Instead of having shoe dealers from all sections required to canvass the shoe market covering all sections, it is incomparably simpler, less expensive and more orderly for the samples and information of all producers to be available for inspection and purchase at each of the great zone centers of population. Here in showrooms and warehouses the goods can be seen and stocks carried so that, for example, all of the dealers in the territory surrounding the wholesale point "B" may, by going a short distance to this center, examine and compare all of the likely products suitable for the use of the consumers in that zone and, as their customers' representatives, select and order suitable styles, sizes and quantities which their experience teaches them will serve the needs of their community.

In other words, not only the consuming public must have expert services in filling their needs, but these representatives who serve them as retailers in this capacity must again call upon others to cull and select and bring into their general zone the fittest and most valuable examples and stocks that the shoe factories have to offer. This constitutes a main part of the function of the wholesaler who buys from the

Out of Their Own Mouths

By T. EVERETT HARRÉ

The European politicians who with American com-
ity have hatched this inhuman monster have
ed either cynically, hypocritically or vindictively,
their handwork will breed cynicism, hypocrisy
vindictiveness in the minds of future genera-
is.

They do this thing because they themselves are
unconscious servants of the cupidity and the
dictiveness which infect the psychology of an in-
ane and complacent capitalist society."—Comment
the treaty by the *New Republic*, May 24, 1919.

There will still be many to applaud the treaty,
to join hands with Mr. Wilson in remorseless
rt to push vengeance to completion, . . . the
inch supporters of power and privilege, . . . the
ible champions of the established order against
ry form of revolution. . . . With the publi-
ion of the German treaty the real battle for liberty
ins."—Comment by Mr. Oswald G. Villard in the
ion, May 17, 1919.

A dying philosophy of imperialistic and capital-
c tendencies is here celebrating its last terrible
mph."—Comment upon the treaty in counter-
posals made by Germany.

EXCEPT for that comparatively small minority of disloyal and pro-German elements, the people of America united in whole-hearted support of the Gov-
ment in its determination to carry on the
r against Germany, to employ force without
nt or limit, until German militarism was de-
oyed and Germany was finally and decisively
feated. Except for pro-German, German-
nguage, Socialist and radical journals, the
ess of America stood solidly against any com-
omise peace with the foe, against any conclu-
n of the conflict which would leave Germany
defeated and in a position readily to recuper-
e and begin a war for world dominion over
ain. By reason of the espionage laws and a
gilant censorship, the German-language and
volutionary press was obliged to steer care-
lly within straight and narrow lines. While
pression of their surcharged feelings may have
en painful, it was not long after America
tered the war that the pro-German and So-
ulist editors found that that course alone was
althful.

Among magazines which appeal to an intel-
ctual audience, which are supposed to be first-
ass, two oddly distinguished themselves during
e war by what, to some people, was an inex-
icable course of conduct. Making their ap-
al for readers and for their readers' confidence
a high platform of liberalism and humani-
rianism, both persistently, insidiously and in-
ustriously advocated an ending of war by com-
omise, or peace through negotiation, with Ger-
any. While they were apparently unmoved
the indescribable cruelities of the Huns, by
e wholesale massacres, by the enslavement of
e Belgians, the despoilation of Belgium and
orthern France, by Germany's ruthless high-
a murder of innocent non-combatants, to right-
us indignation, to a consecrated determina-
on that Germany must be made impotent and
reed to make reparations for the great wrongs
one, the hearts of these editors, instead, seemed
bleed in the mere thought of forcing the war
continue until Germany was crushed or the
Fatherland" invaded. Ignoring the bald fact
at any peace through negotiation with Im-
erial Germany would have meant a German
eace, with Germany victorious, with German
rms undefeated, and with the Government of
ie Kaiser dictating the terms, these ostensibly
merican weeklies strained themselves to the
mits of their herculean puniness to bring about
eace by negotiation, or as they termed it, "a
eace by diplomacy," and to bring whomsoever
ey might influence to support that cause, by
harging the Allied nations in continuing the
ar as being dominated by motives of sordid
reed and implacable revenge.

To some of their less sophisticated and less discerning readers, the course of these journals must have been perturbing, perplexing, difficult of understanding. It surely was not possible that these organs of aloof high-browism could be anti-Ally or pro-German! Both addressed their readers from a high and lofty standard of Americanism, a peerless liberalism, a moral integrity beyond reproach. The mere implication that the sweet souls guiding the editorial policies of these sheets could be tenderly inclined toward the Huns was by themselves repudiated with indignation. What they wanted, they reiterated, and their siren protestations went forth beguilingly, was a new world order, a peace or justice that would endure. Singularly, with a new world order and an enduring peace of justice in view, they zealously championed radical, pacifist, Socialist and revolutionary movements, defended and befriended the murderous Bolshevist regime in Russia, railed against Allied intervention in stricken Russia, defended and befriended the I. W. W. leaders who had engaged in a conspiracy to thwart and obstruct the country in its war against Germany, defended and befriended as well as the "conscientious objectors;" likewise, they opposed a peace of victory by fighting until a military decision was obtained over Germany—the one and only peace which would disarm the German power and make democracy secure—and advocated instead such a peace as would have left the German power unimpaired and German Imperialism intact.

"LIKE, BUT OH HOW DIFFERENT!"

These two eccentrically distinguished journals are the *New Republic* and the *Nation*. The *New Republic* is a comparative parvenu compared to the *Nation*, which still travels on a prestige dating from the time of the Civil War. The editor of the *New Republic* is Mr. Herbert Croly. The now pacifist Mr. Croly published, in 1909, a book, "The Promise of American Life," in which, indicating the undemocratic and demoralizing influences at work in England and France, he glorified military Germany, justified Germany in her wars of aggression, and advocated that war should be carried on to decisive results in military victory. An associate editor of the *New Republic* is Mr. Walter E. Weyl, who published a book, "The End of the War," in which, to use the words of Charles A. Beard (himself the author of a book impugning the Fathers of the country and the Constitution): "Mr. Weyl draws swiftly under review . . . the plans of French, Russian, English and Italian imperialists for spoiling the enemy, Italy's ambitions, the war of new Russia against capitalistic imperialism, the faint hope of German liberalism, the inconclusiveness of a bitter-end peace," and in which he (Weyl) predicted that "the final war for democracy will begin after the war. It will be a wider conflict than that which now rages and the alignment will be by classes and interests rather than by nations. It will be a war which will be waged until separate interests within each nation are completely extinguished." Another associate editor is Mr. Walter Lippmann, formerly but no longer connected with Colonel House's peace commission, author of the assertion "The Congress of Versailles is not the Last Judgment. . . . They cannot damn the German people for all time, desirable as that might be, because German mothers bear German children." The editor of the other strangeling-sheet, the *Nation*, is Oswald Garrison Villard, whose father, Heinrich Hillgard, was born in Speyer, Germany, and who is the author of "Germany Embattled," published in 1915, in which he asserted of German frightfulness in Belgium: "Few of these stories of atrocities can be supported," and in which he maintained that "Men of light and leading are protesting that Germany must not be degraded" and that much in Hun Kultur "must be preserved."

Considering these magazines as ranking among loyal and patriotic journals and their editors as ranking among sterling, 100 per cent American editors, there was that in their editorials and editorial policy which was, to say the least, ambiguous, dubious, confusing, open to question. While all loyal, true-blooded journals sought to fortify and fuse the spirit of the country in a selfless enthusiasm, a confident conviction that right must win, the *New Republic*, for instance, just six weeks after America entered the war in its issue of May 19, 1917, devoted its columns to a most discouraging example of defeatism. Implying the almost absolute hopelessness of Allied Military victory, it declared that the despatch of such an American army to Europe as would break the stalemate which would at best result in case Russia drifted out of the war, "could not be recruited, equipped and trained until the summer of 1919" and that even then it might be impossible to transport it to Europe. The *New Republic*—which has since had the effrontery and unconsciousness to declare in advertisements that "it insisted that the war must go on until Germany was beaten"—presented "an appalling outlook," in the continued waging of war against Germany, and it said: "The result would almost certainly be a revolution in America far more bloody and drastic than the revolution in Russia.* A war conducted until 1920 on the scale required by a military decision might bring peace with victory, but it would also bring victory with suicide."

Doubtless weight was given by some people to what the *New Republic* published, if only because of the implication adroitly given that it represented unofficially the point of view of the Administration and that it had "seen itself taken into the counsels of statesmen at home and abroad." In an advertisement published November 25, 1918, the *New Republic* made an appeal that people subscribe "in order that you may clearly understand the President's policies." New readers accepting this sheet, upon this pointed suggestion, as an articulate echo of the point of view entertained in Washington were doubtless confused, doubtless troubled, by its persistent advocacy of peace through negotiation with Germany, by the policy adopted, when German military defeat became certain, of assailing the Allied leaders and charging them with a program of revenge and plunder. Having preached defeatism, the hopelessness of Allied military victory, immediately after our entry into the war, the *New Republic* during the period that Germany was still undefeated, chronically advocated entering into peace negotiations with Germany and bringing the war to a close by "a peace by diplomacy." This sheet was a perfervent champion of the proposed Stockholm conference. Upon the routing of the Hun armies by Foch, upon Germany's catastrophic defeat and the signing of the armistice, the *New Republic* then charted a slightly new course in which it specialized in a policy of impugning the motives of the Allies, the purposes of the Allied leaders, and by which it sought to sow seeds of suspicion and distrust of the nations associated with us in the war. It

* That the imposition by the Allies of strong terms for peace upon Germany would make Germany go Bolshevik and cause revolutions in the Allied countries, has been the familiar argument of German propagandists and of such American pacifists as Mr. O. G. Villard.

went so far in its impassioned exploitation of Allied dishonesty and intended brigandage as to carry its campaign against the "wicked Allied statesmen" into large newspaper advertisements. "If the diplomats should begin once more their ancient game of chess with peoples as pawns, the game of military supremacies, selfish alliances, balances of power, strategic frontiers and economic barriers—it would be the supreme tragedy of history." So ran one of its costly newspaper "ads."

It may, of course, be mere coincidence that so long as Germany had all to gain and nothing to lose by the creation of disagreement between America and the Allies, by the creation of hostile American opinion against the Allied leaders with whom Mr. Wilson had to deal, by the destruction of amity, confidence and concord, that so long as Germany gambled for advantage upon this very possibility of differences and dissension, the *New Republic* strained its caponized powers in presenting President Wilson as opposed to the Allied statesmen and their purposes, in interpreting the war on part of the Allies as having been lacking in all ideals until ideals had been interjected by the foreign hand of Mr. Wilson, in picturing Mr. Wilson and Clemenceau especially as being at bitter odds, in representing Mr. Wilson as standing heroically alone for the principles of humanity and justice against a gang of unscrupulous cut-throat statesmen fully as bad as the Prussian Junkers. It may be mere coincidence that the *New Republic* pursued a policy which, so far as German purposes and German advantage were concerned, was strikingly in accord with the most discreet and subtle form of pro-German policy—a policy which, had it succeeded, would have estranged America from the Allies, have torn the Allies themselves with dissension, rivalries, animosities and antagonisms, and would consequently have resulted in "a liberal peace" what Mr. Villard called a "magnanimous" peace—ergo, a pro-German peace.

"THEIR OWN DREAMS AT LENGTH DECEIVE 'EM, AND OFT REPEATING, THEY BELIEVE 'EM."

So long as it was not publicly repudiated by the "leading statesmen at home and abroad" by whom it claimed to be taken as counsel; so long as Mr. Herbert Croly had the free entree to the Washington offices of Mr. Felix Frankfurter, known to be high in the confidence of the Administration; so long as Mr. Walter Lippmann was in a position to "assist" Colonel House's commission by his help and advice; so long as Mr. Walter Weyl had the full run of the Hotel de Crillon in Paris; so long as the Steffenses and Bullitts seemed to be given confidence as unbiased reporters on the Russian situation, if not world affairs, the *New Republic* may perchance have flattered itself that it was in the singular position of enabling its readers to "clearly understand the President's policies." But was it? And what, in essence, was the sort of peace which the pretentious *New Republic* championed? Was the peace it advocated, the peace after its heart, an Allied peace—or the peace Germany wanted? Was it a peace which indemnified so far as possible and made secure from future aggression the wronged and invaded nations—or a peace "without annexations and indemnities," which "let Germany down easy," which would treat her as though she had not been the aggressor, but one of the wronged parties in the war? If the *New Republic* was heart and soul on the side of America and the Allies, fighting a war of defense against German aggression, why did it so enthusiastically espouse the German peace proposals and endeavor to further the German peace mancouvers aiming at an indecisive ending of the war at a time when the Allied governments were united in rejecting any consideration? Why did this sheet support the proposed notorious pro-German, German engineered Stockholm conference? Why did it endorse the pacifist stand of the British Labor Party? Why, once Allied victory and Hun collapse were certain, did it intensify a policy of defamation of the Allied statesmen?

It is conceivable that many sensitive humane people, shocked and sickened by the prolonged killing, believing possibly that Germany could not be broken, longed for peace, even if by compromise with the foe, in order to prevent the further shedding of blood. Sincerely in sympathy with the cause of the Allies, opposed to Germany and Germany's plan of world subjugation, these people could not but have rejoiced when at last the Hun debacle occurred and the victorious Allies pursued the fleeing hordes through France and Belgium. Once the Hindenburg stronghold was smashed and German collapse was sure, these people would not at that late hour have listened to any suggestion for compromise. And once Germany had virtually surrendered, once the Allied council had agreed to the terms of peace, these people could only have exulted in a victory that had been beyond their expectation, a triumph almost past belief. Anyone not at heart pro-German, not at heart disloyal, not at heart antagonistic to the Allies, could not but have found full satisfaction in the glorious consummation. Presumably it is by their joy or their rage over German defeat, by their support or opposition to the terms of the Allied treaty, that it can be ascertained on which side people's sympathies lie. In their reaction to the Versailles treaty—and this applies especially to pacifists, the faint-hearted, the doubtful—is the final test.

What was perhaps not clear to some people in an editorial policy certainly not in conformity with the policy of the loyal American press, may be made clear now by the reaction to the peace treaty experienced by the *New Republic*. Ardently supporting President Wilson previously, indeed, pretending to be a sort of unofficial interpreter of his views, the *New Republic*, upon the publication of the terms drawn up at Versailles, turned immediately and furiously upon the President as having betrayed, in agreeing to the treaty, the "liberal opinion of the world." Cautious and camouflageous in its course before, ambiguous, studiedly subtle, cold-bloodedly academic, carefully restrained, the *New Republic*, upon the publication of the digest of the proposed treaty, as if goaded to a rage beyond restraint, roiled with a frothing despair and chagrin, like a frantic termagent, abandoned itself to a scolding fury in which all caution, all restraint, all diplomacy were thrown to the winds. It may be that at last, perhaps, this organ spills the beans; that inadvertently perhaps, it discloses its hand; in not so much a slip of the pen as a slip of the spleen, as if suffering from a species of mental rabies, it turns upon the Versailles treaty as if to rend it to shreds. Repudiated in its previous advertised pretensions, its self-assumed, self-advertised role, the *New Republic* finds itself in the embarrassing position of being provenly preposterous and quite ridiculous. Of course, to the most obtuse intelligence it is uncomfortable to be made funny. Campaigning for subscribers and for public confidence on the implied claim that it was able to make clear Mr. Wilson's policies, this sheet of *jejune* intellectualism now finds itself utterly discredited.

And in the light of its almost involuntary reaction to the peace terms to be imposed upon Germany, the *New Republic* itself perhaps answers the question as to whether it was at all pro-German, as to whether the peace it proposed and fostered was a peace of advantage and security to the Allies or a peace of advantage and recuperation to Germany. Bearing somewhat upon its vicious turning against Mr. Wilson, upon its virago outburst against the treaty, may be the fact that its associate editor, Mr. Walter Lippmann found it congenial to return from Paris, that the scheme for recognizing the Bolsheviki as advocated by the pro-Bolshevist Steffens and Bullitt failed to be put across, th Mr. Walter Weyl in many respects "ain't wh he used to be," and that the "peace by dip macy" concocted by the *New Republic's* you "statesmen of the new school" was defeated realization in a peace of actual victory, and military decision.

"WHAT BOOTS IT AT ONE GATE TO MAKE I FENSE, AND AT ANOTHER TO LET IN THE FOE?"

Totally ignoring the wrongs committed Germany against the world, totally ignoring t fact that the Allies were driven to fight in she self defense, and that except Germany had be utterly defeated, the world could never be sa from German aggression; totally closing mind, out of ignorance or hypocrisy, to the fa that even now in her defeat Germany has su fered less than any nation in the war exce America, that her lands were uninvaded, th her factories and industries are intact, that s has the added resources of machinery and every form of utility looted in the lands inva ed, that her financial resources have not been i paired by expenditures abroad and that, whi the Allies had to expend their gold in forei lands, chiefly America, for war supplies, Ge many conserved her gold by production withi and that, moreover, through her system of scie tific breeding, there is growing up in Germa today a race of Teutonic males far outnumbe ing all the men lost and incapacitated in the wa the *New Republic* yet howls and gnashes i teeth against the crushing, the crippling, t dismemberment of poor, bleeding, prostrate Ge many!

Does the *New Republic* find any joy, any cau for gratification whatever in the fact that t Allies are able to dictate the peace terms? Ge many has been beaten; but, in the opinion the *New Republic*, a new imperialism has arise "If we mean by an empire a state which throug its armed force, diplomatic position, and ec nomic privileges shares in the rivalry for t exploitation of the backward parts of the eart then German imperialism is absolutely annih lated," declared the *New Republic* of May 17t "Germany's heirs are Japan, Britain and Fran * * * By the elimination of Germany an Russia and Turkey the imperial structure the world has narrowed at the top where it go erns and has expanded enormously at the ba where it is governed. Into this new imperi system America is introduced as the guarant of territorial integrity against aggression, an as a voice of protest if things go badly with th mandates. The question is of what value th protest would be against the four Powers wh actually govern the imperial system."

Is it subtly suggested that the "new balance includes Great Britain, France, Japan and Ital as *against* the United States, "a disintereste minority of one," now entangled in the meshe of a new "*imperial system*"?

"For the present it is important to note tha the destruction of German imperialism seem to carry with it not a diminution but an increas of the other imperialisms."

In other words, is the last condition with th Allies victorious, worse than the first? The *Ne Republic* seemed to be more concerned in bring ing the war to a close by compromise with Ger many than by bringing Germany to her knees And now this sheet is manifestly more concerne about what is demanded of Germany than tha the wronged nations enforce the carrying ou of their terms by the aggressor.

"Germany is put indefinitely at the mercy o her business rivals if her overseas empire i destroyed. Under the treaty this absolutely es sential element of recuperation is controlled fo all practical purposes by Great Britain an France."

(Surely a lamentable conclusion to the Hun enterprise looking toward world dominion!)

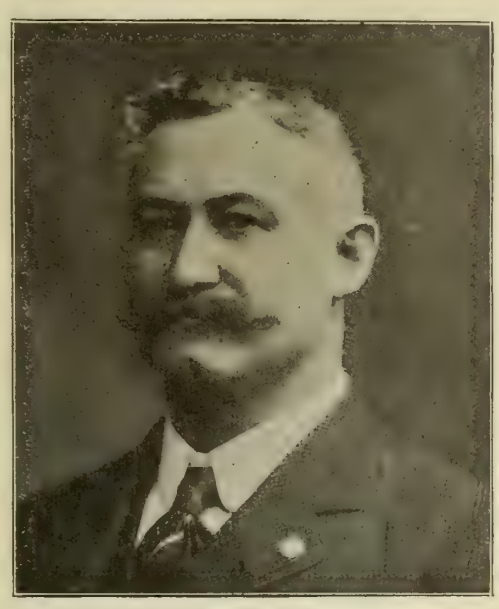
ailroad Brotherhood An Object Lesson in Labor Progress

ORGANIZATION OPPOSED TO RADICAL MOVEMENTS THAT BRING MISERY AND RUIN

(Speech Delivered at Convention of Brotherhood of Railroad Trainmen, Columbus, Ohio, May 15, 1919)

By W. G. LEE



PRESIDENT OF THE BROTHERHOOD OF RAILRO AD TRAINMEN

WHATEVER promises for the welfare of the Brotherhood of Railroad Trainmen promises to be equally beneficial to society at large. Sometimes, in con- ering the effects of economic changes as they ult from increased wages and changed con- ions of employment, we might be led to believe, we accepted seriously all of the statements it are made, that railroad employees are not a rt of the public. Unfortunately there has been lisposition in the past two years to array pub- sentiment against the railroad organizations der the pretense that whatever was secured in way of wage and service betterments would ve to be made good by the consumer. The tement is absolutely true and there is no dis- sition on the part of these organizations to t away from it, but the statement also in all rness should have accompanied the effort to ejudice the public mind against railway em- oyees to the effect that all economic betterments e achieved only by the ultimate consumer pay- the entire cost of the achievement. It is not ir to prejudice the public mind against the rail- y organizations by making it believe, even ough it should know better, that railroad oper- ion only comes out of the public pocket book. I have said, every advance in wages in every her occupation must receive its proper share of e pocket books of the railroad employees, and ey make this contribution without any prejudi- al references about having to meet the extra st of whatever advantages come to their associ- e workers. They had to meet the cost out of eir own pockets, and did not attempt to retard e progress of their fellows by any prejudiced sumption that they alone will have to meet the creased costs attached thereto.

The railway organization employees, of whom e Brotherhood of Railroad Trainmen repre- nts the largest single class, are a most im- ortant part of the public. Their entire sym- athies are for every public betterment, regard- ss of the effect it may have upon them as it ertains to their cost of living. They have long alized that any betterment that comes to any articular portion of society is only gained at e expense of all society, but it is an evolution- y process which with each successive better- ent affects its particular class of society and the end benefits all society.

There is nothing in our economic life that is misunderstood as the labor organization. The reater part of this misunderstanding arises from e natural prejudice that attaches to anything at presumes to arrange terms of employment. he employer has always made himself believe at it was his absolute right to hire whom he leased and for what wage he pleased. In tak- g this position he did so without any regard the rights and welfare of society and these bor organizations have taken it upon them- lves to protect their own interests and in so oing have protected the interests of the general mmunity.

The Brotherhood has tried to be fair to the ublic, the employer and to itself. It has ac- pted its responsibilities and consistently stood y what it agreed to do, although there have een many times when taking that position rought down upon it the most bitter censure rom those who have yet to learn that a labor or- anization to be successful must be a business or- anization that holds its word as sacred as its ond.

W. G. LEE

Our organization is a business organization. Its purpose is to protect the general welfare of its members and in so doing does not confine itself to its own men employed in any given occupation, but covers both wage rates and service rules for every man employed in that service. This feature of the Brotherhood is responsible for whatever has come to the service in the way of improved conditions and wages. It has been accomplished in a progressive and orderly manner, and we know that what has been done is going to stand the test of time.

I do not mean to convey the impression that service conditions are ideal, that wages have reached the point beyond which they cannot go, for that is far from the fact. The progress of the world has been due to the honest discontent of labor, a discontent that expresses itself in terms of better living, which can only be secured by progressive wages and service conditions that always will assure a fair standard of living with all of the opportunities we understand attach to that standard.

We are progressive American citizens in every sense. We have no more use for the purely contented man than we have for the unreasonably discontented man. We believe in good government, we believe in law and order and we know the only way to perpetuate government, good citizenship, and enforcement of law and order is by guaranteeing our population a fair day's pay for a fair day's work and decent treatment with every service condition.

The Brotherhood also conducts an insurance department, which we think is one of the best in the world, more liberal in the payment of its obligations and more generally helpful than associations of the kind usually are. We paid approximately $35,000,000 in death and disability claims to 45,000 claimants in the past 35 years. This of itself is a wonderful record of what insurance properly managed and carefully directed can accomplish in a very few years, and it is insurance that would never have been paid had it not been provided by this organization. The hazard of the service has barred our men from participating in other insurance by its prohibitive cost.

I stated that we were a business organization. In this connection I desire to clinch my statement by saying that in the past year this organization has been called on to make extra payments approximating $3,000,000 due to demands made by war and pestilence, and I am proud to say that the Brotherhood of Railroad Trainmen has met every claim promptly. It has paid every demand made upon its insurance department without having to levy a special assessment or cause one minute's delay. I think the statement of what the protective feature of the Brotherhood and the Brotherhood insurance have done will be amply sufficient to verify the assertion made that the Brotherhood of Railroad Trainmen is a business organization.

In a legislative way the Brotherhood has very many honorable results to show for its efforts. There are times when organization effort is unable to secure general results and in such event legislation is the only way left us to accomplish our purposes. The Brotherhood is largely responsible for the enactment of Federal and State legislation. Among its achievements can be counted the Safety Appliance, the Federal Employers Liability, Standardization of Equipment, the Federal Arbitration, Federal Hours of Service, and the Eight Hour Day Law, and in addition to this record, it has made another of State legislation achievement, in which can be taken considerable satisfaction and pardonable pride. This has been only a part of the work of the Brotherhood of Railroad Trainmen, and not alone in the interests of railway employees, but in the interest of the general public, for we take the position that whatever affects the organization, in its turn affects society generally.

There are labor organizations that are such in every sense, and there are other organizations that seek refuge under the banner of labor unionism that properly have no right to claim affiliation with labor organization, and in proof of this is their readiness to raise the red flag of anarchy and declare for the revolution at every opportunity. I want to assure you that the Brotherhood of Railroad Trainmen has neither part nor purpose in any scheme that proposes to destroy this government or take from any citizen either privilege or property that properly belongs to him; we have no sympathy with any plan that finds its basic purposes in the destruction of government or the organized forms of law and order; we do not subscribe to any propaganda that proposes a policy of destruction to find in a common basis of misery its expected hopes for reconstruction; we have not lost faith in our government nor in our fellow men; we know that we have in our keeping the continuity of our government, the perpetuation of our own common welfare, and we believe that it is not necessary to transplant anarchy, or an autocratic government by a few self-selected rulers to preside over the destinies of a nation of free born American people. The very assumption of power or autocracy established by those who have superseded former governments give truth to the assertion that in whatever changes of this kind have been made one autocracy has succeeded in which the last condition of the people was worse than the first and the very fact that a few assume to control the welfare and the destinies of the many, sets at naught all of their pretenses to a common rule, by the common people, for the common people.

We have no part or sympathy in any of the plans that pretend the hope of the world is only to be found in its destruction. This organization is 100% American. Its representa-

tives come from the two great democratic governments, the United States and Canada. We believe in the orderly processes of law that have brought our respective governments to the first place among the nations of the world. We place our dependence on a continuity of these same processes of order to bring the level of the lowest to the level of the highest. We do not subscribe to any theory that proposes to throw everybody into one common slough of despond for the purpose of experimenting in the hope that out of this general mental and physical misery an average may come that will bring about a general better condition of affairs for a majority of the people. We stand for no such doctrine of destruction or ruin; we believe in the government of our representative nations, and stand as 100% Americans ready to defend our principles and our faith.

In proof of our Americanism and our readiness to defend it are the 16,000 men of this organization who took their places willingly in the ranks of our armies, who were ready to assume all the responsibilities for protecting the government, who were ready to make the supreme sacrifice if necessary in defense of our government, our homes and our firesides, and almost 200 of them are resting today in the sacred soil of France in proof of their loyalty and devotion to the land they called their own.

We propose in the future to go ahead with our work as an organization along the same lines that we followed in the past. We believe in our government, we believe in the expressions of our President and all the other authorities of the government who have declared emphatically their belief that the American workman is entitled to a wage that will insure a reasonably decent standard of living. We propose to dire our energies toward getting that decent standa of living and we propose to do it along order and legal lines, wholly within our rights American citizens and in keeping with our b lief that the workman is worthy of his hire.

To sum up the status of the Brotherhood Railroad Trainmen is to say that it is one of t conservative representative organizations th stands foremost in the ranks of labor. Throug its work, the financial, moral and intellectu standing of the men and their families have bee greatly improved, and we propose to contin our work in this general direction. It never wi be finished. The honest discontent of free Amer can labor will always find expression by its d mand for participation in the direction of t business by which it is employed, and a fair share of the revenues it creates for its employer

Frank Morrison's Award in the Printing Case

ONE of the most important wage rulings of the year has just been made by Frank Morrison, arbitrator of the questions at issue between the Publishers' Association of the City of New York and Typographical Union No. 6, familiarly known as "Big Six." Under the findings and award by Mr. Morrison, the printers gain practically every point, the most tangible being an increase in wages of $9 a week. The award is made retroactive as of April 1 last and the agreement will expire March 31 next.

The printers also asked for double time for overtime, instead of time and one-half, but Mr. Morrison ruled against them, saying:

> The evidence submitted indicated a desire of both parties to eliminate overtime wherever possible. Under ordinary circumstances your Arbitrator believes that overtime should be penalized to the point of prohibition, except in cases of emergency, but because of the expressed opposition of both parties to this practice and the contentions of the Publishers that much of the overtime was due to unavoidable conditions, your Arbitrator decides against the demand of the Printers for an increase from price and one-half to double time.

Radical changes in the working hours were asked by the publishers, most noteworthy of which was the extension of the work day from seven and one-half to eight hours. The printers opposed the abandonment of the present rule which had been in force for many years. On this subject Mr. Morrison ruled:

> Your Arbitrator is of the opinion that to lengthen the work day in any calling, and especially in this intensified industry, would be in opposition to the world-wide agitation for a betterment of the workers' conditions, and for physical reasons alone it cannot be justified.
>
> Even were your Arbitrator to ignore these facts, it is neither wise nor practical to take from workers long-established conditions.
>
> It is therefore ordered that no change be made in the hours constituting a work day, or work night.

The publishers also asked that the time in which work should be performed be changed to have day work from 6 A. M. to 6 P. M., instead of 8 A. M. to 6 P. M., and night work from 6 P. M. to 6 A. M., instead of 6 P. M. to 3 A. M., with the "third shift" from 3 A. M. to 10 A. M. eliminated. This point they lost too, Mr. Morrison holding that the custom of 28 years should not be upset, and saying "it would be a most regrettable decision because of the resultant upheaval of the workers' social life." The publishers, however, retain their old right to call the printers to the office for any unforeseen reason or emergency before the hours specified in the limitations.

Naturally a large part of Mr. Morrison's findings is devoted to the wage increase question. Of this he says in part:

FRANK MORRISON.

In supporting their demands for the wage increase, the Printers submit that they have never received a wage commensurate with the intelligence and skill required of them; that since 1914 the cost of living has increased more than 79 per cent, and during that period their wages have been advanced about 15 per cent; that this increase of 15 per cent is much less than the increase granted other newspaper workers; that it is small in comparison with the increases received by the skilled and unskilled workers employed in other callings throughout the country; that the newspapers of New York were never so prosperous; that advertising has increased, notwithstanding the increase in rates, and that some of the newspapers have been compelled to refuse many columns of advertising each day; that until recently the newspaper printer was the highest paid in the printing trades and that the long period of apprenticeship and the mental and physical strain under which the work of the newspaper printer must be performed are all factors which justify this wage increase.

Tables showing the increases in other trades ranging from 11 per cent for electrotypers to 105 per cent for Delaware River shipyard blacksmiths and the advances in retail prices for 1915, 1916, 1917 and 1918, are made part of Mr. Morrison's findings.

Concerning the publishers' side of the wage question, it is said:

> The Publishers submit that they have raised wages $4.50 a week since January 1, 1918; that the present wage "is a fair wage that compares most favorably with wages paid printers' crafts in newspapers all over the country"; that there is "a probability of a steadily decreased cost of living in view of the ending of the war"; that the "Publishers are not now opposing the demand of the Typographical Union on any ground except that it is exorbitant and unwarranted by either business conditions co fronting the Publishers or by necessities confron ing the Typographical Union Members."
>
> In the Publishers' brief they suggest that in th event that the Arbitrator "feels that the membe of the Typographical Union are entitled to any r lief at all in the matter of wages," that the Arb trator change certain working conditions whic "might in a measure mitigate the charge again the Publishers." (*Changes in work days as me tioned above.*)

In his final ruling on this wage question, M Morrison says:

> It would be fruitless at this time for your Arb trator to enter into a discussion on the causes fo increased living costs now confronting the worker The question offers no escape by theorizing.
>
> What interests us is the fact that the high livin cost exists, and if the processes of arbitration ar to be used with purpose and effect rather than as vehicle to allay a remedial unrest, we must attemp to re-establish the living standards of the plaintiff in this case.
>
> * * * To ask the Printers to continue to accep a standard of living lower than the Publishers then selves agreed to when they accepted pre-war rate is no more equitable than to ask the Publishers t reduce their living standards to meet the increase production cost. While this proposition is unusua it can be justified on moral ground and elementa justice, if the theory of mutuality between Capita and Labor is not merely a shibboleth.
>
> The point is made to emphasize your Arbitrator' belief that there is an unescapable obligation on th New York newspaper industry to maintain the liv ing standards of Printers employed therein. * * *
>
> Your Arbitrator, therefore, sustains the Printer on this question and orders an advance in wages fo the full amount of $9 a week.

Mr. Morrison also made some minor changes in the several sections of the working agreement to make his ruling and the new wage scale effective equitably for all the workers. He also pointed out that even with the increase, New York's scale still was behind Portland, Ore., and Seattle, Wash., where living costs had not advanced as sharply as in New York.

One important point on which Mr. Morrison sustained the printers concerned the hiring of "extras". The workers made the charge that foremen generally were not distributing extra work in an equitable manner. The publishers claimed that the present rule debarred the office from the services of "very competent extras." They also asserted that as the foremen are union members they were subject to its discipline. Mr. Morrison held the extras are an essential class in the newspaper trade and that their rights should be as carefully safeguarded as the rights of regular members. He therefore sustained the old rule under which they were hired, a rule that limited work to three consecutive days or nights in any one week under certain conditions.

Suppressed Facts About Bolshevism

WHAT ALBERT RHYS WILLIAMS FAILED TO TELL ABOUT THE SOVIETS AND RED RULE
SUMMARIZED BY HENRY L. SLOBODIN

VERIFIED facts about Russia's red terror existing under the régime of Lenine and Trotzky have been condensed in most readable form by Henry L. Slobodin in a pamphlet just published, entitled: "Questions on the Bolsheviks and the Soviets which Albert Rhys Williams failed to answer and The Answers." Every angle of the misrule in Mussovy is taken up and analyzed. Authorities for every statement are given. Words are not spared, and the composite result is an arraignment of the Bolsheviki that is so sweeping, so plain and so convincing that the veriest tyro in international affairs is impressed with the truth.

In a separate chapter under the heading, "A Bolshevik Propagandist," Mr. Slobodin analyzes Albert Rhys Williams, the ex-clergyman, in no uncertain terms. He says:

> Mr. Albert Rhys Williams visited Bolshevik Russia armed with a sympathetic heart, enormous gullibility and absolute innocence of any knowledge of Bolshevism, Socialism, Russian language, history, conditions or anything at all that would help him to appraise critically and to form a correct judgment of people and events in Russia. The Russian environment reacted in Mr. Williams' emotions in a peculiar way. Evidently Mr. Williams landed right in the midst of indescribable commotion and noise—people were running to and fro, gesticulating, yelling, Mr. Williams did not know what; everywhere speakers were exhorting crowds, Mr. Williams did not know what about; everywhere people were shooting other people, Mr. Williams did not know what for.
>
> The well known mass psychology, or as some call it, mob spirit, seized upon Mr. Williams' very receptive emotions. He cast aside the old Williams. A new Williams was born. He ran with others to and fro; he gesticulated and yelled as others did, only nobody understood him. * * *
>
> He plunged head foremost into this whirlpool of burning, scorching words and blazing phrases. Words and phrases became the only reality. Things, facts, conditions became unreal, non-existent. Thundering pronunciamentos proclaimed the Industrial Republic. Promptly to Mr. Williams' emotions the Industrial Republic became a fact. Russia is an Industrial Republic, he declared. He was deaf, dumb and blind to the fact that not one of the factors necessary for the establishment of an Industrial Republic was under the control of the Bolsheviks, or in the program of the Bolsheviks. There was no advanced industrial development. There was no industrial autonomy, nor was it on the Bolshevik program. On the contrary, Lenine proposed, not only a political, but an industrial dictatorship as well; "an unconditional and most severe subordination of the will of thousands to the will of one." Finally, the workers had no experience, traditions or intelligence to furnish a basis for an Industrial Republic. What was going on in Bolshevik Russia was a chaos that beggared description and defied definition. But the phrase was there. That was enough for Mr. Williams. He reported in America that he saw the Industrial Republic in Russia.
>
> Likewise with the Soviets. How should Mr. Williams know that the Soviets were organized by Socialists while the Bolsheviks opposed their organization? How should he know that the Bolsheviks were actually destroying the Soviets as representative bodies? It is true all this might have happened right before Mr. Williams' eyes. But evidently Mr. Williams' senses and mind were not functioning normally at the time. He bid farewell to sense and reason and gave free rein to emotion.
>
> Mr. Williams saw a proclamation decreeing "Brotherhood of the Toilers of the World." At least, he was told that such was its import. At once, he saw it as a fact. There it was—the Brotherhood in a blaze of glory. And he tells the story in America.
>
> Mr. Williams endowed the world with the reaction of his emotions in Russia in a pamphlet entitled "The Bolsheviks and the Soviets." If Mr. Williams acted sincerely although ignorantly in Russia, in a heat of a revolutionary environment, it is quite obvious that his motive has undergone a tremendous change since his return to America. In Russia, Mr. Williams was a neophyte, then a zealot. In America he became a propagandist. And Mr. Williams' propaganda takes as little account of facts and reality as the Bolshevik faith does. Everything comes out of Mr. Williams' mind distorted by his new psychology. Nothing that he says of Russia is so. But do not jump to a hasty conclusion that Mr. Williams lies. He is only telling a Bolshevik truth. Fact, reality, reason must give way before this higher truth. Hegel asserted that only that was real which was reasonable. The Bolsheviks assert that only that is true which is unreasonable. It is this unreason that stares at you from every statement of Mr. Williams.
>
> So he discourses grandiloquently of the Bolsheviks and the Soviets as if they belonged to each other, entirely ignoring the fact that the very first thing the Bolshevik government did when it came into power was to disperse the All-Russian Soviet of Workmen and Soldiers' Delegates and also the All-Russian Soviet of Peasants' Delegates. The Bolsheviks were astute enough to retain the name for business and propaganda purposes.
>
> And Mr. Williams loyally adheres to the Bolshevik methods in his propaganda in America.
>
> Mr. Williams tells us that the delegates to the Soviets "are elected in the shops and unions," and that "at present 95 per cent in Russia can vote." Since over 80 per cent of the Russians are peasants, how they can vote in shops and unions Mr. Williams fails to disclose. Thirty-six million votes were cast for delegates to the Constituent Assembly. Since then, the Bolsheviks refused to permit a general election. Nor was any local election permitted except in Bolshevik shops and among the red guards. Why does Mr. Williams say that "95 per cent in Russia can vote" when not even one per cent were allowed to vote, except the Bolsheviks? The answer is, Mr. Williams is totally irresponsible for any statements he makes before any forum of reason or truth. He is a propagandist possessed with a fixed idea. Mr. Williams is dangerous to the over-emotional and weakminded. Unfortunately of these, there are many among us. They should be protected from the insidious unreason and untruths of Mr. Williams.

Mr. Slobodin quotes from M. C. Eroshkin, chairman of the Perm Socialist Revolutionary party and a Kerensky official; from *Izvestia,* the official Bolshevik organ; Maxim Gorky; Lenine's own letters; Gen. K. M. Oberouchev who organized the first Soviets in the Ukraine; many Russian newspapers, both Bolshevik and anti-Bolshevik, and numerous Russian writers of all shades of opinion. In his first chapter, "The Present Government in Russia," he describes the form as "a militaristic terrorism organized by the Bolsheviks, a Socialist sect, whose hatred of all other Socialists is their chief characteristic."

The real control, Mr. Slobodin points out, rests in Commissars appointed by the Executive Committee over which only Lenine and Trotzky have control. "The Bolshevik profession of 'proletarian dictatorship' is merely a dogma," he says, "for no proletarian holds power. In fact, Lenine says that a dictatorship of the proletariat does not mean a working class government, but just the opposite. Lenine's methods are simplicity itself: first, he declares every one but the Bolsheviks 'bourgeois' and then he deprives them of all rights, after which they may be murdered, pillaged or raped *ad libitum.*"

In Chapter II., comparing the Bolshevik Revolution with other upsets of government, Mr. Slobodin says:

> The French overthrew an autocratic government. The Bolsheviks overthrew the greatest democracy in the world—a Constituent Assembly elected by 36,000,000 votes. The French faced a world in arms in defence of their fatherland. The Bolsheviks betrayed their country to the enemies. The Americans fought for independence. The Bolsheviks sought to make Russia a vassal or colony of Germany. The Americans established a most advanced democracy. The Bolsheviks established the most barbarous tyranny.

Also proved in this chapter is the conspiracy of the Bolsheviks and minions of the ex-Czar to kill the Russian democracy, Mr. Slobodin naming no fewer than seven Bolshevik leaders who formerly were spies or agents of the old Russian autocracy. He also shows how the so-called nationalization of factories resulted in greatly curtailed production, ruin in many cases, and Lenine's plan for compulsory labor in an effort to hold power.

Chapter III. tells how "Russia Repudiates Bolshevism," Mr. Slobodin analyzing the early socialist definitions of proletariat rule and the facts as existing in Russia. He shows that with the collapse of Russian industry, workmen in the cities starved to death, went into the villages hunting food or joined the red guard. Hundreds of peasants refused to cultivate the land, burying and destroying food rather than feed the Bolsheviks, "The so-called proletarian dictatorship in fact deproletariarized Russia," he adds.

Many prominent socialists in other lands, he says, are anti-Bolshevik and he quotes the recent Berne Conference as condemning the Bolshevik movement, by a vote of four to one, as "anti-democratic, anti-Socialist and counter revolutionary," with the Bolsheviks "branded as traitors to everything they once professed." Coming to America, Mr. Slobodin answers the question: "Who are the Bolsheviks in America?"

> With few exceptions they were noted for their pro-Germanism or pacifism during the war. Victor Berger of Milwaukee is a type. He gloried in the German devastation of Serbia. He advocated war with Mexico, Japan, anyone to help Germany. Now he is a pro-Bolshevik.
>
> Many of the quondam pacifists are now in ecstasies over Bolshevik bloodletting. They are living in a world of romance. Bolshevik pillage and murder is the manifestation of a great elemental force. Bolshevik bloody hands are baby pink. Nothing is real. They think the Soviet is a new form of advanced democracy. And they think Russia is governed by Soviets. Both propositions are false. The Soviets were originally central labor bodies. Now Russia is governed not by Soviets, but by Commissars. The Soviets serve as a mask.

Ghastly details are given in Chapter IV., "Bolshevik Black Terror," all of them quotations from Bolshevik organs, Lenine's decrees or orders of the Commissars. Gen. Oberouchev's observations also are freely used in this chapter, the whole forming a terrible word picture of wholesale slaughter and terrorism unequalled in the world's history.

There is a brighter side to the Russian situation in Chapter V., "The Kerensky Government," for here Mr. Slobodin tells what the real program for democratic Russia includes, reforms worthy of the most enlightened of countries. This chapter also holds out the hope that the Kerensky program eventually may prove effective, for it quotes workingmen's appeals against the Bolsheviks and the opinions of leading Russian reformers. Those appeals and opinions show that the great mass of the Russian people are fully alive to the dangers that beset the nation and the disaster bound to follow continuance of the Bolshevik rule.

Workmen, Socialists, peasants and intelligentsia all are quoted by Mr. Slobodin and their manifestos promise concerted action against the Bolshevik dictators.

Before closing his brochure, Mr. Slobodin reprints the statement to the Foreign Office of R. H. Bruce-Lockhart, British High Commissioner, that refutes absolutely Raymond Robins' statement to the Overman committee that the Commissioner concurred with him that the Bolshevik government really represented the mass of Russians. Mr. Bruce-Lockhart's report is so utterly at variance with Robins' excuses for the Bolshevik rule that were it not so tragic a subject the contrast would be laughable.

EUROPEAN INDUSTRIAL INQUIRY COMMISSION TO REPORT

By the time this issue of the Review reaches its readers, the commission sent by The National Civic Federation to England and France to study the industrial situation, will have sailed for home. The purpose of that inquiry was to learn what of value the experience, under the various bureaus and commission plans for dealing with socalled labor and capital problems in those countries, had to offer to the wage earners and employers of the United States. Especially was the commission charged to study the operation of the Whitley system, the shop steward, shop committee and democratic control of industry programs; the operation of bonus and profit sharing schemes, the effect of compulsory sickness and unemployment insurance legislation as well as other matters relating to the general betterment of the conditions of workers.

While this commission has been working abroad, another has been studying the operation of our various Federal war emergency plans dealing with industrial matters.

It is intended to have a joint meeting of these two commissions late in June—the time and place to be announced later. Employers and representative wage earners, other than members of the commissions, will be invited to attend and there will be a general discussion of the situation here with a view to proposing an industrial charter for the guidance of American industries.

DISINTEGRATION OF ORGANIZED DISLOYALTY.

Every time our Government has undertaken to deal vigorously with the I. W. W., Bolshevists, revolutionary socialists or any of the other "impossible" classes of people, loud cries have gone up from all the "intellectual" friends of those forces of disorder that the Government was persecuting these "misunderstood" people; that these governmental attacks would only result in making these lawless forces more lawless, more numerous, and therefore more powerful; and that a much more effective policy than prosecuting them would be to arouse society to the needs for industrial reform and to remove the causes that produce these distempers.

Especially vociferous was this clamor when the Department of Justice swooped down upon upwards of one hundred revolutionary and disloyal I. W. W.'ites who, through sabotage, terrorism and murder, were deliberately interfering with the draft and the Government's preparations for war. This particular move of the Government called forth an appeal, signed by some preachers, college professors, and others, in an attempt to raise a fund of $50,000. to defend these indicted I. W. W. leaders. Fortunately, the Federal Government had the courage and ability to "finish the job", which it did by convicting the I. W. W. leaders and locking them up in penitentiaries.

The verdict was no sooner rendered than there was started a series of so-called "mass meetings" in all industrial centres, at which protests were issued and threats made that on the day that the prison doors closed on "Big Bill" Haywood a general strike would occur which would paralyze industry. Sinister suggestions were also made of "popular removals" of important men. At these alarming manifestations of "popular sentiment" against the Government's methods of dealing with "industrial slaves," certain editors, preachers and college professors gleefully pointed out that this was only what they had predicted: "You see what is happening; it is just what we told you would be the result," and so forth and so forth, *ad nauseum.*

Well, "Big Bill" went to jail. The sun rose as usual the following morning and not a man or woman or kiddie struck.

And now, to cap the climax, this I. W. W. terror, which was to grow into an overpowering force, has recently held its annual convention in Chicago, where there were present just sixty-one delegates, representing the total membership of the I. W. W., which their official reports showed had dropped from 275,000 to fewer than 25,000 members. So much for the moral effect of locking up "Big Bill" Haywood and his scoundrelly co-adjutors.

But this is not all. At this I. W. W. convention of sixty-one delegates, so effectively had that organization learned the lesson taught by Uncle Sam, that they kicked out "Big Bill" Haywood as president and, further, provided unanimously for amending the constitution and by-laws to prevent anyone under indictment or out on bond from holding an elective office.

The Christian Science Monitor, in reporting the convention, makes the significant comment: "The I. W. W. make no secret of what has happened to their organization in the last year and a half. The government had it helpless." This is the answer to the high-brow writers, professors and preachers who upbraided the Government for enforcing the law instead of attempting to produce the millennium, when there would be no cause for unrest.

So much for the passing of the I. W. W. bugaboo. Coincident with its passing is the passing of another bugaboo—the Socialist Party of the United States. As an organized force, it has been going down for the last four years. All its loyal members deserted it when we entered the war. From a boasted membership at one time of 900,000, it has for the last two years had less than 75,000, and nearly half that membership—Russian, Lithuanians, Ukrainians and Letts—to the number of 30,000, were expelled from the party at the meeting of the executive committee in Chicago during the past week. The reason for the expulsion of these foreign groups was that they had organized a Left Wing, or Bolshevist division, of the Socialist Party and would soon have overthrown the organization. That the party is on its last legs is plainly shown by Morris Hillquit in a three-column address to the Socialist Party published in the *Call* of May 21, in which he describes "The Socialist Task and Outlook." In this he clearly recognizes the growing strength of the Left Wing. His closing sentence, which is here quoted, shows the hopelessness of the situation:

> But the performance is too sad to be amusing. It seems perfectly clear that, so long as this movement persists in the party, the latter's activity will be wholly taken up by mutual quarrels and recriminations. Neither "wing" will have any time for the propaganda of Socialism. There is, as far as I can see, but one remedy. It would be futile to preach reconciliation and union where antagonism runs so high. Let the Comrades on both sides do the next best thing. Let them separate, honestly, freely and without rancor. Let each side organize and work in its own way, and make such contribution to the Socialist movement in America as it can. Better a hundred times to have two numerically small Socialist organizations, each homogeneous and harmonious within itself, than to have one big party torn by dissensions and squabbles, an impotent colossus on feet of clay. The time for action is near. Let us clear the decks.

In other words, the party is hopelessly split and the thing to do is to "clear the decks" for action and "go at" demolishing each other. This is not exactly what Mr. Hillquit proposes but it is what will happen.

So, as far as these two organized forces of destruction are concerned, the public need give them little further thought. The people with whom it has to deal now, those who will carry on the undermining propaganda of those organizations, are of two types. One is to be found in the sanctums of certain newspapers and magazines, in the pulpits and forums of certain churches and in the professorial chairs of certain colleges and universities. Happily, these men are becoming pretty well "tagged" and the American people will sooner or later see that they are well taken care of. The other type consists of the criminal Bolshevist and scattering revolutionary groups that are openly preaching the overthrow of our form of government and the substitution of a proletariat dictatorship. These groups are being secretly supported by the pro-German Germans and other contingents in this country unfriendly to the Government. They also will be satisfactorily dealt with by the American people.

A most dangerous propaganda at the present time is that put out by the pacifists, who are appealing to "humanitarianism" to "save the world." "The war is over," they say, "and hatred should be replaced by love for all mankind." Under cover of this the un-American forces in our midst are plotting and intriguing for the overthrow of our Government just as infamously as they were while we were at war.

This is no time for "pussy-footing" but for red-blooded Americanism.

TWO NOTABLE UTTERANCES FROM TWO STATESMEN.

Much of the criticism of President Wilson when he sailed for Europe last December was that he was "an idealist," "a theorist," "an academician"; that he was "proposing an impossibility"; that he was "pursuing an *ignis fatuus*"; that his dream of a League of Nations, whereby all disputes arising out of racial, religious or territorial differences would be happily composed, was "an absurdity,"etc. In fact, the unfriendly cartoonists portrayed him with haloes and wings and sent him forth as an apostle of peace a la Ford and Company.

One reason for this attitude of criticism was that he could not, or would not, answer the questions: "How do you propose to do it? What is your plan? Let us see the mechanism." Instead of giving a concrete answer, he chose to deal in glittering generalities. In his famous Guildhall speech he made this beautiful but idyllic statement:

> And back of us is that imperative yearning of the world to have all disturbing questions quieted, to have all threats against peace silenced, to have just men everywhere come together for a common object. The peoples of the world want peace, and they want it now, not merely by conquest of arms but by agreement of mind.

It is entirely conceivable that the President dealt in these glittering generalities simply because he had no plan, and he had no plan because neither he nor anyone else could work out one that would accomplish all that was promised by the friends of the League of Peace idea in all countries. But the President talking at the Guildhall in Christmas week, and the President talking to the Paris International Law Society at the end of May, were two very different men.

n the Paris address we have a most illuminat-ng, intelligent and splendid statement from a an who was not then "an idealist," "a theo-st," or "an academician," but one of the most xperienced and practical men in all the coun-ies represented at the Peace Conference, be-use he had had six months of the most intensive raining, bumping up against all the great minds f Europe, as well as the selfish minds, the com-ercial minds and all the other minds that go o make up the statesmanship of all the nations f the world. In the six months he has been in urope, President Wilson has jumped from the reshman class to the Senior Class, and in the llowing sentences it is the Senior and not the reshman who is speaking:

> One of the things that disturbed me most in recent onths is the unqualified hope men entertained erywhere of immediate emancipation from the ings that hampered and oppressed them. You can-ot in human experience rush into the light. You ave to go through twilight into the broadening day fore noon comes and the full sun shines upon the ndscape. We must set out to see that those who ope aren't disappointed by showing them the proc-ses of law, the processes of slow disentanglement om many things that bound us in the past. You nnot throw off the habits of the individual imme-ately. They must be slowly got rid of, or, rather, ey must be slowly altered. They must be slowly dapted. They must be slowly shaped to new ends r which we would use them.

The supreme fact that all great changes come owly, that civilization has been thousands of ears in reaching its present stage of advance-ent, is just as true in industrial affairs as in ternational affairs, and it is this supreme fact hich the so-called "radical" and "progressive" dustrial elements, equally with the interna-onal radicals and progressives, cannot grasp. hey discover an evil today and they want it olished by tomorrow. If that is not done, they nounce our society, our institutions, as being efficient, capitalistic and autocratic. Such ele-ents have in Petrograd and Moscow a living xample of how such "over-night" perform-nces do not work.

As a companion piece to President Wilson's atesmanlike utterance in Paris, here is another tterance by another president—not of a nation, though of an important part of a nation—muel Gompers, president of the American ederation of Labor. In answer to the socialists ho criticized the methods of the American Fed-ation of Labor as being too slow, too archaic, muel Gompers said:

> The difficulty is, my friends, that there are some ople who won't understand the real facts of life, d that it isn't declarations which count, but the ercise of normal activities. I want the stars in e heavens. My aspirations know no limit for my llow men, but I am vain enough to believe that have some common sense and understanding of the erations of the human mind. I am not going to ve up voluntarily the labor movement with its hievements of today to look for the chimerical morrow. I think the greatest, the most radical, e most idealistic and the most fantastical declara-on which any body of men has made has been by e Bolsheviki of Russia. And they have lost, not ly the meat from the bone but the bone itself, and ve not even the shadow. They went out for the aximum for the masses, for land, bread and peace, d they haven't their land or bread or peace. We efer to go on in this normal way of trying to make e conditions of life and labor better today than ey were yesterday; and better tomorrow and to-orrow and tomorrow's tomorrow than each day at has gone before.

President Wilson and President Gompers are ow in the same class. They are "reactionaries," ey "have no vision," but, fortunately, they ve brains, and their plans, if not designed to ring a millenium overnight, are practical, con-ructive, and the vital thing is, they work.

HE ISSUE IN HE BERGER ASE

Concerning the action of Congress in regard to the investigation of Victor Berger, the *New York Call* comments:

"Now that the initial antagonism engendered gainst Berger in Congress by the capitalist press, from which the members obtained their sole information relative to the Berger case, has subsided, it is freely admitted the case is the most important that has ever come before Congress. It is not Berger's personality that is in question. . . . This question brings up squarely the fundamental principle of representative government."

The Berger case is, indeed, important in that it is up to Congress to decide whether it shall permit to sit among the representatives of the people a man who sought to defeat the cause of America in its conflict with a foreign foe and who advocated the cause of an autocracy that threatened the democracy of the whole world. In its statement that Congress obtained its information from the capitalist press the *New York Call* simply pursues that familiar line of hypocrisy and dishonesty with which the professional Socialist malcontent seeks to deceive his gullible proletarian audience. The facts of the Berger case are to be found in the editorial pages of Berger's *Milwaukee Leader*, just as facts about Mr. Hillquit, Mr. Debs, Bill Haywood, or the late Kaiser, are to be found in their own writings and speeches.

Berger himself, ignoring the charges of which he was convicted, threatened that "if the capitalist class will abolish the free press and curtail free speech for the working class and imprison its spokesmen, . . . then the workers may be in favor of proletarian soviets that will abolish capitalist jails and capitalist courts with the capitalist laws."

Can Mr. Berger with a straight face pretend that when he opposed our going to war and championed Germany, when he engaged in disloyal activities in violation of the espionage act, he was functioning as a "spokesman" of the working classes of America?

According to the jury that convicted him, Berger, in his paper, the *Milwaukee Leader* sought to hinder the nation in its conduct of the war against Germany. In his untoward activities, Berger, himself of the Teutonic race, was neither better nor worse than a majority of leaders of the Socialist party. Eugene Debs was sent to prison because of his efforts to obstruct the draft, and Debs is not a German. Morris Hillquit campaigned for the office of mayor of New York on the Bolshevist platform of a separate peace by negotiation with Germany. Such a peace—and for such a peace all the radicals united—would have left Germany victorious and the Allies defeated. Instead of "a peace without annexations and indemnities", the Allies and the United States would have had to submit to another Brest-Litovsk betrayal by the undefeated Huns. Was it possible these leaders of the Socialist party actually wanted Germany to win?

The stand is taken by Berger's Socialist friends that he was elected by the voters of the Fifth Wisconsin district by a plurality over his nearest opponent of more than 5,000 votes, and that he, therefore, is entitled under the Constitution as the representative of that majority to take his seat in Congress. This raises the pertinent question as to whether any preponderating body of citizens of German birth or extraction in a district, shall be permitted to use the polls to elect to Congress a man more representative of Berlin than of American public opinion, and whose record and acts are more in accord with the sinister forces who would destroy internal peace and promote strife and civil war in our midst than with the majority of loyal Americans who believe in order and the principles of the Constitution. The Socialists, in contending that Berger represents the majority of voters in his district, have raised the question as to whether such a body of voters supporting a candidate such as Berger, should not themselves be disfranchised.

The inevitable whine about persecution by capitalists and the suppression of free speech is characteristically crawling and cowardly. If the heroic and doughty leaders of the social revolution were ordinarily honest and sincere even with themselves, they would be men enough to stand by their published utterances and stated principles. Caught with the goods, this breed can only squeal.

PACIFISTS AGAIN ABET THE HUNS

Immediately upon the publication of the terms, there broke forth a wailing and gnashing of teeth, not only in Germany itself, but from those identical forces and personalities in this country who had long ago opposed our taking up arms against Germany and who, after the declaration of war, campaigned for a peace of compromise. As if some invisible master had pulled the strings, the Socialists, internationalists, pacifists and radicals of various stripes joined in a wailing chorus of protest. The gentle Mr. Villard rent the air with lamentations of bitter chagrin and rage. The *New Republic*, exasperated beyond restraint, gave way to a self-betraying species of mental rabies. Young Bullit, who with Lincoln Steffens was sent to Russia, offered his resignation as a member of the American Peace Commission, on the grounds, according to reports, of dissatisfaction with the terms. The Central Committee of the International Labor and Socialist Conference at Berne assailed the treaty, and the Women's International Conference at Zurich sent in hot haste to the Peace Conference a protest in which it declared;

"By guaranteeing the fruits of secret treaties to the conquerors, the terms of peace have tacitly sanctioned secret diplomacy, denied the principle of self-determination, recognized the rights of the victors to the spoils and created all over Europe discords and animosities which can only lead to future wars."

The Congress decided, according to despatches, to organize in each country meetings of protest against the terms of the treaty, and voted unanimously at its concluding session to call a world-wide strike of women in the event of another war, even though that war be sanctioned by the League of Nations.

The member presenting this proposal was Fraulein Hertzka, a delegate from Vienna.

The American delegation to the Congress included Miss Jane Addams, Mrs. Florence Kelley and Miss Lillian Wald. Mrs. Florence Kelley has distinguished herself as a pacifist. Miss Jane Addams and Miss Lillian D. Wald were mentioned in the "Who's Who" given to the Overman Committee by Mr. Archibald Stevenson. According to this list, Miss Addams has been chairman of the Woman's Peace Party; vice chairman of the American Neutrality Conference Committee, member of the executive committee of the American Union Against Militarism, a member of the Council of Fellowship of Reconciliation and the American League to Limit Armaments. Miss Addams actively figured in the promotion of the Ford Peace expedition, originally engineered by Madam Rosiska Schwimmer, the German-Austrian agent. According to Mr. Stevenson's list Miss Wald, of the Henry Street settlement, has been a member of the American Neutral Conference Committee, American Union Against Militarism, the National Civil Liberties Bureau, the American League to Limit Armaments and the Women's Peace Party of New York.

Certain respect and esteem are due these women for their humanitarian work. But where the future peace and well-being of the free nations of the world are at stake, such sentimentality as may mislead otherwise tender-hearted and fine women into becoming unconscious instruments of a propaganda inimical to the best interests of America and

Bolshevist Bolsterings

ATTEMPT TO EXPLOIT RAYMOND ROBINS IN ROOSEVELT MANTLE

OF BOLSHEVISM as it attacks and appropriates private property we have heard a great deal from eye-witnesses and people who have suffered thereby. Just how Bolshevist methods may work out when applied to reputations, by infringing upon a truly great man's prestige and fame in the exploitation for personal advantage of another, is instanced in the June number of the *Metropolitan Magazine.*

The *Metropolitan Magazine* achieved a unique and enviable distinction by publishing each month an article by the late Colonel Theodore Roosevelt, that splendid, heroic and sterling American, and champion of the highest and noblest Americanism. In the June issue of the *Metropolitan Magazine,* appealing to the same audience which Colonel Roosevelt had won to that journal, appears the first of a series of articles entitled "Bolshevist Russia—Raymond Robins' Story, told to William Hard." Mr. Raymond Robins, we presumed, had fully told his story. He has told it industriously and repeatedly to various bodies throughout the country. He has expended much in mileage to tell that story. He told it in extenso to the Senate Investigating Committee. Bolshevist friends and sympathizers quoting Mr. Robins as their supreme authority, have given further currency to repetitions of that story. Indeed, it seemed there could be nothing more to tell.

Mr. Robins admitted to the Senate Committee that he favored the recognition of the Bolshevist government, that he favored our giving economic support to the Bolshevist government — a regime whose destructive doctrines, he acknowledged, constitute in his own words "the first challenge of the age to our order." Despite the contrary testimony of many men who have come recently from Russia, Raymond Robins represented the Bolshevist regime of Lenine and Trotzky as being supported by the majority of the Russian population—a claim in which Mr. Robins involved himself in ambiguities and contradictions, and which has been thoroughly exploded as inaccurate and untrue.

KNOW-IT-ALL-ISM AND ITS PROPHET

Mr. Robins boldly presented himself to the Senate Committee as knowing more about Bolshevism than any Allied representative in Russia. Mr. Robins said so himself. In the *Metropolitan Magazine* of June, and to the audience of readers attracted to that journal by Mr. Roosevelt's articles, with an impudence that is as shameless as it is unconscious, Raymond Robins is presented by his personal friend Mr. William Hard, a regular contributor to the *New Republic,* as one who has inherited the mantle, and who speaks with the approval, of that man of gigantic spiritual stature, that heroic American, the late Colonel Theodore Roosevelt. Raymond Robins is represented as having gone to Russia at the urging of Mr. Roosevelt. Raymond Robins is represented as having brought back from Russia reports and conclusions concerning the Bolsheviki to which Mr. Roosevelt "gave the deepest consideration and respect." Confidence in Raymond Robins' Russian story — a story in conflict with the testimony of innumerable men who have come from Russia, a story which, as told to the Senate Committee, included egregious charges of brutality against the brave Czecho-Slovak troops and which cast unworthy reflections upon that bravest of brave women, Catherine Breshkovaskaya—is sought on the ground that it had impressed, if not influenced, the views of Colonel Roosevelt himself. Nor is this all. In what is presumably Mr. Hard's own introduction, the statement is made that Raymond Robins is "welcome" to the columns of the magazine, which was distinguished and honored by Mr. Roosevelt's monthly contributions, "not only because of himself and because of his narrative, which we believe to be of the greatest immediate world-importance in the present world-encounter with Bolshevism, but also because of his intimate association with Colonel Roosevelt." Adequate comment upon the "immediate world importance" of Mr. Robins' oft-told and now rather stale narrative may be found in the fact that the American Government did not see fit to follow Mr. Robins' suggestions, if not urgings, that the *de facto* government of those red murderers, Lenine and Trotzky, be recognized and given economic aid, in the fact that the Council of Four is considering recognizing any non-Bolshevik government in Russia which agrees to convene a national assembly and respect certain decisions of the League of Nations.

Mr. Hard brazenly launches the very man who is most quoted as an authority by Bolshevist sympathizers and supporters, with this totally astonishing declaration:

"Colonel Robins is one of the men who will most effectively carry on the Roosevelt tradition in this country."

ROBINS' PHOTO PLACED IN PARALLEL WITH MR. ROOSEVELT'S

Parallel to a photograph of Theodore Roosevelt, among the greatest of all great Americans, famed and greatly loved, is published a photograph of Raymond Robins, in the uniform of a Red Cross Colonel, whose claim to public attention of late is due mainly to a story which tends in its effect chiefly to exonerate the Bolshevist arch-criminals of the wholesale killings and terrorization charged by reputable witnesses against them.

Were it not for its transparence and utter ridiculousness this effort at exploitation by the use of Mr. Roosevelt's great name and great fame would be akin to profanation. Even as it is, to all who revere Mr. Roosevelt's name this example of fulsome boosting becomes nauseous if only by reason of its lack of mere ordinary human good taste.

Introducing Robins' story, Mr. Hard refers in a brief stroke to the Red Cross Colonel's activities in politics in 1912, and quotes in abbreviated form, a letter from Colonel Roosevelt to Robins just as the latter was setting out for Russia in June, 1917. "My dear fellow, you will do a great work. I cannot say how glad I am you are going over," runs the quotation. Mr. Hard then says:

"When Colonel Robins returned from Russia, he went, of course, to Oyster Bay and laid his final views of Russia before Colonel Roosevelt in person. He also presented them to him in written form. We highly value the response Colonel Roosevelt made, as evidence of the impression produced upon his experienced mind by the national and international facts and by the suggestions of national and international policy which Colonel Robins had brought before him and which he now brings before our readers. This response was:

" 'Dear Raymond Robins: I value your letter. I shall use some of what you say; and, as far as I possibly can, I shall adopt the spirit of what you say in what I am writing as to the lesson of Russia for us.' "

That letter was dated September 3, 1918. That letter was written soon after Robins' return and before he became so prominent in the role, self assumed, of knowing more about Russia than any Allied representative who had been there. To the casual reader it might appear that Colonel Roosevelt had accepted almost in *toto* Robins' views on the Russian situation. But Mr. Hard, the chronicler, does not venture to let this assumption by deduction stand without qualification, for he immediately adds:

"We do not mean to say that Colonel Roosevelt concurred in all the conclusions and in all the suggestions made by Colonel Robins regarding Russia and regarding American policy toward Russia. Nor do we know, on the other hand, that he dissented from them, at any practical point, in questions of action by our Government, when he had learned the facts which Colonel Robins had reported. What is important to us is simply that Colonel Roosevelt, with his knowledge of public men and with his knowledge of public affairs, national and international, gave weight—and great weight—to the findings and opinions of Raymond Robins, and gave confidence—and great confidence—to Raymond Robins himself."

What Robins reported to Colonel Roosevelt does not appear. Presumably that report could not have differed very materially from his testimony before Senator Overman's committee that investigated Bolshevism. There, Robins, of course, was sworn to "tell the truth, the whole truth, and nothing but the truth." And so he could hardly have told Colonel Roosevelt anything contrary to what he told the committee, and therefore his testimony in Washington may be taken as a summary of that private report sent to Oyster Bay.

MR. ROOSEVELT'S OPINIONS *VS.* ROBINS'

Robins testified before the Overman committee that he personally found reports of Bolshevist assassinations to be untrue; that the Germans had absolutely nothing to do with the Red Guard, and that German officers did not command the Guard.

"Up to the time I left Russia," testified Robins, *"the thing that was constantly in my mind, again and again, was the lack of vindictiveness, was the lack of actual destruction of life under the circumstances. If it had been in America, if it had been in any other land I know of, where a mob had taken power like that and had the rifles back of them, I should have expected vastly more destruction."*

Just how, in fact, was Colonel Roosevelt "impressed" by reports of such a pacific revolution, by that tale about "the lack of vindictiveness, the lack of actual destruction of life" in the Bolshevist overthrow of all order?

Writing in the December number of the *Metropolitan,* after, of course, he had received Robins' report in August, Colonel Roosevelt said:

"Before our eyes the unfortunate Russian nation furnishes an example on a gigantic scale of what to avoid in oscillating between extremes. The autocratic and bureaucratic despotism of the Romanoffs combined extreme tyranny with extreme inefficiency; and the Bolshevists have turned the Revolution into a veritable Witches' Sabbath of anarchy, plunder, murder, utterly faithless treachery and inefficiency carried to the verge of complete disintegration."

In the same article Colonel Roosevelt diametrically opposed Robins' report as to Germany not having aided Bolshevism, when he said:

"Russia would have been saved from the abyss

into which she had fallen, for in her inevitable revolution the Bolshevists would not have had the German support which has enabled them to wrench loose the very foundations of their country."

Before the Overman committee Robins admitted that he advocated that the Bolshevist government should be recognized and be given the economic support of the United States, despite the fact that, as he had previously admitted, Lenine and Trotzky purposed to overthrow by revolution the American Government as well as all other governments.

What Colonel Roosevelt thought about recognizing the Bolshevists was plainly shown in his article on the League of Nations in the *Metropolitan Magazine* of January, in which he said:

"Russia's action during the last year would make any international guarantee of action on her part worth precisely nothing as a warrant for promise or action on our part."

And previously, in the December *Metropolitan,* he brought this out strongly when he declared:

"Since the Bolshevists rose to power, Russia has betrayed her own honor, and the cause of world democracy, and the liberties of the well behaved minorities within her own borders, and the right to liberty and self government of small well behaved nations everywhere."

CAPITALIZES ACQUAINTANCE WITH REVERED DEAD

Yet in the face of the published expressions of this courageous and sound American, in the face of his stern repudiation of Bolshevism, Mr. William Hard, writing in the *Metropolitan,* seeks to impress the very readers who gave loving confidence to the great dead, with the assertion:

"Colonel Roosevelt * * * gave weight—and great weight—to the findings and opinions of Raymond Robins, and gave confidence—and great confidence—to Raymond Robins himself."

To capitalize one's acquaintance with the distinguished dead may, to many people, seem a matter of very questionable taste. To seek to win confidence in Mr. Raymond Robins and his Russian story on the grounds that Theodore Roosevelt "urged Colonel Robins to go to Russia" and "gave weight to the findings and opinions of Raymond Robins" may seem like going beyond the lines of decent press agency, especially if facts do not support so bald a pretension. Prodded by Senator Overman as to whether he would be in favor of America recognizing a government which he had admitted was a menace to the world, Mr. Robins at the Senate hearings answered:

"As I understand that the question of recognition of a government does not rest upon the character of the government. If the government is really the government of a people, that is all that any foreign government has a right to inquire into."

"There is this Soviet form which the Russian mass, the peasants and workmen, have adopted as a framework," Mr. Robins continued. "'All power to the Soviet,' was the cry on which Lenine and Trotzky took possession of the government in Russia * * * They really, discreetly—or rather cunningly—with real political judgment saw that the people liked their self-governing Soviets. * * * I think we found, in course of time, in Russia that there was this definite framework that had grown up out of their historic past, that the clever political minds of the Bolshevik leaders fell upon as the way to get into power; so I think there is really something there in structure as well as the actual Bolshevik domination."

"Is there any way possible for the people of Russia to get rid of Lenine and Trotzky without a revolution?" asked Senator Overman.

"I should say so, absolutely, sir. I should say that the moment any considerable mass in Russia wants to get rid of Lenine and Trotzky they can do it," replied Mr. Robins.

In other words, according to Mr. Robins, Lenine and Trotzky rule by will of the majority and not by Red Guard terrorism, and in the Soviet system, controlled by the Bolshevik autocrats, the majority of Russians have what they want.

"The reason that their power has held," pursued Mr. Robins, speaking of Lenine and Trotzky, "has been that for the time they expressed as between the old experience of the past and the new experience, a larger expectation of hope and opportunity for the mass of the peasants and workers of Russia than they had before, and as long as that expectation holds they will support Lenine."

In the December *Metropolitan* article, before quoted, Colonel Roosevelt said:

"There are no worse enemies of America than the American Bolshevists and the crew of politicians who pander to them. We ought therefore clearly to understand what the Bolsheviki attempted in Russia and what after a year of power they have done for, or rather to, Russia. *They utterly repudiated the idea of a democracy where every man is guaranteed his rights and is limited in his power to do wrong.* Their effort was to create a Marxian socialistic state, based on the class conscious purpose of the proletariat to destroy and rob every other class. *They oppressed and plundered impartially all former oppressors and wrongdoers and all former champions of fair dealing and liberty. They attacked the erstwhile corrupt bureaucrat or wealthy landowner who had neglected all his duties not a whit more venomously than they attacked the small shopkeepeer or skilled mechanic or industrious farmer or thrifty workingman who, because he had saved some money and had begun to live decently, they denounced as having adopted 'bourgeois standards.'* They definitely sought to realize the stark formulas of Marxian socialism; and therefore they have made a genuine contribution for warning and prevention against destructive adventure of a similar character in our own land. The followers of Trotzky and Lenine, like the followers of Robespierre and Marat, have just one lesson to teach the American people: what to avoid."

ROOSEVELT DENOUNCED LENINE'S AGENTS

And as evidence that Colonel Roosevelt was not influenced by Robins's assertion that the Germans did not aid the Bolsheviki, the article went on:

"In the peace treaty of last March the Russian Bolshevists and the German autocracy joined against the free nations. Anarchy and despotism joined against liberty. The representatives of the privilege of a proletarian mob and the representatives of the privilege of a plutocratic oligarchy struck hands against the men who believe in no privilege. Germany recognizes that anarchy destroys freedom; therefore Germany encourages anarchy in every land to which she cannot apply her iron despotism, for she wishes to destroy every nation she cannot enslave. The Bolshevist leaders—it matters not whether they were sinister visionaries or the corrupted agents of Germany—played Germany's game."

These "sinister visionaries or corrupted agents of Germany" were the men Robins boasted he visited at least three times a week at the Smolny Institute and under whose auspices he spoke in parts of Russia as "Comrade Robins."

Whether he gleaned it from reading Robins' ideas on Bolshevism, since expressed publicly in speeches and before the Overman committee, or not, Colonel Roosevelt had no illusions as to the menace of the insidious propaganda put forth in America by friends or agents of Lenine and Trotzky. In the December *Metropolitan* he said:

"Prominent, though not always powerful, among the various exponents of American Bolshevism are the professional intellectuals who vary from the softhanded, noisily selfassertive frequenters of frowsy restaurants to the sissy socialists, the pink tea and parlor Bolshevists who support what they regard as 'advanced' papers, and aspire to notoriety as make believe 'reds.' I call these persons 'intellectuals' in deference to the terminology of European politics, for they ape the silly, half educated people and the educated able people with a moral or mental twist, who in almost every European country have found notoriety and excitement in fomenting revolutionary movements they were utterly powerless to direct or control. Unless the term intellectual is to be construed as excluding either character or common sense, it can be applied to them only in irony.

"In our own vernacular they have been styled the exponents of Highbrow Hearstism or Bolshevism."

MR. HARD'S STORY A REHASH

Mr. William Hard's story is little more than a rehash and reassembling of the testimony advanced by Robins before the Senate investigating committee, except that it is dressed and garnished after Mr. Hard's best style and that it presents the Red Cross Colonel in a heroic role such as he could hardly, with good grace, have assumed himself. Mr. Hard is manifestly a sincere admirer of the Red Cross Colonel. We have had it from Mr. Hard that they were friends long ago in Chicago. Were it not that Mr. Hard, led away by his enthusiasm, "lays it on too thick," his article as a piece of press agency work might be fairly effective. But hero-worship, except when a Carlyle does it, is dangerously prone to become mawkish. Picturing the contrast between his doughty American hero and an assemblage of Russians, Mr. Hard draws this sketch of his friend who is advanced for the role of "one of the men who will most effectively carry on the Roosevelt tradition":

"He is among the Americans on whom the American climate and environment have perhaps already had a physical effect. His complexion is quite dark, with not a little in it, I should say, of a coppery coloring; and his black hair has an Indian straightness; and his eyes have the searchingness of the forest and the prairie; and the contours of his face have a weathered suggestion of the modelling done by America on the faces of those who preceded us in our present hunting grounds."

And more in the same tone—very much, is it not, like the rousing oratory of the election spell-binder campaigning for a candidate?

Colonel Robins preceded his eulogist in eulogy when he presented himself before the Senate Committee as having gotten an "outdoor point of view" in Russia. Mr. Hard further pictures him as "knocking his shins" against the Soviet "when diplomats were only hearing about it."

"The Indoor Mind," writes Mr. Hard, "goes to a country like Russia, where seven per cent of the population had been masters of everything. It finds the seven per cent swept out of mastery and the ninety-three per cent in full control."

Mr. Robins, with the "Outdoor Mind," is represented as getting in touch with the ninety-three per cent, and the modest Mr. Robins by his Boswell is made to say:

"If I do not know more about the opinions of the common soldiers and of the common workmen who made the Bolshevik revolution of 1917 than any other foreign representative then in Russia, it is because my intelligence was not equal to my opportunities."

Mr. Hard's version of Mr. Robins' ubiquitous activities is equal only to Mr. Robins' own ac-

count. Telling of his success as a busy platform orator in Russia, Hard writes:

"His hearers would listen attentively. Robins would speak for thirty minutes, and would then answer questions for two hours. After testing audiences in many parts of the world, Robins has come to the conclusion that a Russian audience can stand more punishment than any other audience living. The peasants and workmen who listened to him in armories and arsenals and barracks were willing to listen, and also to talk, to the end."

In the course of cross examination at the Senate investigation, Mr. Robins was asked by Major Humes:

"Do you speak Russian?"

"No, sir, only very poorly," admitted the Red Cross Colonel.

"Then," said Major Humes, "the information you got, and the conversations which you had at various times with Russians and those who could not speak English was through an interpreter?"

The rousing orator to the common soldiers and common workmen of Russia, who held his audiences spellbound and answered their questions for hours, conceded this was so.

ROBINS' INVESTIGATOR NOW SECRETARY TO LENINE

It was brought out at the Senate hearings that Mr. Robins' choice of secretary and interpreter fell upon Alexander Gumberg, a selection in which Mr. Robins showed singular judgment. For Gumberg's brother, who had adopted the Russianized name of "Sergius Zorin," was a member of the Lenine-Trotzky Bolshevik crew and occupied the position in the Bolshevist government of Minister of Posts and Telegraphs. Another person who worked for Mr. Robins in Russia—one of his "windows" presumably—according to the testimony of Louise Bryant, was Boris Reinstein, a Russian Jew, who had lived in Buffalo, a Socialist writer, who later became secretary to Lenine. Among Mr. Robins' choice and selected staff of "investigators"—according to Miss Bryant—in addition to Gumberg and Reinstein, were Reed and Williams, both in the service of the Bolsheviki, and Miss Bryant herself. Rhys Williams, John Reed and Boris Reinstein were all members of the Bolshevist Propaganda Bureau in Petrograd. It was thus made clear that Mr. Robins enjoyed extraordinarily close connections with headquarters, and it will be seen just what unique facilities Mr. Robins enjoyed for getting his much self-advertised "Outdoor" point of view.

Ambassador Francis, in his testimony before the Senate Committee, told a good deal about Mr. Robins' activities in Russia. Mr. Francis stated that the Bolshevik looked upon Robins as their friend, and told of Mr. Robins' efforts to secure the recognition of the Bolshevik government. On May 15, 1918, at the railroad station at Vologda, on his way out of Russia, Mr. Robins, said Ambassador Francis, "told an Associated Press man there, and a man named Groves, one of my employees, that if he could get one hour with the President he could persuade the President to recognize the Soviet government." According to Ambassador Francis, Mr. Robins was said to have acted as a courier from the Bolshevik government and to have carried communications addressed to the American government over the head of the Ambassador. Whether these were ever presented or not, Mr. Francis did not know.

MR. ROOSEVELT'S WARNING

One of the first speeches delivered by Colonel Roosevelt after the presumable receipt of Robins' report late last August was his address at the dinner of the National League for Women's Service, presided over by Miss Maude Wetmore. The ideas of the Red Cross Colonel must have been fresh in the real Colonel's mind and any *"weight"* or *"confidence"* he might have had in Robins might reasonably be expected to be manifest in this speech. Yet hardly a fortnight after getting Robins' report, Colonel Roosevelt, as recorded in the *New York Sun,* of September 19, 1918, said:

"I take little interest in the discussion as to whether when the Bolsheviki rip Russia asunder they do it because they are corrupt or because they are incompetent fools. What I am concerned in is the results of what they did. They have, according to their capacity, done all the damage possible to the free nations of the earth, and they have done it in the name of theories which foolish dreamers in this country would have us believe as desirable to follow."

Mr. Hard should have remembered that speech before he wrote, in touting Robins' story in the *Metropolitan*:

"Nor do we know, on the other hand, that he (Col. Roosevelt) dissented from the suggestions made by Colonel Robins regarding Russia."

The record stands for itself.

Colonel Roosevelt went on record in opposition to the Robins' conclusions as to the Bolshevist government, when on October 6, 1918, barely a month after receiving the Red Cross Colonel's ideas about the United States recognizing Lenine and Trotzky, he made a Liberty Loan address at Billings, Montana. In that speech, Colonel Roosevelt handled the Non-Partisan League and its Bolshevist doctrines without gloves, in its own stronghold.

Again, in a ringing speech at the Illinois Centennial, at Springfield, on August 26, 1918, Colonel Roosevelt defined in no uncertain terms his opinion of the Bolsheviki—of the Russian and American "intellectual" variety. As reported in the *New York Sun* the next day, he said:

"The pacifists are the American Romanoffs and Bolsheviki. For the moment the pacifists and internationalists and pro-Germans dare not be noisy. But let our people beware of them as soon as peace negotiations come and from that time forth. They have worked together in the past and they will work together in the future, the pro-Germans furnishing the most powerful and sinister element of the combination, while the pacifists and internationalists prance in the foreground and furnish the rhetoric."

It is probable that Colonel Roosevelt had studied Robins' written report at that time. At any rate, he had received the Red Cross Colonel's verbal opinion of the Bolsheviki. Yet for Colonel Roosevelt to class the very people who have been making such ado about Robins' reports and their importance, for Colonel Roosevelt to class the very people who have of late hailed Raymond Robins as their prophet with "pacifists and internationalists and pro-Germans" may tend to indicate just what "weight—and great weight—and what confidence—and great confidence—" Colonel Roosevelt gave to Robin's opinions and to Raymond Robins himself.

T. EVERETT HARRÉ.

Out of Their Own Mouths

(*Continued from Page* 6)

Commenting on the disposition of the Saar valley:

"There is no excuse in law or in morals for raising the question of sovereignty in the valley," says this organ of the Crolys, Weyls and Lippmanns. "It is a German valley * * * The Saar will furnish an embittered Germany not only a real reason for discontent, but a symbol with all the necessary moral attributes for cultivating a policy of revenge.

"The injustice will rankle and fester, and into it will be injected the poison of another injustice. Germany will point out that the principle of nationality has been applied only when it injures her and never when it might favor her."

The prohibition of union with German Austria, continued the *New Republic,* is a violation of Mr. Wilson's principles. "The drastic Polish cessions" are "a terrible blow to Germany." Doubtless, early in the war Germany had not the faintest anticipation as to this outcome! How well the *New Republic* interprets and expresses the German mind!

"It looks as if millions of Germans would have to emigrate or blow up," pursued the *New Republic.* "The Germans, in our opinion, will quit. A government may sign this peace, but it will never be altogether executed. For the trouble with the treaty is that it gives the Germans too many good reasons for feeling themselves thoroughly abused."

One might gather, from all this, that in the war Germany was one of the injured parties, that she had committed no crimes deserving of punishment, that in bringing her to account the Allies had betrayed the hopes and future of the world.

"The world which will result from the document can by no stretch of language be made to agree with the picture which the President had in mind when he went to Paris, or when he spoke in the days of his glory of what was to be accomplished. * * * By the standards of which he himself was the most eloquent spokesman he has failed."

In its issue of May 24, the *New Republic* referred to the treaty as "this inhuman monster," hatched by European politicians "with American complicity." "Their handwork will breed cynicism, hypocrisy or vindictiveness in the minds of future generations."

"CANTS WHICH ARE CANTED"

The authors of the Versailles treaty, in the opinion of the *New Republic,* "do this thing because they themselves are the unconscious servants of the cupidity and the vindictiveness which infect the psychology of an inhumane and complacent capitalist society. They crave at any cost the emotional triumph of imposing on the German nation the ultimate humiliation of solemnly consenting to its own abdication as a self governing and self respecting community."

"In our opinion the treaty of Versailles subjects all liberalism and particularly that kind of liberalism which breathes the Christian spirit to a decisive test. * * * It is essential that the ratification should not take place with the connivance of the sincerely liberal and Christian forces in public opinion.

"The Treaty of Versailles is damned because it does nothing to moralize the future exercise of political and economic power. * * * What it treats with utter ignorance is the Christian doctrine of atonement and redemption. At a crisis in the history of civilization, the rulers of the victorious Christian states conclusively demonstrate their own contemptuous disbelief in the practical value of Christian moral economy."

In this prating about "the Christian spirit" and "the Christian doctrine of atonement and redemption" by a magazine edited by Messrs. Walter Weyl and Walter Lippmann, which is read as their gospel by the intellectual "yellows," and which carries on the propaganda of that covert and esoteric "internationalism" by which the spiritual alienry would undermine all nationality and disintegrate the Christian civilization of the world, there is something unconsciously and grotesquely ironic. It would seem this tribe of "intelligentzia" are sublimely "dark" to the fact that some people in this world see through them thoroughly and realize exactly what they are up to, and that these appreciate fully that the whole program of Bolshevism and species of internationalism insidiously preached by their "journal of

opinion" is in its essence and at its base sinisterly anti-Christian.

"It seems an unavoidable conclusion that the presence of America in Europe and the promise of her continued participation has aggravated the national claims of every one of the Allied peoples," says the *New Republic* of May 31, continuing its assault upon the treaty. "America gave them a sense of security which they have used in order to press to the limit demands they would not have dared to make under other circumstances."

Does the *New Republic* imply that if America had not been present in Europe, if America had not sent troops to Europe and participated in the war, that it would have been Germany, and not the Allies, who would have "pressed" demands under the "other circumstances"? Or that, at least, in case of a stalemate, which it predicted, with a peace through compromise, which it had urged, the Allies would not have been in a position to dare press demands for adequate reparation from Germany? Would such a peace have been more acceptable to the editors of the *New Republic,* more desirable; in their novel opinion, more just?

"The effect of Mr. Wilson's popularity," pursues this organ, "has been not to democratize the settlement, but to prevent the democracies from influencing it. They gave him their trust and affection. They believed he would fight their battle in the secret meetings. They held their tongues so as not to embarrass him, and the result of his failure was that they were neutralized. They expected America to do for them what after all they could do only for themselves, and the result is a peace which no government in Europe would have dared to propose to its people were it not temporarily painted up with the fading glory of Wilson the democrat. Mr. Wilson's presence in Paris has been mischievous for Europe just because he drained to himself practically all the reason and sense and humanity in Europe, and then surrendered them."

"THAT MEN SHOULD PUT AN ENEMY IN THEIR MOUTHS TO STEAL AWAY THEIR BRAINS!"

Had the Allied nations been so exhausted that they would have been obliged to compromise with Germany at the very time that the *New Republic* and the *Nation* were urging peace by negotiation, would the terms that Germany would have proposed have constituted the terms of a just peace, a humane peace, a stable peace? Would the Kaiser's presence at the dictating council not have been "mischievous"? So unsatisfactory does the *New Republic* find the treaty that it now proposes boldly that the American Senate pass a resolution repudiating any commitment by the United States to support by its economic resources, its military forces or its foreign policy "to intervene in the territorial or economic arrangements of Europe or Africa." The *New Republic's* suggested resolution would leave "the execution of the treaty to the European powers concerned." In other words, we withdraw—and let Germany foil the Allies as best she may.

Having failed, first, in its policy of defeatism, second, in bringing about a compromise peace, third, in estranging America from the Allies and the securing a treaty that would have let Germany off easy, this sheet openly advocates that the United States withdraw its support from the enforcement of the treaty which the Allies have been able to dictate. In whose interest?

In whose interest was the *New Republic's* propaganda of defeatism?

In whose interest was the *New Republic's* efforts to bring America and the Allies to talk peace with Germany at a time German imperialism was unscathed and German militarism undefeated?

In whose interest was the *New Republic's* campaign of slander against the Allied statesmen?

In whose interest are its frantic and enraged efforts now to undo the terms of the treaty?

After its despairing rage over the terms of the terms of the treaty, a new note of optimism, of faintly glowing hope is heard in the *New Republic* of June 7. This optimism concerning "a peace that will last" is founded not on the basis of the Versailles treaty and its enforcement, but is inspired by "Germany's Counter Proposals."

"It is," says the *New Republic,* "possible to build up an enforcible peace on the foundation of the German offer."

"The Germans propose an indemnity up to twenty-five billions. That sum is probably more than sufficient to cover all the items of damage specified in the armistice agreement."

Having long championed a compromise peace, a patched-up peace, a peace of negotiation with Germany, a peace presumably in which the Allies were not absolute dictators, the *New Republic,* flushed, sanguine, inspiritedly declares:

"The Peace Conference can now take advantage of the leverage they have gained to make a peace that can last. It is hard to believe that the conference will act on the assumption that all its earlier determinations, however impractical and disturbing to the peace, must stand."

In whose interest is this "peace that can last" which it is possible to build "on the foundation of the German offer?" In whose interest will be concessions to the German plenipotentiaries, deference to the German objections, abdication by the Allies of their terms?

Campaigning for subscribers by means of a postcard just sent broadcast, the *New Republic* asks: "Do you long for the truth and nothing but the truth?" And it proceeds:

"What you are suffering from is an urgent need for a publication that is not 'lined up' with any party, class or creed—that is nobody's organ."

So far as that great body of Americans who backed the war to a military decision in victory over Germany is concerned, "nobody's organ" is right! As for not being "lined up," a comparison of the frothing-mouthed expressions of German leaders and the German press with the expressions of the *New Republic* regarding the treaty may adequately dispose of that claim. How many American fathers and mothers who gave their own blood in the struggle for victory, how many valiant American boys who have come back after having braved a fiendish foe, will desire, after reading this sheet's final assault upon an American and Allied peace, to take a "special acquaintance subscription for only $1 * * * and defy the press agents of the world" it is not difficult to hazard. However, it is not improbable this sheet will at least find an enthusiastic and sympathetic response among Hun sympathizers, "intellectual neutrals," the "internationalist" tribe who own no country and no country's cause, unfrocked clergymen, dismissed college professors, the soft-handed, the fish-hearted "pacifists," "conscientious objectors," "warm slaves as had as lieve hear the devil as a drum, such as fear the report of a claiver worse than a struck fowl or a hurt wild goose, . . . with hearts in their bellies no bigger than pins' heads, . . . the cankers of a calm world." Among such, doubtless, will be many inspired to "pin a dollar bill or check" to the post-card.

"BUT WOE AWAITS A COUNTRY WHEN SHE SEES THE TEARS OF BEARDED MEN!"

Mr. Oswald Garrison Villard's *Nation* pursued a policy very similar to that of the *New Republic.* After the signing of the armistice Mr. Villard himself visited Germany, the land of his forefathers, and sent back harrowing accounts of the starvation brought about in Germany by the cruel Allied blockade. Despite the contrary testimony of American troops in Germany, he pictured German babies as perishing for lack of milk; he drew heart-rending pictures of the tragedy of the empty, aching German belly. Upon the publication of the terms of the treaty, Mr. Villard, in common with the *New Republic,* entirely lost his head, his poise, his well-bred restraint.

The world, he cried out, was prepared "for a rigorous peace * * * But it was not prepared for a peace of undisguised vengeance, for a peace which openly flouts some of the plainest dictates of reason and humanity, repudiates every generous word that Mr. Wilson has ever uttered regarding Germany, flies in the face of accepted principles of law and economics, and makes the very name of democracy a reproach."

It was this same pacific Mr. Villard who commented thus in the *New York Evening Post* of May 10, 1915, of the sinking of the Lusitania:

"Had the submarine given thirty minutes' warning to the crew and passengers of the Cunarder, the exploit would have gone down in history as one of the most brilliant in the annals of warfare."

And now this same gentle soul, which could regard the sinking of the Lusitania in the light of a possible brilliant naval exploit, is rent with tearful anguish over the cruel and heartless terms of the treaty. Perhaps Mr. Villard's manly grief and noble indignation, finding such sympathetic echo in Germany itself, may help to interpret the singularly "independent" course of his journal during the progress of the war. He bewails out of the bitterness of his soul:

"The German people, who, it was repeatedly affirmed, had had no part in bringing on the war, and who at the worst were the helpless instruments of its prosecution, were to be freed from tyranny and given a chance to take their place among the peoples who love liberty and practice righteousness. * * * Germany and the German people are virtually to be destroyed. * * * As the treaty stands, Germany is to be stripped of its means of defense as well as of offense, while its conquerors hover about it fully armed. * * *"

And with ever higher key, Mr. Villard's lamentations rise:

"The heinousness of its offending, the calculating harshness of its demands and impositions, the gross repudiation of moral obligations and good faith which it involves, its gross injustice to the Allied people themselves and to their moral standing, become only the more apparent as its terms are studied. It is a peace of vengeance, not of justice. * * *"

Upon that wicked tribunal which indicted Germany and held her to account, as a modern Portia accusing the wicked Allies of insisting upon their pound of flesh, Mr. Villard points a finger of annihilating accusation:

"There has been enthroned at Versailles an arrogant and self-sufficient autocracy of five Great Powers, two of which are practically at the mercy of the other three; an autocracy owning no authority save its own will, deliberating in secret, parcelling out privileges and territory as best serves its own interests. * * * It is this Versailles autocracy which, in crushing Germany as a world Power, has itself assumed the role of world dictator. * * *

"How Mr. Wilson has repaid the confidence which the peoples gave him, all the world now knows," Mr. Villard woefully vituperates. "The one-time idol of democracy stands today discredited and condemned. * * * The camouflage of ethical precept and political philosophizing which for long blinded the eyes of all but the most observing has been stripped away, and the peoples of the world see revealed, not a friend faithful to the last, but an arrogant autocrat and a compromising politician."

BY THEIR OWN WORDS

Imperial Germany fostered and financed Bolshevism in Russia. Imperial Germany launched a world-wide propaganda the purpose of which

(*Continued on page* 19)

What — If Not Compulsory Insurance

(*Continued from Page 2*)

Mr. Straus: No, but they have a committee that looks into the qualifications as thoroughly as such a thing can be done.

Dr. Lee K. Frankel, President American Public Health Association and Third Vice President Metropolitan Life Insurance Co., New York, said in part:

"It seems to me that there are certain fundamental things to be considered in this connection. We do know that practically the greatest amount of poverty we find today in the United States is due to illness. The records of practically all the charitable societies and relief organizations show that from fifty to seventy-five per cent of the families under their care have been reduced to their present condition by illness. On the other hand, is it not clear that a considerable part of this sickness is not caused by industry? Much of the illness is due to lapses and shortcomings in the way of health administration.

"Of course, the primary purpose of sickness legislation is to replace the financial losses the individual suffers during his period of illness. If you are not going to do that through an insurance scheme, then is it not a fit matter for us to study to determine whether it can be done otherwise? I think one of the interesting developments recently with us is the fact that industry is realizing the value to it from a utilitarian standpoint of paying wages to responsible honest workpeople during illness, as a purely voluntary matter on the part of the industry. Large commercial plants are assuming that payment of wages during illness to individuals in their employ who are honest and upright is something to which they are entitled,—simply as a matter of good faith and good will between employer and employee.

"It seems to me that an opportunity is offered for a committee of this type to study other substitutes that might be suggested in lieu of what apparently is contrary to the belief of many here—a scheme of compulsory insurance with the machinery that that entails, complicated as it is in the nature of espionage and conducted under our political conditions—and one that has been reverted to by The National Civic Federation before. I happened to be the chairman of the Federation's committee which criticized the original bill presented in the New York legislature.

NEED OF ADEQUATE MEDICAL CARE

"Another matter we must consider is the question of giving the employee adequate medical care. First, we must cover the need of wage payments and then comes the matter of prevention of disease. Here comes the matter of the question of adequate preparation by the state for the conduct of health departments—state and particularly local—so they may have the machinery at their disposal for the reduction of what are today known to be preventable diseases.

"What are the possibilities of development of group practice in medicine applicable to large groups of employees and in particular to small groups? The difficulty has been that the large plants are able to do these things. But how about the employer with 5 to 15 employees? He is not able to make provision along this line. What about the casual, the unskilled and the periodical workers? They require provision just as much as the others.

"These are the things I believe a committee of this kind can sit down and study out; they require careful consideration and deliberation:

1. Provide financial benefits during the period of illness.
2. Give better medical care than is feasible today under any contract plan yet devised either in a plant or under any bill.
3. How to encourage the State to do the one thing the State is thoroughly justified in doing, employ and equip its health departments so as to reduce disease and possibly make provision for adequate medical supervision, inspection and care of the workpeople in the state."

Dr. Charles P. Neill, of the Southeastern Railways, Washington, D. C.:

"I should like to second the suggestion along the same line. The discussion so far seems to have been that the present trend of legislation is unwise. There is no question about that. On the other hand, we are facing a proposition—there is a large and important movement in this country as well as others for handling sickness on a group basis. It will keep on growing. This committee should analyze the defects and the merits.

"In connection with Dr. Frankel's suggestion, when you have taken care of all the plants, there are 49,000 men in Cleveland who have no employment and they are going to get sick, probably more frequently than if they were working. Who is going to take care of them? They are probably going to cheap physicians. We may have to come to some sort of state insurance; you can call it anything you want to. The state takes care of them now, with these two radical defects—one, they do not get decent treatment and two, the tax for the burden they are compelled to carry is levied on the basis of the tender-heartedness of the men who pay for it. This, of course, is rotten. In the third place, the thought of charity breaks down the self-respect of a man and the better class do not want it. The question is whether we are going to adopt an intelligent sane method or let the old scheme continue. We have got to change. It seems to me we should work out some plan and be in the position to say we are going to recommend certain other constructive proposals that will eliminate present defects. I do not believe anyone will say we do not need anything. We all know the need for relief."

Miss Margaret Loomis Stecker, of the National Industrial Conference Board, Boston:

"As this is a sickness problem, the National Industrial Conference Board has gone into it from that point of view. Is the sickness problem the first question? Of course, the answer is Yes. And is health insurance the best way to meet it? The conclusion we have come to is that in advocating insurance for sickness you are putting the cart before the horse, because it is foolish to offer insurance to meet a problem a large part of which can be prevented entirely by the elaboration of machinery existing at the present time. I think that is the main contribution that the Conference Board has to make. There will be sickness and there will be people brought to poverty because of sickness.

"I am not so sure as Dr. Frankel that sickness is the cause of poverty so directly. It seems to me that the two are closely related—one of those vicious circles so to speak in which it is very difficult to find the beginning; but the position of the Board is that preventive activities should be engaged in and tried out under the best conditions and that the public health work especially should be improved. After this machinery has been tried out, there may still be a need for other things. Before that, however, there should be worked out an organization of the agencies for preventing sickness rather than paying compensation for loss of wages through sickness, a large proportion of which might be prevented if ill health and the conditions leading to ill health were taken in hand.

RECORDS SOON TO BE AVAILABLE

"The Conference Board is now analyzing the hundreds of sickness records kept by many representative plants over a representative number of months last year, showing causes of absence. The results of that investigation should bear directly on this problem. The results are not yet available but it is anticipated that they will be soon."

Miss Mary Wood, Chairman Legislative Committee, Federation of Women's Clubs:

"All sane and sensible people are taking notice of the great change in conditions and we cannot close our eyes to the revolutionary methods that are coming to us. Personally, I used to be very much opposed to this question of health insurance; I felt that it was rather socialistic. I felt that there were great objections to the Workmen's Compensation law—and whatever way you put it, the public always pays. Now, the question is, How is it to be paid? In regard to the health insurance bill recently introduced in Albany, the women interested in it —the clubwomen—felt that it was not perfect, but they did go on record as favoring the principle of some sort of insurance by which working people could be possibly compelled—the chairman does not like that word but we are all compelled to be obedient—to set aside a certain sum which would relieve them from the feeling that they were accepting charity, where they had contributed in connection with the employer to a fund which would take care of them during illness. We shall come to it sooner or later. I am glad that this is a real committee to work out some sensible plan and one that will not be objectionable to anybody."

H. E. Miles, President Racine Sattley Co., Racine, Wis.:

"I am not afraid of this word 'compulsion.' Society rests upon compulsion. Law is compulsion. In my state a law was passed to compel the release of every child after 8 hours' work a day. That was compulsion; but the minute the law was passed, every employer was delighted. They said 'If John and Jim are doing it, we are all for it. It should have gone into effect 20 years ago.' We have a definition, too, as to socialism which we apply in considering all legislative proposals. It is this: Does this weaken the personal initiative? If it does, however that law is worded, it is socialistic. Does it stiffen the back of the worker, does it energize his will? If so, no matter how it is worded, it is not socialistic. It is unendurable that 51 per cent of the population can control 49 per cent, but I think there is a type of social insurance which is something like the education of the young. We all know we should do it so we express a common judgment in terms of agreement which is, in a word, compulsion. Compulsion is nothing but a common judgment expressed in terms of agreement. In many of our states they know that the boys should be trained and made worth while but not one starts this work because Jim is waiting for John. Through compulsion employers insure against accidents. I was against it at first; I thought it would weaken the employees. However, no one puts his finger voluntarily into a saw. We can go by the road toward compulsion if we have the intelligence for it."

Dr. Frederick L. Hoffman, Third Vice President and Statistician Prudential Life Insurance Co., Newark, N. J.:

"I think it very false and illogical to draw from statistics concerning poor derelicts on the scrap heap, conclusions supposed to be applicable to the health of millions of wage earners who work honestly for a living. These derelicts are in poverty, always have been in poverty, and that condition is congenital in many of them. They are ignorant or imbecile in many cases—not competent. First, as to the how or why of social insurance, we must get that from only

e country in the world. The evidence from ermany is overwhelmingly against it, showing to be a wrongful practice as indicated by all ports during the past six or seven years. These l show that malingering has enormously inreased. The only country we care about is ngland. If the evidence available from Engnd in 1911 showed that it was a success, they ould have had it here—the American Associaon for Labor Legislation. They would have id from a thousand and one medical officers, bor leaders, and so forth, overwhelming evience proving its success. Here is a book by Villiam Brend entitled 'Health and the State.' is an indictment so condemning that it simply aves nothing for the English system and shows iat it leads to ruin of the independent laboring ement of that country.

BRITISH INVESTIGATION PROPOSED

"I think we should make a fair and impartial ıvestigation in England of their system and hus find whether we should be for or against . Their material is not in any foreign lanuage and the laboring people there are very ıuch like our own. On the other hand, I think ve need a more constructive health program.

"In no country having health insurance has here been any lower death rate than we have ıad without it. The moment you hand out a ıoney inducement to be sick and to stay sick, f course you hinder all other agencies to remedy he conditions making people sick. Now, this s either so or it is not so, and we want to find ut the truth. The people who have gone abroad o study the question have been loaded up with locuments by government officials. They have ıeard the great praise of the German system and why shouldn't they? The German Government started out 30 years ago to make other governments follow their example and it has been back of every movement along this line. Why has ıot Canada adopted it if it is so wonderful? Why has not Japan, Argentine or Brazil, if it is such a wonderful panacea as claimed?

"Would it not be a fine thing to establish a labor class in this country such as these college professors talk about? They seem to have this on the brain. We have no labor class. We have a labor element but no class in which anyone is born and stays as in England and Germany. The moment you establish social insurance whereby a class can get free doctors from the state you will have a class different from the free and independent American we now know.

"The National Civic Federation has done great service in the study of social insurance. In 1914 it sent a commission abroad consisting of Mr. P. T. Sherman, Mr. J. W. Sullivan and Mr. Arthur Williams, and their report was of great value. It was the only document in English that was available at that time. Of great value also are the proceedings of the conference on social insurance called by The National Civic Federation in 1914. These publications have had a profound influence on the thought of impartial statesmen and others instrumental in thus far defeating the plans and purposes of those who have been making propaganda for compulsory health insurance."

Miss Helen Varick Boswell, Chairman Industrial Committee, Federation of Women's Clubs, New York:

"I am for education and against compulsion. I have not yet heard of the thing to take the place of compulsion which I should like to hear."

John Roach, Chief, Bureau of Hygiene and Sanitation, New Jersey Department of Labor (Leather Workers' Union), Newark:

"Social insurance is a scheme of doubtful value. The problem confronting us all is an economic one and we are trying to apply a medical cure. What you want to do is to try to put the workman on his feet so he can buy his own medicine in his own way. I doubt very much whether the amiable and well-disposed people as well as the uplifters who have taken a deep interest in those matters—I doubt whether they want to see social justice done to the workers. You are not rendering social justice to the man or woman who is selling his or her labor—you are not giving social justice simply because you send a doctor to them. Go into a bank or counting house and talk with a three or four thousand dollar a year man and he will tell you about the outrageous demands the average worker is making in the sale of his labor. In Newark the ship-workers are making $50 a week. Why shouldn't they make more than the bank clerk? Very likely it takes more training and it is a lot more disagreeable. But the trend of opinion seems to be that the men and women who are trying to get social justice are doing some wrong to society and that we ought to devise some scheme that will satisfy them, but in my opinion it should not be less than actual social justice. Social insurance does not hit the mark.

"This question of spreading education is good. There are lots of things the employer can do. One thing he should not be made to do is to bear any burden for health insurance. But employers of labor are doing some mighty good things.

"Local boards of health have not measured up to their responsibilities. In the larger industrial communities, what have we? Sometimes a few clinics but none where an average man for a small sum can get good medical attendance. If he has not a cent and applies to charity he can get good treatment. I think present machinery should be utilized before more complex machinery is demanded."

P. Tecumseh Sherman, Attorney and Social Insurance Specialist, New York:

"The important feature about this intense movement for health insurance in this country, as it strikes me, is that it is not for complete health insurance but merely for sickness insurance. That is, for short sicknesses. Health insurance must cover also long sicknesses, infirmities, permanent disability or invalidity. I have searched Europe pretty thoroughly and I have found no form of compulsory *short* sickness insurance that does not injure the public health. I was in England in 1914 at the outbreak of the war, at which time unfortunately our investigations were stopped. But I met Mr. Sullivan in London and the first sentiment we agreed on was that this health insurance scheme is opposed to the public health. I think Dr. Brend's book will explain why. But everyone in England who has investigated the subject knows that if you go out and hire doctors to give public contract medical service, that medical service will be a sham, a danger and a disgrace. I have gone from Glasgow all the way to London looking into this matter, in factories, hotels, private dwellings, etc., inquiring into the experience of the insured. You all have an idea that the English worker is now insured—that is, that he is sure of medical attendance, and so on. But he isn't. Suppose he gets sick; he goes to a doctor —to a sort of corner grocery arrangement—and sits on a bench. When his turn comes the doctor sees him, gives him a certificate of disability and a prescription or directions to go to the hospital. He may be dying, but the doctor may not help him any further than that. He goes to a hospital and can't get in. The prescription may not be filled at the drug store because the last year's bills have not been paid—for the reason that the drug fund would not go around. I tell you this to show the foolishness of the whole thing. That is how things were when the war broke out.

PUBLIC HEALTH MENACED

"Now, I do not say that that same thing would necessarily happen here—only that is what compulsory insurance has actually amounted to. If you do have compulsory insurance, let the men choose their associations, then let those associations choose the doctors. I think then probably they would get a very much better medical service; but it would be very hard on the doctors.

"I do not believe in a general collective medical service. I do not believe in thousands of men contracting collectively with doctors to give them a common service. I believe the proper relations between doctor and patient are the individual relations we now have; and I think a large proportion of the American working men want to be in a position where they can employ doctors of their own choice and have the present personal relations with them. I think to force compulsory insurance, with a practically pauper medical service, upon the self sufficient class of our working people would injure the public health and cause universal dissatisfaction.

"Another point against compulsory sickness insurance is that involved in insuring money benefits—sick pay—for a short time illness. I do not know of any way in which you can insure men money for being sick; that is, offer them money to be sick and not go to work, without increasing lost time by a certain class at the expense of the other classes of the insured.

"I have heard that the sickness societies in France, which are voluntary, select their members, are small, organized generally on trade union lines, and insuring only small benefits, succeed in holding down impositions. I understand that the general opinion there is that there is not ten per cent of fraud on the benefits. I was going over to investigate that question when the war broke out. But certainly such is not the fact in Germany nor in England. When I say benefits are imposed upon, do not get the idea that the industrious people are imposing. It is the parasite, the down-and-outer who, by compulsory insurance, is forced in on an equality with the best class, and entitled to the same rights. I have never seen any form of money benefit insurance for sickness *like that*, that would succeed. I have heard it said over in England that sickness is not an insurable risk, that is, *short* sickness. You cannot insure a man 66 2-3 per cent of his wages for all disabling sickness, because there is no criterion of such sickness. Am I too sick to go to work today? I can get a doctor's certificate that I am. Therefore, would an insurance company pay me two-thirds of my earnings? No. There is no criterion of such sickness. It depends upon the doctor you have.

"I am talking very strongly against one line of social insurance. I am not such a bigot against compulsion when it comes to the real insurable subjects. I am against socialism *prima facie;* but there might be times and conditions when it might be expedient for the state to compel men to insure against old age and invalidity.

"The campaign for health insurance in this country is built up upon a tissue of gross, deadly lies, lies, lies! Simply a system of lies emanating from the father of lies. It is false in every particular. They are trying to delude the people; and what I am afraid of now is, they have deluded the people. This is what they did at one hearing—they represented that an employer and his workman could each put in $7, and the workman get back benefits that couldn't be provided for $150. In course of amendments to the Davenport bill they cut the benefits to two-thirds and still promised more than they could give for the money. All along they have been telling fairy tales, until a great many intelligent, studious people are thinking you can put a penny in here and get $10 back. You cannot do it. God save America!"

Do the Co-operatives Offer a Solution?

(*Continued from page* 4)

manufacturer, carries stocks to serve a more or less extended zone or district, and has an organization suitable for selling not to individual consumers, but in quantities to fit community needs as bought by dealers.

In this form distribution has worked itself out the world around. From olden times to the present and from New York to Shanghai, either way around the earth, this constitutes the backbone of the system by which the bulk of commodities is transferred from maker to user.

TENDENCY IS TO SPECIALIZE

It represents the natural endency of man to specialize. Production, distribution and consumption are three separate and distinct economic phases. They are utterly different in nature and requirements. Combining them under a single ownership does not eliminate the functions to be performed or the labor of fulfilling them. This existing division accommodates itself not only to man's nature, but to his geographical distribution in cities, towns, villages and on farms scattered across the land.

Before attempting to see how the several endeavors in the way of chain store systems, cooperative schemes, manufacturers' stores, etc., to eliminate the middlemen compare with the ordinary system we have just examined, let us consider the problem from the producer's viewpoint for a moment.

Take the manufacturer in the sketch for example, situated adjacent to a large territorial area in which are millions of people, all of whom wear shoes and most of whom presumably could under favorable circumstances be induced to use his products.

But how can the individuals of a nation scattered over a great area be approached individually by the manufacturer? He does not know who they are or where they are. He cannot write to them all. He is in one place, they are in thousands of other places; the cost of sending traveling representatives to serve these individual consumers would be prohibitive.

Even if he could find some way of getting them to order by mail without seeing or trying on his shoes, how would the matter stand? Supposing the school teacher had by chance had a pair of his shoes which were exactly right and knew the current price and sent him the money by mail for a duplicate pair. This order for a single pair would entail about the same work as a wholesaler's order for a thousand pair;—the letter must be opened, read, the money counted and compared with the price list, records entered in cash books, etc., the particular style and size of shoe picked out in the stock room, special packing and wrapping and individual addressing of the package, provided besides records and receipts for reference in case the teacher complains that the shoes never reached her. And then commences another series of labors in transporting and delivering this pair of shoes disproportionately great as compared with the same work on a case shipment or carload of shoes. This parcel must be called for or delivered to the express company or post office. The address must be examined and classified and the package routed. This must be done over and over again, involving the use of expensive human time and attention at each new stage of the journey. Two pairs could go about as cheaply as one,—a dozen as two.

It is not the weight of the package so much as the care necessary to be bestowed in the handling and re-handling of each individual consignment whether large or small.

WHERE EXPENSE MULTIPLIES

Retail operations should be confined to the local retail store. To require the manufacturer and the transportation systems to perform these unescapable retail operations is to multiply expense.

The manufacturer is a specialist engrossed in the operations of production—contracting for raw materials, providing plant, equipment, machinery, organizing for its upkeep and operation, dealing with labor and administration. In the nature of things he is not organized to handle retail orders at the factory.

And as to transportation, it is an elementary economic principle that goods should be transported in bulk to as near the point of consumption as possible. Therefore, the factory will ship in great consignments, the needs of a whole zone to the zone centers A, B, C, etc. There the goods are subdivided and shipped in community lots to the towns surrounding the centers. There in retail stores the retail operations of filling individual consumers' needs can best be performed. This discloses the falsity of most of the appeals to "buy direct from the maker and save middlemen's expenses."

Now let us see whether the chain stores, the department stores, the mail order houses, the manufacturer's own stores or any cooperation plans really succeed in eliminating either the wholesaler or the retailer. The producer and consumer we know are principals who cannot be eliminated.

The department store aims to eliminate the jobber (wholesaler). Does it do it?

In principle the department store is a collection of stores in different lines of business under one roof. At the head of each sub-store or department is a buyer and manager, a paid employee who takes the place of the proprietor of the ordinary specialty store, so that there is a change of form but not of essence in this regard. Some of the departments of the larger department stores in the greatest centers do buy direct from manufacturers, thus appearing to eliminate the wholesaler (jobber). But generally speaking they do not buy in genuine jobbing quantities or accept deliveries of stock in advance of seasons or carry stocks ahead as do the jobbers. This has necessitated that manufacturers who cater to this department store trade establish their own branch warerooms in the leading centers for the convenience of these customers so that in place of the independent jobber we have the manufacturer setting up what amounts to a jobbing business with his own capital—a change of form but not of substance. Nothing has been eliminated. No labor has been saved—merely the producer assumes what was previously the jobber's job.

But several other associated facts should be borne in mind. Most department stores buy largely from jobbers. Some lines of goods they buy "direct" but still as a department store carrying full assortments, not a one could exist without the service of the jobber with his ready stocks to supply their "fill-in" orders between seasons and the incidental convenience items that they only buy in small lots. Therefore, to the extent that they do buy direct and cause the establishment of manufacturers' warerooms for their convenience, they are superimposing these new substitute-jobbers upon the already existing system of jobbing establishments which must be continued for the service of ordinary stores and even for their own use on goods they cannot buy direct. Therefore, instead of eliminating they have added to the complexity of the distributing machinery and somewhat to the expense. It may not be without significance that even before the world war the most striking advances in the cost of living were concurrent with the great development of the various methods calculated to eliminate and save middlemen. It cannot, however, be implied that they were alone responsible for it. Again as to department stores, it must be remembered that those really falling under this head are to be found only in our very largest cities. They are adapted to serve onl in congested centers of population and that eve in these centers they are so far from the hom of the residents that smaller neighborhood stor and specialty stores do many times the volum of trade of all the department stores of a cit put together. They are therefore an insignif cant factor in the whole system of distributio of a nation.

WHAT THE CHAIN STORE ATTEMPTS

Next take the chain stores. Chain stores in contrast to the department store, may be de scribed as a multiple system of establishment under one ownership and in one line of busi ness under different roofs. They are found i the grocery, drug, hardware, hat, shoe, clothing haberdashery, candy, cigar and other lines. Som combinations operate over a thousand stores an stretch from coast to coast. Obviously they d not eliminate the retail store because they ar essentially local retail stores themselves. Do they eliminate the jobber?

Take a typical chain store concern doing busi ness in the Eastern states. Its headquarters are in New York. Here it buys for a hundred stores. It orders in genuine jobbing quantities just as does the ordinary jobber who sells to several hundred stores. At its headquarters it has a large staff of buyers and a warehouse at which it receives its goods from the manufacturers. But how do these goods reach its branch stores? They must be stored, held in stock, orders received from branches, the goods packed, billed, shipped and accounted for exactly as in any jobbing concern. Assume that it has one or two stores in Portland, Me. Numerous small shipments must go from New York to Portland. The ordinary small independent store in Portland, however, can buy from jobbers in Portland who carry stocks bought for dozens of retail dealers in and around Portland and brought there direct from the factory in great bulk. Has there been intrinsic gain or loss in this attempt to eliminate the wholesaler? I submit that it amounts only to a change of form with general disadvantage in the change.

We need not go on through the list to dissect the operation of each of the other methods attempted in the hope of "eliminating the middleman". We may content ourselves with an examination of the manufacturer who sets up his own stores and the purest cooperative systems of consumer-owned systems. If the same old middlemen continue to bob up in some form or other we may accept them as inevitable and see where hope really remains.

TAKES UP THE JOBBER'S WORK

Chains of manufacturer-owned shoe stores are among the commonest of this type. The producer deals "direct" with the consumer. True, the company which owns the stores where the consumers buy, makes the shoes. But there is no marked difference between the stores and those of independent retail shoe dealers. They perform the same functions in about the same methods and a paid manager takes the place of the customary proprietor on the principle of the absentee landlord in agriculture. It may also be noted that whereas the independent local dealer represents the consumer, the local manager of the chain store represents the manufacturer and is restricted to the products of one company instead of choosing among many.

The place of the jobber is taken by the manufacturers' own warehouses set up in central points from which the goods are distributed to the local stores of the company. As a matter of fact chain shoe stores are generally confined to large and medium sized cities and in the smaller towns local shoe dealers act as agents for these same companies buying "direct" from the manufacturer, but receiving their stocks through the same branch warehouses which

erve the stores of the companies. It is a comentary upon the economy involved in the sysem to note that the independent "agent" dealrs are sold on terms that enable them to sell to onsumers at the same prices as the company-wned stores. Nothing has been eliminated; the ranch warehouses of the factory are merely subtitute jobbers. Invariably the functions of holesaler and retailer must be performed and he only change is in the name of the machinery or doing it.

Finally, how do consumer-owned cooperative nterprises function on this proposition of elimiation?

Fair examples are found in the great cooperative societies of England and Scotland.

The customary process in the formation of hese enterprises is for the people of a community to join together and each to subscribe the equivalent of about $5 or $10 towards the capital for setting up a local retail cooperative store which sells both to the subscribing members and to the general public, but dividends based upon the profits of the store are paid to the subscribers, not in proportion to their stock holdings, but to their purchases at the store.

They start out then by *not* eliminating the retail store but by establishing a new one in the community and owning it themselves.

"COOPS" GO TO THE SOURCE

Although many of these "coop" stores buy in part or mainly from ordinary jobbers, the majority have joined in setting up their own cooperative wholesale societies. Thus the consumers own the retail stores and the retail stores own their own jobbers. Single ones of these wholesale "societies" do a business of several hundred million dollars a year, selling exclusively to the cooperative retail stores. So great are their operations that they also own several factories and on foreign continents own their own plantations and warehouses. Most of the wheat imported from Canada to Scotland is for the mills of the Scottish Cooperative Wholesale Society. The actual producers are the employees of the consumers in this enterprise.

But in these very facts of the way in which these consumer-owned institutions organize to perform their functions, is the strongest demonstration that the wholesale and retail middlemen cannot be eliminated. They may be owned, their profits may be turned back to the consumers or part of the consumers, but it is futile to start to "buy direct" or to cut out the jobber or retailer. And the wastes and losses also must be borne by the consumer and it must not be overlooked that these "coop" stores often fail or run into losses.

It remains to be considered whether in spite of the non-elimination of middlemen the cooperative society and the other recent types of distributors merit the measure of success they enjoy or whether they are psychological rather than economic phenomena, temporary and passing.

As to the cooperative store system it may be admitted that there is no saving in the machinery of distribution. Even to the matter of traveling salesmen representing the wholesale societies and calling upon the very retail stores which own them, all of the paraphernalia of the ordinary jobbing and retail system is duplicated. The wholesale societies find that it is necessary to explain their wares, answer questions and objections and stimulate the managers of the retail stores to order more and new goods and they maintain a large staff of travelers to accomplish these and other purposes. Advertising is similarly employed.

If they do all of the work of the conventional distributing system and eliminate none, where may they be expected to make savings for their consumers?

The second of our tests referred to saving unearned or unreasonable profits taken under the existing distributing system. Can the cooperative or other large retail institutions maintain themselves more efficiently and cheaply and thus make savings and earnings to the ultimate users of commodities?

ON A KEEN COMPETITIVE BASIS

Or do the ordinary wholesalers and retailers extort exorbitant profits offering a chance to puncture inflated prices on that account? They are on a keenly competitive basis. They compete with each other and also with the chain stores, manufacturers' stores and department stores. If there were any general, willful overcharging, it would seem as though it would immediately react to drive trade from those who indulged in it. Yet the vitality and persistence of the stores and jobbers of the old order baffle and annoy those who look for and seek their early removal. On the other hand, the growth of department stores, chain stores and especially of the great "coop" systems of Europe and the popular impression in some quarters that they can and do undersell the small stores which obtain their goods through customary channels has caused them to be sometimes hailed as deliverers from the burdens of the high living costs which have grown so persistently higher and their commercial success is accepted as proof of fitness.

Yet if all the work of the old system remains to be done under the new, one must wonder whether it is because a hired manager of a store which he does not own is necessarily more capable or interested or efficient than the owner-proprietor whom he is intended to replace. Do people ordinarily work better for others than for themselves? Do they watch the small economies, have they the incentives for hard work, close supervision and skillful management when others take the profits or stand the losses? Will the managers, foremen and laborers work harder, produce more or take less wages in a factory owned by absent consumers than in one of the ordinary variety?

We are back upon old questions here and argument will lead nowhere.

But in a briefer concluding article under the title "Dissecting the Consumer's $" in the next issue of this publication, we will examine the facts obtainable as to the comparative operating costs and methods of the newer distributors beside the old. We will take the consumer's Dollar apart and see how much of it goes for the production of the goods, how much for the maker's expenses and profits, how much to the wholesaler and what toll and profit the retailer takes.

Costs should be lower. There is a way of saving even though we cannot eliminate any of the links in the distributing chain. It is not to discourage effort by showing what cannot be done that this article is written, but to save misdirected effort and divert it into fruitful channels. This the subsequent article will also attempt.

Pacifists Abet the Huns

(*Continued from page* 11)

the Allies cannot but call for severest censure. The greater their eminence in sociological and welfare work, so much the greater becomes the effectiveness of the service—undoubtedly unintentionally—performed by these people in the interests of the Huns. There is no escaping what is unpleasantly obvious. The action of the Women's International Conference merely supplements the propaganda against the treaty which is being intensively carried on in Germany and is furthered by German agents and sympathizers in America and the Allied countries under the specious guise of promoting justice and securing peace.

Commenting upon the proposal made by a British delegate that women be represented in the League of Nations and that she be appointed a member of the council, Miss Addams is quoted as saying: "Such a scheme cannot be realized, for in America at the present day none is more detested than the pacifist."

"Detested," beyond peradventure of doubt, are all those pacifists who opposed America's entry into the war, who campaigned for an indecisive premature peace by negotiation, and who, in now agitating against the terms of the treaty and the so-called "crushing" of Germany, whether they know it or not, are engaged in no less a task than the effort to make futile the hard-won victory of America and the Allies and make of the peace merely a period of recuperation and easy rehabilitation for Germany —a resting and a breathing space for preparations for a conflict again to come.

Out of Their Own Mouths

(*Continued from page* 15)

was to stimulate social discontent, civil war and revolution in every country on the globe. Mr. Villard's *Nation* took up and championed the Bolshevist cause after Germany had launched it in Russia. And now Mr. Villard, apoplectic in his rage and despair, vengefully prophesies "the great revolution to whose support the friends of freedom must now rally everywhere." He declares: "Versailles has forced men into two main camps, the radicals and the reactionaries. * * * With Germany crushed and autocracy enthroned, with the strong hand of power at the throat of liberty, the battle opens which is to make men free." And he says, as't were piously: "Heaven grant that the revolution may be peaceful, and that it may destroy only to rebuild."

Did not Germany naively threaten, in case the Allies imposed drastic terms, to go Bolshevist and with the aid of Russia, to drag the other nations with her into chaos? Did the official German organs, in order to intimidate the Allied council, not threaten to make an alliance with the Russian Bolsheviki and precipitate world revolution? Did not the *New Republic* and Mr. Walter Lippmann draw dire pictures of what would happen if the Allies prevented "a contented population in Germany" and the Central Powers were "forced" by excessive demands into Bolshevism? Does not the gentle Mr. Villard simply reecho the Hun's attempt at intimidation?

In much that appeared in the *New Republic* and the *Nation* during the past few years there was a strangely, if not pleasantly, familiar ring. And what is now being said in plain words in these sheets could not better serve the Hun interests, or more accurately articulate the Hun point of view, Hun rage and resentment over the treaty, if it were written in Berlin. There is undoubted sincerity in these impassioned, vituperative jeremiads against the treaty — indeed, there is manifest such deep stirring of feeling as becomes reckless of discretion and restraint. At last it is evident the gentlemen of the staffs of these journals write frankly and outspokenly, just as they feel; at last the tepid insipidity and drakish dullness of these sheets give way to a real enthusiasm albeit more shrewish than virile. And, as often happens, truth is blurted out in hysteria and fury just as it oft comes out in wine. By their own words, by their honest rage and rebellion, by this final chapter of their war record writ by themselves without hypocrisy or dissimulation, and which at last exposes the keynote and makes transparently clear all that was camouflaged in a maze of academic verbiage and ambiguous idealism before, the *New Republic* and the *Nation* stand self-interpreted, finally, adequately and unmistakably self-revealed.

Recognize the Omsk Government

APPEAL TO THE AMERICAN AND ALLIED NATIONS FOR A PERMANENT PEACE IN RUSSIA

By LIEUTENANT BORIS BRASOL

VICE CHAIRMAN OF THE VOLUNTARY ASSOCIATION OF THE RUSSIAN ARMY AND NAVY OFFICERS IN THE UNITED STATES

UNDER the heavy blows of Admiral Kolchak's forces, the Bolsheviki defense lines are crumbling along the entire Eastern Front. The Great Russian artery, the Volga, is on the verge of being captured by the anti-Bolshevist forces led by the Omsk Government. General Denikine's troops in the south of Russia are threatening the existence of the soviets in the Little Russian regions. The Finnish and Esthonian troops, under command of General Judenich, are at the very gates of Petrograd. The Polish drive against the Bolsheviki, under General Pilsudski, is menacing the Bolshevist rule from the West. The gallant Rumanian army is battling against the Red Army along the entire Bessarabian border. Finally, in the far North, the Allied troops, reinforced by loyal Russian units, have succeeded in driving the red gangs back to the South, and thus the Bolsheviki, after a year and a half of tyrannical rule, find themselves encircled from the North and South, from the East and West, and the hour of their downfall is rapidly approaching.

The time for action has come. Hesitation is no longer justified, therefore it is no longer possible. All the anti-Bolshevist forces in Russia, with minor exceptions, are under the supreme authority of Admiral Kolchak. Both General Denikine and General Judenich have pledged their support to Admiral Kolchak, and their military operations are fully coordinated with those of the Siberian forces. Within a short period of time Admiral Kolchak has succeeded in suppressing the Bolshevist movement throughout Siberia, in establishing law and order in the regions controlled by him, in regenerating the national spirit among the soldiers of the young and brave Siberian army, and finally in setting up a stable government with strong administrative branches all through Siberia and in the Seven River region. Notwithstanding tremendous difficulties which Admiral Kolchak had to overcome, notwithstanding the chaos which reigned in Siberia at the time when he made his first step to overthrow the red rule, he succeeded in conquering the sympathies of the Siberian population at large. It was not by means of sentimental phrases that Admiral Kolchak won his success; it was due to the iron will of this man who fears nothing, who is cool-headed both in success and danger, and whose chivalrous bravery is well known throughout Russia. that a constructive policy could be started in the Far East.

It is not only the right, it is, certainly, the supreme duty of the American people to give their open support to the Omsk Government.

It is no longer possible to cling to a policy of "no policy" toward Russia. It is no longer possible to display a selfish indifference towards the unspeakable sufferings of a great nation which is struggling for its liberty, for its very existence; nor is it longer possible to reject Admiral Kolchak's authority on the basis of the theory that he is a "dictator," that he was not chosen by the people through regular parliamentary methods. *Anarchy is a brutal force; anarchy can be combatted by force only;* under the prevailing conditions bayonets must precede electional campaigns. Admiral Kolchak has stated quite distinctly and on various occasions that he is going to lead the Russian people to the convocation of a National Assembly; he took an oath, and as a man of honor he will uphold it, that he would merely consider himself as a

Copyright, Underwood & Underwood.
LIEUT. BORIS BRASOL

temporary ruler, and that he would lead the nation to the polls. Parliamentary life, however, is practically impossible in a country where utmost ruin is the basis of economic conditions and where wholesale starvation is a feature of national life. Anarchy must be crushed in order to give the people the opportunity to work out a national policy of their own and such a political status which would best fit their historical traditions and national aspirations.

There are moments in history when a dictatorship is the only path to liberty, and this is exactly what has been proclaimed by the Omsk Government: "*To liberty—through dictatorship.*" There is no other choice: Russia will either remain Bolshevist, which would constitute a menace to the civilization of the whole world, or she will become free and a "fit partner" of the civilized world, provided she succeeds in breaking the Bolshevist chains and eliminating the very memory of Trotzky's disgraceful rule from the minds of the Russian people.

There are two practical ways of helping the Omsk Government: (a) The United States Government, as well as the governments of the Allied nations, ought to recognize immediately the Omsk Government as a *de facto All-Russian Provisional Government;* (b) the American people should render practical assistance to the Omsk Government by means of equipping Admiral Kolchak's forces with ammunition which is no longer needed by the United States Army. The recognition of the Omsk Government will automatically weaken the Bolshevist cause not only throughout Russia but throughout the world, and at the same time will strengthen the anti-Bolshevist cause as such, and the political situation of Admiral Kolchak. This will also stop the insidious pro-German propaganda throughout Siberia, whose aim it is to sow discord among the Allies and to raise a feeling of hatred towards the latter on the part of the Russian people.

Mere phrases will never compel the Russians to believe that the people over here are in sympathy with their national future. This must be proven; this can be proved by means of recognition of the Omsk Government as an organized endeavor to free Russia from the bloody tyranny of the Lenines and Trotzkys. Moreover, the recognition of the Omsk Government as an All-Russian Provisional Government will give a legal title and moral impetus to the activities of Admiral Kolchak and his associates. However successful will be the military operations of Admiral Kolchak, there will always remain a shadow of doubt in the minds of the Russian people as to the legal authority of the Omsk Government as long as the latter remains unrecognized by the Allied nations. It is *moral* support that we ask and that we expect to get from the American people; it is a word of encouragement to the loyal Russian forces that we hope to hear from those who are themselves loyal to the best American traditions and to the highest American ideals.

It must be clearly understood that a partial solution of the Russian problem, namely, the recognition of the Omsk Government as a local Siberian Government, would inevitably weaken its position and would encourage factional differences among the loyal Russians themselves. On the contrary, the recognition of the Omsk Government as an All-Russian Provisional Government would induce the loyal Russian factions to pledge their entire support to Admiral Kolchak and his administration. *Furthermore, a clear Russian policy towards the Entente Powers is as vital as a clear policy on the part of the Entente Powers toward Russia.* A national policy can be worked out only by a national government; therefore it is to the advantage of this country, as well as of the Allied nations, to see Russia as soon as possible guided by one government responsible to the people.

The Peace Treaty, which is going to outline a new map for Europe, may prove to be a failure unless a loyal Russian government will approve by its responsible signature the new order established by the World Conference. It should be borne in mind that the Central European question, the dominant problem of the Peace Conference, can not and will not be settled without a solution of the Russian problem. Invisible links are tying up the fate of the Middle European peoples with that of Russia's future. The loyal Russian Government, if recognized by the Allies, will be duty bound to support the decisions of the Parisian Peace Conference. On the contrary, should the Allies neglect to recognize the Omsk Government before the Treaty has been signed, they cannot expect the Omsk Government to follow and support the decisions outlined by the Entente Powers. This would lead to a series of grave political disturbances immediately after the treaty is signed; this would inevitably convert Europe into the "Balkans of the world."

The League of Nations itself would prove to be a failure were the greatest European power—the Russian link—left out of its chain. Therefore, the recognition of the Omsk Government is not a matter of political taste, but a matter of political wisdom. The sooner a formal recognition of the Omsk Government, as above outlined, is brought about, the more chance there is that the actual unfortunate political situation throughout Europe will be solved in a way which will enable the Entente Powers to affirm that they have really won the greatest war and that they have achieved a lasting peace.

History has taught the civilized world that peace without victory over Germany cannot be maintained. Let us not forget that victory without peace in Russia is but an imaginary victory which can be easily converted into an overwhelming defeat of the sublime principles of Civilization and Justice.

LABOR VOICES ITS PATRIOTISM

AMERICAN FEDERATION'S CONVENTION AT ATLANTIC CITY MAKES SPLENDID RECORD ON GREAT DOMESTIC AND INTERNATIONAL QUESTIONS

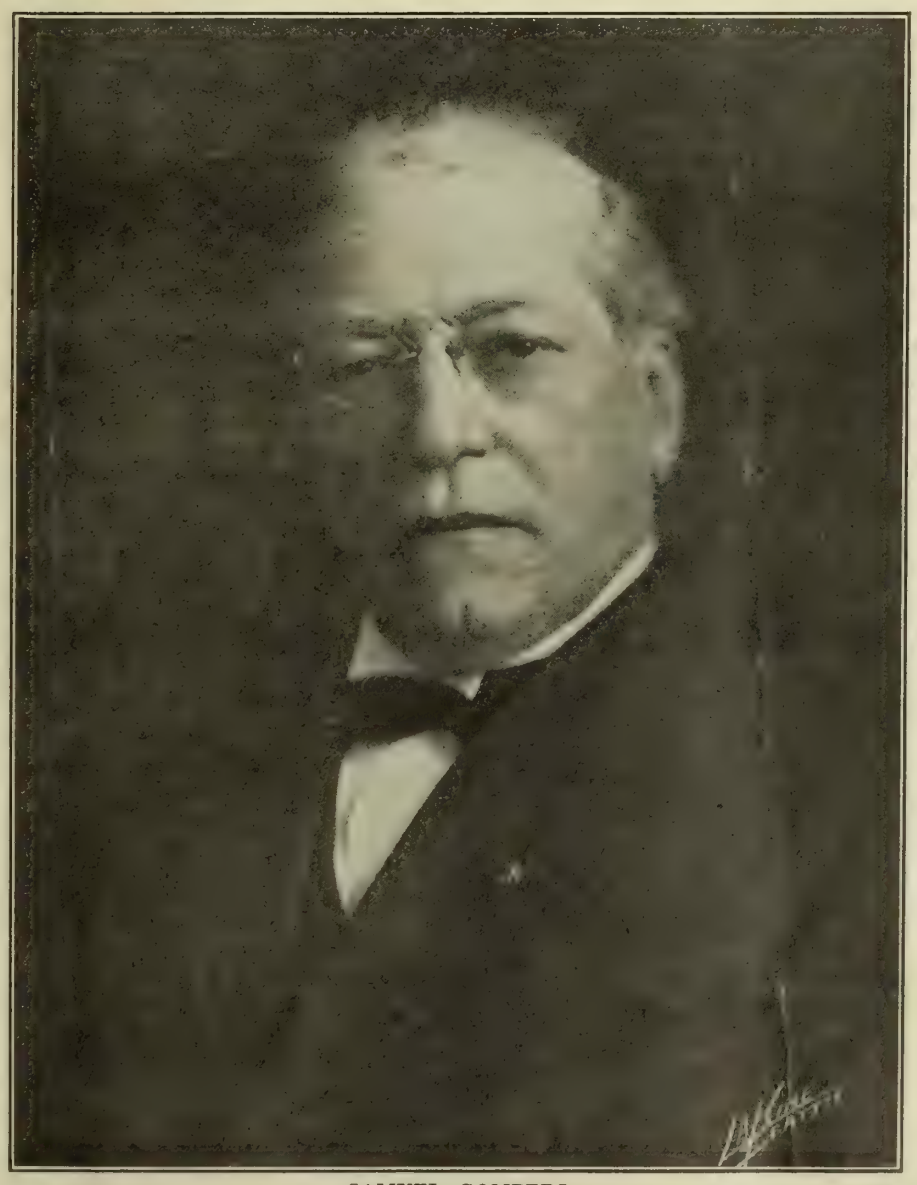
By CHESTER M. WRIGHT

AMERICAN Labor has just closed its most important convention. Not even the great war time conventions in Buffalo and St. Paul recorded so much of vital and lasting interest to the American nation, for the convention just closed was important to the whole people of America. Questions of fundamental citizenship were discussed and acted upon in Atlantic City, as well as questions of interest only to the workers.

There are two main thoughts that indicate the drive of opinion as it found expression in the convention.

1—Whatever tends to undermine the institutions of the American democracy or to disintegrate the machinery of the American trade union movement must be contested at every step and defeated.

2—Autocratic rule, where it still obtains in industry, must be overcome in order that there may be an orderly and steady improvement in the condition of all life through legitimate trade union activity.



There is not anything particularly new about the strong development of feeling upon these two lines, but there was a new emphasis placed upon them, due primarily to new conditions, and to new factors in the life of the nation.

It is impossible to get a view of the convention by a process of vivisection. The sessions formed a cumulative process in which threads of various kinds were woven into one fabric.

There was the action of the convention on the question of Bolshevism. The convention came down flat-footed and with the utmost vigor in denying support to Bolshevism, but the entire feeling of Labor on the question of Bolshevism is not apparent until other declarations of the convention are considered, nor until the whole spirit of the convention is taken into account.

There were three resolutions dealing directly with the question of Russia, all of which involved the issue of Bolshevism in one form or another. The Resolutions Committee offered as a substitute the following, which was adopted unanimously:

> Resolved, that this convention express its well-considered conviction that the United States Government should withdraw all American troops from Russian soil at the earliest possible moment, and be it further
>
> Resolved, that this convention refuse its endorsement of the Soviet Government of Russia or any other form of government in that country until the peoples of Russia, through a constituent or other form of national assembly shall have established a truly democratic form of government.

SAMUEL GOMPERS

Without making the application direct, however, the convention went more deeply into the question of Bolshevism and struck nearer to fundamental principles in adopting the report of the committee on Executive Council's report declaring that American Labor believes that every element in society has the right to a voice in society. This, of course, means absolute condemnation of Bolshevism everywhere as well as of any other form of dictatorship.

The voice of the convention was emphatic in denying the request for an all-inclusive amnesty. The convention felt that the Government had acted wisely and properly in committing to prison enemies who had actually attempted the undoing of the country while at war and it clearly felt that to release such prisoners at this time would be a mistake from which no good could come. Clear emphasis, however, was laid upon that portion of the declaration calling for a repeal of wartime legislation affecting the freedom of expression and assembly.

One of the most important declarations of the convention in this work of clearing away obstacles to freedom of action and to democratic progress, was a strong declaration adopted on the question of judicial construction of law. This question was so important and was so strongly emphasized by the convention itself that expression of the determination of the trade union movement was widely read and noted.

Branching out in the two directions I have specified and acting with equal vigor and determination in both directions, the whole spirit of the convention was probably best expressed

in a paragraph from the opening address delivered by President Gompers in which he said:

"The workers of the world are determined that this new concept of the relation between man and man and this new concept of the right of the workers to have a voice in the determination of the conditions of their labor and their lives shall be recognized."

It may be well by way of amplification, and to make the meaning more clear, to give just three or four additional sentences from that opening address:

"The principles for which this labor movement has been contending from its very inception must come to full fruition," said Mr. Gompers, "we are making no unjust or unwarranted demands upon employers or upon society as such, but for the service which the men and women of labor give to society—the service without which civilization itself would perish—for that service we insist upon a return that would give us the opportunity to live a full, rounded life and to make of this country of ours and this world of ours, a place worthy of the civilization of our time."

SUMMARY OF CONVENTION'S WORK

It was in that spirit and in furtherance of the dominant desire to clear the road of autocratic obstacles to progress and to keep it free from the contaminating and destroying influence of Bolshevism that the convention acted upon the most important questions in the manner indicated in the following partial summary:

1—Endorsed the League of Nations covenant and Labor's Bill of Rights as contained in the Treaty of Peace, urging the workers of America to support the Treaty.

2—Denounced in detailed bill of particulars the "company union" plan of labor organization.

3—Demanded the removal of the Postmaster General from office.

4—Denounced the proposed strike for Thomas J. Mooney and declared that he should have a fair trial.

5—Enacted a provision to prevent central bodies or outside organizations from taking a strike vote of the membership of international organizations.

6—Adopted a strong resolution in furtherance of a campaign to organize the iron and steel workers. (An organizing committee for this purpose held two enthusiastic meetings during the convention and laid plans for an energetic continuance of the campaign. President Gompers resigned the chairmanship to which John Fitzpatrick of Chicago was unanimously elected.)

7—Declined to alter the established political action policy of the Federation because of unlimited proof of the success and superiority of the policy as stood.

8—Adopted the report of the special committee on Reconstruction with the following explanatory comment submitted by the Committee: "Your committee recommends approval of this program not because it believes it all-comprehensive, but fundamental; not because of its novelty, but because it is founded on experience and justice."

9—Declared in favor of prohibition of immigration for a fixed number of years and especially during the period of readjustment.

10—Adopted a program for guidance in educational work consisting of 25 numbered clauses and having no relation to the report of a special committee appointed by the Executive Council under direction of the St. Paul Convention, to investigate and report upon the workings of schools operated by labor organizations or by cooperation between labor organizations and public school authorities.

By far the most strenuous debate of the convention raged around the treaty of peace, though the vote for approval, 29,909 to 1,860, indicates the sweeping and conclusive character of the endorsement. Andrew Furuseth, president of the Seamen's Union, made a determined attack on the treaty, specifically on the covenant of the League of Nations and on the section known as "Labor's Bill of Rights." This brought out the heaviest fighting equipment of the pro-treaty forces and caused President Gompers to deliver what many consider one of the greatest speeches of his life.

Treating the whole broad subject of the coming peace, the committee's report contained also this constructive proclamation of democracy's purpose as opposed to the philosophy of despair and the tactics of desperation which Bolshevism seeks to implant in our national life:

The past has gone forever. Autocracy and militarism, we hope, are buried with it. The future is our immediate concern. Ignoring what has gone before except so far as the lessons taught, we shall build along the lines of reason, judgment and the experiences gained.

Typifying democracy and its true spirit, the labor movements the world over, if they be true to themselves and to the best interests of the masses for which they speak, must recognize that democracy in its truest sense, and act on the fundamental principles of equality, justice and humanity.

All elements of society are necessary for the highest development and greater progress in civilization, economically, socially and politically.

The world's war brought to a triumphant conclusion has prepared the world for democracy on the political field. The mere ending of the war, however, has not insured democracy and justice for the workers on the industrial field. It has not materially changed working and living conditions, but it has aroused fresh hope and quickened aspirations and labor's ambitions. It has created the opportunity whereby the workers regardless of abode can, if functioning through trade unions, more readily, more freely and more effectively carry forward the work of securing justice and safeguarding for labor a fuller measure of democracy in industry. It is the first duty of our own trade union movement, and in our judgment it ought to be that of the movement of other countries, to see to it that this opportunity is not destroyed by diverting the minds of the workers or by delving into the alluring realms of unproven speculative theories which judged by experiences are false and destructive in their nature.

In every phase of its effort the convention marked itself out sharp and clear as the fighting exponent of true Americanism, levelling its guns at the destroyers of democracy in whatever guise they may appear, within or without, and clinging fast only to those agencies and methods that are clearly constructive in purpose and method and democratic in operation.

How clearly this thought runs through the mind of the committee is shown in the Executive Council's report submitted to the convention and which was adopted by unanimous vote:

A careful review and unbiased observation of all the activities and accomplishments of the American Labor Movement, as related in the report of the Executive Council demonstrates

DELEGATES TO THE AMERICAN FEDERATION OF LABOR CONVENTION

conclusively that our movement is the peer of all organized efforts to protect and defend the rights of man and to bring into being a better life, greater happiness and a larger degree of justice and democracy.

The trade-union movement, as exemplified in the report of the Executive Council, in its broadest terms is the effort of men to live the lives of men. It is the systematic struggle of the masses to attain more leisure and larger economic resources. It is the conceived movement for self and others directed against oppression in every form. It is a constant recognition of the fact that men and women of the mine, the shop, the mill, the factory, are men and women—not cattle or articles of commerce. It is a movement of protest against all conditions that tend toward the degradation of humanity.

Practical application of the expressions contained in that declaration were not wanting. It was had in the Mooney strike case and again with great emphasis in connection with the proposal emanating from Basil Manly and W. Jett Lauck of the War Labor Board for a conference of labor and employers under government auspices for discussion and action on labor problems. Under this plan Frank P. Walsh was suggested as labor's leading representative by sponsors of the plan.

When the matter was brought before the convention the result was almost unlooked for. Labor's declaration came clear and sharp and quick that it considered itself confident to select its own representatives and that in addition it had no desire for more commissions. Radicals who stood against the majority on most other questions came to the front saying that on the integrity of the labor movement as involved in this issue there could be but one front and one cause.

Immediately a telegram was sent to Senator Poindexter by President Gompers, asking him to defer action on a bill introduced embodying the Manly-Lauck plan. What the convention meant in this and in the Mooney case was that organizations not a part of the labor movement cannot come in to direct the work of the movement. Help and counsel will be accepted. Dictation will be rejected at every turn.

Not less emphatic was the convention in its analysis of the company union idea and its condemnation of that plan of organization. This declaration came to the convention in the form of a resolution introduced at the request of the National Committee for Organizing the Iron and Steel Workers. This committee later submitted a resolution to the convention designed to assist organization work. The committee also, in a meeting apart from the convention, outlined the opposition to organization in Western Pennsylvania and expressed determination to establish there the right to organize. Twenty-four national and international presidents volunteered to go into that territory, if necessary, to speak in public where the authorities have denied the organization the right to hold public meetings.

A BILL OF PARTICULARS

The resolutions that accompanied the "company union" action pointed out in their preamble the main objections to the plan. "The employers," it was stated, "are actively enforcing a series of vicious practices that hamstring such organizatons and render them useless to their employees." These practices were said to be "Unfair Elections and Representation;" "No Democratic Organization Permitted;" "Intimidation of Committeemen;" "Expert Assistance Prohibited;" "Company Union Devoid of Power;" and "Company Diverts Aim." Then the resolutions read:

WHEREAS, In view of the foregoing facts, it is evident that company unions are unqualified to represent the interests of the workers, and that they are a delusion and a snare set up by the companies for the express purpose of deluding the workers into the belief that they have some protection and thus have no need for trade union organization; therefore, be it

RESOLVED, That we heartily condemn all such company unions and advise our membership to have nothing to do with them; and, be it further

RESOLVED, That we demand the right to bargain collectively through the only kind of organization fitted for this purpose, the trade union, and that we stand loyally together until this right is conceded us.

Possibly as important as almost anything that took place within the convention was an agreement that developed in the meeting of the Building Trades Department just prior to the convention. In this agreement, the building trades unions join with the American Institute of Architects, the Engineering Council, the Associated General Contractors of America, the National Association of Builders' Exchanges and the National Building Trades Employers' Association in a program for the elimination of jurisdictional strikes.

A tribunal known as the National Board of Jurisdictional Awards in the Building Industry is set up with eight members, three of which are selected by the unions and one each by the other organizations associated in the plan. The Board has power to investigate disputes and to hand down awards upon its findings. Headquarters of the board will be in Washington, but hearings may be held elsewhere when necessary. It is the hope that under the new plan disputes will not only be settled quickly, but that they will be prevented from arising by settling jurisdiction before specifications are made in cases likely to create disputes.

Fourteen negro delegates sat in the convention. They came asking a separate charter for negro workers. This desire grew out of conditions, of course, but when the four or five resolutions bearing on the question of negro organization came up it was made clear that the internationals have an eye on the situation and are striving to do their best to bring to the negro workers the full benefit of organization. The Federation declared, naturally, against issuing a charter for a separate negro organization, but the committee report, which was adopted, contained this clause:

"We further recommend that the Executive Council give particular attention to the organizing of colored workers everywhere, and to assign organizers for that purpose wherever possible."

Where internationals refuse admission to colored workers they will be organized under charter direct from the Federation. Statements by delegates on the convention floor show that at least forty-six organizations admit negro mem-

DELEGATES TO THE AMERICAN FEDERATION OF LABOR CONVENTION

DELEGATES TO THE AMERICAN FEDERATION OF LABOR CONVENTION

bers. The negro workers found assurance in the convention that the concern of black men is likewise the concern of white men.

It had been expected that health insurance would take up some of the time of the convention, but it was disposed of quickly. The matter was re-referred to the executive council with instructions that the conclusions reached by it are to be reported to the next convention. In the case of political action and the minimum wage by law, disposition was accomplished with equal dispatch. Action in both cases was adverse to the proposal.

World affairs occupied a position of importance in the convention. Delegates were elected to the international trade union congress to be held in Amsterdam July 25; to the Pan American Federation of Labor convention in New York July 7; to the British Trade Union Congress and the Canadian Trades and Labor Assembly. The convention also expressed the hope that it might be possible to send a delegation to Japan. President Gompers will be one of the delegates to the Amsterdam congress and to the Pan American convention.

In addition to these elections, there were the lengthy reports of various missions sent abroad during the year. Never has any Federation convention dealt with such a volume of business in connection with world problems.

Prominent among the delegates was Mrs. Sara A. Conboy, International Secretary-Treasurer, United Textile Workers of America, who holds this important post in a union composed of 60 per cent of men and 40 per cent of women. Mrs. Conboy is the leading woman trade unionist in America and she exemplifies the attitude taken by the chief trade union women who prefer to work collectively and connectedly with men trade unionists in their craft organizations rather than in separate existing women's associations which have been formed to represent the interests of trade union women.

Mrs. Conboy was secretary of the committee on organization at the convention, and some of the big problems with which that committee had to deal included the organization of the steel workers and those in the oil fields.

She was also chosen by Samuel Gompers to christen the Afol, named after the American Federation of Labor. The United States Shipping Board, taking the initials of that body named the ship Afol and Mrs. Conboy will christen it.

An unexpected, but well-received, contribution to the record of the convention was the program brought in by the committee on education, of which Prof. Charles Stillman, president of the Teachers' Union, was secretary. John B. Lennon characterized the report as second in importance only to the winning of the war. The new educational program thus adopted contains twenty-five clauses.

Thus did the convention act on the greater issues before it. In addition to these things, many other things were done. There were more than 215 resolutions and in addition to these the reports of special committees and missions to Europe. There were fewer of the typical "red" resolutions than usual, though they were by no means altogether absent. Borrowing from Europe's mad career, one delegate introduced a resolution for election of shop foreman as a companion piece, perhaps, to the resolution asking a referendum on recognition of the soviet so-called government.

MRS. SARA A. CONBOY

Anything that came in with a tinge of cardinal was promptly thrown off the pier into the ocean. So tightly was the line drawn against any "red" incursion that the casual onlooker might have thought bigotry held sway or prejudice ruled. That was far from the truth. The truth was that every issue brought up in the convention has long been studied and that a flash was enough to determine whether it was in accord with the practices that American labor has proved sound. It was mature judgment and ripe experience on the job, not bigotry or prejudice.

No convention has had to grapple with so many mighty problems. None has had to assume responsibility so great. And none has handled with more ease and confidence the business before it than this largest of all American Labor conventions.

The convention met determined, builded carefully and soundly for the good of all America, and went home to work patiently, but diligently along the lines laid down in Atlantic City for the betterment of mankind through justice.

The forty-four week endorsement was one of the big things of the convention, even though it came on the closing day. The Federation went on record for the forty-four hour week, but did not fix that as a hard and fast figure, leaving the door open to any organization to go after a lower figure if conditions in the industry made it advisable. The convention was emphatic on the point that overtime is not wanted, but that what really is wanted is reduced working time for the sake of the benefits that go with normal effort accompanied by time for rest, recreation and education.

One of the most dramatic moments of the two weeks' gathering came when a resolution to increase the salary of the president to $10,000 and the salary of the secretary to $7,500, came

DELEGATES TO THE AMERICAN FEDERATION OF LABOR CONVENTION

before the house. President Gompers took the floor and made an earnest appeal to the delegates to vote against raising his salary. He declared that such an act would be misunderstood here and abroad. He said that he had found prejudice in Europe because of the salary he already was receiving, which was $7,500. He said that in France and Italy the workers thought that a fabulous sum and that in some sections in America it was thought he got too much.

"And another thing," he said, "I do not want it said in my last years that I am a money seeker. The salary that you are paying me is enough and I do not want more."

President Gompers never made a more insistent appeal than this against an increase in his salary, but the delegates voted him down with a roar and thrust upon him money that he emphatically did not want.

(*The four large pictures accompanying this article, printed on pages* 2, 3, 4 *and* 5 *are the four sections of one picture of the American Federation of Labor Convention delegates posed as a group on the boardwalk at Atlantic City.*)

Dissecting the Consumer's $

THE ONLY ROAD TO A LOWER COST OF LIVING—NO ROYAL ROAD TO LESSENED COSTS OF DISTRIBUTING GOODS

By WILLIAM H. INGERSOLL

SOCIAL unrest and the dissatisfaction of workers is due largely to the meagre comfort with which people's earnings can be made to provide them. Labor wants a change in its status and in its participation in what is produced, but the most immediate desideratum is a better standard of living. This a true reduction in living costs would accomplish and so it will be understood that when we refer to the cost of living herein we do not merely have in mind prices *per se*, but rather the cost of the essentials of wholesome living in relation to current wage scales, for it has been amply demonstrated since 1914 (if it needed demonstration) that wages themselves mean nothing except as measured in purchasing power to satisfy needs. And though we may have the wage earner primarily in mind in seeking to reduce living costs, the demand is equally strong from all elements of society and the consuming public at large would benefit by a change in the direction sought.

In a preceding article ("Do the Cooperatives Offer a Solution?" in the issue of June 5, 1919) it was pointed out that roughly two-thirds of the cost of the things that we buy are absorbed in the processes of distributing those things after they are made, and that only approximately one-third went into the original cost of physical production.

Granting that costs are too high and that particularly it costs too much to distribute our goods, we then proceeded to examine the aims and efforts of those who would accomplish a reduction through the elimination of the middleman.

We studied the operations of those great retail institutions, the department store and the chain store, which aim and claim to eliminate the wholesaler. We found that instead of eliminating him they substituted a new one. The department store requires the establishment of wholesale warerooms by the manufacturer as well as a continuation of the regular wholesaler, while the chain stores set up their own central wholesale establishment where goods are received from the factories and sub-divided and distributed among their stores, precisely in the manner followed by the customary wholesale house to its retail customers, involving all the labor of receiving goods in bulk, opening, sub-dividing, repacking, forwarding and accounting, with resulting disadvantage and expense rather than gain.

In each chain store we found a substitute proprietor in the person of a hired manager, requiring additional safeguards and expense against dishonesty, indifference and inefficiency.

Similarly, when the manufacturer essayed to establish his own retail stores and eliminate the retailer and wholesaler, we found that the retail stores still existed and that he had to have intermediate warerooms of his own to replace the wholesaler, involving all of the functions, operations and labor of the ordinary distributing system.

Again, when we examined the great cooperative societies of Great Britain, we found the same distributing elements, and we were forced to the conclusion that in the nature of the consumer's needs and his geographical distribution over wide areas, the machinery of distribution require three indispensable elements—namely: the producer, the wholesaler, and the retailer, and that no effort to eliminate any of these units had succeeded in reducing the amount of labor to be performed, or in doing more than to change the name of the functionary performing it.

The mail order system was found to be a retail institution combined with wholesale warerooms, and in some instances factories, and to save no labor, but rather to violate an elementary principle of transportation in that it involves the carrying of retail packages over long distances instead of carrying goods in bulk to the community where they are to be consumed and there opening the factory cases and sub-

dividing and delivering through a retail establishment to the consumer individuals.

It was left to us to inquire, therefore, in view of the fact that elimination of the middlemen could not be achieved, whether any of these methods of distribution succeeded in performing the inevitable labors at a lower expense or in relieving the consumer of paying exorbitant or unearned profits, and whether in the event that these hopes failed there was any other direction in which we might look for relief from the high costs which are admitted to be greater than they should be.

In our preceding article it was set forth that three and only three possible ways of saving on distributing costs lay before us—viz., (a) eliminating useless *labor;* (b) eliminating unreasonable or unearned *profit;* (c) increasing the efficiency of our distributors.

There is no opportunity for saving in the motions, processes or labor of the producer-wholesaler-retailer system without substituting more expensive methods. If further demonstration of this were needed, it might be found in the relative prices of articles sold and delivered by the manufacturers, through direct factory agents as in the case of typewriters, adding machines, cash registers, sewing machines, and a host of other things sold by the manufacturers' organizations without the intervention of the wholesaler or retailer in the ordinary form and the prices of which to the consumer are approximately five times the cost of production instead of the customary three. One other observation is in order here, *i. e.,* that when we discuss the question of eliminating middlemen we have in mind that the numerous speculators and nonproductive meddlers in some lines of trade have not entered into our consideration and are not to be recognized as performing the legitimate, necessary functions of the wholesaler and retailer, though in some trades it is sometimes permissible to subdivide the functions of these latter and add a link.

It is commonly supposed that large businesses operate more economically than small ones, and there is a popular impression therefore that the large department stores, the chain stores, the mail order houses and the great cooperative enterprises of Europe make savings which they can pass on to consumers, or that they work on a smaller margin of profit and give better values.

As to operating costs in point of fact, it is found that the large stores are under greater proportionate expense than small ones, as will be shown in a moment.

The assumption to the contrary is a natural one until a fundamental distinction in the character of the functions of distribution as contrasted with those of manufacturing, is recognized.

It is true that within certain limits, production can be more economically conducted on a large scale than on a small one.

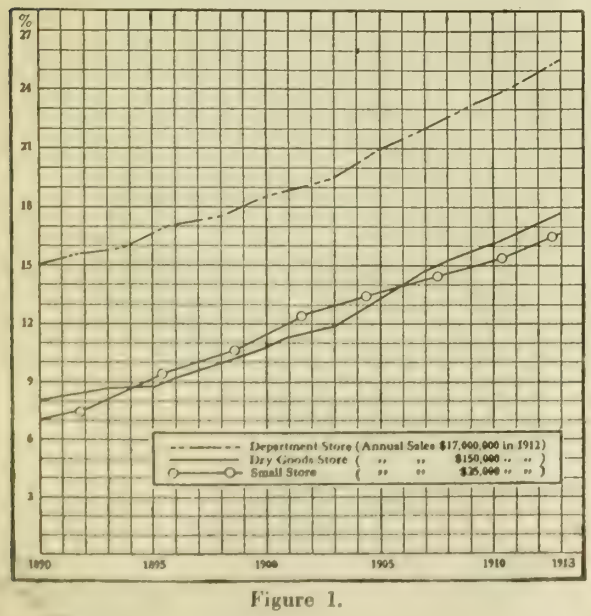


Figure 1.

MUST DEAL WITH HUMAN NATURE

But manufacture is a matter of materials, machinery, labor organization and management concentrated in one unit under a single control. It is done in one place. When we come to distribute the manufactured product, we deal not with metals, machinery and organization, but with the variable quantity, human nature. We must inform, educate and persuade thousands or millions of people of different temperament, experience, purchasing power, viewpoint, and needs, scattered across a continent to adopt our new invention, to discard their old habits, to drop their prejudices, to accept our product instead of some other. We must deliver the individual's retail requirements, not the factory's wholesale output.

This can best be done by widely separated efforts distributed over each small area as the population is grouped. Thus it tends to keep stores small and situated close to the consumers. The retailer, the neighborhood store, knowing intimately the local needs and peculiarities, selects suitable goods with greater precision, has access to the people of the vicinity more often and can get into closer touch with the consumer and show the new products, explain them and make sales with less expenditure for advertising, delivery systems, etc., than the large store further away. His show window is a constant medium of communication. He buys closer according to the local preferences, carries smaller stocks and suffers smaller losses through left-over and mark-down merchandise. Hence, the undiscriminating supposition that because large industrial units are economical, the same will be true of merchandising establishments, is unwarranted and is disproved by an examination of their ratio of operating expenses.

This explains the tenacity with which smaller stores hold out and do the bulk of the country's business, both in the great cities and smaller towns. They are capable of rendering service both from the standpoint of convenience and values. Many other factors enter into the situation, such as the expertness of the specialist who devotes himself closely to one line of business and one community instead of striving to master many with the help of employees, as does the department store; and it has not the "overhead" expense of a co-ordinating organization to keep track of many departments, protect against shoplifting, dishonest clerks, managers, buyers, etc.

It is not to be inferred that the department store does not serve a useful purpose in its own sphere. We are considering only its ability to reduce living costs as indicated by its operating expenses compared with those of the smaller store. Since it does not save *work,* we are striving to find out if it can save in the *performance* of the work.

GETTING DOWN TO FIGURES

Let us now refer to figures.

While it had long been common knowledge among business men that the cost of doing business of the large stores was heavier than that of the small ones, as evidenced by their buyers who argued among other reasons that they must have lower prices on their purchases because their expenses demanded it, there are available the results of several extensive researches into the subject.

On account of the abnormal conditions obtaining since the beginning of the European war in 1914, we will confine our attention to figures gathered before that time.

In his book, "Keeping Up With Rising Costs," Walter Sammons, of *System Magazine,* publishes extensive findings covering the years 1890 to 1913. Typical of general conditions are those pertaining to three stores of different sizes.

One is a large department store doing a business of $17,000,000 a year. Another is an ordinary dry goods store with sales of $150,000 and the third a small store selling only $25,000 a year.

The chart, Figure 1, is reproduced from page 13 of Mr. Sammons' book and shows that throughout the period, the operations of the department store cost about 10% more of the money it took in than did those of the two smaller stores based upon theirs.

That these are not exceptional circumstances is shown by Figure 2, reproduced from page 33 of the same book. The figures represented by this diagram are a composite result obtained by a study of nearly a thousand stores in all sections. It shows that the percentage of the operating expenses in proportion to the business done is higher in the large department store than in any other retail store, save only the jewelry store dealing in luxuries, which is about the same as the department store. The jewelry department in the latter, however, would be found to be about 10% higher still.

Chain stores are not considered in this diagram, but it is generally recognized in business circles that their expenses are higher than those of the department store.

MAIL ORDER COSTS, AN ERROR

The mail order expenses which are shown in the diagram to be the lowest of all, are admittedly in error, the explanation, I understand, being that they were based upon insufficient data. Dr. Paul H. Nystrom of the University of Wisconsin, in an investigation carried on about the same time, found the mail order expenses to be about 22%, to which must be added the cost of transportation of the goods to the consumer to make them comparable to the figures of the retail store which delivers the goods locally. This would make the expense of the mail order business 10% or more higher than shown in the diagram, or about 25%. Dr. Nystrom's research in other particulars generally confirmed that of Mr. Sammons, and his book "The Economics of Retailing" throws other lights on the subject.

Another country-wide investigation is that of Mr. C. C. Parlin of the Curtis Publishing Company, and his findings are partly published in his book, "Advertising as a Business Force." They substantially agree with those of Mr. Sammons.

To offset the higher cost of doing business of the large retail institutions, it must be borne in mind that they buy at lower prices than the smaller stores by about 15% based on their cost prices. This about balances their higher operating expenses, which are figured on their selling prices and permits them to compete in values. Whether they rightfully earn the price advantage they enjoy is beside the question before us.

To those to whom the proof of the pudding is

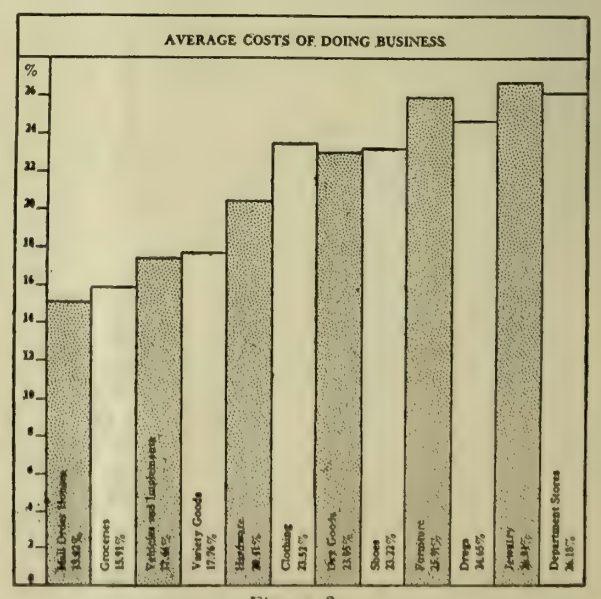

Figure 2.

in the eating and who have experienced undeniable bargains from the big stores, it should be explained that frequently they pick up large lots of goods at genuine savings. This is part of their service to manufacturers, wholesalers and the public. Also they have more "left overs" to be sacrificed. Again, some of them occasionally sell well-known articles at an actual loss in order to draw trade, but in the long run they must make money and they must recoup themselves for their sacrifices and cover their losses on the ordinary run of their merchandise, which on account of their high expenses must be sold proportionately high.

In a long series of purchases extending over a period of years and made from big stores and little stores in the same vicinity at the same time, for the purpose of examining comparative values on identical or nearly identical goods, no conclusive advantage was found on either side. Sometimes and on some classes of goods the larger stores appeared the cheaper. On others the small stores had the advantage. Generally speaking, country stores were cheaper than big city stores. The same holds true for the chain store and mail order tests. In range of variety the large stores excel and likewise in style merchandise they have the later fashions. But in the same goods for equal quality in other respects they are higher priced. The small store excels in convenience of location, in personal service, in promptness of delivery and extension of sound credit.

From all of the foregoing, we may conelude that bigness does not mean economy and that neither in the attempt to eliminate labor or perform the labor at lower operating expense do the large distributing institutions achieve results.

As to cooperative stores, there are no large successes in the United States and my data regarding those in Europe so far as their expenses are concerned, is at present too meagre and inconclusive to mean much. Having visited them, however, and having made comparative purchases from them and from neighboring independent stores without apparent differences in values, and knowing that they save no labor and do not appear to be more capably managed and that they suffer several material disadvantages in comparison with the independent stores, I am forced to conclude that they accomplish no more in economy of operating expense than do the other efforts at "eliminating the middleman".

This brings us to a consideration of whether there is a prospect of saving unearned or exorbitant profits, since the saving of labor and expense has disappeared. To judge of this we must have before us some approximation of the profits absorbed in the existing system of distribution from maker to wholesaler, wholesaler to retailer and retailer to consumer.

While expenses and profits vary in the different lines of trade and different sections of the country and in different stores in the same kind of business and in the same store from season to season, it is possible to approximate the general percentages over yearly periods and make a composite covering principal lines of business.

ALL SORTS OF COSTS TRACED

Figure 3 represents diagrammatically the results of an inquiry made in the early part of 1916. The products of 40 typical factories producing foods, drugs, hardware supplies, fuel, housefurnishings, clothing, jewelry, shoes, dry goods, notions, automobile supplies and several other lines, were traced from maker to user through large and small stores widely scattered. The observations were reduced to composite averages and are exhibited in the chart before us. The effects of the European war in the form of increased operating costs are shown in the figures, yet there is not a wide discrepancy between the retailers' expense of doing business at this time and at the time of Mr. Sammons' investigation. The consumer's dollar thus dissected reveals unreasonably heavy *expenses* in distribution, but the *profits* of the middlemen are not an unreasonably heavy burden upon the consumer.

The retailing profit of 6 cents remaining after the operating expense of 28 cents is deducted from the gross profit of 34 cents out of each dollar taken in, would pay a return of $1,800 a year on the ordinary store's volume of $30,000 sales. This is slightly less than $35 per week and considering a usual investment of from $5,000 to $10,000 in the business and the risks taken, it is a modest reward for the services to the community and with interest on investment subtracted amounts really to less than $30 per week, which is less than the skilled laborer frequently receives for shorter hours, less anxiety and without risking his own money in the enterprise.

For purposes of simplification in the diagram, fractions of cents were discarded and the nearest whole number taken. Thus the wholesaler's profit shown as 3 cents really figured to be only a trifle over 2½ cents. But taking it at 3 cents and adding the retailers' 6 cents, we have the total profit of those two middlemen as 9 cents out of the consumer's dollar.

The most then that any scheme of saving middlemen's profits could hope to attain would be to save a *part* of this 9 cents. Interest on investment and salaries of managers in place of the proprietor's profits would necessarily reduce the amount that could be saved. Only a narrow saving could possibly be looked for.

But in order to hope for *any* saving, it would be necessary to conduct the distributing operations as expertly as they are now performed and without increase of operating expenses. If the ambition contemplated benefits to any large proportion of the people, it would require that the present proprietors be induced to work for others for a smaller remuneration than they now receive as owners or to supply a new school of managers to take their places. Neither of these alternatives is immediately probable.

If for a moment we indulge in a consideration of a vast scheme of collective ownership by consumers, including retailing in all lines of business, wholesaling, manufacturing, growing and mining, we are confronted with problems of organization and management greater than those of government.

NOT EVEN A RIPPLE IN TRADE

The cooperative movements of Great Britain, great as they are and involving hundreds of millions of business annually, are not large enough to have made a ripple on the surface of Britain's trade. The ordinary retailer and wholesaler still do business without concern.

Successful as the "coops" are generally regarded, they have made no general change in conditions and it is seriously to be doubted whether they have conveyed any real economic benefits. Side by side the older wholesale and retail houses successfully compete with them for trade, smaller though they are and without the psychological advantage of having the consumers as "members" or shareholders with all the prejudice that men hold in favor of things to which they "belong" and which belong to them.

To extend the cooperative system to a point where it became a material factor in the situa-

(*Continued on page* 18.)

Where the Consumer's Dollar goes, as shown by an inquiry following through to the consumer the products of 40 staple and specialty manufacturers in various leading branches of trade.

Undermining the Foundations of National Morale

A FOREWARNING OF THE NEW GERMAN PROPAGANDA OF SOCIAL DISCONTENT AND CIVIL STRIFE—POISONING THE FONTS OF LEARNING—A LESSON FROM THE PAST

By T. EVERETT HARRÉ

PART I

GERMANY'S war against democracy and for dominion over the free nations of the world did not begin on August 1, 1914, nor had Germany become the enemy of America only when she struck her first blow at American sovereignty and rights by the sinking of neutral ships and the murder of American women and children peacefully traversing the high seas. Germany's war began when, scientifically laying out her plans for world subjugation, she first inaugurated her campaign of "peaceful" invasion by propaganda, the purpose of which was the destruction of national integrity and the undermining of national morale. Germany had launched her warfare against democracy in America when, immediately after the Spanish-American war, she began propaganda to stimulate hostility in this country against Great Britain, and when, after the visit of Prince Henry she instituted a vast campaign the purpose of which was to debauch and poison American public opinion in favor of Germany. She assaulted American sovereignty when she invaded the schools and colleges of America by the winning over or subsidizing of American educators, by the pro-Germanizing of text books for the use of American school children, by poisoning the fonts of learning at their source.

Nor will Germany's war against democracy, against the peace and welfare of the free nations of the world, end with the signing of the treaty and the formal conclusion of military hostilities. G rmany, unregenerate and unrepentant of heart, will, upon the technical conclusion of the war, seek to obtain by "peaceful means" what she failed to achieve through military victory. The new German propaganda, which has already been carefully worked out, with adroitness and far-seeing cunning, will be carried on with an intensiveness, a subtlety, a calculatingly shrewd mastery of conditions and events, as find no precedents in the past. And in this propaganda Germany will have gained from her experience, by her failures; she will put to profit those lessons which are learned only from defeat.

"THE WAR AFTER THE WAR"

Ideals are the vital things back of all human movements, back of any war. There is no victory, there can be no victory, unless the spirit of the thing against which you fight admits its surrender or is utterly crushed. Germany, indignantly repudiating her guilt in causing this war, refusing to admit her unparalleled crimes, has neither been defeated in spirit nor eliminated as a potential foe to the security and peace of the world. The war of armies, it is true, has ended; but a greater war, a moral war, a war of intellectual deceit and cunning, a war of spiritual treachery, has begun.

Germany will seek, immediately upon the signing of the treaty, to recuperate economically and financially. With her land uninvaded and her factories intact, with the vast resources of machinery looted in the lands invaded, with tremendous stocks of manufactured products to sell, she will seek to flood the markets of the world with merchandise and regain the commerce lost during the war. To this end, the German propaganda will seek to create hostile feeling toward her rivals in the countries whose trade she covets. Wherever it serves her ends, Germany will endeavor to stir up quarrels among political and commercial rivals, fan racial and national differences into active animosities, turn nations one against another, as well as promote social and labor unrest, strikes, revolutionary movements and civil war within the countries whom she seeks to damage.

Germany, protesting that she accepts peace conditions by force, signs the treaty with her tongue in her cheek, and a dagger hid in the folds of the sackcloth of submission. Germany, having signed the treaty, will indubitably scheme to evade fulfillment of the terms of the treaty, and she secretly plans to evade payment by the stimulation of division and disagreement among the Allies and between the United States and the Allies so, that thus estranged, they will not act in concert when Germany fails to fulfill her pledges. That Germany has changed no more than the proverbial wolf in sheep's camouflage is indicated by the fact that, while she made a show of repudiating the figurehead Kaiser and becoming a republic, she maintained in the background as advisers and directors of her affairs the same old gang with whose malfeasances the world has become sadly familiar—the unspeakable Count von Bernstorff, who, while Ambassador to America, directed the slimy intrigues of the Huns, infested the country with spies and ordered the dynamiting of railroads, factories and ships, inflicting a loss of property and life; Dr. Bernhard Dernburg, head of the Hun propaganda, who was forced to leave American shores because of his notorious defense of the sinking of the Lusitania; Dr. Heinrich Albert, Hun propaganda paymaster in America; those bankers with international affiliations who acted as financial go-betweens for the promotion and financing of the Bolshevik revolution in Russia, as well as the vast crew of trained propagandist chiefs, agents and spies. That Germany, whose affairs are still conducted by the same old trickstering gang, will continue her propaganda into the era of peace, was indicated by the far-reaching propaganda campaign scientifically laid out even before America took up arms against her.

THE HAND OF THE HUNS

Germany planned, at that time, to continue her world propaganda after the war, with the purchase or subsidizing of great daily newspapers, of news agencies, the establishment of a cable and wireless news service covering the globe, to the end that she debauch and secure control of politics and public opinion in all the great countries of the world. That Germany has never had any intention of giving up her old game is further shown by the fact that the chiefs of her propaganda bureau in the United States, after their return with von Bernstorff to Germany, simply moved their headquarters to Geneva where they continued their labors. Recently, according to reports, an insidious propaganda of world-scope has been directed from Breslau. Scheming to retain what she gained in Russia and to have free access for the exploitation of the resources of Russia, the German propaganda seeks to hinder if not frustrate the setting up of a free and united Poland, and to this end has flooded the world with anti-Polish propaganda. This has taken the form of lurid reports of pogroms against the Jews—reports which, according to the American Minister, Hugh Gibson, are grossly exaggerated. This propaganda has been instigated and backed by certain German financial groups which desire free access for the exploitation of Russia, and at least one of which figured as fiscal agent for the Huns in financing the Bolshevist revolution. The purpose is to destroy confidence and sympathy for the new Polish Republic, to arouse such racial antagonism and powerfully hostile influence as will paralyze the development of the new nation, discredit Poland to such a degree as will make the floating of a foreign loan of the Polish Republic an impossibility in the world markets. According to Chairman Porter, of the House Committee on Foreign Affairs, many reports of pogroms appearing in the United States are sent out by a German-owned newspaper at Copenhagen "for the purpose of impressing the world with the idea that Poland is not capable of self-government." That this German-inspired racial propaganda has not been without tremendous effect is shown by the pulling off of huge mass meetings, parades of protest and fanatic agitations in every great city in America. It is very probable that, on account of its adroitness and furtiveness, this propaganda has been innocently abetted by many people who would be opposed to any new hyphenism and any effort to turn Poland over to Germany and German international bankers.

Minister Gibson in his report very aptly declared: "Violent agitation abroad based on unwarranted reports of conditions cannot help the Jews, but has exactly the opposite effect," and he asserts that the American Department of State "can render a service to the Jews of Poland by discouraging agitation based upon exaggerated or unfounded reports." Chairman Porter declared it struck him as "quite significant that there was no protest over the killing of the Jews in the Bolshevist country, Russia," where, according to his information, "there are 300 Jews killed in Russia to one in Poland, and probably 500."

THE NEW PROPAGANDA OF SOCIAL DISINTEGRATION

The new propaganda will not appear on the surface as German propaganda. That phase which sought to render countries subservient under German aggression by the creation of an excessive admiration for German achievements and German *Kultur*, and which sought after the outbreak of the war to swing public sentiment in favor of Germany, has ended. The new phase will have for its supreme and ultimate object the promotion, in countries whom Germany seeks to destroy, of such movements as that by which she successfully brought about the surrender of Russia. Germany will not cease to strive for world advantage, for dominion in the politics and markets of other nations, but her armies will not be the goose-stepping soldiers—they will be comprised of the Socialists, anarchists, revolutionaries, I. W. W.s and various breeds of agitating malcontents. And zealously aiding and abetting Germany in her insidious underground onslaught against the security, integrity and peace of the nations, will be that whole tribe of intellectual pariahs, parlor Bolshevists and editor-statesmen of the "new school" who, glibly mouthing their disloyalty and sophistries in terms of idealism and liberalism, have played the German game from the beginning to the end of the terrible war. Unconsciously serving to the best of their power as Germany's agents and tools, will be the whole pusilanimous chicken-hearted flock of pacifists, international-

Studying Industrial Reconstruction in Great Britain and France

By E. A. QUARLES
SECRETARY COMMISSION ON INDUSTRIAL INQUIRY OF THE NATIONAL CIVIC FEDERATION

LAST February there set sail for Liverpool one of the most important commissions The National Civic Federation has ever sent abroad. Its general instructions were to make a study of and report on the various phases of the industrial reconstruction problems that the world war has brought to the fore. The field of operations designated was Great Britain and France. The personnel of the Commission, which was representative of Capital, Labor and the Public, follows:

Charles Mayer, Chairman; Charles S. Barrett, Albert F. Bemis, J. Grant Forbes, James W. Sullivan, A. Parker Nevin, E. A. Quarles, Secretary.

The determination to send the Commission abroad was reached at a conference held in this city in December at which a resolution was adopted providing that the Commission should, in general, ascertain what England had learned during the war in respect of methods of dealing with capital and labor problems that can be of benefit to us in the United States, and especially requiring it to investigate the following subjects:

The Whitley Councils in Great Britain.
The shop steward, shop committee and democratic control of industry programs.
Operation of bonus and profit-sharing schemes.
Compulsory sickness and unemployment insurance legislation.
The housing problem.

Shortly after arriving in London, where headquarters and offices were established in the First Avenue Hotel, a splendid formal welcome was given the Commission under the auspices of the National Alliance of Employers and Employed of Great Britain, an organization similar to The National Civic Federation. This took place at a large dinner on the evening of March 25 at the Holborn Restaurant, presided over by the Honorable E. Huth Jackson, Chairman of the Alliance. Representatives of practically every important labor and manufacturers' organization in Great Britain were present, and nothing could have served better to inspire the visitors to their best efforts or to make them more certain of the cordial welcome that the employers and workmen of the United Kingdom wished to extend.

Busy days, filled to the full with absorbing interviews with leaders in the British labor and manufacturing world followed. The investigators set no limit to their activities and every phase of opinion was sought in the British industrial world from the most conservative to the ultra-radical.

WENT AT A VITAL TIME

No better time could have been chosen for the Commission's visit, for Great Britain was in the throes of industrial unrest due to the upheaval of the war, its unexpected termination, and the wholesale release of thousands of soldiers, jobless, upon the community. For several weeks it seemed possible that all means of transportation might be cut off at any minute and the insistent demands of the Miners' Union at the same time promised the shutting down of all industry at almost any moment. Surely few moments in the industrial history of the world have been more pregnant with awful possibilities than these few weeks during the early part of 1919.

Sound statesmanship and patriotic action on the part of leaders in British industry averted the threatened catastrophe, and there had been set up in Great Britain before the Commission departed, machinery for the working out of the problems that have to be faced that gives promise of success.

One of the most important accomplishments of the stay in England was a visit to the principal industrial centers of the United Kingdom, which included Manchester, Swansea, Liverpool, Glasgow and Dundee. This was taken under the auspices of the National Alliance of Employers and Employed, and the Commission was the guest of that organization throughout the journey.

At every place visited a formal welcome was given by the Mayor and city officials, following which the most intensive work was immediately resorted to. Thanks to the excellent arrangements of our hosts, we were able at each place to get immediately into contact with the men principally concerned in working out the labor problem. The Commission particularly requested that it be permitted to interview those representing every shade of opinion and endeavored to make it clear that it was seeking only the facts. All were impressed with the frankness of expression of both employers and employees and even more so with the spirit of give and take that was manifested and the ardent desire to work out Great Britain's industrial destiny in a harmonious manner.

All who took this trip feel especially grateful to those members of the staff of the National Alliance whose work made possible its success. Mr. A. H. Patterson, Secretary of the Alliance; Lieutenant General Sir Edward Bethune, General Organizer; Captain A. F. Wornum, his Assistant; Mr. T. A. Jackson, Labor Adviser, and Mr. Harry Dewberry, Labor Organizer.

Shortly after the completion of this journey, the Commission took train for Paris for a brief study of the industrial situation in France. On arriving there, its work was greatly expedited by Dr. E. J. Dillon, the famous journalist, who placed it in touch with many of the most prominent French labor leaders. Dr. Dillon also entertained the Commission handsomely and contributed greatly to the pleasure of its stay.

While there are unions in France fairly like those in this country, the great majority are composed of men whose leaders, at least, are frankly revolutionists. It is not too much to say that they are heartily in sympathy with Bolshevism. France, however, is largely an agricultural country and it is the hardworking, land-owning French peasant who dominates the country. While Michel has little regard for the capitalist, he has even less for the syndicalist (the revolutionary labor leader) and it would seem that he presents a formidable barrier to the spread of Bolshevism westward.

In France the days seemed all too short with the vast amount of conferences with labor people, employers, economists and Government officials that constituted the daily program.

FRENCH SITUATION UNIQUE

Taken as a whole France does not seem to be so alive to the industrial problems created by the war's upheaval as does Great Britain, but evidence was found that in some industries, notably the metal trades, efforts are being made by employers to bring about closer relations with employees. As the principal French unions are avowedly revolutionary and openly state that they are working for the downfall of the capi-

The Editor alone is Responsible for any unsigned article or unquoted statement published in THE NATIONAL CIVIC FEDERATION REVIEW.

A. F. OF. L. VOICES POLICY OF CONSTRUCTIVE PROGRESS

The thirty-seventh annual convention of the American Federation of Labor, which has just concluded its sessions at Atlantic City, was the most noteworthy ever held by that remarkable body of representative working men and women. To describe, even by title, all the constructive and useful measures adopted would cover more space in our editorial columns than can be allotted to the purpose. Mr. Chester M. Wright has performed that service in a special article in the REVIEW and we bespeak for it a careful perusal.

It is not too much to say that at the very moment in the history of our country when such qualities were most needed the American organized labor movement displayed its greatest Americanism, loyalty, sanity and courage. The declarations of this convention will serve as a crushing answer to the defeatists, revolutionaries and so-called liberals of Europe who have been confidently whispering in public places, in the last two months that America would "hear something drop" at Atlantic City.

Before the convention assembled, as before all other of its conventions, there were prophecies of "the disintegration of the A. F. of L.," of its capture by the radicals, of the elimination of "Gompersism," and of all the dire disaster wished on it by its ancient enemies, but this particular convention had the distinction of having those sure prophecies more numerous and the forces back of them better organized than ever before. The usual elements of disorder bent on the destruction of the American Federation of Labor were this year reinforced by a definite cabal of revolutionary "intellectuals," running the gamut all the way from *The New Republic, The Dial, The Nation, The Public,* and *The Survey,* to *The New York Call, The Rebel Worker, New Solidarity* and *The Liberator.* Even the revolutionary preachers in certain fashionable churches joined the cabal and directed splenetic soap-box sermons at the head of Samuel Gompers for so persistently and ably defying their anathemas and vanquishing the forces of revolution. One weekly, *The Nation,* was so wrought up over the matter that it published a special article predicting the downfall of Gompers and his reactionary cohorts, and it advertised its own imbecility in this respect in the daily press throughout the country. The fact that the opposition to President Gompers in the convention was so weak that only one out of the handful of its fire-eaters had the temerity to vote against him, is a fitting answer and rebuke to the motley group of anarchists, I. W. W.ites, socialists, pseudo-intellectuals, editors, preachers and college professors ranged against him. In other words, it was a vote of thirty thousand to one—a fairly safe majority.

But, aside from their discomfiture in the attempt to unhorse the Grand Old Man of Labor, the revolutionary forces met overwhelming defeat along the whole line of battle. The only time they dared stand up and be counted was on a proposition to substitute on the Executive Council an official of one of the numerous needle trade unions (the Balkans of American industry) for Thomas A. Rickert, President of the United Garment Workers, an organization anti-socialist and thoroughly American. When one reads of "mass meetings" of the needle workers (most of them "Russians") in Madison Square Garden or in any of the other hundred-and-one halls in New York City, Boston, Cleveland, Philadelphia or Chicago, where they assemble by the thousands, the impression is received that there are millions of them, but when they stood up to be counted at Atlantic City their relative importance in the labor movement showed for just what it was worth. Mr. Rickert received, in round numbers, 29,000 votes, and the revolutionary candidate 2,600.

Most of the other radical propositions — the recognition of Soviet Russia, the indorsement of the I. W. W., the "one big union" scheme of organization, the release of the conscientious objectors and the violators of the Espionage Act, and a dozen other proposals tainted with un-Americanism—were defeated by a vote ranging from 20 to 1 to 30 to 1.

No one witnessing the proceedings at this Atlantic City convention could have any difficulty in discerning the fundamental difference between the labor movement in America and the labor movement in other countries. There is in Italy practically no trade union movement at all; what there is in France is made up chiefly of syndicalists and anarchists and variegated socialists, with only in spots a real trade unionist. In England the trade unionists, a minority force, are submerged in a mixed-up political socialist movement. In America the organized labor movement is anti-socialist, in Great Britain it is fundamentally socialist. Between those two positions there can be no compromise.

The labor reconstruction programs of the two countries stand in contrast. The British asks that the State shall eventually take over all industries; the American calls on the State to keep out of everything possible. The British Labor Party would have State interference in all the affairs of daily life; the American labor movement would not tolerate the State's interference with the citizen except wherein it should be absolutely necessary. With reason, during the war emergency the American organized labor group, as well as all divisions of our people, surrendered individual rights to the State. Decisions had to be made quickly, right or wrong, and the cost of service, and even its quality, was not to be considered; the first requirement was rapid service. Now that peace has come, the American labor movement says: "Stop!" The British Labor Party says: "Go on!" It has had a taste of parental pap and likes it. The people do not want to have to do their own thinking; the State is to do it for them. It believes living on half rations without working at all, under the Unemployment Donation Act, is a good Socialist plan.

Some much-quoted writers and speakers who have returned from England in the last six months fail to perceive the fundamental difference between the labor movements of the two worlds. They applaud things in England that lie entirely on the surface. They make much of the fact that Lloyd George could bring together in general conference four hundred employers and four hundred labor representatives, resulting in the appointment of a sub-committee of sixty—thirty from each side—which unanimously agreed upon a proposed charter of industry. This points the way for this country, say these importers of foreign-made reform stuffs, and some ardently enthusiastic but rather shallow people are urging speedy imitation here. But these innovators do not tell us the whole story. They do not tell us that the conference was called at a crucial moment in the history of England—one that may never recur—when labor of various classes was threatening to tie up everything and everybody, leading to paralysis of industry and possibly to revolution, the fond hope of the Lenines and Trotzkys of Great Britain. As designed, the direct effect of the conference was to relieve the nation's tension, and on that score alone it was justified; but of nothing else connected with the affair could American people approve. The program of the committee of sixty provided that in their respective groups the various organizations of manufacturers and employers should establish rules and regulations and fix prices, to be enforced uniformly by parliamentary law. For labor, standards for rules, regulations and wage rates were to be established by the unions and by law imposed upon all the workers of the respective crafts. In other words, the practical effect is to compel every manufacturer by law to join the organization of his industry and to compel every wage earner by law to join the union of his craft. It is hardly believable that such legislation would ever be enacted by the Congress of the United States, and, for that matter, it is worth while noting that it has not yet been enacted by the British Parliament and may never be. But this is the wonderful outcome of that most wonderful conference of employers and labor leaders in London.

Nor do our importers of sociological novelties tell us that this untried economic medicine was to be taken "for only the time being" by British labor in pain. The labor committee unanimously sent in a supplementary report, restating the radical demands of the British Labor Party's program, which prescribe that the state shall take over and operate all factories, mines, mills, banks, stores, farms, elevators and railroads—in fact, cover all productive industry with its protective paternal hand.

After reading the industrial program of the British Labor Party, it is refreshing to turn to the reconstruction program of the American Federation of Labor and the proceedings of that organization's Atlantic City Convention just closed. We wish every reader of the REVIEW could have attended that Convention and seen our sturdy, brainy men of Labor in action.

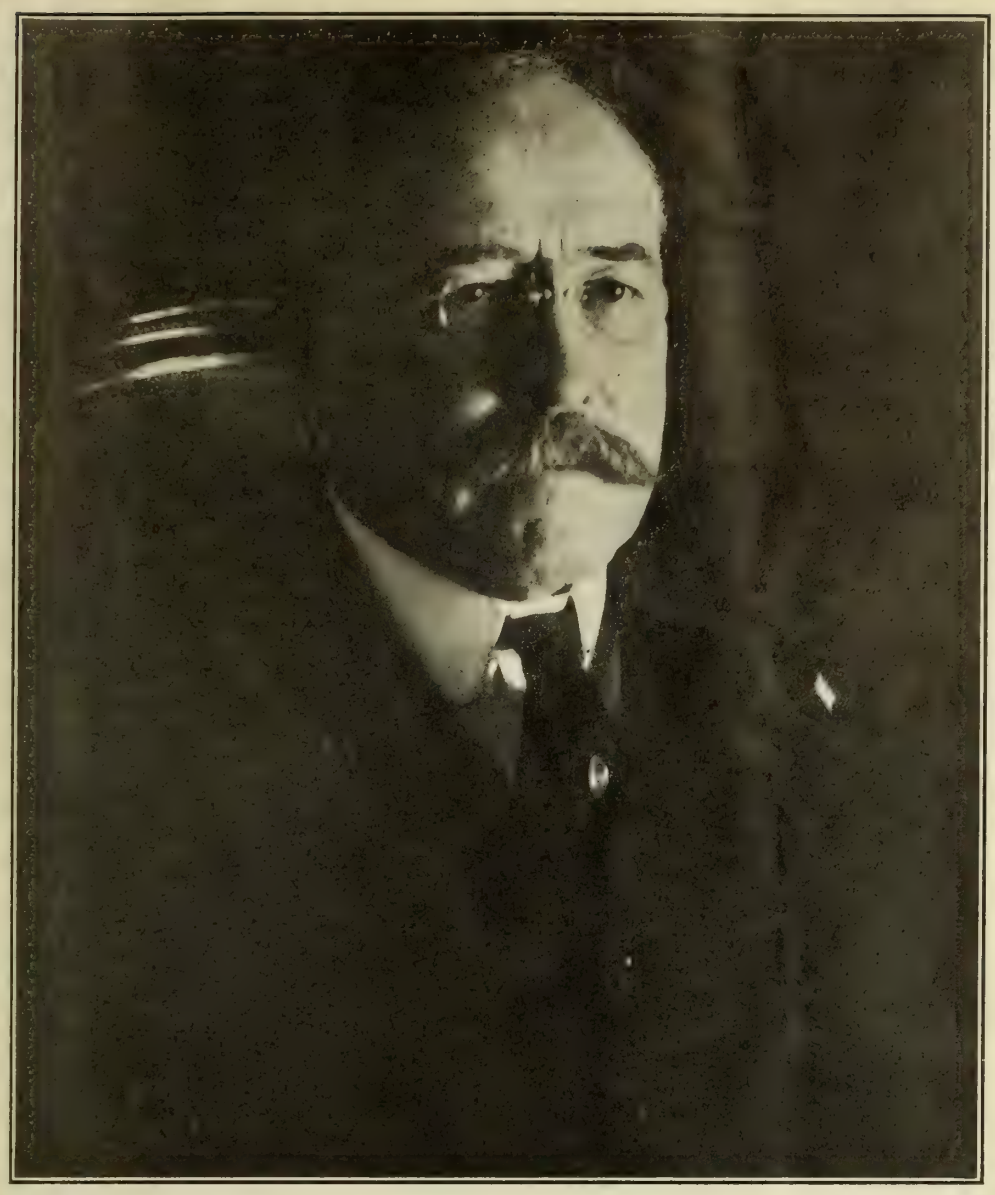
PEACE— BUT IS GOOD WILL AMONG MEN SECURE?

By the time this issue of the REVIEW goes to press the peace treaty will probably have been signed. There will have formally ended the most terrible of all wars, a war unexampled for fiendish cruelty and scientific savagery on part of a people seeking without compassion or scruple to obtain dominion over the nations of the world. In this consummation of the struggle, with victory over the world's foe purchased at so precious a price, civilization will rejoice. And after the long travail, the unstinted sacrifices, the unutterable heartache, the nations which have fought and defeated Germany look up to a new era—an era which, if all the bloodshed is not to be in vain, shall be richer in good will among mankind, in a living Christian love among men and nations.

Germany has been defeated in the field; her frightsome engines of destruction have been stilled; she cannot now impose upon the world a dominion and system of kultur by force, by "blood and iron." Physically she is conquered —but has she been conquered in spirit? Does the treaty which Germany signs make the peace of the world secure? In fighting Germany the nations arrayed against her fought ideas no less real, no less tangible than the brutish armies wreaking fire and bloodshed in Belgium and France. Those armies have been routed—but have the ideas so deeply embedded in the heart of the German nature been uprooted and destroyed? Can Germany be trusted? Will she keep her solemn pledges? Does she seek readmittance among the nations with a penitent and regenerate heart?

There is not one of us but in his better self desires to forgive those who trespass against us, not one of us but would forgive the German

people if, conscious of the evil they had done, they manfully and honestly admitted their guilt.



Great as must be the joy of the world that peace has come, it would be worse than folly, it would be a betrayal of all that for which the nations have bled, to blind our vision to the very menace that confronts us in the era of peace.

In the very act of suing for peace, Germany defiantly repudiated her guilt and denied her manifest and monstrous crimes. In the very act of seeking to alter the terms of the treaty, Germany sought to protect from being held to account those former rulers who had plotted and deliberately made the world war. Upon the very threshold of signing the treaty, German sailors sunk the fleet which had been surrendered to the Allies and a derisive hate-inspired German mob burned those sacred flags taken in 1870 from France and which Germany was pledged to return. In the very note in which they agreed to sign the treaty, the German plenipotentiaries insolently characterized the terms as "unbearably harsh" and asserted that the German Government "yields to force." Protesting against the territorial terms, with amazing effrontery or unconsciousness the German representatives declared: "The German Government, therefore, finds itself compelled to decline all responsibility for any difficulty which may result from the resistance of the inhabitants against their separation from Germany." "No act of violence can touch the honor of the German people. . . . Yielding to superior force, and without renouncing in the meantime its own view of the unheardof injustice of the peace conditions, the government of the German republic declares that it is ready to accept the peace conditions imposed."

Was this not tantamount to giving official warning and public notice that, while she may accept the terms, those terms would not be fulfilled?

The French press accurately gauged the spirit in which Germany agrees to the treaty when it declared that Germany will observe the terms only with a sword at her throat. That sword must be the united moral force, united armed power, the concerted vigilance, the perfect concord, the indivisible alliance of America and the Allied powers. When the nations which fought Germany are estranged and turned one against another with rivalries, enmities and antagonisms, when they are within themselves torn by social unrest and civil strife, when the whole world seethes with a ferment secretly stimulated by Germany, then, and only then, can Germany default in her obligations, repudiate the terms of the treaty, and obtain through the social disintegration and moral collapse of other peoples what she failed to achieve through military means.

That day must never come. And that this day shall never come, that the treaty which has been signed shall be a living document, the nations of the world cannot afford to trust Germany, to relax in their watchfulness, or let suspicion and division destroy that union and concord which has been sealed with precious blood. Unless backed by the united and formidable moral and material force of America and the Allies, the treaty just signed will be, as the Berlin *Vorwaerts* declares, merely another scrap of paper. It was this same paper, the Socialist *Vorwaerts,* which last March boldly spoke of the "new weapons" which Bolshevism offered Germany for defeating the victory and evading fulfillment of the peace terms of America and the Allies.

ALTON B. PARKER

Alton B. Parker has been elected President of The National Civic Federation by the Executive Council and has accepted the position, filling the unexpired term of Mr. V. Everit Macy. On account of a serious operation, Mr. Macy has been ordered by his physicians to withdraw for the time being from all positions of responsibility. He will retain his membership on the Executive Council and will enter once more into the active work of the Federation when his health is completely restored.

Judge Parker needs no introduction to the members of The National Civic Federation or, for that matter, to the American people. He has shown his sympathy for the wage earner not only as Chief Judge of the Court of Appeals of New York State, but as an eminent member of the Bar. Employers and wage earners alike respect and trust his impartial judgment. He is the fifth president in the nineteen years of the Federation's history, the other four being: Marcus A. Hanna, August Belmont, Seth Low, and V. Everit Macy.

It required vision and strength, vigilance and the spirit of sacrifice to win this war. It will require vision and strength, vigilance and a spirit of live patriotism that will not compromise nor grow faint to maintain that the war has gained. Lest, after peace, good will among men be destroyed, let not the sentinels of the nations sleep on the watch-towers of the spirit.

TO PROBE PROPAGANDA IN SCHOOL TEXT BOOKS

Impressed by the extent to which pro-German and un-American propaganda had invaded American public schools and colleges, and had influenced the writers of school text books, as has been revealed by various, if somewhat sporadic, investigations during the progress of the war, a committee is being organized by The National Civic Federation to undertake a systematic and comprehensive examination of various text books used in public schools in order to detect and report upon the inclusion of pro-German, un-American, pro-Socialist and otherwise radical propaganda insidiously put forth in text books on history, civics and political economy. What is put into the public schools will come out in the public opinion and the public action of the land. As school books are today, so will public opinion be tomorrow. True of primary and grammar schools, this is still more true of the high school—the people's college. There, history, economics and political science are taught. There American institutions are presented, their workings studied, their effect on the wage-earning life of men and women described and comparisons made between European conditions and our own.

These studies are vital to the Republic. Only fourteen out of every thousand students who begin in public schools complete a college course, sixteen years later. Even out of every thousand pupils who enter the high schools only fifty-five complete a college course. The training of the vast mass in the field of citizenship is public school and high school training, and public school and high school training almost alone.

The books for these and for all public school studies are selected by school boards on the advice of superintendents, teachers and publishers. No one before the war thought of inquiring into possible non-American, un-American or anti-American teaching in the studies that deal with the duties, the responsibilities and the actions of the citizen. War came, and through the aroused spirit of vigilance and inquiry of the nation, it was found that among the text books which its sons and daughters were studying, were German reading books which praised the Kaiser and exalted German Kultur, books on political

Timely Points in Pope Leo's XIII's Labor Letter

ENCYCLICAL PROMULGATED IN 1891 SETS FORTH DUTY OF EMPLOYERS AND EMPLOYEES AND DEFINES PROBLEMS THE WORLD FACES TODAY

Because of the widespread interest throughout the country in the problems of labor and re-adjustment, as well as because of the discussion interjected into churches of Bolshevism and other radical programs, many readers of The National Civic Federation Review *have suggested the reprinting of Pope Leo XIII's famous Encyclical Letter on The Condition of Labor. That extraordinary document, the product of a mind of profound sanity and vision, was promulgated in May,* 1891, *and as it bears so cogently upon conditions and problems confronting the world today, its re-reading will be an inspiration to all constructive Americans,—Roman Catholics, Protestants and Jews alike.*

IT is not surprising that the spirit of revolutionary change, which has long been predominant in the nations of the world, should have passed beyond politics and made its influence felt in the cognate field of practical economy. The elements of a conflict are unmistakable: the growth of industry, and the surprising discoveries of science; the changed relations of masters and workmen; the enormous fortunes of individuals and the poverty of the masses; the increased self-reliance and the closer mutual combination of the working population; and, finally, a general moral deterioration. The momentous seriousness of the present state of things just now fills every mind with painful apprehension; wise men discuss it; practical men propose schemes; popular meetings, legislatures, and sovereign princes, all are occupied with it—and there is nothing which has a deeper hold on public attention.

Therefore, Venerable Brethren, as on former occasions, when it seemed opportune to refute false teaching, We have addressed you in the interests of the Church and of the common weal, and have issued Letters on Political Power, on Human Liberty, on the Christian Constitution of the State, and on similar subjects, so now We have thought it useful to speak on

THE CONDITION OF LABOR

It is a matter on which we have touched once or twice already. But in this Letter the responsibility of the Apostolic office urges Us to treat the question expressly and at length, in order that there may be no mistake as to the principles which truth and justice dictate for its settlement. The discussion is not easy, nor is it free from danger. It is not easy to define the relative rights and the mutual duties of the wealthy and of the poor, of capital and of labor. And the danger lies in this, that crafty agitators constantly make use of these disputes to pervert men's judgments and to stir up the people to sedition.

But all agree, and there can be no question whatever, that some remedy must be found, and quickly found, for the misery and wretchedness which press so heavily at this moment on the large majority of the very poor. The ancient workmen's Guilds were destroyed in the last century, and no other organization took their place. Public institutions and the laws have repudiated the ancient religion. Hence by degrees it has come to pass that Working Men have been given over, isolated and defenceless, to the callousness of employers and the greed of unrestrained competition. The evil has been increased by rapacious Usury, which, although more than once condemned by the Church, is nevertheless, under a different form but with the same guilt, still practiced by avaricious and grasping men. And to this must be added the custom of working by contract, and the concentration of so many branches of trade in the hands of a few individuals, so that a small number of very rich men have been able to lay upon the masses of the poor a yoke little better than slavery itself.

SOCIALISTS AND PRIVATE PROPERTY

To remedy these evils the *Socialists,* working on the poor man's envy of the rich, endeavor to destroy private property, and maintain that individual possessions should become the common property of all, to be administered by the State or by municipal bodies. They hold that, by thus transferring property from private persons to the community, the present evil state of things will be set to rights, because each citizen will then have his equal share of whatever there is to enjoy. But their proposals are so clearly futile for all practical purposes, that if they were carried out the working man himself would be among the first to suffer. Moreover they are emphatically unjust, because they would rob the lawful possessor, bring the State into a sphere that is not its own, and cause complete confusion in the community.

It is surely undeniable that, when a man engages in remunerative labor, the very reason and motive of his work is to obtain property, and to hold it as his own private possession. If one man hires out to another his strength or his industry, he does this for the purpose of receiving in return what is necessary for food and living; he thereby expressly proposes to acquire a full and real right, not only to the remuneration, but also to the disposal of that remuneration as he pleases. Thus, if he lives sparingly, saves money, and invests his savings, for greater security, in land, the land in such a case is only his wages in another form; and, consequently, a working man's little estate thus purchased should be as completely at his own disposal as the wages he receives for his labor. But it is precisely in this power of disposal that ownership consists, whether the property be land or movable goods. The *Socialists,* therefore, in endeavoring to transfer the possessions of individuals to the community, strike at the interests of every wage earner, for they deprive him of the liberty of disposing of his wages, and thus of all hope and possibility of increasing his stock and of bettering his condition in life.

MAN'S NATURAL RIGHT TO PRIVATE PROPERTY

What is of still greater importance, however, is that the remedy they propose is manifestly against justice. For every man has by nature the right to possess property as his own. This is one of the chief points of distinction between man and the animal creation. For the brute has no power of self-direction, but is governed by two chief instincts, which keep his powers alert, move him to use his strength, and determine him to action without the power of choice. These instincts are self-preservation and the propagation of the species. Both can attain their purpose by means of things which are close at hand; beyond their surroundings the brute creation cannot go, for they are moved to action by sensibility alone, and by the things which sense perceives. But with man it is different indeed. He possesses, on the one hand, the full perfection of animal nature, and therefore he enjoys, at least, as much as the rest of the animal race, the fruition of the things of the body. But animality, however perfect, is far from being the whole of humanity, and is indeed humanity's humble handmaid, made to serve and obey. It is the mind, or the reason, which is the chief thing in us who are human beings; it is this which makes a human being human, and distinguishes him essentially and completely from the brute. And on this account—viz., that man alone among animals possesses reason—it must be within his right to have things not merely for temporary and momentary use, as other living beings have them, but in stable and permanent possession; he must have not only things which perish in the using, but also those which, though used, remain for use in the future.

This becomes still more clearly evident if we consider man's nature a little more deeply. For man, comprehending by the power of his reason things innumerable, and joining the future with the present—being, moreover, the master of his own acts—governs himself by the foresight of his counsel, under the eternal law and the power of God, Whose Providence governs all things. Wherefore it is in his power to exercise his choice not only on things which regard his present welfare, but also on those which will be for his advantage in time to come. Hence man not only can possess the fruits of the earth, but also the earth itself; for of the products of the earth he can make provision for the future. Man's needs do not die out, but recur; satisfied to-day, they demand new supplies to-morrow. Nature, therefore, owes to man a storehouse that shall never fail, the daily supply of his daily wants. And this he finds only in the inexhaustible fertility of the earth.

Nor must we, at this stage, have recourse to the State.

MAN IS OLDER THAN THE STATE

And he holds the right of providing for the life of his body prior to the formation of any State. And to say that God has given the earth to the use and enjoyment of the universal human race is not to deny that there can be private property. For God has granted the earth to mankind in general; not in the sense that all without distinction can deal with it as they please, but rather that no part of it has been assigned to any one in particular, and that the limits of private possession have been left to be fixed by man's own industry and the laws of individual peoples. Moreover, the earth, though divided among private owners, ceases not thereby to minister to the needs of all; for there is no one who does not live on what the land brings forth. Those who do not possess the soil, contribute their labor; so that it may be truly said that all human subsistence is derived either from labor on one's own land, or from some laborious industry which is paid for either in the produce of the land itself or in that which is exchanged for what the land brings forth.

Here, again, we have another proof that private ownership is according to nature's law. For that which is required for the preservation of life and for life's well-being, is produced in great abundance by the earth, but not until man has brought it into cultivation and lavished upon it his care and skill. Now, when man thus spends the industry of his mind and the strength of his body in procuring the fruits of nature, by that act he makes his own that portion of nature's field which he cultivates—that portion on which he leaves, as it were, the impress of his own personality; and it cannot but be just that he should possess that portion as his own, and should have a right to keep it without molestation.

These arguments are so strong and convinc- that it seems surprising that certain obso- opinions should now be revived in opposi- to what is here laid down. We are told t it is right for private persons to have the of the soil and the fruits of their land, but t it is unjust for anyone to possess as owner ner the land on which he has built or the ate which he has cultivated. But those who ert this do not perceive that they are robbing n of what his own labor has produced. For soil which is tilled and cultivated with toil l skill utterly changes its condition; it was ld before, it is now fruitful; it was barren, l now it brings forth in abundance. That ich has thus altered and improved it becomes truly part of itself as to be in a great measure listinguishable and inseparable from it. Is just that the fruit of a man's sweat and labor ould be enjoyed by another? As effects fol- v their cause, so it is just and right that the sults of labor should belong to him who has ored.

With reason, therefore, the common opinion mankind, little affected by the few dissentients o have maintained the opposite view, has und in the study of nature, and in the law nature herself, the foundations of the division property, and has consecrated by the practice all ages the principle of private ownership, being preeminently in conformity with hu- an nature, and as conducing in the most un- istakable manner to the peace and tranquility human life. The same principle is confirmed d enforced by the civil laws—laws which, as ng as they are just, derive their binding force om the law of nature. The authority of the ivine Law adds its sanction, forbidding us in e gravest terms even to covet that which is nother's:—*Thou shalt not covet thy neighbor's ife; nor his house, nor his field, nôr his man- rvant, nor his maid-servant, nor his ox, nor s ass, nor anything which is his.**

IAN'S NATURAL RIGHT AND HIS SOCIAL AND DOMESTIC DUTIES

The rights here spoken of, belonging to each dividual man, are seen in a much stronger ght if they are considered in relation to man's cial and domestic obligations.

In choosing a state of life, it is indisputable at all are at full liberty either to follow the unsel of Jesus Christ as to virginity, or to ter into the bonds of marriage. No human w can abolish the natural and primitive right f marriage, or in any way limit the chief and rincipal purpose of marriage, ordained by od's authority from the beginning. *Increase nd multiply.*† Thus we have the Family; the society" of a man's own household; a society mited indeed in numbers, but a true "society," nterior to every kind of State or nation, with ights and duties of its own, totally independent f the commonwealth.

That right of property, therefore, which has een proved to belong naturally to individual ersons, must also belong to a man in his ca- acity of head of a family; nay, such a person ust possess this right so much the more clearly n proportion as his position multiplies his uties. For it is a most sacred law of nature hat a father must provide food and all neces- aries for those whom he has begotten; and, imilarly, nature dictates that a man's children, vho carry on, as it were, and continue his own ersonality, should be provided by him with all hat is needful to enable them honorably to eep themselves from want and misery in the ncertainties of this moral life. Now, in no ther way can a father effect this except by the wnership of profitable property, which he can ransmit to his children by inheritance. A family, no less than a State, is, as we have said, true society, governed by a power within it- self, that is to say, by the father. Wherefore, provided the limits be not transgressed which are prescribed by the very purposes for which it exists, the Family has, at least, equal rights with the State in the choice and pursuit of those things which are needful to its preservation and its just liberty.

We say, at least equal rights; for since the domestic household is anterior both in idea and in fact to the gathering of men into a commonwealth, the former must necessarily have rights and duties which are prior to those of the latter, and which rest more immediately on nature. If the citizens of a State—that is to say, the Families—on entering into association and fellowship, experienced at the hands of the State hindrance instead of help, and found their rights attacked instead of being protected, such association were rather to be repudiated than sought after.

THE STATE MAY NOT ABOLISH NOR ABSORB FRATERNAL RIGHTS

The idea, then, that the civil government should, at its own discretion, penetrate and pervade the family and the household, is a great and pernicious mistake. True, if a family finds itself in great difficulty, utterly friendless, and without prospect of help, it is right that extreme necessity be met by public aid; for each family is a part of the commonwealth. In like manner, if within the walls of the household there occur grave disturbance of mutual rights, the public power must interfere to force each party to give the other what is due; for this is not to rob citizens of their rights, but justly and properly to safeguard and strengthen them. But the rulers of the State must go no further: nature bids them stop here. Paternal authority can neither be abolished by the State nor absorbed; for it has the same source as human life itself; "the child belongs to the father," and is, as it were, the continuation of the father's personality; and, to speak with strictness, the child takes its place in civil society not in its own right, but in its quality as a member of the family in which it is begotten. And it is for the very reason that "the child belongs to the father," that, as St. Thomas of Aquin says, "before it attains the use of free-will, it is in the power and care of its parents."* The Socialists, therefore, in setting aside the parent and introducing the providence of the State, act *against natural justice,* and threaten the very existence of family life.

And such interference is not only unjust, but is quite certain to harass and disturb all classes of citizens, and to subject them to odious and intolerable slavery. It would open the door to envy, to evil speaking, and to quarrelling; the sources of wealth would themselves run dry, for no one would have any interest in exerting his talents or his industry; and that ideal equality of which so much is said would, in reality, be the leveling down of all to the same condition of misery and dishonor.

Thus it is clear that the main tenet of *Socialism,* the community of goods, must be utterly rejected; for it would injure those whom it is intended to benefit, it would be contrary to the natural rights of mankind, and it would introduce confusion and disorder into the commonwealth. Our first and most fundamental principle, therefore, when we undertake to alleviate the condition of the masses, must be the inviolability of private property. This laid down, We go on to show where we must find the remedy that we seek.

THE CHURCH ALONE CAN SOLVE THE SOCIAL PROBLEM

We approach the subject with confidence, and in the exercise of the rights which belong to Us. For no practical solution of this question will ever be found without the assistance of Religion and of the Church. It is We who are the chief guardian of Religion, and the chief dispenser of what belongs to the Church, and we must not by silence neglect the duty which lies upon Us. Doubtless this most serious question demands the attention and the efforts of others besides Ourselves—of the rulers of States, of employers of labor, of the wealthy, and of the working population themselves for whom We plead. But We affirm without hesitation that all the striving of men will be vain if they leave out the Church. It is the Church that proclaims from the Gospel those teachings by which the conflict can be put an end to, or at least made far less bitter; the Church uses its efforts not only to enlighten the mind, but to direct by its precepts the life and conduct of men; the Church improves and ameliorates the condition of the working man by numerous useful organizations; does its best to enlist the services of all ranks in discussing and endeavoring to meet, in the most practical way, the claims of the working classes; and acts on the decided view that for these purposes recourse should be had, in due measure and degree, to the help of the law and of State authority.

Let it be laid down, in the first place, that humanity must remain as it is. It is impossible to reduce human society to a level. The *Socialists* may do their utmost, but all striving against nature is vain. There naturally exists among mankind innumerable differences of the most important kind; people differ in capability, in diligence, in health, and in strength; and unequal fortune is a necessary result of inequality in condition. Such inequality is far from being disadvantageous either to individuals or to the community; social and public life can only go on by the help of various kinds of capacity and the playing of many parts, and each man, as a rule, chooses the part which peculiarly suits his case. As regards bodily labor, even had man never fallen from *the state of innocence,* he would not have been wholly unoccupied; but that which would then have been his free choice, his delight, became afterwards compulsory, and the painful expiation of his sin. *Cursed be the earth in thy work; in thy labor thou shalt eat of it all the days of thy life.** In like manner, the other pains and hardships of life will have no end or cessation on this earth; for the consequences of sin are bitter and hard to bear, and they must be with man as long as life lasts. To suffer and to endure, therefore, is the lot of humanity; let men try as they may, no strength and no artifice will ever succeed in banishing from human life the ills and troubles which beset it. If any there are who pretend differently—who hold out to a hard-pressed people freedom from pain and trouble, undisturbed repose, and constant enjoyment—they cheat the people and impose upon them, and their lying promises will only make the evil worse than before. There is nothing more useful than to look at the world as it really is—and at the same time look elsewhere for a remedy to its troubles.

THE CHRISTIAN INTERDEPENDENCE OF CAPITAL AND LABOR

The great mistake that is made in the matter now under consideration, is to possess oneself of the idea that class is naturally hostile to class; that rich and poor are intended by nature to live at war with one another. So irrational and so false is this view, that the exact contrary is the truth. Just as the symmetry of the human body is the result of the disposition of the members of the body, so in a State it is ordained by nature that these two classes should exist in harmony and agreement, and should, as it were, fit into one another, so as to maintain the equilibrium of the body politic. Each requires

Undermining the Foundations of the National Morale

(*Continued from page* 8.)

ists and liberals who, instead of rejoicing over Allied victory in the field, have of late been bawling over the heartlessness of the Allies to poor, afflicted, stricken Germany and have been vociferously whining protests against the terms of the Allied treaty. Aiding and abetting Germany, consciously and boldly, will be all those Huns and Shadow Huns who were prevented by the espionage laws from outright disloyalty and acts of treason during the war, and who of late have been flocking to the congenial ranks of the Socialists and revolutionary radicals. Aiding and abetting the Huns in their "pacific" warfare will likewise be all those who preach a class war after the war, "the final war" which, to use the words of Mr. Walter E. Weyl, associate editor of the *New Republic,* "will be a wider conflict than that which now rages and the alignment will be by classes and interests rather than by nations . . . which will be waged until separate interests within each nation are completely extinguished."

GERMANY'S "NEW WEAPONS"

To the promotion of this class war—which, after succeeding in Russia, Germany and German agents sought to promote in France, in England, in Italy, and now in the United States—will be devoted the major efforts of Hun propaganda of the future.

This propaganda of social disintegration and the undermining of national integrity and morale is not new with Germany, and, in fact, the plan long antedated its being carried into effect in Russia. So long ago as February 23, 1915, a circular letter was sent by the Director of the Press at the Ministry of Foreign Affairs in Berlin to all German ambassadors, ministers and consuls, stating:

> THERE HAVE BEEN ESTABLISHED WITHIN THE TERRITORY OF THE COUNTRY WHERE YOU ARE SPECIAL BUREAUS FOR THE ORGANIZATION OF PROPAGANDA IN THE COUNTRIES THAT ARE IN THE WAR COALITION AGAINST GERMANY. THE PROPAGANDA WILL HAVE FOR ITS OBJECT THE INCEPTION OF SOCIAL MOVEMENTS, ACCOMPANIED BY STRIKES, REVOLUTIONARY EXPLOSIONS, SEPARATION MOVEMENTS AND CIVIL WAR.

What she failed to accomplish by force of arms, Germany succeeded in accomplishing through Lenine, Trotzky and their gang, including imported East Siders, in Russia. What she has failed to achieve by military triumph, Germany in the days of her defeat will seek to accomplish in other countries through the same identical forces employed successfully in Russia. The workings of the crafty Hun mind, and its ulterior intentions, were indicated by an article in the Berlin *Vorwaerts*, reputed to voice semi-officially the opinions of the "reformed government," last March, at the time Germany sought to intimidate the Allied council by threats of going Bolshevik. Of course, the leaders of Germany never had any serious thought of "going Bolshevik." But as for helping to make other nations "go Bolshevik," that is another matter. The *Vorwaerts* declared that, "Until now Germany deliberately has opposed the Russian method of instigating a world revolution," when as a matter of historical fact Germany herself brought about that revolution in Russia. After this hypocritical declaration, the *Vorwaerts* threateningly went on to say: "But if Germany is forced to refuse to sign the peace treaty it could not fail to affect a great change in her policy. She would center her hope on achieving similar far-reaching changes to the Western countries and concentrate her revolutionary energies and resources to the task. . . . *Germany may be forced to choose the harder fate of resisting the Entente's coercion, not with arms in hand, but by new weapons which recent developments furnished the German people.*"

So authoritative an oracle of matters revolutionary and subtly pro-German as the *New Republic* as long ago as last December predicted that if the Allies did not abandon "particularist national ambitions" "they themselves will eventually be engulfed in the anarchy and ruin which is now threatening Europe." There could hardly perhaps have been a more clairvoyantly articulated interpretation of the process going on in the Hun mind than the statement, made in a supplement to the *New Republic* of March 22, by Mr. Walter Lippmann: "Bolshevism in both Russia and Germany would soon eat the heart out of Poland, Rumania and Hungary where social conditions are already desperate. Now, anyone who supposes that the populations of France and Great Britain will endure the human and economic cost of such an occupation is suffering from a severe case of reading nothing but censored news." And lately, in a diatribe against the Allied council because of the peace terms asked of Germany, that mildly-shining minor star of pacifism, that turn-the-other cheek apostle of a compromise, patched-up peace, O. G. Villard, in the *Nation* asserts:

"With Germany crushed and autocracy enthroned, with the strong hand of power at the throat of liberty, the battle opens which is to make men free. . . . Heaven grant that the revolution may be peaceful, and that it may destroy only to rebuild."

AUXILIARIES OF THE HUNS

To be forewarned is to be forearmed. Germany, and her friends, adept in strategy and trained in guile, calculate to take advantage of the relaxation, the laxity, the resting on their oars of the peoples over-weary from war. And lest the enemy obtain advantage because of this lack of vigilance, it is all vitally important to understand and ever bear in mind the workings of the foe in the past, to apprehend the scope of what was planned, to comprehend what was actually accomplished. By this, may be gauged what lines the German propaganda will pursue in the campaign to frustrate the Allied treaty, and secure political and commercial supremacy by distintegrating rival nations by an undermining process from within.

Germany will use, as she has used in the past and is now using, all the various radical movements, the Socialists, the I. W. W., pacifists, internationalists and anarchists. She will foster and give support to all movements seeking to promote civil war, "direct action" by the workers, the overthrow of government and existing order. Secretly and cunningly she will artificially stimulate social discontent, labor unrest, inflame religious, political and racial prejudices, and take advantage of all differences and conditions of discontent wherever they arise. She will seek to break the organized labor movement. She will attack the foundations of our national life, and seek to undermine and destroy national feeling, the spirit of patriotism, loyalty, belief in the nation's ideals, confidence in our institutions and social order, that national solidarity and morale which alone give strength and resistance against treacherous and subtle foes. Her propaganda, as before, will be scientific, shrewdly far-seeing, brainy and ruthless. She will endeavor, in her effort to undermine the spirit of nationality, to make her attack at the very sources where national ideals and the national spirit are supposed to be fostered and nurtured. She will seek to poison the minds of children, to destroy the moral fibre of the coming generation, in schools, the fonts of learning. It was the theory of Imperial Germany, in her propaganda extending into schools, that if you color the mind of a child at the fo mative period, your work is accomplished. survey of what Germany actually succeeded doing before the Great War may indicate wh potentially grave dangers menace us in t future.

In the propaganda of Socialists, I. W. W and so-called liberals, in their tons of pamph teering, in all the revolutionary harangues fanatic reds, there is not so much danger as li in the subtle propaganda which aims at destro ing in the minds of children love of countr patriotism, reverence for the principles out which our nation was born, belief in spiritu ideals, a living Christian faith, and which woul instead, render cynical, hard and sterile t minds of the young with irreligion, unbelief, i reverence for the nation's ideals and for i past—a philosophy of gross unidealistic mat rialism. Were it covertly, insidiously insin ated into the minds of children that our gover ment was based upon an entirely wrong and ev system of economics, that the framers of the Co stitution wrote that document primarily to e rich their pockets, that patriotism, love and r ligion work more evil than good, that in all h man movements not ideals but economics moti mankind, that man is an animal urged by ca nal desires and not spiritual faith, the gener tion thus poisoned would be ready prey f those malcontents and internationalists who Germany has already used to such advanta in betrayed and stricken Russia.

SOCIALIST PROGRAM TO DEBAUCH CHILDRE

In a series of remarkable and illuminating a ticles recently published, Rheta Childe Dorr tel of the Socialist program of proselytizatio among school children:

> There is one certain or almost certain metho of holding young radicals through life. Th method is being employed in Socialist locals, i centers like the Rand School all over the cou try. It consists in destroying all ideals of mo esty, reticence, reverence for parents, respect fo women or faith in any ultimate spiritual goo As a substitute for these ideals, without whic the world would never have advanced beyond ba barism, the reds preach the most unbridled l cense in speech and behavior. They make an kind of religion, or even intellectual agnost cism, a possession to be ashamed of. Atheism of the most blatant kind is preached. Grosses materialism is substituted for the ideals an dreams which are instinctive in the minds of al normal girls and boys. . . .
>
> So far as I know, as far as my reading o history has revealed, the first human beings wh ever deliberately undertook a whole campaig to debauch the minds of their youth, the firs ones who ever preached sex excesses as a duty are the revolutionary socialists at work in th United States of America to-day.
>
> A teacher in the English department of on of our schools prepared a bibliography of con temporary literature which he recommended t his young students. This bibliography in th form of a small booklet, he caused to be placed on sale in the school store and to be advertised in the school paper. Included in this bibliography were books which the public library forbids even adults to read except in a private room under the eye of an attendant. . . .
>
> A standard work on anarchism, from the extreme anarchist point of view, was included, and for regular reading, periodicals later suppressed by the government. . . .
>
> The principal of the school knew that this bibliography had been prepared, but he did not know that it was on sale in his school until the head of the English department so informed him. The teacher was brought up on charges and dismissed from the school system. But his dismissal was a mere incident in the campaign to instill materialistic poison into the minds of youth. . . .
>
> To indecent books add indecent pictures. Just now the New York Yipsels, the Young People's Socialist Leagues, are wallowing in what they call psycho-analysis, but which is really little more than education in sex license.

MORAL CORRUPTION OF YOUNG IN RUSSIA

Just how the extreme Socialist program in practice reaches out to corrupt and debauch the

ds of children is illustrated by the object les- afforded by Bolshevist-ridden Russia. In *New York Times*, of June 13, 1919, appeared account, by its Geneva correspondent, of the ntific program to poison the minds of Russian dren worked out by Lunacharsky, Bolshevist nmissary for Public Instruction. The *Times* respondent gained his information from a iss school teacher who had just arrived from scow, where she had spent eleven years. He l:

> The most diabolical of all measures conceived by the Bolshevist rulers of Russia to perpetuate their domination is their systematic corruption of coming generations to undermine and destroy family life. To estrange children from their parents by encouraging them in unlimited indulgence of idleness and pleasure, to inculcate brutal and materialistic principles in the receptive minds of young boys and girls, is the surest method, the Soviet dictators think, to secure the duration of Bolshevism.
>
> In some cases entirely illiterate supporters of the Bolshevist regime have been appointed instructors. Thus the head master of the famous Alexandrowsky Cadet School is a former Corporal, whose first act of authority upon assuming his new functions was to prohibit the use of tooth brushes, tooth powder, combs, and all other toilet articles of a "bourgeois character." Some of the former school teachers have remained at their posts, but theirs is a sad lot. They are continually spied upon and subjected to every humiliation.
>
> There being no schedule of lessons, the scholars in the four higher classes decide themselves every day what they shall be taught. All educational questions are decided by school councils, whose meetings are, to say the least, extremely original. Side by side with the teachers sit delegates of the Scholars' Committees, children from the age of 12 upwards, and the decisions of the latter are obligatory for the teachers.
>
> Religious instruction, of course, is strictly forbidden, and even conversations on philosophical and moral subjects are regarded by the Soviet authorities as counter-revolutionary and prohibited. This prohibition is particularly fiendish because co-education in "absolute liberty," as instituted by Lunacharsky, must inevitably lead, in a primitive country like Russia, to revolting conditions if moral guidance be completely lacking. But it is a deliberate part of the Bolshevist plan to corrupt and deprave the children in order to obtain a lasting hold over them and to train them as future propagandists of Lenine's materialistic and criminal doctrine.
>
> With tears in their eyes the mothers of Russia tell you:
>
> "There are no longer any children in Russia today, only vicious little brutes whose talk is of money and pleasure."
>
> The unfortunate children of Russia must be delivered from their Bolshevist oppressors and seducers before it is too late. Otherwise, though Lenine may be finally overthrown, there will remain in Russia thousands of boys and girls morally corrupted, victims of the Bolshevist schools, who will be a future menace not only to Russia, but to the entire civilized world. The brave and upright men who are giving their lives in the crusade against the international criminals of Moscow are fighting for the children and mothers of Russia.

VIGILANCE THE PRICE OF LIBERTY

How shall we safeguard the coming genera- n in our public schools and colleges? Shall t the most careful, conscientious and thorough ecautions be taken lest, in text books on his- ry, economics and civics, there be subtly in- jected sugar-coated and disguised propagan- of social disintegration? The extent to which sidious teachings invaded our schools and col- es has been fully demonstrated in the past, t until America entered the war these objec- nable books never came under questioning rutiny. The pertinent question now arises— hall men found guilty of incorporating pro- erman propaganda in text books to be pur- ased out of money paid by the American ople in taxation and used in public schools, permitted to continue to write books for the ducation of our children? Should text books, matter on what subject, by any man who defamed the framers of the Constitution and derogated that document now be tolerated in any public school within the confines of our land? Should text books written by any man who jeered at patriotism, who held that patriotism, like religion and love, has worked more evil than good in the world, be given to an innocent American child? Shall men notoriously known to sympathize with the Socialist movement, who have lent their aid to the defense of the criminal I. W. W., who have defended the red-handed Bolshevik despots and championed "conscientious objectors," be allowed to write the text books which shall form the point of view of the coming generation? Can such men be trusted in the future?

If the people of America are not to forfeit what they have gained at so costly a sacrifice, it will be their public duty to safeguard the nation at the very well-springs of national life. "The Public School is the Ark of the Covenant of the Republic," declared Judge Thomas Burke, of the Text Book Committee of the Seattle, Washington, School Board, commenting upon "Outlines of European History, Part II," by Professors James Harvey Robinson and Charles A. Beard, which was withdrawn from the Seattle schools under charges that it contained pro-German propaganda. "It is little wonder, then, that for some years even before the German war, the common enemy sought and secured an entrance there. . . . We know now what the enemy has been up to in secret for many years. It is our duty to the children of the land to seek out this enemy's hiding places and drive him hence and to see to it that he never enters there again."

In the new Hun propaganda, which will seek to undermine the foundations of national morale and sap the very sources of moral resistance, Germany will endeavor, as before, to invade the schools and colleges of the land, so as to poison and corrupt the minds of the coming generation at the formative and impressionable age of immaturity. What precautions can be taken against this new invasion by the enemy of democracy and civilization? Can those distinguished college professors who lent themselves to the dissemination of Hun propaganda be trusted to have aught to do with the education of young men and women in our higher institutions of learning? Can those professional compilers of school text-books, who adroitly sandwiched pro-German propaganda in their pages, be trusted to have aught further to do in the preparation of school histories and text books on citizenship and economics?

SCHOOLS REPOSITORIES OF NATIONAL SPIRIT

It is beyond question to the public interest to know to what extent German propaganda had succeeded in invading American schools and colleges prior to the outbreak of the war in 1914, and to appreciate by what subtle and covert methods flagrant pro-Hun propaganda found its way into public schools even after the invasion of Belgium and the tragic sinking of the Lusitania. An approximation of what was accomplished by subtlety or stealth may afford loyal and patriotic Americans a sense of what measure of vigilance will be necessary so as to thwart the propaganda of the future.

Captain Gustavus Ohlinger, who was in charge of investigations into German propaganda for the Military Intelligence, declares in a book recently issued:

"The rivalries among the liberated Nationalities of Europe, the possible misunderstanding and differences among the people who have fought the war for freedom, will undoubtedly, in the future, furnish fresh opportunities for German propaganda. Against this propaganda, and its resulting disintegration and dissentation we must still stand guard."

Citing various outrages, dynamite plots, the fomenting of strikes, and the destruction of factories by German agents in this country while the United States was at peace with Germany, Captain Ohlinger very pertinently declares that these plots "recede into the background when viewed in relation to the far more dangerous and insidious conspiracy which Germany, through her agents, sympathizers and dupes, has prosecuted against American education."

Captain Ohlinger continues:

> Bridges, canals, factories and ships are mere physical properties, easily replaced. Our public education, on the other hand, represents infinitely higher values.* In our schools are transmitted the traditions of the past; there are generated those moral forces which bind us together and vitalize us as a nation. They are the repositories of our national spirit, and national spirit cannot be made to order. It is born of the travail of history, of the sacrifices of countless thousands in the past, of the work of those rare geniuses that flash upon a nation's horizon as infrequently and mysteriously as comets from an unknown stellar system. Once perverted or destroyed, it cannot be restored. With it, there succumbs the nation, and the nation's institutions and achievements pass into history. The plots engineered by Kaltschmidt, Koenig, von Igel, Consul General Bopp, von Papen, Boy-Ed, Ambassador Bernstorff and their retinue of lesser malefactors have furnished the press frequent opportunities for sensational headlines. But the activities of these men are insignificant when compared with the insidious and far-reaching conspiracy against our education.
>
> Just as Germany planned her own educational system with reference to her military power, so she sought, as a part of her higher strategy, to enhance her superiority by insinuating herself into the morale and intellectual life of foreign countries. German schools and churches abroad she set down as important outposts of her power. If, in addition to supporting these institutions, she could introduce her agents into the native education, there disseminate doubt as to the validity of native traditions and with regard to the adequacy of established institutions, replace national spirit by a shallow cosmopolitanism, and foster an admiration of *KULTUR* to the disparagement of national achievements,—then she could sap the very sources of moral resistance. It would be an easy matter to fit the people with a coat of *KULTUR* cut to her own measure and according to her own patterns. This accomplished, political domination would come in due course, either through voluntary submission, or after a short war in which every moral and material advantage was with the aggressor.
>
> The evidences of this programme, a definite part of Germany's higher strategy, are writ large over the parochial schools, the public schools and the colleges and universities of America—they are as unmistakable as the gun emplacements which Germany built within the territory of her friendly neighbors. The purpose of both was the same—military conquest and political domination.

THE INVASION OF KULTUR

In his book, "The German Conspiracy in American Education," published by Geo. H. Doran Co., New York, Captain Ohlinger briefly sketches the history of the German invasion of American schools and higher institutions of learning. In 1881 there was formed in Germany the General School Alliance for the Preservation of Germanism in Foreign Lands, which established schools and libraries in foreign countries and maintained a teachers' bureau which supplied German-trained educators. The alliance was a few years ago merged into the Society for Germanism in Foreign Lands, which was given an annual subvention by the German government of a million marks.

---

* The far-seeing designs of Germany to secure industrial control of the United States were revealed in the report made by A. Mitchell Palmer, formerly Alien Property Custodian. Just as Germany schemed to obtain the industrial conquest of the continent, she sought at the same time to undermine American morale through schools and higher universities of learning. As Capt. Ohlinger indicates, what Germany sought to destroy through our public education represents infinitely higher values than the mere material domination aimed at in industry.

"Nowhere did the *Verein* operate so actively and so successfully as in the United States," says Captain Ohlinger. "For years it maintained its secret agents in our midst, working in favor of German language schools and pulling wires for a German political party."

In a review of its work made in 1909 the society declared with gratification that, "had this annual meeting brought nothing more to the *Verein* than the inspiring report of Germanism in North America, the expressions of common interests and the promises for future cooperation, those things alone would have been of immense significance for our cause."

In order to gather together and use in German propaganda those American educators who had studied in Germany and had received degrees at German institutions of learning, there was organized at a banquet given in honor of Prince Henry, on the occasion of his visit in 1902, by four hundred former students of German universities the Union of Old German Students. Carol Beck, the first president of the Union, declared: "These Americans who have attended German Universities are permanently inoculated with the German virus. They have only good things to tell of Germany. Even for German immoralities they have words of extenuation—yes, they go so far in their courtesies as even to imitate our faults."

In 1904 there was established the Exchange Professorships, by which American and German professors exchanged visits. The Kaiser was personally interested in this further scheme to pro-Germanize American professors. A striking example of Germany's success in "capturing" visiting professors is found in John W. Burgess, the first exchange professor, who after the outbreak of the war, became one of the most notoriously flagrant champions of Hun *Kultur*.

Later there came into being the German University League, of New York, whose membership included not only native Germans but also native Americans, the purpose of which was to mobilize, direct and command American educators in the organized pro-German propaganda instituted after the war.

NATIONAL GERMAN ALLIANCE

On October 6, 1901, The National German-American Alliance" was permanently organized. The sinister and inimical activities of this federation were exposed after America entered the war against Germany. To the powerful influence and pressure exercised by this organization, which was more devoted to serving the interests of Imperial Germany than those of the United States, was largely due the amazing invasion of American schools by Hun propaganda in text books and the astonishing compliance of publishers of school text books in specializing in books in which Germany was exalted and glorified and in which Germany's rivals, such as England, were derogated and disparaged. The National German-American Alliance entered into relations with the Pan-German League and the General School Alliance of Germany, and, says Captain Ohlinger, "became the mouthpiece of Pan-German ideas in America. The propaganda of world dominion in Germany boasted of the superiority of their Kultur, denounced the Latin races as suffering in the last stages of decadence, described the British as hopelessly addicted to sport and besotted through wealth and luxury; the Germans were the one race singled out by Providence to rescue Civilization. In the same way the leaders of the National German-American Alliance extolled the superiority of the German element. . . ." They taught that Great Britain was filled with commercial jealousy of Germany and France obsessed by the *revanche*.*

By 1916 the National German-Alliance had an organization in every State and in the territory of Hawaii, and it claimed a membership of two and a half million and a control of the same number of votes.

"DIRECT ACTION" ON PUBLIC SCHOOL SYSTEM

Captain Ohlinger says:

"They undertook to operate directly upon the Public School system. 'Strict control of the public schools is necessary,' they declared, and early in the career of the Alliance, the following program was laid down:

"1. The teaching of the German language in all elementary schools, beginning, preferably, with the first grade; such teaching, moreover, to be given in such a manner 'as to produce familiarity with Germany and with the German race in America';

"2. 'A dignified place in the curriculum for German history';

"3. 'The rewriting of American history so that not only descendants of the Anglo-Saxon race, but those also of the German and of other races who have contributed to the civilization of the United States may come into their rights, and so that contemptuous expressions, such for instance as those applied to the Hessian mercenaries, may be eliminated from school text books';

"4. 'Instruction in the geography of Germany.'"

The National German-American Alliance, working in conjunction with the German American Teacher's Alliance, conducted an organized nation-wide campaign to force the introduction of German into public schools. Intimidation was used when intimidation became necessary. "In those communities where the introduction of German was left to the Local School Board," declares Captain Ohlinger, "the procedure was to send questionnaires to candidates for the Board, ascertain their attitude, and then to actively campaign for those who gave satisfactory answers. This was done in Chicago in 1916. . . . In Detroit, even after the break in diplomatic relations, the city alliance interrogated candidates and prepared to enter the local campaign. In Indianapolis they succeeded in electing one of their own officers, the first Vice President of the national organization, to the school board and he later became its president. This worthy was at the same time the paid propagandist and organizer of the brewers and liquor dealers of America. . . . In Milwaukee, another Vice President of the National Alliance was made assistant superintendent of schools. . . : In Cincinnati, according to its records, the local alliance had the situation well in hand. . . .

"Where State Legislation was necessary to facilitate the introduction of German the alliance was equally active. Questionnaires on the proposed measures were sent to all candidates. This was done in Ohio in the election of 1912. In this manner the state alliance of Nebraska secured the passage of the Mockett Law, requiring the teaching of a foreign language beginning with the fourth grade—the foreign language being of course German—whenever the parents of fifty children in attendance upon t school requested it. . . .

"Of course the propaganda never revealed real purpose when presented to the state leglators or school boards. It always came bef them in plausible pedagogical disguises. It w said that the study of German improved t student's mastery of English."

ALLIANCE USED BOYCOTT

Captain Ohlinger points out that the lead of the German movement always contended t historical text books used in American pub schools were replete with falsifications, show astounding omissions, slighted the part which German element had played in American histo and unjustly omitted German history. To bri about the desired Germanization of histori text books there was incorporated in 1901 t German American Historical Society, the p poses of which were encouraged and accelerat by the National Alliance. Captain Ohlin goes on to say:

In those districts where Germans were in the jority the text books could be controlled throu the election of the members of the school boa But this would not accomplish the result principa desired—the enlightenment of Americans in th districts where the Americans were numerica stronger.

The school committee therefore hit upon an iginal idea. "To reach an American one must at his pocket book," the chairman reported. The liance could best accomplish its purpose by allyi itself with some energetic publishing house that h put out a book most nearly approaching the Germ point of view. The Alliance could endorse such book, and through its numerous branches advert it, bring it to the attention of school boards, and cure its adoption. Requests for the insertion other desirable matter could then be made of the p lishers from time to time. Such a course was tually pursued in the case of Bourne and Bento "School History of the United States." . . . T book was endorsed by a number of state allian and an active propaganda was undertaken in behalf.

At the same time a covert threat was exercis upon all publishers of text books through the quest that they submit copies of their publicatio They were made to appreciate the financial loss th would incur if they ignored Germanism in th presentation of history. Professor Samuel B. Ha ing, of the University of Indiana, relates an int esting incident in this connection. Early in 19 he prepared a chapter on the present war for use a text book. He read it before the historical ciety of the University. Within two weeks the were forwarded to him by his publishers lette which they had received demanding that the cha ter be omitted from the book, and practically thre ening a boycott, not only of that particular book, b also of the firm as well.

The most insidious of all forms of German pro ganda was that conducted through text books us in the public schools and the fact much of th propaganda was produced unconsciously and inn cently by American born scholars is convincing e dence of our shortcomings in not insisting upon ed cation in political and institutional history.

Probe Propaganda In School Books

(*Continued from Page* 11)

science which hymned the advantage of auto racy and a "strong" government; historical te books in which praise was lavished on city a ministration in Central Europe under whi the few profited and only the outside of the pla ter was made clean, while the children of t poor had a heavy death-rate and forty perce of the families in Berlin lived in one room an a kitchenette. History was rewritten along m terialistic, so-called "modern" lines, no long with approval of the faith that endured pers cution in the struggle for liberty and the sacr fices of patriotism; instead these things we marshalled as the causes of bloodshed and t fruits of mistaken and ignorant superstition alike in freedom and in faith.

With peace gained at so costly a sacrifice a war waged by America and the Allies f the purest ideals, this sort of thing must sto So the whole country is resolved. Facts a

* This Hun propaganda was aided and abetted with an amazing degree of audacity or unconsciousness by certain American citizens. Roger W. Babson, the presiding genius of the Babson Statistical Bureau, for instance, wrote a series of fifty-one articles for the German-bought New York *Evening Mail*, for which, it is said, Babson was paid $5,100. Babson, in these articles, declared: "I want my sister Susie to sew no socks for any sick soldiers." He averred that if England and France had not gobbled up the colonies of the Earth the war might not have taken place, and he asked: "May not some of Germany's rich neighbors be as guilty as Germany?" Babson asserted that "as a nation England needs somebody to keep her where she belongs." In his little books Babson further extolled the superiority of Hun Kultur. It is known this adviser of investors breakfasted genially with Hugo Schmidt, representative of the Deutsches Bank and Hun paymaster in the United States. If Germany so readily found aides in her propaganda in 1914-1915, will she find it difficult to align in her new propaganda men who have, consciously or unconsciously, served her in the past?

wanted. A close examination of the books which orm the basis of American education is demanded. Neither fear nor favor can be permitted to influence the decision. The National Civic Federation Committee proposes to take up nd examine various text books and lay the facts nd verdict before the school boards, members f which are public servants, who select school ooks in the city, country and state boards.

The job will not be easy. It is not pleasant. t will arouse wide opposition and perhaps some hreats. But the work must be done. It is a ublic duty. In peace, any man is at liberty to ut any opinion before the American people who loes not incite to violence in support of that pinion. The American people wishes to hear very side of every question. This is lawful, vise and just, and tends to public safety.

Our schools are supported by taxation; they re established by law; their support is provided or by every State Constitution, and they teach American history, American principles and American practice to American citizens. The American people has decided through its Constitution what are the principles and practices by which the nation is to be governed. Any man has a right to propose a change, and in its behalf go before the voters of the land who can hear both sides, provided he does not advocate the use of force. If he can get enough votes, he can make the changes he urges. But no man has a legal or moral right to go before the children of the State, who can hear but one side, and teach what he pleases, subverting the principles and practice ordained and ordered by the American people. No school board has a right to buy books that do this. No teacher should use them. And no teacher who does not subscribe to the principles of the Constitution should be granted a license to teach in our schools. Public education must teach, preach and support the public aims and principles for whose support the American people has established the schools.

As a first step, it is proposed to take up textbooks on history and read them in the light of battles which our sons have won to establish in perpetual security the Constitution of Washington, and to destroy the Constitution of Bismarck. Books and authors that support the former Constitution should be used. Books and authors that have championed the latter should be proscribed. We shall judge these books by what they say about the institutions of Washington and of Lincoln and about the institutions of Bismarck and of the ex-Kaiser. The criterion by which these books shall be judged will be the ideals and principles of Washington, of Lincoln and of the American nation. The committee will work to the end that only such books as pass this test shall be used in our public schools until the American people itself changes its estimate of these men and their institutions. May the living spirit of American liberty and freedom—which in three centuries has made of a little flock in the wilderness, a great nation, mighty for liberty through law over all the earth—forbid that this land permit any to tamper through its schools with the foundations of the temple of its constitutions, institutions and laws.

PROF. J. HARVEY ROBINSON TAKES EXCEPTION TO T. EVERETT HARRÉ'S ARTICLE

New York, June 12, 1919.

To the Editor of the National Civic Federation Review:

Sir:

An article entitled "Who's Who in the New School" which appeared in your issue of April 10th, accuses a considerable number of well known liberal writers of an illicit passion for Germany and a tendency to forward "bolshevism" in our country. Anyone who will take the trouble to acquaint himself with the character of the promoters and the aims of the New School for Social Research and with the instructors and courses of study announced for the coming year will find no basis whatsoever for the allegations in the article. I deem it, therefore, superfluous to discuss them. Nor do I think that any fairly intelligent reader of my articles in the Century Magazine and in the Atlantic Monthly on nationalism and freedom of speech, to which your writer alludes, would be able to detect any tendency to shield Germany. Indeed it was the cruel workings of inordinate German nationalism and of Prussian suppression that led me to write the articles. I wish, however, to say a word about the charge that in my textbooks I have sought to conceal the guilt of the German government in precipitating the war and endeavored to minimize its responsibility for the unheard of atrocities that have ensued.

The facts are these: Before the outbreak of the war, historical students treated the modern development of Germany in exactly the same spirit that they dealt with France, England or Italy. They were intent on telling what seemed to them at once true and important without regard to European animosities. Portraits of Bismarck and the Hohenzollern rulers seemed quite as much in place as those of Cavour or Gambetta or of Queen Victoria. During the first two years of the war there came a natural demand that school histories be brought up to date. Our country was in peaceful relations with all the belligerents; we had been enjoined by the President of the United States to maintain an attitude of strict neutrality and school authorities in view of the divided sentiment of the period recognized the expediency of this. It was at this juncture that new editions of two of the school books with which my name is associated appeared with an added chapter on the origin of the war. This was highly praised at the time as at once clear and impartial.

When the United States entered the war I was asked by the publishers to prepare a supplementary chapter on the recent course of events in which I took real satisfaction in exposing what we now know to be the true nature of the German program. I also revised earlier portions of the books with a view of satisfying the reader's natural curiosity as to the nature and development of German militarism. I could hardly expect to satisfy everyone, for all text book writers who have to touch upon living and controversial issues find it almost impossible to maintain the high standards of historical truth, as it appears to the scholar, and at the same time meet the demands of those critics whose knowledge is derived mainly from the daily newspaper and who allow themselves to be swayed by the impressions of the moment.

There was nothing in my treatment which could offend the most ardent patriot who reckoned with the great change that had overtaken public opinion. But the competition among the agents of rival textbooks is keen and at times unscrupulous, as any school superintendent or member of a board of education can testify. An attempt was made to discredit my books on the ground that I had not dealt with German matters in the same way before our entry into the war as I did after. This was equally true of all historical text books for reasons I have described, although none of their authors, so far as I am aware, were pro-German in sentiment. As it happens, I am descended from a long line of New England ancestors and while I studied in Germany many years ago I have never been partial to that country, or ever desired to visit it again.

Not content with charging that I was a friend of Germany, the writer of the article in question, accuses me of adhering to the I. W. W. The only basis for this is the fact that I signed a petition approving the raising of a fund to enable certain persons arrested on the charge of illegal conduct in connection with the I. W. W. to engage counsel. This was no reflection on our courts, nor did it indicate any approval whatsoever of the I. W. W. or their violent methods which I abhor as much as any other peace loving citizen but merely a precaution to insure justice in a time of great popular indignation. I suppose that it was a certain Anglo-Saxon love of fair play that led me to lend my name to the request for funds and I was too simple minded to anticipate how completely "interested parties" could distort my motives.

I should hardly have taken the trouble to defend myself against the attacks made upon me were it not for the fact that I believe that the public interested in education should be aware of the difficult situation in which not only I, but all writers on recent history, are placed.

(signed) James Harvey Robinson.

We gladly give space to the above letter from Mr. James Harvey Robinson, which is an answer to observations made upon certain of Mr. Robinson's writings by T. Everett Harré, of the staff of The National Civic Federation Review. This letter refers specifically to the article in the Review of April 10, which we hope all our readers will re-read in the light of the statements made above by Mr. Robinson.

Mr. Robinson does not complain that any of the quotations used by Mr. Harré are incorrect, but makes the assertion that he thinks "no intelligent reader" of his articles in *The Century Magazine* or *The Atlantic Monthly* "would be able to detect any tendency to shelter Germany." Mr. Harré made no attempt to imply that Mr. Robinson's articles tended "to shelter Germany." That deduction is Mr. Robinson's. Reference to Mr. Harré's article discloses the fact that it was mainly devoted to an analysis of Mr. Robinson's article in *The Century Magazine*, of November, 1916, on "What is National Spirit?" and his article in *The Atlantic Monthly*, of December, 1917, on "Free Speech." Mr. Harré sought to interpret Mr. Robinson's attitude toward national spirit, toward the national virtue of patriotism, as well as his attitude concerning the limitations placed upon free speech by the operation of the espionage laws. As to whether or not Mr. Harré's interpretation of the undisputed quotations is justified, "intelligent readers" will decide.

The text books, "Medieval and Modern Times" and "Outlines of European History, Part II.", were not dealt with in the article of April 10; but a second article, then in preparation, was announced, which was to be devoted to an analysis of Mr. Robinson's history, in which statements in the 1916 edition, published before we entered the war, were to be compared with statements in the edition of 1918. The publication of the second article was deferred for the reason that Mr. Harré, the writer, had to undergo a hospital operation. Otherwise, the article would have appeared in the succeeding number, as announced.

During this period of delay, however, complaint was made to the editor of the Review by friends of Professor Robinson that a great injustice had been done, because the 1916 edition of "Medieval and Modern Times" had been withdrawn and a revised edition of the book brought out at great expense to the publishers. This edition, it was shown, was officially passed by the Military Censor's Bureau of the War Department and is therefore unobjectionable so far as German propaganda is concerned.

Furthermore, the friends of Professor Robinson pointed out that many of the histories written prior to the entry of the United States into the war were colored by the pro-German point of view. To the question put by these gentlemen, "Why should Robinson's history alone be singled out for attack?", there was but one answer, and the assurance was given to them that the publication of the second chapter of Mr. Harré's article would be postponed until after a thorough study had been made of the other histories, and that when the publication of these articles was resumed all histories found to contain objectionable matter would be discussed. It was stated to these friends of Mr. Robinson that if the information as to the pro-German character of other histories was correct, it made the situation only so much the more serious, because it raised the question as to how far the charge that German propaganda had invaded American schools and colleges and school text books had any basis in fact. For that reason, and after consideration by officials of The National Civic Federation, as stated elsewhere editorially, it was decided to appoint a committee of experts to look into all the histories that have been used in our public schools and colleges, and not only the histories but text books on political economy, political science and civics, and that this committee would deal with the entire situation.

As the committee referred to is going to deal with this whole subject, we will not at this time enter into a discussion of the various statements made in the letter printed above.

The Editor.

Dissecting the Customer's $

(*Continued from page 7.*)

tion would bring such complication in organization and management that men could hardly cope efficiently with them. We would have business on a scale analogous to that which governments have had to carry on during war time in making, buying and distributing munitions and clothing and food supplies. The limitations of human capacity would be felt, waste, lost motion, high costs, politics, favoritism, indolence, jealousy, bureaucracy, if not graft, would creep in. Is it not better to divide the job up into small lots and leave it to men according to their initiative and ability to handle it on their own responsibility under competitive conditions and within limits that they can comprehend and grapple with, instead of lumping it into so great a task that the magnitude surpasses even imagination?

The socialist will answer one way, the democrat the other. But I submit that we have seen that bigness has resulted so far in increased operating expense and that except for inside prices of doubtful validity, it could not compete. Why then extend it? I further submit that so long as human nature remains as it is, and so long as we employ the principle of private property and capital at all, that moderate sized units closely and competently managed under the customary incentives of the profits of the competitive system, will excel larger units in economy of operation if artificial advantages to the latter are withheld. And the limits of size in the field of distribution are much sooner reached than in the industrial field.

We have found no way of eliminating the labor of distribution. Our experiments in new forms of distributors have not disclosed economies in the performance of the work. We have not discovered an exorbitant profit, absorbed by the "grasping middleman." Personally, we know the dealer to be much like other men, we know him as a neighbor and citizen, and we know that usually he works hard without getting rich.

THE REAL WAY OUT

Have we followed this long reasoning then only to end in discouragement? No! There is a way,—not a royal, easy road to lower living costs, not a simple change of form and names and ownership in the elements of the distributing chain to bring a wondrous reformation, but a reasonable way to secure benefits in return for patient, intelligent effort toward our goal.

Let us give democracy a real trial.

Let us improve the system that we have, instead of looking at the green fields far away. How?

The one unreasonable condition that our analysis has disclosed is the *expense* of distribution, not the multiplicity of unproductive functionaries that may easily be eliminated, nor the burdensome profits so often suspected. But our distributors do spend too much to do the job.

Figure 3 indicates that 50 cents out of each dollar goes for the manufacturers and middlemen's selling expense.

Our next suspicion might be that while we cannot dispense with the wholesaler or retailer, that there may be too many of one or both to be supported economically in the field. While I believe that there would be a small net gain if the number were reduced by half or two-thirds with sturdier size for the remainder, there has not been an advantage with size or concentration of trade to warrant hope on this ground alone.

But a saving of expense could be realized by greater skill and efficiency on the part of the distributors. We suffer from too great an investment in stagnant stocks.

Supposing for simple illustration, that a dealer carries a stock worth $30,000 at selling prices and that this allows him a gross profit of 33 1/3% of his sales, thus making the cost of his stock $20,000. Supposing further that he sells out his stock once a year, i. e., he does a business of $30,000 at a gross profit of 33 1/3% or $10,000. Assume that his expenses are 28% or $8,400. He would then make a net profit of 5 1/3% on his sales or $1,600. This based upon his investment in stock would be 8% on his capital employed. On this basis he could not safely do business on less than 33 1/3% gross profit, which means 50% added to what he pays for his goods as the consumer's price. Indeed, on this basis he would be better off to invest his money in Liberty Bonds and hire out to work on a salary without risk to himself. Yet this would be a great burden on the consumer. To have his goods marked up 50% on the last distributing operation alone is "too, too hard."

Supposing now that a new dealer buys out this store and by more capable handling, without investing any more in stock, is able to sell out three times a year. Figure the results. Allowing for the moment that his expenses remain the same, he would have $90,000 of sales at 33 1/3% gross profit or $30,000 and his net profit would be $4,800 or 24% on his capital invested. Again, if he could sell out 6 times a year on the same investment in stock, he would net 48% on capital invested. On this basis even though his selling expense remained at 28%, he could somewhat reduce his prices to consumers with safety.

But let us see if his expense percentage reasonably need remain at 28%. If we analyze his expenses, we find that they fall into two classes, one depending upon the length of *time* his goods remain in stock and the other depending upon the *labor* expense of handling and selling. The first then relates to the rate of selling out,—in trade parlance called "turn over." It applies to such items as rent. The longer the goods remain in stock, the longer the dealer must charge them with rent expense for shelf-room. The second relates to the amount of goods handled irrespective of the time occupied in the process, though there need not be a direct variation of labor expense in proportion to volume. It applies to such items as advertising and wages paid to clerks.

Taking the one turnover a year if we examine the dealer's expenses they would be found to be somewhat like this:

ONE TURNOVER

	Percent	
Time Expenses:		
Rent	6	
Interest	6	
Heat, light and insurance, etc.	2	14
Labor Expenses:		
Buying and traveling	1	
Clerk hire	8	
Advertising	2	
Expressage, delivery and supplies	1	
Breakage, loss, obsolescence, miscellaneous	2	14
		28

Suppose now, that we see what results from speeding up the turnover so that the same store with the same stock investment sells out 6 times instead of once. Its time expenses amounting to half its total expense are immediately divided by six. As long as the stock is held down there will be no more rent or other "time" expenses, so that an operating charge of 14% is at once reduced to 2 1/3%.

As to labor expenses, the *amounts* will surely increase with more goods to be handled, but the *percentages* should not increase, but on the other hand should tend to show a reduction. It should not for instance, require six times as many clerks to handle the larger business in the same size store and stock.

But assume that the labor expense remains the same. The result would then be:

SIX TURNOVERS

	Percent	
Time Expenses:		
Rent	1	
Interest	1	
Heat, light and insurance, etc.	1/3	2 1/3
Labor Expenses:		
Same as before		14
		16 1/3% instead of 28%

Here is a saving of 11 2/3% or more than the combined net profit of the retailer and jobber as shown in Figure 3, only a part of which could be saved under the most favorable circumstances. If we were willing to assume that the labor expense might come down to 10%, we would gain 4% more and cut the total by more than half.

Now, our illustration is an elementary one, but it goes to the essence of the distributing problem in that it attacks the admittedly high *operating* expenses of distributors, instead of assuming that the high prices are due to unrighteous profits which might be conserved for the consumer by returning them to him through some cooperative ownership plan. High prices are due to waste and inefficiency, not to graft or greed.

MUST HAVE EXPERT MANAGERS

It is in this that the "coops" are barking up the wrong tree. Unless they can supply a host of more expert managers there can be no marked gain, no matter who owns the stores or pockets the profits. Only skill can overcome the waste.

As a practical matter the largest factor in the high expense percentage of operating stores, is the slow turnover of stocks. The fixed expenses have to be charged against too small a volume of business. The country pays interest and operating charges on too great an investment in stocks in proportion to the business done. The solution lies in cutting down the stocks without reducing the amount of sales,—doing the business on a smaller investment. Increasing the *size* of the business does not reduce expense percentages if the stocks increase proportionately. Size alone only makes for complication and lost motion as is shown by the higher expense of the department store compared to the smaller store. Quick turnover means lower expense, as is demonstrated by the smaller expense of the grocery store with its quick selling stock as contrasted with the jewelry store. (See Figure 2.) The grocer is not a better merchant than the jeweler, but his goods sell faster in proportion to investment. And all could cut down their stock investments without curtailing volume of sales if they were better sales "engineers".

In my own experience, I have seen a moderately successful drug store that was turning its stock barely twice a year, come under new management and do five times the volume of business on half the stock,—in other words, turn its stock ten times instead of twice. It was able to give far better values to its customers and yet make far more itself.

MAKE SLOTHFUL DOLLARS WORK

The secret is to make slothful dollars in idle stocks get busy, start rolling and yield a return.

While our illustration of multiplying turnover by six may be a bit too ambitious for a general program, it is not so far out of the way as to miss the point. If goods cost less through true savings, there would be purchasing power to absorb more of them. More goods would be sold. More therefore would be produced. Employment and earnings would be greater and also would buy more per dollar.

How then can this better standard of distri-

ation be reached? Only through the gradual nd painful process of research and education. ociety now provides no means by which skill nd training can be acquired on the part of those ho do the work which consumes more than half f all that our money goes to purchase. Great ndy and preparation goes into production. echnical and engineering and mining and agri-ultural schools give the result of research, ex-erience and correlation for the benefit of those aking up the work of production. And society n return gets the benefit of skilled operations—t least, it is beginning to.

But the careless assumption prevails that dis-ribution can look after itself—that anybody an be an acceptable storekeeper, salesman, holesaler or advertising man, and that the "law of supply and demand" takes care of oods after they are made. And we pay the rice of our carelessness by getting only a part f what we should get for our money.

Think of what the skilled distributor should now!—the subjects that he is called upon to grapple with, without even realizing that he s working in a field that might have a scientific asis. To get faster turnovers, he must do his uying more exactly in accordance with the eeds of his market, and must not stock up for eriods too long in advance. Quantity discounts, which tempt the merchant to overbuy, and which favor big stores with their high expenses, and further the monopolistic tendency, should be restricted to a scientific scale which measures he true economy of the quantity purchased to he producer.

To buy more exactly, the dealer must keep ccurate records of past requirements and sales; e must know his market, and to this end must arry on more or less continuous research into he conditions and needs of his community. The verage merchant today keeps only the most udimentary reports, and has no true account-ng system. He is unschooled in statistics or n the compilation or interpretation of reports. He knows nothing of research or how to conduct t. He has no organized means of knowing what he market affords. He barely knows of the law f turnover, and rarely knows how to apply it. Hence, he doesn't focus his aims in the most economical direction. He is not schooled in he art of buying. For precision and economy e should understand how to keep cost records, tock records, as well as classified expense ac-ounts. He should know something of the prin-iples of store arrangement and display.

In order to move his stock quickly after it as been purchased and received, he should un-derstand the art of letting people know what he as, and the merits of it. His service to the ommunity should be exploited. He needs to e a teacher in order that his clerks and assist-nts may be drilled in the purposes of the store, nd in understanding and being able to explain ts wares. In order to deal with the public and his employees he must know something of hu-man nature and its organization. These sub-jects involve some training in applied psychol-ogy, and in art, so that he may arrange his store and display his goods attractively, and may se-lect colors and designs in his merchandise in-telligently, and in order that he may prepare effective news items of what he has to offer to the local public.

Again, he needs a technical training in his special line. The shoe merchant should know leather and the processes of manufacture and styles. The grocer should know something of the food qualities of his wares, and the proc-esses of preparation, in order to advise accord-ing to the need of his customers. The jeweler should know something of design, proportion, art and color, instead of graduating into a mer-chandising career by way of the watchmaker's bench. Then his goods will be selected more in-telligently; will sell more readily, and he will be able to recommend goods of appropriate size, design, form and color, according to the indi-vidual need of the purchaser.

When our merchants are more thoroughly qualified in the fundamental principles of mer-chandising; when they understand statistical ac-counting, cost keeping, stock keeping, buying, practical psychology, organization, the elements of art, and the other subjects, a mastery of which would qualify them in their work, a large part of the waste in distribution will disappear. The day is coming when a man will be no more per-mitted to set up in the profession of distri-bution without first demonstrating his qualifi-cations to society, than the druggist is now per-mitted to dispense drugs, the doctor to practice medicine, the lawyer to practice law, or the en-gineer to put "M. E." after his name.

In the meantime, governmental and other agencies can do much toward spreading some rudimentary knowledge of value in this coming profession among those already in it, just as our agricultural schools have helped the present generation of farmers. Better business record keeping can be spread. Until such a time as a more capable school of distributors is available, it will accomplish nothing to rail at the middle-man, who is doing the best that he can under the conditions that society has provided, or through cooperative or other movements to set up new stores under the charge, as usually hap-pens, of those who are even less experienced and less qualified than the present distributors. And when the same principles of improvement are applied not only to the retailer, but to the whole-saler as well, and to the marketing departments of the manufacturers, a truly great economy will be found possible.

I submit, therefore, that this is the only road to lower costs; that we cannot eliminate the middle man; that high prices are not due to his extravagant profits, but to the undeveloped standards of operation, and that no device save that of education will overcome this funda-mental deficiency.

Pope Leo's Labor Letter

(*Continued from Page* 13)

the other; capital cannot do without labor, nor labor without capital. Mutual agreement re-sults in pleasantness and good order; perpetual conflict necessarily produces confusion and out-rage. Now, in preventing such strife as this, and in making it impossible, the efficacy of Christianity is marvelous and manifold. First of all, there is nothing more powerful than Re-ligion (of which the Church is the interpreter and guardian) in drawing rich and poor to-gether, by reminding each class of its duties to the other, and especially of the duties of justice. Thus Religion teaches the laboring man and the workman to carry out honestly and well all equitable agreements freely made, never to in-jure capital, nor to outrage the person of an employer; never to employ violence in represent-ing his own cause, nor to engage in riot and disorder; and to have nothing to do with men of evil principles, who work upon the people with artful promises, and raise foolish hopes which usually end in disaster and in repentance when too late. Religion teaches the rich man and the employer that their work people are not their slaves; that they must respect in every man his dignity as a man and as a Christian; that labor is nothing to be ashamed of, if we listen to right reason and to Christian philoso-phy, but is an honorable employment, enabling a man to sustain his life in an upright and creditable way; and that it is shameful and in-human to treat men like chattels to make money by, or to look upon them merely as so much muscle or physical power. Thus, again, Religion teaches that, as among the workmen's concerns are Religion herself, and things spiritual and mental, the employer is bound to see that he has time for the duties of piety; that he be not ex-posed to corrupting influences and dangerous occasions; and that he be not led away to neglect his home and family or to squander his wages. Then, again, the employer must never tax his work-people beyond their strength, nor employ them in work unsuited to their sex or age. His great and principal obligation is to give to every one that which is just. Doubtless be-fore we can decide whether wages are adequate many things have to be considered; but rich men and masters should remember this—that to exercise pressure for the sake of gain, upon the indigent and destitute, and to make one's profit out of the need of another, is condemned by all laws, human and divine. To defraud any one of wages that are his due is a crime which cries to the avenging anger of Heaven. *Behold, the hire of the laborers * * * which by fraud has been kept back by you, crieth; and the cry of them hath entered the ears of the Lord of the Sabaoth.** Finally, the rich must re-ligiously refrain from cutting down the work-man's earnings, either by force, fraud, or by usurious dealing; and with the more reason be-cause the poor man is weak and unprotected, and because his slender means should be sacred in proportion to their scantiness.

Studying Industry Abroad

(*Continued from Page* 9)

talistic system, it can be seen that the French employer faces a situation radically different from that of his British neighbors.

The French Government does not seem as alive to the demands of the industrial reconstruction period as the British, though a national eight-hour law has recently been passed and Govern-ment officials are by no means blind to the sit-uation that must be faced.

After three tense weeks in Italy, part of the Commission returned to England to take up the loose ends of a number of matters that it had been impossible to bring to a conclusion before the departure for Paris. Shortly before our departure we had the pleasure of entertaining our friends of the National Alliance of Em-ployers and Employed at an informal dinner, and there cemented friendships which we are sure will always endure. There is a good pros-pect of a visit from these British friends this fall and the Civic Federation is doing all in its power to make this possible. If the British Commission comes, it will make a special study of housing.

Just before sailing, the Commission waited on Ambassador Davis, at his request, and made a verbal report on the information it had gath-ered, with which he expressed himself as being well pleased.

No account of the trip would be complete with-out an acknowledgment of the contribution made to its success by the Chairman, Mr. Charles Mayer, who, despite a serious illness while abroad, and heavy responsibilities as Counsel for the National Farmers Union at the Peace Conference and Adviser to the Polish Government, nevertheless never failed to respond when needed and, through his large acquaint-ance abroad, was able to get the Commission into instant touch with individuals and organizations that were important to its work.

Certainly everyone who went abroad feels that he witnessed a wonderful time in the world's in-dustrial history and none who went can ever forget the splendid hospitality that was met with wherever the Commission went.

The Commission is now hard at work on its report, which should be of great value to Ameri-can industry.

*St. James v. 4.

Freedom of Teaching in the Schools

SOCIALISTS BELIEVING IN COMMUNIST MANIFESTO HAVE NO PLACE IN PUBLIC SCHOOL SYSTEM

By JOHN L. TILDSLEY

ASSOCIATE SUPERINTENDENT, DEPARTMENT OF EDUCATION, NEW YORK CITY

(From a speech before the Public Education Association, New York City, April 26, 1919)

THE most important portion of to-day's discussion is the question of freedom of expression. One teacher of the De Witt Clinton High School was disciplined for certain things that he said. Another one was disciplined for certain things that he said and also for recommending a list of books to pupils in his class through the medium of a pamphlet that he put in the bookstore. These two cases bring the question flatly before us.

I do not want to have a teacher in a public school system who wears a muzzle or who even wears a bridle. But there are certain kinds of people that I believe have no place in a school system. I believe that any teacher who needs to be muzzled in order to keep him decent or who needs to be bridled in order that he may not run amuck among the morals of the students, is not the kind of person who ought to be in our school system at all. The remedy is not to limit freedom of speech, but it is to limit the kind of teacher that you have in your school system.

I think the time has come frankly for us to recognize that there are certain undesirable types of people who are applying for admission to the teaching ranks, and who ought not to be in the teaching ranks. It is not an accident that this trouble has arisen only within the past two years. When I came into this school system twenty-one years ago, we did not have troubles of the kind we have been discussing, not because we were any less intelligent than the young men who are coming today, not because we were any less ambitious, not because we were any the less interested in the welfare of our pupils, but because in those days the men and women who came into our school system had been brought up in an American environment.

THE OLD-TIME TRAINING

We had been trained to believe that progress is a matter of slow development; that experience is a most valuable asset in life, and that we go on improving our day and generation by taking advantage of that which is past. For the last few years we have had coming into our school system some people who have never had the advantage of that experience; they have never had the benefit of these ideas; and they have come in not steeped in those Anglo-Saxon ideas, or more liberally those Western European ideas of which our President is so conspicuous an exponent.

But they have come in with the idea that all that is old is useless; that that which has stood the test of time in matters of government, in matters of thought, is not worthy of their notice; that to believe in that which has stood the test of experience is to be old fashioned, whether it be in matters of government, in matters of the conduct of business, in matters of morals, or in matters of taste. Consequently our trouble arises at the present time not because our Board of Education is drawing a tight rein, but because we have in our school system teachers who have not the feeling that the first business of a teacher is to be decent.

I realize that this is a strong statement, but I am prepared to defend it. For example, in a pamphlet entitled—"Toward the New Democracy" (page 84) we find: "Modern psychology teaches that books in themselves cannot be objectionable; it is rather the subjective state of the contemplative mind that determines the objection. 'To the pure, all things are pure.'" Consequently, you can take any book no matter how sensuous, no matter how lascivious, and put it into the hands of a boy or girl of fourteen years of age, and no harm will come.

Now I do not wish to put limitation on the right of the teacher holding such views to speak. I say that man has no right to be in the school system. We won't muzzle him! We won't have him in the school system at all!

I was quoted today as having said a few years ago that a man who was a socialist has no place in the school system. I do not know whether I said it or not. But I will say today, speaking only for myself, and not for the Board of Education or the Board of Superintendents, that men and women who are Marxian Socialists, who believe in the communist manifesto, have no right in the school system because such teachers believe in the overturn by force of those elements on which our civilization is based. They are opposed to the rights of property; they are opposed to the family as at present constituted; they are opposed to the very thing for which Lowell pleads—the right of every man to his chance in a democracy and to know that he has a chance.

For under a Marxian democracy, so-called, under a Marxian dictatorship of the proletariat, there would be no chance for the development of the individual. In a public school system under a democratic government such as ours, there is no place for the Marxian revolutionary socialist. To prove that I am not tilting against windmills allow me to read quotations from a letter in *The New York Call* signed by thirteen persons, three of whom have been teachers in our schools:

> We believe that the Socialist party must teach solely and agitate exclusively for the overthrow of capitalism and the establishment of an industrial democracy. A political party cannot organize all workers in the economic field; but we believe that the party should assist this program of organization by a propaganda of *revolutionary* unionism. . . .
>
> We believe that the Socialist party should send delegates to participate in an international congress to be attended by representatives of the *revolutionary* socialist parties of all countries, but that the party should refuse to participate in any conference called by moderate Socialists or social patriots.

Another provision calls for the abolition from the party platform of all plans for social reform. This "party of the Left" stands for the absolute overthrow of all movement for the development of society by orderly progress and this letter is signed not only by Scott Nearing, Louis Lochner and others, but also by David P. Berenberg, who until one year ago was a teacher of English in the Boys' High School, by Benjamin Glassberg, of whom you have heard today as one of the martyrs of the autocratic Board of Education, and by Jacob Lawn, a teacher in the elementary schools.

We are, then, face to face with the question of the day. We all agree that the idea of freedom of speech, freedom of thought; but, unfortunately we are confounding two ideas. Nobody desires to interfere with your freedom of thought as a person. You can think as you see fit. But what we are discussing today is the qualification of teachers in a public school. The term "inquisition" was used today and I was criticized because I called in some teachers of the De Witt Clinton High School and asked them certain questions about their views. It has been said that a man's views should not enter into the question of his qualifications as a teacher. But I believe that far more important than a man's conduct or what he says, are his views; for what a man thinks, that he is. Every teacher will inevitably teach that which he is. Therefore all remedies seeking to solve the question of what limits to set to freedom of speech will fail.

The only remedy is to devise some system by which the teachers who enter a school system shall be the teachers who will take our boys and girls and make of them the kind of citizens that the majority of the people of this country desire them to be. I believe that the majority of the people of this country today, that the majority of the people of the City of New York, do not wish their children trained to believe that the best way to bring in the better day is by an overthrow of our present established institutions.

FUTURE RESTS WITH TEACHERS

I believe in constant change. I believe that you all believe in constant change. I believe that we all think that tomorrow ought to be better than today and I agree that upon the teachers of this city rests the future of the city. To make that city worthy of the city's past is our task, and we ought to realize that it is our task.

If we are not in sympathy with the beliefs, the aspirations of the majority of the people of this country, we do not have to remain teachers. It is always within our power to resign, to go out where we can think as we please and speak as we please. The unfortunate thing is that we, as teachers, think too much of our own individual welfare. The schools do not exist for our benefit.

I, for one, cannot see why it is that the instant we find that a teacher is advocating a policy which is destructive of our American institutions, that any other teacher should feel called upon to come to his defence and to insist that such a man be retained in our school system. I do not believe that you do. I think those who do are very few in number.

Allow me one closing word—I have been a member of the public school system of the City of New York for twenty-one years; as a teacher of history; as principal of a high school, and now as superintendent. I have always been free to think as I saw fit, to teach by any method that I saw fit; to teach any content I saw fit.

As superintendent in charge of high schools at the present time I am not hampered by the Board of Education or the Board of Superintendents. They cooperate with me in every way possible to carry out the policies which have been decided upon in the high schools. Although our system has its defects, I do not believe the person who is energetic, who is thoughtful, who is willing to plan, is seriously hampered. If, because he suffers a rebuff, he stands in a corner and sulks, then he cannot accomplish results. But I see about me everywhere persons who have thought their own thoughts, worked in their own way, and who have accomplished great things for the city.

I believe that autocracy in the school system does exist, but that it can be overcome by any teacher who, instead of nursing his grievances and thinking only of his own advancement, will devote himself to the development of the boys and girls committed to his care and to making smooth and effective the working of the great organism of which we are all a part.

PLOT TO OVERTHROW GOVERNMENT

N. Y. LEGISLATIVE PROBE EXPOSES RADICAL GROUPS UNITED TO ESTABLISH "DICTATORSHIP OF PROLETARIAT" IN AMERICA—RAND SCHOOL HOTBED OF SEDITION

By T. EVERETT HARRÉ

WITH the well-defined, specific and deliberate purpose of overthrowing the existing government of the United States and establishing a "dictatorship of the proletariat," such as exists under Lenine and Trotzky in Russia, the radical organizations of the country—divided into three principal groups, anarchists, syndicalists and socialists—have united and are now working together on a common platform. That platform is the platform of the Russian Communist party, known as the Bolsheviki, which overturned the democratic Kerensky government by armed force and which has prevailed in Russia through the exercise of arbitrary armed might.

That the Socialists, including both the Right and Left, or revolutionary, wings, the syndicalists, including the I. W. W.'s, and the anarchists have combined in a nation-wide propaganda designed to convert every class of workers to the theories of Trotzky and Lenine, the ultimate purpose of which is to precipitate in America a revolution such as has made of Russia a bloody shambles, has been definitely and conclusively proven by evidence produced during the investigations of the New York State Legislative Committee, of which Senator Clayton R. Lusk is chairman, into seditious and disloyal activities in the State of New York.

So alarming have been the revelations already made of the nature and extent of inflammatory agitation seeking to promote mass revolution for the overthrow of the government and the destruction of all existing order, that the Hon. Alfred E. Smith, Governor of New York, has called a special term of the Supreme Court to begin August 11, for the purpose of investigating criminal anarchy and all other criminal activities directed against organized government in the state and nation. Aroused by the widespread activities of Bolshevist agents, a number of states in the Middle West have notified Senator Lusk of their intention of be-

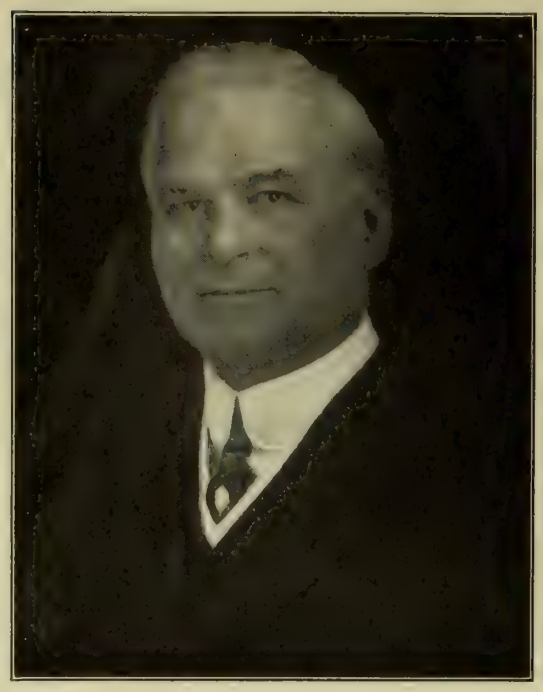
LEGISLATIVE COMMITTEE INVESTIGATING BOLSHEVISM

Standing, left to right: Assemblyman W. W. Pellett, Assemblyman Frederick S. Burr, Attorney General Charles D. Newton and Assemblyman Peter P. McElligott. Seated, left to right: Senator J. J. Boylan, Senator J. H. Walters, Senator Clayton R. Lusk, chairman; Senator D. Carroll and Assemblyman Louis M. Martin.



ginning investigations, asking that any information developed in the New York inquiry which bears on their states be afforded. Already the State authorities of Ohio and Illinois have sent representatives to New York to confer with the Lusk Committee, with this purpose.

New York City, as it was the center and hotbed of German propaganda, has been likewise the center and hotbed of the propaganda of the "reds." When the proposal was made that the New York Legislature appoint a special committee to undertake an inquiry into seditious and disloyal propaganda and intrigues, it was believed that by uncovering the chief centers of revolutionary activities in New York the ramifications of their organizations, agents and propaganda throughout the country would also be exposed. By reason of a special espionage act passed shortly after America entered the war, the Attorney General of the State of New York enjoys unique powers enabling him to subpoena witnesses and to compel them to testify under oath. Attorney General Newton is acting as chief counsel to the Lusk Committee, and has assigned one of his deputies, with full powers, to cooperate in the investigations. The probe of the Lusk Committee, to be supplemented by a special Grand Jury investigation, is the most important of its kind ever undertaken, and the evidence already produced establishes the gravity of the situation and the great and real menace confronting the country in the plots and propaganda of the enemies of peace and order. As a result of the investigations, it is proposed by the members of the Committee that the legislature of New York State—and it is hoped the legislatures of other states as well—will pass drastic measures to curb disloyal and un-American agitation and to suppress absolutely the activities of all those who advocate the overthrow of government by force.

AMERICAN RADICALS ABET LENINE'S AGENT

Sensational as have been the disclosures already made by the Lusk Committee, it is declared by members that the investigation so far has only scratched the surface of revolutionary radical propaganda. The evidence already produced clearly proves the connection between American Socialists and official representatives of Lenine and Trotzky. This evidence has established the fact that the Soviet Bureau located at 110 West Fortieth Street, New York, of which L. C. A. K. Martens is head, has been working in conjunction and in close cooperation with Socialist organizations, especially the Rand School of Social Science.

Preliminary to the hearings of the Lusk Committee, and acting upon search warrants issued by Magistrate William McAdoo, raids were made of the headquarters of Ludwig C. A. K. Martens, "representative in the United States of the Russian Socialist Soviet Republic," and of the Rand School of Social Science, 7 East Fifteenth Street, New York. From the documents and correspondence seized, it was revealed that the Soviet Bureau, while pretending to be purely commercial, spent no money whatever for commercial purposes; that the daily credit bank balance of the bureau varied from $5,000 to $9,000; that deposits were made in cash by Martens; that "large sums" of money had been received for propaganda purposes from Russia, and that the Soviet organization maintained a bureau for the defense of men charged with crimes against the Government of the United States. It was shown that the Rand School of Social Science was a hotbed of seditious activities and a clearing house for the dissemination of Bolshevist revolutionary propaganda urging the taking over of the State and the establishment of a dictatorship of the proletariat by mass action. It was shown that the Rand School booked as lecturers men who had been convicted and sentenced for crimes against the Government of the United States.

HUGH FRAYNE

Whose Testimony Showed All Groups of Radicals United on Bolshevist Program.

A form letter sent out by the correspondence department of the Rand School, of which David P. Berenberg is director, declared: "What are you going to do when the State robs you and your union and so make you helpless to strike? There is only one thing to do: Take over the State. Are the members of your local prepared to take over and conduct wisely and well the affairs of your town and country? Are you ready to meet the militia when the powers of the state and courts are against you?"

Among the papers seized at the Rand School was a copy of the *New York Communist,* of June 14, 1919, of which John Reed is editor, in which it was declared: "The Left Wing hopes that the proletariat will conquer its enemy, the capitalist class, with as little bloodshed as possible." Among papers seized in the offices of the so-called "ambassador" from the Lenine-Trotzky government was a letter addressed to the workers of Europe and America by Nicholas Lenine, in which he advocated the "overthrow of the bourgeoise and the annihilation of bourgeoise parliaments, . . . soviet rule and proletarian dictatorship." The tremendous scope of the Socialist, revolutionary, Bolshevist propaganda, through newspapers, monthlies, books and pamphlets, as well as lecture itineraries covering the entire country, in which the Soviet ambassadorial bureau and the Socialists cooperated, was demonstrated by the seized documents.

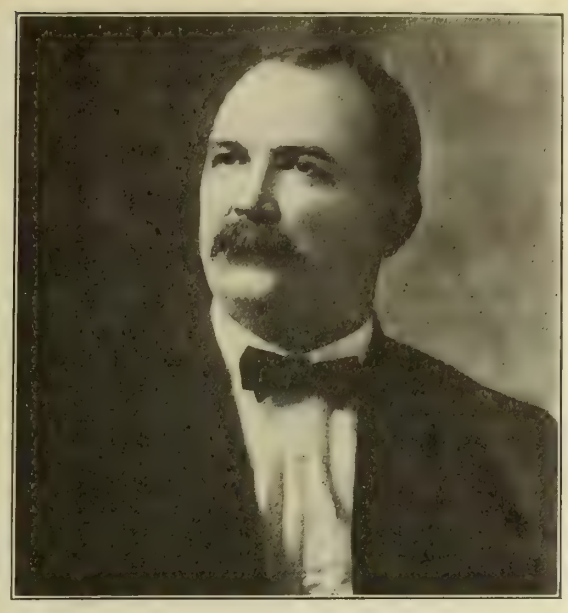
An illuminating sidelight upon the profits enjoyed by the professional "emancipators of the disinherited and downtrodden," the spell-binders of the proletarian revolution, was afforded by an examination of the bank books of the Rand School. Scott Nearing, who had been dismissed from the University of Pennsylvania, would, according to the Committee, have probably earned a maximum of $200 a month by teaching. According to the accounts of the Rand School, Mr. Nearing, as a "silver-tongued" monger of sedition and social discontent, a "champion of the oppressed and exploited," earned in one month a total of $555, which with "extras" added, amounted to $610. Just how the "poor and disinherited" are gulled for contributions running into the thousands was revealed by correspondence of members of the Rand School, one letter telling that $25,000 had been raised toward a fund of $40,000.

NAMES HEARD BEFORE

Of especially significant interest were lists of names—"evidently," according to Archibald E. Stevenson, associate counsel to the Committee, "a specially prepared mailing list"—found in the headquarters of the "official ambassador" from Lenine. This list included the names of a number of persons who had been mentioned in the "Who's Who" of radicals and pacifists given to the Overman Committee in its investigation of German propaganda. It included the names of people who have been notoriously active in pacifist and anti-war propaganda, who had opposed our going to war with Germany, who had advocated a premature, compromise, patched-up peace with Germany, who more recently have rabidly frothed at the mouth over the terms asked of Germany in the Versailles treaty, who have defended the I. W. W. and conscientious objectors, who have defended and befriended the Russian Bolsheviki, and who have openly or covertly sympathized with or abetted various revolutionary, radical and un-American movements. On the list were also the names of men who, having held government positions, would not, it would be supposed, be in sympathy with a movement which meant the overthrow of the existing government and the abrogation of the Constitution of the United States.

Among the names on the list were: Leonard Abbott, according to Mr. Stevenson, "connected with the Ferrer association of anarchists in New Jersey"; Robert Bruere, a writer; B. W. Huebsch, pacifist, and publisher of "a large number of books on anti-war subjects"; John Lovejoy Elliot, "active on the Board of Directors of the National Civil Liberties Bureau"; Carleton Hayes, an associate professor at Columbia, signer to an appeal made in June, 1918, to raise a defense fund of $50,000 for the I. W. W. leaders on trial in Chicago for seditious conspiracy to obstruct the Government in its conduct of the war, and until lately associated with the Military Intelligence division engaged in the investigation of seditious and disloyal activities; Morris Hillquit, leader of the Socialist Party, who campaigned for the office of mayor of New York in 1917 on a platform advocating a separate peace with Germany and now legal counsel for the Soviet Bureau; Paul U. Kellogg, editor of the *Survey,* who did his midget best to keep America from going to war with Germany and later advocated the British Labor Party plan for peace by negotiation with the Central Powers; George W. Kirchwey, federal director of the United States Employment Service; Louis Lochner, secretary of the Ford Peace expedition and since active in the People's Council; Rabbi Judah L. Magnes, who has impugned the loyalty of his own race by boasting of the leadership of Jews in revolutionary movements and who was mentioned in an aerogram, "No. 381," of Count von Bernstorff to his government as "belonging to circles very friendly to us"; Max Pine, of the United Hebrew Trades; H. Overstreet, a professor at City College; Gilbert Roe, legal counsel for various radicals; Norman Thomas, agitator for "conscientious objectors"; Walter E. Weyl, associate editor of the *New Republic,* author of "The End of the War," in which the Allies were contemptibly assailed and peace by compromise with Germany was urged; Amos Pinchot; Thomas D. Thatcher, of the Y. M. C. A., who has in lectures exonerated the Bolsheviki of crimes charged against them; Lillian D. Wald, head of the Henry Street Settlement, member of pacifist organizations and American delegate to the recent International Women's Congress at Zurich which attacked the terms of the Versailles treaty; Scott Nearing; John Reed and Albert Rhys Williams, both formerly engaged by the Bolshevist publicity bureau in Petrograd; and the famous and dashing Raymond Robins, Red Cross Colonel, exploited in the *Metropolitan Magazine* as having inherited the mantle of Theodore Roosevelt, and who is the most popular and most-quoted authority of Bolshevist advocates, agents and sympathizers. Testifying before the Senate Committee investigating Bolshevism, this same Robins

resented the Soviet Government of Lenine and Trotzky as representing the majority of the people of Russia. His testimony tended to exonerate those arch criminals, Lenine and Trotzky, of the crimes and wholesale killings charged against them; he repudiated the charge that the Bolshevist leaders were German agents, and he capped it all by the amazing assertion that if the revolution "had been in America" he should have expected vastly more destruction."



"DISILLUSIONED AMERICANS"

Among the memoranda seized in Martens' office were a number written by Evans Clark, an employee and "assistant director of the Commercial Department," a son-in-law of Dr. George W. Kirchwey. According to the evidence, Martens' bureau engaged in an attempt to interest American capitalists and business men in sending supplies to Russia. In a memorandum by Clark, dated May 16, 1919, and addressed to Dr. J. Hartman, an employee, the statement was made: "It will be useful in our conversations with business men to quote from such men as Robins", and others "in support of the Soviet régime." Presumably this referred to no less an authority on matters Bolshevist than the aforementioned Colonel Raymond Robins. In a statement, dated May 1, 1919, from the Rand School book store to Santeri Nuorteva, formerly director of the Bureau of Information and now associated with Martens in the official Soviet Bureau, for "merchandise, $400, past due," the following credit was written out: "Mrs. Raymond Robins paid $18. Leaving a balance of $382." It was brought out from Nuorteva's reply that this bill was for copies of Lenine's "Soviets at Work", which came under the ban of the Espionage Act.

There was found in the Soviet Bureau carbon copies of letters written by Evans Clark, introducing Herman Tucker, an employee of the Bolshevist Commercial Department, as "also one of our 'disillusioned Americans,'" saying: "He has recently left the Navy, denied a well-earned commission because of his 'socialist tendencies.'" These letters favorably advancing Mr. Tucker as also one of our 'disillusioned Americans'" were addressed to George W. Kirchwey, Federal director of the United States Employment Service, who lately filled the New York papers with statements emphasizing the difficulty or impossibility of returning soldiers to get employment, and who was saluted by Clark in his letter as "Dear Father"; to the Hon. Fred. C. Howe, Commissioner of Immigration of the Port of New York, who long before the war did his puniest to propagate the myth of Hun social welfare and superior social progress and who recently took part in a pro-Bolshevist meeting at Madison Square Garden; and to Prof. Charles A. Beard, a defender of the Russian Bolsheviki, special lecturer at the Rand School of Social Science, author of a book in which the framers of the American Constitution were impugned as not having been "disinterested" in the framing of that document, and in which the Constitution itself was characterized: "Every fundamental appeal in it is to some material and substantial interest."

"LIBERALS" RUSH TO RAND SCHOOL DEFENSE

Perhaps the most significant phase of the revelations so far made through the Lusk Committee concern the activities of the Rand School of Social Science, which boasts of such special lecturers as Professor Charles A. Beard, Oswald Garrison Villard, John Haynes Holmes, Owen R. Lovejoy, and, according to Mr. Samuel Untermyer, Professor Shotwell, a member of Colonel E. M. House's peace commission. Basing his action on the ground that the corporation is under indictment by the Federal Grand Jury for violation of the law and upon the evidence presented in the hearings of the Lusk Committee of the seditious activities of this school, showing

JAMES P. HOLLAND
Declared A. F. of L. Invulnerable to Radical Assaults

it to be a center of Bolshevist propaganda and to a large extent of Left Wing Socialist and I. W. W. propaganda as well, Attorney General Charles Newton began proceedings for the annulment of the charter of the American Socialist Society, the corporate title of the organization operating the Rand School of Social Science. There immediately rushed to the defense of the Rand School all those organs which had made a unique record for themselves by opposing our going to war with Germany, by advocating a premature compromise peace through negotiation with the Central Powers, by defending and championing the German-subsidized Bolsheviki, and which of late have howled execrations against the terms of peace exacted by America and the Allies from the Huns. Loud in their denunciation of the raids made upon the headquarters of the Bolshevik agent, Martens, and of the Rand School were the *New Republic* and the *Nation*, which now adds to its inglorious and un-American record the crowning dishonor of publishing a confidential communication from the United States Department of State to Col. House in Paris, which, with other confidential documents, it is reported, were, according to evidence in possession of the Government, stolen in Paris by certain radicals who had gained entrée to the headquarters of the American Peace delegation.

To the defense of the Rand School have rushed, with two or three exceptions and with two or three new sympathizers, the same old crowd of radicals, so-called liberals, pacifists, pro-Germans and others, who are mouthing the same old trite and hypocritical protests about the violation of constitutional rights and of the rights of liberty and free discussion.

Vociferous in their stock, stereotyped rantings about the violations of the "fundamental rights of freedom," the persecution and jailing of "thousands whose only crime consists in voicing their protest against economic junkerdom in America" and who "languish in jail because they dare to think," the Socialists on July 21 launched at the People's House in New York, the headquarters of the Rand School, a campaign to raise $100,000 for the nation-wide dissemination of propaganda and to fight the Lusk Committee and other official bodies engaged in attempting to prevent the spread of radicalism. Upon the launching of this campaign, the People's House became a center of feverish activity; a special corps of stenographers and typists engaged in sending out thousands of letters asking for contributions, in which appeal the recent raid on the Rand School by agents of the Lusk Committee was called a "Cossack invasion" and our national and state administrations were denounced as the obedient tools of Capitalism. It was announced that more than $3,500 had been collected at the meeting at which the drive was formally launched, and that the radical defense fund had been enriched by a single contribution of $2,000, sent with a letter in which the Lusk Committee agents were characterized as "raiders and safe crackers." Out of the money contributed to the fund, the radicals propose to distribute 50,000,000 pamphlets throughout the country. After referring to the appropriation by Congress of $2,000,000 to probe and suppress revolutionary activities, the Socialist appeal declared: "We are being confronted by an enemy with millions at his disposal. Will we at least respond with thousands to carry on the conflict?" At six open air meetings held simultaneously on July 21, in New York City by Socialists to protest against the actions of the Lusk Committee and the attitude of the United States toward the Bolshevik régimes in Russia and Hungary, resolutions were adopted demanding the immediate withdrawal of American troops from Russia and the lifting of the blockade against Soviet Russia and Soviet Hungary.

A so-called "non-Socialist" protest against the action to revoke the Rand School charter, issued through the National Civil Liberties Bureau—which has engaged in the defense of the criminal I. W. W. leaders, "conscientious objectors" and persons convicted of violation of the espionage laws—was signed by Stanley Bowmar, John A. Fitch, J. A. H. Hopkins, Rev. John Howard Melish, Allen McCurdy, Don Seitz, George Foster Peabody, Paul U. Kellog, editor of the *Survey*, Walter Lippmann and Walter E. Weyl. Walters Lippmann and Weyl are associate editors of the *New Republic*, whose record in the war has been fully analyzed and exposed. Weyl is the author of a book assailing the Allies, advocating a compromise peace by negotiation and prophesying a "final war after the war," a class war, such as Bolshevik-agent Martens, the Socialists and other radical organizations, including the Rand School, according to the record of the Lusk Committee investigation, have been engaged in promoting.

RADICALS MOSTLY ALIENS

Among the representatives of organized labor who have testified before the Legislative Committee, and who have proven of invaluable help in exposing the character and activities of the enemies of orderly and constructive social progress, were Mr. Hugh Frayne, General Organizer of the American Federation of Labor in charge of the New York office, and Mr. James P. Holland, president of the New York State Federation of Labor.

The American Federation of Labor, declared Mr. Holland, has proven itself proof against the radicals, who, since the socialistic element completely wrecked one of the strongest labor organizations in the country in 1889, have made mighty efforts to win over members of conservative organizations and disrupt the Federation. At the last convention in Atlantic City the radical element met with an overwhelming defeat when they attempted to put through a resolution favoring the soviet form of government. Of a total membership of 900,000 union members in the state of New York, not more than 60,000 or 70,000 are radical, and of these only 25,000 have been converted by the radicals in the last three years. The radicals, said Mr. Holland, had not succeeded in getting into the building trades, longshoremen's and other organizations, but had met their greatest success among the garment workers, furriers, boot and shoe manufacturers, machinists and hotel and restaurant employees. "At least 85 per cent of them," said Mr. Holland, "are people who are not citizens and do not intend to become citizens." While ninety per cent of the American Federation of Labor members are citizens, less than thirty per cent of the radical organizations are American citizens, and some of these are citi-

Striking Contrasts Between U. S. and British Labor

FUNDAMENTAL DIFFERENCES OF UNDERLYING PRINCIPLES SHOWN BY ANALYSIS OF COMMENTS B AMERICAN OBSERVERS RETURNING FROM ABROAD AND BY FOREIGN VISITORS

THE members of the commission sent by The National Civic Federation to study industrial conditions in England, France and Italy have returned and are now at work formulating their report. While many of the questions which they will discuss will be of general interest to the readers of the REVIEW, some of them will be of especial interest to employers and wage earners. The Federation's commission is the only one sent from this country to Europe since the signing of the armistice, which has been composed of representatives of the three groups—employers, wage earners and the public, and therefore its conclusions, where unanimous, ought to be of great value at this time.

On every returning steamer for the last three months there have been business men who, since the signing of the armistice, have been studying commercial and financial propositions in Europe, either in behalf of the Government or of private interests. Naturally, these men have something to say about the labor question, because no one could go to Europe now without hearing the labor question discussed on every street corner, in every meeting place, club and parliament. Out of this chorus of clashing views, the public emerges bewildered. British, French and Italian labor politics baffle the most expert students of international labor affairs. Even labor men themselves sometimes throw up their hands in despair. So these business men could hardly be expected in a few short weeks to grasp all the intricacies of that complicated situation. Some of them make a comparison between the British and American labor movements, to the disadvantage of the latter. Many vigorously assert that labor is going to be the ruling force in all governments and some of them fear that the United States will soon be in the hands of Lenine, Trotzky, Bela Kun and Company. This article is written in the hope that it will throw a few side lights, however feeble, on the situation, with the consciousness that there are those who will doubtless say that it only adds to the confusion.

One of the puzzling questions upon which it is hoped The National Civic Federation's commission will throw light is: "What is meant by 'democratization of industry?'" Or, to state it in another way: "What part of the management of industry is demanded by Labor?" So generally have writers and speakers voiced the feeling that labor is to have a larger, if not a dominating, share in the management of the plants, that employers and labor representatives are alike using those phrases, although they do not mean the same thing when they do.

When trade union men talk of "democratization of industry," they mean collective bargaining, through which agency they can negotiate on equal terms with employers on their wages, hours and working conditions. Employers using the term are generally non-union employers and when they do so they usually refer to the method of dealing with those same questions, not through the unions but by means of shop or "grievance" committees, organized along many different lines but with that general idea in view. Others mean by "democracy in industry" profit sharing, stock participation and other schemes of that character. When the socialists use the term they mean the state taking over the industry and running it. The I. W. W., the Left Wing Socialists and the Bolshevists, which are all about the same thing, mean by "democracy in industry" the taking over of the plant and the operating of it by the workers themselves.

By RALPH M. EASLEY

A recent statement that has attracted wide attention is that of Mr. Bernard M. Baruch, who represented our Government at Paris in a financial capacity almost from the beginning of the Peace Conference. This statement comes to this country as an interview given by Mr. Baruch to a correspondent of *The New York Times* in Paris:

> Labor never again will be satisfied with the old conditions. A proprietary share in what he produces must be given to the workingman and he has got to be taken into the management of the corporations by which he is employed. The workingmen must sit on the boards of directors. These conditions are here and must be promptly recognized. Capital, instead of hanging back and passively resisting, should run to meet the advancing conditions, or else labor may not be satisfied merely with what it is entitled to, and may demand more than its share.

What does Mr. Baruch mean by "a proprietary share?" Does he mean profit sharing or stock participation or the bonus system? If so, he can easily ascertain by inquiry that not a single trade union organization in the United States or, for that matter, in any part of the world, demands or even believes in profit sharing or any other substitute for "just wages." As organized labor is growing by leaps and bounds, no employer can be satisfied that a scheme he works out satisfactorily with his non-union men today will not be overturned tomorrow by the advent into his plant of the union agent. Therefore the voice of organized labor, whether one agrees with it or not, cannot be ignored in dealing with this subject.

Unfortunately, the history of profit sharing does not point to profit sharing as the great panacea. If it did, England, the home of profit sharing, would have approved it. The British government in 1912 published an analysis of every attempt at profit sharing made in the United Kingdom during one hundred and twenty-five years. It showed that there had been 299 such ventures, 133 of which had gone by the board. In the remaining 166 there were only 106,000 employees involved, out of a possible 15,000,000, and of that number three-fourths were in public utility plants, where there was practically always a profit to distribute. Here and there in this country, as in England, there are to be found a few corporations which seem to have made it work, but there are particular reasons for it in those instances. As a general proposition, it has failed.

Again, what does Mr. Baruch mean when he says: "The workingman has got to be taken into the management of the corporations by which he is employed?" Or, is that answered by his next declaration: "The workingman must sit on the boards of directors"? There is a vast difference between one or two workingmen sitting on a board of directors with twenty-five capitalists, and their being "taken into the management of the corporation." Of course, "taken in" might be used in a facetious sense, but Mr. Baruch did not mean it that way. If the workingman is going to sit on a board of directors as a stockholder, it will be necessary for him to own stock. But in a billion-dollar or a hundred million-dollar or even a million-dollar corporation, how much voice would a workingman be likely to secure by the shares of stock he is able to buy? If the purpose is merely to have him present at board meetings, so that he can explain back to his brother workers why market conditions, for instance, would not permit of the company's granting certain demands f increase in wages, experience shows such an e pedient to be disappointing, because the m at once suspect him of having sold out.

In connection with this idea that workin men must sit on the boards of directors and mu take a part in the management of the corpor tions, it is interesting to call attention to t action of the American Federation of Labor its recent Annual Convention at Atlantic Cit when a resolution proposed by the handful radicals in that big organization, providing th the workingmen in every institution should ha the right to select the foreman, was overwhelm ingly defeated. Mr. John P. Frey, secretary the Convention's Committee on Resolutions an editor of *The International Iron Molders' Jou nal*, in explaining why the Committee on Res lutions had unanimously turned the idea dow said:

> I would call your attention to the fact that i the literature which has been circulated upon t question of electing foremen and in the speeche made in trade union meetings upon this sam question, the subject does not stop with the ele tion of foremen, because the argument is the made, and it is a logical one, that the electio of foremen would be of no value because the for men would be under the general manager an the board of directors, and if we could only g the trade union movement to commit itself t the election of foremen in industries, it woul logically follow that we would have to elect th board of directors and determine who the gener manager would be. It is not, therefore, a trad union proposition and I have made this stat ment so that you will more thoroughly unde stand what is included in the resolution in pu pose, if not in language.

Mr. Frey's language makes it very clear tha the trade union movement does not favor an scheme whereby the worker is supposed to ente into the management of industry. In fac trade union writers are frank to say that the want no responsibility for failures or losses upo their shoulders; that responsibility they wan the employers alone to take. They do want t be heard on the question of wages, hours an working conditions but that is the extent o their demand for democratization of industry.

One of the most conspicuous writers an speakers today on after-the-war conditions i Europe and America is Mr. Frank A. Vander lip, whose recent book, "What Happened t Europe," and his famous speech before th Economic Club in New York immediately o his return from his six months' tour in Europe created somewhat of a furore.

Mr. Vanderlip did not pretend to speak a a labor expert but as a student of finance and business. The only chapter in his book deal ing with the labor situation is that under the title: "An Employer's Vision." It is a thir teen-page account of an interview with, to quote Mr. Vanderlip himself, "an employer of first importance," who "has had a wide experience throughout his life with large bodies of work people." Mr. Vanderlip having been a report er in his early days, it may be assumed that his account of his interview is accurate. But much more weight would attach to the interview were the name of this employer given, so that one could evaluate it. Just what value, for instance, would it be to the English public to have an English writer come to the United States and interview Henry Ford at length on labor matters, and then go back and give Mr. Ford's views in England under the anonymity of "an employer of first importance?" From statements made, it might be fair to assume that the

employer whom Mr. Vanderlip interviewed was Lord Leverhulme, the big soap manufacturer, who is also a big soap advertiser. Parenthetically, it is not amiss to remark that soap goes into the homes of all wage earners. He has announced himself as a proponent of the six-hour day and, from his interview, may well be termed "the Henry Ford of England."

But whatever the motives of Lord Leverhulme, or "the employer of the first importance," may be, the various propositions he advocates are largely in line with the demands of the socialist labor organizations of England and against the demands of the organized labor movement of America.

Mr. Vanderlip in his preface mentions the labor men with whom he talked. The first was "J. H. Thomas, M. P., the General Secretary of the National Union of Railway Workmen, who represents a union of more than 500,000 workers." Then he also talked with "Mr. A. Taylor, in the absence of Mr. W. A. Appleton, the head of the General Federation of Trade Unions, which organization has over half a million members." Mr. Vanderlip notes: "If there are many such labor leaders in England and if they can lead their followers, I have little fear of how far the labor movement there will travel." The curious thing about this is that, assuming that Mr. Taylor spoke for Mr. Appleton, if the British People follow the two men of whom Mr. Vanderlip spoke, Mr. Thomas and Mr. Appleton, they will have to split in two and go in different directions, Mr. Thomas being a socialist and co-operator with Arthur Henderson, the socialist and pacifist, while Mr. Appleton represents the real trade union movement in Great Britain, which corresponds to the American Federation of Labor in this country and is anti-socialist and anti-pacifist. Both Mr. Thomas and Mr. Appleton have been entertained by The National Civic Federation, Mr. Thomas heading a party of Englishmen who came to the United States in 1917 and Mr. Appleton a party who came in 1918. So bitter were the leaders of our "intellectuals" — the editors of *The New Republic, The Survey, The Dial,* and *The Nation* against Mr. Appleton and his party on account of Mr. Appleton's opposition to the British Labor Party, of which Henderson and Thomas were supporters, that they openly attacked him and his party, not only because they were against the British Labor Party's program but also because they had added to that crime the crime of having accepted membership on a commission appointed by the British Government. In those days, it must be recalled, pacificism, defeatism and pro-Germanism had noted adherents both in this country and in Europe, and it was reprehensible in the minds of such people for anyone loyally to work with his own government. So we see that if Mr. Vanderlip expects Mr. Thomas and Mr. Appleton jointly to lead the British wage earners into a haven of peace, he is doomed to disappointment.

Mr. Vanderlip speaks of the Rt. Hon. Arthur Henderson and Professor G. D. H. Cole as "representing the more radical views," but says: "Even they had a moderation of utterance and such a tentative character of program as partially to disarm fears as to where they might lead an active minority." Has he read the British Labor Party's program, drafted by Sidney Webb, Arthur Henderson and Ramsay MacDonald, the latter being the Morris Hillquit of England? Has he read the memorandum presented by the trade union representatives on the Provisional Joint Committee of the British Industrial Conference held in London in February of this year, which was signed by Arthur Henderson, as Chairman, and by G. D. H. Cole, as Secretary?

The British Labor Party's program, which is endorsed by Mr. Thomas, proposes frankly to wipe out capitalism and to "wipe in" state socialism. The following extracts from it have the familiar ring of the Marxianists, also of the Trotzkyists.

> The individualist system of capitalist production, based on the private ownership and competitive administration of land and capital—may, we hope, indeed have received a deathblow. . . . And the Labor Party refuses absolutely to believe that the British people will permanently tolerate any reconstruction . . . involved in the abandonment of British industry to . . . separate private employers. . . . What the Labor Party looks to is a genuinely scientific reorganization of the nation's industry . . . on the basis of the common ownership of the means of production; the equitable sharing of the proceeds among all who participate in any capacity and only among these, and the adoption in particular services and occupations, of those systems and methods of administration and control that may be found, in practice, best to promote the public interest.
>
> The Labor Party stands not merely for the principle of the common ownership of the nation's land, to be applied, as suitable opportunities occur, but also, specifically, for the immediate nationalization of railways, mines and the production of electrical power.

So much for the "fear disarming" program of the British Labor Party. But fully as much to the point is the special report of the labor members of the Provisional Joint Committee of the British Industrial Conference. Notwithstanding the radical agreement reached and signed by both the employer and labor members of that committee, the labor members felt called upon to add a memorandum, in the nature of a minority report, based entirely upon the British Labor Party's program, from the "Conclusions" of which we quote the following familiar socialist phrases, the italics being the Committee's:

> The fundamental causes of Labor unrest are to be found rather in the growing determination of Labor to challenge the whole existing structure of capitalist industry than in any of the more special and smaller grievances which come to the surface at any particular time.
>
> These root causes are twofold—the breakdown of the existing capitalist system of industrial organization, in the sense that the mass of the working class is now firmly convinced that *production for private profit is not an equitable basis on which to build,* and that a vast extension of public ownership and democratic control of industry is urgently necessary.
>
> * * * * * * * * *
>
> It is not enough merely to tinker with particular grievances or to endeavor to reconstruct the old system by slight adjustments to meet the new demands of Labor. It is essential to question the whole basis on which our industry has been conducted in the past and to endeavor to find, *in substitution for the motive of private gain,* some other motive which will serve better as the foundation of a democratic system. . . .
>
> This cannot be done so long as industry continues to be conducted for private profit, and the widest possible extension of public ownership and democratic control of industry is therefore the first necessary condition of the removal of industrial unrest.

It is not strange that anyone meeting the British labor leaders in the way that Mr. Vanderlip, or any other business man going to Europe to ascertain conditions, would meet them, should form a splendid impression of them and be strongly influenced by their views. These labor men are plausible, able and always genteel. They have such an air of sincerity and apparent wisdom when they announce with dogmatic fervor their "fundamental economics" that it is easier to go along with them than to combat them. But when Mr. Vanderlip made the following statement in his celebrated speech at the dinner of the Economic Club in New York, he forgot for the moment his own knowledge of economics and laid aside his own wide experience in detecting fallacies. He said:

> It is not altogether hunger and want, because you find the present order of society questioned and questioned by a considerable minority in England. There has come to be a suspicion of the efficacy of higher wages in the minds of a great many workers. They organize, they strike, they get advances, and they find they have no more comfort than they had before. The cost of living has risen in many cases more rapidly than even the rapidly rising wages, and there is a grave suspicion in the minds of a great body of workers that there is some legerdemain, there is something by which you can apparently hand them higher wages but so manipulate the value of what they pay the wages in that they are worth no more to the man who earns them; and, with that suspicion in the minds of men, there is always inflammable material.

On this *The New York Call* makes the following comment:

> Such statements are not calculated to confirm the faith of the masses in the permanence or the desirability of modern capitalism.

The Call is right; and Mr. Vanderlip is wrong in his statements. He is only repeating what socialist writers and speakers have been saying for the last twenty years and what they will continue to say for twenty, forty or a hundred years to come.

The Rt. Hon. James H. Thomas, M. P., already referred to in this article, has just been paying a second visit to America. At a number of private meetings of employers, where he was a guest, he made statements which many desired to combat but the character of the occasions forbade anything of a controversial nature. However, the *New York Tribune,* on July 6, published a full page interview with him, in which he repeated some of the statements he had previously made privately, thus releasing them for public discussion. One of these statements was to the effect that a Labor government would soon succeed the present Coalition government in Great Britain and he then went on to say:

> There seems to be far more apprehension in this country than at home of the probable results of a labor government in Great Britain. I suppose the explanation is that the British people know us best. We are neither bandits nor robbers, anxious to confiscate property and pull down the old bases of society. Our party is made up of men trained to face responsibilities, who recognize that justice is an essential feature of any political programme. No party can exist unless actuated by and influenced in all its decisions by the high moral principle of justice and equity to all.

A question which many persons wanted to ask Mr. Thomas was: "Just what people in England is it who are feeling so complacent, secure and happy over the prospect of having these 'trained and responsible' men of labor take over the government of Great Britain?" Does anyone in England have such a feeling of trust in the British Labor Party and its fantastic program of State Socialism, outside of the members of that party? There are, of course, Lord Leverhulmes in every country and there are always the "intellectuals" with their wagons hitched to the stars. They will follow the Bernard Shaws, the Sidney Webbs, the Ramsey MacDonalds and the Arthur Hendersons; but the great middle class, the agriculturists, the real trade unionists and the hard-headed employers are not so trustful and so simple-minded as Mr. Thomas would have us believe. They realize that the British Labor Party's program is a plan for the state to take over all the mines, mills, factories, farms, stores, warehouses, banks, railroads, steamship companies, etc.; in other words, all means of production and distribution, and operate them, which, by and large, is about what Lenine and Trotzky are trying to do in Russia.

The Tribune, in its interview, said:

> Mr. Thomas remarked that, in so far as labor suffers any disadvantages in the United States, it was largely attributable to its failure to wield its inherent political power through the formation of a separate party. He said the attempt to

(*Continued on Page* 15)

The Milk Problem—A Practical Program

By IRWIN G. JENNINGS
ASSISTANT SECRETARY METROPOLITAN TRUST COMPANY

IN September, 1916, the receipt of the daily milk supply of New York City was seriously jeopardized. For more than a week, the producers, under the leadership of their "association," had been on a strike demanding increased prices from the New York dealers. Much good milk in the possession of those seeking to deliver it to shipping stations was destroyed by the striking producers. A large part of the milk received during this period was not of a sanitary character. A deadlock was reached. The Mayor of the city intervened and tried to settle the dispute, but he made no progress whatever. The dealers were proceeding on the theory that the public would not stand for a rise in the price of milk, and their profits were so small that a very slight advance in the cost of milk to them, if they were compelled to sell at the then retail prices, would drive practically all of the small companies out of business.

The producers were conscious that the price they were receiving from the dealers did not cover the cost of production and so were determined at all events to see the strike through. Beyond the interest taken by the Mayor, there was no authoritative assertion of the right of the New York public to receive its daily supply. The controversy was finally settled, but the public paid the bill. From this time on, the price of milk to the consumer was progressively higher until in November, 1917, but little more than a year from the time of the first strike, grade B milk rose from 9 cents to 15 cents, an advance of 66 2/3% over its former price.

In the fall of 1917, controversy again arose. Public authorities began to take cognizance of the situation and the District Attorney even threatened to indict the leaders of the producers who were making what seemed to him to be exorbitant demands. It was reported that if the District Attorney should carry out his threat against one or more of the members of the Producers' Association, the cows would be killed and the milk destroyed. Again the New York milk supply was jeopardized and again the controversy was settled by the New York public's paying the bill.

Something more than a year has passed. In the meantime, the Federal Food Commission which had adjusted the price between the producer and the distributor during the war, after the armistice discontinued its efforts along that line. Under the Commission, the policy followed was that the dealers should charge their patrons just as much more for their milk as the commission permitted the producers to add to the existing price. Thus both the dealers and the farmers got along very nicely at the expense of the consumer. But, in January, 1919, the first month that these two interests in the industry were left to themselves, on account of their inability to agree, a milk strike resulted. There were three conflicting factors in this strike, the dairymen's league, the milk dealers' pool and the New York public.

The strike was finally settled by the dealers and the producers agreeing upon prices for a period of three months, after which time the question of future prices might potentially arise any month with new possibilities of disagreement.

IRWIN G. JENNINGS

THE PLAN.

1. *The formation of a central association composed of both milk dealers and producers for the purpose of building constructively the milk industry as a whole and stimulating the increased sale and use of dairy products, especially fluid milk.*

2. *The administration of the affairs of such an association in general, by a Board of Directors with representation thereon of both producers and dealers and possibly the public and in detail, by a capable and responsible director who would give his entire time to the work.*

3. *The organization of local units or business units participated in by both dealers and producers for the purpose of stimulating cooperation, efficiency, business methods and good will among its members.*

4. *The establishment of one or more thoroughly equipped laboratories, ably manned, for the purpose of making a systematic study of milk as a food, its most healthful and wholesome form and the most sanitary and marketable method of its handling and distribution.*

5. *The maintenance by the central association of a clearing house of information and industrial facts for the purpose first, of stimulating the standardization of sanitary methods, grading, supervision and reporting, so that results throughout the country can be competently compared and intelligently interpreted; second, the promotion of cooperation throughout the industry; third, a provision for the economic study of the industry, especially matters relating to markets.*

6. *The maintenance of a method of disseminating the information obtained in the laboratory and under the supervision of the director, to both dealers and producers in or out of the local units.*

7. *A campaign of publicity to which both dealers and producers shall contribute which shall use both the best established and new methods for acquainting the public with the facts obtained, thereby stimulating the demand for and use of more milk.*

8. *The provision by the director through educational and experimental means, of a stimulus, looking to the more efficient production, distribution and sanitary control of milk on a large scale in order that increased demands for the product may be met.*

NECESSITY FOR A STEADY MILK SUPPLY

Greater New York is today a city of more than five million people and growing rapidly. In it there are estimated by the Board of Health to be 130,000 babies under one year of age and 126,000 babies between one and two years of age. The health, welfare, and probably the lives, of the greater percentage of these babies are dependent upon an uninterrupted, sanitary milk supply. Besides this, there are a number of convalescing invalids, some of them wounded soldiers, who must have milk.

Milk is a vital necessity. There are no satisfactory substitutes for it. The milk supply cannot with impunity be tampered with. To do so may mean death to many human beings. To be the direct or indirect cause of a single death means more than fines or jail to the guilty persons. The New York public's right to life and health is fundamental. There are some things about which the interests may quarrel, but their quarrels should not be allowed to imperil the lives of the people. A milk strike in the hot summer months would be disastrous. Those months are now upon us.

Both the dairymen's organization and that of the producers, whatever may have been the theory of their original organization, of necessity have become fighting machines for the purpose of preserving what seems to each of them to be its rights in the industry. It may still be necessary for them to maintain these organizations and to continue a fight for their rights, but the question may well be asked whether the time is not at hand for a more constructive program.

No interest in the milk industry has in the past sufficiently appreciated the dignity, importance and responsibility of the functions it has been performing. To this fact is due most of the disrepute into which the industry has fallen. The public attitude and that of the press toward the industry have been wrong. The milk distributor, instead of being looked upon as a business man performing a public service function and entitled to credit for work well done, has been universally regarded with suspicion. The presumption has been against him. No morsel of news has been so luscious in the eyes of the ordinary reporter as a front page account of adulteration or dirty containers, or of responsibility for disease traced to a milk dealer's door. It has been a popular pastime for the social reformer to attack the milk dealer and to charge him with fraud, dishonesty and uncleanliness, and the latter has had well-defined reasons for taking a position calling for the least possible publicity.

The good will of a milk business is its main asset. The milk plants, the machinery, the wagons and the cans of a concern that is not going are worth little. To preserve the good will is most important. The most effective menace to this good will is unfavorable newspaper notoriety. To keep his cases out of the general courts has been considered by the milk dealer essential in order to escape such publicity. To plead guilty and to take reprimands in the minor courts accomplished this purpose. On the other hand the greatest insurance of good will in the industry would be a program of constructive publicity based upon a firm foundation of facts scientifically ascertained.

A SUGGESTED PROGRAM

What is to be done in the matter? The present situation is precarious to the public and destructive to the industry. Two facts are apparent: first, the health and welfare of the New York public must not be periodically placed in peril by lack of cooperation among the various interests of the milk industry; second, some program must be devised that will protect the public, give it a greater interest in, and knowledge of, the industry, insure a better product and better service, and which will constructively build, rather than persistently destroy, one of the greatest industries of the country. The following suggestions are practicable and might be carried out profitably under proper leadership, developed either in the industry or out of it:

Spargo's Camouflaged Socialist Propaganda

RADICAL MARXIAN THEORIES EXPLOITED UNDER ADROIT GUISE OF DENOUNCING BOLSHEVISM

By DAVID GOLDSTEIN

BEING the first in the field, John Spargo's "Bolshevism" hit the American purse just when everybody was asking "what is Bolshevism?" The book was sent forth as "a plain and easily understandable outline of the origin, history and meaning of Bolshevism . . . a fair and reliable statement of the philosophy, program, and policies of the Russian Bolsheviki." It is no such thing! It is, as an understandable reading will show, an astute piece of Socialist propaganda. Professedly, it was hurriedly written in fulfillment of a promise to "dear Will," so that the author is "very conscious of the imperfections of the book as it stands." One may indeed wonder what would have been its contents if the author had at leisure paused to realize the lack of common sense reasoning that he has, on paper, convicted himself of. The book *as it stands* is a very clever and, we must admit, a too successful attempt to turn the anti-Bolshevist sentiment of our country to the advantage of Socialism; for the truth of the matter is that when put into practice Socialism is what is, today, nicknamed Bolshevism.

One-half of the book is taken up with an interesting re-write-up of the struggle of the Russian people against an autocratic dictatorship, especially the fight of recent years. It contains not a few reprints of documents and speeches giving somewhat in detail the forces that overthrew the Czar and established a Constituent Assembly. Passing on from the Constituent Assembly that was to govern Russia upon a democratic basis, the book deals with the *coup d'etat* of Lenine-Trotzky *et al.* and the setting up of the Russian Socialist Federated Soviet Republic.

From thence on to the end, the text assumes an inconsistency between Bolshevism and Socialism that is wholly unwarranted by the facts in the case past or present; since Bolshevism is but the ripest fruit yet plucked from off that poisonous tree planted by Marx and Engels and assiduously cultivated ever since by Socialists of whatsoever brand—"Utopian or Scientific." As the psychology is rather forceful to the man having neither the time, ability nor inclination to study those radical forces that have hammered at the foundations of civil society, since the days when the Communist Manifesto was sent forth to tell the world that "the Communists [Socialists] ends can be attained only by the forcible overthrow of all existing social conditions," he will lay down the book with a false impression. His spirit will be aroused against Lenine-Trotzky *et al.*, but not against Bolshevism in its essential principles—namely, Socialism in action.

ALIGNED WITH SOCIALIST SET

The uncritical mind will hold in view the Bolsheviki five thousand miles away in Russia, not the Bolsheviki here in our own dear homeland. If he should become completely psychologized with the Spargonian camouflage he will find himself lined up with one set of Socialists against another set of Socialists, the only difference between them being one of temperament. There are those who wait for society to evolve in mechanical fashion and those who have the dash to "leap from the kingdom of necessity to the kingdom of freedom" *a la* the Paris Commune and Soviet Russia. Yet since society is not evolving their way and as the "leap to freedom" is a jump into tyranny and chaos, a plague rests on both their houses.

The reader is deftly disarmed: the preface tells him that the author's "aim" is "to make a deliberate and scientific study" of Bolshevism, but once he gets into the body of the book the author's aim is seen to be to "remove from the great international Socialist movement a shameful reproach" (p. 214) that Lenine and Trotzky have put upon it. It were candid in the author to say that his aim is to win public sympathy for the Mensheviki as against the Bolsheviki. Even so, from the basic point of view one is as bad as the other; and it is Spargo's assertion that both are "Socialists of the school of Marx" (p. 59).

This issue may be put easily to the touchstone, since the industrial development in Russia is still in a primitive state the vital issue falls upon the question of land ownership. Granted, freely, that the peasants have rightly complained of the injustice under which they have been compelled to toil, the question is pertinent: What difference is there between the Bolsheviki whom Spargo condemns and the Mensheviki whom he upholds? None whatsoever, since both accept the pronouncement of the Communist Manifesto in favor of complete proletarian monopoly of land. Indeed, both groups go Marx one better, their abolition of private property in land, without compensation, shall stay even the hand of changing phenomena as well as those principles writ in the Decalogue. With an assumption of omnipotent power they call a halt to evolution,—never more shall it evolute, for private property in land shall be abolished FOREVER.

Bolsheviki

"The landlord's property in all land is herewith abolished without compensation."

"The right of private ownership in land is abolished forever; land can neither be sold, nor bought, nor leased, nor mortgaged, nor appropriated in any other way. The whole of the land of the State, of the appanages of the Crown, of the monasteries, of the churches, as well as majorats, lands in conditional possession, or endowed to persons, or concerns, privately owned land and land belonging to public bodies, and to peasants, and so on, is herewith expropriated without any compensation whatever, and it becomes the property of the whole people and is transferred for use to all who till it."

Mensheviki

"The right to privately owned land within the boundaries of the Russian Republic is hereby abolished forever."

"All land, mines, forests, waters, at present owned by and otherwise in the possession of individuals, associations, and institutions, are confiscated without compensation for the loss incurred."

The abnormal vision of the Bolsheviki and the Mensheviki in Russia, just as that of the Debs and the Spargos in America, fails to grasp the fact that the *right* to own property in land is a natural right that even the majority upon the principle of might, though they have the power, have not the right to abolish. Again, that it is the duty of the State to maintain the inviolability of this natural right and to its advantage to increase the number of owners of land rather than to centralize the ownership of it into the hands of the State or of a favored few.

Nothing sounder as against the unjust proposal of the Socialists has been said than this from Pope Leo XIII:

> "The right to possess private property is from nature, not from man; and the State has only the right to regulate its use in the interests of the public good, but by no means to abolish it altogether."

Again Leo XIII said—and this was in 1891—the

> "great labour question cannot be solved except by assuming as a principle that private ownership must be held sacred and inviolable. The law, therefore, should favor ownership, and its policy should be to induce as many people as possible to become owners."

Very clever, or very dull, in its double meaning is the sub-title of Mr. Spargo's "Bolshevism"—"The Enemy of Political and Industrial Democracy"—for the implication is direct that the author takes his stand against the enemy of political and industrial democracy. Thus while denouncing the enemy of Americanism Mr. Spargo deftly advances Socialism in public favor as he has ever done since the day he landed in New York City. If, indeed, the author is blinded to the fact that Bolshevism in Russia is merely American Socialism rotten ripe he is neither a sound reasoner nor a safe guide of public opinion. We shall leave him to take either horn of his sad dilemma and come to the rescue of common-sense.

Again, in the text there is a dual personality that in the interest of right, reason and love of country should be understood. Mr. Spargo assumes that democracy, in its etymological and its historical sense, is entirely incompatible with the soviet form of government in Russia (p. 162). This we shall gladly grant—that this government of Commissaries is in reality a despotism of the very few over the vast majority. Precisely, "democracy has always meant absence of class rule; proletarian dictatorship is class rule." But when Mr. Spargo says the "Bolshevists are not Marxians" (pp. 238, 266) because they did not await the predicted time when the proletarians would be in the majority before setting up the "dictatorship," which Marx did declare for, we are aware that a hair-splitting Talmudic discussion is entered upon which essays to save Socialism in theory from Socialism, we may not say practical, but rather, impractical operation. The indisputable fact is that Marx coined the term "dictatorship of the proletariat," and it is fair to say that it means that a dictator shall rule in the interest of the proletariat during the period of transition from "Capitalism to Socialism." But since a "classless society," a one class society, contemplated by the Marxians, is absurd it is fair to say that this goal shall never be reached under Bolshevism or any other Socialist title. The soviet form of government as it lay in the imagination of Trotzky (p. 161)—a "true unadulterated democracy"—is precisely what Engels called for—"a government of things"—another absurdity since things are not governed, they are used or misused by men. Here is the crux of the whole matter, because of their materialistic philosophy Socialists are unable to grasp the fact that we have a government not of men, but of laws carried out by men. A dictatorship, whether proletarian or otherwise, is a despotism which it is not in the nature of free men to tolerate, since it is human power to which they are subjected, not the force of right principles that never change.

Even though a government were made up exclusively of representatives of the several industries, rather than of representatives of territorial divisions, as wards, towns, cities, counties or states, as Socialists propose, it would be class government—working class government—and it is true that class government is etymologically and historically incompatible with democracy. If then Spargo would have democracy he must quit Marxism both in the green wood as in its fruit, deadly ripe. He cannot, logically, condemn his cause and advocate his cause in one and the same book as he has in "Bolshevism."

The naivete with which Mr. Spargo expresses surprise that a radical like Max Eastman gives his benediction to the Bolshevist suffrage system (p. 281) shows a fine skill at making black white. For after all this is quite Marxian, there never was a time in the history of his cause that any means to the end was out of vogue. Indeed the autocratic manipulation of the suffrage, that is supposed to be free and equal, gave to Marx the control of the International Socialist Congress by the misuse of blank credentials and by keeping Bakunin out of the Congress. This was innocently done by calling the assembly in a place inaccessible to exiled Bakunin. It is interesting to note that base tactics are not out of date in the Socialist movement of Spargo's adopted country. Just now comes the news that the inner powers that be in the Socialist Party have expelled 40,000 members without the semblance of a trial to make sure of controlling the party here in America. Evidently Max Eastman believes in Bolshevist tactics to carry out Bolshevist ideals, so, too, does John Spargo believe in Bolshevist ideals and in the self-same tactics, differently applied, in order to "remove from the great international Socialist movement a shameful reproach" (p. 214).

Again (pp. 216-217), the moral irresponsibility that the father of Modern Socialism bequeathed to his numerous followers finds a star exemplar in Spargo. He vehemently condemns the "inconsistencies" of the Bolshevists in Russia and vehemently approves inconsistencies in himself. Mr. Spargo is a patriot! so he is. An international patriot—God save the mark!—is a man who loves no country; for Socialism calls upon workingmen of all countries to unite, since they have nothing to lose but their chains and a world to win. Oh it were pitiful!—"The red flag was borne by debauched and drunken mobs. What a fate for the symbol of universal freedom and human brotherhood!" (p. 199). The "shameful reproach" against the anti-patriotism of the movement must be *removed,* so it must! But marvel of marvels the anti-patriotism of Socialism must be removed while Socialism itself—the very essence of treason—must be advanced in order to bring about the world *Revolution* incidentally trailing Old Glory in the dust while running up the red flag over the Capitol at Washington. Don't doubt it! Spargo himself has said so, he is a Social Democrat and an International Socialist (preface) all because he believes in Americanism with all his undivided heart—a heart that loves two absolutely opposite things, treason and patriotism, with a wholesale fervor.

Blandly, the author of "Bolshevism" asks: "Is there any logical sense in the average radical's mind?" (p. 217) Surely, the correct answer is—*No.* However, it is not the "average radical" who sets himself down illogically between covers, so we cite Spargo's "Bolshevism" as a complete vindication of the sane opinion that at least one distinguished radical has by far outstripped the average radical in the lack of "any logical sense."

Of course, a logical process of thinking, resting upon a reasonable premise will lead to a common sense conclusion. But since a rational basis is not to be found for Socialism in any one of its phases, it goes without saying that however logical their process, their aim is all wrong since their foundation is all wrong. Take their aim "the expropriation of the expropriators," in other words that of taking from private owners the land and capital in their just possession and making these means of production the property of the working class—"the only class that has any right to exist"—is logical enough if one accepts the utterly unsound premise that the one and only source of modern capital is the unpaid wages of the working class in the years that are passed. Placed upon such an absurd foundation what aim is too ridiculous, tyrannical or treasonable? And what means, to such an end, is too unreasonable, illogical or contradictory? It is or it isn't the thing to do not because it is right or because it is wrong, but because at a specific time and place it is or it is not thought to be good propaganda by those who man the steam roller. To illustrate, when the advocacy of sabotage threatened to retard their propaganda the majority of the convention of the Socialist Party (1912) made its repudiation a prerequisite of membership; but when this threatening danger from within was thought to be passed the convention of 1917 of which Spargo was a prominent member unanimously rescinded the action of the former convention.

QUESTIONS FOR MR. SPARGO

To promote the understanding of the Socialist mind we note the position taken by John Spargo. Was he opposed to the wanton destruction of property and the possible loss of life that results from the practices of sabotage because *per se* it is immoral? Perish the thought, what should a Marxian have to do with morality or immorality—there is no such thing in their philosophy. We quote Spargo's "Syndicalism, Industrial Unionism, and Socialism" (pp. 172-3):

> I am not opposed to sabotage because of any love of "law and order," or because of any regard for the "rights of property." None of these things is particularly sacred to me, none of them is one thousandth part as dear to me as the emancipation of my class. If the class to which I belong could be set free from exploitation by violation of the laws made by the master class, by open rebellion, by seizing the property of the rich, by setting the torch to a few buildings, or by the summary execution of a few members of the possessing class, I hope that the courage to share in the work should be mine. I should pray for the courage and the hardness of heart necessary. It is not, then, because of a lack of revolutionary will that I oppose sabotage and the appeal to other violent methods, but because I believe that they can only leave my class more hopelessly enslaved than ever. It is not that I would be careful not to harm the masters of bread and life and to preserve their property, but because I would not destroy the *morale* of my class as a fighting force.

Does the Lenine-Trotzky regimé rest upon any better ground or upon any worse ground than this reason—that is not reason—given by Spargo in defending his own conduct? True, moral irresponsibility may take on a multitude of forms but it is all of one substance—rebellion against the authority of Almighty God and treason to one's country.

Again, ardently patriotic for the nonce as a good Socialist tactician may be, Lenine is condemned (p. 91) for his advocacy of "revolt among the soldiers regardless of the fact that it would mean Russia's defeat and Germany's triumph"! Really, how splendid! Lenine carries forward his cause of destruction and Spargo carries forward his cause of destruction, one with deeds and the other with words, and both are consistent with the ugly premise of International Revolution.

Ferrer tried to do the deed in Barcelona while Spain was at war in Morocco that was done with words at Stuttgart (1907) and at Basle (1912). Both these International Socialist Congresses declared that advantage should be taken of war in every country to overthrow the capitalist system of society.

Lenine has unhappily carried out his words with deeds. Together with Rosa Luxemburg, Lenine presented the proposal to the Stuttgart Congress. Happily Spargo's power resides merely in words, yet words have a far-reaching effect. Surely the set of resolutions presented by Spargo to the 1912 Socialist Party Convention calling for a propaganda in our army and navy may have prompted others to do the ugly deeds.

Adroitly Spargo argues that "the Bolsheviki are not Socialists because they adopted the name Communist Party when they quit the Social Democratic Party of Russia" (p. 223). Certainly Spargo were much lacking in the history of his bad cause not to know that by changing their name the Bolsheviki followed strictly the world masters of Socialism—Marx and Engels. Precisely at a critical time, finding themselves at variance with other leaders, Marx and Engels adopted the name Communist in order to distinguish what they were pleased to term "Scientific Socialism" from the utopian socialism of 1848. So it came about that the leading Socialist document of the world is still called the Communist Manifesto.

However, let no man think that this double name—this treble name with Bolshevism added—is a disadvantage to their propaganda. If the movement were clearly defined its strict adherents would, no doubt, number some thousands of malcontents. It is consequently just because Socialism — Communism — Bolshevism is not clearly defined that its generous hearted novices may in their enthusiasm for the brotherhood of man make of it what they will. And the doctrinaries are worldly wise to this advantage in bringing raw recruits into camp.

But we shall permit the veteran editor of an "official organ of the Socialist Party"—G. A. Hoehn—to rebuke Spargo:

> Why are some scientific socialists afraid of the Russian Bolshevik program as applied to the Russian Soviet Government? Have we not been taught by Marx and Engels for the last seventy years that the Proletariat must take possession of the machinery of government and own and operate this machinery for the benefit of the working class? That wage slavery and the profit system must be abolished? That in order to do this there will come a time in the struggle between the Bourgeoisie and the Proletariat when the latter will be compelled to proclaim its dictatorship? That the change in the different countries will come about in different ways, according to the difference in the economic political and social conditions, is a matter of course. ("*Labor,*" St. Louis, June 14, 1919.)

Having included Americanism within International Socialism that are as opposite as right from wrong, in the preface of "Bolshevism," Spargo lefthandedly proceeds in his *Postscriptum* to make identical Christianity and Socialism that are as opposite as love from hate. Oh! no, "the two are not conflicting forces, or even separate ones, but merely different and complementary aspects of the same faith" . . . "the religion of Jesus." A wonderful feat, in spite of Master Marx the law of ultimate contrast has been destroyed, from this time on even electricity should be without its positive and negative poles. Yet, the religion of Jesus is supernatural: the faith of Socialism is materialistic. The religion of Jesus has eternal happiness for its ultimate end: Socialism rests happiness on food, shelter and clothing—tomorrow the death. The religion of Jesus enforces the natural right to own and inherit private property: Socialism denies such rights *in toto.* The religion of Jesus dignifies work and makes the labourer to receive a just wage: Socialism denies the justice of wages and scorns the employment of one man by another. The religion of Jesus enforces God's command, "Thou shalt not steal": Socialism by the power of the ballot or bullet would commit wholesale robbery.

In fine, the religion of Jesus enforces the dignity of man by his moral responsibility: Socialism degrades man to the animal level of moral irresponsibility.

Indeed, we are in error! and so must apologise for in his "Life of Marx" the Spargonian fact is found that Marx is the maker of a newer and better religion than that of Christ. Marx's atheism is "a fundamental religious instinct" . . . "a religion greater than Christianity."

So it is by a deft handling of facts and fancies that Spargo's "Bolshevism" by neutralizing opposition to Socialism would make Christianity a second class religion to atheism and put the red flag above the Star Spangled Banner.

Early Closing Helps Efficiency of Workers

By MAY L. MANNING

THE world is seething with discontent. Profiteers are grumbling at a tax of 87 per cent. on their profits. All others wish they had profits to be taxed. Labor nrest is crystallizing into the threat of a great ocial upheaval under the leadership of that ntest spawn of the devil—Bolshevism—unless ealth is more equally distributed. Idealism tands by bewildered.

Between the two extremes Americanism tries o bridge the gulf of diverse opinions to save the ountry from the threatened clash of class atred. In this process of education, thinkers eed a steady head in analyzing those local dis-ontents, which are contributory causes of the apid spread of this Bolshevist infection among elf-respecting workers, who would be 100 per ent. good citizen if they could, lest the issue be onfused.

It is too true that one-half the world does not now how the other half lives, and these literal en-pictures taken at random from the lives of ur next-door neighbors may arouse interest, nd even prompt, practical constructive help for hose who stand in need of it. The "one touch f nature (sympathy) which makes the whole orld kin" may prove to be the antidote to this adness when it is expressed in terms of man-to-an and woman-to-woman cooperation in light-ning the worker's burden. Only that touch of ommon humanity will convince him of the utter ottenness of Bolshevism, and that even multi-illionaires are helpless in the grip of world onditions. Arbitrary customs enslave us all rom the top dog to the under one. But the nder dog carries the heaviest chains.

SYDNEY, AUSTRALIA, 1863

Humanity in terms of practical plans to ease he worker's burden, has always been the sub-onscious handmaid of Australia's industrial nd social development. Away in the early 'sixties", Sydney—the first spot inhabited by hite men in Australia, and not yet 75 years old—began to show consciousness of class re-ponsibility in various ways, resulting among ther reforms in the eight-hour day and the arly closing of shops to give the workers time or lawful recreation. This last contribution to he health and contentment of a valuable ele-nent of the community was, in its first incep-ion, the outcome of a voluntary decision on the art of society women not to shop after 1 p. m. n Saturdays. That was the hour when govern-nent, professional, and business men closed their ffices for the day, and their wives argued that hat was good for mental workers must be qually good for manual workers. They noticed he effect of long hours in the pallid faces of hop assistants, and it set them thinking of their wn responsibility towards them. They called neetings of their friends and talked after this ashion:

"Shops keep open as long as they think they an get custom. We control that situation, for women are the chief shoppers. If we systematize our marketing and shopping on Saturdays so that it can be all done by 1 p. m., we can go to the proprietors where we deal and say: 'We think your employees are as much deserving of a half holiday as our husbands, so we have de-cided not to shop on Saturday afternoons, and we will keep our word.' "

Those society women kept their word, and by 1865 all the better class shops in Sydney had adopted the rule of closing at 1 p. m. on Satur-day, because, after their busy morning, there was not enough afternoon custom to make it worth while keeping open. From that time on every shop of any standing has closed *all the year round on Saturday afternoons.* Naturally the custom became an unwritten law in the younger colonies as they developed.

The little seed of sympathy prompted by a sense of *noblesse oblige* in that handful of gentle-women way back in the early "sixties", has grown into a mighty tree since then, though it was 35 years before the Early Closing Act was inscribed on the statute book of New South Wales, and not till 1912 did it become a law of the last of the six States under the Factories Act, and shop employees were universally given time from their labors to "find themselves" and enjoy some home life. The final act of legisla-tion was the direct effect of an Employees' As-sociation, who brought before the legislators the evidence of doctors to prove the devitalizing ef-fects of long hours in a deoxygenated atmo-sphere on the health of the men and women who were to carry on the race, and clinched their arguments for a nine-hour day for five days, one late night a week, and a full half holiday by asserting that housekeepers need only be asked to methodize their shopping and marketing in the name of the health of the nation to bring about a reform that would benefit all and harm none.

On January 1, 1900, the law first came into operation, with two late nights and a half-holi-day on a day suitable to local conditions, and, like all reforms, worked hardship on a few, such as the lone widow depending for custom on the improvident housewife, who rushed out at the last moment for supplies. But that was a small matter in comparison with the benefit to a big class of the community which is now a valuable bulwark of law and order, instead of a disinte-grating mass of discontent. Certain shops are exempt to meet public needs, but the rights of employees in them are safeguarded.

LONDON, 1905

Early in October, 1905, two women were driv-ing across London about 6:30 p. m. They had landed at Tilbury that afternoon, the one from Australia, the other from a visit to India. The Australian's eyes were popping out of her head in the excitement of recognizing streets, parks, and historic buildings she had heard of all her life, but now saw for the first time. All at once it struck her that though the clock hands pointed to 6:45 p. m., shops were open and workmen were busy building.

"Look at the people shopping, and the men working at this hour," she exclaimed. "You don't mean to say people have to work so late?"

"Of course. Shops don't close as long as people want to buy, and houses must be built before the winter," replied the Englishwoman.

"But what about the shop people and the workmen? Don't fathers get home in time to see their children before their bedtime? Is there no early closing law in London?"

"Of course not! Whoever heard of such a thing?"

"We have one in Australia and it works all right for everybody," protested the Australian.

"How do you manage when you get home and find there is no butter in the house?" asked the friend sceptically.

"Go without if we are such bad housekeepers as to neglect our business. We often had to in the first days of Early Closing, we forgot lots of things because we had the bad habit of ex-pecting shops to be open to suit our convenience, never considering the unfortunates cooped up inside till all hours."

"Oh! well, they're accustomed to it," came the indifferent reply.

"Do you suppose they like it any better for that? Do you think they should be enslaved in this way? Their health affected, their minds embittered, and the welfare of the nation men-aced through them just because women, who are the shoppers of the world, are too indiffer-ent to the wrongs they do to systematize their shopping and do it in reasonable hours? Thoughtless selfishness is what it amounts to!"

"To tell you the truth I never thought about the matter before?" the Englishwoman admitted apologetically.

"But you *have* remarked on the improvidence of the poor. Did you never think that it was their obsession of eternal work which causes a sort of mental inertia, and paralyzes the sense of proportions? Women had better wake up to their responsibilities and help workers to help themselves to better conditions if they have the good of dear old England at heart. . . . Be-sides, it's much better for their pockets to shop by daylight. You know how difficult it is to judge of quality in materials by artificial light."

"Oh! as to that, we have to do it in London for six months of the year. Wait till you see our fogs."

"All the more reason why the worker should have a chance of being in the sunshine when the sun *does* shine! You should see our workers going off with their families early Saturday afternoon for outings or picnics around Sydney Harbour! It just does one's heart good to see them streaming across Circular Quay to the ferry boats, with their baskets and billies to have a good time together under the gum trees or on the beaches."

"But where can they find places for picnics near such a big city as Sydney?"

"Very easily. The Harbour is big, and has over 100 miles of foreshore, and much of that foreshore on the northern side is reserved as a public recreation ground for all time, and ferry or excursion boats carry you to fascinating picnicking grounds, where the Government has built rough fireplaces for people to make a small fire to boil the billy for tea. Sometimes if you are first on the spot you may find a small pile of wood thoughtfully put ready for you by the forest-ranger, but mostly you skirmish round for your own fuel, or economize with what some other party has left from their put-out fire.

"Then there are large shelter pavilions with trestle tables and benches where big parties feast, and dance to band music. Moonlight picnics are very popular in summer, and people linger in the coolth till there is only time to catch the last boat or trolley by the skin of their teeth. Life is well worth living in Australia, especially for the worker, I can tell you!"

"It certainly sounds like a workman's para-dise, and you've got your work cut out if you are going to start reforms of that sort here in the cradle of conservative tradition," laughed the Englishwoman.

"I'd like nothing better, only a self-support-ing woman is handicapped, but I'll talk."

NEW YORK, 1919

In the intervening years the Australian woman has gained wide experiences of the old world's traditions and the new world's customs. Passing from a purely British environment where one language is spoken and one point of view is held, to the purely cosmopolitan one of New York, she realizes the peculiar difficulties of dealing with a huge amorphous mass of for-eigners, representing forty different races, speaking as many languages, and understanding none but their own properly. Full of hereditary antagonisms, and set in their ways, yet held in the invisible grip of American hustle, these

WHAT SHALL BE OUR ATTITUDE TOWARD GERMANY WHEN PEACE IS CONCLUDED?

Upon the ratification of the peace treaty by the United States Senate peace will have been formally concluded with Germany. Ambassadors will be appointed, commercial and financial relations will be resumed, we shall be again on a friendly basis with the people who sought to impose their dominion on the world by force and whose record for crime and outlawry has been unparalleled in the history of mankind. With the reestablishment of friendly relations some exceedingly serious questions arise.

Every loyal American would desire to be chivalrously generous toward Germany if she showed some signs of recognizing her own guilt and if, beyond doubt, she had been rendered impotent to do further harm. But is that the situation which confronts America and the Allied nations? As it is, we can be generous only to the degree within which positive safety lies. America and the Allies have gone through an experience in dealing with barbarous cruelty, monstrous lawlessness, unscrupulous treachery and deceit, which it would be sheer madness for them to forget; they have learned a lesson which has been paid in treasure incalculable and bloodshed and suffering immeasurable.

Are we to forgive, to forget, to give full confidence and trust, simply because Germany, confronting inevitable defeat, found it expedient to capitulate and get out of the war as best she could?—When German leaders themselves designate the treaty as merely another "scrap of paper," when they have openly declared *Der Tag* has only been postponed?—When even now, after the German assembly has ratified the treaty, Minister of Defense Noske boldly announces the terms are impossible of fulfillment, that he gives Germany's victors warning that she will not be able to carry out the terms accepted, and that her delegates signed the document with reservations regarding certain articles, among them that concerning the admission of her guilt?

Count von Bernstorff, in a recent statement, urges Germany to cultivate friendship with the United States, and for what purpose? That by winning the friendship of America, there could be most easily brought about modifications or abrogations of certain of the treaty terms. Can Germany be trusted?—When members of the new government openly avow their intention of seeking to nullify the treaty and default in their solemn agreements? When the German press openly discusses a war of revenge in the future? When the *Berlin Vorwaerts* has threatened, if Germany was compelled to sign the treaty, that she would retaliate upon her victors, by creating world-wide social chaos and revolution, through "the instruments offered by Bolshevism."

That is the admitted Hun intention. That is the deliberate Hun plan. There is already every sign that Germany will ally herself with the Bolshevist regime in Russia, and already a commission has gone from Berlin to Moscow to make a study of, and work out a plan for, the exploitation of the resources of Russia. Under such an arrangement Germany would have access to such vast resources of raw materials as would make her economic recuperation extraordinarily rapid; with the Red Guard under her dominion, and officered by Germans, she would have free access for the speedy dominion of Asia. While restoring herself economically, she would meanwhile undertake to destroy the industry and trade, as well as political and social peace, of her rivals. "Through the weapons offered by Bolshevism," with the machinery of Lenine and Trotzky in her hands, she would seek to spread industrial and social unrest everywhere, foment labor disturbances, "strikes, revolutionary explosions, separation movements and civil war." That was her plan, as revealed in a circular letter dated February 23, 1915, sent by the Director of the Press of the Ministry of Foreign Affairs in Berlin to all German ambassadors, ministers and consuls, concerning the "countries that are in the war coalition against Germany." That is her plan today concerning the nations who will soon resume friendly relations and receive her ambassadors, ministers and consuls. Can we, therefore, afford to trust Germany without reservations, to give implicit confidence and unhampered freedom in their activities to the army of agents, official, financial, commercial and others, who will presently arrive on our shores? What shall be the attitude of 100-percent loyal Americans toward the hundreds of thousands of citizens, of German birth or extraction, who did all in their power to keep America subservient under Hun aggression, who were against America in their hearts, who intrigued and plotted to obstruct the country in its war activities, and who, through all sorts of secret organizations, went to the extreme length at a time when this country was neutral of organizing Germans in this country for military training so that they might be ready for action against us on our own shores should Germany win on the western front?

Every American wishes to give full credit to those citizens of German birth or extraction who opposed Germany because of her guilt in the war, who gave not only of their treasure but of their blood, and whose sacrifices were in sooth greater than those of native Americans, because they were called upon to fight the land of their birth, with which they were connected by blood and heart ties. It is from information afforded by loyal German-American sources that we know that various Kriegebunds, and other "bunds," "fests" and "vereins"—which had operated as species of military organizations before America went to war with Germany and whose harmless names have camouflaged the activities of enemies within our midst—are renewing their propaganda and can be counted upon in the future to be against the interests of this country and on the side of the interests of Germany.

At a meeting held on July 24 at the Deutscher Liederkranz, New York, to organize a Central Committee for the Relief of Distress in Germany and Austria, six hundred German-American men and women amid the wildest excitement cheered declarations that "the German spirit is not dead and will never die," that "Germany lives on, though wounded sorely," and that propaganda was needed "to bring the German spirit, German education and German kultur to the American people and to the world."

Already that notoriously disloyal and defunct organization, the German-American Alliance, has been supplanted by a new organization, "The German-American Citizens League of America," which comprises over seventy organizations, and which flooded Congress early in June with an appeal urging the rejection of the treaty. The appeal brazenly declared "the starving German people" had been "deceived" by President Wilson, that because of the treaty "the American people appear before the world as hypocrites," and that the treaty is "barbarian." This new organization first became active in the Chicago elections last April when it supported William Hale Thompson for mayor. It frankly avows its purpose of taking political action. Can the meaning of this be mistaken? Is there any mistaking the meaning of the influx of Germans into the Socialist organization and the financial support given of late to socialist and revolutionary radical propaganda?

Realizing the treachery and underhand acts committed against us by the German Ambassador when the American Government and the American people were trying to be absolutely neutral; recalling that, through Von Bernstorff and Von Zwiedinek, Austrian Charge d'Affaires, there was organized a system of spies, of from 20,000 to 30,000, ranging from bankers, lawyers, editors, college professors, society women, agents in the musical world to tools among anarchists and professional dynamiters;

ANNOUNCEMENT

THE Commission sent by The National Civic Federation to study industrial conditions in England, France and Italy, the personnel of which includes representatives of employers, wage earners and the public, has just returned. The purpose of this study was to discover any information which the commission might deem helpful in promoting better relations between employers and wage earners in this country.

The drafting of the commission's report, which will soon be made public, has been entrusted to Mr. James W. Sullivan, representing the labor group; Mr. Albert Farwell Bemis, president of Bemis Bro. Bag Company, Boston, Mass.; and Mr. A. Parker Nevin, attorney-at-law, representing the public.

Mr. Sullivan's chapters will discuss: "The Shop Steward Movement;" "The Democratization of Industry;" "British Labor and Politics;" and "Factors for Economic Change in Great Britain." Mr. Bemis, in addition to setting forth the situation from the employer's standpoint, will make a special report on the subject of housing. Mr. Nevin will summarize his conclusions from the point of view of the public.

Another commission was charged with the duty of studying and reporting upon the operation and results of the various governmental bureaus and commissions created under the war emergency to deal with labor conditions in the United States, such as the National War Labor Board and the War Labor Policies Board, with a view to recommending what, if any, of the activities of those bodies could effectively be adapted to peace conditions. A report on this matter will be made by the Domestic Commission at a meeting to be held in New York City on September 8 and 9, at which time there will be considered a number of important problems bearing on the relations of capital and labor in the United States.

Four questions that are of especial significance now, when so many employers are seeking to find ways and means for establishing better relations with their employees, are:

1. How far do profit sharing, stock participation and bonus plans meet the demand of the wage earner for "a larger share in the product of his labor?"
2. How much, if any, *control* do the wage earners demand on the business side of industry?
3. Is there a fundamental and necessary conflict between trade unions and the so-called "employers' unions?"
4. What methods can be adopted that will more generally promote collective bargaining?

It is the purpose of the committee in charge of the forthcoming meeting in September to arrange for a thorough discussion of the above questions by representatives of employers, commercial organizations and national trade unions.

recalling the plot, nearly successful, to obtain control of vast sections of American industry; recalling the surreptitious efforts to subsidize the American press, to sway American politics and to poison American public opinion, the inevitable question arises—How shall we safeguard ourselves in the future? How shall we resist the new warfare that menaces us in the time of peace?

Those questions become of immediate pregnance when we hear from most authoritative sources that the Germans now hate America more than they hate Great Britain or any of the Allies.

Possessing evidence of what the German and Austrian embassies accomplished before our entrance into the war, it is unlikely that our Government will be again so naively gullible, so childishly trusting, so blissfully blind to all that went on under its eyes. With the evidence secured by the Alien Property Custodian of the Hun plot to secure monopolies in American industry, it is not believable that Germany's commercial and industrial movements in this country will escape scrutiny. Our Government, however, knows only part of the intrigues of the past, and is aware of the identity of only a comparatively small number of Germany's vast armies of spies. What guarantee have we that we shall be secure from those spies in the future?

It is only too easy to relax into good natured complacence and agree to the subtle suggestion that, everything being over and done with, we should forgive and forget, that "hate should be eliminated from our minds," and that we should look forward to the time when all men, including the repentant and regenerate Germans, will be brothers. That simple and generous minded people are only too easily swayed when an appeal is made to their sentiment was shown recently when several reputable and well-known Americans were gulled into signing a manifesto of good will which had been engineered by men notoriously known to have been paid agents of the German government.

The situation which confronts every loyal American is a serious one. And, unless there is a strong, compact body of live, open-eyed Americans in every community who apprehend the danger of the situation, it will be only a short time before we shall fall into the net of the next von Bernstorff and his vast web of secret agents. What we have gained in this war has been gained at too costly a price to let ourselves be defrauded of it by succumbing carelessly or thoughtlessly to deceitful and cunning appeals to easily-stirred sentimentality and generosity. Intelligent vigilance and a judicial scrutinizing reserve will be, as ever, the price of the future liberty, peace and weal of the world.

"MINORITY OPINION"—OR SEDITION?

Of the journals and individuals who have come out in defense of the Rand School of Social Science the majority are journals and individuals who opposed our going to war with Germany, who agitated for a compromise peace with Germany, who championed and defended conscientious objectors, resisters to the draft and persons convicted under the espionage laws, and who lately have howled execrations at the Versailles Congress because of the terms exacted of Germany. Their protests against the action begun by Attorney General Charles D. Newton to have the charter of the Rand School annulled are in line with the same old stock protests made when caught in disloyal or seditious activities by pro-Germans, revolutionary radicals, and their sympathizers, concerning the violation of constitutional rights, of the rights of free speech and the danger of the creation of "more revolutionary sentiment" by "the coercion of minority opinion."

That some really generous-hearted and loyal, if perhaps over-sentimental, citizens are actually reached by this hypocritical pother about the "coercion of minority opinion" was shown sometime ago, after the Lusk Committee had made its raid on the Rand School and the headquarters of Bolshevist-agent Ludwig Martens, when a group of New York clergymen issued a statement urging "that fair hearings and just trials be given to men, irrespective of their political or economic opinions, so that it may be truly said that in America no man's case, be he an I. W. W. or a Bolshevist or the most reactionary conservative, is prejudged by an appeal to popular feeling," and "that the attempt be abandoned to coerce minority opinion so long as it does not promote disorder." It is hardly necessary to say that by employing this very species of verbiage those well-meaning persons were all simply furthering and giving importance to the stereotyped propaganda of radicals and disloyalists to the effect that fair hearings and just trials are not given and that minority opinion is "coerced". Are hearings and trials not fair? Is such action as has been taken against the Rand School "coercion of minority opinion."

The radicals and others who sought to raise a fund of $50,000 to defend the I. W. W. leaders on trial last year in Chicago for seditious conspiracy obviously had little if any faith that the Department of Justice would permit a "fair trial" and that it was therefore up to "American liberals" to afford this. In the matter of the Rand School, the *Nation* is of the opinion that the evidence against the Rand School "is so weak and flimsy that the whole proceeding must be regarded as a peculiarly vicious and vindictive piece of railroading." Mr. Paul U. Kellogg, of the *Survey,* and Messrs. Walter Lippmann and Walter Weyl, of the *New Republic,* subscribe to the point of view that the action against the Rand School is "coercion of minority opinion."

Were the actions of the Lusk Committee in raiding the Rand School and the headquarters of Martens, and of the Attorney General in seeking to obtain an annulment of the Rand School charter, nothing more than efforts to "coerce" and suppress "minority opinion?" Or have not the Lusk Committee and the Attorney General taken a genuinely urgent and vitally necessary action to discover, root out and exterminate activities gravely endangering the public welfare, the peace and security of the country, and which aim at the ultimate overthrow of the government itself? Is the exposure of a conspiracy between direct agents of Lenine and Trotzky and Socialist organizations in America, aiming at the establishment of a "dictatorship of the proletariat," "vicious," a "coercion of minority opinion?" While Germany was murdering American citizens on the high seas there were many who urged that we remain supine and submissive under Hun aggression. When official Bolshevist agents, receiving funds from Russia, have set up headquarters in this country and seek, through propaganda and lecturers, to convert American workers to the theories of Trotzky and Lenine, and when they are aided and abetted by American Socialists and Socialist organizations in propaganda openly advocating world revolution, are we to remain supine and submissive, "to permit them to be heard and observed?" Is the effort to protect American institutions a departure "from traditional American liberty?"

The evidence produced at the hearings of the Lusk Committee, and quoted in part by Mr. Harré in his report of the hearings in this issue of the Review, adequately demonstrates the incitement made by radicals to "violence and revolution" and the relations existing between the Rand School and the direct official agents of those arch-enemies of civilization, Trotzky and Lenine. Like their blood-brothers, the Huns, these enemies of peace and order depend on getting defenders and support among those well-meaning, over-sentimental and soft-hearted people who are only too easily gulled and duped by specious appeals to liberal ideals and humanitarian sentiment. As with the Germans, so it is with those forces who constitute today Germany's chief instrumentality for working harm, through the promotion of internal discord and civil strife, to the nations which have won the war. Intelligent vigilance, and when necessary drastic action, alone constitute the price of safety.

MORE VARLETRY AND VILLARDRY

To its unenviable record achieved during the war and during the peace negotiations with Germany, the *Nation,* which in bygone years enjoyed a certain unique prestige as being loyal, honorable and reputable, adds the crowning baseness of publishing confidential correspondence sent through the United States Department of State to Colonel House and which was presumably stolen. This is the second time that a confidential governmental communication, obtained through some "leak," has been made public. The first message, addressed to Secretary of State Lansing in Paris by Mr. Polk, was read by Max Eastman at a meeting held in Madison Square Garden on June 20 to protest against the raiding of the offices of Ludwig C. A. K. Martens, Lenine's representative in the United States, by agents of the Lusk Committee. Both Eastman and Villard have protested they do not know the sources of the information and that the messages came to them anonymously.

To receive and use for one's benefit stolen goods is a common crime. To betray confidence has generally been regarded as an act of mean men, without honor. To betray, and give publication to, confidential documents belonging to a department or representatives of one's own government, will, to most people, appear as hardly less than moral treachery and moral treason.

The Department of Justice has begun an investigation as to how the State Department document sent to Mr. Lansing and the document forwarded to Colonel House through the State Department were obtained. The National Civic Federation Review on a number of occasions expressed grave concern regarding the measure of confidence given by officials high in the Government to certain young men notoriously known for their radical and un-American opinions, regarding the way in which certain young "editor-statesmen" whose forebears came from Germany managed to worm their way into positions high in the Administration, regarding important missions entrusted to pro-Bolshevist radicals, one of whom was hardly past the age of adolescence, and regarding the free entrée enjoyed at the Hotel de Crillon, the headquarters of the American Peace Delegation in Paris, by certain writers who had qualified themselves as being anything but 100-percent loyal and American. At least two of these worthies, after being given special favor and confidence, were so roiled and upset over the terms asked of Germany in the Versailles treaty that they turned upon President Wilson in opprobrious public denunciation.

According to the *New York Times,* "the evidence now in the possession of the Government clearly indicates that the cable messages which were stolen in their decoded form or by someone who had possession of a State Department code were obtained in Paris, probably by two men, both of them well known in the radical world." The New York *Tribune,* commenting upon the act of the *Nation,* says it "does what may well be regarded as a public service." Not only may this publication, as the *Tribune* says, reveal the "misinformation and misadvice" concerning Russia which was received by the Department of State from "fanatical social theorists," such as Arthur Bullard, who in his message attacked Kolchak, but it serves further to demonstrate the dishonesty, disloyalty and moral turpitude of those who are more concerned about the vindication and success of Bolshevism than about the security and well-being of their own country.

Plot to Overthrow Government

(*Continued from Page* 3)

zens only by naturalization. Mr. Holland said the majority of radicals are Italians, Spaniards and other aliens, with Russian Jews predominating.

In organizing the garment workers, the Socialists, declared Mr. Holland, employed as their agent Jacob Panken, now a municipal court justice in New York. The garment workers, said Mr. Holland, "do not believe in the Government; they preach this today behind closed doors, and some in the open. There isn't a place where one of their speakers goes that he doesn't ridicule the form of government of the United States." This organization has 70,000 members in the United States and Canada.

Of 750 labor organizations in New York state, only 25, according to Mr. Holland, are radical. Mr. Holland mentioned Local 23 of the International Pressmen's Union as being such and declared that the president, James J. Bagley, "preached on the floor of the Central Federated Union not alone to break up the Government, but to smash up the printing presses. We were amazed that the Government permitted him to get away with it. This can be found in the records of the Central Federated Union." Mr. Holland asserted that in the Central Federated Union radicals who agitated for war with Mexico opposed our going to war with Germany. According to Mr. Holland, the I. W. W., the W. I. I. U., the Socialists and Socialist Labor Party make it a practice to send out agitators to the big industrial centres, and especially try to break in whenever a legitimate strike occurs. These agitators are seldom labor men; the leaders of the radicals are so called "intellectuals," and of eleven Socialist Assemblymen recently elected in New York only one carried a union card.

The Women's Trade Union League was characterized by Mr. Holland as having been for the last year or two "a tail to the Socialist kite." Miss Maud Schwartz is president and Miss Rose Schneiderman is secretary. In going to Europe as a "representative" at the Peace Conference of American working women, Mr. Holland declared Miss Schneiderman did not go "with the consent of American laboring men or women." He said her organization "adopted resolutions in favor of the Russian Soviet Government," and named as financial backers of the organization Mrs. J. Sergeant Cram, Miss Mary Dreier and Mrs. Raymond Robins. Mrs. Cram has been affiliated with various pacifist organizations. Miss Mary Dreier and Mrs. Raymond Robins are sisters of Miss Katherine S. Dreier, who was chairman of a group of signers to a suffrage appeal in 1916, in which it was declared: *"The Teuton ideals have always stood for Freedom and Equality."* Mrs. Raymond Robins, according to evidence produced by the Committee, as before stated, paid part of a bill rendered S. Nuorteva, a representative of the Russian Bolshevist Government, by the Rand School of Social Science for copies of Lenine's "Soviets at Work."

That all the radical groups of the country, formerly divided by differences in philosophy and programs, have united on a common platform—that the platform of the Russian Bolshevists—and that they are cooperating toward the ultimate and common object of overthrowing the existing government and present order of society with the purpose of establishing a "dictatorship of the proletariat" in the United States, was brought out in the testimony of Mr. Hugh Frayne. Mr. Frayne's testimony, which has served as a basis and groundwork for the investigation of the Lusk Committee into seditious activities, consisted mostly of evidence drawn from the official statements and publications of these radical groups themselves. Mr. Frayne interpreted them out of their own mouths. He showed where these groups had formerly differed and how of late, in rallying to the Lenine-Trotzky program, they had come together.

"A study of the radical literature issued here," said Mr. Frayne, "and the radical organizations which have been formed in this country for the past few years, indicates that they divide themselves into three principal currents of radical opinions—namely, anarchism, syndicalism, and socialism. An examination of the current literature and of the speeches made by leaders of these groups indicates that under the inspiration furnished by the Russian Communist party, otherwise known as the Bolsheviki, the leaders of these groups have found a common platform upon which they may cooperate for the establishment of a dictatorship of the proletariat in this country."

SOURCE OF PROPAGANDA FUNDS

Testifying under oath before the Lusk Committee in executive session, Ludwig C. A. K. Martens, so-called official ambassador from the Lenine-Trotzky Bolshevist Russian Government to the United States, and A. A. Heller, head of the so-called Commercial Department of the Soviet Bureau in New York City, according to the record, declared that their activities were purely commercial. Much of the evidence found in the papers seized during the raid upon the Soviet headquarters was presented at the hearings of the Lusk Committee. "A careful search of the files was made," testified Mr. Stevenson, "and there is no indication that any commercial transaction was entered into at all."

In a letter written to Mr. Henry Ford asking for an appointment—and to which a favorable reply in the form of a telegram from Mr. Ford's assistant secretary was received—the "Soviet Ambassador" said: "Writing to you, I have, however, in my mind something else than the purely commercial interests your firm may have in Russian trade. We would like very much to discuss with you the social aspect of the regeneration of Russia."

According to evidence seized in the raid on Martens' bureau, "large sums" had been received from Russia, while other funds sent by the Soviet Government had been intercepted. It was brought out from the seized bank accounts that the daily credit balance of the bureau varied from $5,000 to $9,000. "This was replenished from time to time," explained Mr. Stevenson, "and the curious feature of that is that all the substantial sums were deposited by L. Martens, meaning Ludwig Martens, and examination of the bank book so far shows that these deposits were made in currency by Mr. Martens, and gives no evidence as to the source of these funds."

"In connection with the financial situation," said Chairman Lusk, "I want to call the attention of the members of the committee . . . that it appeared in the evidence of Mr. Martens and Mr. Heller that they have not paid out any money in any commercial transactions. So, whatever money they used must necessarily have been used for something besides commercial purposes."

That the Soviet Bureau was not regarded as a purely commercial agency by Socialists and other radical organizations was proven by innumerable communications sent to Lenine's representatives by Socialists and other radical organizations all over the country, and which were offered in evidence. In these communications various Socialist committees and locals greeted Martens as the "first official representative of the Russian Socialist Federal Soviet Republic in the United States," wished him "rapid success in your activities for the benefit of the Russian Republic" and pledged their support to "the world revolution and brotherhood." A letter addressed to Martens from the Socialist party, Sixth Assembly District, New York, dated April 3, 1919, and signed by Charles Grossman, organizer, declared:

"The revolutionary Socialists of the Great East Side are, it goes without saying, behind Soviet Russia."

Another communication, from the Eighth Assembly District, of the Local New York Branch of the Socialist party of America, signed by Rebecca Bouhay, secretary, declared:

"The members . . . pledge our cooperation in establishing the first representative of the workers' government of Russia in America. We also pledge ourselves to work unceasingly for the propagation of those principles and policies and tactics that will end directly in the establishment of a Socialist Federated Soviet Republic in America."

"We are ready to meet and battle for the future," ran a communication to Martens from the Young People's Socialist League, Circle Six, Manhattan, which was signed by David Levison, organizer.

According to a letter from the National Office of the Socialist party, Chicago, Illinois, dated February 15, 1919, and signed by Adolph Guerner, executive secretary, Santeri Nuorteva, the chief associate of Martens in the Soviet Bureau, was "nominated as a delegate to the International congress." Mr. Stevenson said he offered this in evidence "as showing the extremely close relations between Mr. Nuroteva and the Socialist party of America."

HILLQUIT SOVIET "CHANCELLOR" IN U. S.

Morris Hillquit, one of the national leaders of the Socialist party, is the legal counsel of the Soviet Bureau, which, as the evidence proved, has maintained a department—to use Mr. Lusk's words—"for the defense of men charged with crimes against the United States." Among the twenty-eight employees of the Russian Soviet Bureau, according to the testimony, were two, Theodor Fedotoff and Anton Taitsen, who had been convicted under the sedition law in New Jersey, and who are out under $5,000 bail, pending an appeal. Mr. Hillquit's status in the Lenine-Trotzky organization in the United States was presumably better defined in a bulletin issued by Nuorteva. "Mr. Morris Hillquit," ran the announcement, "has accepted the post of Chancellor of the Russian Soviet Bureau in the United States . . . Mr. Hillquit has been in close touch with Mr. Martens and his bureau from the very day of Mr. Martens' appointment."

Correspondence between Nuorteva and Eugene Debs, sent to prison for violation of the Espionage Act, (who has been appointed by Lenine as "Proletarian Dictator" of the United States upon the successful culmination of the proposed revolution) proved the extremely cordial relations and spirit of harmonious concord existing between these two.

Innumerable invitations to address meetings were sent by Socialist organizations all over the country to both Martens and Nuorteva. According to the evidence, Nuorteva appeared to be the chief speaker for the Soviet Bureau, and was filling speaking engagements throughout a large part of the United States. Several hundred letters in the seized files relating to his engagements proved that this Bolshevist arch-agent was being booked through Socialist party locals. One of the communications, relating to a meeting at which he was invited to speak, was announced as being "only for discharged soldiers, sailors and marines." A paragraph in the announcement of this meeting read: "If you want to rebuild society, there is only one way to do it, join with the rest of the workers in one big union. It is useless to try to buck the system alone. Bosses are too strongly entrenched. You might as well try to capture a fort single-handed. If the workers get together and stick together there is nothing they cannot accomplish. Di-

'ded they are helpless. United they are in-ncible. The world is theirs. The only way to t freedom is to TAKE it."

While Mr. Martens professed to be engaged the establishment of purely commercial rela-ons between the United States and Soviet ussia, the evidence secured in the raid upon s headquarters demonstrated that he was en-ıged in disseminating, and in promoting the issemination of, propaganda material exploit-ıg the theories of Lenine and Trotzky in the nited States. A weekly bulletin, issued by ıe Soviet Bureau, according to Mr. Stevenson, as subscribed to by various branches of the ocialist party, each of which took from twenty-ve to one hundred and more copies weekly. ıecording to the testimony, at the Soviet Bureau as found a letter addressed to the workers f Europe and America by Nicholas Lenine, nd an appeal by Lenine, asking American orking-men for their cooperation, in which e expressed "confidence" and "conviction" ıat the American working class "will go with s against the bourgeoisie." The Soviet Bureau f Information distributed an approved list of ublications giving favorable information con-erning Bolshevism and Bolshevist Russia. Among publications whose articles were endorsed y the official representatives of Lenine and rotzky in the list, which was offered as evi-ence, were the *Dial*, Mr. Oswald Garrison illard's *Nation*, and the *Survey*, of which Mr. aul U. Kellogg is editor. There were also ecommended the following books: "Russia in pheaval", by E. A. Ross; "The Red Heart of ussia", by Bessie Beatty; "Six Red Months in ussia", by Louise Bryant, and "Ten Days that hook the World," by John Reed. There were ecommended also pamphlets published by the ocialist Publication Society, of Brooklyn, New ork, the People's Institute, San Francisco, alifornia, and the Rand School of Social cience.

RAND SCHOOL HOTBED OF SEDITION

Answering an inquiry as to "what literature the best to put out to the people in regard to he true situation in Russia," Ludwig Martens, he German-born official agent of Lenine and rotzky in the United States, referred an in-uirer—one, S. C. Haskin, of South Bend, ndiana,—to the Rand School of Social Science, where," said Martens, "you can obtain all in-ormation desirable." That the Rand School f Social Science directly cooperated with the fficial agents of Lenine and Trotzky; that it ooked lecturers who spoke "aggressively in avor of the Bolsheviks;" that it engaged in the istribution of Bolshevist propaganda, including he writings of Lenine openly advocating the verthrow of organized governments, suppression f the right of private ownership of property, ule by the mob and the destruction of the resent forms of government in the United tates and European countries; that it dissem-nated translations of the Bolshevik constitution nd governmental regulations; that in its cor-espondence courses it promoted the theories of he soviet form of government, that in its letters o correspondents it advocated preparedness to resist" and the taking over of the State; that t distributed and freely sold inflammatory mat-er advocating "a political revolution by force," vas brought out by correspondence, documents nd propaganda material seized in the raid on he Rand School premises.

Algernon Lee, educational director of the Rand School and Socialist member of the Board of Aldermen, acted as chairman of a meeting held n Madison Square Garden on June 17, 1919. n the stenographic report of a speech delivered y Lee at this meeting, and which was presented s evidence at the Lusk hearings, was the declara-ion:

"The cause of Soviet Russia is identified with the cause of labor and liberty here in the United States and the world over."

One, David P. Berenberg, is director of the correspondence department of the Rand School. From the letter-files seized there, evidence was produced showing the kind of propaganda conducted through Berenberg's department. In a carbon copy of a letter to Harry L. Perkins, of San Diego, Cal., dated June 7, 1916, the statement was made:

"When we read of 'preparedness' that is in full force in the camps of the capitalists we realize that unless we organize and fit ourselves to resist, and to take over the government, we will one day find ourselves where our French and German brothers are today, dead or maimed in the fray."

"In other words," commented Chairman Lusk, "for over two years this Rand School has been advocating armed preparedness to take over the government."

A letter—obviously after a form letter sent to correspondents generally—dated October 3, 1916, addressed to M. E. Rabb, Xenia, Ohio, offered as evidence, contained the following:

"WHAT ARE YOU DOING WHEN THE STATE ROBS YOU AND YOUR UNION AND SO MAKES YOU HELPLESS TO STRIKE? THERE IS ONLY ONE THING TO DO: TAKE OVER THE STATE.

"ARE THE MEMBERS OF YOUR LOCAL PREPARED TO TAKE OVER AND CONDUCT WISELY AND WELL THE AFFAIRS OF YOUR TOWN AND COUNTY? ARE YOU PREPARED TO MEET THE MILITIA WHEN THE POWERS OF THE STATE AND COURTS ARE AGAINST YOU? ARE YOU ARMING YOURSELF WITH THE KNOWLEDGE OF THE FOUNDATIONS OF OUR SOCIETY SO THAT WHEN THESE CRISES COME TO YOU, YOU WILL HAVE AN ORGANIZATION STRONG ENOUGH TO HAVE FORESEEN AND FORESTALLED THEM? ARE YOU TRAINING YOUR MEMBERS IN SCIENTIFIC SOCIALISM?"

This same adroitly phrased incitement was found in other correspondence.

A letter written by David Berenberg, dated April 16, 1919, and addressed to "Dear Helen", informed his correspondent of a proposed "cross-country trip to establish connections with the radical movement throughout the rest of the country", and stated, "If I can possibly put St. Joseph on my program I shall be glad to visit your town again." An interesting part of the letter were the following comments upon the draft as it touched Mr. Berenberg and upon the Versailles Congress:

"I should be very glad to hear from you or in fact from anyone in the family. Let's at least know what's going on. Was Emanuel drafted? If so, did he serve? If so, what happened to him? It seems to me you might at least have kept us posted. Everyone of us here lived through the war; none of us were touched, and the danger did not come because I was liable to be drafted, but for other reasons which I will not go into now.

"I don't know how much you are interested in the developments of things in Europe. In fact, I don't know how much of the real news of things—which doesn't get into the newspapers—penetrates into the Wild West. I do know that we are due in this country for a reaction which will make us for a period of some five or six years, the most backward country in the world.

"Isn't it amusing to see Wilson, Lloyd George and Clemenceau tearing each other to pieces over the question of who should own this or that piece of territory? *It strikes me the whole thing is much ado about nothing anyway, since the Bolsheviki will get them before long.*"

Further discussing his proposed visit to St. Joseph, Berenberg's letter went on to say:

"Tell Uncle Dave to leave off his uniform when I come out; otherwise, it might be his duty to lock me up as an enemy, and with all the jails in the country to choose from, I do not know why I should pick out the jail in St. Joseph as my stopping place."

In a reply, dated May 13, 1919, addressed to "Dear Dave" and signed "Helen", it was brought out that the "Uncle Dave" referred to was engaged in detective work in St. Joseph.

RAND SCHOOL SOCIALISTS GOT "SICK OVER" BEING DRAFTED

Interesting light upon the attitude of certain of Mr. Berenberg's associates in the Rand School regarding the draft was afforded by a carbon copy of a letter dated July 26, 1917, addressed to "Dear Jenny", found in the Rand School files, which was offered in evidence, in which the following appeared:

"You ask about the draft. Only a few of our boys are caught by the draft, so far. Most of their numbers are so high that we are quite sure they will be safe. Schurter and Benj. Gordon and Grant are caught, but will probably go to jail instead of into the army, Sonabend also. I hear that many of the union men will go to jail, but that is rather indefinite information. We are awaiting developments somewhat anxiously, as there must be others we know not of that will be caught. Schurter is just about sick over it, and we for him."

The declaration that the Rand School "boys" would probably go to jail rather than fight Germany, the satisfaction expressed that the majority would be "safe," certainly indicates the attitude of the Rand School crowd toward the war. And indubitably it "places" this crowd, composed mostly of unassimilable alienry, so far as loyalty and Americanism are concerned. Enjoying American opportunities and yet enemies of American institutions and the American Government, their first whine, when they are detected in disloyalty, is about their rights to freedom and their rights to free speech. The spectacle of this gang of shirkers and cowardly crawlers advancing themselves as deliverers of humanity, as the apostles of a new order, would be simply grotesquely comic were it not for the fact that, as has been proved by the Lusk Committee exposures, they do constitute a serious and very real menace as a force in our national life inciting to discontent and disorder.

In the Rand School files, with the above mentioned correspondence, was found a letter addressed to "Dear Comrade Mailly"—presumably Bertha M. Mailly, executive secretary of the Rand School—and signed "Jennie Matyos." From the correspondence it was shown that "Jennie" lived in Chicago. In the above quoted letter, commenting upon the draft as it affected the "comrades", the following—which gives some insight into the fund-raising activities of these "champions of the poor and exploited"—appeared:

"The school building fund is growing beautifully, better than we could have dreamed. What we must do now is to keep up the pace already set and all will go well. Forty Thousand is no small amount to raise, you know. $25,000 is already subscribed, but the last will go more slowly, I presume, because the first half includes several large contributions, one of five thousand. But isn't this a fine beginning?"

In another letter written from the Rand School to "Jennie," the statement was made: "We have paid ten thousand dollars on the new building."

That the Rand School—whose "boys" got "sick over" being drafted and who preferred to go to jail rather than fight Germany—got single contributions of $5,000 is not, of course, any more surprising than that William Bayard Hale, paid secret director of Hun propaganda in the United States, should, in the autumn of 1917, have joined the Socialist Party in support of Hillquit and his program of a Bolshevist sepa-

rate peace with the Huns. It would not, naturally, be surprising if now—when the radical movement offers to the Huns the most convenient and effective vehicle whereby to damage their victors by the promotion of social discontent and civil strife—that the vast funds left by Bernstorff in South America and elsewhere should be made liberally available to the foes of peace and order in the United States and the Allied countries as well. Nor is it surprising that all varieties of these foes of peace and order should find a common meeting ground in the platform of the Bolshevists, whose propaganda was first inspired and promoted by Germany.

"IDEALS WHICH TODAY INSPIRE LENINE" IDEALS OF RAND SCHOOL

That the Socialist Party and the Rand School of Social Science teach nothing less than the economic theories which the Bolsheviki are endeavoring to carry out through terrorism, mass murder and armed force in Russia appears to be the fact from "Lesson XII" of the Correspondence Department of the Rand School, entitled "The Human Element in Economics," offered in evidence. In this lesson sent out in the correspondence course, was the following:

"The workers of Russia adopted a constitution in July, 1918, which represents and attempts to put into practice some of the principles of industrial democracy. . . The second chapter of the Declaration of Rights provides for 'the abolition of exploitation of men by men, the entire abolition of the division of the people into classes, the suppression of exploiters, the establishment of a Socialist society, and the victory of socialism in all lands. . . Furthermore, all workers are to be armed and all members of the property class are to be disarmed.' . . .

"The application of the principles embodied in this Soviet Constitution, whether made in Russia or elsewhere, means inevitably the overthrow of capitalist and class government and the establishment of an industrial democracy. . . The struggle between plutocracy and democracy is a struggle for life and death. One must survive, the other must be destroyed."

"This is typical of the correspondence instruction given by the Rand School in its correspondence course," explained Mr. Stevenson, "and I think shows conclusively a real sympathy for the Soviet form of government."

Illustrating the product of a course of training in the Rand School of Social Science, Mr. Stevenson presented to the Committee a copy of a valedictory speech by Oscar Edelman, apparently made at the time of Edelman's graduation. In this speech the young graduate said:

"For us as students, Socialists and Labor Unionists, our work is laid out. We must help educate the workers of America so that their slogan, 'a fair day's wage for a fair day's work' be replaced by the revolutionary slogan, 'abolition of the wage system.' . . In the great world-wide struggle which is taking place today, we must take active part. . . The ideals which today inspire Debs and Lenine are the ideals which inspire us."

An instance of the very close relationship existing between the heads of the Bolshevist Bureau in New York and the leaders of the Rand School of Social Science, was found in a letter sent to A. A. Heller, Director of the Soviet Commercial Bureau, by David P. Berenberg, recommending Gertrude Pignol for a possible position in the Soviet Bureau. Gertrude Pignol was one of the teachers dismissed from the New York Public Schools because of her views regarding the war. Other correspondence seized in the files of the Rand School proved the cooperation between the lecture bureau of the Rand School and the Left, or revolutionary, Wing of the Socialist Party. It also revealed that the Rand School, as late as April 3, 1919, was booking Joseph M. Coldwell to lecture. According to the record, Coldwell, formerly state organizer of the Socialist Party of Rhode Island, was convicted of violating the Espionage Law, was sentenced to three years imprisonment in Atlanta, and while the Rand School was booking him he was out under $25,000 bail.

ANSWER "CANNON WITH CANNON"

Nicholas I. Hourwich, a son of one of the Rand School instructors, and a contributing editor of *The New York Communist,* the organ of the Left Wing of the Socialist Party, according to information afforded Mr. Stevenson by the office of the District Attorney of Lackawanna County, Pennsylvania, was arrested in Scranton on July 6, 1919, under the Pennsylvania anti-sedition law. According to District Attorney George W. Maxey, Hourwich, at a meeting held in Scranton, made the following remarks:

"Russia is ruled by communists, that is, Bolsheviks. Who are the Bolsheviks? We, the working classes, who now rule in Russia. In Germany and in Austria we have quite a hold, and here in America the American Communist Party is strong for the cause, the same cause that has succeeded in Russia after many years of strife. Men, kneel down on your knees and pray for a leader who is proletarian, a dictator of the working class. All in favor of proletariat communism hold up their right hands. Do we believe in force? Most assuredly we do believe in force. It would be folly for us to go out with bare hands and oppose the trained armies of the capitalistic government. We must answer their cannon with our cannon."

When the raid was made on the headquarters of the Rand School there was found freely on sale in the book store, together with seditious literature issued by the Left, or revolutionary, Socialist Wing, literature of the I. W. W., including the *One Big Union Monthly,* a periodical published in Chicago by the I. W. W. In the May, 1919, issue, a copy of which was taken from the Rand School library, was an editorial entitled, "The Onward Sweep of Bolshevism," in which the following statements were made:

"The tide of Bolshevism is still rising to our immense satisfaction. . . Bolshevism is a great popular uprising against the upper class of the old world. Its first point of attack in every country is directed against the existing government, and the first thing the victorious Bolsheviks do, they take possession of the government buildings and the institutions of the state. They capture the government by force and put Bolsheviks into office in place of the officials of the old regime. The typical Bolshevik revolution is A POLITICAL REVOLUTION BY FORCE."

Among the papers found freely on sale at the Rand School book store and offered as evidence, were copies of the *New York Communist* of Saturday, June 14, 1919, in which was an article beginning: "Do we hold that the revolution must come by violence? To answer this question by yes or no would be asinine. It may; again, it may not. The Left Wing, all the protests of the Right Wing to the contrary notwithstanding repudiate Socialism by assassination. The Left Wing hopes that the proletariat will conquer its enemy, the capitalist class, with as little bloodshed as possible."

Among the seizures at the Rand School, and which appear in the record of the Lusk Committee, were amazing documents relating to seditious and revolutionary propaganda among the negroes of the country. In a letter addressed to Francis J. Peregrino, 4 Fernando St., Pittsburgh, Pa., dated May 16, 1919, who had written for information concerning a correspondence course which would equip him for doing "missionary work" among negroes, David Berenberg made the following remark:

"There is great need for missionary wor among all people and especially among colore people. We have here a very active group c comrades—among them Comrades Owen an Domingo—who warn us that unless we mak headway with the negroes, the Capitalists ma use them in a time of a social revolution muc as the Czecho-Slovaks are being used in Russia.

According to this, the director of the corr spondence department of the Rand School o Social Science, David P. Berenberg, was on Ma 16 last, looking forward to "a time of a socia revolution" in the United States.

PLANS TO WIN NEGROES FOR REVOLUTION

Among the propaganda material found o sale by agents of the Lusk Committee in th Rand School book store were copies of the *Mes senger,* on the front page of which it is called "The Only Radical Negro Magazine in Amer ica", of which Chandler Owen and A. Philij Randolph are editors. In the May-June, 1919 issue, was an editorial entitled, "The March o Soviet Government", in which the following appeared:

"Still it continues! The cosmic tread of So viet government with ceaseless step claims an other nation. Russia and Germany have yield ed to its human touch and now Hungary joins the people's form of rule. Italy is standing upon a social volcano. France is seething with social unrest. The triple alliance of Great Britain—the railroad, transport and mine workers—threaten to overthrow the economic and politi cal bourbonism of 'Merry Old England'. The red tide of socialism sweeps on in America. South America is in the throes of revolution. Soviet government proceeds apace. It bids fair to sweep over the whole world. The sooner the better. On with the dance!"

Both of the editors of this magazine, who are negroes, are instructors at the Rand School of Social Science.

In the files of David P. Berenberg, in the Rand School, was found a long memorandum, signed by W. A. Domingo, a contributing editor of the *Messenger,* outlining in detail a comprehensive plan for Socialist propaganda among American negroes. Considering the possibility of an overthrow of the existing government by the Socialists, either by legally employing the ballot or else by mass action and force, the writer argues that if three or four million of negroes are not made class conscious and won to Socialism beforehand, they could and would be employed as mercenaries by the capitalists to prevent the establishment of a Socialist Republic and a dictatorship of the proletariat. In order to insure the success of the Socialist revolution, wide-spread concentrated propaganda designed to win the negroes to the ranks of the revolutionary movement was urged. "Experience has taught the workers that Socialism will not be permitted to flourish in isolated spots," reads the conclusion of the memorandum. "Russia like the Paris Commune realizes that international capitalism will ruthlessly destroy any government not built upon the pillars of rent, profit and interest, hence no effort should be spared to hasten world revolution.

"Russian emissaries are sent everywhere and communist propaganda reaches from South Africa to England, Argentina to India, Cuba to Canada. Propaganda is not localized, but goes everywhere. In like manner must propaganda inside a nation reach every element. If America with her boundless resources remains non-Socialist, she will be a menace to world socialism and America can remain non-Socialist if twelve million negroes so will it. That some Socialists are getting to realize how serious a menace negroes are likely to be to the movement is proved by the willingness of the Rand School to institute lectures giving out the necessary facts relating to the race in America."

riking Contrasts Between U. S. and British Labor

(*Continued from Page* 5)

separate the industrial sphere from the political was a mistake, tending to make trade unionists "lobbyists" when they came into contact with the legislative bodies.

"I perceive," said Mr. Thomas, "a fast growing sentiment in favor of an independent labor party in this country."

Mr. Thomas, so the promoters of the American abor Party claim, expected, when he landed ere, to make a number of speeches in different arts of the country in the interest of that move- ent. In fact, his only public appearance in is country was before a New York group of at small faction in the American Labor move- ent that is trying to promote an independent olitical labor party, thereby disintegrating the merican Federation of Labor and turning the bor movement of this country over to the Bol- evist and other disruptive forces. There is ot space to discuss here the merits of this ques- on. Suffice it to say that that proposition owed so little strength at the Annual Conven- on of the American Federation of Labor at tlantic City that its proponents tried to keep from coming before that body to prevent its eakness being revealed. And yet Mr. Thomas perceives a fast growing sentiment in favor f an independent labor party in this country." t is easy to conclude with what labor people he ssociated while here. It is a matter of record at he did not attend the Atlantic City Conven- ion and, for some reason, apparently kept aloof rom the recognized trade union leaders.

The merits of the British and American labor olicies will be illuminatingly discussed by Mr. . W. Sullivan, the Labor member of the com- ission sent to Europe by The National Civic ederation. Comparing accomplishments, which what counts, the American labor movement, ith its feet always on the ground, is getting esults, while the British Labor movement has one up into the clouds and does not know how o get down. Results to it mean nothing; politi- al jobs mean everything.

While Mr. Baruch and Mr. Vanderlip, quot- d above, are financiers and therefore do not retend to speak from actual experience, an- ther gentleman who was a member of a com- ission of employers, appointed to study indus- ial conditions in England from the standpoint f an employer, has just returned and is putting ut a good deal of printed matter, giving his own iews of the situation. This employer is not so ell known as are Messrs. Baruch and Vander- p and does not bear the same relation to em- loyers that those two gentlemen do to the bank- ng fraternity. He does, however, speak as an mployer. We refer to R. J. Caldwell, who in *he New York Times*, of June 22, in a three- olumn article, discusses the remedy for labor nrest. Mr. Caldwell does not fail to use the tock argument about democratic government. Ie says:

> I have merely come to the inescapable conclusion that we must apply to industry the principles of democracy which we are enjoying politically, and that our mills and factories must be governed with the consent of the governed.

What was said in reference to this point in n earlier part of this article applies equally to Ir. Caldwell. But he has discovered other hings besides the fact that the "factories must e governed with the consent of the governed." Ie says: "We must abolish the Three Big Ter- ors of labor: the fear of disemployment, of ill- ealth, and of old age in a poorhouse."

Of course, this simply means that Mr. Cald- vell is looking at the situation through the pectacles of the socialistic British Labor Party. Ie doubtless has accepted at par value all the claims made by the defenders of English pater- nalism. Mr. Caldwell, considering the matter entirely from a commercial point of view, has figured out that compulsory health, unemploy- ment, old age and invalidity insurance could all be provided for without taxing the employer more than five per cent on his pay roll. He en- tirely ignores the point of view of American labor, which is that it should not be done at all, whether it involves five, ten or only one per cent. Their objection is based upon a funda- mentally greater and more important proposi- tion than that of dollars and cents. They say, we do not want to reduce the American work- ing people to the condition that is bound to follow such paternalistic legislation. The dis- integrating effect upon the moral fibre of the English working men and women who are appli- cants for unemployment insurance, the loss of independence of character and the pauperizing of the individual, would require a volume to discuss, as shown by preliminary reports from investigators now on the ground.

Mr. Caldwell, unlike most employers who have visited England since the war, says on his re- turn: "We cannot do better than to profit by the example of England which is much further advanced than this country or any other in the matter of meeting labor problems." He then tells how for thirty years in the cotton industry of England they have had joint committees made up of representatives of employers and wage earners working together—as if England had anything to teach us along that line! In our mining, building, printing, boot and shoe, stove manufacturing and forty other industries, such agreements have been in vogue for anywhere from twenty to forty years. But stranger still, Mr. Caldwell says it is inconceivable that pro- gressive America should fail to "profit by the ex- perience of Great Britain and Australia in their methods of settling labor disputes." He adds: "It would be un-American to require twenty years of embittered and costly strife to apply to our industry the benefits derived by Great Britain."

Mr. Caldwell should forget Great Britain and Australia for a few months and devote him- self to a careful study of what has been done in the United States along all those lines. Aus- tralia and New Zealand made complete failures of all their compulsory arbitration schemes, as everybody knows who has given any study to the question, and there is nothing in the labor governments of those two countries that Ameri- can labor, much less the employers, would think for a moment of wanting to copy. Even the min- imum wage which Mr. Caldwell puts out as one of the demands of labor was voted down by an overwhelming majority at the American Fed- eration of Labor Convention at Atlantic City in June and much of the objection to it comes from the knowledge of the failure of its opera- tion in the countries Mr. Caldwell is so anxious to have us imitate.

On the objections to compulsory sickness and unemployment insurance, we will quote two of the most representative labor leaders in this country, Mr. Warren S. Stone, Grand Chief of the International Brotherhood of Locomotive En- gineers, and Mr. Samuel Gompers, President of the American Federation of Labor. At a recent meeting to discuss compulsory social insurance held at the headquarters of The National Civic Federation, Mr. Stone said:

> It seems to me that the whole plan of health insurance or social insurance, from the standpoint of the workers at least, is altogether wrong. If we have accomplished anything as a nation, it has been due to the fact that the men and women of the country have been allowed to work out some of these problems. I do not take much stock in paternalism; I do not believe in a government that tucks you in bed at night, and if some plan of health insurance is adopted, worked out and finally made a law, I fear its effect on our country; I fear it will be the beginning of the end. I do not believe any nation can prosper when the government does everything for the industrial worker. It destroys initiative and makes him a dependent upon the bounty of his government.
>
> But I want to say to you frankly as a representative of labor that there is not going to be any compulsory health insurance if we can help it. When you say to the American working people that they must do this or that thing, every drop of red blood in them resents it. I think it is summed up in a homely phrase, "You can push all you like but you musn't shove."

In the January, 1919, number of *The American Federationist*, an editorial by Samuel Gompers said on "Political Labor Party—Reconstruction—Social Insurance":

> There are so many of our people, including workmen, who look to the government of our country to do the things which seem so easy for the government to do, and which they imagine should be done by the government. They do not recognize the pit-falls and the dangers which are entailed by conferring upon the government the function of doing these things. To my mind, it is a grave danger to place into the hands of the government the powers which would necessarily result from government compulsory health insurance with all the powers vested in the government incidental to and in the enforcement of health insurance.
>
> There is one thing that I want to say to the Committee on Social Insurance. Place in the hands of the government the right to determine who is or who is not entitled to governmental insurance; to determine regulations and conduct of every man insured, then it means that the government has the power with all the force at the command of the government to enforce the decrees or regulations.
>
> And that applies, too, to unemployment compulsory insurance. The government will determine then what will constitute justifiable reasons for unemployment. It might decide that when men and women are unemployed they are entitled to this insurance. Well, what is the cause of unemployment? Suppose it is a disagreement with employers. The government will decide as to whether the cause of unemployment is justifiable or is attributable to the workmen or to the employers. It is not necessary, then, for me to mention the fact of what that would mean to the work, the policy and the constructive movement of organized labor. The labor movement would lose its voluntary character and its effectiveness, and there would be brought about a condition of affairs in our country whereby the toilers would be rendered ineffective in their work for the protection and promotion of their rights and interests.

When the English socialists, the Hendersons, Thomases, *et al.*, can capture the American labor movement, then all these paternalistic proposi- tions will be tried here, but not before. In the meantime, it is safe to predict that those em- ployers of this country who have their feet on the ground, and that is 95% of them, will on these questions prefer to follow the lead of the representatives of the American labor move- ment, such as Samuel Gompers, Warren S. Stone, James Duncan, W. G. Lee, Joseph F. Valen- tine, Matthew Woll, John P. Frey, William D. Mahon, John A. Voll, Daniel J. Tobin, John Golden, T. V. O'Connor, George W. Perkins, Frank J. McNulty, and a thousand other big and brainy American labor men, rather than the lead of the Hendersons, Thomases, Smillies and Williamses of the British Labor Party. Our sane employers here know that, when it comes to a comparison between the labor leaders of America and those of Great Britain, those of America are not only more brainy, more states- manlike and more farseeing, but have also proved their loyalty to their country during the war. They have refused to follow in the foot- steps of the defeatist, pacifist British labor leaders, who played into the hands of Germany in 1918 by trying to force "a negotiated peace" with the enemy and are now endeavoring to coerce their government in its international policies. They said, in effect, to the British Government at Southport in June, 1919, "Take the troops out of Russia; lift the embargo on Russia; lift the embargo on Germany; release

the conscientious objectors; reject the Peace Treaty because of its severity to Germany; reject the League of Nations covenant because it is not democratic—*i. e.*, because it is not so framed as to give the socialists, bolshevists and anarchists of Europe control! Do these things," say Robert Smillie, of the Mine Workers, and Robert Williams, of the Dock Workers, "or we will call a general strike and tie up the industries of the nation. Not only that; we will get Italy and France to join with us."

And this is what those sane and conservative labor leaders of Great Britain, with Arthur Henderson at their head, are now trying to accomplish. The only reason that the Rt. Hon. James H. Thomas, general secretary and head of the National Union of Railwaymen and treasurer of the Triple Alliance (of railwaymen, transport workers and miners) and a Member of Parliament, was not mentioned in the reports of this Southport meeting as joining in the resolutions, along with Henderson, Smillie and Williams, was that he was in the United States at the time, telling the American employers how safe it would be for the affairs of Great Britain to be turned over to the Labor Party.

Contrast this situation at Southport with the Annual Convention of the American Federation of Labor which was held at Atlantic City a week earlier. On every proposition that convention stood with our Government and for Americanism and against Socialism and Bolshevism with all their accessories. They refused to endorse the Soviets of Russia, they refused to condemn the League of Nations, they refused to ask for the release of the conscientious objectors, they refused to endorse the general strike to help Mooney, they refused to favor a Labor Party on the lines of the British movement. In fact, they refused to endorse almost all the things which the British Labor Party was demanding should be done. And yet we have employers in this country who are expressing the wish that the leadership of the American labor movement might be placed in the hands of men like Thomas, Henderson and Smillie, instead of being in the hands of men like Gompers, Duncan and Stone; and they applaud Mr. Thomas when he says: "Our party is made up of men trained to face responsibilities, who recognize that justice is an essential feature of any political programme and the British people, knowing this, have no apprehension for the future should the Labor Party come into power" just as if he were to be taken seriously.

To all such employers we commend a careful consideration of the following extract from *The New York Daily Call*, the leading socialist organ, commenting upon the Atlantic City Convention, and a statement made to the United Press by Jean Longuet, Socialist Deputy and the leading spirit in the international proletariat alliance of French, British and Italian workers.

The Call says:

> Atlantic City, June 18.—The high tide of reaction in the affairs of the American Federation of Labor was reached here yesterday when the Gompers machine crushed all proposals of the radicals and progressive elements of the trade unionists of this country.
>
> Practically every expectation that this convention of the American Federation of Labor would condemn every progressive idea as outlined in the *Call* by your correspondent has been borne out by the developments here.
>
> There will be no strike to save Tom Mooney; the Soviet government has been denounced; the millions of starving Russians blockaded by the Allied governments are to be left to their fate; the Labor Party idea has been smashed and, as for industrial unionism, the A. F. of L. intends to go on its old way. This is the grist of two days' grinding in the Gompers mill.
>
> It was a field day for Gompers, for every parliamentary trick that might be employed to shut off debate was used by him.
>
> The convention has shown opposition to a joint termination of contracts, is opposed to the democratization of industry to the exent of refusing to recommend the election of foremen on jobs by the workers, refuses to assist in the formation of 'soldiers' councils that would be helpful to labor, sets its face against any letting down of the craft bars or aiding industrial organization and finally has defeated a recommendation to the international unions to adopt an initiative and referendum clause in their constitutions.

Mr. Longuet's statement is:

> French and Italian workers are already bound closely together, while English laboring men are lining up more and more closely with us. We have already succeeded in establishing an alliance of workers which does not recognize European national boundaries.
>
> But at the present time we have gained but little support from America. This fact is chiefly due to the opposition of Samuel Gompers and other conservative leaders who control the destinies of the American Federation of Labor and who have complete power over labor organizations. Also, the fact that numerous workers own their homes breeds conservatism.

But, to bring the matter home more concretely, it is announced by Mr. John O. Jones, an organizer of the British Labor Party, who says h accompanied Mr. Thomas to New York, that th representatives of the Triple Alliance of Gre Britain, Messrs. George Smillie and George Wi liams, are coming to America to organize th railway workers, the miners and the dock worl ers of this country into a Triple Alliance fo America. These are the same men who hav just ordered a referendum which, if carried ou will authorize them by direct action to tie u the three industries referred to at any time. T quote Mr. Jones:

> The plan in America is to win the railroa workers, the harbor workers, and the mine work ers to the general strike movement. A strike o the three would mean a walkout of 3,000,000 mer it is said, and would paralyze any effort to mov troops.

So our employers who seem so greatly en amored of the British Labor leadership may have a taste of it a little sooner than they ex pected.

Mr. American Employer, were this situation not so serious, it would be ludicrous.

British Official Reports Indict Bolsheviki

HORRORS of Bolshevik misrule in Russia, described before the Overman Committee of the United States Senate last Winter, are fully confirmed by official British reports recently presented to Parliament. Chaos in the stricken country is spreading rapidly and steadily in the vast districts still controlled by the Reds. Testimony before the Overman committee only related to conditions existent up to September, 1918; the British reports cover the period up to February 15 of the present year.

Every sensational story of cruelty, oppression and misgovernment brought from Russia since Lenine and Trotzky attained power practically is confirmed by the British reports. No hope is held out in any one of them that the dictatorship established after Kerensky's fall ever will result in anything except armed mob rule. Even anarchy does not prevail, the great mass of the population being held under a sway of terror by a small minority backed by the meagre food supplies of the nation and the guns of criminals, forced soldiers and non-Russian mercenaries.

Even the hope that the great middle class and the peasants might rise against Lenine and Trotzky and reestablish something like the idealized republic of Kerensky's time no longer is held out. The populace, long starved and cowed by innumerable murders, no longer has hope of a successful rebellion. Disease, grief and privations have so weakened the spirit of the many that the few well armed and well fed Reds rule practically with impunity. Only the advent of armed forces working for law and order can redeem Russia, is the inevitable conclusion drawn from the many, varied pictures of conditions there. Those pictures come from sources so reliable that the British government has accepted them fully and has incorporated them in its official documents.

Shocking as are the conditions of the civil population under the mob rule, their counterpart in industry is unprecedented in any time in the world's history. Food production almost is at a standstill. Factory work is so scarce that it excites comment. Living costs have risen to such heights that even the favored Bolshevik supporters resort to robbery of their fellows once they trace the smallest food supplies. Banking virtually is abolished and the wholesale printing of paper money—much of it deliberately counterfeit—has gone on to such an extent that the nation's finances are in even greater chaos than the civil administration.

Most interesting and significant are those parts of the British report that deal with Socialism. Lenine and Trotzky, it will be remembered, rose to power largely through their promise to establish a socialist state modelled after the teachings of Marx and Engels. Once they had gained control, the dictators turned on the very ones who had helped them to power. Forming their Red Guard from the criminal classes and by enlisting at high money and food pay of Chinese, Letts and German and Austrian prisoners, they proceeded to oust all Socialists from the soviets and to put in their stead the Bolshevik riff-raff that had joined their army only to loot the helpless middle class. Any who protested against the mob rule thus established, whether he were Socialist, bourgeoise or of the landed class, was at once denounced as a traitor to the proletariat. Thousands of such starved to death in the prisons. Other thousands were tortured and killed. Other thousands escaped from Russia. Those who escaped those fates now lead the existence of animals, hunting their food where they may, dodging the Red Guard daily and in imminent danger of summary execution if caught.

Nationalization of the industries—the Marxian dream—has worked out most disastrously. When Lenine and Trotzky took control of the factories, no compensation, not even the depreciated paper currency, was given to the owners. In less than six months after the commandeering of the factories, an English business man reports that the important metal trades were at a standstill. The linen industry soon dwindled to less than 40 per cent of normal. The wool and cotton manufactures fell off more than 60 per cent. The once enormous industry in making silk has disappeared. Paper and coal production, at the last report, only were at 60 per cent of the normal, while agriculture alone showed an increase.

A "Mr. G." who was in Petrograd as late as last November, made the following comment on Russian industrial conditions:

> It is an extremely curious feature of the Russian revolution that a movement which had proclaimed itself as social and democratic has achieved in the first instance total destruction of those social groups on which a social democratic organization is mainly based the class of the industrial workmen. All factories, with a few exceptions of those engaged on munitions work, are stopped, and the industrial workmen

(*Continued on Page* 17)

The Milk Problem—A Practical Program

(*Continued from Page* 6)

First, a systematic study should be made of the value of milk as a food, its most healthful and wholesome form, its most sanitary and marketable method of handling and distribution.

Second, a plan of publicity devised that will acquaint the public with these facts.

Third, a stimulus provided looking to the more efficient production, distribution and sanitary control of milk.

While milk is admittedly indispensable to certain classes of our population the general public does not know nor appreciate to what extent it is a desirable and virtually necessary article of diet for everybody, nor its relative importance and economy as a food. Great progress has been made, however, in the past few years in scientific studies conducted to ascertain the nutritive qualities of milk. But this is only the beginning. There are questions as to the effect of pasteurization upon the food value of milk, the relative nutritive value of the butter and the salts in milk, the real facts as to certain types of bacteria, the value of milk in its sweet and sour form, which have not been definitely settled. Then again, the relationship between pasteurization, safety, and marketability, and the determination of the best packages and containers, are all matters of vital interest.

While studies of these matters would be interesting and useful from a scientific standpoint, their real value would be determined by just how far they became matters of general public information. If the facts were known, the public would both appreciate and buy, thereby increasing the demand for milk in its best and most wholesome form, and automatically creating the greatest natural stimulus to its efficient production and distribution.

Let us suppose that the dealers and producers of the country would unite upon a program of this kind by establishing one or more laboratories manned by the best experts obtainable for the purpose, whose object it would be to study constructively every phase of milk production and handling. Let the results of these laboratories be checked up and modified by experiments made on an industrial scale under the same competent supervision. In other words, instead of the industry being led by the findings of health boards and private laboratories with only a general interest in milk, the industry itself would thus anticipate and lead in the progressive movements for milk betterment, and to this extent would be a step in advance of the findings of either public or private health agencies. This fact alone would dignify the industry and invest the men engaged in it with something of the prestige and dignity that always accompanies public service endeavor.

GIVING PRACTICAL EFFECT TO SCIENCE

The next step would be to establish a publicity organization which would intelligently bring before the public all the facts of a constructive nature determined by the laboratory experiments. A tremendous amount of good could thus be accomplished. Such an organization could revolutionize the annual conventions of the industry from associations for the mere purpose of discussing technical papers and indulging in industrial politics, to great vital factors in the movement for industrial growth.

Further, no better news material could be devised than the reports of the laboratory put into popular form and distributed by means of magazine articles and the pages of newspapers devoted to the interests of women, children and public health. Such publicity would be very economical for the industry and most valuable in news interest to the periodical handling it.

Again, by pooling the contributions of both dealers and producers a national campaign of direct advertising could be carried out which would be economical and comprehensive in its nature and wonderful in its results. It is obvious that an advertising campaign directed by the whole industry would carry more weight and bring better results than if conducted separately by the producers or dealers.

The whole theory of the above organization would be to sell more milk and to make clear the reasons why it should be sold. It would become a gigantic sales agency for the whole industry, and at the same time serve as a protection against unfair discrimination in legislation, railroad rates or any other of the manifold obstructions which might from time to time beset its path.

The selling price of milk would react to the regulating efforts of such an organization. As the matter now stands, there is no scientific rule that governs the price to be charged in the future for milk except that dealers would be expected to charge the public high enough to insure a profit over the cost of the milk to them. It will be logical to expect that the higher the price charged by the producers, the greater the percentage of profit to the dealers. Such a process will constitute a price to the consumer tending to discourage the public in its use of milk and leading it to seek cheaper substitutes, all of which would be most regrettable to those engaged in the bigger movement.

SOMETHING TO THINK ABOUT

It will be presumed that many of the dealers and producers represented in the newer organization would also be members of the existing separate organizations of dealers and producers. The point of view of these men in their work in the new organization would undergo a revision, causing them to see the danger of overcharging and likewise do much to assure a more sympathetic relationship between the original organizations, in place of their old mutual bitterness. An organization such as we are planning, in addition to creating an increased demand for milk, will also be in a position to recommend the best manner in which that demand can be supplied.

To create a sufficient supply in itself would become a stimulus to more efficient production and distribution. Better sanitary control of the product would be guaranteed since the very foundations of the new organization would be laid in the laboratory experiment, and industrial analysis. By such constructive processes public interest in the industry would be increased. The importance of the producers and dealers as public service agents would be more fully and readily recognized. The business would so thrive in private hands and under private management that all thought of public ownership and undue public regulation would virtually disappear.

Under a leadership that both could respect, the distributor and the producer would be encouraged to work together. Each country creamery could be made an educational dairy center where the best interests of the producer, distributor and consumer would be freely discussed. The distributor could become the business agent of the industry, taking the initiative in the cooperative buying of feed, not on the basis of profit to himself, but on that of saving to his patrons. Cow testing associations could be provided for and encouraged, thus enabling the producers to learn their poor cows and to substitute better cows for them. All such educational enterprises would naturally fall within the scope of the functions of the laboratory and publicity organization.

The question of prices for the milk in the city would be discussed not only from the viewpoint of profit to those engaged in the industry, and rightly so, but also with the great end in view of building increased sales of milk to the point of diminishing returns, thus carrying out the purposes of the organization. Conversely, matters of distribution would not be left exclusively to the judgment of the dealers alone, but would necessarily have to be considered from the standpoint of the progress of the whole industry. Obviously, the more efficient the method of distribution the greater saving in the basic cost of milk, and the greater demand for milk.

Both production and distribution are distinct functions of the milk industry, each dependent on the other, and with the consumer entitled to efficiency in both. Production or distribution alone is a big enough job for any one man, and these two functions should be kept separate. But efficiency in performing these functions properly becomes the common interest of producer, distributor and consumer. An organization made up of both distributors and producers keeping always in mind the interests of the public will be best equipped to reconcile factors of quality, price and efficiency.

The chief interest of the producer is not production alone, but a healthy industry throughout.

The real consideration of the distributor is not distribution alone, but a healthy industry throughout.

Certainly the best interests of the consumer lie in encouraging an intelligent industrial policy and increasing its consumption of this most valuable of all food products.

The great demand of the present is for all American industries to consider their problems from the four corners, comprehensively and constructively. In no other way will those petty differences tending to destroy be relegated to the background. There is no better time nor place in which to begin these considerations than now, in the milk industry. In no other field will the public enjoy greater benefits.

British Official Reports Indict Bolsheviki

(*Continued from Page* 16)

have to return to their villages with which they had lost ties, or enlist in the Red Guard. The younger men, nineteen to twenty-six, to a great extent have chosen the latter alternative and it is they who form the nucleus of the Bolshevik army.

To speak of the growing success of the management of industrial concerns under soviet rule is an absolute misrepresentation. It would be sufficient to disprove this statement only to cite the instances of the factories of Petrograd, Moscow and Nishny, where formerly many thousands were employed and where now only a few hundred are working.

The British reports show that the greatest factor in cutting down the factory output is the need of food. Workmen, though theoretically paid the highest wages in Bolshevik paper money, find it impossible to get enough to eat, hence have to forage for food or join the Red Guard. The wages paid fail to meet in any degree the prices fixed by the soviets and cannot even touch prevailing food prices. An idea of the chaotic financial condition of Russia may be had when conservative estimates state that there is outstanding in paper more than 100 times the amount of the country's gold reserve. That fact helps explain the following scale of food prices by the pound obtaining in Moscow in February, 1919:

Black bread	$3.00 to $3.50
Wheat flour	5.00 to 6.00
Potatoes (rotten)	1.00 to 1.25
Sugar	25.00
Butter	25.00 to 30.00
Beef	7.50

WELFARE WORK

Edited by Gertrude Beeks Easley, Director Welfare Department, The National Civic Federation

The purpose of this department of the Federation is to secure improvements by employers in working and living conditions of employees, especially in mines, railroads, factories, stores, and public institutions. Articles will appear continuously in The Review, *dealing with existing activities or recommendations upon sanitation and safety, recreation, industrial and domestic science training and other educational opportuities, homes for workers, voluntary social insurance, provident funds, pensions, workmen's compensation, and profit sharing.*

Standards for Factory Wash Room Facilities

CONSERVATION of the health of workers engaged in making munitions and supplies as well as ships in which to transport them, was one of the primary war efforts of the Welfare Division of the Committee on Labor, a part of the Advisory Commission of the Council of National Defense. As a part of the educational program, Samuel Gompers, Chairman of the Labor Committee, circulated standards for employees' washrooms and other sanitary devices. Louis A. Coolidge, himself an employer, was chairman of the Welfare Division whose Section on Sanitation developed this code especially designed for high explosive plants and to guard the workers against industrial poisons. After several conferences, representatives of the industry especially concerned agreed to adopt the rules and regulations as the practice for their various plants.

The cordial feeling of employers toward the endeavors of the Committee on Labor and its relation to the war emergency are indicated by the following statement by Dr. William A. Evans, under whose Sanitation Section the Divisional Committee on Industrial Diseases and Poisons operated. He said when recommending the committee's report for acceptance:

"In most states it will be impossible to secure the requirements for the conservation of health of labor that will be necessary in those industries that are speeded up by purposes of war. Legislatures meet at long intervals and the securing of laws is a slow procedure. The only possibility that we can see of getting action immediate enough to be of service is through the agreement of the interested parties to adopt the rules laid down. The conferences were attended by more than one hundred representatives of manufacturers of high explosives, those loading high explosives and making war material."

The standards, which are given below, are applicable to factories in general. Installations of this character will not bring undue hardship to the employer whose working conditions are not equivalent to such regulations. They are a little better than the requirements of any state law. Among the expert members of the committee who assisted in their development were: Dr. W. G. Hudson, Chairman, Wilmington, Del.; Dr. R. P. Albaugh, Columbus, O.; Dr. George Apfelbach, Chicago, Ill.; Dr. Lewis Booker, New Castle, Del.; Col. Lewis T. Bryant, New Jersey State Commissioner of Labor, Trenton, N. J.; Dr. E. R. Hayhurst, Columbus, O.; Dr. F. D. Patterson, Department of Labor and Industry, Harrisburg, Pa.; Dr. J. W. Schereschewsky, U. S. Public Health Service, Pittsburgh, Pa.; Dr. W. Gilman Thompson, New York City; Dr. Alice Hamilton, Bureau of Labor, Washington; Dr. B. S. Warren, Public Health Service, Treasury Department, Washington, D. C.

WASHING FACILITIES

There should be provided by the employer without expense to the employee one (1) wash basin for every five (5) persons up to one hundred (100) on a shift; one (1) wash basin for every eight (8) persons between one hundred (100) and five hundred (500) on a shift and where there are over five hundred (500) persons on a shift, the wash basins should be one (1) for every ten (10) persons on a shift.

Or, there should be two (2) feet of trough for every five (5) persons up to one hundred (100) on a shift; two (2) feet of trough for every eight (8) persons up to five hundred (500) on a shift and where there are over five hundred (500) persons on a shift there should be two (2) feet of trough for every ten (10) persons. Where double-sided troughs are used, half the above trough space should apply.

It is recognized that where the trough is used, there should be flowing water and no stoppers. It is the part of wisdom to provide one faucet for every five persons. In practice it has been found that shower baths may be substituted in part for such faucets.

Continuing, the standards also provide that:

Where there are ninety (90) persons or less on a shift, there should be one (1) shower for every fifteen (15) persons; ninety (90) to five hundred (500) persons on a shift, there should be one (1) shower for every twenty (20) persons; five hundred (500) to one thousand (1,000) persons on a shift there should be one (1) shower for every twenty-five (25) persons; and when there are one thousand (1,000) to five thousand (5,000) persons on a shift there should be one (1) shower for every thirty (30) persons.

There should be provided hot and cold water, soap and fabric or paper towels.

TOILET ARRANGEMENTS

1. General Provision: Toilet facilities should be provided in accordance with the following standards:

2. Apartments:

(a) *Location*: All toilet facilities should be located conveniently to and easily accessible from all places where persons are employed.

(b) *Separation*: Toilet rooms for each sex should be maintained separate and apart from each other and from all workrooms and passageways. Such rooms should be marked so as to designate plainly and distinctly the sex for whose use they are intended.

(c) *Screening*: If the water closet is not located within a separate screened compartment in the toilet room, the entrance to all toilet rooms should be provided with a screen to insure privacy. This screen should be at least six (6) feet in height, and extend to within at least four (4) inches of the floor, and, if the space permits, should be not less than two (2) feet wider than the door leading into such toilet room.

(d) *Distance*: All toilet rooms not having sewer connection and maintained outside of buildings where people are employed should, on new installations, be at least twenty-five (25) feet from such buildings and in all factories where the workers are exposed to excessive heat, humidity, or fatigue from physical exertion, there should be a covered passageway connecting said building with toilet or toilets.

(e) *Construction*: The outside partitions of all toilet rooms should be of solid construction and may be opaque or translucent, but not transparent, and should extend from floor to ceiling, or such rooms should be independently ceiled over. All partitions separating toilet rooms provided for the different sexes, should be at least two (2) inches in thickness and constructed of such materials as are not transparent or translucent, and they should be sound proof, and no openings in such partitions should be permitted.

(f) *Floors*: The floors of all toilet rooms should be tight, smooth and constructed of a substance that should be impervious to moisture.

(g) *Walls*: The walls of all toilet rooms should be tight and of a substance that can be readily cleaned and kept clean.

(h) *Ceilings*: In those toilet rooms which have ceilings, the ceilings should be tight and of such substance that they can be readily cleaned and kept clean.

(i) *Light*: All toilet rooms and water-closet compartments should be adequately illumined by natural or artificial light.

(j) *Ventilation*: All toilet rooms not lighted by windows that open easily should be adequately ventilated to the outside air by artificial means. Similar methods should be employed for every water-closet compartment entirely separated from the remainder of the toilet room by partitions extending from the floor to the ceiling, and not provided with a window opening easily.

On new installations, every toilet room or every water-closet or urinal compartment should have a window opening directly to the outdoor air. No such window should be less than one (1) foot wide, nor have an area of less than six (6) square feet, measured between stopheads, for one water-closet or urinal. For every additional such fixture, the area of such window should be increased at least one (1) square foot. A skylight should be deemed the equivalent of a window, provided that it has fixed or movable louvres with openings of the net openable area prescribed for such window.

Every such window should open upon a street or upon a yard or open space, uncovered at the top, which in its least horizontal dimension, should be at least one-tenth (1-10) the height of the highest abutting wall but in no case less than six (6) feet.

(k) *Heating*: All toilet rooms and wherever practicable, water-closet compartments, should be adequately heated at all times.

(l) *Cleanliness*: The occupier should be responsible for the maintenance of all toilet rooms or water-closet compartments in a clean and sanitary condition.

(m) *Entrances*: All toilet facilities should be adequately protected to prevent the entrance and breeding of flies, as far as practicable.

FIXTURES

(a) *Kind*: The use of any form of trough water-closet or latrine, or school sink should be prohibited—individual closets should be provided. The bowls of the water-closets shall be of smooth, impervious material. Pan, plunger, washout, faucet and long hopper closets should not be permissible. The seat should be finished with a smooth, impervious waterproof substance. Types of chemical closets or other closets which are approved by the properly constituted authorities should be permitted.

(b) *Connections*: The disposal of all contents of toilets and urinals should be in accordance with the laws, rules and regulations of the properly constituted authorities of the locality in which they exist. Provision should be made for the adequate flushing of every water-closet.

Privies should be permitted only in cases outside of the sewer zone, and where cesspool, septic tank, or chemical closets or other closets which are approved by the properly constituted authorities, are not practicable. Privies not connected with the sewerage system should be built in accordance with the standards recommended by the properly constituted authorities.

(*Continued on Page* 19)

Early Closing Helps Efficiency of Workers

(*Continued from Page* 9)

oreigners suffer exploitation through their gnorance, but they also exploit through their dhesion to the enslaving customs of their native ands.

The competition of this servile spirit has its eaction in a financial vassalage of a most subtle nd harmful sort on the entire body of workers; he more so since it is never tyrannical enough o drive its victims to the eruptive point, but eeps them in a state of nervous irritability gainst conditions of life, when they confuse ffect and cause in blaming the apparently care-ree classes above them for hardships resulting most of them from iron-bound custom. . . . It is easy to see the mote in the other fellow's eye, yet never to suspect the beam in one's own!

Thus Bolshevism is accepted as a disease of down-trodden peoples, and not likely to spread here under conditions of life said to be the best in the world for the worker, therefore the receptive state will be found wanting. The same could have been said of the influenza plague; yet it came and exacted an enormous toll in spite of a generally high standard of health and medical precautions.

Industrial unrest in any class is a contributory cause of Bolshevism, and there are countless instances where this discontent is justified by remediable conditions.

For example: Take the lot of the small storekeeper on the East and West sides of New York. He is even more heavily enslaved by arbitrary custom than his confrère in London, because Sunday trading eats into his one day of rest till only half of it is left. Admittedly it is very convenient for the housewife to feel there is always a store open every day of the week at any hour, except perhaps between midnight and 6 a. m. But what of the mental and physical reaction on the obliging shop people who rarely feel the rays of beneficient sunshine, or breathe the comparatively pure air of the streets? Ask them.

Said a prosperous East Side storekeeper to me:

"This is a life of slavery. I am at work from 6:30 in the morning till 10 at night, and on Sunday morning till 10 o'clock. I would willingly observe chain store hours, but if my neighbors keep open I must do the same, for I cannot afford to lose a customer."

"Why not get your neighbors to close too? They can't get enough custom half the time to pay for their gas?"

"That's true. We did try closing on Sundays, and as long as the police stood round it was all right. But as soon as they moved off one man opened, and then another, till we all had to open again in self-defense."

"Well, why not stop competing with each other by becoming cooperative traders when you can compete with chain stores on equal terms, which you can't do now? Sooner or later they'll drive you out of business anyhow."

"I don't know anything about cooperative trading except that it has not been successful when tried here."

"That is not the fault of the cooperative system, but of the people who have misused its powers for their own profit. In every country of the world, except the U. S. A., it has been the salvation of the struggling man. Read up about it."

"I have no time for reading; if I get a look at the headlines of the paper it's as much as I can do in the day. . . . 'Girlie' (calling to his daughter, who was his cashier), 'would you like to read up about the cooperative movement for me?'"

A slim pretty girl of about 18 came out of the office, and it was easy to see she was the father's treasure. Her fair skin was already sallowing and her wavy hair was fading from its natural gold to a drab hue.

"I have no time, father, for reading. You know I am here always," she replied with gentle reproach in her voice.

It was cruel to see how her birthright of joyous youth had been suppressed and stultified by long hours of solitary work, under unnatural conditions till she was just a meek ghost of exuberant youth. Her natural destiny was to be the mother of future citizens. What sort of fighting heritage could she give them?

"Why do you submit to such long hours? Why don't you young ones form an Employees' Union and agitate for Early Closing?" I asked impatiently.

"But what could *I* do?" she exclaimed in amazement.

"Do? Why get together all your friends who are working in stores, organize yourselves into unions in community blocks, and agitate! What others have done, you can do. In my country Early Closing has been a law for many years. But it might never have come about for all stores if shop assistants had not agitated to help themselves. It is all as simple as a, b, c. You only have to show the public how the national health is being sapped through selfish custom, and tell women if they did their shopping and marketing in reasonable hours they would give you a chance of living like a decent American, and of being a credit to your country. . . . You have the vote now. What is it for but to improve your conditions? Use it for early closing, and you'll win out. . . . Think what it would be to have five free evenings, a free Sunday and a half holiday of daylight and sunshine each week. Why life would be worth living again!"

The girl looked like a soul awakened, and with a gospel of hope put into her hands which quickened the blood in her veins, sending a faint flush to her cheeks. Both father and daughter wanted to be 100 per cent. American, but the wearing monotony of endless work was sapping patriotism and preparing their minds for any mischievous doctrine of pretended salvation that came by.

"If only the laws that exist were enforced," remarked the storekeeper, "we might have a chance. But they are not, and what hope is there that fresh ones will have any better luck?"

The yearning of these two for a day's work of normal length, and time for natural recreation in which to find themselves, together with their lack of initiative in fighting for better conditions, seems typical of would-be good citizens under the acid test of arbitrary custom.

In a drug store nearby was a tall anaemic young man, son of the proprietor. Nature had intended him to be a fine strapping young fellow, but the long hours of indoor life had made him sappy and reedy. Despondency was his keynote.

"I have no time for reading, I am here all day from early morning till late at night, always on tap," he remarked in a weary toneless voice.

How could he be 100 per cent. American when already initiative and energy were killed? For him there was no joy in living, no incentive to ambition. A paternal government had insisted on his having a free education which would stimulate desire for rational pleasure, while arbitrary custom had tied him to a treadmill just when his pulses were beating fastest and life should be most alluring. Worse still, he was already in the grip of hopelessness and incapable of a fight for better conditions. Could there be more fertile soil for subtle Bolshevism?

Into a garage I went for some gasoline. A young, respectable foreman measured out the quantity, remarking apologetically that it would be 3 cents more to me than the marked-up price. That was all right, but prompted the question: "Why is gasoline double the old price, and still going up?"

"Why?" he replied with intense bitterness, "because every time Rockefeller gives a million dollars in charity he puts up the price a penny, and we pay for his generosity."

This led to a discussion on the tyranny of trusts in boosting prices at will, and of Bolshevism as Lenine's cure, when the man said in accents of intense scorn of himself and his class: "The only difference between those people in Russia and us is that *they have backbone and we haven't.*" The contempt of himself and his class, the antagonism to capital, the denunciation of trusts, breathed in his every word, indicated a dangerous mental perspective. Yet there was that about him which convinced me he would willingly be 100 per cent. American if the conditions of life were less harsh for him.

I looked at the bloodless face, at the thin, nervous body, at all the hall marks of unnatural repression, and walked away reflecting on the menace of such opinions to the well-being of the nation, when just a little easing of the worker's financial burden would make the scales fall from his eyes, and he would judge of Bolshevism at its true worth as "mere robbery without extenuating circumstances."

This placing of the responsibility of poverty on the shoulder of capital seems to me to mask an inarticulate cry for fair play, for sympathy, for brotherhood, expressed in a practical constructive plan to ease the worker's burden, and bring about a juster distribution of the world's wealth than exists now.

Man is a selfish animal, and what he gets he keeps. But woe to the profiteer if Bolshevism rises to a flood tide in this country!

Welfare Work

Standards for Factory Wash Room Facilities

(*Continued from Page* 18)

(c) *Number and Ratio*: When there are one hundred (100) or less persons on a shift there should be one (1) toilet (closet) for every twenty (20) persons (in practice it has been found advantageous to provide one closet for every fifteen persons); when there are one hundred (100) to five hundred (500) persons on a shift, there should be one (1) toilet for every thirty (30) persons; when there are five hundred (500) to one thousand (1,000) persons on a shift, there should be one (1) toilet for every thirty-five (35) persons, and when there are one thousand (1,000) to five thousand (5,000) persons on a shift there should be one toilet for every forty (40) persons.

URINALS

(a) *Kind*: Urinals should be either individual or slab. At least two (2) feet of slab should be considered the equivalent of one (1) individual.

(b) *Construction*: All urinals should be composed of smooth material, impervious to moisture.

(c) *Connections*: All urinals should be connected by means of waste pipes to sewers or cesspools, which sewers or cesspools should be constructed in accordance with the laws, rules and regulations of the properly constituted authorities of the locality in which they exist.

Unless water runs continuously over the walls of a urinal, each urinal should be provided wherever practicable, with an adequate water flush. When individual tanks are used, the flushing should be accomplished by pedal action, or if water flush is impracticable, then with other proper means for cleanliness and safety.

(d) *Number and Ratio*: One (1) urinal, or its equivalent should be provided for every fifty (50) men on a shift.

(e) *Entrances*: All urinals should be adequately protected to prevent the entrance and breeding of flies, as far as practicable.

In practice it is recognized that separate urinals should be arranged throughout the work places convenient to the points where the men work.

Bolshevist Buncombe Regarding Germany's Defeat

By W. J. GHENT

OVER and over again, from pro-Bolshevist sources in America, one hears or reads the statement that the war was brought to an end by means of Bolshevist propaganda in Germany. Not the hammer strokes of Foch, Haig and Pershing brought Germany to its knees, but the demoralization of the army and navy subtly influenced by Lenine and Trotzky, with perhaps some assistance from Karl Liebknecht and Rosa Luxemburg.

No proof is offered to support this amazing assertion. It is merely repeated, in various forms, as though repetition could take the place of evidence. It was first made, apparently, in an article by John Reed, in the January *Liberator*. This article told of the propaganda sown by Bolshevist agents in foreign countries, particularly Germany, and it made a great number of wild and sweeping statements about the influence exerted. "Soviet Russia," it declared, "Conquered Imperial Germany." Reed was for a time an employee of the Bolshevist Bureau of International Revolutionary Propaganda, as were also Albert Rhys Williams and Boris Reinstein, and it is only natural that he should feel a sense of the immense importance of his activities. But he presents not a scintilla of real evidence to support his boasts.

NO CONFIRMATION FROM GERMANY

The testimony of the Germans themselves refutes the assertion. In the Weimar assembly Ebert declared that revolution in the rear had had nothing to do with the collapse of the German military power, and his declaration was received with applause. The testimony of the military chiefs is to the same effect. There was no revolution, nor anything that looked like a revolution, until after Germany had sued for peace. Nine months earlier there had been a number of strikes in the industrial centers, but they appear, in the first place, to have been easily suppressed, and in the second place, to have had no relation to Bolshevist propaganda.

The German offer of peace was made on Oct. 6, 1918. Six days earlier (Sept. 30) Bulgaria had formally surrendered, and a day earlier (Oct. 5) Austria-Hungary had made a most abject plea for peace, while Turkey had already made her first move for an armistice. The German army and navy were at that time intact.

Four days later (Oct. 10) the *Munich Post*, the leading official paper of the Bavarian Social Democracy, published an article (quoted by Karl Dannenberg, in the *Radical Review* for January-March) by its Berlin correspondent which discussed the question, "Who is responsible for Germany's latest and most all-embracing offer of peace?" The answer named several factors, but it entirely excluded the Socialists, revolutionists and Bolsheviki as one of them. "The change," it says, "is not at all to be attributed to the Socialists—it came from the very opposite direction. That is, it came solely from the higher-ups, who knew that the army had been vanquished and was daily becoming weaker."

SOCIALISTS AND ARMY CHIEFS AGREE

This is contemporary Socialist testimony; and though the Bavarian Social Democrats were not on good terms with the majority Social Democrats of Berlin, neither the *Post* nor its correspondent could well have ignored the fact of a revolutionary factor in the change had there been one.

Ludendorff, in his recent book, says that as early as Aug. 8 the Germans had lost hope of a military victory, and that at a meeting of the crown council, on Aug. 14-16, he had declared that a victory was impossible. On Sept. 8, in a talk with Hindenburg and Hintze, he had said: "The western front may at any time have to withdraw further, and the worse our military situation becomes, the harder will be the conditions."

Hindenburg was apparently slower in reaching the same conclusion. A letter of his, dated Oct. 30 and published in March by the Wolff Bureau, declares that the "Macedonian disaster" a month earlier, with its attendant weakening of reserves of the west front, made the imposing of peace on the allies impossible. He accordingly advised: "It is imperative that we cease the struggle in order to save the German people and our allies from unnecessary sacrifices."

NO EVIDENCE OF BOLSHEVIST INFLUENCE

What was the situation behind the front? Of evidence of Bolshevist influence there is none. As for the Spartacan agitation, Karl Liebknecht could not have been a factor before Oct. 24, when he was released from prison. But Germany had already, on the 20th, committed herself to the acceptance of the proposal for an evacuation of occupied territories and had made request for the arrangement of an armistice. Though there were anti-war demonstrations on the streets of Berlin on the 25th, there is no evidence of any demoralization in the army other than the demoralization resulting from constant defeat.

The German note of Oct. 27 was generally regarded as a note of surrender, since it gave tacit consent to the principle laid down in the President's note of Oct. 23 that the armistice must be on terms which would preclude Germany from renewing hostilities. When, therefore, the mutiny in the fleet broke out on Oct. 31 Germany as a power was already finished, and was merely awaiting supinely the drastic terms then being drawn up by the Supreme War Council in Paris.

REVOLUTION FOLLOWED THE COLLAPSE

The mutiny was not a revolution, but a strike against putting out to sea on a suicidal adventure. The formal demands made by the sailors upon the authorities had to do with conditions and disclipine, but were not a revolutionary ultimatum. Though revolutionary sentiment was at work in Berlin and other centers, there is nothing to show that it was other than a home made product. It was an inevitable reaction from the realization of the overwhelming defeat of the army and the impending abject surrender. Even so it was without force until the Majority Socialists, seeing their opportunity of taking over the government, joined hands with the Independents. This shift came only at the last moment. A manifesto of the national executive committee of the Majority Socialists, issued on Nov. 6, says nothing about revolution but warns the people to avoid riots and demagogues. During all the previous month the negotiations for the armistice were going on, and the allies were smashing their way forward. By the 8th, when the Majority Socialists had swung over to revolution, the Kaiser's delegates were standing before Marshal Foch and hearing the terms which reduced Imperial Germany to impotence. The part which Lenine, Trotzky and Reed played in the great drama is nowhere visible.

British Official Reports Indict Bolsheviki

(*Continued from Page* 17)

Pork	10.00		
Lard and Bacon	20.00		
Horseflesh	3.00	to	4.00
Dog flesh	1.00	to	1.75
Cat flesh	1.50	each.	

One of the greatest pities of the foregoing table and the fact that thousands are starving, is the fact reported by many of the British observers that in parts of Bolshevist Russia there is food in plenty. The reason for the pressing shortage and the high prices elsewhere is the fact the trans tation system has broken down ly. Ac t this the great deal ng and g by the peasants. Unles is fort ough to have real coin it is lt to b d from the peasants, so distrus ave they become of the depreciated paper toke n circulation.

Many of th British agents reporting the facts in Russia are dden under initials, but among the signed reports are some from Sir M. Findlay, at Christiania; Sir E. Howard, at Stockholm; and Sir R. Paget, at Copenhagen. All their reports relate to murders of British subjects by the Red Guard, or the arrest of British officials and consuls. There is also a report from R. H. Bruce Lockhart, a British diplomat widely and favorably known in the United States. Lord Kilmarnock at Copenhagen, Colonel Wade at Warsaw, Sir H. Rumbold at Berne and Sir C. Eliot at Vladivostock also contributed details of the Bolshevist rule, so it may be readily seen that the pictures of conditions drawn could not be exaggerated.

No story of the happenings in Russia under Lenine and Trotzky would be complete without the recital of wholesale killings and tortures of innocent persons. The British reports are honeycombed with the bald facts of such incidents and almost everything printed heretofore is verified by these official observers. Men and women frequently are compelled to dig large graves and then, standing on the brink, are shot down without mercy. Officers of the former Russian army have their shoulder straps nailed to the shoulder when caught and the most menial tasks—and worse—are the fates suffered by the educated women and girls seized as hostages by the Bolshevik leaders.

Not less important than these verified details of atrocities are the excerpts from the Red press forwarded by the British agents. The Red organs by the score record with apparent glee the excesses to which the cultured classes have been subjected. Others incite the armed mob to further killing by bloody appeals far worse than those that filled the German press in the early days of the Great War. The press extracts are incorporated in an appendix to the report and fully confirm the stories of terrorism rife ever since Lenine and Trotzky took full control.

One of the most striking press quotations comes from the Krasnaya *Gazette*, which said on September 1 last: "Without mercy, without sparing, we will kill our enemies in scores of hundreds. Let them be thousands; let them drown in their own blood. For the blood of Lenine and Uritski, Zinovief and Volodarski, let there be floods of the blood of the bourgeoisie—more blood, as much as possible."

And the flood of blood thus demanded for the attempts on Lenine's life still is apparently flowing unchecked throughout the Red-stricken land.

Civic Federation Review

Vol. IV. NEW YORK, AUGUST 30, 1919 No. 18

GREAT FARMERS' ORGANIZATION

WILL BUILD TEMPLE OF AGRICULTURE AT WASHINGTON — AT CONFERENCE IN SEPTEMBER WILL START CAMPAIGN TO PROTECT NATIONWIDE INTERESTS

FARMERS of the nation have awakened. Perfection of a great national organization is being rapidly attained. Plans are being worked out for a Temple of Agriculture costing $1,250,000 at Washington. Subscriptions are being asked for an endowment of more than $6,000,000 more. It is planned to use building and endowment for the centering of the complex interests of the farmers so that the organization may rank with the Chamber of Commerce of the United States, the American Federation of Labor and similar combinations.

The National Board of Farm Organizations, Charles S. Barrett, chairman, has the project in charge. Fourteen leading farmers' unions, with more than 2,000,000 active members, are thus united. Many of them are national or interstate in scope. Mr. Barrett, chairman of the National Board, long has been head of the National Farmers' Union and represented the interests of the American farmer before the Peace Conference in Paris. His work there brought international recognition of farm interests never attained before in the world's history. M. Clemenceau and David Lloyd George consulted with Mr. Barrett immediately on his arrival abroad, but his sailing times and President Wilson's crossed and they passed one another in mid-ocean.

CHARLES S. BARRETT
President Farmers' Educational Cooperative Union of America and Chairman of the National Board of Farm Organizations

Already the National Board of Farm Organizations has a home in Washington, having bought the old mansion at 1731 I Street, N. W., not far from the White House. In this mansion, on September 16 and 17, will be held the fifth semi-annual conference, a meeting that bids fair to be momentous for the farming interests of the nation. Hundreds of delegates from the great farmers' organizations —grange masters, officers of grain, livestock, cotton and milk producing associations, will attend. Needless to say, the occasion will reveal to all the imperative need of the Temple of Agriculture and its endowment for protecting the agriculturist.

Few realize what has been accomplished by the National Board of Farm Organizations since its foundation in 1917. Its three representatives on the food price fixing committee were largely instrumental in obtaining the guaranteed price of wheat. They presented to President Wilson vital facts concerning the nation's position on the all-important food question. Modifications of the draft law as it applied to farmers and their helpers enabled the country to continue its output of foodstuffs at the one time they most were needed. An Agricultural Advisory Committee was formed by President Wilson and two of the board's members—Mr. Barrett and Milo D. Campbell, president of the National Milk Producers' Federation—were made members.

In furtherance of its campaign for the strongest kind of organization of farmers, the National Board just has finished a series of meetings throughout the West. The speakers were Senator Thomas P. Gore, Dr. W. J. Spillman, Milo D. Campbell, Charles S. Barrett, John A. McSparran and A. A. Elmore. The trip was most successful and the building fund was increased by a six figure amount in consequence.

At the Spokane conference, more than 4,000 farmers attended and their response to the fund appeal was a contribution of $20,000. Other places visited were Lexington, Kentucky; Salt Lake City; Modesto and San Jose, California; Bozeman, Montana; Bismarck and Fargo, North Dakota, and Mitchell, South Dakota. Wide publicity was given each of these meetings and some of them extended over several days. Thousands of farmers were made to realize the need of a strong national organization and their belief in the plan was expressed in cold dollars—the most striking medium of endorsement.

John A. McSparran, who is treasurer of the fund, is the master of the Pennsylvania State Gradge. The Keystone state is one of the largest agricultural states in the union, despite the great industrial developments that overshadow its farming activities in the public eye. His speeches on the tour were forceful explanations of the need of federation in the right way. In showing how the farmers should get together, he cited the instance of $2.26 wheat for which three men stood stead-

fastly for weeks and won. One of them was Charles S. Barrett, a cotton planter who never raised wheat, but who plainly saw that the guaranteed price was necessary if the world were to be fed.

A. A. Elmore, chairman of the Temple of Agriculture Committee, is president of the Washington Farmers' Union. He brought out clearly that the National Board was wholly non-partisan, non-sectarian and purely economic. He said that it was certain that the problems of the farmer could only be met by fullest cooperation, something that the National Board of Farm Organizations furnished.

All of the speakers on the tour told the farmers of the many important measures pending in Congress. It was shown that efforts were being made to blame the farmers for the hight cost of living; that there were certain influences at work to put the onus of everything on the farmer. They told of the efforts to get cheaper potash and of the opposition to the bill to regulate the sale and shipment of fertilizers. The imperative need of trained economists, field men and lawyers to represent the farming interests properly was shown to be greater than ever and it was declared that the only way to get this vital protection was to perfect the National Board of Farm Organizations at once. Emphasis was laid on the fact that the feed men, the fertilizer men, the canners, the packers and the millers, were all strongly organized and working for legislation to aid their businesses, while the farmers—the basis of all the other industries—were without adequate representation.

In addition to Messrs. Campbell, Elmore, McSparran and Barrett, other members of the Temple of Agriculture Committee are:

J. H. Mills, president Georgia State Farmers' Union;

Joe Niccolls, representative Iowa Farmers' Union;

Gifford Pinchot, president Pennsylvania Rural Progress Association;

Maurice McAuliffe, president Kansas Farmers' Union;

S. J. Lowell, Master New York State Grange.

In working out the plan for the Temple of Agriculture and its accompanying endowment, it is also proposed that each state shall raise $150,000, interest of which would serve to maintain a representative of farm organizations within the state in addition to the representative of the National Board of Farm Organizations.

As showing how fast the National Board is growing, it might be said that at the conference in August, 1918, thirty-seven states were represented and that eighteen organizations (in addition to the fourteen in the Board) sent delegates.

HOME OF THE NATIONAL BOARD OF FARM ORGANIZATIONS, 1731 I STREET, N. W., WASHINGTON, D. C.

NATIONAL BOARD DEMANDS "COLLECTIVE BARGAINING"

The National Board of Farm Organizations at a recent meeting at its headquarters in the Woodward Building, Washington, issued an appeal to farmers of the country to protest by petition, ballot, or other lawful or orderly means against the unfair and un-American methods being used against farm organizations engaged in the collective sale of their farm products. The immediate cause for this appeal was the arrest on August 9 of seven prominent farmers in Ohio who were acting as representatives of the Ohio Farmers' Cooperative Milk Company in the sale of the farmers' milk to the dealers of Cleveland. These men were arrested at their farm homes in the night and thrown into an overcrowded vermin-infested room of the city jail. In the appeal, congress and legislatures are asked to take early action to clarify a situation which the Farm Board asserts is widening the gulf between the city and the country. The statement of the National Board follows:

"On the 9th day of August, 1919, seven farmers who were acting as officers of the Ohio Farmers Cooperative Milk Company were indicted by a Grand Jury in the City of Cleveland, Ohio, for having acted as representatives of the farmers who were selling milk to the dealers of that city.

"The price charged was below the cost of production by the farmer, as found by all investigations, and was lower than in most of the other cities of like class in the country. The offense consisted of 'collective bargaining' and was not inordinate profits. The men indicted were among the most prominent and respected farmers of the state, several of them being township and county officials.

"In order to make their humiliation or intimidation more pronounced and public, these men were arrested at their farm homes in the night, taken to the city of Cleveland and there thrown into jail without opportunity to secure bail until the next day. The jail itself was full of vermin and the treatment accorded these men was barbarous and extreme.

"The National Board of Farm Organizations, standing at all times for law and order and asking no immunity for violators of the same, nevertheless, records its vigorous protest against the use of our criminal laws for the personal advancement of ambitious city politicians and for the benefit of profiteering combinations operating between the farmer and the consumer.

"The National Board of Farm Organizations calls attention to the fact that if farmers shall be denied the right to do collective bargaining in the sale of their products; if they are to be branded as criminals for doing openly what all business is permitted to do unmolested, that such class distinction will not always be borne with patience by the farmers of the country.

"The National Board of Farm Organizations recalls that in almost every large city of the United States within the last two years, farmers from outside such cities have been caught within their boundaries and branded as felons for daring to confer with their neighbors or for joining with them in the sale of their milk or other common products; that some of these indictments are still pending, others are being threatened and all without regard to the farmers' increased cost of production.

"The National Board of Farm Organizations believes that organization and collective bargaining in the marketing of farm produce is essential if profiteering and unnecessary expense shall be eliminated between producer and consumer. These indictments by cities against milk producers whose industry cannot survive without this right, are being justly construed as indictments against all farmers whether they be named or not in the indictments themselves. We view this widening breach between city and country with fear and alarm.

"The National Board of Farm Organizations confidently asks:

> "1. That every farmer through petition, by the ballot, or by other lawful or orderly means makes his protest known against the unfair and un-American methods so being used again t him.
>
> "2. That Congress and Legislatures by early action make clear the original purpose of our anti-trust laws that are now being misinterpreted and misdirected so that by unmistakable terms farmers shall have the right to do collective bargaining in accord with the original intent of the law."

The Senate Committee on Agriculture and Forestry recently issued a statement on the agricultural situation which emphatically asserts the need of changing wheat grading rules and discounts, which, it is claimed, if unchanged may rob wheat growers of from fifty to seventy-five cents a bushel on millions of bushels of wheat. The senators and farm organization representatives say that the wheat, although shriveled owing to the unusual heat of the summer, is of the highest milling value and will enter in large measure into the production of the high priced patent flours and be sold to the consuming public at prices based on "Number One" wheat, so that producers will be defrauded and consumers receive no benefit. The statement has the endorsement of the entire committee and has received the unqualified support of the National Board of Farm Organizations and the National Grange, which have a combined membership of approximately three million producing farmers.

The Labor Situation Abroad Following the War

Part of the report of the Commission sent by The National Civic Federation to England, France and Italy to study industrial conditions has been completed, and the chapters by James W. Sullivan, the labor member of the Commission, which cover "The Passing of the British Shop Steward Movement," "The 'Democratization of Industry,'" "Chaotic British Labor Politics" and "Great Britain's Triple Alliance," are here published in abridged form.

Few men are better known in the labor world than Mr. Sullivan, and this applies to the other side of the Atlantic as well as to this. For more than a quarter of a century he has been in active touch with labor organizations and leaders of Great Britain and the continent, having been sent abroad as a delegate of the American Federation of Labor on several occasions.

During the war he was Assistant to Mr. Gompers on the Advisory Commission, Council of National Defense, and, concurrently, head of the Division of Labor and Consumers' interests in the United States Food Administration.

The Chairman of The National Civic Federation Commission was Charles Mayer, chairman of the Board of the France & Canada Steamship Corporation. Other members were Albert Farwell Bemis, President of Bemis Bro. Bag Co., Boston, Mass., who represented employers, and Andrew Parker Nevin, a well known New York attorney, who represented the interests of the American public. The reports by Mr. Bemis and Mr. Nevin will be published in the next issue of The National Civic Federation Review.

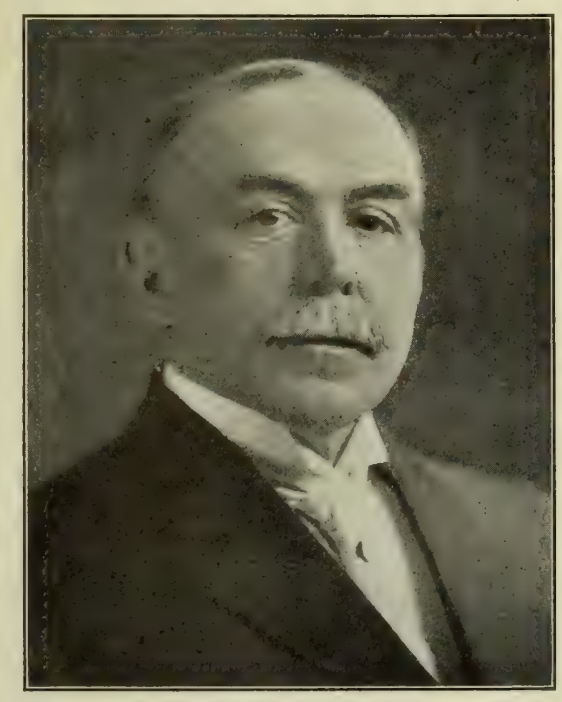
The Commission's full report, comprising a careful analysis of industrial conditions on the other side of the Atlantic, will soon be printed in book form.—Editor.

THE PASSING OF THE BRITISH SHOP STEWARD MOVEMENT

I

AMONG the many unusual developments in the course of the abnormal conditions which characterized the industrial situation in Great Britain during the war, few were viewed with greater interest than the so-called "shop stewards movement." It was mainly in its beginnings a war-time schism from regular trade unionism, and later a thrust toward nationalizing and democratizing industry. Following its rise and rapid growth, most extravagant claims were made for it in various radical publications in the United States. How unsubstantial these claims were is, I think, conclusively shown in the history of the shop stewards movement which follows, for it evidences on how slight foundations utopias may be built by impatient social perfectionists, and also how widely the British and American trade union systems differ in organization, practice and effectiveness.

SHOP SPOKESMEN LONG A FEATURE



In various British industries, shop spokesmen chosen by their fellow wage-workers have long been a necessary feature of works operation.

In Britain, with the war, came hastily assembled working forces in large new munitions works and other manufactories. In these establishments, department representatives of the workers were usually recognized as a necessity by the employers, and, prompt decisions regarding working conditions for all the departments being frequently required, the various representatives on presenting themselves for conference were recognized as a general shop committee.

In the non-union shops these committees could directly adjust differences, to the extent of the powers conceded them by the employers and their fellow workers. But in the union shops a first and serious obstacle to speedy decision existed in the unit organization of certain trade unions, especially that of the machinists (in England, "engineers").

MEMBERSHIP BY LIVING AREAS

In a British branch union of engineers, the membership is by living areas and not by working areas. Hence the branch may be made up of members at jobs in various other living areas, and contrariwise a shop force may be made up of members of different branch unions. British trade unionists account for this form of unit organization by the fact that usually the "branch" combines trade union with "friendly society" features. Workmen's organization benefits are better administered by neighbors,

JAMES W. SULLIVAN

it is argued, than by shopmates living far apart, some of them casual workers.

Previous to the war, by the practice of the engineering trade union, which for at least half a century had authorized shop committees, a "convener of committee" was appointed in case of trouble, but there was no trade union official present regularly as deputy to carry out affairs of the general union. In American trade unions the confusion of this situation is obviated by making the workshop, or the shops of a given locality, the unit for the branch union, with its chairman representing the general union in local administration.

LACK OF UNITY IN ORGANIZATION

It was in this lack of shop unity of organization, and consequently of direct executive union action, that during the war troubles through shop stewards, both independent and union, clogged the work.

This gap in efficiency characterized some of the largest British trade unions having members engaged in war work. Continuous operation necessary, the shop stewards, union and unorganized, learned to take on authority for themselves. Consequently, union stewards drifted away from control by their headquarters; stewards for the unorganized, new-blood "labor leaders," became powerful men of the day. With the dilution of skilled labor came relaxed union organization together with distrust of the higher trade union officials because of their impotence in sudden crises.

Here was opportunity for the modern youthful agitator—energetic, unafraid, unencumbered, chafing under restraint from his elders in union positions. When fired by socialistic faith, the steward standing for the unorganized recked little of immediate consequences could he but promote the cause. He was in office for that purpose.

CHURCHILL RECOGNIZES STEWARDS

It was at this stage that a deputation from the stewards of the Woolwich Arsenal was assured by Winston Churchill as Minister of Munitions that they should be the body consulted concerning work in that important government establishment, thus ignoring the regular union officials. Similar recognition was soon extended to other large industrial centers.

District committees, seeing shop stewards recognized and setting aside union laws, ventured to follow suit, and in turn were suspended. In many parts of the country local, unofficial shop or craft spokesmen practically dominated in dealings with perplexed employers, uncertain whether agreements were to be observed.

Differing from the United States, there was no authorized central executive standing for a general wage-workers' organization, covering all occupations for the entire country, with which employers, singly or in bodies, might treat.

AMERICAN FEDERATIONS PROVED EFFICIENCY

The capability of the American Federation of Labor to come to a working understanding with our government on its entering the war, and to offer to employers a complete union mechanism applicable to every industry throughout the country, with models of rules, regulations and organization for the rapidly forming unorganized working forces, even to having an authorized union agent in every considerable workshop, is a matter of very recent history.

Everyone of the one hundred and eleven general ("national" or "international") unions covers comprehensively as to its own trade and exclusively of all other trades the whole of the United States. A traveling member of any local union is thus entitled to free, direct, unobstructed membership in every other local union of his occupation throughout the country. The workshop local unions uniformly represent, not living but working districts; in this respect certain building trades allowing latitude. No union man is under constraint to support any political party.

The Secretary of the American Federation of Labor reported in 1919, before the accession of the Brotherhoods, that the membership was 3,260,068, regular dues for the previous year of exactly that number having been paid into the treasury. Exempted members not being paid for—the sick, the unemployed, the idle by lockout or strike, an average year by year of approximately 10 per cent.—the true membership was then 3,600,000. Today the grand total, with the Brotherhoods, ranges from 4,200,000 to 4,500,000.

FOUR "NATIONAL" BRITISH UNIONS

The British labor movement, differing fundamentally from that of America is politico-economic in character. It has four separate organizations, varying in type and purpose:

(1) The Trade Union Congress, meeting an-

nually to decide principally upon the several measures to be asked of Parliament and to elect its "Parliamentary Committee," whose mandate is "to watch all legislation affecting labor." The Secretary's report of the 1918 meeting gives the total membership as 4,532,085; the number of delegates 881, representing 262 societies.

(2) The "General Federation of Trade Unions," described by its Secretary as "the largest purely trade union organization outside of the United States," and as having March 31, 1,215,107 members.

(3) The Co-operative Union, its fraternal delegate to the Congress reporting a membership of 3,500,000, the great bulk trade-unionists; associated since 1917 in the Labor Party.

(4) The British Labor Party, its membership composed of wage-workers and other citizens, mixed, polling a vote equal to somewhat more than half the total membership claimed for the trade unions in the Congress and represented in Parliament by 59 out of 707 members.

MEMBERSHIP FIGURES DISCONCERTING

While 4,532,085 was recorded as the membership represented at the British Trade Union Congress of 1918 at Derby, these figures stand for the total number for which entrance fees were paid by the delegates at their option at the rate of ten shillings or less per 1,000. Between the membership of the unions reported, separately or in total, nearly all in round numbers, in this way in the Congress proceedings, and those given officially in detail in other union or government publications, there is wide divergence.

In comparatively few cases are the 262 organizations participating in the British Trade Union Congress of 1918 national in the sense of representing either England or the kingdom. In the "National Federation of General Workers," for instance, are nine organizations (four of them having "National" in their titles), all separately represented in the Congress, each with its own headquarters and independent administrative machinery, and mostly with special fields of operation, local or regional, the total membership claimed being 961,466. Similar instances might be cited almost ad infinitum.

BRITISH TRIBUTE TO FEDERATION

Commenting on the business-like completeness, unity and efficiency of the American Federation of Labor, a British trade unionist, for years high in the councils of the movement, said: "I believe that the superiority in organization of the American Federation of Labor is due largely to the fact that among its originators were Englishmen who, having had experience with the shortcomings of British organization, suggested correct forms for America." Cole, an indefatigable "intellectual" writer on labor matters, suggests, as to the local union: "Let the general principle be that of the works branch (instead of the residence branch)." British union and non-union employers alike frequently express the desirability of facing representatives of all their employees directly without loss of time.

In 1918 the British Parliamentary Committee's income was, in round numbers, $45,000, and its expenditures $35,000. It neither owns the building in which its offices are located nor issues a periodical. It does not employ organizers. The American Federation's income last year was more than $650,000; its expenditures nearly $590,000. In its new headquarters building in Washington it has invested $200,000. It paid for printing and publishing the *American Federationist* $122,000. It employed 112 paid organizers, fifty of them on full time, at an expense of $165,000, besides directing a corps of more than a thousand volunteer organizers and maintaining office communication with the numerous paid organizers of the separate national and local unions.

Abundant confirmation of the statements made previously in this article is found in writings of numerous leaders in the various branches of the British labor movement. For instance, Arthur Henderson, Secretary of the Labor Party, wrote in the *Daily News* of March 27 that "the pressing need of organized labor was fewer trade unions and more trade unionists." J. H. Thomas, Secretary of the National Union of Railwaymen, is quoted in the Manchester *Evening Chronicle* as saying, "The gravest danger now is not between the Government and the railwaymen, but between the unions themselves."

However, crude and clumsy as it is, British trade unionism possessed sufficient resisting power to throw off the shop steward fever, after the armistice came. From that time the stewards never won a strike and the mass of the wage-workers in the engineering trade repudiated both irregular leadership and insurrectional tactics. Product of the war emergency, with which British trade unionism was incapable of coping, the stewards' growth and power passed away with the cessation of war materials.

In the United States, as a social reformer, the shop steward never had a footing with its workers. To American trade unionists, accustomed to their own complete organization mechanism, as a workshop official supplementary to the union representatives he would have been classed with the proverbial fifth wheel to a wagon.

THE "DEMOCRATIZATION OF INDUSTRY"

II

IN the article immediately preceding I endeavored to show how shop stewardism had been born in Great Britain as the result of abnormal conditions combined with inefficient functioning of the British trade unions. It was also shown that this movement, hailed at one time by the radical American press as the dawning of a new era in world industry, quickly died when the exceptional conditions that gave it birth had passed.

It is hard to discourage our utopians, however, and we have been hearing a great deal lately about the "democratization of industry," "workers' control," "a voice in management," "an economic democracy," "labor to head the business," "wage workers at the directors' table" and similar verbal coinages which are in favorite use among a group of stampeders after economic will-o'-the-wisps. They are a busy tribe not regarded too seriously by American trade unionists accustomed to deal with grimy and untheoretical fact.

Behind these phrases is screened a big idea—a compound of syndicalism, socialism, and the new-fangled Guildism. One of the good sentimentalists promoting the new doctrine declares: "The application of the principle of workers' control (self-government in industry) is the greatest functional advance for democracy since the state extended its operations beyond police power and became an administrator of public services." And he goes on: "Workers' control is an elastic term. It means, first, a little control in the workshop in regard to welfare and general workshop conditions; then more control in relation to discipline, sanitation; and so on, up to full participation in control over the whole industrial process inside the shop and *in the industry as a whole.* The degree of control will be set by the capacity of the workers for exercising control."

DESCRIPTION IS ALLURING

The kindly apostle of "self-government in industry" who indited that scenario expresses his opinion that the wage-workers of Great Britain have already paved much of the way to the goal of his vision, first, through having their spokesmen in the workshop; secondly, through the "enlightened self-abnegation of autocratic control" by certain employers; and third, through government action on the Whitley Committee Report.

Have the wage-workers of Great Britain, or of any other country, for that matter, really paved much of the way to the goal seen in the vision of the writer quoted above? This can best be answered by considering somewhat in detail just what is involved in the management of the average business. First, it must be set up, which requires among other things the marketing of shares, determining the form of incorporation, and multitudinous other things that will suggest themselves at once to the average reader. Next comes the purely physical side, which means that a site must be selected and a building erected, following which machinery must be installed. There are of course many other features involved in the development of this phase of management. The plant to be run must have efficient operating and sales forces. Then there are evident financial questions, such as the buying of supplies and raw materials, meeting the methods of competitors, action in crises such as fire, flood and disaster, and many other things too numerous to mention, which require long experience, sound education and good judgment. There are also such questions as the fixing of the percentage of depreciation, employment of attorneys, choosing forms of charity, and other similar questions which are certainly far removed from the province of labor as we know it in any country at the present time.

The whole matter comes down to the fact that workmen sharing control in any industrial establishment must have either personal training or expert advice as to the points enumerated above, coupled with sufficient general education and brain power to cope continually with keen-minded competitors. They must also be able to rise to the self-discipline necessary to secure united action in a board of directors representing both capital and labor. Furthermore, placed in such a position, labor would necessarily be compelled to accept all the consequences of control, including, when necessary, the passing of dividends, sharing of losses, reducing of wage scales, dismissing surplus employees, abolishing the minimum wage, sacrificing certainty of income, and incurring various forms of liability.

The promoters of the recently discovered route to a reign of democracy in industry begin their argument by calling attention to the "control" by shop spokesmen under agreements with employers. The degree to which that control goes, or whether in fact it should be called control, merits consideration.

SHOP REPRESENTATIVES' TRUE FUNCTIONS

The functions of shop labor representatives are usually defined in the contracts made between employers and trade unionists. They commonly name as matters of negotiation wages, hours, shop facilities, superintendence, regulations, with the many ramifications of each.

The second stage toward "self-government in industry" is achieved, by the new theory, when the workers absorb functions turned over to them, in part, through the "self-abnegation of autocratic control by far-sighted employers." The most conspicuous illustration submitted of this alleged transmission of directive powers to the workers is the Renold factories at Manchester. It may legitimately be examined as a test of the theory.

In a memorandum on the subject, Mr. Renold himself submits a list of subjects which he regards as matters susceptible to negotiation between employers and employees, and he includes in this list all of the subjects mentioned above,

(*Continued on page 13*)

Andrew Carnegie—the Friend of Labor

ANDREW CARNEGIE, one of the greatest constructive forces in the development of American industry and one of the most magnanimous philanthropists of the world, has passed away. With his gigantic accomplishments in business, his benefactions exceeding $350,000,000, his labors during a quarter of a century to secure universal peace, most people are familiar. His rise in life from a poor boy who came to America at the age of twelve to one of the dominating figures in the nation, whose wealth was estimated at possibly $500,000,000, is one of the romances of the age, a story that is well known, an inspiration to all who are filled with ambition for notable accomplishment. One phase of Mr. Carnegie's character has, however, escaped publicity and yet it is doubtful if this deep interest of his heart was even exceeded by his interest in world peace. That was his deep concern regarding the welfare of workers, the betterment of working and living conditions, the amicable adjustment of disputes between labor and capital.

Various revolutionary radicals, seeking to foment discontent and class hatred, have pictured the genial Scotsman—who was one of the most loyal, ardent and exemplary Americans—as one of the heartless exploiters and oppressors of the working classes; anarchists and socialists have pointed to him as an enemy of labor. Yet during all the time that Mr. Carnegie was in business only one single clash with labor occurred. That was the Homestead strike in 1892, for which his detractors held him responsible. And yet the truth is that for this single clash with labor Mr. Carnegie was not himself and in no degree whatever responsible. He was away in Scotland at the time, and as soon as word reached him of the trouble he immediately cabled orders urging a conference for a speedy and amicable settlement with the men.

The facts of the Homestead strike were gathered and presented by Edward W. Bemis, formerly Professor of Political Economy in the University of Chicago, whose report was quoted in THE NATIONAL CIVIC FEDERATION REVIEW of March, 1905. As the strike has been so generally misunderstood and the facts misrepresented by anarchists, socialists and the enemies of organized labor, and as these facts absolutely absolve Mr. Carnegie of any responsibility for the unfortunate happenings, Prof. Bemis' report is important in any presentation of Mr. Carnegie's notable career.

After the arrival of the militia in Homestead, Mr. Hugh O'Donnell, upon the request of two of the labor leaders, approached Mr. Whitelaw Reid, then candidate for the vice-presidency on the Republican ticket, and asked him to get in touch with Mr. Carnegie and urge him to order Mr. Frick to reopen conferences with the men. Mr. O'Donnell, as well as President Weihe of the strikers' organization, stated that there was no disposition on part of the employees to stand upon a question of scale, of wages, of hours, or of anything else, but requested that the Carnegie Company "recognize the Amalgamated Association by reopening the conference doors." Mr. O'Donnell had been charged by the Carnegie officials with murder in connection with the events of July 6, and was released under $10,000 bail. After receiving his appeal, Mr. Reid endeavored to secure Mr. Carnegie's address from Mr. Frick. Upon Mr. Frick's refusal to give the address, Mr. Reid secured it from the American Consul General in London, John C. New. Mr. Reid then cabled Mr. Carnegie and Mr. Carnegie immediately replied. In his reply Mr. Carnegie accepted the terms proposed by Mr. O'Donnell for the workers and urged that Mr. Frick be seen at once with a view to effecting a settlement. In the meantime Alexander Berkman, the anarchist, who had no relation with the strikers, had attempted to assassinate Mr. Frick, and when the gentlemen who undertook the mission of reconciliation reached him with the message from Mr. Carnegie, they found him confined to bed.

Addressing a meeting of The National Civic Federation some years ago, Mr. Carnegie told a story which is illustrative of his attitude toward his men. Burgess McLuckie, one of the Homestead strikers, disappeared after the riots to avoid arrest. Sometime afterward Professor van Dyke, of Rutgers College, told Mr. Carnegie he had found McLuckie working as a laborer in a mine at Sonora, Mexico. Mr. Carnegie asked Professor van Dyke, upon his return to the West, to offer McLuckie any help he might need. "You don't know," said Professor van Dyke

NOTABLE CONFERENCE, INCLUDING 200 LABOR REPRESENTATIVES, HELD IN MR. CARNEGIE'S NEW YORK HOME IN 1907 UNDER THE AUSPICES OF THE NATIONAL CIVIC FEDERATION

Great Leaders of the Union Labor Movement

By W. C. ROBERTS

COMPILER OF THE AMERICAN FEDERATION OF LABOR HISTORY, ENCYCLOPEDIA AND REFERENCE BOOK

MANY men have left the impress of their personality on the labor movement of America. Any one who will read, as I did, the thirty-nine annual proceedings of the American Federation of Labor will find that the names of a score or more of delegates stand out like stars in the labor firmanent. They have stood side by side with Samuel Gompers in every critical situation and have led the trade union movement along a path in which it has been protected from its natural enemies as well as from foes within.

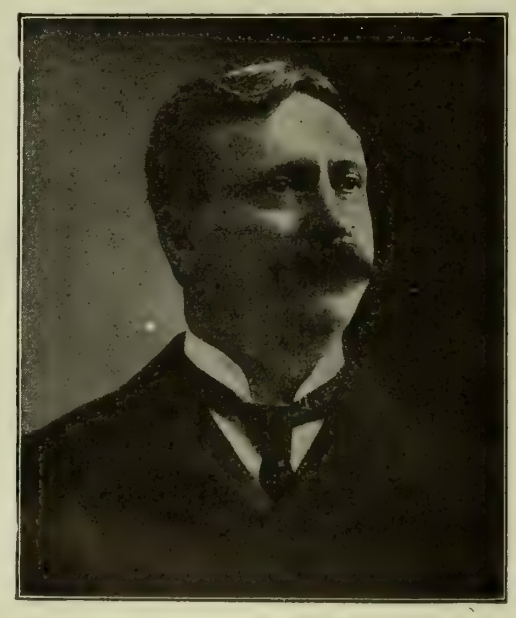
These men are of strong character. They did not always agree with Mr. Gompers, or he with them. But with all of them the battle was for the good of the organized labor movement, and in their discussions they always sought to find the best way to obtain better conditions.

Few people realize that the big work in the American Federation of Labor conventions is in committees. The committees must scan every word of the resolutions presented in order to prevent the adoption of some subtle and dangerous proposition. Resolutions are sometimes clothed in beautiful language, but hidden within them are "jokers" that, if adopted, would endanger the very life of the organization or at least make it the laughing stock of its critics.

In the thirty-nine years since the American Federation of Labor was organized it has been the custom for President Gompers to be the spokesman for labor. Those who have aided him and worked in harmony with him in advancing the fundamental principals of trade unionism sat silent willingly, for their only desire was to obtain results, not personal prestige. They thought only of the cause of labor, not their own advancement.

But it is a great cause they were part of and in which they were selected to lead. And they knew whatever President Gompers had to say was what they would say. It is this frame of mind of the builders of the American labor movement that has made the American Federation of Labor the most remarkable organization that ever existed. No other organization ever met as many formidable obstacles and overcame them. No other body of men and women has been attacked so insidiously and viciously by those who would make it impotent, and who lure it into paths leading to disaster.

The struggles of the American Federation of Labor for a higher standard of living for the people of the nation, its battles for remedial laws that would benefit all the people, its loyal stand when the freedom of our country was threatened by a resourceful and dangerous enemy, constitute a most interesting history.



Through all these crucial struggles were many men who stood as the Rock of Gibraltar against diverting the trade union movement into channels that would make it detrimental to not only its members but all the people. History will remember these men's persistency in fighting for the right, their unprecedented sacrifices and their unswerving principles. The purpose of this article is to present some of these big, brainy, energetic statesmen of labor—men who, had they been public officials, would have made a record unsurpassed by any who have served their country in public office.

They made history not only as officials of international unions, but as members of committees which analyzed and passed upon all propositions presented in American Federation of Labor conventions. Their unceasing work has been of incalculable value. Their advice has been shown to be right, while the principles they have advocated, which the conventions indorsed, have proved enduring.

It is impossible to refer to all chairmen, secretaries and members of committees who served since the formation of the American Federation of Labor. But the Atlantic City convention emphasized the value of those who know the labor movement thoroughly, for they had a tremendous task to perform. The following are a few of the great men of labor who served as chairmen or secretaries at that convention and whose knowledge and ability gave them a discerning insight into the resolutions presented:

JAMES DUNCAN

President Granite Cutters' International Union and First Vice-President of the American Federation of Labor

JAMES DUNCAN, familiarly referred to by his friends as "our Jim," has been one of the bulwarks of the labor movement. Strong in character, a splendid orator and a firm believer in his convictions, Duncan has been an imposing figure in the struggles of the labor movement for recognition. His sledge-hammer verbal blows against all labor heresies have many times killed the propaganda of those who would destroy the labor movement for partisan political purposes. His courage is phenomenal, as he never sits silent when an attempt is made to endanger the labor movement.

Duncan is a granite cutter. He joined the International Granite Cutters' Union in 1881. In 1895 he became its general president, and has held that office continuously since. Next to President Gompers he has the longest record of representing his union as a delegate in American Federation of Labor conventions. His first convention was in 1886. In that session he established himself as a leader of men. Almost his first act was to present a resolution favoring compulsory education, a principle he has vigorously supported ever since.

In 1894 at Denver he was elected second vice-president and in 1900 was made first vice-president, a position he has held since continuously. One of the dangers recognized in the early days was the attempt on the part of certain men to betray the labor movement into chimerical schemes that would interfere with trade union activity.

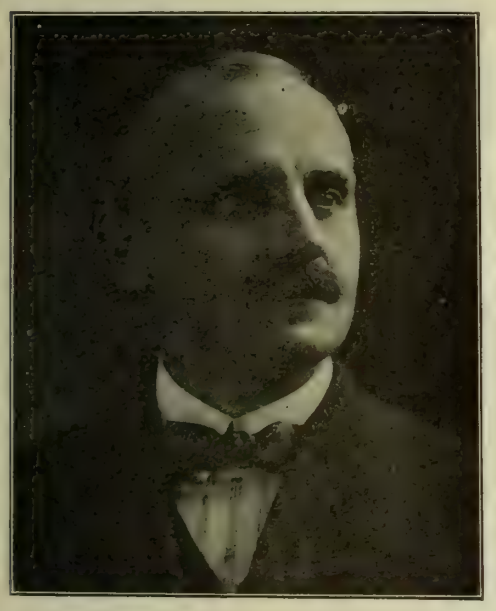
Early in the history of the American Federation of Labor, Duncan won distinction by his cleverness in debate, his logical reasoning and his efforts to prevent what were termed "ghost dancers" getting a stranglehold on the organized labor movement.

Duncan's ability was recognized by President Gompers in 1887, when he was appointed on the constitution committee. But his splendid ability to analyze propositions presented for consideration by conventions soon made him chairman of the resolution committee. After making a report on a resolution written for an ulterior purpose and the resolution committee had reported adversely, it was his duty to explain the reason. Those who have attended conventions in the last twenty years could not fail to observe that after Duncan had made the explanation for the defeat of a proposition he invariably was upheld.

During the New Orleans convention, when it was feared the socialists would capture the convention by a trick resolution, Duncan made a remarkable speech in opposition which resulted in its defeat. He spoke for three hours and mentioned every labor movement in history that, after gaining its ends, had been sacrificed by ambitious leaders on the altar of partisan politics.

Probably the Atlantic City convention proved the most strenuous to the resolution committee. There were 277 resolutions presented, many of them favoring every impractical idea conceived by the radical delegates during the unsettled period of the war. The committee held continuous day and night sessions for more than a week. But out of the mass of good and bad resolutions a masterful report was made that, when adopted, showed the labor movement of America has no desire to change its policies for some of those now endangering the labor movements of Europe.

When the Great War was looming up before the people of the United States, Duncan was one of the men who prepared the famous declaration that while the labor movement was against war they would, if war was declared, offer their "services to our country in every field of activity to defend, safeguard and preserve the republic of the United States of America against its enemies."



Duncan has had a part in the world labor movement. In 1898 he was fraternal delegate to the British Trade Union Congress. In 1911 he represented the American Federation of Labor in the convention of the International Secretariat at Budapest, Hungary. In 1913 he was selected a member of the United States Commission on Workmen's Compensation, and in 1917 he was appointed by President Wilson, with five other public citizens, as envoy extraordinary to Russia.

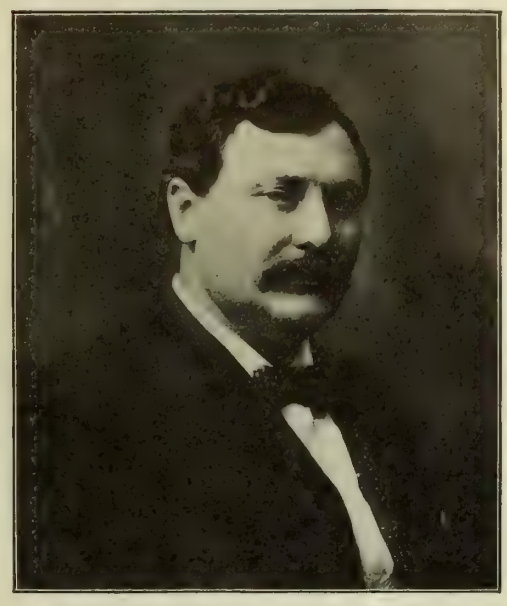
While wielding a powerful influence on the adoption of principles to benefit the work of the American Federation of Labor, he has been editor of the *Granite Cutter's Journal* since 1895. His writings have been quoted from coast to coast and have been of great good in presenting the hopes and ambitions of the labor movement.

Early this year Duncan, John R. Alpine, Frank Duffy and William Green, with President Gompers, were selected by the executive council as a commission to attend a labor conference in Paris while the Peace Conference was in session. The mission was authorized by the Buffalo and St. Paul conventions to protect the interests of the American working people. While in Paris, President Gompers was chosen a member of the Commission on International Labor Legislation by President Wilson, and the commission made him chairman. The other members of the American labor commission acted as advisors to President Gompers in his difficult task of securing the adoption of principles acceptable to the labor movement of this country.

JOSEPH F. VALENTINE

President Iron Molders' International Union and Second Vice President American Federation of Labor

Education has constituted one of the most important subjects studied in American Federation of Labor Conventions. In fact, the committee on education has had a difficult work to perform, as no question requires deeper thought or more careful findings. For years it has had as chairman Joseph F. Valentine, who has submitted most far-reaching and adequate reports of methods to increase knowledge and to eliminate illiteracy.



Valentine as president of the Iron Molders' International Union has had an exceptional experience. No harder worker for his fellowmen can be found anywhere. It is not generally known that he is so enthusiastic over the problems he has to solve for the molders that he gives his entire time to their interests. Night and day he can be found at work in his office, in his home, or on the train while traveling.

The Iron Moulders secured the first trade agreement in this country and their gains have been secured through business-like methods. Mr. Valentine's record has been marked by a calm confidence and decisiveness of thought and action.

Early in his labor experience Valentine discovered that the children of workingmen were not obtaining the education they should have. Owing to small wages, fathers were compelled to place their children in industry. This disturbed Valentine, who set out to seek a remedy for the evil. He bombarded legislatures and other legislative bodies to bring about greater education. This experience he brought to the committee on education of the American Federation of Labor, and it is by most of this that he has been able to advance so many practical plans for both elementary and industrial education.

WILLIAM D. MAHON

President Amalgamated Association of Street and Electric Railway Employees and Fifth Vice President of the American Federation of Labor

Nearly thirty years ago a driver of a horse car in Columbus, Ohio, shook the snow from his clothing and the icicles from his mustache and declared he never would return to his job until the street railway employees of the land were treated like human beings.

For the next year he traveled from town to town to organize the carmen. Sometimes he rode in a Pullman side-door sleeper, on the rods, or in an uncomfortable seat just behind the engine. But he persevered, and now W. D. Mahon is president of an association of nearly 100,000 members, who are receiving something approaching a proper wage.

Bringing the organization up to its present standing was not accomplished without the most difficult kind of agitation. Mr. Mahon was fighting the most resourceful opponents who made it exceedingly disagreeable for him for many years. Gradually his opponents began to recognize in Mahon a spirit that would not give up. They saw he was determined to win his struggle for better conditions, and gradually they began to deal with him in arranging wages and hours of employment for the carmen in the various cities.

Mr. Mahon is one of the men who year after year has helped make the labor movement better and better. As a member of some committee or its chairman, he has striven to give the best that is in him for the benefit of those who need helpful advice and assistance.

Mahon is of a jovial disposition, one of the best story tellers known, and the life of any party. In times of trouble he meets all obstacles without flinching. He is considered a most clever press agent for his cause during a strike. He does not know what the word "fail" means. No matter how bitter a fight may be, he never loses his good humor or his head. He is regarded as a marvel by the big men he has opposed in the financial field. As a clever manipulator of peculiar situations he cannot be equaled.

Mr. Mahon has proved an exemplary administrator, intelligent, courageous, persevering, and in his own organization is fearless in enforcing discipline.

During many years of trials and heartaches—and he must have sometimes thought he might never succeed in his object—Mahon learned many lessons. These taught him what was best for the labor movement, what should be done to protect it from its enemies and what should be the treatment of a traitor from within.

MATTHEW WOLL

President Photo-Engravers' International Union and Eighth Vice President of the American Federation of Labor

Many young men grew up in the labor movement almost unnoticed until some great issue brought them and their talents to the front. In the labor movement we have been accustomed to see only those who have been with us for many years, who have led the struggle against wrong and who became so well known that newcomers by contrast stand in the background.

Such may be said to be the case of Matthew Woll. When he attended his first convention he was placed on the adjustment committee and soon became secretary. He demonstrated so much ability that he was appointed secretary of the committee on executive council's report and also on the committee on interational labor relations. Many subjects that bear upon the fundamental principles of the American Federation of Labor are referred to this committee and

the utmost care is necessary to separate the wheat from the chaff. As secretary of the committee on executive council's report in 1916 he wrote this declaration, which was adopted by the convention:

"It seems to be the settled purpose of interests antagonistic to the freedom of men and women who labor to persuade and then use the judiciary to misconstrue constitutional guarantees and thereby nullify legislative enactments so as to leave but one remedy. We therefore recommend that any injunctions dealing with the relationship of employer and employee, and based upon the dictum 'Labor is property,' be wholly and absolutely treated as usurpation and disregarded, let the consequences be what they may."

In the 1919 convention at Atlantic City, all the shrewdness coming from years of analyzing resolutions stood Woll in good stead. The committee on executive council's report was overloaded with vague ideas presented by delegates, and in their consideration and preparing of decisions thereon Woll made an extraordinary record.

In the trying times of the war the untiring ability of Woll was given greater opportunity to function. While President Gompers was in Europe this year, Woll acted as editor of the *American Federationist,* a difficult and most trying position. He also represented President Gompers on the National Council of Defense, and when Victor A. Olander became stricken with illness he took his place on the War Labor Board.

Recently Woll took part in a conference on War Risk Insurance, in which some of the most able men in the country participated. His suggestions were carefully considered and adopted.

Since then he has furnished several strong articles on war risk insurance that have attracted the attention of many public men who are looking for the right way to conduct that most meritorious institution.

While performing all these tasks Woll has not neglected his international duties. The photo-engravers have advanced rapidly because of his persistence for their welfare. As editor of *The Photo-Engraver* he has been able to advance many propositions of a national character. As editor of the *American Federationist*, a position he is still filling, he has pointed out many defects in the labor policies followed by irresponsible members and in the advice given by self-appointed regulators of the organized labor movement.

Being ingrained with the policy that has made the American Federation of Labor so great, he was a most acceptable candidate as fraternal delegate to the British Trade Union Congress in 1916. When he returned he was more determined than ever in his support of the fundamental principles of the American Federation of Labor.

During the war he was a bitter critic of the pacifists and all those who would hamper the government in prosecuting the crusade for world freedom. His editorials have been widely copied. In fact, so well known has he become that every moment of his time that he can get away from his special duties is occupied in conferences and speechmaking to widen the influence of the trade union movement.

Woll is still a young man, has studied law and is in a position to do wonderful work for the labor movement. As older men pass away there must always be someone to take their place. It was fortunate for the movement that such a resourceful character as Mr. Woll has dedicated his life to the cause of labor.

DANIEL J. TOBIN

President International Brotherhood of Teamsters and Treasurer of the American Federation of Labor

After the great panic of 1893-6 the failure of employers to increase wages as their prosperity improved caused a wave of labor organization to sweep over the United States, especially in the great industrial centers. Early in the 1890's the boom was tremendous. In cities like Chicago workers in every kind of occupation organized so they might make demands for a proper wage. While there had been unions of teamsters they were not organized on the right plan. Owners of teams were admitted. The Chicago teamsters started union after union, but finally in 1901 had nearly 30,000 members. They then spread over the entire country like wildfire.

In 1905 a great strike was called in Chicago, which lasted one hundred and five days. It was a drawn battle. Both sides had carried a chip on their shoulders before the strike. This changed afterward and from that time on few strikes have occurred. But the teamsters of the United States after that strike found a new leader who sent them forth on the right path and in a few years built up one of the most remarkable organizations in the country.

The leader who has done so much for the teamsters by his generalship is Daniel J. Tobin. He is a common-sense fighter for not only his own fellow workers but for all others. He has been of great support to the policies preached and followed by the American Federation of Labor.

When the executive council met to select a fellow delegate to go with President Gompers to the Amsterdam conference, Tobin was chosen. He proved a worthy champion of all that the American labor movement stands for. When the German delegates sought to show that the war was in the interest of commercialism, his voice was raised in protest and it was heard on this side of the water.

Because of his knowledge of the necessary rules governing labor organizations, Tobin has been made chairman of the committee on law of the American Federation of Labor conventions. His reports have sought to add only that which would be good to the constitution.

(*To be continued*)

Andrew Carnegie—the Friend of Labor

(*Continued from page* 5)

to McLuckie afterwards, "whose money I was told to help you with." He did not. When he was told, McLuckie in a slow, earnest voice said: "Well, that was damned white of Andy." "When I heard this," said Mr. Carnegie in recalling the story, "I suggested to my friend van Dyke that it wouldn't be a bad epitaph to grace one's tombstone."

Mr. Carnegie's disposition, whenever labor difficulties came up, was to work for an agreement rather than call in new men to replace others. In an article published in the *Forum*, in 1886, he declared himself thus:

"To expect that one dependent on his daily wage for the necessaries of life will stand by peaceably and see a new man employed in his stead, is to expect much. . . . In the case of railways, and a few other employments, it is, of course, essential, for the public wants that no interruptions occur, and in such case substitutes must be employed; but the employer of labor will find it much more to his interest, wherever possible, to allow his works to remain idle, and await the result of a dispute, than to employ the class of men that can be induced to take the place of other men who have stopped work. Neither the best men as men, nor the best men as workers, are thus to be obtained. There is an unwritten law among the best workmen, 'Thou shalt not take thy neighbor's job.' No wise employer will lightly lose his old employees. Length of service counts for much in many ways. Calling upon strange men should be the last resort."

One of the most notable gatherings of representative employers, labor leaders, professional men, educators and publicists was held in Mr. Carnegie's home, in New York City, in the summer of 1907. The purpose of this gathering, which was held under the auspices of The National Civic Federation and which was attended by over two hundred labor representatives, was to discuss means of improving conditions of labor, the relations between employers and employees, to ascertain means of lessening industrial strife and to promote industrial world peace. That gathering was an inspiring one and no one showed himself more interested in the welfare of workers throughout the world than Mr. Carnegie himself. The speakers of that evening included Mr. August Belmont, then president of The National Civic Federation; Archbishop Farley, Dr. Nicholas Murray Butler, president of Columbia University; Doctor Lyman Abbott, the Hon. Seth Low and Mr. Carnegie. Among the representatives of labor present at the meeting was "Big Bill" Weihe, who had led the Homestead strike. Mr. Weihe came to New York to attend the meeting in response to a special invitation and his meeting with Mr. Carnegie was a thrilling moment. It was the first time they had met since they had seen each other in Pittsburg before the Homestead strike. "Big Bill" Weihe, brawny-muscled and fully six feet tall, grasped the hand of Mr. Carnegie, who seemed little of stature beside him. The eyes of both lighted with affection, and the hand-shake was long and hearty. Both Mr. Carnegie and "Big Bill" Weihe had a good time that night talking of old days.

What Mr. Carnegie had to say in his brief speech of welcome concerning industrial peace was characteristic of his great vision and true wisdom. "It is a fundamental point in law that no man shall sit as judge in his own cause," declared Mr. Carnegie. "So it should be with trades unions and employers. Neither the men nor the employers should assume to sit in judgment on their own case, because neither sees both sides of the question. It is very rarely, indeed, in my experience, that one party is entirely right and the other party wholly wrong. You must get a disinterested party to judge between them, and all will be well.

"That same principle applies to nations. Nations should no longer be allowed to disturb the general peace of the world, because all nations are now interdependent and much concerned, materially as well as morally, in the preservation of peace.

"So it is in the industrial system. No branch of employers should be allowed to sit in judgment upon their own case and disturb the operations of the community in which all are interested. And the man or the nation that refuses to submit his judgment to disinterested parties is prima facie in the wrong. The man says: 'What, my honor! Shall I allow a man to insult me and not strike back?' No man ever insulted, dishonored, another in the world. No nation can dishonor another. All dishonors from which we suffer are self-inflicted. The principle of arbitration is what laborers should stand for; is what employers should stand for.

"It gives me a special pleasure to meet the representatives of labor. When I look back I think how much pleasure I have experienced with my interviews with workingmen. I could tell you many stories about strikes, and I wish to say this word: It is not wages, as a rule, that cause strikes—no, it is the lack of recognition on the part of the employer for his men. I remember a serious point when we had a committee of sixteen and a committee of thirty-four, and we presented a sliding scale, and they wanted to see me. I was at Pittsburg. Billy Edwards rose. 'Mr. Carnegie, that scale upon the whole we don't object to; that is a fair scale, but what we object to is that it is not rightly divided. Now, Mr. Carnegie, you take my job.' I said, 'No, Mr. Edwards, Mr. Carnegie takes no man's job.' They began to laugh, and

If Bolshevism Came to America

RUSSIA'S MONSTROUS OBJECT LESSON IN APPLYING PROGRAM ADVOCATED IN UNITED STATES BY SOCIALISTS AND OTHER RADICALS DESCRIBED BY FORMER U. S. CONSUL TO RUSSIA

By T. EVERETT HARRÉ

IT was a cloudy, penetratingly chill, dour day in April of the present year, the twenty-third. Accompanied by Judge Paul Blumenthal, presiding judge of the Bellebei court under the Kerensky government, and several newspaper correspondents, John A. Embry, United States Consul at Omsk, Siberia, on his way back to the United States through Russia, visited the town of Bellebei and its environs, in Western Russia, to hear accounts from eye-witnesses and victims, and to see himself the aftermath, of Bolsheviki atrocities and outrages. Bellebei, a town of 12,000 inhabitants, had been captured by the Bolsheviki in December, 1918, and had been delivered from the grip of Lenine's Reds by Kolchak's Siberian armies only eight days before Mr. Embry's arrival. Leaving a church, where the Bolsheviki had broken the sacred icons, desecrated the pictures of Christ and the Madonna, and where they had installed a free motion picture show for the benefit of the vicious and criminal Red Guards, playing obscene tunes on a gramophone, Mr. Embry and his companions saw a crowd going into a wood some half mile distant. They were told, in response to an inquiry, that in a pit in the woods there had been discovered that morning a large number of victims of the Bolsheviki, who had been murdered without trial, and whose bodies were uncovered by the melting snow.

Copyright, Underwood & Underwood.

JOHN A. EMBRY, FORMER U. S. CONSUL AT OMSK, SIBERIA, AND MRS. EMBRY. SHE WAS MLLE. NADEJDA DOBROVELEKI, DAUGHTER OF GEN. MICHAEL DOBROVELSKI, AND SUFFERED MUCH UNDER THE RED RULE.

Called recently to testify before the New York Legislative Committee investigating disloyal and seditious activities, Mr. Embry, who had just arrived from Russia, recounted what he had heard and what he had witnessed—a story revealing Bolshevism in its stark and grisly workings, and graphically demonstrating, through that hideous and appalling object lesson, just what it is which Socialists, revolutionary radicals and various pseudo-intellectuals are at the present time advocating through propaganda in the United States.

On that dismal day in last April, standing with his companions on the verge of the pit, Mr. Embry beheld—fully revealed through the melting snow, their bodies still perfectly preserved by the cold—the bodies of twenty men and women. They looked as if they had been slain only a few hours before. Describing that awful spectacle, Mr. Embry said: "The men for the most part had their skulls crushed, smashed, and the brains were lying on the snow. The faces were mutilated by gun shots at close range. On the larger pile of dead bodies the topmost figure was that of a young girl, seventeen or eighteen years of age. Although her face was not mutilated, there was an ugly gunshot wound in her left breast which was uncovered and exposed to the gaze of the crowd. Her left hand was folded across her breast, and the third finger was amputated at the second joint, and the ring which doubtless she had worn was not to be seen." Mr. Embry admitted that the spectacle brought tears to his eyes.

Before turning away he hastily took a photograph of the pit, a copy of which was given as evidence to the Lusk Committee. That picture, he said, had been offered to various newspapers as proof of what was commonly and everywhere done where the Bolsheviki had power, but American newspapers refused to print the picture. It was too horrible.

MAIN OBJECTS TO LOOT AND KILL

In Bellebei, when they gained possession of the town, the Bolsheviki, according to Mr. Embry, made a criminal, whom they released with all other convicts from prison, one of their commissionaires. They looted the city, seized private property, ejected people from their houses and apartments, in which the unsavory Red leaders were luxuriously installed. In the parlor of the president or head commissionair of the so-called Bolshevik Council of Domestic Economy, whose chief function was to loot, were found three pianos which had been stolen from other people's homes. Upon the setting up of the Bolshevik Executive Committee, which as everywhere else assumed autocratic absolute power, the president, Belt by name, had brought from a hospital in an invalid chair the president of the former local government. Helpless, unable to move, this invalid was heartlessly shot by Belt himself in the public square. A so-called Extraordinary Investigating Committee was set up which had the absolute power of executing without trial any man, woman or child charged with being counter-revolutionary. Its special function was the imprisonment and killing of all suspected of being opposed to Bolshevik rule. Two objects, said Mr. Embry, were pursued by the Bolsheviki wherever they gained power with mad, fanatic, indefatigable zeal. These two prime objects were the seizing and looting of property and the wholesale assassination of people, especially the educated and intellectual, whom the malignant, envenomed forces of "internationalism" had reason to fear or hate. "In no case," testified Mr. Embry, "did I hear of any execution by the Bolsheviki which had any just cause, except in the few cases where a Bolshevik Committee or a Bolshevik organization of some kind would get after another Bolshevik organization because there were conflicts of interests, and sometimes they actually executed their own members because two conflicting parties would have a battle for power in the organization, and whichever one was the stronger would have the opponents put to death. They fought for the spoils in just the way that a pack of wolves fight for a corpse."

Recounting the outrages described to him by eyewitnesses in Bellebei, Mr. Embry continued:

"One of the most striking was that of sixteen hostages brought from Ufa, a city of 75,000, about 150 miles east of Bellebei. Among them was a high school girl of about 17 years of age. These sixteen hostages, according to the statement of the judges (residents of Bellebei who were among Mr. Embry's informants), were placed in the county jail. Nobody knew why they were in jail. Nobody knew what the charges were. They were held in jail until the jail became overcrowded. One day the Bolsheviki of Bellebei decided to make room in their jail. These sixteen helpless victims were brought out into the pubic square and shot.

THE NATIONAL
Civic Federation Review

Office: Thirty-third Floor, Metropolitan Tower
1 Madison Avenue New York City

RALPH M. EASLEY, Editor

Published Twice a Month Two Dollars a Year

The Editor alone is Responsible for any unsigned article or unquoted statement published in THE NATIONAL CIVIC FEDERATION REVIEW.

IMPORTANT PROBLEMS TO BE DISCUSSED SEPTEMBER 11 AND 12.

Granted that the public has a paramount interest in the continuous operation of our great Federal steam railway systems and our municipal traction, gas and electric light systems, is there any way by which that public can protect those interests? This is one of the outstanding questions confronting every citizen today. The nation faces this question through the possible tie-up of all the steam railway systems which may occur at any time that the demands of the employees are refused, while in New York, Brooklyn, Boston, Chicago and other large cities, the question has concretely presented itself through the temporary paralysis of the street railway systems.

It is easy to declare that it is a blot upon our civilization to permit these injustices, not to say crimes against humanity, to continue.

But this is not a new question.

Since the Debs railway strike in 1893, the street railway strikes in Columbus and St. Louis in 1898 and the Interborough strike in New York in 1903, the press, the pulpit, the platform orator and the statesman have been declaring that this intolerable thing must be stopped. Yet the strikes go on just the same, and, owing to the abnormal situation arising out of the war, there are a great many more of them now than before.

There is, at this time, another situation in which all agree that paramountcy of the public interests should be recognized, and that is involved in the question: "How far can the public safety permit the organization of its police, its firemen and other municipal employees to form striking unions?"

With this last should also go the companion question: "What methods has the public provided for its employees, federal, state or municipal, to redress just grievances in any way other than through the organization of a union?" The recent strikes of the firemen in Pittsburg, the municipal employees in Chicago and the threatened strike of the police in New York and in many American cities, as well as the actual strike of the police in London, all serve to bring this matter to the front for serious consideration.

In the case of quasi-public, as well as industrial employees, the compulsory principle has been tried and found wanting. The experience of Australia and New Zealand with compulsory arbitration and that of Canada with compulsory investigation in connection with municipal utilities, show that the answer does not lie in that direction.

One of the important questions that will be considered at the meeting of The National Civic Federation, September 11 and 12 next, is: "Can any new voluntary machinery be created which, even though it may not prevent all strikes and lockouts, will reduce them to a minimum?" In connection with this general topic, there will be discussed the question: "How can collective bargaining be most effectively promoted in this country?" It is conceded that in the United States and Great Britain, the two countries where employees and employers are best organized, despite disappointments and certain weaknesses, collective bargaining has been found to offer the most hopeful line along which progress can be made.

Many employers, in an effort to deal with the great unrest among their workers, have inaugurated plans with a view to granting them a voice in the determination of questions relating to hours, wages and general working conditions. These include all kinds of shop committee and joint council programs, one providing for organization on the Federal system of a lower house, a senate and a cabinet. Others, to meet this situation, rely upon profit sharing, bonus systems and stock participation plans. All these schemes have been coupled in the public mind with the general proposition for a greater democratization of industry.

Other employers criticise such plans on the ground that the organization of the men for such purposes is only a stepping-stone to their eventually becoming affiliated with the real trade union movement—that once the employees begin acting together in any kind of an organization, Mr. Gompers "will get them" sooner or later.

But the American Federation of Labor, at its recent annual convention in Atlantic City, passed a series of resolutions denouncing all such programs as employers' schemes promoted for the purpose of preventing the organization of their men into trade unions. The headings of the "Whereases" are: "Unfair Elections and Representation;" "No Democratic Organization Permitted;" "Intimidation of Committeemen;" "Expert Assistance Prohibited;" and "Company Union Lacks Power."

Which is right?

Employers and workers will discuss all phases of this subject at the Federation's meeting.

In dealing with the profit sharing and public utility subjects, the recent proposal for a participation in the management and a share in the profits by the railway brotherhoods, and other plans proposed for giving the employees a voice in the management of the railway systems, will be discussed.

How long can the present program of raising wages and shortening hours go on before it results in the utter collapse of production? The management committee of the British General Federation of Trades Unions declares that "November, 1919 to May, 1920 will be fateful months" and that "unless sanity returns and production increases, they will be tragic months." Is that warning not equally applicable to the industrial situation in the United States?

In addition to the discussion of the domestic problems referred to above, the Commission sent to Europe by The National Civic Federation to study industrial conditions will present at the meeting its report describing the relations between employers and wage earners in England and France.

THE HIGH COST OF LIVING

According to the Bureau of Statistics of the Department of Labor, the advance in the cost of food and clothing from December, 1914, to June of the present year in various cities was as follows: New York, 151 per cent; Philadelphia, 135 per cent; Boston, 137 per cent; Cleveland and Detroit, 125 per cent; Chicago, 157.67 per cent, and San Francisco, 134 per cent. The highest advance was in clothing and house-furnishings, and food came third. Throughout the nation people have become gravely concerned over the advance in price of the necessities of life; following the war the high cost of living has become one of the most acute and most vital problems of the time. With the Government considering legislative action to control prices, with the Department of Justice engaged in a nation-wide crusade against food hoarding and profiteering, with the Fair Price Committee working after a plan outlined by Attorney General A. Mitchell Palmer to employ pitiless publicity to keep prices from soaring, everywhere, in the largest cities and smallest communities, people are asking the question—What is the solution?

What is the solution? Is there any magical key which will at once, entirely and ultimately offer a solution to the problem? Or does the solution not lie in a scientific study of the causes of high prices and the application of constructive methods to restore life to a normal basis such as existed before the war was unleashed upon the world? There are many who say the world will not, and can not, be the same as it was before August, 1914, and they are right. Never was the world so shaken, so unsettled from its base, so fundamentally disturbed as it was by the catastrophe precipitated by Imperial Germany; never was there such a cataclysmic upheaval in all history, economical, social, spiritual. With the war over, a readjustment will come, a new co-ordination, an equalization in the economical, social and spiritual phases of life which were all utterly deranged during the long period of a devastating war. But as the war utterly ravelled the social life of the nations and upset life at its vitals, the swinging to a balance cannot take place in a moment, in a day, in a year. The process of recovery, of world healing, must come as do all processes of nature. No one save the idiotic, the fantastically idealistic, the hare-brained, save mountebanks and deceiving demagogues, will pretend to have the open sesame to the new order, the abacadabra which will restore a chaotic world to a millennium over night. That is, however, the blatantly proclaimed pretense of the revolutionaries, by which they seek to lead to still further disaster the long suffering masses of the world. That is the Mumbo Jumbo of the Bolsheviki, the fee-faw-fum propaganda of the Socialists. But intelligent people, and the sane majority of the working people of America, will not be beguiled by any promises of a miracle. They have seen too unmistakably what has been produced by Lenine and Trotzky's Aladdin's lamp in unhappy Russia. They know that the world will not be restored by any incantation, be it Bolshevist, Socialist or otherwise.

But we have problems, among them the high cost of living, with which we have to deal, a constructive solution of which we have earnestly to seek. That is the present task of the nations of the world, a task perhaps no less great, no less grave than was the winning of the war over the nation which sought to destroy the democracies of the world and the freedom of man's spirit.

Whatever affects that upon which physical life depends, whatever makes for the ease and happiness or for the difficulty and hardship of the home-life of men, is of the most vital importance as a matter of social peace or of social unrest. If the cost of living exceeds the earning capacity of a man he naturally becomes a prey to legitimate discontent. To any discerning mind there is no single cause for the high cost of living, and therefore there can be no simple single remedy. The causes are various. As pointed out by George W. Perkins in the *New York Times* of August 17, the inadequacy of, and lack of co-ordination in, the transportation of supplies and the utter lack of any system of centralization for storage and distribution in the great cities, constitute a great factor in keeping up the price of food. Mr. Perkins urges Federal control and legislation to bring about legalized and publicly controlled co-operation. The point of view of the farmers was expressed in a statement issued in Washington by T. C. Atkeson, of the National Grange, in which it is pointed out that the guaranteed price of wheat put on by the Government has kept prices down and not up, and that, because of a shrinkage of crops throughout the world, a removal of restrictions would bring about "such a skyrocketing of prices as to wreck the financial and economic fabric of the world. The price of subsistence is high," declare the farmers, "because the price of work is high. The way to cure this

hysteria is to quit howling and go to work. The way to cure the high cost of living is to do more work."

Increased wages, shorter hours, the taking of men out of industry for service in the army, the concentration of the nation upon the production of war supplies, have all tended to disorganize the industrial world and increase the cost of living. Yet as Mr. Theodore N. Vail declares in the *American Magazine*, people are better off under high wages and high prices than under low wages and low prices, and people today have better homes, wear better clothes, eat a wider variety of food and have more amusement than ever. The unwonted extravagance which follows any great boom in wages, according to W. M. Lewis, Director of the Savings Division of the Treasury Department, has been one of the contributing causes of existing conditions. "A veritable orgy of extravagant buying is going on," says Mr. Lewis, and as extravagance breeds profiteers, therefore economy by individuals will do much to lessen the evil.

Hoarding of food and profiteering, widespread and egregious, is also only one phase of the problem, and hoarders and profiteers, great and small, should be vigorously prosecuted. Government regulation of prices may ease the situation and help toward a final readjustment, but in working toward an approximate solution which will get at and remove as far as possible the fundamental causes, there will be needed the best minds of the nation—not the minds of destructionists, but the minds of those who helped to make America, who helped America toward the winning of the war. Even if the amelioration of conditions does not come over night there is no reason for dismay. And in working toward a remedy capital must help, labor must help, the machinery of the Government must help, and all individuals likewise must co-operate

SIGNIFICANCE OF NEGRO RIOTS

Whatever may have been the specific causes of the race riots in Washington, Chicago and other cities, in which a number of people, both white and black, were killed and hundreds injured, these lamentable disturbances cannot but impress all thinking people with the startling suddenness with which such outbursts may overwhelm a community and the harm that can be caused when the lawless elements of society are unleashed. It is hardly likely that the significance of these riots was lost to the Germans and the German sympathizers and revolutionary radicals is this country. The revolutionary radicals have already inaugurated an extraordinary and concentrated propaganda among negroes, with the purpose of swinging the millions of negroes in this country into the ranks of Bolshevism. Among the documents seized in the raid made upon the Rand School by agents of the Lusk Committee was a long memorandum outlining such a plan. The Germans and their sympathizers—who sought during the war to stir up the negroes of the South to resist the draft—have already aligned themselves with the forces of disorder, with the purpose of employing the "new weapons offered by Bolshevism" for disintegrating the nations which won the war and compelled Germany to sign the Versailles treaty.

According to the outlined plan for progaganda among the negroes which was found in the files of the Rand School, it is the intention of the radicals to transform the race consciousness and race hatred of the negro into class consciousness and class hatred. That the radicals fully appreciate what a powerful force the millions of negroes would constitute were they converted to the cause of Bolshevism was proven by this frank and significant document. And just what the country might expect if the negroes were to any large extent infected with Bolshevism and inspired to riots was demonstrated recently in Washington and Chicago.

According to a statement made by Attorney General A. Mitchell Palmer, the Department of Justice has possession of evidence showing that Bolshevik propaganda has been conducted among negroes of the South. According to evidence gathered by the Lusk Legislative Committee, agitators are being sent among negroes by direct orders from Trotzky, and much of this propaganda has been financed with money sent from Russia. I. W. W. demagogues were sent to Chicago from New York more than a month ago, and all these agitators have sought especially to antagonize the negroes against the American Federation of Labor. A negro magazine, published in New York City, and which is supposed to be devoted to educational and welfare work among the negroes, has of late given itself to teaching subtle forms of radicalism. Another negro monthly, now making a drive to raise $50,000 and which announces a circulation of 33,000 copies, has openly urged the negroes to revolt, and in a recent issue declared: "The red tide of Socialism sweeps on in America. . . . Soviet government proceeds apace. It bids fair to sweep over the whole world. The sooner the better. On with the dance." In this same magazine was an editorial "Break Up the A. F. of L."

According to a report in the *New York Tribune*, William Monroe Trotter, the negro editor of the *Boston Guardian* and leader of the Colored National Equal Rights League, declared at a meeting of 2,000 negroes that unless white Americans behave themselves they will find out that when they taught the colored boys to fight they started something they will not be able to stop. The inculcation of such a spirit among the negroes, or among any class for that matter, is fraught with serious menace, and if it is allowed to continue the Chicago and Washington riots may be only the beginning of greater troubles.

THE FORTY-EIGHT MILLENNIAL MIRACLE WORKERS AGAIN ON THE JOB

The editor of THE NATIONAL CIVIC FEDERATION REVIEW has received a circular letter from a so-called Committee of Forty-Eight, asking if he agrees that "The time has come for the people to meet together and discuss the real facts of American life, the issues which vitally affect the welfare of individual citizens, and decide on some line of action which will meet the situation."

The reason for this meeting to "discuss" and "decide" things is that, to quote from the circular:

> We have come to be one of the worst ruled, one of the most completely controlled and dominated governments in the world—no longer a government by conviction and the vote of the majority, but a government by the opinion and duress of a small group of dominant men.
>
> This control and dominance of the few has increased. Two years of ruthless censorship has added to its strength. The American press has not only refrained from printing the truth but has wilfully misinformed the American people. A small group of dominant men who control credit dictate the decisions of both political parties, and either directly or indirectly censor and inspire the news.

Enclosed with the circular is a pamphlet giving the purpose of and the reasons for the Committee of Forty-Eight. Its indictment of society, the Government and everybody and everything in general is made up of stock diatribes so familiar in the pacifist, socialist and pro-German literature, and even harks back to the old days of Populism. It greatly stresses the ills of the "laborer" and the "farmer," stating in one paragraph:

> The very classes whose labors in factory and field are the basis and substance of our economic power, find no effective political medium through which to express their economic demand, but by deceptive diversions of our party-system are denied their proper representation in the law-making bodies of the nation.

This great solicitude for the factory and field worker is readily explained when one notes the many sturdy and brawny farmers and mechanics on the General Committee—given on the letterhead as follows:

ROBERT W. BRUÉRE	ROBERT MORSS LOVETT
LINCOLN COLCORD	ALLEN MCCURDY
OTTO CULLMANN	DUDLEY FIELD MALONE
WILL DURANT	GEORGE NASMYTH
WILLIAM P. EVERTS	MARY PATTISON
GILSON GARDNER	GILBERT E. ROE
JOHN HAYNES HOLMES	MARY K. SIMKHOVITCH
J. A. H. HOPKINS	GEORGE P. WEST
MARY H. INGHAM	ARTHUR G. WRAY
HORACE M. KALLEN	CHARLES ZUEBLIN
OSWALD W. KNAUTH	WILLIAM F. COCHRAN, Treasurer

There is also in the pamphlet a list of some 225 signers of this call for "Saving the Nation," which incidentally furnishes salaries for certain brain workers out of jobs. It is unfortunate that there is not sufficient available space in the REVIEW columns to allow for the complete list, as it is a gem and ought to be filed among the "Who's Who" of those ardent and industrious folk who never get anywhere. Like the General Committee, its membership shows an utter lack of men who labor with their hands, in the field, or the shop. Their work is done mostly with their pens and their jaws. While the committee includes a few high-minded and loyal Americans who have no business in such a menagerie, it is composed largely of pacifists, socialists, Single Taxers, Bolshevists, England-hating Irish and Germany-loving Germans.

When the Committee of Forty-Eight declare that ours is "no longer a government by conviction and the vote of the majority," that "a small group of dominant men who control credit dictate the decisions of both political parties," and that "our country is menaced by the growing power of an autocratic and reactionary minority," it states what is baldly and absolutely false. With the direct primary and the Australian ballot system of voting, all the men and the majority of the women citizens of the United States have the privilege and the duty of participating in the selection of those who fill the positions of government provided by our federal and state constitutions, and if they do not avail themselves of this opportunity it is entirely their own fault. The truth is, however, that the American people do avail themselves of this privilege, but they do not see fit to place in positions of honor and trust any of the class of individuals who are so largely represented in the Committee of Forty-Eight. Will these political ghost dancers tell the American people what new methods they propose for enabling the voters of the United States to select their representatives in Congress, the legislatures and the municipal councils (the only places where legislation can be enacted) other than the direct primary or the convention and election under the protection of the Australian ballot laws?

Also, will the promoters of this "Happy Thought" movement, who are so strong for democratic methods and who are appealing for our "time, enthusiasm, advice and money," tell the public just how it was organized? Was a mass meeting called at Cooper Union in New York, for instance, and in the other large centers of population in the country, to select, democratically, this General Committee that is to "decide on a line of action" and manipulate the machinery of a so-called New Party? Or w s it created by a self-appointed clique in some purple Greenwich Village tea-room or in a back office of the *New Republic*, the *Nation* or the *Dial?* Come out, gentlemen, and give us some pitiless publicity as to the origin of this great, democratic, anti-autocratic, anti-government-by-minority, anti-ring, anti-everything movement!

"I'd Fight for America," says Stokes to Sinclair

J. G. PHELPS STOKES, who left the Socialist party to support the American cause in the war and who has come to be known as one of the ablest exponents of democracy in every phase of the contest against autocracy during the war and since, just has made public through the American Alliance for Labor and Democracy, his reply to a hypothetical question propounded to him by Upton Sinclair, California socialist and one of the editors of the *Appeal to Reason,* in the columns of which he asked the question which Stokes has answered.

Mr. Stokes informs Sinclair that if Sinclair wishes to continue the debate he will be happy to oblige the Californian.

This is the question put by Sinclair, which Stokes answers:

> Imagine, just for the sake of argument, that the American workers were to accomplish a revolution of physical force and set up a dictatorship of the proletariat, and then imagine that the capitalist governments of Great Britain and Italy and France and Japan were to say to the American working-class government: We demand that you shall abdicate and restore the old-time capitalist democracy to America. We will block your coast, we will invade your country from all sides and seize it, and set up American capitalist governments wherever we can, and meantime we will take your lumber and your coal and your iron to pay interest on the debts you owe to our capitalists—do I have to hesitate very long to decide what I would answer to the capitalist governments of England, Italy, France, and Japan? I wonder what my friend, J. G. Phelps Stokes, would answer under the circumstances?

Elsewhere in addressing Stokes, Sinclair says: "I admit that America has a democracy of a sort," though he thinks there might be much discussion about how complete it is. "We have, of course," he says, "never had a real democracy in America," adding, however, that he believes "America does sincerely believe in and intend a great deal more democracy than it actually carries into practice from hour to hour."

REPLY OF MR. STOKES

Stokes' reply to Sinclair follows in full:

> Mr. Upton Sinclair,
> Pasadena, Calif.
>
> Dear Upton:
>
> Thank you very much for sending me copy of the highly compounded hypothetical question which you addressed to me publicly in last week's *Appeal.* I received it this morning and am very glad indeed to answer at once, but since no single answer could possibly fit all the ingredients of so complex a question, I shall have to answer its several parts seriatim.
>
> You assume for sake of argument that several things happen: 1st, that the workers of America set up a dictatorship of the proletariat; 2nd, that such dictatorship would really be a "working class government"; 3rd, that Great Britain and other powers demand the restoration of "old time capitalist democracy"; 4th, that these aggressive foreign powers "invade our country from all sides and seize it," and restore the type of government now existing; 5th, that meanwhile they "take" our American lumber and coal and iron to pay interest on our alleged debts to them. You ask what your friend, myself, "would answer under the circumstances."—Would I line up with the dictators or their opponents? You intimate very plainly that you would line up with the dictators.
>
> I answer unhesitatingly as follows:
>
> "1st The majority of the workers in America are not proletarians, and never were proletarians and never will be proletarians unless such preachments as yours bring about complete chaos and ruination for the workers here, like that which prevails now in Bolshevik Russia. In that event everybody would of course be proletarians, unless perhaps the dictators and their henchmen. The workers of America cannot conceivably become fools enough, in my opinion, to be guided by such preachments, or to subject themselves to the dictatorship of any group whatever.
>
> "2nd Your assumption that the Bolshevik style of dictatorship is really a working class government, is, I am convinced, very far removed from the truth. And when I say 'I am convinced,' I do not speak idly. I do not believe there are many Americans who have followed the Russian situation more closely than I have.
>
> "Let me cite one or two examples out of many: When the *Workmen's International,* official organ of the Left Wing Mensheviki, declared on August 7th of last year that the Bolsheviki were 'attempting to bribe the proletariat,' and that they were 'driving the peasantry into the arms of the counter-revolution,' it must have been at least their opinion that neither the proletariat nor the peasantry were supporting the Bolshevist 'government,' very enthusiastically at that time; and when Zinovieff, Chairman of the Petrograd Soviet, declared shortly afterward, 'We must win over to our side 90 millions of the 100 millions of the population of Russia,' he must have meant that that task was still to be accomplished. (Zinovieff's statement as above appeared in the *Northern Commune,* official organ of the Petrograd Soviet, in its issue of September 19th, last.)
>
> "The Bolsheviki may, of course, have won a good many adherents since last September, but they have lost a good many, too; not through 'invasion' by Great Britain or other powers, but through the revolts of workingmen in almost every part of Russia. Vladimir Bourtzeff recently sent to friends in this country a list of seventy-five Russian districts where notable revolts of the workers occurred last year. The Bolsheviki have in fact lost since last September about one-third of the Russian territory that they controlled at that time, and they have lost nearly all of this at the hands of Russian workingmen, notably those in the armies of the native Russian leaders Kolchak, Denikine and Petlura. As General Vatsetis, Commander-in-chief of the Soviet armies, declared in his recent proclamation as published in the Left Wing organ here (*The Revolutionary Age,* of May 31, 1919), 'The numerous bands of White Guards and traitors [not foreigners], like hungry jackals, attack us on all sides and the struggle against them [not against the foreigners] gradually becoming more intense, has become a struggle of life and death.'
>
> "3rd I thoroughly approve of the workers of all lands responding to the very tragic appeals made over and over again by the democratic workers of Russia for aid in their desperate struggle to overthrow their dictators and to establish democracy in their government. If, when they have secured democracy, the Russian workers should voluntarily give all power to Lenine and Trotzky, or to some other dictatorial group, I should very greatly regret it, but should say 'Hands off! Let them work out their own salvation in whatever way they choose.' Until, however, the Russian workers have created the democratic machinery through which their will, whatever it may be, may be freely expressed and made effective, I say 'Hands off!' not to their friends who help them from other lands, but to their dictators.
>
> "4th If aggressive foreign powers should 'invade America and seize it,' I should of course do everything in my little power to oust them, and most gladly give my life, if need be, to aid in effecting that object. But if the foes of democracy in America should enter into a compact with some autocratic foreign power, as the Bolshevik dictators did, and with the aid of that foreign power arm 60 thousand Chinese laborers in this country and 100 thousand unemployed and all the inmates of the prisons, and thus seize or attempt to seize New York and Washington (as the Bolsheviki with German aid armed 60 thousand Chinese laborers who had been employed on the Murmansk Railway and all the unemployed and prisoners they could persuade to fight for pay, and with their aid seized Petrograd and Moscow), then I should certainly accept service, gladly, as a common soldier in the army of democracy and fight to the limit to overthrow such tyranny and to re-establish and maintain 'old time democracy'—capitalistic democracy if no better form were to be had—until such time as the workers of America could be brought to a realization that Democratic Socialism would be preferable, and until they would vote to put Democratic Socialists and their system of government in power.
>
> "5th If foreign powers or any other powers should attempt to seize or hold the natural resources of America, I, of course, should do everything in my little power to aid in ousting them. You should, I think, have observed by this time that I have not been altogether idle in this direction during the past eighteen or twenty years.
>
> Since you have given such very great publicity to your hypothetical question addressed to me, I am sure that in fairness you will do what you can to secure equal and similar publicity for this my reply.
>
> If you would like to continue the discussion, please believe me most happily at your service.
>
> Very sincerely yours,
>
> GRAHAM.

Andrew Carnegie—the Friend of Labor

(*Continued from page 8*)

I laughed, and Billy said, sitting down: 'We won't have any trouble settling this.' And we did not. It is astonishing what a joke will do to settle difficulties that we meet with in life.

"I want to express the genuine, heartfelt happiness of Mrs. Carnegie and myself for this opportunity of meeting the two branches, equal in every respect, who bargain with each other—the one for labor, the other for satisfactory wages; one just as welcome as the other, and both doubly welcome. It is something we will remember with great happiness all our lives, and it is another instance that I will look back to in after years, when I become an old man, and I will be telling some other audiences what a glorious time I had with the delegates of The Civic Federation Peace Evening. I thank you, one and all, for giving us the pleasure of meeting you here this evening."

Before dispersing, a flashlight photograph of the gathering was taken, and before the assemblage could rise, Mr. Carnegie, who was standing, waved his arm and began singing "Auld Lang Syne," in which everyone heartily joined. Mr. Carnegie, and others who were at that conference, have gone on "the great adventure," but the principles which were there discussed and which have guided organized labor remain. And likewise in his brief speech did the great captain of industry put into words an immortal truth which remains—that no man can dishonor another, and that no nation can dishonor another, that "all dishonors from which we suffer are self-inflicted."

The Labor Situation Abroad

(Continued from page 4)

common topics of negotiation, but he is exedingly cautious in going further than those ıbjects. He suggests as profitable to both sides, orally or financially, certain shop practices by nployers such as, interpreting to the workers ew rules or shop developments coming from ıe management, discussing and working out in onjunction with the workers educational matrs relating to shop processes and trade techique. He regards as open to question, howver, discussion of the filling of any vacancy by ıanagement and workers. Mr. Renold does not ink that workmen should choose their own oremen, and a "still more doubtful" point he eels, is "Education in general business quesons."

OWNER'S AUTHORITY REMAINS INTACT

It may be stated that at no point in his memoandum does Mr. Renold carry his proposed articipatory functions for the workers beyond he limits long practiced by wise employers, ith or without trade union recognition and asistance. Not on a single point does he part with uthority of ownership. American employers ave gone further than he without thought of haring with their employees the powers inolved in ownership and direction.

In New York, for instance, the Typographical Jnion and the printing employers' association ave a joint committee of six members to which discharged employee may appeal as against foreman or superintendent.

In John D. Rockefeller, Jr.'s "Industrial Contitution" for the Colorado Fuel & Iron Company, it is provided that "Employees at each f the mining camps shall annually elect from mong their number representatives to act on heir behalf with respect to matters pertaining o their employment, working and *living* condiions, the adjustment of differences, and such ther matters of mutual concern and interest s relations within the industry may determine."

In neither of these instances is "control by the workers" over the policy or nature of the busiess the principle contemplated. It relates, rather, to negotiation with equals in the labor market. Mr. Renold's sole object seems to be, when analyzed, the instruction of the unqualified in processes of production.

The third lift on the way to "workers' self-government" in Great Britain is promised to the hopeful in "government action through making effective the report of the Whitley Committee."

HISTORY OF WHITLEY COMMITTEE

A word of explanation is necessary here with regard to the Whitley Committee, whose exact designation was "The Sub-Committee on Relations between Employers and Employed" of the National Reconstruction Committee. It was appointed in 1916, and on July 1, 1918, made its final report. Briefly, it recommended the creation of "joint bodies for purposes of consultation and decision of matters of common interest." These voluntary joint bodies, representative of employers and employees, were threefold; (1) Works Committees; (2) Local District Councils; (3) Joint Standing Industrial Councils. The last named were "to consider conditions for an industry as a whole," the two others for shops and localities respectively. Three strata of wage-workers in which the government was to proffer a progressively paternal hand in assisting to form the councils were: The occupations in which trade unions were strong; those in which they were but partly organized, and those in which non-unionists were mostly employed. In this process of committee and council organization, the Ministry of Labor would make suggestions to both parties, giving general assistance in establishing councils, drafting constitutions, and "issuing relevant matter," besides itself "forming an official liaison in connection with every council."

Let it be affirmed at once that the Whitley Report embodies no recommendation whatever of putting wage-workers in charge of any authoritative part of business enterprise. It does not suggest any method in shop administration not known to American workers of the mechanical trades. The main principle advocated is, "granting to work-people a greater share in matters affecting their industry." Any ambiguity in the words "their industry" is cleared away in the sub-paragraphs particularizing the committee's recommendations. These recognize wages, hours and conditions of labor as proper subjects of negotiation and legislation. In the report reference is made to such questions as security of earnings and employment, technical education, industrial research, rewards for inventions, etc., which pass somewhat beyond ordinary shop agreements. They do not, however, go beyond demands often discussed by trade unionists, or methods followed by advanced employers, or rights exercised by workers individually.

ORGANIZATION PROGRESSES SLOWLY

Returning to the Whitley Committee organization for a moment, I may state that it contemplates the organization of employers and employees in all the occupations consenting, under government supervision and regulation where necessary. Up to May 1, thirty-three joint industrial councils had been organized, and constitutions drafted for nineteen other industries. Steps had also been taken to apply the Whitley Report to government industrial establishments, the civil service and administrative, professional, technical and clerical staffs of local authorities.

Evidently the Whitley recommendations have looked better to the lay public and small industries than to the big unions, as councils have not been formed in ship-building, cotton, railways, engineering, coal mining and steel. From the American viewpoint the Whitley Committee recommendations and the work done thereunder to date show excellent intention, elaborate preparation, but a rather scanty crop of results.

One of the prominent British trade unionists interviewed by the writer thus stated his interpretation of the facts regarding "voice in the management."

"It is doubtful whether any workmen really concern themselves with anything beyond sharing in workshop control, that is, control of working conditions and control of workshop production. So far as the foundation of the business is concerned, the arrangements made in the initial stages of starting the business, financing of the business, the seeking out of markets, whether they be home or foreign markets, these are matters that the average workman has never yet concerned himself with, nor does there appear to be any serious desire on his part to be troubled with matters of this description now."

AS THE SOCIALISTS SEE IT

How many of those who are clamoring for the control of industry by workers have stopped to consider how large a ripple on the industrial situation this would bring about were every industry that is susceptible to organization administered on that basis? The last United States census lists 38,000,000 males and females as engaged in "gainful occupations." Of these, 23,900,000 are engaged in agriculture, domestic, general, professional, public and clerical service, and in trade. It will be admitted that few wage-workers in this group are likely to take part in the management of the occupations in which they are engaged. This territory is little known either to trade unionism or work-shop control.

"WORKERS' CONTROL" NATURALLY LIMITED

A second group numbering 14,100,000, composed of persons engaged in extracting minerals, manufacturing and mechanical work and transportation, includes, besides wage-workers, employers large and small, the higher salaried employees, young persons learning trades and scattered craftsmen in small industries or in non-industrial communities. Making the generous assumption that one-half of these 14,100,000 are genuine wage-workers susceptible of organization, we would have only about one-fifth of the persons in gainful occupations (7,500,000 in 38,000,000) in classes in which the workers could possibly have a "voice in the management." How many of this possible fifth could be reached by the plan of "workers' control?" Could one wage-worker in ten, or twenty, or thirty? Surely these statistics show that democratization of industry, if it is to cover the country, requires some plan other than those suggested thus far.

TOO MANY ORDERS; TOO MUCH ADVICE

It is the opinion of the writer that the stage now arrived at through the tutorship of the British government and the establishment of its various councils and committees is less satisfactory than the present status of the employer and employed classes in this country. Both sides here know where they stand. In Britain, what with works committees, joint councils, industrial conference committees and the standing trade union agreements, too many voices call too many orders and proffer too much advice. The Parliamentary Committee's action relative to the whole scheme of administration of the Whitley Committee's recommendations brings the entire subject and policy back toward the American trade union basis. The committee, in a resolution, rendered this decision:

"The Parliamentary Committee cannot accept any form of joint negotiations either by Works Committees, District Councils, or National Councils which may be developed as a substitute for Trade Union organization."

This signifies that, no matter how numerous the methods for understandings between "capital and labor" provided by the government, the trade unions are to rely on their own strength to reach their usual purposes. In their conception of democracy in industry, no other factor equals in play and outcome the right of the dissatisfied laborer to quit work.

CHAOTIC BRITISH LABOR POLITICS

III.

FOR a good many years now, a small minority among the wage-workers of the United States has been continuously and vociferously urging the formation of a distinct labor party in this country along political lines. This proposal has come up frequently at annual conventions of the American Federation of Labor, and has always been unceremoniously voted down by the hard-headed representatives of the several million wage-workers assembled there, for these men know the history of the British Labor Party.

Very briefly summarized, it may be said that Labor's entry into politics in that country as a separate political party has brought confusion to the workers. It interferes with the progress of union organization, engenders enmities among union officials, carries far and wide the fever of political campaigning all the year 'round, has pushed labor representatives to unpatriotic votes on war measures in Parliament, brings to the party less than a fourth of the wage labor vote of the country and has eventuated with respect to efficient laws for labor's protection in a less satisfactory situation than exists in the industrial states of America.

PURELY A WAGE-WORKERS' MOVEMENT.

In the United States the labor movement is a wage-workers' movement, and they know without a doubt what fealty to their union requires of them. They are not bound to a labor party or to labor candidates. The power of their will goes by democratic processes from the thirty-odd thousand local unions to the annual convention of the American Federation of Labor, the final interpreter of American labor's policy and program. Pronouncements on political party matters there are unmistakable. By votes approaching unanimity the conventions have successively continued to decide against a wage-workers' party, either union or Socialist. The American movement is a trade union movement pure and simple.

In Great Britain among the most prominent leaders of the so-called political Labor movement are men and women who were never wage-workers. The trade unionists, supplying to the party nineteen-twentieths of the votes and a greater proportion of the contributions, mostly remain spectators to the play. From the outsiders comes a stream of proposals for the reorganization of society to which the majority of the wage-workers of the kingdom steadily refuse assenting votes.

Before the organization of the Labor Party in Great Britain, leaders in Labor's cause in that country were practically united in the unions for common ends, were mutually appreciative team-mates, usually impressed with one another's sincerity, each acknowledging the other's merits and deeds of self-sacrifice. To-day the situation is absolutely reversed, and the solidarity of yesterday has been transformed into confusion and back-biting indescribable. A few examples taken from the list of men prominent in the Labor movement in Great Britain in recent years will serve to illustrate the statement that has been made.

JOHN BURNS' CAREER TYPICAL.

Commencing with John Burns of the Engineers, we find that politics carried him away from the activities of his union, put him in Parliament as a labor representative, turned him over to the Liberal Party and took him to the presidency of the Local Government Board. On the outbreak of the war his sentiments divided him from the mass of his countrymen and he passed into private life.

J. Havelock Wilson, of the Sailors, his union record approaching forty years, variously designated in the reference books as a "Coalition Labor" or "Coalition Liberal" M. P., his majority over his opponent, a Labor candidate, was last December 13,089; in opposition to the Labor Party yet elected at the Trade Union Congress to the present Parliamentary Committee; for years a target for Socialists and extreme Labor partisans.

Alexander Wilkie, of the Shipwrights, a Labor M. P. and for twelve years a member of the Parliamentary Committee, is at present a member of the Management Committee, General Federation of Trade Unions, which body was two years ago excluded from joint committee work with the Trade Union Congress and the Labor Party. Then there is David Gilmour, of the Miners, General Secretary, National Democratic and Labor Party, now represented in the House of Commons by ten members. His party is on the other side of the House from the Labor Party.

One could give a long list of Labor men who are occupying prominent Government positions, such as the Right Honorable John R. Clynes of the Gasworkers, the Right Honorable George H. Roberts, head of the Ministry of Food, Sir David Shackleton, Permanent Secretary, Ministry of Labor, etc. The lack of unity in politics or otherwise as illustrated in the case of these prominent leaders, characterizes the situation in all grades of union membership throughout the country.

In November, 1918, the Labor Party, by a large vote, withdrew from the coalition with the Government and directed the eight labor men occupying high Government office to withdraw. Four only obeyed this command.

SOCIALISTS OUTVOTE TRADE UNIONISTS.

At a recent trade union congress a motion was presented declaring in favor of a distinct political labor party exclusively for the trade union movement. This was debated for the better part of two days. The burden of the argument of those favoring the resolution was that the "intellectuals" had done their best to capture the executive control of the trade union. The congress was warned against putting up as candidates "brilliant middle class speakers who tell you that they know the wants of the workers better than you do, because they have had a collegiate education and you have not." This motion did not prevail, because it was not favored by the Socialist delegates representing great numbers in the unskilled unions, who were pitted against a considerable body of delegates representing the skilled unions with a smaller membership. Savage attacks were made by the International Socialists on Colonel John Ward, of the Navvies, when, commanding a battalion of railroad workers in Russia, he was obliged to engage in battle with detachments of the Bolshevists. To his British critics he was a "butcher of the working people."

The one daily newspaper in London assuming to represent labor—its leading editor, George Lansbury, once a Labor member of Parliament but not a wage-worker—carries on a crusade of opposition to all the leading trade unionists not in agreement with extravagantly radical and pro-German views. When the terms of the Peace Covenant were published in May, the *Herald* printed such first-page headings as "Germany in Mourning," "Obstacles to a Real Peace," "Jingo Press Howls for Harsher and More Humiliating Exactions," "British Workers Join Herr Wolff in Indignant Denunciation of Peace of Violence," "Capitalist Peace of Fear." In the political field the British trade unionist hears it most positively asserted that "Labor's Daily Newspaper," the self-same *London Herald* is maintained by German bankers and Indian magnates.

LAST ELECTIONS A BLOW

The Labor Party was sadly disappointed in the results of the election last December. Claims had been made that it would return from 100 to 200 Members of Parliament. The principal extremists among the candidates, Snowden, Ramsay McDonald, Anderson, Jowett, Henderson, were defeated. The 59 members elected are by no means a solid block. Their published views on public issues continually vary.

The knife is busy. Old Labor Party opponents of the new National Democratic Labor Party allege that its candidates were in part financed by funds subscribed "through the *Morning Post* and other organs of privileged groups." The British Socialists, rent by dissension, some of them loyal to their country during the war, spill ink in calling one another names. The trade unionism of some of the 59 members is assailed by undoubted unionists. In the Annual Report of the General Federation of Trade Unions last year the General Secretary in defense said: "In my humble opinion the Federation is the only trade union movement we have in the country."

Judge of the state of mind of the average British trade unionist when he hears veteran labor officials declare that "these labor politicians of every stripe are forever talking for votes and acting for effect on their political fortunes," when his attention is directed to the fact tha while a few "intellectuals" supply issues an name leaders the trade union membership i the Labor Party is at least two millions, th socialist managers contributing fifty thousan names and the unions nearly all the money Sympathize with him when he hears one set o men declaring that it would have been bette had labor never entered politics while anothe set assert that labor never received the slightes consideration in the House of Commons unti its own representatives were there bearding th conservatives.

SOCIALISM'S 57 VARIETIES

If the common-or-garden variety of British trade unionist is inclined to associate with deep-down radicals, he will be obliged to choose between the Independent Labor Party, the British Socialist Party, the Socialist Labor Party, the National Socialist Party and the Socialist Party of Great Britain. The chips of the split-up and sawed-up old original Socialist Party are scattered all over the British Isles. To ascertain the merits of the differences between these Socialist groups the earnest sociological student would be required to give a month's reading to the bundles of their controversial printed matter and exercise the judgment of a Solomon.

Strange bed-fellows are found in the Labor Party itself—the Trade Union Congress, the Socialist and Cooperative Societies, the City Trades Councils, the local labor parties and the Women's Labor League. Among the fifty-nine Labor representatives in Parliament there are men of every shade of political opinion, from the very conservative to the violent revolutionist. Condemnation inevitably falls on the heads of trade union officials in Parliament. If they attend to their union duties they must be absent from the House; if they sit conscientiously in the House they are charged with neglect of their union work.

The puzzled unionist hears to-day clamorous advocacy of the political strike to take the place of the ballot. He hears continual demands for local and national meetings. He is called on to take sides on the unemployment problem, on the peace treaty, on questions of demobilization, on the distribution of food in the famished continental countries. He is called on to take sides in problematical international issues, and on propositions for dubious international congresses. He is confronted with the duty of settling in his mind his impulses of patriotism in connection with international conventions—at Stockholm, at Berne, at Paris, at Kienthal, at Zimmerwald, at London—with Allies, with Neutrals, with Germans. He sees at such meetings supposedly sober British representatives chummy with the wild Cachins and the Marxite Longuets of France and the obstructionist Italian Socialists who openly opposed their government during the war. He is expected to shout for Quixotic international projects, such as world-wide free trade and similar universal brotherhood issues non-existent to American Labor. He beholds prominent on the Labor and Socialist stage pacifists and conscientious objectors, some of them interned during the war. He becomes acquainted with earnest people in the Labor Research Department, formerly the Fabian, struggling with their Socialist prepossessions in endeavors to put before the public in scientific form serious reports helpful to the general British public, entertainment being supplied at their meetings through the dignified chairmanship of Bernard Shaw and the fanciful guild projects of G. D. H. Cole.

The philosophic humorist, James Sexton, M. P., of the Dockworkers, inquired at a recent party conference what in fact the labor issues were to be, saying: "I don't want to go to the next general election with only a Fabian essay around my neck."

Despite all the confusion and counter-currents ɔted above, it is a matter of general observa-on that the puzzled and defeated British trade nionist will occasionally act with the great ɔdy of his class and caste. Shaking off his abitual lethargy, he now and then attends ieetings or conferences of his union or party, ad, sinking differences, cheers with either iends or enemies, applauds crusaders who want ɔings he doesn't, and boos or laughs with dis-ɪrbers, interlopers, hecklers; in short shows a illingness to roar in chorus with any animal ı the menagerie. He "doesn't know where he ; going, but he knows he's on the way."

In what respect are the British wage-workers ıore advantageously placed than the American? Iave they found open ways to high civic and conomic levels not attained in this country? n pre-war times American wage scales were niformly double to treble those of Great Brit-in. The general rates of wages in Great Britain re yet today below—for much of the popula-ion far below—rates in the United States. For everal years the cost of living, standard for tandard, has been higher, with the single ex-eption of bread. The British wage-worker may ive the cheaper through doing without what American wage-workers regard as necessaries. As to food, as it became dear he constantly hifted his consumption from the higher to the ower-cost commodities, and as to habitation and he comforts of life, he never enjoyed the space nd facilities common to laborers in American ommunities. As a citizen, his desired political eforms are but the rights usually long exercised reely by Americans. The recent notable ex-ension of the suffrage in Great Britain leaves he voters there short of the franchise powers ɔf Americans, who elect not only the members ɔf city councils and the national legislature, to which the vote in Great Britain is practically ɔonfined, but also other classifications of the ɔeople's servants, including judges.

American trade unionists after patient toler-ance of successive shoals of screaming social sub-verters, have put up bars stronger than steel against them, in local unions, in national unions and in the great union of unions. For nearly forty years the American Federation of Labor has rejected every plan for Socialism proposed at its conventions. In its judgment there has never been before it a scheme for Socialism that would not begin with gross injustice and end in social ruin because unworkable.

GREAT BRITAIN'S TRIPLE ALLIANCE

IV.

THE recent visit to this country of J. H. Thomas, General Secretary of the National Union of Railwaymen of Great Britain, and the frequent reference in London cables to the threatened coal shortage in Great Britain due to the strike of more than 200,000 miners has served to direct the attention of American industrial circles to Great Britain's Triple Alliance. The story of the formation of the Alliance and its history to date, make interesting reading.

The Triple Industrial Alliance is a labor combination for direct action to achieve economic purposes ultimately. It aims beyond wages and welfare clear to nationalization of certain industries. It is made up of the Miners' Federation of Great Britain (650,000 members), the National Union of Railwaymen (400,000) and the National Transport Workers' Federation (275,000). Its basic principle of organization is: "Recognition of the fact that in the case of the miners, railwaymen and transport workers, an injury to one is, in a very special sense, an injury to all." The alliance began systematic joint action in 1913. By experience of the strikes of 1910-12 the lesson had been learned that a stoppage by one of the three bodies led to an involuntary stoppage in one or both the others. After conferences in 1914-15, the constitution of the Triple Alliance was ratified in December, 1915. At a meeting in April of 1916 resolutions were passed dealing with after-war problems, demanding that departures from trade union practices should terminate on the resumption of peace, and that substituted workers should be given employment at standard rates, or full maintenance by the State, and making certain proposals in connection with demobilization.

COERCION IS CHARGED

When this program was presented to the Prime Minister in August, 1916, the *Times* accused the Triple Alliance of "formally attempting to supersede constitutional government and to frighten the appointed ministers of the crown, who are responsible for the conduct of the affairs of the nation into doing their will." In June, 1917, the alliance, at a conference attended by 280 delegates, passed resolutions against industrial conscription and for the conscription of wealth and property, to bring about equality of sacrifice. J. H. Thomas, explaining the origin of the alliance, has written that he "saw that sectional unionism had become obsolete and that even occupational unionism would have to be put into the melting pot and recast."

A radical opinion is that "the Triple Alliance is the nucleus of a General Federation of Industrial Unions which may be of invaluable importance to the future of the labor movement," and, further: "It may, for instance, be permitted to hope that the power of the alliance may be employed to raise the status rather than merely to increase the wages of its members."

The Triple Alliance stood aloof from the joint standing Industrial Councils and from the special Joint Committee of the government's National Industrial Conference of Employers and Employed which met in February in London. However, J. H. Thomas, representing the alliance, in a written communication stated that the organized workers of Great Britain have made up their minds to procure an increasing share of the wealth produced by their labor; they are determined to shorten materially their working hours; they are dissatisfied with a system which treats their labor power as a mere commodity to be bought, sold and used as though they were machine-like units in the process of wealth production and distribution. And they demand that they shall become real partners in industry, joint sharers in the determination of working conditions and management. They stand unalterably for the ownership by the state of the mines, railroads and means of inland and coastal transportation. However, they recognize that the capitalist, the inventor, the director and the organizer have some interest in the products of industry.

LEADERS OF THE ALLIANCE

Of the three foremost leaders of the alliance. J. H. Thomas has repeatedly advised a moderation in procedure falling far shart of the desires of extremists. Robert Smillie, of the Miners, President of the Alliance as well as of the Miners' Federation, was chief on the labor side in conducting the sessions of the Coal Commission in London, a mission which he performed with satisfaction to Socialists generally. Robert Williams, representing the transport workers, is much in the public eye, especially as a speaker in opposition to the government. As a candidate for the House of Commons he was defeated by a Coalition Liberal.

If accepted as one hundred per cent. solid, the Triple Alliance would be undoubtedly a standing menace not only to the State but to British trade unionism; but there are reasons for regarding it as less frightful than it looks on first blush. It is commonly asserted that unauthorized preparations by its executives for a general strike would cause a demand for a secret ballot by all concerned, ending in general exposure of internal weaknesses now obvious to other unionists. The National Sailors and Firemen (65,000), with Havelock Wilson at their head, are united to the alliance by slender ties, and the independence usually shown by the National Union of Dock Laborers (45,000), James Sexton, Secretary, is apt to be displayed on rightful occasion. Nor is the Dock, Wharf, Riverside and General Workers' Union, Ben Tillett, Secretary, easily led to anti-social action. There are more than 200,000 railway employees, one-half of them organized, not in the National Union of Railway men and several hundred thousand mine-workers not in the Federation. The trade unions outside the alliance are far from united in supporting its methods.

In the last week of May, after much consideration of the proposition, the Parliamentary Committee of the Trade Union Congress declined to act upon a request made to it by the Triple Alliance to call a special national labor conference to take action on the abolition of conscription, the withdrawal of British troops from Russia, the lifting of the blockade on Germany, and the release of the imprisoned conscientious objectors. The Parliamentary Committee decided that the government's statements to a deputation on these subjects were sufficiently satisfactory.

LEADERS CONDEMN ALLIANCE PRINCIPLES

The Rt. Hon. J. R. Clynes of the General Workers' Union said recently: "The Triple Alliance is an outstanding example of the very action which in others labor is called upon to denounce." In an article in the *Democrat*, entitled "Britain's Danger," W. A. Appleton called attention to the fact that the Triple Alliance represents less than one-sixth of the working population. He regards it as endeavoring to secure special advantage at the expense of the rest of the working class. He reasons that damage to other industries, even if only temporary, must reduce the demand for coal and the need for transport and entail the loss of overseas markets.

The labor press and leaders friendly to the alliance point out that through its strength for direct action—the threat of strike—were obtained the recent concessions from employers and the government resulting in considerable wage advances, the forty-seven-hour week and the recognition of higher standards in working conditions in the three industries. Trade union opponents of the alliance, while admitting its effectiveness for wage advances and the like up to the present time, are profoundly disturbed at its methods as applied to political purposes. Recognizing its exercise of power not only for trade union objects but for revolutionary ends as an extraordinary event in British history, they inquire with concern as to the probable limits of this power and its eventual social effects. They are aware, as its supporters say, "that if the Triple Alliance wills it, the industrial life in Britain will stop short," or again, "It can hold up the economic life of Great Britain." This theoretical truth would be the more significant if spoken of British industrial unionism in its entirety. No graver social problem could be before Britain.

GREAT CRISES SUGGESTED

Whether, to compel nationalization of one industry after another, the nation is to be held up by a force within itself superior to its constitutional lawmaking powers, how often and to

(*Continued on page 18*)

If Bolshevism Came to America

(Continued from page 9)

Their bodies were then thrown into the little river that runs through the town of Bellebei."

GIRLS FROM HIGH SCHOOL OUTRAGED—BOYS SHOT WITHOUT TRIAL

With Judge Blumenthal—who, upon his return after the ejection of the Bolsheviki, found his apartment looted of every bit of furniture—Mr. Embry called upon a lady physician, a friend of the judge's, Mrs. Koshevnikoff, who resided in Bellebei with her sister, head of the Bellebei high school, and her aged mother.

"They told us their stories of how they in their homes were compelled to live in one room," said Mr. Embry, "all the other rooms being taken over either by Bolshevik officials or soldiers, and how they were daily insulted, and how they had no peace and hardly any rest all hours of the night. The Bolsheviki came in, there was loud cursing and quarrels; they were constantly drunk and gambling, and the language was so foul it was distressing for these ladies to listen. It was in the midst of one of the coldest winters of Russia, and they had no other place to go. That was their life during three or four months until last December. One day the Bolshevik Commisar living in Dr. Koshevnikoff's home noticed the old grandmother sitting by the stove. 'Come on,' he said, 'let us throw the old woman out into the street and let her freeze. That's the way to treat people who are no longer useful.' And this old lady, whom I saw and with whom I spoke, was put out on the street. Although they did not persist in carrying out their threat, her mind was so affected she fell ill and barely lived through it. She was just beginning to get her strength back when we arrived there."

From the sister of Madam Koshevnikoff, the head of the Bellebei high school, Mr. Embry learned what the Bolsheviki had done to the pupils, the children of Bellebei. The smaller boys "were made to work on the streets shovelling snow, receiving for this labor no pay whatsoever. The older boys, who were thought to be possible material for the Siberian Army (of Kolchak) and believed capable of attempting an escape to join that Army, were taken out and shot without any trial or any reason for it other than that they might possibly join the Siberian Army. The girls of the high school, according to the sister of Madam Koshevnikoff, were made to wash out the barracks, to wash the dirty apparel of the Bolshevik soldiers, and received for this labor nothing but blows and curses."

All that happened to the girls of the high school, the fair, refined and innocent daughters of the best families, the bourgeoise, of Bellebei; all that—and worse.

"No man's life or woman's honor," declared Mr. Embry, "was safe at Bellebei under the Bolsheviki."

600 SICK CHILDREN RUTHLESSLY SLAIN

From reports afforded by the Intelligence Staff of General Belitzen, who commands the Kolchak forces along the southern section of the Siberian front and whose armies had just liberated Bellebei, Mr. Embry learned much of what the Bolsheviki did in other parts of unhappy Russia. One of Belitzen's lieutenants was captured by the Bolsheviki, and was imprisoned at a camp near Moscow. He arrived in Moscow on the twenty-fourth of last December, and later escaped by the use of a false document. He reported that in Moscow horsemeat sold for eighteen to twenty rubles a pound, and dog meat for six or seven rubles; bread was not to be had. On his way back to the Kolchak forces, he witnessed a revolt at Talkai of the peasants against the Bolsheviki. This revolt was suppressed with indescribable violence. At Booglooruslan he saw thousands of teams loaded with grain and stolen goods which the Bolsheviki were taking to Samara in their retreat before the advancing armies of Kolchak. At Kennelt-cherkovskaia, where the people attempted to revolt, the Bolsheviki killed 1,000, and sent 600 more to Moscow for trial. Dead bodies were frequently seen along the railroads.

According to a report made by two Russian girls who had escaped from Moscow and who arrived at the Siberian front the day before Mr. Embry's visit, in Moscow there was an epidemic of Spanish influenza and of glanders, resulting from the eating of decomposed horseflesh. Seventy-five percent of the cases of Spanish influenza were reported fatal. In one case, 600 children, ill with glanders, were taken out and shot. On the sixteenth of last March, the street cars of Moscow stopped. In the city there was no benzine or kerosene, except that used by the Bolsheviki officers and leaders; torches were used for lighting purposes in houses; to get heat, people were burning their furniture and tearing up floors. Daily, long lines of people waited in the streets to secure permits to bury dead relatives.

At a famous convent near Surtensk, the nuns were compelled to act as servants for Chinese mercenaries billetted there. Instructions issued to the troops, composed of Chinese, Magyars and Letts, and officered by Germans, read: "Shoot all intelligent classes because only the ignorant classes can be taught Bolshevism properly. All grain must be requisitioned. All people found with firearms must be put to death." According to the reports, Mr. Embry said that most of the native Russians in Moscow, except those who managed to convince the Reds of their conversion to Bolshevism, had either fled or been killed. The Russian language is now infrequently heard, Mr. Embry said, and Yiddish has become the language most used.

After serving two years as vice-consul at Odessa, Mr. Embry was appointed a consul to Russia, February 19, 1918. He was ordered to Moscow, sailing from the United States March 1, and arriving at Vladivostok, Siberia, March 28, 1918. As he was unable to reach his destination, he served as junior consul at Vladivostok from March 28, 1918, until November 6, 1918, when he was ordered to Omsk, where he served as consul from November 8, 1918, until April 20, 1919. The Soviet regime became all powerful in Vladivostok in June, 1918, when people were ejected by force from their houses and apartments. "The cases that came under my observation," testified Mr. Embry, "were those of people who were thrown out of their apartments, and these apartments were taken by the workers and their families, and the people who had leases on these apartments, who owned these apartments, or were in any way entitled to reside there, were ejected in many cases and great hardships worked upon them. My wife suffered under this at that time. At that time we were not married. She was a Russian citizen and had no protection other than what she could get from the Bolshevik Soviet there, which was none, as she states it to me."

KOLCHAK HAILED AS SAVIOR BY RUSSIANS

From Vladivostok Mr. Embry was ordered to Omsk, Siberia, where he arrived November 8, 1918. It was on the night before his arrival that there had occurred at Omsk the coup-d'etat whereby the present Siberian government came into power. Admiral Kolchak, said Mr. Embry, arrived at Omsk a few days later and was called to the head of the government. "To our great surprise," said Mr. Embry, "inside of about three days the scattered bands of Russian troops throughout that section of Siberia declared their loyalty to Admiral Kolchak and they quietly took their places on the Siberian front which up to that time had been held by Czecho-Slovaks." Mr. Embry said that Kolchak's genius for leadership and his control over the men enabled these Siberian people to protect themselves against the return to power of the Bolsheviki. At first the Russians were panic stricken lest the Bolsheviki return to Siberia and resume power. Mr. Embry remained until April 1, 1919, at Omsk, where he said he felt as safe as he does in New York. While serving as vice consul at Odessa, from January 28 1916, to November 27, 1917, Mr. Embry first came to know Admiral Kolchak. Of Admiral Kolchak, whom the Bolsheviki in America and such pro-Bolshevist organs as the *Nation* and *New Republic* represent as an outlaw and brigand, Mr. Embry said:

"He was in command of the Black Sea fleet at that time, and at the time of my arrival in Odessa the whole city was singing the praises of Admiral Kolchak because he had just recently gone out against the two German battleships, the Goeben and the Breslau, and had just driven them out of the Black Sea. They never came again to the Black Sea. The Russian people there were particularly loud in praise of Admiral Kolchak for his brilliant action, because the former Russian Admiral, whom he had replaced a short time before, had remained in his port and had refused to go out, saying that he had only relics of the Japanese war and he could not battle against the first-class German ships, and it was Admiral Kolchak who showed that the Black Fleet could fight and protect these cities along the coast."

Later, after telling of the Bolsheviki atrocities in Siberia Mr. Embry spoke of the attitude of the Russian people in the districts through which he passed toward Kolchak and his army.

"Every man, woman and child with whom we conversed spoke of the Siberian government with almost tearful affection, and the name of Admiral Kolchak to these unhappy people who had just been liberated was like the name of our Savior, Jesus Christ. It was so heart-rending, so pitiful—their complete dependence upon the organization which Admiral Kolchak has got together in Siberia to save them from this kind of thing, that it made a profound impression upon the party with me and myself who interviewed these people. And I think it is important to make a statement about this here, because the Socialists in America, and even such formerly reputable magazines as the *New Republic* and the *Nation* are denouncing the present government in Siberia in the worst terms possible, and because their denunciations are so false and so harmful at the present time to the Russian people, I feel it my duty to say here—and I take a solemn oath to it—that the Siberian government as I knew it at Omsk the past six months is a real government, struggling to restore law and order and to secure to the Russian people their rights, which have been completely swept away by Bolshevism. And a man who is opposed to the Siberian government headed by Admiral Kolchak, in my opinion is either grossly misinformed, or else a man who wishes such scenes as these to take place in America."

Mr. Embry declared the actual territory controlled by the Bolsheviki is only one-fifth or one-sixth as large as that controlled by Admiral Kolchak's government. He said further it is the firm conviction of intelligent Russians who studied the situation and have gone through the horror of Bolshevism that less than ten per cent of Russia at the present time is back of the murderous Trotzky-Lenine regime. Kolchak, he explained, is a non-party man and enjoys the confidence and love of the people. Of thirteen members of his government, six are Socialists, the other Social Democrats and constitutionalists. "Knowing these people over there as I do, and knowing the struggle that they are making for freedom from such things as I witnessed in Bellebei, I believe it is the duty of every man who loves liberty to help those people any way we can. You must remember the Bolsheviki got control of all the arms and all the arsenals when they first started their program.

Since then the whole of Russia has been in about the same situation as we would be if the I. W. W.s and Socialists, the bomb throwers of America, suddenly got control of all our arms and ammunition, and if then the rest of us had to fight with bare hands to protect our homes and regain our country again."

PRISONERS FORCED TO DIG GRAVES FOR THEIR EXECUTED FRIENDS AND RELATIVES

When Mr. Embry arrived at Ufa, a city of about 75,000 inhabitants, in the foothills of the Ural Mountains, on his 1200 mile trip through Russia, the city had been freed of Bolshevik tyranny for about a month. Ufa had been taken by the Bolsheviki in November, 1918, recaptured by Siberian troops, and then in February, 1919, recaptured by Bolshevik troops, who were driven out only last March.

"At Ufa," Mr. Embry testified, "I met Madam Andreyevna. Madam Andreyevna is the public librarian at Buglama, a small city near Ufa. She is the mother of four sons serving in the Siberian army. When the Bolsheviki took Buglama in the fall of 1918, Madam Andreyevna was placed in jail, and was never told why she was held in prison. She remained in prison until about two weeks before I arrived at Ufa, until March, I believe. During that time she suffered severely from the nervous and mental strain she was under. She related to us that in the jail they were kept in a common room, many of her dear friends, acquaintances, people whom she knew to be respectable, honest people were held there in jail, and each day a number of them were taken out to be executed. . . . There was a party formed each day, a grave-digging squad among the people in the jail, who went out and dug the graves for those to be shot."

"Was there any excuse given by the Bolsheviks why these people were shot?" Mr. Embry was asked.

"Yes," he replied, "they were shot on one of these three charges—counter-revolution, speculation, sabotage. I investigated the term 'counter-revolution' very thoroughly and found that anyone who is opposed to Bolshevism is a counter-revolutionist. Counter-revolutionism merits the sentence of death. Madam Andreyevna related to us how her friends were murdered, how one old man who was in jail with her was taken out to dig the grave of his own son, and he came back so affected by it that he died in jail."

Mr. Embry explained that the charge of "sabotage" is brought against people who work secretly against the Bolsheviki, who pretend to be Bolsheviks in order to mitigate the rigor of their regime, or who in any way by surreptitious means seek to "take a spoke out of the wheel of Bolshevism."

It was at Ufa that Mr. Embry met Judge Blumenthal, who had under the Kerensky government been presiding judge of the District Appellate Court of Bellebei county. Judge Blumenthal had lived in the United States many years and because he was a strong republican had been denied all chances in political life under the Czarist government. In the court presided over by Judge Blumenthal were seven judges, four of whom, including Judge Blumenthal, fled from Bellebei when the Bolsheviki took that place in December, 1918. When Mr. Embry and Judge Blumenthal arrived at Bellebei, the judge found three of his colleagues who had remained there during the Bolshevik control. They managed to save their lives, said Mr. Embry, by declaring they were heartily in favor of Bolshevism. These three told the story of another judge, Famisky by name, which Mr. Embry recounted as follows:

"Judge Famisky, a resident of Bellebei and a Socialist, felt it his duty to espouse the cause of Bolshevism with the idea of securing a place in the Bolshevik government or first regime there, with the intention to mitigate the rigor of this regime. He was a man beloved by all the countryside for his wisdom and kindliness, and the townspeople, when they learned that Judge Famisky had, on the night the Bolsheviki held their monster meeting, made a speech, and through the speech was elected on the spot Minister of Justice, were delighted. The townspeople felt that a Bolshevik Minister of Justice such as Judge Famisky would certainly mete out justice and lead them to a happier kind of life.

"The story of Judge Famisky is a short one. The same day that the Bolsheviki took over power, they started at once a general execution, without trial, of all the men who had been prominent in public life in the district of Bellebei and the town of Bellebei who had not fled. Any man prominent in public life, who did not declare unreservedly in favor of Bolshevism, was put to death without trial in the public square of Bellebei, according to these three judges. These three saved their lives by swearing they were Bolsheviki. Now, Judge Famisky had declared himself a Bolshevik. He had been made Minister of Justice; but when the men who had been his colleagues in the local government in Bellebei were executed without trial by the Bolshevik Extraordinary Investigating Committee, he felt it his duty to make a rigorous protest against these executions. He made his protest almost within twenty-four hours of the time he assumed office. Before that time many of his best friends had been executed. His protest was couched in restrained, but vigorous language, and the Extraordinary Investigating Committee replied by charging the judge with being a counter-revolutionist, and he was thrown in prison and sentenced to be shot. The townspeople made such an uproar about the execution of the mild-mannered judge that the most daring of the Bolshevik leaders were afraid to carry out the sentence. He was held in prison, however, until the Bolsheviki were driven out of Bellebei, just eight days before my arrival there in April, and when the Bolsheviki evacuated the town Judge Famisky was carried away with them, and no one knows what befell him."

BOLSHEVIKI PUT CRIMINALS IN POWER

Just how the Bolsheviki went about seizing power was described to Mr. Embry by the three judges. "The first thing that happened," he said, "was this monster meeting in the town hall, attended by some fifteen hundred soldiers and armed workers, whom these judges described as being the riffraff and criminal classes of Russia, and among them, also, a large number of foreigners, Chinese, and some of the wild tribes of the country. Now these Bolsheviki entered the town and looted part of the city as they came in, but that night they were together in assembly to hold a meeting. During the afternoon and evening the jails were opened and every criminal in the county jail was released and present at the Bolshevik meeting. It was at this meeting that Judge Famisky was made Minister of Justice. The other appointees—you could hardly say they were elected—to various Bolshevik offices were of a different type. One of the men who was made a Bolshevik commissionaire was a criminal released from the Bellebei county jail, whom Judge Blumenthal knew personally and had sentenced to jail for theft the year before. Another minor official was a man of the lowest class of society there in the town who had been put in jail by Judge Blumenthal for drunkenness and for beating his wife."

At the meeting the Bolsheviki, said Mr. Embry, instituted their form of government, with an Executive Committee in absolute power, under which were other committees, including the Extraordinary Investigating Committee whose function was to jail and shoot men and women ruthlessly. People were hauled out of their beds in the middle of the night by soldiers, led by a commisar, accused of being counter-revolutionists, were thrown into jail, and executed without trial. It was after the institution of this reign of terror that these unsavory and blood-thirsty crusaders of "internationalism"—who are hailed by Socialists in America as "emancipators of the world"—desecrated the Christian church at Bellebei, defiled and destroyed the pictures of Christ and the Madonna, and turned the church into a motion picture house, where they played lascivious songs on the gramophone for their regalement.

Telling of his attitude toward Bolshevism when the Bolsheviki had first assumed power after the overthrow of Kerensky, Mr. Embry said:

"All of my life I sympathized with the workingman and the underdog, so to speak, and I believed at that time that the Russian underdog was going to come up, and that possibly there would be worked out in Russia a social experiment which would be of value to the world. I could easily understand why it made a strong appeal to the ignorant man because it not only made a strong appeal to the ignorant man there, but to most of the men, most of the Americans whom I knew there. We were not hostile to the idea, and actually in some of its phases it captured men like myself who had studied Socialism at college and who were sentimentally inclined toward it. And it was only after I had lived in Russia long enough to see what the Russian underdog did when he got on top that I have felt so strongly about it, and why I am happy today to give my testimony against the Bolsheviki."

POWER MAINTAINED BY RUFFIANS

"The revolution of 1917 was brought about by the intelligent Russian people," declared Mr. Embry, "the Russians of good education who were sick and tired of an autocratic regime in Russia. The Bolsheviki had nothing whatever to do with the first Russian revolution. . . . The former members of the Duma," continued Mr. Embry, "for a large part are dead—murdered. Those who are not murdered have fled to foreign countries or have escaped to Siberia or are living in security east of the Ural mountains.

The Soviet form of government under the Bolsheviki, Mr. Embry emphasized, is anything but democratic. "They do not have elections. They do not have anything but a mass meeting at which the more violent may get up and make fiery speeches. Then certain men are elected commissars, and then, first of all, they have the task of dividing up all the property—all the private property—then proceeding to live on the people. They are parasites. The Bolsheviki as I knew them in Russia are the greatest criminal organization the world has ever seen. Nothing that is released from our state penitentiaries would approach in horribleness what the Bolsheviki, the much-praised Bolsheviki-government of Russia is doing today wherever I have come in contact with it. . . . There is a government at Moscow—it calls itself a government. I understand that there are Bolsheviks of intelligence who are idealists to a certain extent. . . . They keep in power by the most predatory and bloodthirsty bunch of ruffians that the world has ever heard of. I do not believe that the Hun, Attila, who sacked Rome, knew anything at all about barbarity in comparison with these supporters of the Bolshevik government."

Asked further to describe the operations of the Bolsheviki, Mr. Embry went on:

"I learned that the Bolshevik method was this: The soldiers and workers have a big meeting at which they decide matters. Then they drive out the members. For instance, I will make a picture as it would be here in New York. If they took over New York, you gentlemen here would

be marched out by a bunch of soldiers, and you would be very fortunate if you were not killed at once. At least you would be put in jail. Then this court room would become a Bolshevik meeting, at which everything would be decided by a big crowd of men, each one struggling to give out and carry out his ideas. They would elect a president and executive committee and would try to do things by a committee system, but nothing would be done according to rule."

Having forcibly seized power, the Bolsheviki "declare all the old laws, all the old legal forms, non-existent, no longer valid; the terms 'legal' and 'illegal' have no meaning for them, because it is all a question whether or not it is according to Bolshevik principles, and their principle is to take all property and divide it up." Once they had their executive committee organized, "they would make a list of all available private property, list it up, divide it up, or attempt to do so. These two jobs they consider of paramount importance—taking the private property and dividing it up, and killing everybody opposed to Bolshevism."

BOLSHEVIK PROPAGANDA IN RUSSIA BEFORE REVOLUTION PARALLELS THAT NOW CONDUCTED IN UNITED STATES

Questioned as to his opinion regarding the status of Ludwig C. A. K. Martens, so-called ambassador from the Soviet government to the United States, Mr. Embry said:

"I believe he was actually sent by Lenine, Trotzky and company from Moscow, and that his main duties over here are to foster a Bolshevik revolution in America."

"Why," Mr. Embry was asked by Assemblyman McElligott, "should they concern themselves over there with what happens over here?"

"They know perfectly well that Bolshevism in Russia is doomed unless the rest of the world can go Bolshevik," replied Mr. Embry, "because right-thinking men and women are not going to allow Bolshevism either in America or in Russia. The menace of Bolshevism is a very serious, a very imminent one, in my opinion. They are striking at all our institutions, which up to the present time have given us liberty and the pursuit of happiness. They are determined to overthrow by force, by the murder of innocent people, determined not to wait until they can win by a majority. That means that innocent people all over the world are going to be murdered. That any man who thinks can sit idly by and let the Russian Bolsheviki carry out their program and carry on their propaganda here, is, I believe, very short-sighted, because these men are internationalists; there is no such thing as a nation to them. They are intent on the proletarian revolution of the world. They have declared from the very beginning that it is a world revolution, a world government; and if we want our homes, if we want the majority to rule in America, we have got to take every step possible to put an end to Bolshevism, because it is not a majority rule."

"Lenine is the man who today is holding himself out as being the head of the so-called Soviet government," Mr. Embry was asked, "and he sent Mr. Martens as his representative to New York?"

"I believe that Mr. Martens was actually sent by Mr. Lenine and Mr. Trotzky. I believe that he is properly authorized by these people to come to America as their envoy."

That the Bolshevik agitation which preceded the overthrow of the Kerensky government was identical with the inflammatory agitation carried in the form of speeches, pamphlets and newspaper articles in this country today by Socialists, the I. W. W. and other radicals, evidence concerning which had been presented at hearings of the Lusk Committee, was declared by Mr. Embry to be a fact. The Lenine theory of Government "is based," said he, "on the principle of Socialist government, and it parallels in my mind what the I. W. W. in the United States call 'direct action.'"

Comparing the Bolshevik propaganda carried on in Russia prior to the revolution with that now being waged in the United States by Socialists and others, Mr. Embry said:

"I believe it was more frank and outspoken in Russia, but the points raised and the methods approved are identical with those which are raised and approved by our agitators in the United States. It was the same sort of thing. I believe it to be parallel."

The Labor Situation Abroad

(*Continued from page 15*)

what extent that force is to be aggressively employed, what radical economic reorganizations will be demanded through it, what will be the action against it by the government backed by other social forces—these questions suggest crises which the country may possibly be called upon to face. They lead to the vital question: Is Britain's present social system to be overturned by a consolidated mass of men who rightfully or wrongfully are malcontents or is progressive social improvement to come through the operation of legislative methods and ameliorative forces some of which are already important aids in the country's economic life?

The nation's hope is that the cataclysmic strike by the "one big union" may never come. From members of the Triple Alliance itself have come proposals for nationalizing by legitimate means the industries in which its members are engaged. A detailed plan for nationalizing the mines, transmitted to the Coal Commission by an official of one of the miners' unions, was published in full in the newspapers of the time and attracted general attention. Besides, from the Fabian Society another plan was brought forward embodying, it is commonly said, ideas long discussed throughout the kingdom among the moderate Socialists, and the guild Socialists were last spring discussing a third plan, one of mingled compensation and confiscation.

RAILWAY OWNERSHIP BY STATE PROPOSED

The Railway Clerks' Association (80,000 members) have issued the draft of a national transport services bill which makes provision for the purchase by the State of all the railways in the United Kingdom, with canals, hotels, docks, harbors and auxiliary services to the railroads, all to be managed by and for the benefit of the State. The bill and the notes attending it, a considerable document of 57 printed pages, gives numerous particulars of the proposed operation. It also provides for the coordination of road, motor, aerial, coastal and steam packet transport services as part of a national system. Inasmuch as this plan was made up by railway clerks of every grade, many of them concerned in a large way in the operation of the present transport services, it may be regarded as having merits deserving serious attention. When an investigator has heard trade union leaders, men of caution and common sense and a good general knowledge of their occupation, giving reasons for their belief that mines and railroads can be operated by the employees, inclusive of the grade of superintendents and managers, the project appears one entirely different from those brought forward by the old-time visionary theorists bent on nationalizing indiscriminately capital and land—and labor.

For State ownership of railways there is of course ample precedent, but operation by employees become directors and controllers is an untried plan. Since both the miners and the railway men propose compensation to present owners, with continuance of the wage system for the operatives, their outlook contemplates legitimate procedure, non-communistic ownership, and a form of operation in theory democratic.

British trade unionists who are not thoroughgoing Socialists hold that the usual arguments against State operation of commercial or manufacturing enterprises fall off in force when applied to the mines and railroads of the kingdom. They say that arguments which hold good against nationalizing in the United States, with its great area and population and many State governments, do not fit in with conditions in Britain—nor, they say, has land and mine ownership the same validity in Great Britain with the present generation that it has in America. The social abuses to be corrected, especially in regard to housing and harsh treatment, are more acute and more numerous. Both mining and railroad operation have been weighted down through the rack rent and blackmail rent of the British landlords. The majority of the railway workmen of Great Britain have until recently been laboring in servitude at miserable wages. The testimony before the Coal Commission regarding mine workers' living conditions has shocked the British as a nation. Public opinion may be reconciled by the all important fact that the new nationalizers propose that the State shall pay for expropriated property.

The panic over Triple Alliance aggressions last spring came at a time when many people of all classes, chastened by the war, were of a mind to redouble their efforts for the permanent improvement of the country. Everywhere was heard expression of generous and patriotic sentiment. Committees of inquiry on social questions had been at work on the part of the State, the Church and voluntary societies. Their reports uniformly looked forward to a better era. The rights and needs of the workers obtained national attention and recognition. That the colliery or railroad worker should have a voice in the direction of mine and road was a taking thought. Just how that direction was to be exercised, however, was usually a matter left indefinite. The miners and railway men came forward with their own plans.

LABOR PROBLEMS IN GREAT BRITAIN AND FRANCE FOLLOWING THE WAR

The full report of the Commission sent by The National Civic Federation to England and France to study industrial conditions will be published in book form in October. The price of the book, which will contain about 350 pages, will be $2.00. Advance orders may be sent to The National Civic Federation, 1 Madison Avenue, New York City.

The report of the Commission was made from the point of view of the employer, the wage worker and the public, the Federation's Commission being the only one sent abroad since the conclusion of the war which was representative of all these elements. The contributors to the book are Chairman Charles Mayer, of the Commission, who is also chairman of the Board of the France & Canada Steamship Corporation; James W. Sullivan, of the American Federation of Labor; Albert F. Bemis, a well known textile manufacturer of Boston, and A. Parker Nevin, of the New York bar, an authority on industrial problems.

In its investigations the Commission devoted especial attention to the constructive policies and programs adopted abroad affecting the relations of employers and employees, with the object of determining which if any of these might advantageously be applied in the United States.

How Irish Blunders Hurt the Irish Cause

By GEORGE CREEL

(By permission of *Leslie's Weekly.*)

GEORGE CREEL

THERE is need to speak a few, plain, straightforward words to Americans of Irish birth and Irish descent, for unless the Irish movement in the United tates is brought under more intelligent con-ol and given more intelligent direction, there grave danger that its present dynamic force ill be weakened in very material degree. Noth-ig is more safe than to assert that the American eople, as a whole, are heart and soul with Ire-nd. Even where there is no exact knowledge f Erin's seven-century struggle for freedom, it still the case that the average citizen feels trongly that the Irish have suffered unbearable rongs, and are entitled to the liberties and op-ortunities that will flow from unrestricted na-ional development.

IRELAND LOOKS TO AMERICA

When all is said and done, this American sym-athy is Ireland's most valuable asset. Just as t was American money and encouragement that ept blazing the flame of Irish aspiration during he last fifty years, so is it the public opinion f America today that makes the Irish question world problem that England will be forced to nswer. What other nation has any real interest n Ireland? France and Italy have their own retchedness to repair. Japan is remote, and hile Germany might rejoice at the chance to dd to British troubles, Germany is scarcely in position to come forward as a source of aid. t is America alone to which Ireland must look; t is American sentiment that is Ireland's chief eapon of attack.

Surely these should be obvious truths, yet it s this sympathy and this comradeship that is be-ng subjected to a strain that is bound to prove eakening, if not actually destructive. Meetings t which the President of the United States is issed, meetings at which the ideals of America re "booed" and derided as hypocritical, meet-ngs at which notorious pro-Germans preside, re not calculated to strengthen the Irish cause n the American mind. Nor, for that matter, re they calculated to enthuse and unify Ameri-ans of Irish birth and descent, for there is no yphen in the average Irish heart, and while he ields devotion to his motherland, his allegiance s given unreservedly to America.

Quite obviously, the Irish movement lends it-elf to the purposes of many dangerous and in-incere groups in the United States. It fits in bsolutely with the schemes of partisans, with he hatreds of pro-Germans, and with the plots f those who want to destroy the League of Na-tions in order that the old programs of greed and rapacity may be restored. No greater blow ould be dealt the Irish cause than to have it become the catspaw of these selfish and malign influences. Let Americans, and this includes the great majority of Irish also, come to the con-viction that the Irish movement has a *hyphen* in it, and there will be a reaction the force of which can not be overestimated.

A LITTLE THINKING NEEDED

It is high time that every American with Irish blood in his veins, and every American truly interested in the Irish cause, should commence to do a little intelligent thinking for himself in-stead of giving his mind over to the emotional-ism of meetings and the claptrap of perfervid oratory. Irish freedom is now merely an aca-demic assertion, and the question that each sin-cere, intelligent person should ask himself is this: "How can Irish freedom be made a *fact?*"

There are just two ways and only two: (1) by force of arms, (2) by England's own action.

To any person of sense, the first way is out of the question. Ireland cannot possibly hope to cope with the military might of England. Even if she had the manpower, which she has not, she lacks guns, munitions, aircraft and all the scientific machinery of war. England, crouched over the isle like a lion over a bull ter-rier, could strike and crush almost in a week. And where, outside of Ireland, is armed force to come from? Not from France and Italy, bled white. Not from Russia, from Spain, from Japan? This leaves the United States as the one possible chance. Does anyone imagine for a moment that the people of America, not yet recovered from the shock and horror of a world war, will take arms against England in Ireland's behalf? Not an Irishman urges it; not even the Sinn Fein leaders themselves, as they admit-ted to me, even dream of it.

Let us, at this point, consider the position of the United States with reference to this Irish matter. The President is hissed and openly de-nounced by "Irish patriots" like Mayor Thomp-son, of Chicago, for having failed to rise, in his place in Paris and make demand that Ireland should be given freedom at once. Now what was it that the President went to Paris to do? He went, primarily as the representative of a bel-ligerent power to sit with the representatives of other belligerent powers, for the purpose of framing the terms of the Peace Treaty that would bring the World War to an end. What would have been the result had he announced to the Conference, "Gentlemen, I refuse to take part in these deliberations until the Irish Republic is given recognition?" Does anyone doubt that England would have risen in hot resentment, or that this resentment would not have been shared by other countries concerned only with the framing of the peace? Chaos would have piled on chaos, and all hope of world order would have perished then and there.

If not at the outset, then at what other time? Had the case of Ireland been introduced, does anyone imagine for a moment that other intro-ductions would not have followed? What about Egypt, India, the Philippines, Morocco, Lithua-nia, the Ukraine, the Jugoslavs, and scores of other peoples with their claims to liberty and self-determination? These bitternesses ancient and complicated, would have turned the Confer-ence into a Bedlam, no Peace Treaty would have been drawn, or could have been drawn, and the world would have plunged into a bottomless abyss.

It is because these various national and racial appeals were not heeded and considered in de-tail that the charge is made that the Peace Con-ference repudiated the pledged principle of self-determination. This is the great lie. The Peace Conference did not repudiate, but kept its faith in the only way that it could keep the faith. Lacking in itself the power and the machinery with which to give any *practical* effect to the principal of self-determination, it created a body that *would* have the power and the machinery, framing and signing the solemn Covenant of the League of Nations.

This body, and this body only, with its high court of international justice, is fitted and planned for dealing with the injustices that im-peril the peace of the world. It is before it that the case of Ireland may be presented, aye, and the case of every other oppressed peoples, for the President of the United States framed and secured the insertion of this paragraph in Arti-cle XI:

"It is also declared to be the friendly right of each member of the League to bring to the attention of the Assembly or to the Council any circumstances whatsoever affecting international relations which threatens to disturb either the *peace or the good understanding between nations upon which peace depends.*"

There, as plain as language can make it, is the right of the United States to put the matter of Ireland before the League of Nations with the privilege to press it even as counsel pre-sents the cause of a client. Not as an insult to be resented by England, not as an hostile act leading to severed relations and bitter feeling, but as a "friendly right," for what with our large Irish population, continued injustice to Ireland *does* disturb "good understanding."

THE ONLY WAY WE CAN HELP

This—the second of the two ways by which Irish independence can be made a *fact*—is the only way. Until the League of Nations is formed we have no such right. Even as open presenta-tion of the Irish cause at Paris by the President would have entailed chaos, so would any such demand on his part today deal the Irish cause a deadly blow. The great mass of the English people are in favor of Irish freedom. Particu-larly is this true of the English Labor Party, the coming great force in England's political life. But this sympathy and support would be swept away instantly if racial angers should be aroused by any action on the part of America that the British would have a right to resent as arrogant and autocratic.

Take our own case, for instance. The great mass of public opinion is firmly in favor of in-dependence for the Philippines. But what if the House of Lords passed a resolution urging Philippine independence, or if Lloyd George, rising from his seat at the Peace Conference, had said, "Gentlemen, I cannot go further with the discussion of the peace terms that are to be presented to Germany until the United States has granted the demands of the Filipinos?" Does anyone doubt that America would rise *en masse* and say, "We'll *show* you."

It is a false friend to the Irish cause who races over the country abusing the English people and stirring up hatred against England. In 1912, the House of Commons passed a Home Rule Bill because the English people wanted it passed. Again in 1913 and again in 1914 the measure went through the House of Commons by undiminished majorities, showing that the will of the people had not changed. It was the House of Lords that stood between the English people and their desire to do justice to Ireland; it is the Tory party in England that stands between Ireland and freedom today. This distinction be-

tween the Tory party and the English people is a distinction that it is a folly not to make.

A NEW ERA IN ENGLAND

The old order is passing in England. It is only a matter of weeks when the present ramshackle Coalition Government, born of Lloyd George's trades, will be thrown out, ushering in the dawn of a new order. The leaders of this new order are Ireland's friends, pledged to do her justice. Is it wise to anger, insult and alienate them?

Out of my own personal knowledge, I say that Woodrow Wilson has always been a steadfast champion of the Irish cause. He is that today. The trouble is that he is for the Irish *cause* and not Irish applause. Had he chosen to come out with some Irish demand at Paris he would have been selling Ireland's hopes for his own personal glory. Not only would he have ruined America's opportunity as a force for idealism, not only would the action have aroused domestic revolt because of the disruption of the peace proceedings, but he would have arrayed the English people as a unit against the Irish demands.

As it is, English opinion is still with the Irish, and increasingly so as the unspeakable Carson raves and threatens; the power of the President to exert pressure upon the English Government remains unabated, and the League of Nations provides a court in which the Irish case may be brought unless it is settled before that time.

ANOTHER DANGER FOR IRELAND

There is still another false and dangerous position in which the Irish movement is being placed by its reckless leadership. This is the movement's antagonism to the League of Nations as a whole, not because of anything that it does to America, but because of what it is supposed *not* to do for Ireland. The attack is made by reason of Article X, which provides that the "members of the League undertake to respect and preserve as against external aggression the territorial integrity and existing political independence of all members of the League." This Article was framed to protect the new States like Poland and Czechoslovakia, and to guard against the rapacities of power, the lusts of conquest. It is not concerned in any manner with internal revolution, redress of popular grievances by insurrection, or even against a readjustment of national boundaries by action from the inside.

This is the danger, however; the Irish movement is being put in the position of refusing to view the League of Nations in any other light than the false light of this lie. It is being made to appear that Americans of Irish birth and descent have no interest in the proposal at all except as it bears upon Ireland. Whether there is good for America in the Covenant, whether there is good in it for the world, matters nothing. It is supposed to prejudice Ireland in a minute particular, therefore it must be defeated. The world's attempt to substitute arbitral processes for wholesale slaughter, to lessen the backbreaking burden of competitive armaments, to raise the standard of workers the world over, all these things are contemptuously swept aside because Ireland is not pleased.

This is bad business. Not only is it angering the native American, but it will split the Irish movement itself into bits, for the Irishman in America is an American *first*. Nothing is more imperative than that the Irish movement be rescued instantly from the hands of pro-Germans, partisans, anti-English schemers and others who are attempting to use it for their own selfish ends.

If I have written critically it is because I believe passionately in the absolute justice of Ireland's cause and want to see it *win*. I am for Irish independence because I am an American. And because I am an American I not only want to see Ireland free, but the freedom of all oppressed peoples. And the League of Nations is the *machinery for the manufacture of world justice*.

Since I am taking this adventure in unpopularity for what I honestly believe to be the good of the cause, it is just as well to say everything that is in my heart to say. Whatever may have been the mistakes of judgment of men like John Redmond, T. P. O'Connor and John Dillon, however much they may have been tricked, they were *true Irishmen*. And then Ireland's great need today is absolute unity; it is worse than stupid to hate and hiss the Nationalists instead of holding out an olive branch for them to grasp.

From Ireland also come reports that a ban of exclusion has been placed upon all Irishmen who fought under the British flag in the late war. Thousands of these young fellows joined the Dublin revolution, even before England repudiated the Home Rule Law, just as did Tom Kettle, who fell at Ginchy. They never dreamed that the English Tories would cheat Ireland in such a moment of world stress. And there is this to be remembered also. While they fought under England's banner, it is equally the case that they fought side by side with *Americans* against a common foe.

All such hates must be banished. Victory is in sight. And if Ireland is to stand straight among the nations, she needs every ounce of strength that fraternity can contribute.

MR. VILLARD'S MISDIRECTED GRATITUDE

THE NATION
20 Vesey St.
New York

June 14, 1919.

Mr. T. Everett Harré,
C/o The National Civic Federation Review,
New York City.

My dear sir:

May I not express to you the gratitude that we of *The Nation* feel for your persistent advertising of us in The National Civic Federation Review—giving space to us which on an advertising basis would cost us hundreds and hundreds of dollars? To it we attribute somewhat our rapidly swelling subscription list and our steady growth in readers. Nothing, we are sure, can help *The Nation* more than to have it known so clearly that we are in many ways at the opposite extreme of the Civic Federation.

With renewed thanks,

Yours truly,
(Signed) Oswald Garrison Villard,
Editor.

June 19, 1919.

Mr. Oswald Garrison Villard,
Editor *The Nation*,
20 Vesey Street, New York.

Dear Sir:

I have your letter of June 14, expressing "gratitude" for the "advertising" given *The Nation* in The National Civic Federation Review, to which, I note, you somewhat ascribe your "rapidly swelling subscription list." I am inclined to believe that your reported "steady growth in readers" is not due to the analysis of your articles made in the pages of the Review—which mainly reaches readers who believe in the ideals and institutions of America and who loyally stood back of the war until the power of the intolerable Hun was broken—but that, on the contrary and quite manifestly, it is due to the "persistent advertising", to the generous and approving reprinting of your articles in the scrubby sheet formerly known as *The Fatherland*, and that your thanks, therefore, are not due to me or The National Civic Federation Review, but to that fellow-colleague and pacifist, whose heart also bleeds because of the cruel Allied blockade and the Allied "injustices" to poor, inoffensive, stricken Germany, Mr. George Sylvester Viereck.

One so well-informed as yourself cannot, of course, be ignorant of the intensified resumption, and new phase, of the Hun propaganda; of the recent voting by the German National Assembly at Weimar of indefinite sums for "a news service abroad;" of the threat of chagrined and hydrophobiac Germany to employ the "new weapons" offered by Bolshevism against her victors; of the propaganda of social discontent and civil strife which has been stimulated throughout the world, on this hemisphere from Canada to Argentina; of the agitations of the "reds" and parlor "pinks" and the bomb plots within our own land; of the whole pro-German revolutionary movement, which in America has been swelled by all the Hun soreheads and sympathizers who, up to the signing of the armistice, found it healthy to hold their peace; of the fact that, directing and advising the policies of the "reformed" German government and its foreign propaganda; are the old gang—Dr. Dernburg, Dr. Albert, your personal friend the unspeakable von Bernstorff; and that, in this foreign propaganda, also, your former friends, Karl Mechlenburg and Dr. Fuehr are on the job. So accurate a "detector" of certain cerebral workings as yourself predicted a revolution as a result of the terms asked of the Huns. But the latest Hun intrigue will fail, as the former Hun intrigues failed, and the secret sympathizers of Germany will no more succeed in promoting a revolution in America than they succeeded in their efforts to keep the nation cravenly supine and cowardly non-resistant under the attacks and aggressions of the most despicable horde of brutes that ever trampled ruthlessly over the fair and sweet lands of the earth.

With this recrudescence of Hun propaganda, with the Kriegebunds and Vereins cautiously coming out of their holes to do what they can do, with the whole breed of pig-hearted square-heads, compelled to stew in their own juice by reason of the espionage laws during the war, now crawling out to whine against the treaty, and all of them threatening, if the treaty is enforced, to make the land which gave them harbor "go Bolshevik," it is not surprising that the isolated pilgarlic-organs devoted to the "new propaganda" of revolution and to a contemptible and unmanly campaign of slander and contumely of the brave nations which resisted the brunt of the Hun assault, should find a considerable growth of sympathetic readers.

As for myself—and perhaps I can speak for The National Civic Federation Review—we cannot find it in our hearts to envy *The Nation* for its particular kind of "rapidly swelling subscription list."

Sincerely,
(Signed) T. Everett Harré.

THE NATION
20 Vesey Street

June 21, 1919.

Mr. T. Everett Harré,
The National Civic Federation,
33rd Floor, Metropolitan Tower,
New York City.

Dear Sir:—

Please let me thank you for your courteous and most amusing letter which the whole staff has greatly enjoyed. But you will forgive me if I tell you that I have never seen either Dr. Mechlenberg or Dr. Fuhr and I have never heard of the former until now?

Sincerely yours,
(Signed) Oswald Garrison Villard,
Editor.

V-R

104 East Seventeenth Street
New York City

June 24, 1919.

Mr. Oswald Garrison Villard,
Editor of *The Nation*,
20 Vesey Street,
New York City.

My dear Sir:

That my letter should have brought the blithesome spirit of gaiety into the solemn and intellectual'y dour circles of *The Nation* staff is in itself a feat that is inspiritedly exhilarating. Surely 'tis going some!

Please accept my apologies for the assumption—which under the below-stated circumstances was perhaps not unnatural—that you were personally acquainted with Herr Doktors Karl A. Fuehr and Karl Mechlenburg. In addition to the widely-known fact that you enjoyed a most intimate acquaintance with their chief, von Bernstorff, it so happens that the stenographer who is typing this letter was placed in the office of Dr. Fuehr in 1915, and on a number of occasions acted as messenger carrying especial communications both to the office of Dr. Edward Rumely, of the New York *Evening Mail*, and the offices of the New York *Evening Post*, then owned by yourself, and that he remembers, one bitterly cold winter's night and in the teeth of a biting snowstorm, delivering to the house of a Mr. Villard uptown a package which Dr. Fuehr impressed upon him was of exceptional importance.

I am sure that if those polished and suave servants of the Hun diplomatic service never had the privilege of seeing you they must regretfully regard that as a most profound and inconsolable loss.

Very sincerely,
(Signed) T. Everett Harré.

Vol. IV. NEW YORK, SEPTEMBER 30, 1919. No. 19.

OUR PARAMOUNT PROBLEMS

CONSTRUCTIVE MEASURES FOR SOLVING EXISTING SOCIAL AND INDUSTRIAL UNREST DISCUSSED BY LEADERS AT NOTABLE MEETING HELD BY THE NATIONAL CIVIC FEDERATION

WITH industrial disturbances existing throughout the nation as an inevitable part of the aftermath of war, with strikes threatening to tie up great industries which vitally affect the life of the nation, with the police and other public service employees seeking to unionize and going on strike, and with various panaceas—many extremely radical and striking at the foundations of organized society—being offered, more than ordinary interest attaches to the meetings held on September 11 by The National Civic Federation in the rooms of the Merchants' Association, in the Woolworth building, New York City. This meeting, consisting of two sessions, was attended by more than 250 representative leaders of employers, labor and the public. Problems relating to labor unrest, municipal ownership and profit sharing plans, the unionization of policemen and other public service employees, and other matters foremost in the public interest, were discussed by men familiar with the conditions and difficulties of the time, men whose business it is to deal with those problems, and whose chief concern is the solution of problems almost if not as great as the problems of the war. With President Wilson to call a conference in October, consisting of delegates representing manufacturers, bankers, agricultural organizations and labor, to deal with these very subjects, there will be found in the discussion at The National Civic Federation conference suggestions of immediate constructive value.

While the various speakers may have disagreed in regard to certain matters, such as the right of policemen to organize, profit sharing, etcetera, there was presented in the course of the discussion the basis of a workable program for the stabilizing of industry and the adjustment of differences by an extension of the principles of arbitration, by a recognition by big corporations of the principle of collective bargaining, by the practical working out of some plan of sharing with workers surplus profits, and for the solving of the high cost of living by increased production.

The strikes of policemen in Boston and elsewhere provided an illustration of the imperative need of prompt action, and a resolution was passed providing that a special committee be appointed by the Civic Federation to make a study of the problems involved in the organization of unions among policemen, firemen and other public service employees. The question as to whether or not England and France had learned anything in their dealings with so-called capital and labor problems during the war that might be helpful to employers and employees in the United States was answered by James W. Sullivan, of the American Federation of Labor, and A. Parker Nevin, who reported for the commission sent by the Civic Federation to study industrial conditions abroad.

In the absence abroad of Alton B. Parker, president of The National Civic Federation, Samuel Gompers was to preside, but was unable to do so because of the death of his father. Charles S. Barrett, president of the Farmers' Educational and Cooperative Union, which represents three million farmers, therefore acted as permanent chairman. The other speakers included Matthew Woll, George W. Perkins, Lewis Nixon, Wheeler P. Bloodgood, Meyer Bloomfield, Sir Charles Ross, Emerson McMillin, T. V. O'Connor, Rev. John A. Ryan, of the Roman Catholic University of Washington, D. C., Angus S. Hibbard, Ralph M. Easley and Patrick J. McNabb. Eloquent tributes to the work and character of John Mitchell were paid by Louis B. Schram, who made a motion for the preparation of a suitable resolution of regret on Mr. Mitchell's death, and by Timothy Healy and August Belmont, who both seconded the motion.

A. F. OF L. DISCOURAGES GOVERNMENT EMPLOYEES FROM STRIKING

Matthew Woll, president of the Photo-Engravers' International Union and eighth vice president of the American Federation of Labor, who spoke for Mr. Gompers, in opening the meeting, discussed the strike of the Boston policemen. Mr. Woll said in part:

"The difficulty in Boston is not due to anything left undone on the part of the American Federation of Labor to maintain peace and tranquility in that great metropolis. The attitude of the American Federation of Labor is that all workers, whether in private employment or employed by municipalities, states or governments, have the right to organize, and should, to pro-

EMERSON McMILLIN

tect their mutual interests. The attitude of the American Federation of Labor is clear on that subject, that all wage earners, regardless of the character of their employment, have the right to associate with each other and collectively seek to improve their condition. The American Federation of Labor, however, has distinguished in the procedure by which grievances should be remedied, and by which improvements might come to the particular class of men, between those of government, municipal, state and national employment, and those engaged in private employment.

"The American Federation of Labor discourages all government employees from striking. The American Federation of Labor cannot tell any body of men not to strike, nor direct any body to strike. The American Federation of Labor as such has no authority over matters of that kind. But it does urge as guidance to all public employees that they should not revert to strike. Indeed, I know that in the granting of the charter of the Fire Fighters Union, with which I had something to do, it was clearly understood when the charter was granted that these men would not resort to strikes, but employ petitions and all the other political channels to attain improvement of conditions, and that the American Federation of Labor would give them assistance in that direction. That is equally true with the police.

"On the general situation, of course, the great war through which we have passed has rent asunder all former relations, customs, and concepts of relations that prevailed. We have had four years of time devoted entirely to destruction. We are now in a period of reconstruction. The problems confronting us now are equally as complex and perplexing, if not more so, than were the problems of the war. The problems are large and varied. During the war the great thing which was held forth was that of making the world safe for democracy. I believe that we have destroyed political autocracy. I believe we have made the world safe for democracy from a political standpoint, but we have not attained the degree of industrial democracy which should exist in the relations of men.

IMPRACTICABILITY OF PROFIT SHARING

"Profit sharing, I am convinced, is impracticable, even though operated absolutely sincerely and honestly by all concerned. On the other hand, we have movements on the part of the workers which are pronounced in the terms of industrial democracy, which do not coincide with the American Federation of Labor's conception of industrial democracy, namely, the changing of society from its present state as a unit to the shop as a unit. I allude to the Soviet form of government. Then, of course, we have the I. W. W.—men who believe in using the economic power, or direct action, to influence political action, aside from industrial relationship, and also we have the movement of socialism—all parading under the guise of democracy. And yet they don't measure up to that democracy proclaimed by that great American, Abraham Lincoln—'a government of the people, by the people and for the people.' That is the sort of industrial democracy the American Federation of Labor believes in. It believes democracy is an arrangement where all people will have the right to be heard, both in industrial as well as in political affairs. We distinguish that those matters which affect all persons alike and which relate to all peoples are matters truly of government; but that those matters in industry which only affect a particular group and those directly concerned in that industry, are not matters for government, but matters of legislation mutually agreeable and acceptable to employer and employee. That is our conception of industrial democracy. It, of course, is imperative in the exercise of that ideal that the right of workers to organize and deal collectively must be conceded and freely recognized and responded to.

"We also urge that employers should organize, and then in respective groups might, from time to time—around a round table, or however you want to meet—talk over the respective problems confronting both the industry, the employee and the employer, and thus by common council reach that conclusion and adjustment which will bring proper returns to the employee and employer, and at the same time advance the interest of the industry itself, and thus directly and indirectly help promote industrial problems of civilization."

Mr. Woll introduced Charles S. Barrett, president of the Farmers' Educational and Cooperative Union of America, who acted as chairman of the conference. Mr. Barrett presented A. Parker Nevin, who was first in the program to report for the commission sent to Great Britain

WHEELER P. BLOODGOOD

T. V. O'CONNOR

MEYER BLOOMFIELD

ıd France by The National Civic Federation study industrial conditions. Mr. Nevin said: "Yesterday, in the City of Glasgow, the Brit-h Trades Union Congress, by a vote of 4,447,-)0 against a vote of 77,000, passed a resolution ı favor of the nationalization of Great Britain's ɔal industry. The Congress also passed a reso-ıtion to the effect that in the event of the Brit-ih Government continuing to refuse to enact egislation for the nationalization of the coal in-ustry, a further Congress should be called to onsider ways and means by which the govern-ıent would be forced to take such action. This ction taken yesterday was the formal culmina-ion of the discussion of the question of national-ing the British coal industry, which your Com-ıisson last March saw the beginning of.

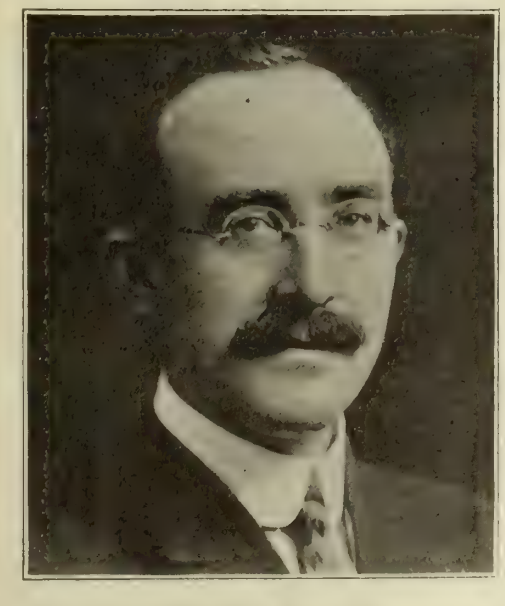
NATIONALIZATION VS. SOCIALISM

"I am not going to discuss this morning the ıerits of nationalizing British coal. I want to alk, however, on the consequence of the action f the Trades Union Congress to which I have ust referred. Great Britain, as we know, has ıad cross-currents of decidedly socialistic ten-lency, but in London when we were there last pring we did not hear the word 'socialism' used ery much. We did hear the word 'nationalism' ısed, and 'nationalization'. Now, I leave it to ou to make any distinction that you care to be-ween the nationalization of an industry and the ocialization of an industry. It may mean the ame thing; it may mean different things. I am ıot quite clear in my own mind what the distinc-ion is, but I am perfectly clear in my own mind what the tendency is; because we have seen by his resolution, to which I have referred, British rganized labor taking this position—insisting ıpon the transfer of the basic industry of Great Britain from private ownership, to not joint ownership, not trusteeship, but to governmental ownership, under joint control of management, however. Was that the wisest action for British labor to take? How will it be regarded by labor in this country? How are we to interpret that momentous decision taken yesterday in the City of Glasgow? Will the government of Great Britain accede? Will it reject? If it accepts there is a new principle in operation in Great Britain's industry, a new principle affecting both employers, employees, and the public,—a principle which, I take it, the vast majority of labor in this country has been enthusiastically contending for.

"What is that tendency toward the nationalization, the ownership of industry, going to result in? Are we going to follow it in this country? Are we going to demand that not only our transportation systems, but also our basic industries, and our related industries shall become nationalized? If we do that we have abandoned absolutely the principle of the industrial system upon which our great country has so far lasted. If we favor as an operating principle of modern industry the state control of our industrial forces, by so admitting we overturn the entire principle of employment, of employers, and of employees, and of the exclusiveness of private property.

CHAOTIC BRITISH LABOR CONDITIONS

"The chief economic question we observed when we were in England was the failure of the resumption of full production, and until that production is made, not only for the vacuum created during the war, but for the present conditions over there, there will be high prices and general disorganization of industry.



"We found in Great Britain, in my judgment, a more tolerant attitude between the representatives of organized labor and the representatives of organized employers than exists in this country. They were willing to meet and discuss plans of action by which there could be perhaps evolved better industrial relations. I won't say we didn't find greater stubbornness on the part of employers, but we found a more willingness to at least listen to what the other man had to say before denouncing him in advance. We found the forces of labor, however, as I stated before, divided between various schools of belief. We did not find British labor as such distinctly and positively standing for any one thing. And we certainly did not find the combined forces of British manufacturers standing for any one or two stated principles. It was all mixed up.

"I think the fundamental trouble in Great Britain and also in the United States at the present time is this: That consciously or unconsciously we have got industrial neurasthenia. We are on our nerves. We are upset. We are not seeing very straight and not acting very straight. It is a natural reaction of the great war. We are looking more at the things than at the people running the things. I think we get in a confused condition of mind and fail to see how we can treat these questions with composure. If we are going to get machine guns out in the street and kill one another and denounce everybody, we are having a re-enactment of the war, we are having industrial war. But we are not going to get anywhere by those methods. If there ever was a time in the history of American industry, and particularly so far as labor is concerned, when you want

LEWIS NIXON

The Industrial Situation Abroad Following the War

The report of the Commission sent by The National Civic Federation to Great Britain and France to study industrial conditions has been completed, and abridgments of the chapter by Albert Farwell Bemis, who represented the employers, on "The Housing and Land Problem in Great Britain," and by Andrew Parker Nevin, who represented the interests of the public, on "Public Opinion and Labor in Great Britain," are here published in abridged form.

Mr. Bemis' is the fifth in a series of reproductions of the more important chapters of the report, in abridged form, Mr. Sullivan's contribution having appeared in the previous issue of THE NATIONAL CIVIC FEDERATION REVIEW.

Mr. Bemis is President of Bemis Bro. Bag Co. of Boston, and is connected with several other important textile companies. He has for many years been a member of the Board of Government of the National Association of Cotton Manufacturers, and was President of this organization for two years. He is also Treasurer of the National Council of American Cotton Manufacturers, and a member of the National Industrial Conference Board. Mr. Bemis is a graduate of the Massachusetts Institute of Technology, and has given special study to the subjects of industrial relations and housing.

The Chairman of The National Civic Federation's Commission was Charles Mayer, chairman of the Board of the France & Canada Steamship Corporation. Besides Mr. Bemis and Mr. Nevin, the other members were James W. Sullivan, who represented labor; Charles S. Barrett, President of the Farmers' Educational and Co-operative Union of America; Grant Forbes, of the American International Corporation, and E. A. Ouarles, secretary.

THE HOUSING AND LAND PROBLEM IN GREAT BRITAIN

V.

LONG wars usually bring housing problems. The condition after the Napoleonic wars has been thus described:

"The building of houses was so discouraged that the consumption of bricks and glass was actually declining. . . . There was a tax on windows, which yielded a million and a quarter annually, and which caused the building up of windows, and a consequent shutting out of sunlight, to the serious diminution of human comfort and health."

"There was no drainage, and the filth of the city lay festering on the streets, poisoning the unhappy people."

In France the houses destroyed and damaged beyond ordinary repairs within the devastated area may be taken as the measure of the present shortage. This would approximate 410,000 homes. In Great Britain 450,000 would probably represent the actual need.

Strange as it may seem, the conditions of the war have inspired among all classes of people a greater interest in humanity, and a greater regard for the physical and social conditions under which the masses of the population live. During the war the people of Great Britain and France became accustomed to the handling of large national problems by direct governmental action. For this reason and because of the size and extent of the problem, it is natural to find the governments of both countries adopting measures for fostering individual and associated interest in and the subsidizing of improved industrial and community housing, and the prompt building of modern homes for workers.

In both Great Britain and France, there has been a distinct revival of interest in agriculture as the result of the war, and, partly in fear of emigration, both governments have been taking steps toward improving agricultural lands and opening up additional areas for the growing of food and feed stuffs. Whereas the number of schemes having to do with the carrying on of this work is great, actual accomplishment so far has been small.

BUILDING COST NOW ON PARITY

Prior to the war, a house which, in Great Britain or France would have cost $2,000 would have footed up about $3,000 in the United States. As a result of the war, more radical advances have taken place in Europe than in America, and the present cost of building in both Great Britain and France is about three times the pre-war cost while that in America is approximately double. This puts America on an approximate parity with these two countries, and the house above mentioned would cost practically $6,000 in all three countries.

ALBERT F. BEMIS

In Great Britain practically all dwelling houses, wherever situated, are of solid masonry construction—stone or brick—and, save in the cities, are without cellars or basements. There is no air space for insulation against temperature and moisture, and the inside plastering is placed directly on the surface. The flooring is usually of brick, tile or stone. The water supply is generally limited to an outside tap. Even in the rather attractive Liverpool tenements, built by the municipality in 1885, there are no direct water or sewer connections, both being located in the hallways outside and for the use of two to four families. Most of the workmen's tenements in Great Britain are without yard space. The heating is from open fires, and the window spaces are, in general, rather small.

GOOD EXAMPLES OF MODERN HOUSING

The description above applies to the houses of twenty-five or more years ago, and these comprise by far the greater portion. There are, however, several recent community and industrial developments, such as those at Letchworth, Ealing and Bourneville, where there are fine examples of modern housing. The two first mentioned were built and managed by cooperative societies. At Bourneville, which I consider the queen of all England's industrial towns, private enterprise did the building but later turned it over to the public to administer. In Liverpool the municipal corporation, after wiping out numerous slums, has substituted much fine modern city housing.

The solid masonry of the older type of house makes it difficult though not impossible, to introduce modern conveniences. With few exceptions the housing of industrial workers of Great Britain is in towns and cities which have preceded the industrial plants, and rarely has housing been constructed as an integral part of an industrial plant.

A noticeable feature in the finish of the front doorways of most of the recent industrial tenements in Liverpool is that the locks and latches are of brass. Commenting on this feature, Mr. Turtin, Director of Housing, said that the condition of the "handle of the big front door" largely depicted the condition within the house. By this simple device the work of inspection was made easier, for these door latches represent the degree of orderliness of the tenants and at the same time give opportunity for the force of example to exert itself.

MINING HOUSING BAD

The mining industry is one in which employers have provided housing to the extent of about thirty-three and one-third per cent. While this has not been the cause of the low standard of housing conditions in the mining regions, it has brought severe criticism upon the mine owners, and has justly tended to fasten upon the employers a large measure of obligation for decent living quarters in industries forming practically the only productive business in their immediate section. Both because of the dirty and continuous nature of the work, and the limited scope for the satisfactory grouping of dwellings in the proximity of the mines, living conditions in this industry have vied with the slums of the big cities in over-crowding, dirtiness and ill health. Mining towns are sure to receive particular attention in Great Britain's immediate housing program.

Labor's demands in Great Britain at the present time are anomalous. On the one hand the cry is for shorter hours, and on the other for increased wages and better and more houses. The enormous waste of war materials has impressed large masses of wage-earners with the idea that there is no limit to the resources of the State. They wonder why houses could not be provided at an expense of, say, fifty million pounds annually, if the Government can afford to spend twenty-five or fifty times that amount on the prosecution of the war. They fail to appreciate that the country has been living for the past four years on her capital, and that a continuance of that policy for much longer would result in national bankruptcy. It is not easy for the wage workers to understand that by a doubling of nominal wages in the building trades the nominal cost of houses, and hence nominal rentals must inevitably double if Capital, however owned, is to continue to provide homes for the individual.

LUXURIES COST WOULD BUILD HOUSES

A prominent authority has estimated that from ten to twenty thousand rich persons spend unnecessarily in luxuries each year in Great Britain fifty million pounds or more. If,

through large taxes on luxuries or an amplification of the existing graduated income tax, sums heretofore spent in this way, and the labor employed in manufacturing and distribution, could be diverted to the building of houses, the country's problem would be quickly solved.

Modern housing legislation in Great Britain commenced with the "Laboring Classes Lodging Houses Act" of 1851. Material amplification was made in 1875, and there was a gradual betterment in the laws which culminated in 1890, when the "Housing of the Working Classes Act" was passed. This consolidated the housing measures in all previous acts, and included new provisions.

In 1879 George Cadbury, the great cocoa manufacturer, started the development of the village of Bourneville. In 1869 the city of Liverpool opened its first tenement building. In 1895 the then Sir William Lever founded Port Sunlight. In 1899 the Garden City Association was founded, and in 1906 the National Housing Reform Council was set up, to be followed in 1909 with "The Housing and Town Planning Act", a further amplification of the statute of 1890. It established a system of nation-wide housing inspection under the sanitary authorities, reporting to the Local Government Board, and extended and amplified the policy of national Government aid. Local authorities were permitted to borrow from the Public Works Loan Commissioner on the security of their local for land and 60 years for buildings. Developments by societies, corporations and individuals, subject to certain limitations, might be aided financially through the Public Works Loan Board under essentially the same terms as local government schemes. The needs of individual workers were met by the "Small Dwellings Acquisition Act" of 1899, which permits local authorities to advance sums of not more than £300, representing not more than four-fifths the market value of a house whose total value must not exceed £400.

THIRTY-FIVE MILLION INVESTED IN HOUSING

Up to 1916, 528,742 persons had been housed in England through constructive housing legislation, and £7,640,597 had been invested by the national government in housing. Model dwellings on cleared slum areas in London showed a decrease in the death rate of from 40 to 13 in the thousand. In Port Sunlight, just outside Liverpool, seven-year-old boys average two and seven-tenths inches taller and seven and one-half pounds heavier than those in Liverpool itself.

As the local government of Scotland is quite distinct from that of England and Wales, housing and town planning legislation for that country has been through entirely separate acts of Parliament. These follow fairly closely the lines already referred to, and they need not be considered here.

Recent legislation in Great Britain indicates a tendency to limit or control rentals even to the extent of subsidizing the business from the public revenues. It is doubtful, however, whether this latter tendency will persist, because, as an economic proposition, it is clear that the Government cannot subsidize all industries and businesses without precipitating insolvency.

HOUSING MOVEMENT EXPEDITED

With a view to avoiding unnecessary delay in meeting the extensive housing needs of the nation, the Local Government Board of Great Britain, on February 6, 1919, offered to local authorities and Public Utility Societies virtually the same measures and plan of Government financial assistance as those contemplated by proposed new legislation, and since included in the Government housing bills. Loans thus made by the Government are to be liquidated by annuity payments over a period not exceeding fifty years, and would be issued up to three-quarters of the total value, and include a plan similar to that of Government subsidies to the extent of twenty-five percent of total value as contemplated in pending legislation, with the additional provision, however, in the case of Public Utility Societies that "any profits of the Society in excess of 6 per cent shall be devoted in whole or in part as may be required by the Local Government Board towards the repayment of sums received from the Exchequer by way of subsidy during the currency of the loan."

The Government has appointed a new official in connection with housing known as the Director of Propaganda. It will be his duty to arouse and maintain general interest in housing matters, and it is proposed that he work through a subordinate attached to each of the thirteen regional commissioners.

Financial assistance to local authorities is to be calculated on a basis estimated to relieve these of the burden of any annual deficit in expenses of operation to the extent of the excess in the local tax "rates" of a penny on the pound, assessable against the area in question. There is to be no donation by Government towards the cost where the annual excess of expenditure over income would not exceed that amount. It is estimated that the capital expenditure by Government during the three years of its proposed assistance would amount to £300,000,000 for England and Wales, based upon an average capital cost per house of £600, and the net deficit to be met out of public funds on account of subsidies to Public Utility Societies, and contributions toward the cost of operation in the case of developments by local authorities, would amount to £6,500,000. Similar figures for Scotland would be £39,000,000 capital expenditure and £845,000 net deficit.

1936 SCHEMES SUBMITTED UP TO MAY 31

A total of 1936 schemes had been submitted up to May 31 by 660 local authorities and 36 Public Utility Societies, under the plans for Government assistance described above. The total area of the sites covered by these schemes was 25,000 acres, and the number of houses 250,000. Five hundred and seventy-four sites covering 13,364 houses for the approval of house plans had been received, of which 107 applications, providing for 5,201 houses, had been provided.

Reference has already been made to the "Small Holdings and Allotments Act." This gives power to county officials, acting under the Board of Agriculture and Fisheries, to acquire land for lease or sale on easy terms, to those desiring to settle upon and cultivate it. Operations under this law have been comparatively small, involving loans by the national Government in the years preceding the war of approximately £5,000,000.

With a view to meeting the demands of demobilized soldiers who want to acquire small agricultural properties, the Government has introduced into Parliament two measures known as the "Acquisition of Land Bill" for improving and clarifying laws governing the condemnation and acquisition of land for public purposes, and the "Land Settlement Bill." Under these, County Councils would be given increased authority in the acquisition of land for development into small agricultural holdings which would be financed by loans from the national Government, authorized through the Public Works Loan Board, with guarantee to the County Councils against a loss in capital investment occurring within a period of seven years. The Settlement Bill not only contemplates the sale of land, but the operation of colonies under the supervision of the Department of Agriculture and Fisheries for the training of agriculturists and the forming of co-operative organizations for the distribution and sale of farm products.

Public Opinion and Labor in Great Britian

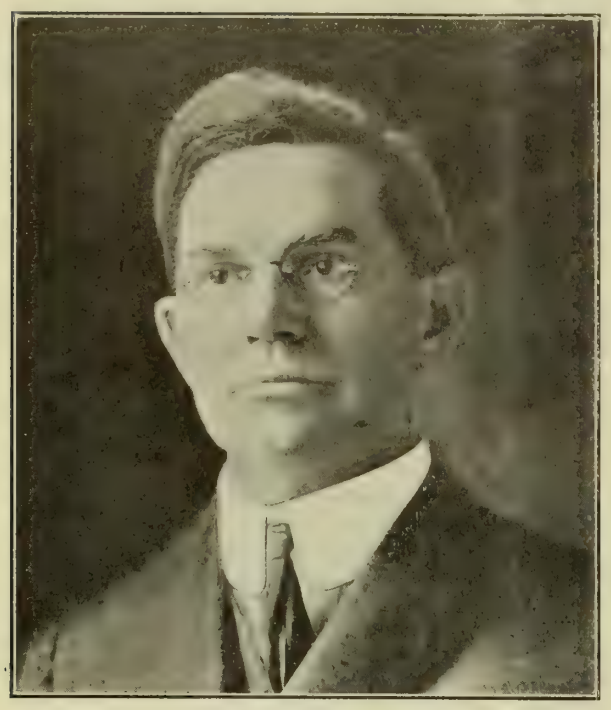
THE following is the reproduction in abridged form of a report by Andrew Parker Nevin, of the New York bar, who represented the interests of the American public on the Commission recently sent abroad by The National Civic Federation to study industrial conditions. This is the sixth and last in a reproduction of the more important chapters of the report in abridged form.

Mr. Nevin is a graduate of Princeton University, and was for many years General Counsel for the National Association of Manufacturers. During the war he was a member of the Committee on Labor, Council of National Defense, of which Committee Samuel Gompers was Chairman. He was particularly active in the work of the American Fund for French Wounded. He has long been an interested observer of the relations of capital and labor, and has delivered many addresses on industrial and economic topics.

VI.

NO observer of industrial development will deny that the public is becoming a larger integral factor in the labor equation of the day. Employers and workers appreciate this significant fact. Both groups seek to enlist public opinion in support of their respective issues, in the hope that they may be sustained in the positions taken. The interest of the public is, therefore, associated vitally with the vast and complicated problems in which the employing and employed groups are at present so deeply immersed. The public has a very direct interest in most controversies between capital and labor from the very fact that a large majority of the people as a whole is concerned with the cost of the commodities which the public consumes.

While there is evidence that the public is taking an increased interest in such controversies, a greater increase of the best thought of the more progressive nations could be given to the formulation of plans whereby the interests of the consumer could be more adequately safeguarded in the strife that seems inevitably to arise between capital and labor. This is particularly true of the salaried and wage earning classes, whose income is more or less fixed, and who, particularly since the outbreak of the war, have been called upon to pay a constantly increasing price for the necessaries of life.



BRITISH ATTITUDE MORE ALERT

The arena of British industry being small and concentrated, public opinion can shed its light on a given problem with almost the pencilled illumination of a searchlight. That opinion in Great Britain, in its attitude toward the labor problem, is more active, responsive and alert than in the United States, is the opinion of the writer. Against this observation, however, it may be advanced in friendly criticism that the methods, plans and procedure adopted by the public are more complicated and less effective than corresponding agencies in the United States. Public opinion plays a very important part in the ver-

(Continued on page 17)

Great Leaders of the Union Labor Movement

By W. C. ROBERTS
COMPILER OF THE AMERICAN FEDERATION OF LABOR HISTORY, ENCYCLOPEDIA AND REFERENCE BOOK

GEORGE W. PERKINS

GEORGE W. PERKINS

President Cigarmakers' International Union

In all movements benefiting mankind are found men who never seek the limelight, who feel that a good act accomplished for others is well repaid by the joy it gives. The labor movement has such a character in George W. Perkins, who has been president of the Cigarmakers' International Union since 1891. In that time, as editor of the *Cigarmakers' Journal,* he has persistently urged a better standard of living for all the people, and month after month has given practical remedies for conditions in which he found causes for protest.

There is no hypocrisy in Perkins. He is a cool, deliberate, earnest thinker, and cannot be "rattled" or driven off the path he believes to be right by any force or influence. Under the laws of the cigarmakers, until recently delegates to the American Federation of Labor had to be elected by referendum vote. While entitled to contest for the position, he held that as he was president he should not attempt to hold another office while so many members held none. He therefor never submitted his name as a candidate. But in 1912 the international union convention made him a delegate by virtue of office, and he has served ever since.

In 1913 Mr. Perkins was sent as a delegate to the International Secretariat at Zurich. While in Europe he visited many countries and made a careful analysis of labor conditions. His report was exhaustive and exposed the dreadful conditions under which many workers of Europe lived. He showed conditions were so much lower in standard than in the United States that the people of this nation were astonished. His report proved a stunning blow to the German propagandists, who had set up the Fatherland as the Paradise of workers.

So complete and illuminating was this report that Mr. Perkins has been appointed chairman of the committee on international labor relations at all American Federation of Labor conventions since. The reports made by that committee have had much to do with keeping the American labor movement safe from courses fraught with irreparable havoc.

In the last convention, Perkins showed up a dangerous propaganda on part of the radicals, who were persistently discussing what had passed during the war and who obdurately refused to consider what was best for the future. It was soon found that these delegates and outsiders were trying to divert the American Federation of Labor away from its reconstruction plans into criticism of the war, of the methods followed, and of the grievances of individuals against either government officials or officers in the army. Groups of these disturbers gathered here and there on the boardwalk and poured their venom into the ears of every one who would listen. When the committee on international labor relations made its report, which was written by Perkins, this stand was announced as a repudiation of the Socialists and pro-Germans who sought to use the American Federation of Labor:

"The past is gone forever. Autocracy and militarism, we hope, are buried with it. The future is our immediate concern. Ignoring what has gone before except so far as the lessons taught, we shall build along the lines of reason, judgment and the experiences gained."

This was a setback to the radicals, who died hard when the report was debated. This is only an instance of the care that must be used by committees in safeguarding the Federation from its foes within. It is not always possible to tell what motives or outside influences are behind some of the resolutions presented. The trained labor leader, who seeks only the good of mankind, who sinks his own desires and individuality for the common good, generally pries out the stranger in the woodpile. But it requires a long apprenticeship as a labor leader to be able thus to distinguish between the propositions presented.

This one incident may show clearly what responsibility rests on the chairmen of committees. But Perkins has had a most remarkable training. The Knights of Labor sought to destroy the Cigarmakers' International Union away back in 1887. It failed because trade unionism was too firmly established in the minds of the workers. Then the Socialist Labor party began a warfare upon the international in 1894 that brought to the surface all the talent necessary for the Socialists' defeat. Perkins came through these struggles with his union intact.

In the previous issue of The National Civic Federation Review *was begun an article giving briefly the history of some of the men who helped make the American Federation of Labor. That article included sketches of James Duncan, president of the Granite Cutters' International Union and First Vice-President of the American Federation of Labor; Joseph F. Valentine, President of the Iron Moulders' International Union and Second Vice-President of the American Federation of Labor; William D. Mahon, President of the Amalgamated Association of Street and Electric Railway Employees and Fifth Vice-President of the American Federation of Labor; Matthew Woll, President of the Photo-Engravers' International Union and Eighth Vice-President of the American Federation of Labor; and Daniel J. Tobin, President of the International Brotherhood of Teamsters and Treasurer of the American Federation of Labor. Following are sketches of a number of other men who stood with Samuel Gompers in making the American Federation of Labor what it is, and who did splendid work as chairmen or secretaries at the notable convention in Atlantic City.*

JOHN P. FREY

JOHN P. FREY

Editor of the International Molders' Journal

Publicity is labor's most effective weapon. To get before the great reading public the true story of labor is always difficult. Because of this fact, it is to be considered a case of good luck to labor that scattered here and there throughout the nation are men who never lose an opportunity to point out the good in life secured by the organized labor movement. These men are the history-makers for labor.

Among the labor editors who are always looking for an opportunity to advance the cause of Labor is John P. Frey, editor of the *Molders' Journal.* For years his literary work has been prolific. He also goes into colleges to combat the sophistry of those professors of political economy who have tried to corrupt the youth of the land with disloyal teachings.

As a member and secretary of the committee on resolutions of the American Federation of Labor conventions Mr. Frey has proved a wise and capable teacher of what is needed to better the methods of the organization. He has been a deep student of the injunction and judicial processes. His advice, because of this knowledge, has proved valuable in times when cautious judgment is necessary.

Mr. Frey has been one of the most earnest leaders in the agitation for more and better educational opportunities for the growing children of the nation. No question requiring the strictest analysis has been too difficult for him to solve.

When the pacifist intrigues among the labor forces of England, France and Italy seemed to be growing in strength and the war was at its most critical stage, the real labor men of those countries urged President Gompers to send a labor commission to Europe to save the situation. President Gompers named Frey as one of the members of the commission. Those who read his report at the 1918 convention will not wonder at his selection. It was a masterpiece, recounting the remarkable work accomplished in presenting the ideas of American workers to the war-weary people of Europe.

Our slogan was that "there can be no peace without victory." This encouraged the working people of those lands and inspired them to a new effort for success.

Frey always has planned greater publicity for the labor movement. In 1910 he proposed that a weekly news letter should be printed to get Labor's side before the public, as an effective

THOMAS A. RICKERT

MRS. SARA A. CONBOY

WILLIAM GREEN

instrument to further the cause. The results proved he was right.

In 1916 he proposed that a Year Book should be published, and in 1917 the Buffalo convention again endorsed the proposition. In compiling the Year Book it was found that a history covering only one year would be impracticable. It was therefore decided, with Frey's approval, to make it a more elaborate work, and when completed he said it surpassed his expectations, containing more information than he thought could be put between two covers. It will thus be seen that Editor Frey's agitation for further vehicles for advancing the cause of labor have proved most fruitful. His part in the labor movement has been varied, but in every angle can be seen the results of his advice and handiwork.

SARA A. CONBOY

Secretary Textile Workers of America

The women of America are fortunate in having such a splendid representative in American Federation of Labor conventions as Sara A. Conboy. As a leader of her sex for many years, as an official of an international union, and as a delegate to American Federation of Labor conventions, she has through her untiring efforts secured many concessions for women and children. She has also taken part in discussions on all questions for the benefit of labor as a whole.

As a member of the committee on organization, she has shown wonderful powers of reasoning. Many old and tried international officers are on this committee, but Mrs. Conboy's deep knowledge of the trade union movement and of proper methods to pursue in the organization of the unorganized made her selection as secretary almost inevitable.

No question affecting women and children comes up in the conventions in which she does not take the deepest interest. Leading men delegates find her a source of needed advice when they are puzzled over some knotty trade problem.

As secretary of the textile workers she has aided in building up that organization despite most bitter opposition from powerful influences.

When President Gompers was requested to name someone to christen the Afel in the Hog Island Shipyards on June 28th last, he selected Mrs. Conboy as a representative of the American Federation of Labor and of the highest American womanhood.

FRANK DUFFY

THOMAS A. RICKERT

President United Garment Workers and Sixth Vice-President American Federation of Labor

No labor official has had a more difficult task in guiding an international union than Thomas A. Rickert, president of the United Garment Workers. More than two scores of nationalities make up that organization, and it requires diplomacy and executive ability of the highest order to keep it intact.

President Rickert has had his enemies both within and without the organization. Some of these are found in other unions and central bodies. With a wonderful command of himself, Rickert has moved ahead through all difficulties with confidence in the outcome.

It is such battles that make men big. It was not, therefore, surprising that when the Atlantic City convention met he was made chairman of the adjustment committee. While jurisdictional controversies raise more disturbance than all the different nationalities in his own organization possibly could, he was very successful in adjusting disputes. No one without such an experience as his could serve on such a committee.

Rickert's experience has therefore proved of great assistance to the labor movement. He declared the policy that nothing be done in secret, and which met the hearty favor of those delegates with jurisdictional disputes to settle.

FRANK DUFFY

Secretary Brotherhood of Carpenters and Joiners of America and Third Vice-President American Federation of Labor

Frank Duffy is secretary of an organization with nearly 300,000 members and has held that position for nineteen years. Open and frank in all his dealings, and a thorough trade unionist, he is respected by all who know him for his extensive knowledge of labor matters.

Duffy is one of the big men who in conventions help to steer the labor craft into safe harbor. His work on the committee on organization has proved of incalculable value to the American Federation of Labor and its affiliated unions. Having aided to make the policy which increased the membership of the organization of carpenters, he was ably fitted to act as chairman of the committee on organization.

WILLIAM GREEN

Secretary United Mineworkers and Fourth Vice-President American Federation of Labor

No miners' convention has been held for many years in which the voice of William Green has not been lifted in demands for better conditions for the men of the coal pits. It is difficult to remember when he first appeared as a leader, but it was many years ago. For several years he was a member of the Ohio Senate and president *pro tem.* He afterward became secretary of the United Mineworkers.

Green's experience has been of a practical kind. He has no visions of an impossible chimerical world, and the work of using a pick and shovel when employed in mines has made him a business-like man of affairs. As chairman of the committee on shorter workday, he presented a masterful report in which it was set forth as the policy to be followed hereafter that wages must be increased so that the dollar of today will buy

JAMES WILSON

Socialism or Social Reform in the Church—Which?

THE following correspondence between the Editor of the REVIEW and Mr. William Fellowes Morgan, Chairman of the Every Name Campaign of the Protestant Episcopal Church, is published herewith, in the hope that it will be of some interest to the readers of the REVIEW. As the first two letters found their way into the columns of *The Nation*, it may not be presumptious to assume that the full correspondence to date, at least the quotations contained in the third letter, are worth publishing. This correspondence is not official but personal between Mr. Morgan and the Editor. Any further correspondence on the subject will appear in later numbers of the REVIEW.

NEW YORK, July 25, 1919.

MR. WILLIAM FELLOWES MORGAN,
Chairman Every Name Campaign,
New York City.

Dear Mr. Morgan: I have read with interest and sympathetic appreciation the announcement of the organization of the Every Name Movement, the purpose of which was so well represented by you in the press statements.

In connection with that, I desire to call your attention to a situation which a good many members of The National Civic Federation consider a serious one, namely, the rapid growth of socialism in the churches, Protestant, Catholic and Jewish alike. Unless the sane and conservative religious business men, such as you are proposing to organize, take an interest in this matter in all the churches, a state of affairs will develop which will cause serious trouble. In fact, trouble is already developing.

It will not do to leave these matters entirely in the hands of the clergy. There are, of course, brilliant exceptions in all denominations but, as a rule, the clergy are not equipped by training to deal with the practical, hard-headed business propositions that employers and labor leaders have to consider when they are dealing, for example, with strikes, and, naturally, they have not the time to get at first hand the facts that would enable them to form a correct judgment on such matters.

In a study I made recently, I was surprised to find that practically all of the church committees or commissions dealing with industrial matters are dominated by Socialists or by those of an extreme, radical type of mind. While proposing to deal with the question of American labor conditions, they give voice only to the views of the Socialist wing in this country or those of the British Labor Party in England, which is working on an out-and-out socalist programme.

The trouble with many of the preacher-secretaries of these social service movements is that they do not differentiate between social reform and socialism, while many of them are socialists, pure and simple, and do not wish to differentiate. The American Federation of Labor and the Railway Brotherhoods have all they can do to beat down the forces of disorder in their own fields and, from what I hear, some of them think that the employing and business classes, who largely dominate the boards of trustees of the churches —the Protestant churches at least—should protect them from attack in the rear by church organizations.

Your new movement relates only to the work of the Protestant Episcopal Church, and, while, as stated, all the churches, Protestant, Catholic and Jewish, are alike permeated with these dangerous doctrines, the Protestant Episcopal Church is especially open to that criticism. You doubtless have seen the announcement of the Church League for Social and Industrial Democracy, of which the Right Rev. Charles David Williams, Bishop of Michigan, is the chairman. On its committee are several well-known socialist clergymen, among them being the man who so fulsomely praised the I. W. W. in an address at the General Convention held in New York in 1913, without any protest being made.

Another Episcopalian movement is The Church Socialist League in America. *The New York Daily Call*, the leading organ of the socialists, reports this organization as "calling upon the church to repudiate its affiliation with the captalist system," and goes on to say: "The Church Socialist League in America reorganized itself at a meeting in the People's House (Rand School) and issued a manifesto to which it will try to rally all the progressive forces in the Protestant Episcopal Church throughout the country. Right Rev. Paul Jones, former Bishop of Utah, was elected president, and Rev. W. B. Spofford, organizing secretary. Irwin St. John Tucker was elected chairman of the committee on activities at the general convention of the Protestant Episcopal Church to be held in Detroit next October."

This Irwin St. John Tucker, who is designated to take such an active part in the General Convention of the Protestant Episcopal Church, is the same gentleman who was convicted in Chicago of sedition and sentenced to a twenty years' term for violation of the Espionage Law.

The National Civic Federation last spring sent a commission to Europe to study industrial conditions. This commission has just returned and is now formulating its conclusions. It will make its report at a meeting called by the Federation on Monday and Tuesday, September 8 and 9, and at the same meeting there will be considered the labor situation in America. These subjects will be discussed by representative labor men and employers. It has been decided to invite all representatives from the reconstruction committees of the various churches, in order that they may not only hear what the labor men and employers themselves think on these matters, but also may have an opportunity of expressing their own views. I hope that the Every Name Movement will accept the invitation, when it is issued, to send a representation.

Very sincerely yours,

RALPH M. EASLEY.

Aug. 19, 1919.

RALPH M. EASLEY, Esq.,
The National Civic Federation, New York.

My dear Mr. Easley: Absence from the city, coupled with a desire to give your letter of July 25 the thoughtful consideration which it demands, have postponed till now my reply.

We are living in a period of vital change. There are many divergent views as to the nature of the reforms which existing conditions require. These will have to be reconciled according to our democratic custom in the adjustment to meet the demands of the new age. Discussion of the various proposals to that end is covering a wide range, in church circles as elsewhere, which I think you will agree is altogether desirable, inasmuch as no church establishment is fully discharging its functions which does not to the extent of its resources seek to assist in the solutions of the problems which the world is facing.

Now, as to the "rapid growth of socialism in the churches" which you charge. My specific interest is in the Episcopal Church. A cardinal principle of that church is that its communicants shall enjoy the fullest expression of their views, but with the understanding that such views, clerical or lay, must in no sense be interpreted as representing the attitude of the church as a whole, which can only be expressed through its duly constituted bodies. In the absence of any declaration by the General Convention or any duly authorized committee or commission upon pending issues, I suggest that it is not just to attribute to the church any attitude either for or against socialism. If there is a tendency toward socialism on the part of individuals or groups of individuals within the Church, such as you suggest, I venture to say this tendency is not more markedly developed in Episcopal circles than it is within the body of our citizens as a whole; and while extreme radicals outside the church, like extreme radicals within it, may be more strident and more prone to make themselves heard, there is no evidence yet at hand to indicate that they constitute a majority of the community.

After all, whatever the present tendencies may be, I can see nothing but benefit to be derived from broad discussion of our social problems, even within the Episcopal Church. That is one of the safety valves of our form of government. Rev. Dr. William T. Manning, Rector of Trinity, in a recent statement on our Every Name Campaign, with particular reference to the question we are now discussing, said, with very great point: "At a time like this it is natural that there should be extravagant views and unregulated enthusiasms. It is inevitable that the vision should carry some of our brethren off their feet and lead them to confuse liberty with lawlessness, and progress with social destruction and disintegration. Perhaps we need these extreme views to spur us on to true progress."

True progress is what we are all aiming at. Indulge us a personal note. I do not share the views of Trotzky or Lenine. I am opposed to such doctrines as are embraced in the theories of those radicals who advocate the assumption of all enterprise and initiative by the State. And I have reason to believe that the gentlemen with whom I am associated in the Every Name Campaign of the Episcopal Church, for the most part laymen and business men and vitally interested in stable, progressive government, share my views in this regard. But in these days of progress, when a "rapid growth of socialism" is alleged, one is impelled to ask for a definition of "socialism" with reference to the present crisis in the world's history. Many of the activities upon which our Government has embarked with the full approval of the people to remedy evils, and make the Government more responsive to the popular will, have within your memory and mine been stamped as highly socialistic. Then consider the present situation. You say: "The American Federation of Labor and the Railway Brotherhoods have all they can do to beat down forces of disorder in their own fields," and you protest that they should be protected from "attack in the rear by church organizations," which latter, you say, "while proposing to deal with the question of American labor conditions" urge the view of the "British Labor Party in England, which is working on an out-and-out socialist program."

Yet we find the American Federation of Labor and the Railway Brotherhoods urging upon the country a plan for the socialization of our railways which is far in advance of the British Labor Plan. Is one more socialistic than the other?

I merely cite this by way of pointing out the desirability of an agreement as to what "socialism" is, without going into the merits of either plan and assenting to the proposition that the Episcopal Church is urging the one or the other.

The fact is, I believe, that when our people come to face the issues squarely the test will be not whether a proposed reform is or is not "socialistic," but will it remedy a downright evil, meet a real demand—will it conduce to the well-being, the happiness, and the prosperity of the whole people? Of this much we are sure: The old order has passed. One great good which has

ime out of the war is a reassertion of the essential equality of mankind. The war was a great veller. In that crisis we all had to put our houlders to the wheel, rich and poor, high and w, and with all former rank and distinction vept away each of us fitted into the groove to hich he was best suited. It is in that spirit iat we must face our present problems. Somehere between the extreme on either side there is middle ground upon which the foundations of ie new age will be laid.

It is the purpose of the Every Name Campaign f the Episcopal Church in New York, which is part of the Nation-Wide Campaign of the 'hurch, by education, by propaganda, by perional contact with every member of the organiation, to awaken our people to a sense of their esponsibility as citizens and church members, nd to assist in the solution of these problems. n connection with the Campaign, a nation-wide urvey of the resources of the Church is being iade. When the General Convention of the 'hurch meets in Detroit in October, it will have efore it a complete picture of the Church organization, together with all the facts as to its vants, needs and aspirations. Thereafter a programme of nation-wide church activity will be 'ormulated as representative of the Episcopal ittitude toward the new age. Whether it will be 'socialistic'' or not, I am unable to forecast. But under the leadership of the broadminded Bishops and clergy and the body of laymen who will there represent every section of the country, and every point of view of the Church, I have full confidence that the Church in keeping step with the march of progress, and in meeting the demands of the new era upon which we have entered, will continue to be sound, patriotic, and worthy of her traditions.

Very truly,
WILLIAM FELLOWES MORGAN.

New York, September 27, 1919.

MR. WILLIAM FELLOWES MORGAN,
Chairman, Every Name Campaign,
124 East 28th Street, New York.

Dear Mr. Morgan:

I have your letter of August 19. First, I want to say that when I wrote to you on July 25, I did not know that the Every Name Campaign was an alliance of clergymen and laity. From a headline in a New York paper, referring to the movement as one designed to prove that "religion is good business," I inferred that it was made up of business men. Furthermore, you are quoted in the press—and I have seen no refutation of the sentiments ascribed to you—as saying: "The movement is built around the practical idea that big business men believe that the life of the average American can be made to conform, with profit to himself, to religion and the spiritual law. It is to be an intensive development of the theory that religion is good business." I now learn from your letterhead that the active workers in the movement—the Honorary Chairman, the Honorary Chairman of the Executive Committee, the Chairman and Secretary of the Standing Committee, the National Campaign Director and the New York Director—are clergymen. I do not refer to this in criticism, but simply as an explanation of the impression which I had received.

I agree with you that it "is altogether desirable" for the Church, "to the extent of its resources" to "seek to assist in the solutions of the problems which the world is facing."

My main contention was that it is time that the sane and constructive business men of the churches took cognizance of the growth of socialism in the churches, instead of leaving it to the clergy, and that if they did not, a situation was, and is, developing which would be fraught with serious trouble. I still maintain that contention, whatever the composition of the Every Name movement may be, because it is the business men—manufacturers, merchants, lawyers, bankers—who make up the governing bodies of the Protestant Church, especially of the Protestant Episcopal Church, and, if they are going to prove that "religion is good business" as you expressed it, it will be their primary duty to see that the social, educational and spiritual machinery of the church organization is not captured by the inordinately active socialists, socialistic sentimentalists and other fomenters of disorder.

I did not charge the Protestant Episcopal Church with being socialistic as a church, but I did charge that the committees, or commissions, which are dealing with industrial matters are, in practically all the churches, influenced, if not dominated, by socialists or by persons of an extremely radical type of mind. In a sense, these committees do officially represent the Church and, unless their utterances are repudiated, the public has a right to assume that, if not *approved* by the Church, they are at least *not disapproved*.

The clergyman who, at the General Convention of the Protestant Episcopal Church in New York in 1913, as I said, praised the I. W. W. (the Bolsheviki of America) without any public protest being raised, was the Rev. J. Howard Melish, of Brooklyn, Secretary of the Joint Commission on Social Service of the Protestant Episcopal Church, of which commission I believe you are the Treasurer. This is what he is reported in the public press as having said:

> Syndicalism, as every investigation has shown, finds a field only in our industrial centres where immigrants are herded. Without a vote, strange, bewildered, "put upon," deserted by the Church, the labor union, and the socialists, it was syndicalism which went to them in their distress and gave them courage and hope. All honor to the I. W. W. leaders that they were found at the hottest point of the industrial conflict.

This simply means that the Rev. Mr. Melish, Secretary of the Social Service Commission, had accepted at face value all the fantastic claims of the I. W. W. propagandists about the Utopian program of that organization and was repeating, parrot-like, the misrepresentations of the trade union movement put out by William D. Haywood and his band of thugs to the effect that the American Federation of Labor was neglecting the unskilled immigrant workers, when, at that very time, the American Federation of Labor had twenty-five times more unskilled laborers organized than the whole membership of the I. W. W. Every month the Federation spends more money in endeavoring to organize the unskilled laborers of the country than the I. W. W. has done since its inception.

You say you "do not share the views of Trotzky or Lenine," and that you are "opposed to such doctrines as are embraced in the theories of those radicals who advocate the assumption of all enterprise and initiative by the State." There is no question that all men who are "vitally interested in stable progressive government" must share your sentiments. And yet you say: "But in these days of progress, when a 'rapid growth of socialism' is alleged, one is impelled to ask for a definition of 'socialism' with reference to the present crisis in the world's history." That definition can easily be given. But first, taking up your statement, "Many of the activities upon which our Government has embarked with the full approval of the people to remedy evils, and make the Government more responsive to the popular will, have within your memory and mine been stamped as highly socialistic," I should like to ask you exactly what you include in that category?

It was popular propaganda that when the Government, during the emergency of the war, took over the railroads, the telegraph, telephone and express companies, and established a drastic price-fixing regime, we had embarked on a sea of socialism. It is true that, under the stress of the war, things had to be done quickly, without regard either to efficiency or economy. Red tape had to be cut, federal statutes ignored. In fact autocracy of the highest type—not socialism—had to be instituted, with the President, by common consent, as the great executive autocrat. Just as soon, however, as the emergency had passed, the experience we had gone through showed that we wanted to get out of the clutches of the Government at the earliest possible moment, the President himself leading the demand.

And here we squarely face the question you ask: "What is socialism?" I agree with you that we should not oppose a given program simply because it is socialism or is socialistic, but that we should ask: "Will it remedy a downright evil, meet a real demand, will it conduce to the well-being, the happiness and prosperity of the whole people?" As I stated in my previous letter, one great trouble with many persons is that they confuse socialism and social reform. All men of normal minds are social reformers. They want to see a better state of things, improved housing, abolition of child labor, sanitary factories, just wages and fairer hours of employment, good municipal government, etc., etc. But none of these things is socialism. As a matter of fact, the socialists oppose social reform, because they claim that such reforms are only palliatives and simply operate to postpone the overturning of present-day society and the ushering in of the communist state, in other words, "the dictatorship of the proletariat." As Keir Hardie put it: "It is not reform we want, but revolution."

When in this letter I speak of socialists, I mean Karl Marxian socialists, members of the Socialist Party, not sentimental individuals who loosely call themselves socialists but are not members of the party and who do not consciously subscribe to its platform or really know what it contains. These socialists are men aptly referred to by the Rev. Dr. Manning, whom you quote, as given to "extravagant views and unregulated enthusiasms." In the case of socialism, we have a very clear and easy way to find the definition. In 1914, the Industrial Relations Commission invited the Socialist Party to send an official representative to testify before the commission on the philosophy and methods of socialism, and the executive committee of that party appointed as such representative, its chairman, Morris Hillquit, who is also recognized as the brains and leader of the socialist movement in this country. When asked to define socialism, Mr. Hillquit testified as follows:

> Stated in more concrete terms, the socialist program requires the public or collective ownership and operation of the principal instruments and agencies for the production and distribution of wealth—the land, mines, railroads, steamboats, telegraph and telephone lines, mills, factories and modern machinery.
>
> This is the main program, and the ultimate aim of the whole socialist movement and the political creed of all socialists. It is the unfailing test of socialist adherence, and admits of no limitation, extension, or variation. Whoever accepts this program is a socialist; whoever does not, is not.

A study of every socialist platform of any kind, the Christian (save the mark!) Socialists included, confirms Mr. Hillquit's testimony. Now then, Mr. Morgan, it is easy, I think, for the American people and for the Protestant Episcopal Church, as well as for the other churches of the country, to decide whether or not it will "conduce to the well being, the happiness and prosperity of the whole people" to have all the factories, mines, farms, banks, stores, docks, steam and street railroads, gas and electric light utilities, etc., taken over and operated by the socialists.

To bring it closer home, and therefore to illustrate more forcibly—and I do not mean this in any offensive spirit—do you, or does the Joint Commission on Social Service, think it would "conduce to the well being, the happiness and

CONSTRUCTIVE SANITY OR DELPHIC HOCUS-POCUS

It was not so long ago that various pseudo - intellectual magazines, such as the *New Republic, Nation* and *Survey,* which advocated its program for peace by compromise with the enemy, were exploiting the British Labor Party's radical program as an Ephesian spell which would at once change the world. They implied that the American Federation of Labor was obsolete and on its way to the scrap-heap and that, compared to Arthur Henderson, Ramsay MacDonald and Clynes, Samuel Gompers was a back number. It was not so very long ago that certain young radicals who wormed their way into publicity jobs in the War Labor Board were trying to stimulate the formation of shop committees in American industries—the secret purpose of which was, of course, to undermine the A. F. of L. and disintegrate organized American labor in the interests of the radical British program.

As told by Mr. J. W. Sullivan at The National Civic Federation meeting, reported in this issue, the shop steward movement in Great Britain has utterly failed, and as recounted by Mr. A. Parker Nevin, British labor is in an absolutely chaotic condition. To that Sir Charles Ross, familiar with conditions in England, declared that what England urgently needs is a Federation of Labor modelled after the American. The sum total of the report made by the Commission sent by the Civic Federation to study industrial conditions in England and France was that those countries had learned practically nothing from their experience with labor during the war which could be applied to advantage in this country. America is not likely, therefore, to look abroad for any Sibylline hocus-pocus cooked up by the extremists, but will go ahead, as it has always done, as the American Federation of Labor has consistently done, to solve its problems and remedy its ills through sane, constructive upbuilding endeavor.

If the conference to be held next month by President Wilson fails to work out any program which will by a turning of the hand solve the problems of the high cost of living, strikes, unionization of policemen and Federal and other civil service employees, and every other grievance which might be put forward, the Socialists and near-Socialists will, as usual, come forth with a loud clamor that it proves the inefficacy of our present system of government and industry and that, therefore, the only solution lies in revolution.

History has shown that civilization has been built up and all its achievements have been gained from the myriad experiences, successes as well as failures, of the past, and if the men who come together at such a conference as that to be called by the President, are not unanimous in formulating any recipe for a miracle, but present conflicting views and debate various suggestions, it will be more a hopeful sign than otherwise. For it is only by the exchange of views of men of practical experience, by a sincere and judicial testing of plans and experiments, by an amicable arbitration of differences, that the root of our evils can be reached and that any lasting and progressive program can be attained.

POTENTIAL GERMANY

While certain periodicals of uncertain hue so far as loyalty and Americanism are concerned, were agitating against the demands made of Germany in the peace treaty, while they bewailed the so-called "crushing" and economic "strangling" of poor, defeated, repentant Germany, while certain editors and writers such as Oswald Garrison Villard and Mary Heaton Vorse came back from flying visits into the domain of the Central Powers with heart-rending tales about hundreds of thousands of starving children and famished mothers, THE NATIONAL CIVIC FEDERATION REVIEW, almost alone among American journals, continued to point out what we believed to be true: That Germany had been by no means utterly defeated when she sued for peace; that, seeing military victory over the Allies impossible, she simply determined, and most expediently, to get out of the war on the best terms possible; that she signed the treaty with her tongue in her cheek, and that she will seek to evade fulfillment of her obligations by promoting discord and disunity among the nations who won the war. We expressed our belief, based on the observations of many returning soldiers and others who had been in Germany, that there was no such starvation in Germany as was reported by various radical sentimentalists and pro-Bolshevists, that there was less want and suffering than in stricken France itself. We expressed our profound apprehensions of the future menace of Germany to the world. We told, what we know from authoritative information to be a fact, that Germany plans to continue her warfare against her victors; that she intends to use the weapons offered by Bolshevism for fomenting social and industrial unrest throughout the world; that she will seek to undermine and disintegrate her rival nations from within, and that in the immediate future we shall see the resumption of a sinister propaganda as was not paralleled by the propaganda carried on before America's entry into the war.

Our policy of presenting what we believed to be true, and what we felt it to be our duty to emphasize, brought the commendation of the majority of our readers. It brought also a number of protests, and we were accused of an implacable and uncharitable spirit toward a defeated and disarmed foe, of helping to perpetuate a spirit of bitterness and hate. That our doubts and misgivings concerning the impotence of Germany and the drawing of her fangs were not baseless, that we were not alone in suffering from some nightmare, is shown by the statement made in Paris the other day by Mr. Henry Morgenthau, who headed the United States Commission of Investigation and had gone through Poland and Central Europe.

Mr. Morgenthau is not a man subject to hysteria, but has been distinguished by an eminently sane, calm and judicial temper of mind. "Germany," he says, "came through this war a perfect dynamo of strength. Her human military power is practically as great as ever, and her 65,000,000 people have been schooled and hardened by trials. The nation has been compressed into a concentrated mass, which is surcharged with energy and moving with centripetal force, while Germany's neighbors are spreading themselves out thin and quarrelling and moving with centrifugal force. If disintegration keeps up among Germany's neighbors there can be but one result. . . . Germany intelligently refused to fight to a finish with the United States. She withdrew in good order to a place of safety, where the war had not ruined her factories and where everything was ready for the resumption of peace industry. . . . The forces of peace must organize and consolidate; otherwise they are inviting an onslaught which German arms unquestionably will make within a few years unless Germany's enemies entrench themselves through constructive work and establish the nations which threaten to weaken themselves and their allies through greed and jealousy. Germany has gone over into Russia. Her people are organizing there, and they will marshal Russian resources and utilize them in combating the rest of the world, unless a strong Poland is created as a protection for Europe. . . . The task of the United States is clear. She must begin through her Allies, she must equip statesmen in the international school and create the first General Staff that has ever existed, so as to have leaders who will realize what the world developments are."

Mr. Morgenthau's is the most intelligent, logical and clear-visioned analysis of the supreme situation which confronts the world, which has been made since the formulation of the treaty of peace. Will the leaders of America prove too blind to see? Will the people of America, naturally relaxing from the tense strain and spiritual suffering of the war, drift supinely into a lethargy of which the watchful, wily, indefatigable enemy waits to take advantage.

Talking the other day with a most able woman who had gone into Germany for the Y. M. C. A., we asked about the reported starving of children. "I never, never saw so many children in my life," said this woman, with a sort of aghast expression. "Maybe it was the result of their system of scientific breeding. I don't know. But I do know they weren't peaked and pallid, and nowhere in Germany was there any evidence of starvation. They weren't living luxuriously, but neither were they weak and unhealthy. And I couldn't help but look forward twenty or twenty-five years when the males would form a potential army greater in numbers than the army Germany had when she invaded Belgium and precipitated the war.

"I felt everywhere I went, and I was billeted with German families," the woman went on in a low awed voice, "that I was not in a defeated country, but an *enemy* country. You can feel their bitter, bitter, vengeful hatred, particularly of America, in the atmosphere."

A MISCHANCE BULLITT

There appeared before the Senate Foreign Relations Committee on September 12, a hitherto unwrit-of young man, a former cub newspaper reporter, Bullitt by name, who was permitted to take up the valuable time of that importantly functioning body by giving prolonged accounts of alleged confidential conversations with the United States Secretary of State, Mr. Lansing, Colonel Edward Mandell House, Mr. David Lloyd George and others.

Whether the reported conversations revealed by the blabbering Bullitt ever took place or not, whether Secretary Lansing was accurately reported or not, whether Mr. House's mysterious state of mind was veritably revealed or not, the spectacle of this young person appearing and bruiting conversations that, if they did take place, were matters of sacred confidence, while unedifying, is revealing and informative as to the character and type of men who are gravitating by natural affinity to the so-called "liberal," pro-Bolshevist, internationalist movement. Just through what chance abberation of a freakish fate this inexperienced and undistinguished Mr. Bullitt was lifted from the obscure ranks of newspaper cubdom to a trusted position in the Department of State, just through what temporary lapse of ordinary judgment in the estimation and evaluation of human character this callow adolescent was selected as chief of the intelligence section of the American Peace Commission, just through what oblique or crotchety mental quirk on part of Mr. House he was picked out with the pro-Bolshevist Lincoln Steffens as an impartial and responsible envoy to Soviet Russia is as incomprehensible, as totally baffling, as utterly disconcerting as was the selection for other high and trusted positions with Mr. House's peace delegation of former Rand school lecturers, co-authors of pro-German school histories, and *New Republic* editors of quasi-German extraction.

That Bullitt should have been selected for a position of confidence with the peace delegation,

that, with Lincoln Steffens of all people in the world, he should have been selected for a grave and onerous mission of investigation to Russia, is of course lamentable, but it must be borne in mind that all human beings are liable to err in judgment, and Mr. Wilson could have had no greater quality of clairvoyance as to what a yellow streak this Bullitt would develop than he had when he delegated as his envoy to Mexico the William Bayard Hale, who later hired himself as secret director of Hun propaganda in America.

We knew nothing of the personality of this aforesaid and still unfamed Mr. Bullitt. He married and went to Germany in 1916 on his honeymoon, and according to the publishers' advertisement of a book on the trip written by his wife: "Von Bissing, Governor of Belgium, was her dinner partner; Zimmerman, 'the busiest man in the German Empire,' discussed peace and the U-Boat campaign with her; Countess von Bernstorff and Baroness von Bissing asked her to tea." According to this "Uncensored Diary," Mr. and Mrs. Bullitt were entertained lavishly and de luxe by the most exclusive and brilliant circles of German society; in fact, it is made clear that Hun society, Hun diplomats and military commanders put themselves out and went to extraordinary measures to "capture" the two young honeymooners. So in the book on their trip one reads statements like this: "It is foolish to talk of ruining Germany. She is too valuable to be ruined. And Germany doesn't want to rule the world. She's nothing compared to England when it comes to that" (page 30).

Whether Mr. Bullitt, when he was promoted to a position in the American government after we were at war with Germany, disagreed with Mrs. Bullitt's conclusions is not known. Mr. Bullitt did resign as a member of the American peace delegation, and his letter to President Wilson explaining his resignation reveals a mental state of puppy hydrophobia over the so-called "unjust settlement" of the treaty drawn up at Versailles, specific objection being made to the "unjust decision" regarding the Tyrol, Hungary, East Prussia, Danzig and the Saar Valley.

As for Bullitt's report that the terror has ceased in Russia, that good order has been established, that the Soviet government is founded in the imagination of the mass of common people of Russia, that it is turning itself to constructive work, as well as for his recommendations, we have innumerable reports of reliable men who spent not days, but months, in personal investigation throughout Russia, and whose matured conclusions are not the result of any flying, rapid-fire conversational visit to Lenine. Lincoln Steffens, who accompanied Mr. Bullitt to Russia, is the author of an introduction to a book by Trotzky, and after a characteristically light-legged as well as light-headed jaunt into Russia after the revolution, was wont to appear ubiquitously at lunches and banquets, and tell dramatically all about the glorious revolution as a revolution for the world. It is whispered that the detailed and ripened observations of Mr. Steffens were gained during an exhaustive visit of something like eighteen days. One can merely hazard the opinion that Mr. Wilson saw fit to "suppress" the recent Bullitt-Steffens report simply because of the fact that he estimated it at its actual value. —T. E. H.

The President's Industrial Conference

By RALPH M. EASLEY
CHAIRMAN EXECUTIVE COUNCIL, THE NATIONAL CIVIC FEDERATION

THE inndustrial unrest, resulting in strikes and lock-outs, and threats of many more lockouts, has become so acute in the last few months that President Wilson has wisely called a national conference to consider plans and methods for dealing with it.

In doing this, the President recognizes what Premiers Lloyd George of England and Borden of Canada have recognized in their respective countries, and that is, that the situation is so grave and so far-reaching in its various ramifications that only the highest authorities in the national government can properly, or at all effectively, deal with it. Mr. Lloyd George, facing a threatened paralysis of all industry in England, last March called a conference, composed of two hundred representative employers and two hundred representative wage earners, while Sir Robert Borden called a similar conference, which met in Ottawa this month. In Great Britain, irrespective of the net results in terms of solution of practically unsolvable problems, the moral and educational effect of bringing together the leaders of both sides of the industrial fighting forces at that crucial moment was tremendous. In fact, it may not be too much to assert that it saved the nation from a calamity which threatened its industrial life.

While the situation in this country when President Wilson decided to call his conference was not so serious as that which faced Lloyd George last spring, it was serious enough to justify, if not to demand, such a move on the part of the President. As in Great Britain, the mere announcement of the calling of such a conference had a reassuring effect on industry and if nothing more concrete were to result from it than the coming together at the White House of representatives of all sides of our great productive industries to consider the vital problems facing our nation, the effort would be more than justified. But very much more will come out of it.

Those familiar with the work of The National Civic Federation, which for fifteen years preceding the war had, in a smaller way, been bringing together these same forces of capital and labor with a view to composing their differences, saw results so gratifying as to justify the above prediction of what will happen at the White House. No problem relating to industrial conflicts is likely to arise at the President's conference that has not already arisen in the conferences of The National Civic Federation, excepting, of course, the special cause for the present unrest, the phenomenally high cost of living. In the light of the Federation's experience, we may be pardoned for pointing out some of the things that we believe can be accomplished by the President's conference and some of the things that we believe cannot be accomplished—things which practical people will not expect to be accomplished, and which only the theorists, the sentimentalists and the revolutionaries will demand shall be accomplished.

I well remember the shock which I received at the first meeting of the Executive Committee of The National Civic Federation, in 1901, presided over by Senator Mark A. Hanna and attended by Bishop Henry C. Potter and Grover Cleveland, as well as by Messrs. Samuel Gompers, James Duncan, Charles M. Schwab, Charles A. Moore, and other men of the same type as comprise our Executive Committee today; I shall never forget how, after Bishop Potter had spoken so enthusiastically about the wonderful achievement of bringing capital and labor together—the first attempt in that line ever made in this country or any other—declaring that he believed we would solve the great industrial problems and practically put an end to strikes and lockouts—in a word, realize the Brotherhood of Man—Mr. Gompers arose and said, in effect:

"I share with Bishop Potter all the hopes that he has expressed, but twenty years' experience (and this was eighteen years ago) impels me to add a note of warning. If we set out expecting to solve any of the real industrial problems within the span of our short lives, we are doomed to disappointment. My warning is only for the purpose of saving any one from the rude awakening that is sure to come when he finds that these problems are ages old and can only be solved as human nature becomes more perfect, less selfish and ignorant, and as we abolish class, religious and racial prejudices."

My shock came because, with Bishop Potter, I believed that the whole capital and labor problem had been solved by the organization of The National Civic Federation; but Mr. Gompers was right. We entered into struggle after struggle, winning today, losing tomorrow, and the next day losing the fight we had won the day before, sometimes fortunately winning it back again the day after; but the millennium had not arrived. However, the bringing together in The National Civic Federation of representatives of all the big forces of capital and labor and the so-called "general public," where they could talk out their differences together face to face and, to use the stock phrase, "with their feet under the same mahogany," did accomplish important results. It made for better feeling and better understanding between employers and employees, though it did not solve all the problems, nor stop all strikes. So I say, let us not assume that the whole matter in this country has been settled now that the President has called a conference nor that the rest of the American people can relieve themselves from any further concern about our industrial future.

Since the armistice there have sprung up in this country innnumerable so-called industrial bureaus, composed of from one to half a dozen self-advertised "industrial experts," who, for a generous financial consideration, will furnish to employers plans, schemes, programs and charts for solving all their labor problems. As a rule, in none of these bureaus are there real labor men or real employers. They are composed entirely of doctrinaires, many of them Socialists or near-Socialists, but not so visionary that they cannot discover where the dollar lies and that many employers today have become so alarmed over the "great unrest" that they will grasp at any straw that comes their way and pay any amount for it. I opine that the plans of these theorists will not get very far at the White House conference, for the reason that the President has wisely selected a personnel of hard-headed men whose feet are on the ground all the time. There will be as members of this conference:

Fifteen representatives of organized labor;

Five representatives from the National Industrial Conference Board, an organization representing nineteen national employers' organizations;

Five members of the Chamber of Commerce of the United States, a body made up largely of merchants and manufacturers;

One representative from each of the three largest national agricultural organizations; and

Two representatives from banking and investing organizations.

The President will himself select the fifteen members who are to be representative of that indefinable, elusive element termed "the public."

Irrespective of the fifteen representatives of the public, even if all of them were to be theorists or even freaks, which of course they will not be, there is sufficient good practical horse sense in the other elements to control the conference.

Besides, it is safe to assume that action will be taken only upon questions where there is substantial unanimity.

But to refer specifically to certain things which I think cannot be accomplished at the White House conference and certain things which I think can be accomplished:

First. There is at the present time what might almost be termed a "clamor" for Democratization of Industry, that is, the giving to the wage earners a voice in determining not only wages, hours and working conditions but also a voice in the control of the business itself. The term "democratization of industry" is used freely by various classes of persons to whom its meaning is not at all the same. To many writers it means profit sharing of some kind, with shop committees, shop stewards, membership for employees on the board of directors, etc., etc. To organized labor it means only what is involved in collective bargaining; that is, a voice in regard to wages, hours and conditions of employment. To the I. W. W. or Bolsheviki it means the confiscation of the property and its operation by the workers. The last is, of course, real democratization of industry and at the same time the destruction of industry.

The position of the American Federation of Labor on the proposition that the wage earners should have a membership in the board of directors of a corporation is well given in the statement made by Mr. John P. Frey, secretary of the Committee on Resolutions of the American Federation of Labor at its recent Convention at Atlantic City. The Committee on Resolutions had reported against the proposition for the wage earners to select a foreman in the factory and the committee's report was overwhelmingly approved by the Convention. Mr. Frey said:

> "I would call your attention to the fact that in the literature which has been circulated upon the question of electing foremen and in the speeches made in trade union meetings upon this same question, the subject does not stop with the election of foremen, because the argument is then made, and it is a logical one, that the election of foremen would be of no value, because the foremen would be under the general manager and the board of directors, and if we could only get the trade union movement to commit itself to the election of foremen in industries, it would logically follow that we would have to elect the board of directors and determine who the general manager would be. It is not, therefore, a trade union proposition and I have made this statement so that you will more thoroughly understand what is included in the resolution in purpose, if not in language."

Mr. Frey's language makes it very clear that the trade union movement does not favor any scheme whereby the worker is supposed to enter into the management of industry. In fact, trade union writers are frank to say that they want no responsibility for failures or losses upon their shoulders; that responsibility they want the employers alone to take. They do want to be heard on the question of wages, hours and working conditions, but that is the extent of their demand for democratization of industry.

While many employers on the President's commission will favor profit sharing or stock participation schemes of some kind, they will shy at any idea of giving the workers a voice in the management of the business, and with the wage earners also opposing it, as well as the practical people representing the public, it is pretty certain that participation in the management and business operations of industry will not make much headway in that conference. That is not to say that there are not plans in operation in non-union plants where employers are trying sincerely to give the workers a voice on wages, hours and conditions, the same as is demanded by the trade unions through collective bargaining, which plans, from all appearances, are in some cases succeeding. One of these schemes, called the federal plan, provides for a lower house, a senate and a cabinet. A conspicuous example of this plan, which has been largely advertised, has been tied up by strikes, and other corporations, which put in other plans, are in the same dilemma. So that industrial peace does not seem to lie in that direction. Neither can it be affirmed that collective bargaining will in itself absolutely solve the problem, because we have seen, n the stress of the rising cost of living, that even some collective contracts have been broken by the workers. Collective bargaining is, however, the best mechanism yet devised to reduce industrial conflicts to a minimum, and should only be judged by its operation under normal conditions. It works best when men are thoroughly organized and under the discipline of strong leaders, but the bringing about of that condition is necessarily a work of education and is by no means a quick process.

Another proposition that is largely to the fore at the present moment is compulsory arbitration and what is known as the compulsory investigation principle in public utilities, if not in all industry. Again we have to reckon with the opposition of the organized labor group, which will be solidly against it in the White House conference, and the opposition by this group will be augmented by that of many of the employers and the informed members of the public group.

Some of my readers may say: "What is the use of calling a conference if you cannot stop these strikes and lock-outs, because it is the prevalence of them that has caused the calling together of that august body?" Again do I come back to the twenty years' experience of The National Civic Federation. At one time we believed in compulsory arbitration, especially in dealing with public utilities, because we argued, as everybody argues now, that the public interest is paramount and should be protected at all hazards. But no one has as yet invented a plan that will secure that protection. True, as pointed out by our lawyers, the Government has a right to say that men shall not strike, at least on railroads, without giving notice or without having their grievances investigated, as in Canada; but the Government does not have the right to compel a man to work against his will. That is where the plan falls down. Australia and New Zealand have gone the limit in their attempt to enforce compulsory arbitration and have failed. In Australia, when the attempt was made to enforce the law against 12,000 abattoir workers who had struck in defiance of the arbitration act, and in Canada, when 15,000 mine workers struck in defiance of the Canadian act, the wage earners discovered the weakness of the government's position, because in neither country were there jails enough to contain those thousands of men, even if the politicians had dared to imprison them for their offenses. And with this discovery the striking men's fear of and respect for the law disappeared. From that time forward, they trampled upon it with impunity when any really serious conflict arose.

But, fortunately, we are not confined to compulsory methods of arbitration and here, I think, is one of the places where the President's conference can accomplish practical and helpful results, justifying the expectations of its most sanguine friends. Experience with voluntary mediation and arbitration methods shows that very much can be done towards preventing industrial disputes. The experience of the Department of Labor, of Mediation Boards in several states and of The National Civic Federation itself, all teach the same thing, and that is, that there are very many instances where if an outside, tactful party brings the contending forces together for conference, an avoidance of many industrial outbreaks results. While there are questions of principle that cannot be arbitrated or mediated but can only be fought out, such as the right of a worker to join a union or the right of an employer to refuse to discharge non-union men who have stood by him in a strike, there are more cases where the question is one of wages, hours and working conditions, of personal misunderstandings between superintendents or foremen and the men, or of autocratic and overbearing conduct on the part of a foreman or the leaders of the men, all of which latter difficulties can be ironed out by a voluntary mediation committee.

But there has never been in this country a thorough organization on a large scale of the forces that could be utilized in such work. Under the inspiration and prestige of the President's conference—and I am only referring to industrial disturbances, not to the other great reconstruction problems that will come before that conference—a practical organization could surely be effected in every industrial community. For instance, in the 303 cities of the United States having a population of over 20,000, the leading commercial organizations and the central labor unions might be asked by the President each to name an equal number of persons—five, ten, fifteen or twenty-five, depending upon the size and importance of the city—to form a joint mediation committee for that city, these two groups themselves selecting the public representatives to act with them. This would mean that, in addition to acting in strikes and lock-outs, these forces in every community would be organized for weekly or monthly conferences on industrial questions generally, pertaining to the welfare of the city.

In addition to these city mediation committees, there could also be state committees, appointed by the Governor, similarly constituted, to deal with corporations having industries in more than one city, and with inter-urban troubles and other state-wide disturbances. Then the President might himself appoint a national committee, or expand the commission he is now naming, to deal with disturbances in the large basic industries, such as steel, coal, railroads and shipping, which committee would logically lead in the educational work that would follow and also act as a national stabilizer. It could also annually call to a national conference representatives of all the municipal and state committees to discuss industrial problems and methods of dealing with them.

The administration of all this work might well be placed in the hands of the Department of Labor and the Department of Commerce jointly, thus enabling the Government to utilize every one of these municipal and state committees. If such a plan were put into operation, it may be assumed that Congress would willingly appropriate sufficient money to those departments to enable this work to be carried out. Many voluntary conciliation committees have been appointed in this country in the past that did not amount to much. They were formed of well-meaning persons without practical experience in dealing with the industrial questions that faced them, but when organized wage earners form one third of a committee and employers another third, the best possible results can be assured.

While the discussions alone at the conference will be illuminating and valuable, there will undoubtedly be an agreement among the members on many important general principles; and I hope they may be able also to adapt the effective War Labor Board program to meet the after-war conditions. But I still believe that the most far-reaching and practical results will come from the perfecting of a permanent organization to deal with these conflicts at their inception in every industrial center.

Our Paramount Problems

(*Continued from page 3*)

nposure, it is the present time. When I say nposure, I don't mean armistice; I don't mean y particular time to call off the contest, but I say that no man can think clearly, constructly, hopefully or sympathetically when he is a rage, when his mind is upset, or when he is t in good mental health. That is exactly what e trouble fundamentally with Great Britain is the present time, and quite naturally, and the ouble in this country at the present time. erybody wants everything in sight. Everydy is demanding things. We are all mixed in our economics. We are mixed up in r sociology. We are mixed up in our obtives, and until we get back to some normal sis of constructive thought, and unless we stop is rowing between ourselves, attacking and unter-attacking, I personally fail to see where are going to make steady progressive thought d progress."

TRIBUTES TO JOHN MITCHELL

A motion that a committee be appointed to press by a suitable resolution its sentiments on the death of John Mitchell was offered by uis B. Schram, who said:

"I was associated with Mr. Mitchell for many ars in his capacity as chairman of one of the portant departments of The National Civic deration, the Department on Trade Agreents, and it is for that reason that I claim the ivilege of making this motion. The life history Mr. Mitchell is one of the greatest interest. uring the tender years of childhood he was ken from school and put to work in the mines, here he picked slate from the coal, and under ry trying conditions he grew up, not to the sult which might be expected from circumances of that kind, not to a life of bitter hosity to the conditions which made possible his ying experiences; he grew up to be a man of oad view, who became the leader of his assotes, the Mine Workers of America, and a man o, when he laid down that task, was selected lead in the broader work of industrial developent. The men who develop this broad spirit e not too numerous among us, and his loss, en, is more severe to us now that it would have en at any other time."

"Mr. Mitchell was my closest friend for twen- years," said Timothy Healy, who seconded e motion. "We will always look back at his ork as head of the United Mine Workers of merica, the struggle he has gone through, the hts that he has gone through in the interest the men that he represented as the head of e United Mine Workers, the great service that has been to these men; I might also say that has been of great service to the employers of ese men, the coal operators. Since the setement of the great coal strike, the coal operars have known from year to year where they and. Up to the time that Mr. Mitchell got ntrol of the United Mine Workers and organed them, there was no employer in the mining dustry who could tell from one day to the her when his plant would be shut down. I beeve that this work of Mr. Mitchell's in bringg about peace in the coal industry has been t alone of a great benefit to the men who have cceeded in getting decent hours, wages and cent living conditions in the mines, but has en a wonderful service to the miner, the mine wners, mine operators, and the general public well. We have sustained a great loss in the ath of Mr. Mitchell. He is not alone a loss labor, but he is a national loss, a loss to the untry."

August Belmont said:

"I would like to avail myself of the opportuity to have the privilege of also seconding this solution, for I desire very much to record my own personal appreciation of the character and worth of Mr. Mitchell and his services to the Civic Federation. It was not only my privilege, but my pleasure, to serve with Mr. Mitchell intimately in the affairs of this body, and in all my experience in business and civil affairs I do not recall encounterng a purer, more disinterested and loftier character than that of Mr. Mitchell. His reliability, his good judgment, and the purity of his motives stand out in my memory as possessed by one of the few great friends that I really had."

RESULTS OF SHOP COMMITTEES

Upon the passing of the motion, James W. Sullivan, of the American Federation of Labor, who represented labor on the commission sent abroad by the Civic Federation, reported in part as follows:

"With regard to the work of this Commission, at the present moment I will ask your attention to the fact that we of the Commission agree with the Commission sent over by the United States Department of Labor, that the Whitley Committee outcome to the present time gives us very little in practice which is valuable to us in the United States. And as to the general results of the shop committees, I have those summarized in a letter written me the twenty-fifth of August by a man who for many years was one of the executive committee of the General Machinists and Allied Metal Trades of Great Britain, known as the Engineers:

> With reference to the shop stewards' agreement, these stewards were continually saying that the old procedure of local and central conference was too slow, as they desired to be in a position to deal promptly and to down tools, if necessary. This agreement has just been made between the Amalgamated Society of Engineers and Society of Employers, under which some recognition is given in the shop to the stewards' committees, but I have no hesitation in saying that while giving them the right of discussion, they give them no more power, but, on the contrary, by accepting the offices of stewards under the unions, the stewards accept and give up their right to stop work. The agreement between the employers' federation and the executive of the trades unions still stands good and forbids any other agreement that is inconsistent with it.

"That is the official ending of the shop stewards' movement as a separate, independent movement from trade unionism."

Taking up the subject of the economic status of working women in Great Britain, Mr. Sullivan continued:

"In the United Kingdom at the outbreak of the war, in a population officially estimated at forty-six millions, females outnumbered males by 1,300,000. At the close of the war the excess was at least two millions. In the classification of women workers the largest number are, of course, the housewives, and working-class housing is essentially a woman's question.

"The outstanding feature of the war was the extent to which women were drawn upon to do work hitherto the almost exclusive sphere of men. The curious part is that more men were drawn from the general public than women to take the place of those going to the war, a fact not generally understood. In general the pay of working women abroad compared with American is from half to two-thirds of the money wages of American women.

"As to the question of organization, political and otherwise, it has been of disappointment generally to the men of Great Britain that women have not taken a part in society in general and in the associations in which they have the same rights as men. There are a half dozen national woman societies concerned with promoting woman's cause in general, and especially for equal pay for equal work, and on that principle there are here many notes on many sidelights, many views as to whether that is a practicability. Politically and in the trade unions, the women do not exert much influence. They did not, for at the late county elections, the total vote was only twenty per cent of the entire vote, and in the trade unions and co-operative societies, although they are entitled to a position, they seldom take those positions. They get back to the old principle that woman wants a husband, children and a home, and within that kingdom mostly her own way, and she succeeds within that kingdom."

METHODS OF PROFIT SHARING

George W. Perkins, in a talk on profit sharing, said in part:

"There is no term used today, in my judgment, to describe relationship between people that is so misunderstood and so misused as the word 'profit sharing'. 'Profit sharing' is used to cover bonuses, turkeys at Thanksgiving time, all sorts of devices, in an effort to make the working-man feel he is being better remunerated than he otherwise would be. If I am right in the statement that the question of what the workers' fair share is, is being raised because of broader education, then you never will answer that question by giving a bonus at the end of the year, because in giving it you simply raise anew the question, 'what is my fair share?'

"I believe that the only way to introduce profit sharing into business is to say to the organization at the beginning of the year, 'Now, last year we made so much money in this business. Here is a frank, thorough, complete annual statement. It takes so much money to earn our fixed charges, to pay our insurance, to pay our salaries, to set aside for depreciation, and so forth, and whatever this concern earns over and above those items, we propose to divide with the organization on some percentage basis which will be stated in advance and distributed on the basis of wages and salaries paid.' That is not a scientific basis, but up to date it has been the best basis anybody has been able to think out. When you lay that proposition down before an organization, at the beginning of the year, each and every man knows what was done the year before, and each man desires to do better than he did the year before, and whatever is done will be divided, as with the management and stockholders of the company.

"Now, when you come to the question of how to distribute these profits: There are many organizations who go eighty percent of the way that I believe in, in saying what the profits are and distributing them, turning them over at the end of the year in cash to the men and women of the business. That is not partnership and profit sharing; that is not partnership—it will not last. When a man is working in a business for a wage and goes home at night, his work is usually done. His mind is not continuing in that business. The man who has capital in it, the manager, his mind must continue in the business. The point is—the desirable point to arrive at, at least, is to get the two, if possible, co-ordinated in the closest possible cooperation. Now, you distribute cash at the end of a year to an organization, and say a man gets $1200 a year, and as a result of a profit sharing plan so-called, at the end of the year, he gets $200 more. He begins to regard that $200 as an extra salary. He is very apt to use it in his expenses and regard his income as $1400. If he does not do that he puts it into some other investment outside of the business he is engaged in, possibly a suburban lot, or some other stock in some other company, and he begins to use some of the time that he is paid for to put into the business, in worrying about a business in which he is not engaged and knows nothing about, in which some of his savings are invested. That is in itself very bad business. It certainly in no way helps the business in which he is engaged, and it does not help him. So I am against distributing profits, even if they are properly

arrived at, in cash at the end of the year. I think it should be in some form of security in the business in which he is engaged.

NEED OF CORDIAL RELATIONSHIP IN INDUSTRY

"The great point about all the profit sharing plans of the future must be that they have got to be in the open, and a man down the line in the store or in the company must be as well informed as to what the company is doing as the man at the top, and if built on that solid foundation there is no question in my judgment about their enduring.

"If ever there was a time in the history of our country when cooperation between capital and labor is of first importance, it is at this hour. We are going out to a great new world. We are all in doubt, to a certain extent, as to what that world is to be. But that it is changed, no one is in doubt. Now, if we can get in our country with as little delay as possible the closest cooperation between capital and labor, a cooperation that means friendly trust, a close working of both groups as one, it will mean everything for this country in the next half century, everything in developing foreign trade, of which we are going to be greatly in need, everything in bringing to us here at home a better understanding and a more cordial relationship between all classes engaged in any form of industrial effort. If there ever was a time when the Civic Federation had an opportunity to take up the subject, and try to give to all who are inquiring the best information that we can gather and compile, I think this is the hour, and I trust in this respect the Federation will do its best, as I know it always does."

Lewis Nixon, Commissioner of Public Service of Greater New York, the first speaker at the afternoon session, took up the problem of the possible tie-up of transit in cities through strikes.

"Such a strike," said Mr. Nixon, "is far different from an ordinary strike in an industry. An industry can close up, and, on account of the vastness of the country, probably the product can be found in other directions; but here the distress is universal. It strikes at every calling, profession and trade, and a strike of one of our large transportation systems means an actual cost to the people of New York City of not less than five to six million dollars a day. Now, this is of course a public service. These men are responsible for the running of trains which accommodate the public and which are on systems controlled by public franchise. Hence I hope that there will be some means evolved by a meeting such as this that will enable us to settle this great problem and at least avoid the tremendous strain upon the resources of this city through a strike upon its public utilities.

"Personally I have never believed in enforced arbitration of any kind, but I believe there can be thought out through the fairness of the men who work and the fairness of those who employ them, a system which will at least hold them at work until a fair adjustment is made.

LABOR BEST IN COLLECTIVE BARGAINING

"I am inclined to think that as the men in these great industries allow others to speak for them, when they know their own representatives are of kindly sympathy with them in all their aspirations and all their needs, we are going to bring about a condition here on that experience, which is very large in its general effect, where, when an agreement is made, that agreement will be followed out to the letter. After we balance up, after the give-and-take of discussion, when we bring about the feeling in this country that organized labor is best in collective bargaining, when it says that bargain is something it wants you to sign for a term, whether months, weeks, days or years, when we can feel we can rely on the sounder numbers, the men who control and are looked upon for influence and example, I think that we will have an honest adherence to contracts made.

"I can remember when I was shipbuilding actively, the great fight was over the nine and one-half hour day from the ten hour day. The rest of the manufacturers rather quarrelled with me and were severe in their criticisms because I would not join them. The great leader, a man from Kansas City, came to me and said, 'We think we ought to have nine and one-half hours and we are going to strike to get it.' I said, 'You are striking.' He said, 'Yes; we think you ought to help us.' I said, 'I am not going to do what you have asked.' That seemed to disappoint them very much. I said, 'I am going to do a little bit better, and instead of giving you nine and one-half hours I am going to give you nine, and the same wages as you have for ten hours. Now, I will see if you are going to show me I have done a fair thing.' Well, everybody gave nine hours. Those were in the old days. Those struggles have passed. Collective bargaining has come, and we have to stand for it, and, so far as my experience has been it has been altogether a good thing, and I only say that if we feel that we can get that dependence upon an agreement and that responsibility shared in the making of such an agreement by both sides, so that both agree to it, we will at least have permanence in industrialism in this country."

COMMITTEE TO INVESTIGATE UNIONIZATION OF PUBLIC EMPLOYEES

Wheeler P. Bloodgood, of Milwaukee, declared that prior to the war the labor union movement was not generally understood and that many confused it with the Socialist movement. The war brought many such into contact with union labor and they came to understand "the old fight that had been on for many years between Mr. Gompers and the socialist. Mr. Gompers and those associated with him contending that through the union movement and collective bargaining and the recognition of individual initiative and property rights, the wage earner could be protected, that he would be able to get the wage to which he was entitled, the hours of labor and the conditions which he was entitled to."

"Now," declared Mr. Bloodgood, "through the organization of The National Civic Federation—and in that connection, I think we ought to all realize that The National Civic Federation has done a wonderful work not only in this war but, in fact, that it has brought about a condition of public sentiment that did not exist prior to the war, and I represent only one, I think, of thousands. I have a very different idea and conception of the great leaders in the labor movement, and during the war I came to the conclusion that they were not agitators, but among the great statesmen of America. In that connection I place Mr. Gompers among the very first and the very greatest."

Referring to the police strike in Boston, Mr. Bloodgood continued:

"I am very glad Mr. Woll said what he did this morning, and I think it is of vital importance that what he said should be spread broadcast throughout America, and that is that while the American Federation of Labor has granted a charter to organized unions and to policemen and to other government officials, it has urged and advised that they should solve their problem, whether it was the amount of wage they were receiving or the conditions under which they worked, through political action or some other action that did not involve a strike, because a wrong impression had gone abroad.

"If the men whose duty it is to defend our wives and children from thugs are going on a strike now, it is a matter of serious moment, it is a matter of most serious moment to the American Federation of Labor that this que tion should be weighed and considered from the standpoint. I do not think, as applied to th men who are firemen or policemen or governme officials, that they should use the weapon of strike. There can be but one result if it is co tinued, and that is that you will drive awa from the American Federation of Labor and th union movement the great body of public opinio in America which they must have with them we are going to solve the problem through th union movement. I think that it has got to b made perfectly plain to the American peop that when it comes to trouble in the police forc or among firemen or among any men who hol up their right hand and swear that they ar going to do those things which are necessary i the line of duty in which they may be called fo tne state or the nation, that in the language o Chief Justice White of the Supreme Court, ther is then an implied agreement that they will no through concerted action strike. That does no affect the question of their right to resign. Tha does not mean servitude in violation of the Co stitution, and that is what we have got to hav And if we do not have it, why, what was brough out in this war will soon develop. The Amer can will not stand for that sort of thing, an therefore, I believe that the matter is of sufficien moment that a special committee should be ap pointed by the president of The National Civi Federation to investigate into the question of th charters that have been granted to policeme and firemen and other governmental bodies i the form of union charters, and that a repor should be made to this body with recommenda tion in respect thereto."

ISSUE OF PUBLIC SELF-DEFENSE

Meyer Bloomfield, of Boston, discussing th police strike, said in part:

"Two days ago there were several issues be fore the Boston people. Today there is only one Two days ago there were the issues of whether o not the police would affiliate with an outsid organization or with the American Federatio of Labor. That was an issue. It is not a one sided affair by any means. There was the issu of their conditions, which certainly needed look ing after. There was the issue as to whether th police commissioner could give an order and carry through his ideas of discipline without th results we had. Those were issues which reason able men and women could, of course, discus and should discuss and take very seriously, and labor had a great deal to say that deserves th most earnest attention, and those who had oppo site views had a good deal to say, too. But al these issues which so much need settlement by reason and friendly exchange of opinion were buried, and the prime fundamental issue of sel defense came to the front. Under these circum stances any cause, however good, is sure to suf fer, and the more such conditions endure the less likely is that cause to receive that amount of attention and response which alone would make any solution of it a promise of endurance."

POLICE STRIKE IN LONDON

Sir Charles Ross described the recent police strikes in London, saying:

"The metropolitan police of London, having, as I understand, exhausted every possible means of seeking redress, struck. After they struck their grievances were redressed. That was the first phase. Immediately following that phase came a second one and a very much more important one. Within the police force was organized a power, a body, an organization that had for its avowed object the usurping of the power of the government. I am not going into that document in what of necessity is a public speech for very good reasons. There is a copy of that document in America; there has been for months. Very broadly put, using military phraseology in order to paint my lily, what took

ace was this: the private soldiers drew up a arter, formed an organization, and what they id was: Nobody above the rank of a pri- ite soldier shall belong to this organization; cond, a committee appointed by private sol- ers only shall have the power to call before and to dismiss all officers from the com- anding general downwards. Public opinion in ngland, informed opinion, held the view that ie police had very serious grievances which ight to have been redressed. The men undoubt- lly had very just grievances. The bureaucrats ould not act. Well, what next? At home there no organization which I know with power, the ithority, or whose business it is to intervene. would be impertinence on my part to make ny suggestions as to what should or should not could not be done in America. But there is o doubt a very urgent need so far as England concerned for an organization of the scope of ie American Federation of Labor and The Na- onal Civic Federation. These organizations are oth strictly economic. We have nothing of the ind and, viewing my own country, studying it ery closely, after a very close study of America, cannot but help feeling that if we had some- ing in England corresponding to these two or- nizations, one or the other of them would have tervened and would have had enough influence have compelled the government to take the olice commissioner by the scruff of the neck if rong and made him do what was right, or to ave taken the men and made them toe the line they were unreasonable."

MUNICIPAL OWNERSHIP AND POLITICS

Emerson McMillin, in a paper on municipal vnership, said that a quarter of a century ago large percentage of the American public advo- ted the ownership of public utilities by the unicipalities. This sentiment, being chiefly ased on purported results obtained in Great ritain, became so strong that The National Civic ederation sponsored the sending of a commis- on composed of twenty-one persons, represent- g all shades of opinion and including expert gineers and accountants, abroad to make a orough investigation, and the result was that t few advocates for municipal ownership were ard from thereafter for some years.

"Until the great increase in wages and mate- al resulting from the war forced utility com- nies to apply to many municipalities, we heard t little clamor for municipal ownership out- le of states with a large socialistic popula- n," said Mr. McMillin. "But even now the de- and for municipal ownership is quite limited. fact, it hardly exists; certainly not to an ex- nt to be alarming to public utility companies.

"In view of the fact that municipalities can tain capital at lower rates of interest, labor practically the same price, and under condi- ons equally stable, they could doubtless secure ually efficient management. Then why should t municipal ownership prevail? Certainly a amor for city ownership would not meet with iversal opposition of private utility companies would have been the case a few years ago, or receding the war. Why this change? Wages d material have advanced one hundred per nt while the prices for the product of utilities ve advanced but little and perhaps in a major- of cases, none at all.

"If the cities can obtain cheaper capital and rkmen at the same price per day, or month, hy should not city ownership be made a suc- ss? This question has been analyzed in the st efficient manner and from every point of ew by one of the most efficient public service mmissioners of the country, a man with many ars experience as a commissioner, in a state th strong socialistic tendencies, and a state ith perhaps a much larger percentage of muni- pally owned public utilities than any state in e Union. His conclusions are drawn from the records of his office, and are unprejudiced conclusions, made up from facts. I will quote largely from his written statements; the statements being deduced from a comparison of reports made to his office by city owned companies, and by private companies.

" 'Municipal utilities usually have such poor methods of accounting as to make a determination of the success or failure of municipal ownership almost impossible.

" 'The cost of municipally owned utilities is usually higher when all the legitimate items of expense are given consideration.

" 'The equipment installed in a municipally owned plant is usually too poor for effective service, or badly adjusted to the operating demands.

" 'Business methods are usually lacking in municipally owned plants.'

"The causes of the failures of these enterprises are to be found in the organization of the municipalities.

"The Commissioner attributes much of the failure of city owned plants to the frequent change of management. He gives it as his opinion, that the period of employment of the superintendents does not average more than two or three years in city owned plants. This is bad in itself, but it also makes it difficult to obtain high class managers. Politics is the enemy of municipal ownership. It may be truthfully asserted that all of the weaknesses here shown to be incident to city owned plants can be remedied. But when? Never under our present form of city government!"

SQUARE DEAL THROUGH AMICABLE ARBITRATION

T. V. O'Connor, president of the International Longshoremen, talked on the contract between the longshoremen and the shipowners, as follows:

"A few years ago we used to have the habit of meeting our employers, laying down a wage scale, and saying to the employers. 'We want that to go into effect on such a date', and the employer would say 'Well, it won't go into effect', with the result that we had a quarrel, a strike, shipping tied up, men lost time, ships lost time. We came to the conclusion, after talking the matter over with some of the principal employers, that both sides were losers through handling the situation that way. And we got to the point where we met at a table and talked over our differences. If we were too radical on our side, we compromised. If the employer was too tight on his end and didn't want to come over with enough, we split the difference as a rule. But we came to an understanding.

"During the period of the war, whenever a man in our organization was under the idea that he should have double what he was getting, that conditions ought to be improved wonderfully, and it got to a point where the officer of the organization could not handle or convince all the members that they should be reasonable or send in their demands, we took the matter up with the Government and we had a commission appointed known as the National Adjustment Commission. That was composed of one man representing the employers, one man representing the War Department, one man representing the Shipping Board, and one man representing the International Longshoremen. That commission all during the period of the war set the scale of wages for longshoremen to work by, not only in every port of the United States,but in the possessions, in Hawaii, in Porto Rico. Any place a dispute came up that commission handled the case there either through the local or national commission.

"When the war was over, we were again confronted with the old condition. So we had a meeting with the employers again. We talked the matter over and we again came to the conclusion to continue the National Commission to handle all the disputes for the next year. That has been done by an agreement by all the employers. We are now meeting our employers in this city—some 60,000 men represented by about 150 delegates from the different ports. If we cannot agree with our employers, the matters that we cannot agree on will be referred to the National Commission, and there will be no stoppage of work, and both sides will abide by the decision of this commission. I want to say that if the employers of labor throughout the country will start in and handle their proposition the same as the steamship companies have in the past three or four years, there won't be any need of situations such as has arisen in Boston or other cities. All it wants from both sides is a good heart-to-heart talk, both sides sitting down with the idea in mind that we are not going to try to skin one another, we are going to try to give both sides a square deal. When we get to that point I believe the industrial problem is solved."

RIGHT OF LABOR TO BARGAIN

Rev. John A. Ryan, of the Catholic University of Washington, began by saying that twenty years ago he wrote one of the first magazine articles published in this country favoring the Australian scheme of compulsory arbitration, but that several years ago he changed his mind and no longer holds the views he did when he wrote his article.

"However, it seems to me that at least in public utility enterprises, such as railroads and street railways and other municipal utilities," declared Father Ryan, "the principle of compulsory investigation of disputes and compulsory suspension of the right to strike for a certain time, not too long, would be feasible and reasonable. That, as most of you know, is substantially the plan of the Canadian Industrial Disputes Act, and I believe something of the sort is in operation in Colorado.

"We ought to recognize, I think, that despite all the gains that have been made by the principle of collective bargaining in this country in the last few years, and despite the general statements that some of us make about opposition to collective bargaining being antiquated and a thing of the past, that we have still in this country several powerful employing organizations who do repudiate the principle of collective bargaining. The United States Steel Corporation is one of them, and we know a strike is threatened now for no other reason than because that organization is opposed to the principle of collective bargaining, under the pretense, I believe, that the men in the unions do not comprise a majority of the workers. The point, it seems to me, is that men have a right to speak through an organization whenever they form such an organization representing a respectable number—a respectable proportion of the workers. I see no reason why the majority of the workers in any concern have got to be in an organization before that organization or representatives of it have a right to speak. Now, this, it seems to me, is one of the real disturbing factors of our present industrial situation; that, despite all our talk about the principle of collective bargaining being recognized, it is flouted by powerful organizations in the industrial world.

MORE PRODUCTION GREAT NEED OF THE TIME

"We all agree that the primary requisite of our time in this country as well as in Europe is more production. I may say in passing that I don't believe as fully as I used to that the problem of industrial justice is so entirely a problem of distribution. It is largely a problem of distribution, but it is, I think, more a problem of greater production. Many of you are acquainted with the estimates of Professor King, which are the only ones we have, I think, to the effect that if the national income in the United States in 1910

were divided equally among all the families of the United States, each family would have received only $1,494. That would not enable each family to support an automobile, not even a Ford. So that, rich as our country is, and great as our productive capacities, we are not so rich, nor is our productive capacity so great that everybody could be well off or comfortably fixed if there were an equal division, and of course we cannot expect an equal division. So the great need of our time is more production.

"It seems to be notorious that, generally speaking, men are producing less per hour or per day now than they were before the war. The general feeling seems to be among the workers that during the war there was a great deal of profiteering of one kind or another, or that in times past the men who had the power grabbed all they could grab, so now the workers, or many of them at any rate, are saying: 'We are now in the saddle. The power is now ours, and we are going to get all that we can out of the exercise of the power we possess.' And so they are asking for a forty-four hour week, and a five day week, and a six hour day. I do not believe we can get along on any such short hour production period as that. Then how are we going to get this larger production if the workers don't seem to be interested in giving it, if the theory seems to be to raise wages and shorten hours according as labor possesses the strategic power to do so? You used to be able to do it by threatening them with discharge, because you had men in reserve to put in their places. You cannot do that any more. So far as we can see, for several years to come labor is going to be scarce in this country, owing to the stoppage of immigration and apparently the departure from our shores of a great many of the immigrants that have been here. So you cannot inspire the worker through the motive of fear to produce an increased product, because he is not afraid. And I don't think you can interest him in his work or in greater production through any altruistic motives. The mass of men are not moved that way, neither employers nor employees. So far as I can see, there is about as much human nature in one class as there is in the other.

"It seems to me the only way you can get men interested in their work, interested in the pecuniary effects of it, and in the creative part of it is by making it worth their while to produce more. And you can make it worth their while to produce more, it seems to me, only through this device of partnership. The two principal elements, I think, are, first, labor participation in industrial management, so far as that is feasible; and, second, profit sharing in the surplus that remains above, let us say, a fair return on the capital. The point is, I think, that we shall have to divide this surplus among or between the management and the rank and file of the workers. I don't know on what principle it can be done. I am not suggesting a particular basis for the distribution. But as to the principle, the fact that the workers must be allowed to participate in this elastic and definite surplus, I have no doubt whatever."

PERSONAL RELATION WITH EMPLOYEES

Angus S. Hibbard, a member of the Executive Committee of the Chicago Association of Commerce, next read a paper on "Wanted Willing Workers." He said:

"It has been fully demonstrated that increased production is the need of the country and that by it alone stabilized conditions can be restored. The controlling element in production is labor and nothing has been so thoroughly upset during the past five years. Labor is now unequally distributed. Living conditions and costs are not uniform. The individual interest of those employed has lessened, and to a greater extent than ever before the workers of the country are not willing workers. No amount of wages will make men or women efficient unless they have a real interest in what they are doing. This human interest is not a chattel and must be brought about, if it is to be maintained, by something more than the mere payment of wages.

"As labor does not deal directly with capital but deals only with the management employed by capital, it is therefore the problem of management to produce willing workers, people interested and contented in their jobs, having before them a prospect of betterment for themselves and families and a liking for their employment and employers. It has been demonstrated that this can be done, and it is being done to a greater extent than ever before, by carefully developed plans and by consistent and constant effort of management on behalf of some of the large as well as small employers. So-called welfare work is no longer looked upon as something extra which may be given by well meaning employers. It has been proven that it is a good business proposition to provide for pensions, death benefits, accident and sick benefits, savings plans, good surroundings and working conditions, opportunities for recreation, etc. Many have gone beyond this and have brought about direct representation of employees by committees whose members sit in with the management and take part in determining the relations of labor within the establishment. Still others go directly into plans for profit-sharing, finding it possible to say that the capital invested in the business will be contented with a specified return and that all net earnings beyond this shall be divided between the labor and the capital employed.

"In the great majority of cases these plans have been successful. All cards have been put upon the table, and the problems and risks of management have been put into language which is understandable. It is not found that any one plan for welfare work, committee representation or profit sharing will fit all cases, but some plan or part of some plan will fit almost any case, and where honestly and earnestly followed up by the management, individual relations with labor are established which were heretofore found impossible.

"It is certain that management throughout the country wants nothing more than to bring about personal relations with employees. This is no patent nostrum or universal cure-all to be taken in the dark, but it is a problem for management, as its development will be not alone to their benefit and the benefit of capital represented by them, but to the communities in which they live and to the entire country."

SIGNAL ACHIEVEMENTS OF FARMERS

Chairman Barrett next told of the purpose of his organization, the Farmers' Educational and Cooperative Union of America.

"We call it," said he, "the Farmers Union for short. The purpose is to better the condition of the farmer, mentally, socially and—mostly financially. It is sixteen years old. We have initiated a little more than three and one-half million farmers into the organization. You have heard all about the farmers' difficulties. You have heard all about his suspicions and his other shortcomings. He has had about as hard a time as you have. We have launched or started a little more than 12,000 business concerns in the Farmers' Union to date—a little more than 12,000 cooperative concerns. We have had a little over 4,000 failures—not fifty per cent. That is better than you folks have done. Just look through your records, and it shows that over half of you folks failed. I mean when you go out of business. Not quite half of us have failed. For instance, we have one concern that handles between twenty-five and thirty million dollars worth of hogs at Omaha. We have got them all the way up into the millions and many millions at that."

OBVIATING STRIKES IN PUBLIC SERVICE

Patrick J. McNabb, vice-president of the National Association of Letter Carriers, spoke on the questions as to how far with safety the pu lic could go in allowing their public employe to unionize, or as to what the public would to help those public employees to secure redr of grievances if they don't unionize. He sai

"I don't believe—my experience leads me this belief—that public employees want to unio ize, and when they have unionized, they ha been driven to it by the bureaucracy that obtai in states, in cities and in the federal gover ment, which has made it impossible for them secure redress of grievances promptly in any w that they know of through their ordinary for of organization. So they have been led to lo around and see what else they might do in ord to help lift themselves out of a very grievo situation. And it is grievous so far as the polic men and firemen of this city and other cities a concerned, and in the Federal service very ge erally. The Federal employees that I represe the National Association of Letter Carriers, their recent convention last week, express themselves as unalterably opposed to strikes b cause they want to avoid conflicts, but they demand—and they are going to enforce the demand with all the strength that they can bri to bear—that in this cooperative concern, t Post Office Department, they be allowed to c operate. Public service departments can n be conducted like an outside private busine because they are not run for profit and they ca be made the greatest agency for cooperative e fort. Most of the employees are making th service their life work. They have made a stud of it. They can offer good suggestions for i improvement. They want those suggestions t be taken up and discussed. That is all.

"President Wilson has said that men cann remain very far apart if they can get around table, and that is what we are trying to do. Tha is what I think all the public employees anywhe are trying to do. Have it so fixed that they ca sit down with those who happen to be runnin the machinery for the time being and discu with them the things that affect the employee As it is now, the manager of the Post Office D partment and the employees are very, very fa apart, because he will not permit us to meet wit him and discuss these things. I think if you committee has upon it a representative of eac say, of the Federal, the State and the City em ployees, and enough other men to represent thi association generally, we might be able to wor out some rules, some method of procedure, tha would obviate the situation of strikes in the pub lic service."

TRANSLATION OF FRENCH LAWS

Through the generosity of Mr. Albert Farwell Bemis of Boston, a member of the Commission on Industrial Inquiry of The National Civic Federation, which has just completed its report on the industrial situation in Great Britain and France, the Federation is able to offer to the public without cost translations of the recent French laws on town planning, and reparation of damages caused by the events of the war. The translation is by Dr. Roscoe Pound, dean of the Harvard Law School.

This publication is issued under the auspices of the Commission on Industrial Inquiry as an addendum to its report. The translations are expressed, as far as possible, in American legal phraseology, and they should prove of value to any American who is interested in the general subject of town planning, or who has a desire or intention to participate in any way in the rehabilitation of French towns or industries. There are copious explanatory notes by Dr. Pound accompanying the translation.

The Industrial Situation Abroad Following the War

(*Continued from page 5*)

dict in the threatened disastrous coal strike in Great Britain last winter, and it had fundamentally determined that this serious national menace to British industry should be ended. We may well ponder the significance of this attitude, for it proves that there is a point to which the public is not only interested but will enforce its equities in the settlement of industrial controversies where those controversies affect the interests of the people. The public mind, of course, cannot, should not be concerned with details, but once a clear issue is fairly presented, it usually decides in accordance with broad justice and compelling reason.

The public represents the jury in industrial struggles. Neither side to any industrial controversy has the right to seek the approval of the public without openly submitting its claims for examination and scrutiny. No strike can prevail against aroused and opposing public opinion, and no strike ever will prevail.

HOW PUBLIC OPINION IS EXERTED

For purposes of loose classification it may be said that public opinion (exclusive of employers and employed) is exerted through the following broad grouping: (a) Political organization (that is, party groups); (b) the Government, through the Houses o fParliament and the Ministry; (c) miscellaneous civic, religious, educational and reform societies; (d) the press. When these and other groupings address themselves to an analysis of and participation in British trade and labor problems, it may be assumed that any considerable unity of action might be called the expressed opinion of the citizenship of Great Britain. If this be true, we may indicate certain generalizations arising through these agencies in their especial application to the problem of British industrial relations.

The Labor Party, of which Mr. Arthur Henderson is leader, seeks political and legislative action as the most effective means of translating labor demands into terms of enforcible reform. It holds that the aspirations of labor cannot be put into effect without political action. This party, however, does not represent all the wage workers of Great Britain, reflecting merely a part, the numerical strength of which is debatable. British workmen as a mass are not convinced that the political program for industrial reform advocated by Mr. Henderson and his associeties is the wisest one for them. They believe that their aims and desires can be fully accomplished by action other than that which is strictly political. The present Coalition Government shows a tendency to permit employers and employed to work out their own industrial salvation with or without legislation. The radical group of socialists, represented by Mr. Snowden, Mr. McDonald, Mr. Webb and others in their respective schools of political phantasy, are regarded suspiciously by the average British worker, and unitedly opposed by British employers.

RADICALS DEMAND BASIC CHANGES

The basic principle of radical thought in Great Britain is that present industrial conditions demand changes in scheme, purpose and method. They believe that the capitalistic system is so faulty that new arrangements are necessary wherein the worker is protected socially and economically against the oppression claimed to be inherent in the existing system. They contend that industrial society owes its allegiance primarily and organically to the source of common welfare, which is the State. If men fight as soldiers for their country, they argue, why should they not also work for their country from similar motives of service and devotion? Their plan,

A. PARKER NEVIN

in principle, is for a nationalized sense of service.

This may be generally accepted and designated as socialism, but it is not certain that some of the radical wing in British industry would admit that it is socialism at all.

Industry must exist within certain definite classifications: either it must be the result of private enterprise with private capital employed and with labor an integral factor; or, it must be communized, which means that the two main factors are the State and the workmen—the State furnishing capital, paying wages and appropriating profits if any are made over the cost of service; or, industry must be proletarianized, which would abolish capitalism, eliminate employers, private or State, and combine all labor, manual and brain, in each industry into one large collective unit. If an industry should become thus proletarian in its structure, it would necessarily become either guildism or syndicalism. If industry is to merge into the guild system, there will be no imaginative enterprise, capitalistic initiative nor the taking of commercial risks. Instead of the guild being subject to the community, the community will be subject to the dictates of the guild. If industry should become a product of syndicalism, capitalism as well as the State will disappear, and there will be one group dominating the entire community, nation and government. It does not seem possible to escape the classification of industry into one of these groups.

SOCIALISTS SEEK STATE CONTROL

Socialists, on the other hand, repudiating communism and proletarianism, seek to substitute State control of means and agencies of production. Their claim is far more plausible to the plastic mind than the extreme forms of organization to which allusion has been made.

The obvious weakness in the program of the radical group is the absence of coherent and practical plans for execution. English conservatism, in the writer's opinion, wholly precludes employers or employees adopting socialism as we ordinarily use that term. Our Commission met employers who were wholly hostile to socialism, but expressed a willingness to adopt advanced ideas towards socializing their plants and businesses. They recognize clearly and sympathetically the pressing need of serious reforms in British industry. Such as these were entirely at variance with the radical element, but they were willing to go very far towards evolving means to stabilize and mutualize relations between themselves and those in their employ. The attitude of these men was impressive, and one could see in their progressive willingness to enrich industry with forward-looking plans of action the real hope of future industrial strength and harmony. Such methods of socializing industry upon sound, enlightened and humane principles can and will proceed without reliance on or connection with the theories of a state control of industry or sinister hints of sudden revolution.

Every commission and every individual which has made a study of industrial conditions in Great Britain since the war has been impressed with the fact that greater production is the crying need of the country. It was interesting to find men so opposed in their general views with regard to the problems of capital and labor as Lord Leverhulme, head of the vast Sunlight Soap industry, and Mr. Arthur Henderson, General Secretary of the British Labor Party, united with regard to this matter. Lord Leverhulme stated that it was immaterial to him what the weekly schedule of hours was if there were adequate production. Mr. Henderson, from an entirely different viewpoint, stated that increased production for the needs of the community was paramount to any question arising between employers and employees, and his statement contained a veiled threat that unless production were maintained in response to the normal needs of the nation, the whole system of British employment would be attacked by labor and a comprehensive plan of nationalized control would follow.

PRODUCTION LIMITATION BEING ABANDONED

The old idea of limitation of production by British workmen is being abandoned, and there is being substituted a better and quickened understanding of the necessity of enlarged productivity. Trade unions clearly recognize and openly advocate the economic effect of increased production, and there is no evidence of insistence upon the reinstatement of pre-war restrictions of output.

Most impressive during the travels of our Commission through Great Britain was the attitude of broad minded representatives of trade unionism in seeking to establish cordial plans of cooperative action between employers and employees.

There is a growing demand that the status of labor be stated in the terms of a new morale of industry. Evidence of this insistence is shown in recent reports of committees representing various organizations, all of which agree substantially in the conclusions reached as to the worker himself. For instance, the report of a committee appointed by the Archbishops of the Church of England to make a broad survey of the new spirit in industry thus characterizes the situation to which I refer:

> ". . . We think that the common description of workers as 'hands' summarizes aptly an aspect of their economic position which is not the less degrading because it has hitherto met with too general acquiescence. The suggestion is that the worker is an accessory to industry, rather than a partner in it; that his physical strength and manual dexterity are required to perform its operations, but that he has neither a mind which requires to be consulted as to its policy nor a personality which demands consideration; that he is a hired servant whose duty ends with implicit obedience, not a citizen of industry whose virtue is in initiative and intelligence."

Labor as a whole is more trustful of British employers than the Government or the politicians. In considering Great Britain's industrial situation the American reader should remember that the Government officially recognizes the legality of trade unionism, and there is practically no issue between employer and employed with respect to the enforcement of the principle of the closed shop. The chief concern of the public toward trade unionism in relation to industry is not the form of organization nor the number engaged in the ranks of the union, it is the solemn question whether trade union officials and their followers recognize that as their power increases so does their responsibilty.

(*Continued on page 20.*)

Socialism or Social Reform in the Church—Which?

(*Continued from page* 9)

prosperity of the whole people" if the socialist state were to confiscate and operate the American Beet Sugar Company, the Barlow Foundry Company, the Brooklyn Bridge Freezing and Cold Storage Company, the Merchants' Refrigerating Company of New York, the Seamless Products Corporation or the Citizens' National Bank of New York, of which associations you are either a president or director? And then add to these business concerns a million other corporations covered in the socialist program, not to speak of the six million farms, and the picture will be complete; and yet, according to Mr. Hillquit, that is exactly what socialism means, and it "admits of no limitation, extension or variation."

As against Mr. Hillquit's clear and terse definition of socialism, I want to place another clear and terse expression on socialism; that made by Samuel Gompers at Faneuil Hall, Boston:

> I want to tell you, Socialists, that I have studied your philosophy; read your works upon economics, and not the meanest of them; studied your standard works, both in English and German—have not only read, but studied them. I have heard your orators and watched the work of your movement the world over. I have kept close watch upon your doctrines for thirty years; have been closely associated with many of you, and know how you think and what you propose. I know, too, what you have up your sleeve, and I want to say that I am entirely at variance with your philosophy. I declare it to you, I am not only at variance with your doctrines, but with your philosophy. Economically, you are unsound; socially, you are wrong; industrially, you are an impossibility.

In the above treatment of socialism, I refer only to its economic phase. What is its spiritual significance? Does the Joint Commission on Social Service think it would conduce to the spiritual welfare of the people to have put into practice a program which is admittedly founded and based fundamentally on a philosophy that is the negation of Christianity; a philosophy which interprets all human life, all history, all human accomplishments, all heroic and noble deeds as having been inspired by nothing more than the two basest carnal urges of mankind—the urge of the stomach and the urge of sex; a philosophy which flatly denies the declaration of Christ that man does not live by bread alone, which is utterly materialistic, which not only ribaldly scoffs at all religion as an alleged instrument of capitalism for the oppression of the masses, but which denies the existence of God and that man is a living soul. Do the clergymen of the Protestant Episcopal Church, or of any other church, whose mission it is to teach the Christian gospel and who yet blandly approve of so-called "Christian Socialism" as a means of reform, really know what socialism is? Do they comprehend that socialism would not only destroy private ownership and personal initiative in material endeavor, but that which is infinitely more precious, the heritage of spiritual beliefs and immortal aspirations?

At the forum to be conducted in October at Detroit under the auspices of the Church Socialist League in America and the Church League for Social and Industrial Democracy, referred to in my former letter, you will doubtless hear much talk about the elimination of the causes of unrest through the democratization of industry and the enactment of minimum wage, compulsory sickness and unemployment insurance and old age pension legislation. None of these things, however, is socialism except the first named, which could well be termed Bolshevism, dependent entirely upon who defines it. The other subjects mentioned are by-products of socialism, in that they all look to the State for [illegible] guidance and help, but they do not contemplate, as socialism does, the "abolition of the wage system."

There is not space here to go into these questions in detail. Suffice it to say that in the great reconstruction program drafted by the Executive Council of the American Federation of Labor, reported to the recent convention of that body in Atlantic City and unanimously endorsed, there is not a suggestion of any of these alleged panaceas, excepting that a resolution offered by a member endorsing the minimum wage by law was overwhelmingly defeated, while a proposition for the democratization of industry along the lines advocated by the original coiners of that phrase was unceremoniously stamped upon as a Bolshevist proposal in disguise.

I do not mean to imply that the American Federation of Labor is the repository of all wisdom on industrial matters. But I do insist that when it comes to proposals designed to help the wage earner, the real wage earner's voice—and especially when it is in accord with that of the employer—should be listened to over the voice of the doctrinaires and sentimental well wishers of humanity in general.

On the questions of compulsory sickness and unemployment insurance, old age pensions and so forth, I quote two leading labor officials, Mr. Samuel Gompers, President of the American Federation of Labor, and Mr. Warren S. Stone, Grand Chief of the International Brotherhood of Locomotive Engineers. Mr. Gompers says:

> There are so many of our people, including workmen, who look to the government of our country to do the things which seem so easy for the government to do, and which they imagine should be done by the government. They do not recognize the pit-falls and the dangers which are entailed by conferring upon the government the function of doing these things. To my mind, it is a grave danger to place into the hands of the government the powers which would necessarily result from government compulsory health insurance with all the powers vested in the government incidental to and in the enforcement of health insurance.
>
> There is one thing that I want to say to the Committee on Social Insurance. Place in the hands of the government the right to determine who is or who is not entitled to governmental insurance; to determine regulations and conduct of every man insured, then it means that the government has the power with all the force at the command of the government to enforce the decrees or regulations.
>
> And that applies, too, to unemployment compulsory insurance. The government will determine then what will constitute justifiable reasons for unemployment. It might decide that when men and women are unemployed they are entitled to this insurance. Well, what is the cause of unemployment? Suppose it is a disagreement with employers. The government will decide as to whether the cause of unemployment is justifiable or is attributable to the workmen or to the employers. It is not necessary, then, for me to mention the fact of what that would mean to the work, the policy and the constructive movement of organized labor. The labor movement would lose its voluntary character and its effectiveness, and there would be brought about a condition of affairs in our country whereby the toilers would be rendered ineffective in their work for the protection and promotion of their rights and interests."

Mr. Stone says:

> It seems to me that the whole plan of health insurance or social insurance, from the standpoint of the workers at least, is altogether wrong. If we have accomplished anything as a nation, it has been due to the fact that the men and women of the country have been allowed to work out some of these problems. I do not take much stock in paternalism; I do not believe in a government that tucks you in bed at night, and if some plan of health insurance is adopted, worked out and finally made a law, I fear its effect on our country; I fear it will be the beginning of the end. I do not believe any nation can prosper when the government does everything for the industrial worker. It destroys initiative and makes him a dependent upon the bounty of his government.
>
> But I want to say to you frankly as a representative of labor that there is not going to be any compulsory health insurance if we can help it. When you say to the American working people that they must do this or that thing, every drop of red blood in them resents it. I think it is summed up in a homely phrase, "You can push all you like but you musn't shove."

But, Mr. Morgan, permit me to take exception to your assumption that government ownership of the railroads in this country, as demanded by the Railway Brotherhoods, spells socialism. At the time you wrote your letter, you were perfectly justified in assuming that the American Federation of Labor and the Railway Brotherhoods had united to demand the so-called "socialization of the railroads." At this writing, it would seem that the American Federation of Labor has not itself taken favorable action, although some of its constituent organizations have done so. However, whether the American Federation of Labor joins the Brotherhoods in this demand or not, the so-called "Plumb Plan" is not socialism. It is "government ownership" of railroads, but not "government operation." It contemplates wages, interest and profits. In fact, the real socialists today are opposed to government ownership and operation of public utilities until such time as the socialists can take over the government, when they will demand not only ownership but operation as well. The socialist argues that the "capitalistic government," by exchanging government bonds for railroad bonds, is simply continuing to the capitalist his profits in the form of interest, at the same time making his investment an absolutely safe one. What the socialists want is a government like Trotzky's, that will, through wholesale confiscation, extinguish entirely the private capital invested. There is no more socialism involved in the Brotherhoods' proposition for the Government to own the railroads than there is in the proposition for the City of New York to own the Interborough Railroad, which it does. The difference between those propositions is not in the *ownership*, but in the next step; that is, the leasing, which is a business proposition. New York City leases the Interborough to a corporation of bankers and business men who themselves put up one hundred million dollars, which under certain contingencies they will forfeit, while the Brotherhoods' proposition is that the Government should lease the railroads to the railroad employees for operation and, should there be a deficit, the Government, instead of collecting from them, would have to take its satisfaction out of the cancelling of the contract. So, whatever criticism may be made against the Brotherhoods' plan, that criticism cannot justly be that it is socialism.

You say that this Brotherhood plan for the socialization of our railways is far in advance of the British Labor Plan, and you ask: "Is one more socialistic than the other?" My answer is, as explained above, that one is entirely socialistic and the other is not at all. The British Labor program is a Marxian proposition, pure and simple, as evidenced by the following sentences in that much-heralded reconstruction program:

> The individualistic system of capitalist production, based on the private ownership and competitive administration of land and capital . . . will receive its death blow. And the Labor Party refuses absolutely to believe that the British people will permanently tolerate any reconstruction . . . involved in the abandonment of British industry to . . . separate private employers . . . What the Labor Party looks to is a genuinely scientific reorganization of the nation s industry . . . on the basis of the common ownership of the means of production; the equitable sharing of the proceeds among all who participate in any capacity and only among these, and the adoption, in particular services and occupations, of those systems and methods of administration and control that may be found, in practice, best to promote the public interest. . . .
>
> The Labor Party stands not merely for the principle of the common ownership of the nation's land, to be applied as suitable opportunities occur, but also, specifically, for the immediate

nationalization of railways, mines and the production of electrical power.

To get a striking view of the difference between the British and American trade union policies, compare the proceedings of the British Labor Party at Southport, England, with those of the American Federation at Atlantic City, both bodies meeting last June. At Southport they said: "Take the troops out of Russia, lift the embargo on Russia, lift the embargo on Germany, release the conscientious objectors, reject the Peace Treaty because of its severity to Germany, reject the League of Nations Covenant because it is not democratic"—that is, because it was not framed so as to give the socialists, Bolshevists and anarchists control. "Do these things," said Robert Smillie, of the Mine Workers, Robert Williams, of the Dock Workers, and Charles Cramp, of the Railway Engineers, "or we will call a general strike and tie up the industries of the nation. Not only that, we will induce Italy and France to join us." Within the last month Williams and Cramp have cabled appeals to the workers of this country which are being published in the socialist and bolshevist journals, calling upon the labor of this country to join with them. I quote from Williams' cablegram, which is largely the same as that of Cramp:

> We in Great Britain, despite our conservative outlook have fashioned an industrial organization which is probably the most potent ever created—the Triple Alliance. In this body we 300,000 Transport Workers have allied ourselves for defensive and aggressive purposes with 500,000 railroad workers, and 800,000 miners. We believe it is our duty to use every means in our power to challenge the institution of capitalism and its domination of the working people. . . . Today, we of the Triple Alliance are challenging the Government's policy in maintaining conscription, military intervention in Russia, and military intervention in trade union disputes.
>
> We see in the fight against the workers of Russia an attempt to safeguard the interests of English bondholders, and we realize, perhaps more by instinct than by reason, that the fight of the Russian and Hungarian proletariat is in fact our own fight. We know, moreover, through experience that conscription means the possibility of breaking strikes by means of the intervention of armed soldiers and sailors.
>
> Therefore we are taking the only means at our disposal to compel the Government to abandon conscription and get out of Russia.
>
> We earnestly hope that America will not be the stronghold of capitalism during this world-proletarian crisis which is at hand. America with its international origin should be in the van of the world movement for working-class liberty. May we therefore urge upon American trade-unionists the duty of assisting struggling Europe in what is not a make-believe but a real fight for freedom?

At Atlantic City the official representatives of three and one-half million American trade unionists, under the leadership of the men who refused to follow in the footsteps of the defeated pacifist labor leaders who played into the hands of Germany in 1918 by trying to force a "negotiated peace" with the enemy, were enacting a different role. There was no suggestion of dictating to the government, of threatening to take it by the throat. On every proposition that convention stood with our Government and for Americanism and against socialism and Bolshevism with all their auxiliaries. In fact, they refused to endorse about everything which the British Labor party was demanding should be done.

This convention is so well described in the *New York Daily Call*, the leading socialist organ, that I quote as follows:

> Atlantic City, June 18.—The high tide of reaction in the affairs of the American Federation of Labor was reached here yesterday when the Gompers machine crushed all proposals of the radicals and progressive elements of the trade unionists of this country.
>
> Practically every expectation that this convention of the American Federation of Labor would condemn every progressive idea as outlined in the *Call* by your correspondent has been borne out by the developments here.
>
> There will be no strike to save Tom Mooney; the Soviet government has been denounced; the millions of starving Russians blockaded by the Allied governments are to be left to their fate; the Labor party idea has been smashed and, as for industrial unionism, the A. F. of L. intends to go its old way. This is the grist of two days' grinding in the Gompers mill.
>
> It was a field day for Gompers, for every parliamentary trick that might be employed to shut off debate was used by him.
>
> The convention has shown opposition to a joint termination of contracts, is opposed to the democratization of industry to the extent of refusing to recommend the election of foremen on jobs by the workers, refusing to assist in the formation of soldiers' councils that would be helpful to labor, sets its face against any letting down of the craft bars or aiding industrial organization and finally has defeated a recommendation to the international unions to adopt an initiative and referendum clause in their constitutions.

Not only on this side of the water do the revolutionists recognize the patriotic, courageous and adamant stand of the American labor movement against their destructive policy, but those in Europe have an equally clear perception of the fact. This is evidenced by the following statement made to the United Press by Jean Longuet, grandson of Karl Marx, Socialist Deputy and the leading spirit in the international proletariat alliance of French, British and Italian workers:

> French and Italian workers are already bound closely together, while English laboring men are lining up more and more closely with us. We have already succeeded in establishing an alliance of workers which does not recognize European national boundaries.
>
> But at the present time we have gained but little support from America. This fact is chiefly due to the opposition of Samuel Gompers and other conservative leaders who control the destinies of the American Federation of Labor and who have complete power over labor organizations. Also, the fact that numerous workers own their own homes breeds conservatism.

Observe that nothing is more ruinous to practical socialism than ownership of their homes by the working classes.

It matters not that many changes have taken place since June. Many serious outbreaks have occurred and at times it may have seemed to the public as if the American labor movement had been fully as radical as the British labor movement. The leaders of only a few of the 125 different craft organizations of the American Federation of Labor are demanding the nationalization of the industries in which they work. In fact, when the conventions of the miners and the railway and steel workers declare for nationalization, it would appear to the casual observer that the cablegrams from the Triple Alliance of Great Britain had been effective. But despite sensational declarations and resolutions and striking headlines, none of those industries is yet nationalized, nor do I think they will be. Also, it is well to reflect that, with all the various crises, flare-ups, etc., which have occurred in England, none of the industries in that country have yet been nationalized, either.

Even if such declarations were to be taken at their face value, it is all the more reason why the business men in our churches, or the clergymen with whom they work, should not relax for a moment their grip on the essential feature of the situation, which is that the nationalization of industry, whether by our "capitalistic" government, by a socialistic state government or by a Soviet government, spells alike the practical destruction of industry and the overturning of all our free institutions. When the American Federation of Labor, representing three and a half millions of organized wage earners, sends delegates to Berne, Amsterdam and Paris to beat down those revolutionary programs, it is no time, I repeat, for American employers, bankers, business men, preachers, professors and lawyers to be even indirectly doing anything that would encourage their enemies.

With you I can say that: "We are living in a period of vital change" and that "true progress is what we are all aiming at." With you I agree that "the war was a great leveller," and that "in that crisis we all had to put our shoulders to the wheel, rich and poor, high and low, and with all former rank and distinction swept away, each of us fitted into the groove to which he was best suited." With you I agree that "it is in that spirit that we must face our present problems." But I cannot agree with you that "the old order has passed," if by that you mean that the fundamental concept out of which our Republic had its birth, that which is the basis of the American Constitution, the ideal of the human right to liberty, the full development of opportunity, individual freedom in the pursuit of great accomplishments and of happiness, that which has enabled America to become great, industrially, socially and spiritually, among the nations, is to be scrap-heaped and a new era of Socialism and Bolshevism is to take its place. We are too prone to be carried away by rhetorical phrases. In fact, we have had so persistently dinned into our ears the slogans of the Socialists and Bolshevists about "the new concept," "the new world," "the new order," when the Brotherhood of Man is to be realized—which, in the minds of those radicals, means the advent of Bolshevism—that many of us have got to talking in the same phrases.

Arthur Henderson, the high priest of "the new concept," "the new world" coterie of radicals, who is kotowed to by the writers in such publications as *The New Republic, The Nation, The Dial* and *The Survey,* which, in turn, are kotowed to by many members of the Social Service Commissions of the Church, stated the case for that cult last week in London, as follows:

> The present world unrest means that the old order of things is in its death throes; that a new society is about to come to its birth and that age-long injustices and inequalities that burdened the lives of the common people are at last to be swept away. But it is doubtful whether the ideal of true political liberty will be realized in this or other countries without a violent convulsion of society. . . . The ideal of a new society arises again in these fateful days, strengthened by the downfall of that system of the capitalist and imperialist which created conditions that drove the young men of the world into the shambles of war.

As against this visionary rhetoric of Arthur Henderson, I place the sound common-sense utterances of Mr. Herbert Hoover, lately returned from his work of directing relief in Europe:

> A conviction dominant in my mind comes from contact with stupendous social ferment and revolution in which Europe is attempting to find solution for all its social ills by practical experiments in socialism. My conviction is that this whole philosophy is bankrupting itself from a startling quarter in the extraordinary lowering of productivity of industrial commodities to a point that, until the recent realization of this bankruptcy, was below the necessity for continued existence of their millions of people.

Another characterization of the subject which I will give is by Mr. A. Parker Nevin, who has just returned from England, France and Italy, where, as a member of The National Civic Federation Commission, he made a first-hand study of industrial conditions. He talked to Arthur Henderson and other leaders of the Bolshevist and near-Bolshevist groups. Mr. Nevin said:

> I think the fundamental trouble in Great Britain and also in the United States at the present time is this: That consciously or unconsciously we have got industrial neurasthenia. We are on our nerves. We are upset. We are not seeing very straight and not acting very straight. It is a natural reaction of the great war. We are looking more at the things than at the people running the things, I think we get in a confused condition of mind and fail to see how we can treat these questions with composure. If we are going to get machine guns out in the streets and kill one another and denounce everybody, we are having a re-enactment of the war, we are having industrial war. But we are not going to get anywhere by those methods. If there ever was a time in the history of Ameri-

> can industry, and particularly so far as labor is concerned, when you want composure, it is the present time. When I say composure, I don't mean armistice; I don't mean any particular time to call off the contest. But I do say that no man can think clearly, constructively, hopefully or sympathetically when he is in a rage, when his mind is upset, or when he is not in good mental health. That is exactly what the trouble fundamentally with Great Britain is at the present time, and quite naturally, and the trouble in this country at the present time. Everybody wants everything in sight. Everybody is demanding things. We are all mixed in our economics. We are mixed up in our sociology. We are mixed up in our objectives, and until we get back to some normal basis of constructive thought, I personally fail to see where we are going to make steady progress.

The socialists, frankly despising the Church as an alleged institution of capitalism, have not been averse to using, wherever possible, its machinery and employing in their propaganda clergymen who could be caught through the bait of their catch-phrases, purposely designed to way-lay the unwary and sentimental.

We have learned much through suffering during the war and one of the things we learned is that we do not want anything that has even remote connection with what is advocated by the Lenins and Trotzkys, the Bela Kuns, Haywoods, Hillquits and their great galaxy of cheap imitators who are editing our so-called "intellectual magazines," and which has been drawn upon so extensively, as stated in my former letter, by the social reform committees of the American churches. I know that the churches of America are sound to the core when it comes to dealing with such questions. They need only to have the facts. My criticism has been that they are not getting the facts through their social service commissions, but are getting only part of the facts and many mis-statements. My appeal to you, as a business man, was that the business men of the churches should take hold of this matter themselves and deal with it, not leaving it to theorists, sentimentalists and socialists, or to sensational revolutionary preachers whose pulpits are open principally to the most radical elements.

Speaking of the General Convention of the Episcopal Church which will meet in Detroit in October, you say that "a program of nation-wide church activity will be formulated as representative of the Episcopal attitude toward the new age," and you add: "Whether it will be socialistic or not, I am unable to forecast." As to whether the Episcopal program will be "socialistic" or not, I can confidently say that if the Episcopal Church realizes what socialism is, economically and spiritually, it will not be. Nor will it be in line with the principles laid down by the Church Socialist League in America or the Church League for Social and Industrial Democracy, the first of which is largely advertising that it will make over the Episcopal Church so as to assist in the working out of a "complete" social and industrial revolution. This same organization boldly declares in the New York *Call*: "The Church must repent in sackcloth and ashes. It must repudiate its affiliation with and support of the capitalist system of production, with its unholy emphasis on profits, privilege and exploitation which have impoverished and fettered the mass of the people of the world. And it must demonstrate that repentance by a whole-hearted indorsement of those movements which are seeking to establish a real brotherhood among men."

The public will doubtless watch with great interest this bold and impudent attempt of the revolutionary element in the Protestant Episcopal Church to capture that organization. Of course they will fail, but the attempt will be wholesome inasmuch as it will force a line-up between the sane and patriotic Americans in that body on the one side and the pacifists, socialists and convicted disloyalists on the other.

RALPH M. EASLEY.

"THE LABOR SITUATION IN GREAT BRITAIN AND FRANCE."

Indicating the scope of the complete report of Commission sent abroad by The National Civic Federation to study industrial conditions, the following is the table of contents:

Foreword . . . . . CHARLES MAYER

The Commission—Origin, Purpose and Work
E. A. QUARLES

PART ONE: The Labor Problem in Great Britain from the Public Viewpoint
ANDREW PARKER NEVIN

I. Public Opinion and Labor.
II. Labor Grouping and Plans of Reconstruction.
III. The Issues Stated.
IV. Present Tendencies.

PART TWO: Varying Forms of Labor Organization. Methods and Purposes in the United States, Great Britain and France.
JAMES W. SULLIVAN

I. The Passing of the Shop Steward Movement.
II. The Imaginary "Democratization of Industry."
III. Chaotic British Labor Politics.
IV. Factors for Economic Change in Great Britain.
V. The Labor Situation in France.
VI. The Economic Status of Working-women in Great Britain.
VII. "Equal Pay for Equal Work."

PART THREE: Social and Industrial Relations in Great Britain, France and America from the Viewpoint of the Employer
ALBERT FARWELL BEMIS

I. General Viewpoint of the Employer.
II. Conditions in Great Britain.
III. Notes and Comments on the General Situation.
IV. Organization of Labor.

PART FOUR: Housing and Agricultural Reconstruction in Great Britain and France
ALBERT FARWELL BEMIS

I. Britain's Attempt to Solve the Housing and Land Problem.
II. France's Determined Efforts to House Her People.
III. Back to the Land.

The report of the Commission has been made from the point of view of the employer, the wage worker and the public, the Federation's Commission being the only one sent abroad since the conclusion of the war which was representative of all these elements. The contributors are Chairman Charles Mayer, of the Commission, who is also chairman of the Board of the France & Canada Steamship Corporation; James W. Sullivan, of the American Federation of Labor; Albert F. Bemis, a well known textile manufacturer of Boston, and A. Parker Nevin, of the New York Bar, an authority on industrial problems.

In its investigations the Commission has devoted especial attention to the constructive policies and programs adopted abroad affecting the relations of employers and employees, with the object of determining which if any of these might advantageously be applied in the United States.

The publisher of the report, which will be issued in regular book form, is E. P. Dutton & Company. The book is expected to be off the press October 15. It will contain approximately 400 pages. Advance orders may be sent to The National Civic Federation, 1 Madison Avenue, New York.

The Industrial Situation Abroad

(*Continued from page* 17)

Whether as a practical method of joint operation, workers should be permitted to have a voice in the direction of all the affairs in a given industry is as much of a question and as much disputed in Great Britain as in America.

"The least thing I would suggest as the workers' right," says Mr. Clynes, "is a share in the direction of industry in all matters immediately relating to the workers' welfare. There is nothing the Britisher will claim more than the right to take part in what he feels is his proper sphere of service."

He further argues that in all matters that affect directly the welfare and the working conditions of the masses of the workers they have a right to take some share in the general management of the business. I do not believe, however, that there is a dominating desire on the part of the workers or employers in Great Britain for that form of industrial democracy which would place the workers in the sphere of management.

The deep, underlying defect in the entire scheme of modern industry is that it is functioning upon a wholly materialistic basis. The spiritual is not there; and until it is, until the forces of a higher spiritual impulse begin to permeate the body industrial, one fails to see whence the urge for higher development will come.

Great Leaders of the Union Labor Movement

(*Continued from page* 7)

as much of the necessaries of life as did the dollar before the war.

Acting as an official for more than 400,000 miners has certainly given Mr. Green an experience that well fits him to help guide the American Federation of Labor.

JAMES WILSON

President Pattern Makers' League

It is easy to understand why the Pattern Makers' League has been successful. James Wilson, its president, is a young man who has won a high place in the labor movement because of his experience as an international official. He has been a delegate to many conventions and proved his metal many times. As chairman of the committee on executive council's report he has employed his knowledge for the advancement of the American Federation of Labor on practical lines.

The chairman of this committee must be one who has a general knowledge of public questions as well as those which refer directly to the trade union movement. Many big issues come up for consideration and action. It was, therefore, only logical that he was named chairman of that committee.

During the war he was one of the members of the labor mission who visited Europe to acquaint the people of the position of the American trade union movement.

Among the other committee chairmen and secretaries at Atlantic City who helped lead the American Federation of Labor along the pathway of greater triumphs are:

John Donlin, president of the building trades department and chairman of the committee on building trades; James P. Noonan, its secretary;

John J. Manning, secretary of the label department and chairman of the committee on labels; R. S. Sexton, its secretary;

John W. Hays, secretary International Typographical Union and of the committee on shorter workday;

John Golden, president of the Textile Workers of America and secretary of the committee on adjustment;

John J. Barry, secretary of the committee on local and federated bodies;

Charles C. Shea, president Theatrical Stage Employes' International Alliance and secretary of committee on education;

James J. Freel, president International Union of Stereotypers and Electrotypers and secretary of committee on boycotts; and

S. E. Heberling, president Switchmen's Union of America and secretary of committee on law.

These are not all of the labor men who have added to the prestige of the American Federation of Labor. There are many others. No one shows greater appreciation for the amazing progress made by labor through the work of these men than President Gompers himself.

Tyrrel Print, New York.

The National Civic Federation Review

Vol. V. NEW YORK, JANUARY 1, 1920 No. 1

INVIOLABILITY OF CONTRACTS

EMPLOYERS' AND WAGE EARNERS' REPRESENTATIVES AGREE THAT INDUSTRIAL CONTRACTS MUST BE KEPT AT ALL HAZARDS, BUT GIVE DIVERSE VIEWS ON OTHER ISSUES

COLLECTIVE Bargaining was made the theme of discussion at a dinner given by the Economic Club, of New York, on Wednesday, December 10, 1919. Abstracts of the speeches of the three men who represented employers and wage earners are given herewith.

Frederick P. Fish, President of the National Industrial Conference Board, an organization composed of nineteen different national employers' organizations and himself the head of the committee from that organization in the President's Industrial Conference in October last, spoke for employers; and Major George L. Berry, President of the International Printing Pressmen and Assistants' Union; and T. V. O'Connor, President of the International Longshoremen's Association, represented organized wage earners. Collective bargaining could not have had more representative and able exponents from the labor standpoint than these latter gentlemen, because they have both just emerged from conducting two of the most exasperating, extensive and turbulent strikes in recent history where the main contention was over the keeping of contracts officially made by the organizations with their respective employers.

Robert Erskine Ely, Secretary of the Economic Club, proposed three cheers for the labor union leaders who believe that a contract is a contract and that there is only one thing to do with it, to live up to it. The wildly enthusiastic applause of the twenty-two hundred diners was a glowing tribute to the splendid work of these two men, which culminated in a victory over the Bolshevist and disloyal forces which had striven to destroy the unions from within.

Mr. Frederick P. Fish, said in part:

"Whenever I am thinking of the subject of industrial relations, one thought comes into my mind which I wish might permeate this country, and that is that the industries are not primarily for the advantage of the men who have money invested in them and their management, they are not primarily in the interest of the workingmen, but they are to be treated and considered in view of the interest of the people of the United States as a whole. We are today in a critical position, as England is and the rest of the world on this question of employment relation, and it is the duty of the people in this country not to develop prejudices one way or the other, not to be carried away by emotion, but to try to get at the real truth of the situaion as it exists and then use their judgment and their powers of reasoning in taking sides on the issues, insofar as it is essential that sides should be taken.

"The subject of collective bargaining is one much talked about. The phrase 'collective bargain' needs interpretation. My own conclusion is that, as it is generally and commonly used, it refers to an ideal situation which is more nearly exemplified in English conditions than in any other that exists in the world, that is, where the workmen are all organized in labor and trade unions, where the employers are organized and where the individual shops and the relations between the management and the individual establishment and the workmen of that establishment are ignored and sidetracked, and everything settled by collective bargaining between the enormous power of the labor unions on the one hand and the enormous power of the employers on the other. This seems to be the situation to which England is coming, if she has not got there already, but that is not yet the American situation. The American situation, on the contrary, is primarily today the open shop as against collective bargaining in the sense which I have given to that phrase.

"At the time we went into war there was a careful investigation made by the Washington government, which resulted in the publication of a report, which I think was the basis for the proposition that not ten per cent of the establishments of this country, and not ten per cent of the workmen, the wage-earners, in this country were organized into trade unions, as compared with the very much greater percentage in England. That has been up to date the American situation, the closed shop and what it means dominating the employment relations in England, the open shop and what it means dominating the employment relations in this country.

"I think a study of the books, a study of the available evidence, will justify this: that whatever may be the cause of the situation, the labor

MAJOR GEORGE L. BERRY

FREDERICK P. FISH

T. V. O'CONNOR

union domination in England had not succeeded in bringing about efficiency in production at the time the war began, that it had not succeeded in getting for the English wage-earner very good pay. I believe that the books establish the proposition, based upon scientific investigation, that, at the outbreak of the war, the English workman was producing not more than a third to a half, at the outside, as much as the American workman, and I believe that it is perfectly clear to those who have studied the matter and have recorded the results of their studies in books, that the English workman wasn't getting anything like the compensation the American workman was getting. . . . It was impairing the standing of England as an industrial empire; it was reducing the standard of the individual workman in England.

"Now, gentlemen, an illustration of the why of that situation, I think, is shown by what happened in England when the war broke out. It was evident to the powers over there that the war couldn't be won unless there was a most tremendous increase of production, which meant work, work, work on the part of everybody, and the government officials persuaded the labor unions to abrogate their rules, by which there was efficiency of production. The production in England per unit per workman increased tremendously through the country and saved the situation.

"I think there is a definite connection between those two facts, that the production was very low before those rules were abrogated and those principles abandoned and the situation which arose after those rules were abrogated and the situation abandoned. Coupled with this agreement on the part of the English labor union was a definite promise on the part of the government that at the end of the war those rules and those principles should be re-established and the world today is waiting with interest to see what happens if, in fact, they are re-established. I don't believe they can be. If they are, I think England, as a commercial nation, is doomed. I think the labor union and the labor union leaders will have to see and recognize that fact in England and voluntarily adopt new principles, and if they do it over there, maybe they will do it in this country, because in this country I think the evidence is complete that the rules, principles, of the labor union are such as to reduce production, to limit efficiency and to suppress development of the industries that are of such vital importance to every man, woman and child in this country and to the whole world.

"We all know what a tremendous and radical change has occurred in industry during the last fifty years. The development of electricity, of power, the work of scientific men, inventions, the extension of transportation systems all over the world, the substitution of machinery for hand work and the crowding of people into great establishments and into cities have led to a condition utterly unlike that under which men worked and lived fifty years ago. . . . The stress and strain and the effort in dealing with all the questions, from selecting the right coal and the right raw material, that the product might be perfect all through the organization, the invention and design of machinery, looking after floor space, the saving of effort, the development of power in all its forms and the dealing with these modern conditions of transportation and of production that were so radically new, all those things took so much of the thought and energy of the men who were responsible for that management that in my opinion they neglected certain other things that were equally important and which should have been dealt with in exactly the same spirit, exactly the same mental alertness, exactly the same power as the physical, material and engineering problems which they dealt with so admirably. Among those was this: The relations with the workmen. The workmen were working under new conditions. They were crowded together as they never had been before. There were any number of new situations under which they worked. I cannot stop to go through the list, but among others the change from the old-fashioned generally easy going work to the work that is speeded up and timed by a machine which requires concentration and where men specialize to such an extent that a workman's job at which he starts is likely to be his job all his life. All those things brought in new elements of psychology, new elements of mental relation to the situation on the part of the workman, and they needed study and analysis and research that they might properly be dealt with. There were many more of them, gentlemen; there were many more of the same kind, but in addition to all there was this tremendous development of energy, of power, with this enormous production and the results of production which showed in profits, which showed in the creation of a few abnormally rich men who stood out from their neighbors with having made fortunes beyond the dream of anyone in prior generations out of this condition of things.

"That brought about a ferment on the part of the workingman, and it was naturaly inevitable that this should be so, that they did not look at things as they had before. That situation was one which should have been definitely attended to and studied. There should have been the same kind of research and the same kind of attention given to it as there was to the more material problem, and, gentlemen, I am satisfied that it wasn't done.

"But it has begun. A number of years ago attention began to be given to these things. It was begun to be recognized that working conditions were not right and all through this country in the industry men have attended to that side of their obligation, the management has attended to that important and conspicuous thing, for I know there is no element of industry that is anything like so important as the relation with the organization, the loyal workman, the sympathetic workman, the man whose work is a joy to him is invariably more effective in every possible way, and more than that, we have to recognize now that we are beginning to think about it, we have got to consider him not at all from the point of view as a part of a machine but as a man with so much aspiration, human feelings and human strength, as well as human weaknesses. As we all know, there has been great effort made in the direction of sanitation, of insuring good conditions of work and good conditions of living, assuring safety, and that work shall be done as easily as is consistent with efficiency. But that is not enough.

"There is an old doctrine which people had in the back of their heads all the time, although they didn't think about it—that the question of wages was a mere question of demand and supply, that is, the market will fix the worth automatically, although we recognize at the present time, I am happy to say, that there are qualifications to that law, that while that law controls and always will control, it cannot help controlling, yet there are qualifications to it and that an effort should be made to bring out, to reward, to develop, to reward every individual effort, every individual efficiency, every individual power, every individual capacity, every individual with loyalty, and also that any industry that is worth providing, that is worth perpetuating, ought to be able to pay everyone that enters in its employ a decent wage that will support him in a fair degree of comfort that is satisfactory to a right minded man and that will give him a chance for relaxation, a chance for saving something for old age or for accident. Another thing which I think they are beginning to recognize is this: that the unemployment situation is a most serious matter in industry, and that it isn't necessary that there should be so much unemployment, and steps are now being taken to select men rather than to take them haphazardly, to fit them for the job. Also there is the thought in many of our establishments today that if a man is employed there is an obligation to him that he is not to be fired merely because he isn't fitted for his job. Before that is done, it is the duty of the management to look around and see if there isn't a job for him somewhere else, and I believe that they can in this way gradually deal with the evil of unemployment.

"Out of the 450,000 industrial establishments in this country almost all, some 95 or 98 per cent of them, employ less than 250 men. If the employer of that small number of men goes at the matter intelligently and sensibly, he can get at these men sympathetically and intelligently, and he doesn't need any machinery for doing it. But the great troubles that we hear about are in the big organizations, where there may be in the 2 per cent or so of the big organizations there may be anywhere from 500 to 50,000 men or more, and there it is utterly impossible that there should be that personal relation that existed in the old days and which may exist today in the small shop if the employer gives attention to the matter. There you have got to have some organization, and each individual management should study the employment in its own shop and see which is the best. One form that is successfully employed in some places is simply to establish a department of good men for devoting themselves to the study of that question, to find out what the men need and want and think, and to talk things over with them. Another form is what we sometimes call shop committees or shop councils, where in the individual establishment the workmen elect, and it should be by secret ballot of the fairest kind and counted fairly, representatives from their own number who meet the representatives of the employer, who are men selected because they have th right characteristics and the right views of this important relation, because they recognize that the employees are men like themselves and are entitled to be treated respectfully and frankly and fairly. In that way the management will learn just as much as the men, and the men will learn just as much as the management. Men are fair; the employers are fair in this country. If they only stop to think and get at the situation accurately, I believe many of these things can be taken care of at the start. I also feel, and experience shows, that the workmen soon get into the frame of mind where they want to co-operate. Among the things that can be taught in that way, and in no other, in the big establishments, are some of the simple economic problems, for instance, that no rule which suppresses production is consistent with prosperity or with good wages. When it comes to a question of hours of labor, the principle that should be applied is not an arbitrary eight-hour day or forty-eight hours a week. That might fit some conditions and might not fit others, but there should be in every establishment that amount of work and the maximum amount of work that can be done without in the slightest degree impairing the health of the operatives and which leave them an opportunity to lead comfortable lives. There is a form of collective bargaining that appeals to me. There has got to be behind it sympathy, good faith, fairness, frankness, loyalty, a certain recognition of the weaknesses of human nature, because human nature on both sides is weak, and the desire to get results. For that kind of collective bargaining I urge you to stand. It involves the open shop. It involves that the employer shall not be forced into that kind of collective bargaining to meet the labor union delegate or the representatives of the labor union who are not in his employ, if elected as representatives of his men, because the moment he does that, that moment the labor union gets into his establishment, that

Russia as Seen by Ex-Military Attaché

LIEUT. A. W. KLIEFOTH, FORMERLY CONNECTED WITH AMERICAN EMBASSY IN RUSSIA, TELLS OF CHAOS UNDER BOLSHEVIKI—PLAN TO NATIONALIZE CHILDREN—RIDICULES ROBINS

AFTER spending three years in Russia, where he observed three régimes, those of the Czar, of Kerensky and of Lenine and Trotzky, Lieut. A. W. Kliefoth, who left Russia only last September, has returned to America with information of exceptional and impressive value concerning the break-up of Russia under Bolshevik rule. Lieut. Kliefoth tells of what he witnessed, and the evidence he brings back was gathered first-hand. Raymond Robins, at a recent meeting in Madison, Wis., according to reports, asserted that American troops had mutinied at Archangel, and was called to account by some soldiers, members of the American Legion, who had been there. Lieut. Kliefoth was the man ordered by the American commander there to investigate the reported mutiny. Of this, Lieut. Kliefoth said in a recent address in New York:

"There was no mutiny at Archangel. The first we heard of a supposed mutiny came from a Y. M. C. A. secretary. I was ordered to where our troops were preparing to entrain to fight the Bolsheviki.

"It was a bitter cold day. I asked the soldiers what the trouble was. They said they wanted more heat on the train. They wondered if their Captain might not have an additional stove supplied. They were ready to fight. That was all. I did not hear the word 'mutiny' applied to the incident until I reached New York."

ROBINS' ECSTASY AT SOVIET MEETING

Lieutenant Kliefoth, when asked about the statement ascribed to Colonel Robins that the railroad service of Russia was better under the Bolsheviki than under the Czar, said:

"When Robins was in Russia if you had a special train you got to your destination. If not, you took a chance. For three days I waited in a village on the Murmansk Railway for a chance to crawl on top of a train for Petrograd. We were about to leave when a telegram came from Lenine saying Colonel Robins was passing through on the way to Moscow. The whole line was shut down and traffic stopped until Robins passed in a special train, which formerly was used by the Czar and had been placed at his disposal by the Bolsheviki.

"Many peasants said to me that Americans were aristocrats. I argued with them that Americans were democrats. They would cite the fact that Colonel Robins was using the Czar's private car as proof of their contention.

"I have seen Robins at a meeting of the Soviet in Petrograd, listening to the speech of a Commissar. At the end of the address he would declaim rapturously, 'Isn't it wonderful? Isn't it inspiring?' All this though he had no interpreter with him, and I doubt that he knew twenty Russian words. As a matter of fact, Robins' information about Russia was obtained through an interpreter, Gumberg by name, who was a Bolshevist."

Concerning William C. Bullitt, whose testimony before the Congressional Committee on his peace mission to Russia created a stir, Lieutenant Kliefoth said Bullitt was in Russia seven days. He spent most of this time, he said, in the Kremlin in Moscow, with Soviet officials. He had no opportunity to ascertain facts at first hand and made his report on conditions from material supplied by the Bolsheviki.

CHILDREN ELECT OWN SOVIETS

Lieutenant Kliefoth described the system of education in Russia under the Bolsheviki.

"Under Lunacharsky, who was put in charge

Copyright Underwood & Underwood

LIEUT. A. W. KLIEFOTH

of the system, universities were opened to the illiterate," he said. "At the leading proletariat university in Petrograd not more than one in fifty could read or write. The catalogue announced that astronomy, physics, physiology and logic would be taught. There were no textbooks.

"In the elementary schools the children assembled at 9:30 o'clock. They came without breakfast and received a bowl of soup. The class then was called to order and the 'Internationale' and other revolutionary songs were sung. The children then were loaded down with proclamations and pamphlets describing the Communist movement and were told to bring back a receipt for the literature from their parents. They went home and returned in time for lunch, which again was a bowl of soup.

"The only freedom in the schools is the freedom of the pupils. In the kindergartens children four and five years old elect their own soviets or committees to report on the conduct of the teachers. As they cannot write, they report orally. If objection is made to the teacher, he is summoned before the Committee on the Suppression of Counter-Revolution and Speculation.

"Lenine's idea at first was to have no schools at all. He wanted the children of four and five to be taken to factories, where they would learn trades. Because of the downfall of industry, this plan was not followed.

NATIONALIZATION OF CHILDREN

"The Bolsheviki seek to obliterate the family unit. I saw no decrees concerning nationalization of women except, perhaps, some put out by irresponsible Soviets, but the ultimate Bolshevist aim is to control and guide race propagation. They feel that women must not be bothered with the institution of family or husband, and this ultimately would lead to nationalization.

"The Bolsheviki hold that the family is the unit of conservatism. One of their tenets calls for the destruction of all records concerning births, marriages and deaths. So that when 500 children are taken from Moscow out into the country communal schools the records of the children are destroyed and they are known only by number. Nobody can tell where the children have been taken. They are forbidden to write to their relatives. The mothers are told that no records exist of the destination of the children, who are in this way nationalized. This fact has become known to the people, and the day after such an excursion you can see many mothers sneaking out of Moscow on trains bound for the country in a hopeless attempt to find their children.

"You are told by people sympathizing with the Bolsheviki that the schools are more crowded than they were under the Czar. That is quite true, but the reason is because the schools are almost the only places where the children may keep warm and obtain food."

Lenine suppressed all opposition newspapers in Russia, using as an excuse the ruling that "no lie could be published." When some of these papers persisted in appearing, the supply of print paper was nationalized, and paper was supplied only to periodicals of Communist leanings.

The Committee on Propaganda and the Suppression of the Counter-Revolution, Lieutenant Kliefoth said, was empowered with authority over life or death. It spent in the current year 400,000,000 rubles for propaganda, printed in every known language. Lenine's foreign policy was based, he said, on foreign propaganda and world social revolution.

"The men running affairs in Russia are clever propagandists. Many of them have been political exiles for so many years that all they know is propaganda. They exercise arbitrary power and have unlimited funds behind them. Take the Committee for the Suppression of Counter-Revolution and Speculation: A simple accusation as a counter-revolutionist is sufficient to bring you before this body. There is no hope for a man accused. The real object of the committee appears to be to prevent the bourgeoisie from living.

"The only thing that pays in Russia today is being a Commissar, especially one dealing with finances. A Commissar having anything to do with finance automatically becomes rich."

Apologists for the Bolsheviki have said it was safer to walk in Petrograd than in the streets of an American city, the speaker declared. Lieutenant Kliefoth said this was undoubtedly true, for he had walked through street after street in Petrograd and had found the houses deserted. He said it was not safe to walk in the streets without a permit, and as permits were difficult to obtain, the streets were quite deserted. "So is a prison orderly and quiet," he commented.

"GET-RICH-QUICK" SCHEME OF RADICALISM

"It is a mystery to the physicians in Russia that the people have so much endurance. There are constant epidemics and it is remarkable that many more do not die. The population of Petrograd has fallen from 2,500,000 to 400,000, according to the Bolsheviki, but the English give the figure as 300,000. Most of the people residing in Petrograd, having no longer any reason for remaining there, have gone to the country, where they are living with the peasants, waiting for conditions to change. Many have been slain. The escapes of men would be more frequent, but they know their families would be held as hostages.

"Far from being a new experiment in democracy, Bolshevism is the get-rich-quick scheme of radicalism. It is a party government maintaining its power through military force, terror, food control, tyrannical suppression of every form of opposition.

"The Bolsheviki speak of peace, but they are not sincere. They desire a breathing spell for world social revolution, which is their real aim. That is the theme of all the commissars in every village in the land.

(*Continued on page 7*)

The Peace Covenant Labor Code

IS IT A MENACE TO A. F. OF L. PRINCIPLES? HOW FAR IS INTERNATIONAL SOCIALISM TO SET ASIDE THE TRADE UNION MOVEMENT IN AMERICA?

WHEN the International Labor Organization was chartered by the Treaty of Versailles a new mark was set in the inter-continental relations of the wage-workers.

The first international labor conference under the charter was held in Washington in October and November. Some points in what looks like legislation for the world's labor were arranged for. A Director General of the international labor office was elected. That Director General is Albert Thomas. It hence will not be a waste of time for American trade unionists to stop and indulge in the classic query, "Where do we go from here?"

Labor tactics in Europe and America have differed widely. Labor policies have differed radically. The philosophy and the psychology of European labor movements have found little reflection in the trade union movement of America. The character of the conference in Washington and the election of Thomas by that conference to its most important executive office fairly open the whole subject of organized labor's principles and methods for consideration.

Albert Thomas is one of the leaders of French Socialism. In the language of the radical world, he is an "intellectual." In Europe, he might be called a labor leader, but not in America. In America, Thomas would be purely a politician, like Victor Berger or Eugene V. Debs—a Socialist politician, though with no suspicion of pacifism in his make-up. The great international labor organization of the League of Nations thus comes at once under the administrative leadership of a Socialist politician. Is he to lead in a Socialist or a trade unionist movement?

The propositions that American labor has now to consider may be divided thus:

1—Is American labor prepared to abandon its traditional adherence to a policy of economic, or industrial, action?

2—Is American labor prepared to submit to the European idea of political action as a main weapon?

3—Is American labor prepared to join wholeheartedly in the work of the international labor organization of the Treaty of Versailles, which mostly is purely political and which is so designed that it may—perhaps must—impose its decisions by methods that have always had the complete disapproval of American labor?

4—Is American labor prepared to see the purely trade union international—the Federation of Trade Unions—pass out of existence as an effective labor body, made useless by the new organization which is set up by the treaty of peace and vested with high power in direct affiliation with governments?

5—Is American labor agreed that labor, in partnership with governments and employers, can achieve truly progressive results in keeping with established trade union concepts?

It is evident that a point has been reached at which decisions of moment must be made by American labor.

American labor has until now held itself strictly aloof from the political policies and practices of Europe. It has had for the attempts at introducing those policies and practices in this country the sharpest condemnation, though recognizing, of course, the right of each foreign national labor movement to be entirely free to determine for itself its own course of action.

European labor has more and more gone the political route. No political and industrial movement have been so inter-related in purposes and commingled in organization that only the well versed knew where one movement began and the other left off. And the dominating influence, almost without exception, is to-day wielded by the political wing of the alleged labor movement. Trade union activities only get short paragraphs in the newspapers where labor politics get pages.

Examine the labor movements of England, France, Spain, Italy, Germany, Austria, of the new countries such as Poland, Czecho-Slovakia and the states carved out of what the world once called Russia. Politics predominantly determines the labor character in every country. Politics is supreme in the labor aims considered by general public opinion.

There is a personal way of getting at the situation. Who are the powerful "labor" leaders of Europe? Who in France? Who in England? Who in Italy? Who in Germany? Who in Belgium? Every one who knows anything about the French labor movement knows about Albert Thomas, about Jean Longuet, about Pierre Renaudel. These are Socialists. Few know even the names of the French Federation of Labor officials who came to Washington. Their secretary is a Socialist, while his official position is in the industrial organization. In England, Arthur Henderson is the first personality to occur to most minds. Henderson is a union member, but his regular field of action is the political field. His office is in the headquarters of the Labor Party. He sits in Parliament. Politics is his game. J. H. Thomas is almost as well known, John Hodge once was, Smillie is pretty well known. But Henderson's is recognized as the big name. Furthermore, as if to lend emphasis to the domination of the political idea, the executive body of the British Trade Union Congress is the Parliamentary Committee, today a political agency. In Belgium the leading figure is Emile Vandervelde, a Socialist. Few Americans know the name of any big trade unionist in Belgium. The fame of the Belgian labor representatives is derived from their political activities. The case of Holland is a bit different, for in that country—sole exception to the European rule—the trade union movement as a whole seems to hold some place on its own merits. In Italy, labor is little else than Socialism run wild. It is Socialism of an extremely radical variety, colored in the flaming tones beloved by the ardent Latins. Spain knows nothing of a true trade union movement. The Bohemian movement is taking on more and more the color of Socialism, and so also with the Jugo Slavs and most of the other smaller nations, judging by the means of information to which Americans have access.

In most of these countries there are clearly defined industrial movements, to be sure. Especially is this true of France and England, among the larger nations, and of Belgium and Holland and Switzerland among the smaller nations. But the vital truth is that the industrial movements take their color from the political movements and shape their course in accordance with the demands of a political philosophy. In the Germany of old the German Federation of Trade Unions ran second to the German Socialist Party, with its 110 seats in the debating society called the Reichstag. The energy of the labor movement was directed principally into political channels, which resulted in the election of men to practically powerless public positions. It was much like piping steam through the roof instead of into the cylinder chest.

So it is in all Europe. So it has been. So it is going to be, by present indications. The one man in France who most admires American methods and who has sought most diligently to apply them in his own union is a pathetic figure—a splendidly qualified trade union leader with few followers. The outstanding figure in England who believes in putting industrial action first is a man of power personally, but until now has been unable to change the tide of British labor policies.

Labor in Europe has sought parliament as its favorite battle ground, and in some countries necessarily so in order to bring their workers up to the level of civic rights and standards long enjoyed by the working people of the United States. But European labor customarily tries to get by law what American organized labor has sought through union action. In every one of the leading nations of Europe legislation has been secured or is pending for the purpose of shortening the work-day, such a measure being just now before the British Parliament. From the labor movements of Europe also we get the idea of using the strike to paralyze the political state so as to compel parliamentary action. The general strike is a favorite cry of labor politicians, however seldom it may be used by trade unionists.

Labor in Europe, to boil it all down, runs strong to parliaments and politics and forensic battles, which is to say that theoretically it runs straight for state Socialism, from which it expects all blessings to flow. American labor, on the contrary, has run mainly to the strictly economic fight in the industrial field.

Having a full realization of the value of politics, American labor has thus far declined to give politics any over-lordship in the house of labor. It believes that the labor struggle is immediately an industrial struggle and as such must be fought out in industry. It does not take the question of the length of the work-day in factories into the halls of Congress, but into negotiation with employers. If conference yields nothing it goes to the time-honored industrial field of last resort, where it calls a strike. It wants wherever possible to settle industrial questions in industry and not in politics.

American labor looks upon the questions in dispute in industry as definite, tangible, basic. It looks upon politics as frequently unstable, abstract, treacherous and rarely fundamental as relating to industry. It believes that labor laws, so far as they write great changes into statute books, must necessarily be the written records of convictions already arrived at by the masses through other processes. Such laws as those that aim to fix the work-day or to fix minimum wages for men are regarded by the most thorough-going American trade unionists as of doubtful present value and of highly probably future menace. American labor is best satisfied in industrial matters when it has the least law to deal with. It believes the function of law should be to keep out of the way of industrial growth and change and progress. It has a high respect for the law, and it wishes to maintain this respect by keeping law to its proper field.

American labor has always admitted the right of European labor to take its battles into Parliament, to build up a state suzerainty over itself, to erect for itself a state mother and to create for itself a state Socialism. American labor has said repeatedly that labor in any nation must determine for itself its own policies and practices. But American labor has declined to adopt for itself the policies of Europe, declined to commit itself to the political platforms of Europe, declined to submit its destinies to the manipulations of politicians at home and declined to con-

ede to those from other countries the right to ictate what policies American labor should dopt. English speaking labor on the American ontinent has been agreed in matters of policy, Canada being in harmony with the United States n the main.

One of the contentions of American labor has een that politics for labor decreases the vigor f the industrial movement. Its classic example n America has been Milwaukee, where statisics have shown repeatedly that wages were lower nd trade union vitality weaker than in any ther city similar in size and in industrial organization. Milwaukee has been the American tronghold of Socialist politics. Union labor enjoys high wages and the eight-hour day in varius municipalities in which Socialism ruled for brief year or two, to disappear, leaving labor o recommence with trade union methods.

But history develops now to a point where Europe may entangle America, with little regard for America's own precedents and policies, and enmesh America in all the ruck and mire of European parliamentary policies. The International Labor Organization of the League of Nations is planned to be the supreme labor body of all the world that falls under the labor code of the treaty. This for the simple reason that it will have the strategic position—it is to have the center of the stage and to wield the power. It is in partnership with governments. This it is to be and to do, at least unless something vigorous happens to spoil the pretty picture.

This is the way the International Labor Organization functions: Its International Labor Conference takes place annually. This conference discusses labor questions and adopts either draft conventions or recommendations. The term "draft convention" is a European term. What we call a convention they call a congress or conference. What they call a convention we call a covenant or contract. When the International Labor Conference adopts a draft convention it adopts what amounts to a contract, which is thereupon offered to all nations party to the treaty of peace. The nations may reject or accept these contracts. There are drastic penalties for nations that violate them after adoption. And if America is party to the treaty of peace it becomes party to the labor conference and party to the permanent international labor office which is to be maintained at the seat of the League of Nations.

Not only is the American government to be party to the labor organization, but the American labor movement becomes a partner, by virtue of the fact of its existence. There is no choice after America signs the treaty. The International Labor Conference is composed of four delegates from each nation. Two of these represent the government. One represents employers and one represents labor. The labor and employer delegates must be nominated by the organizations most representative of employers and of labor. The American Federation of Labor must therefore nominate the American labor delegate. Thereafter that delegate must participate in the work of an organization which has its whole being in the state and which can function only through the state by virtue of laws. That delegate must strive, with the others, to secure for labor, by law, things which American labor has always declared should be secured by purely industrial action; and if it so happens that his own country is immune from action by the conference in most cases he must none the less endeavor to bring about legal action bearing on other nations on questions purely industrial in character.

The International Labor Conference just closed has adopted a draft convention providing for an eight-hour day and a forty-eight hour week. This draft convention will be presented to the various governments for ratification, and indications are that most European governments will ratify it at an early date. The document is full of exceptions and evasions. For the purposes of this discussion the details are beside the argument. The point is that this is a way of getting the eight-hour day by law. If the United States Senate ratifies the treaty, that draft convention will be presented to the Government at Washington through the League of Nations. There have been no more strenuous fights in American Federation of Labor conventions than over the question of securing a shorter work-day by law, the last great debate on the subject being staged in the Baltimore convention in 1916. In all of the contests, the American Federation of Labor principle of applying the tactics of the industrial field to industrial problems was carried through in triumph, sweeping majorities showing up on the side of upholding the traditional policy. In these fights it was always the Socialist contingent that brought in the proposition to desert the industrial field and try the political method. In the American labor parliament, American labor defeated the Socialist proposal. But now, for better or worse, under the League labor code, it must reverse its judgment and join hands with the political labor delegates of Europe—with the representatives of governments and of employers—and adopt in world-wide practice the methods it has consistently condemned. Defeated in their frontal attack, the Socialists will have won in a rear attack, reinforced by overwhelming numbers of foreigners.

American labor was represented at Paris by Samuel Gompers in the commission that wrote the labor section into the treaty. He fought as gamely and courageously against the European labor politicians in that commission as any man ever fought. He was but one among many. After he left the battle ground and returned home, the work of his commission apparently finished, the peace conference took that document and did things to it that American labor has tried to swallow with a grace worthy of the cavalier traditions of the days of chivalry. But the things the peace conference did, with the evident consent of President Wilson, perhaps reluctantly given, were things that savor strongly of quiet corner conspiracies and underhand manoeuvering. And the politicians of Europe had the effrontery to champion the alterations and call them good. President Wilson let them go. One of the changes was to convert the triumphal slogan of the A. F. of L., achieved after decades of battle, "The labor of a human being is not a commodity," to "The labor of a human being is not merely a commodity!"

A word of explanation concerning the section of the treaty setting forth the principles to guide the International Labor Organization. The draft reported to the peace conference by the Commission on International Labor Legislation, of which Samuel Gompers was chairman, contained this language in the preamble:

"The high contracting parties declare their acceptance of the following principles and engage to take all necessary steps to secure their realization in accordance with the recommendation to be made by the International Labor Conference as to their practical application."

It should be noted that here is a definite pledge. It is clear and unequivocal. The clauses that follow it are definite. They go straight to the point. But, when this definite language got before the peace conference something happened to it. The famous Borden amendment took its place. Premier Borden, of Canada, moved a substitute, wrongly called an amendment, and his substitute took the place of the draft submitted by the Gompers commission. Says the substitute as written into the treaty:

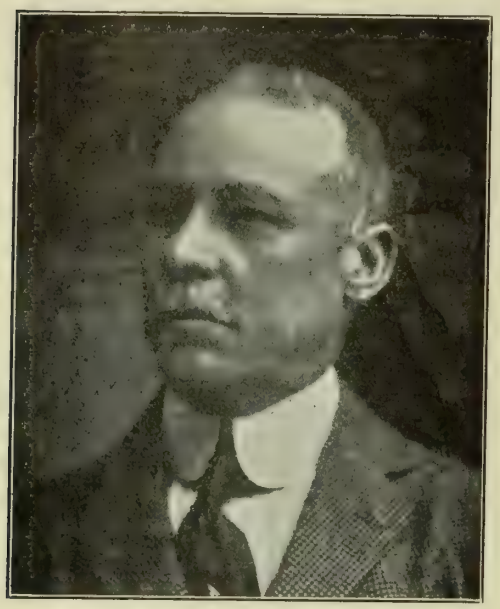
"The high contracting parties, recognizing that the well-being, physical, moral and intellectual, of industrial wage earners is of supreme international importance, have framed a permanent machinery associated with that of the League of Nations to further this great end. . . . They think that there are methods and principles for regulating labor conditions which all industrial communities should endeavor to apply, so far as their special circumstances will permit. Among these methods and principles the following seem to the high contracting parties to be of special and urgent importance."

Then follows the list of specifications, all reduced to the realm of abstraction, of intangibility, and of possible equivocation.

American trade unionism has indorsed the treaty of Versailles. There was, of course, no hope of getting a more satisfactory labor section. The one written into the document at Paris was to be taken or left. Though stamped with the approval of the American Federation of Labor, it is well that there should be an understanding of what happened to it before that indorsement was given—especially in view of the fact that the treaty is beginning to operate and that the labor section has had its first trial run in Washington.

This may be said: The changes made in the labor section by the peace conference tend to give to the International Labor Organization more of political color and leaning than it would have been given by the original draft. The whole document is thrown in the direction of the political field. The language of the draft as it stands today is the language of diplomacy—cautious and devious diplomacy—instead of the straightforward language of labor.

In the International Labor Conference itself, greatly to the disappointment and dissatisfaction of American Labor, one-half of the total number of possible delegates to be nominated represent governments. Only one-fourth represent labor. But in the conference just adjourned, more than half present represented governments, for the reason that from ten or twelve nations there were no labor representatives and no employer representatives. No cure was found for this situation, and it may recur. Probably it will recur regularly. Most of the South American countries sent only government delegates. Labor had less than one-fifth of the votes. Any proposition championed by governments could have passed even in the face of the combined opposition of labor and employers!



But above and beyond the changes made in the labor section of the draft of principles, in point of effect on the future of labor and labor organizations is the machinery set up by the labor section. American labor went to Paris with a set of principles in its pocket. It sought to have the civilized world acknowledge recognition of the justice of certain definite principles of human freedom. It came home leaving behind it in the Paris treaty an emasculated version of those principles and a ponderous international machine created for the purpose of legislating world agreements. This machine is the International Labor Organization, with its permanent executive staff and its annual conference, as already described. This was the contribution of European labor, and especially of English labor, to the treaty. This machine is a political machine, designed to go on and on forever, legislating in annual international conferences and presenting each year to the governments of the world its contracts and recommendations. If there is no compulsion on any nation to accept these contracts, there is surely in store the multifarious forms of criticism of those who do accept them for those who do not accept them. There is surely in store that condemnation and coolness which is called moral pressure.

But to go back of the International Labor Organization to the individual nations once more. In the National Industrial Conference held in London in February of this year the labor representatives, duly accredited to represent English labor, took their stand plainly for Utopia. They presented to the conference an abstract statement of doctrine that placed their position beyond question in the realm of "intellectual" theorizing. Here is a quotation

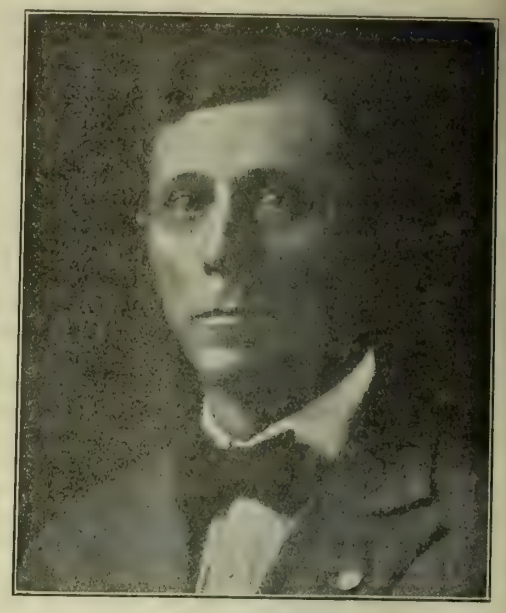
Compulsory Sickness Insurance Propaganda



REPORT OF COMMITTEE ON CONSTRUCTIVE PLAN OF SOCIAL INSURANCE DEPARTMENT OF TH NATIONAL CIVIC FEDERATION REFUTES FALSE STATEMENTS

DR. ALVAH H. DOTY
Chairman

MRS. SARA A. CONBOY

HILL MONTAGUE

IN seeking a constructive plan as a practical substitute for compulsory health insurance, the committee charged with that work studied the claims and arguments of the proponents of such legislation better to draw conclusions as to remedies to be recommended to meet the needs of wage-earners unable to provide for emergencies resulting from sickness.

The examination of proceedings of legislative hearings, articles, reports of the American Association for Labor Legislation, Federal Department of Labor conferences, State commissions, etc., revealed a situation so startling as to misrepresentation of facts that Warren S. Stone, Chairman of the Social Insurance Deparment of The National Civic Federation, decided that the findings of the Committee should be published.

In the foreword, he made the following statement:

> "The pending movement for compulsory health insurance in this country undoubtedly obtains its principal impetus from false beliefs as to the success of the European experiments in this line of social insurance.
>
> "Back of this false basis, there is a real question as to whether or not compulsory insurance would be the best remedy for some existing social evils and for which, all agree, a remedy or remedies should be sought. That question will be considered on its merits, in the light of the truth as to foreign experience and domestic conditions, so far as now ascertainable, in a later report from a Committee on Foreign Investigation, having for its Chairman J. W. Sullivan of the American Federation of Labor, a member of the International Typographical Union.
>
> "As a preliminary, however, it is desirable to sweep aside a mass of fictions, falsifications, guesses and unwarranted assumptions which stand in the way of the search for the truth. Hence this report from the Committee on Constructive Plan whose Chairman is Dr. Alvah H. Doty.
>
> "That Committee in the near future will present propositions of a positive character for legislative enactment and public health education designed to eradicate unnecessary disease and protect the worker when idle, neither of which has been covered by any insurance scheme offered so far."

In that connection Dr. Doty stated that:

> "A careful study of the various plans of Health Insurance, either in operation or recommended for approval, presents little or no evidence that the education of the public as an important factor in the preservation of health and the prevention of disease is fully appreciated, or that, if properly carried out, it would go far to render compulsory health insurance unnecessary. It is true that reference is made to the value of this means of maintaining health but no definite or concerted action plays a part in the measures now employed or in the plans proposed for future action. The proper education of the public is a powerful instrument in the prevention of disease. Contrary to statements frequently made, relative to this matter, only very slow general improvement has been made in this direction."

Illustrative falsifications refuted in the committee's report and abstracts of typical replies are given below. Authorities, pro and con, are not indicated, because of lack of space, but the full report containing them may be had upon application at Federation headquarters.

The propaganda statements appear in blackface type.

"Today *universal* workmen's health insurance is established in not fewer than ten of the leading continental countries" [of Europe].

Only three European sickness insurance laws (those of Germany, Great Britain and Norway) are even approximately universal as to "wage-workers." They all exclude many "workmen," and the Norwegian law many "wage-workers."

GEORGE W. PERKINS,
President, Cigarmakers' International Union

The Dutch law comes next; but it applies only to low-paid wage-workers and leaves out all casual labor and domestic servants.

In Luxemburg 37,500 wage-earners are compulsorily insured out of a population of 260,000 (1910).

The Austrian insurance comes next, covering about 3,340,000 out of about 10,000,000 wage-earners and a total population of 27,800,000.

Under the Hungarian law, in 1909, about 900,000 persons were insured out of a population of 21,000,000.

Under the Rumanian law, in 1911, about 140,000 persons were supposed to be insured out of a notoriously impoverished population of about 7,000,000.

Under the Russian law, just before the outbreak of the war, about 1,394,000 persons were insured in European Russia (Finland, where insurance is voluntary, excluded) and the Caucasus, out of a population of about 145,000,000.

In Serbia, though a sickness insurance law was enacted in 1910, it can hardly be said to be "established," since there is no record of its ever having been put into actual effect.

This is a complete list of the European countries—continental and non-continental—in which compulsory health insurance prevails. There are 10 altogether, and in 7 of them, the insurance, so far from being universal, provides protection for only minorities—and in some cases only insignificant minorities—of the working people.

"You couldn't get either capital or labor in the realm of England to give up this health insurance."

The English health insurance is paid for about 4/11ths by the state and 3/11ths by employers, leaving the insured employees to pay only 4/11ths. Because they are getting for 4d. per week insurance that costs 11d., the majority of the British working people probably would be reluctant to give up the health insurance. Instead they seem to be demanding that the medical benefits originally promised them for 4d. per week be provided them for 4d.—which benefits are now only about half provided and to provide which in full would probably double the state's contribution, so that the working people would get for 4d. insurance costing 15d.

V. A. Appleton, Secretary, General Federa- of Trade Unions of Great Britain, and irman of the newly organized "Internation- however, portrays the following unfortunate dition:

"The lot of the panel patient has never been a very happy one. Today it is tragic; and, if the Insurance Commissioners are powerless to act, the Local Government Board, which is more or less concerned with hygiene and sanitation, should itself intervene. Anyone going the rounds of the surgeries in the poorer-class districts will find many of them overcrowded with patients, who have to wait two and three and four hours for attention. The immediate result is to drive the busy patient or the patient who objects to sitting in a germ-impregnated atmosphere to the chemist's shop for ready-made remedies that may or may not be suitable for their complaint. The exploitation of the panel patient is a scandal, and those responsible ought to be indicted. * * *

"We must always take into consideration that any forced conditions upon the workers must have a tendency to create revolt. Compulsory health insurance has not improved the working portion of the community, nor materially raised the standard of public health.

"All the more conspicuous and gratifying results in the improvement of social conditions, the lowering of the death rate, the gradual elimination of preventable diseases, etc., were secured more effectively in this country and entirely without compulsory insurance."

As to English employers, the known attitude many of them is simply one of patient endur- e of a political imposition.

Compulsory insurance would reduce the blic expense for poor relief.

This statement miscolors a partial truth to ve as a bait to attract taxpayers to support npulsory insurance. In practical experience npulsory health insurance has never resulted any relative reduction in appropriations for ect poor relief.

In Germany, according to Zahn, "expendi- es for the poor have increased almost every- ere, both as regards the number of those who supported and as regards the degree of sup- rt which is given individual cases."

The New Statesman says as to Great Britain: t is significant that we have not been able to ertain that any diminution whatever has yet en noticed in the number of those resorting the Poor Law."

The part truth in this statement is that, al- ough compulsory health insurance increases e demand for poor relief, it does provide relief r some proportion of those who, in sickness, uld otherwise depend upon out and out poor lief. But that proportion is not large.

The Illinois Health Commission reported:

"Our investigations in Chicago show that a large percentage of the cases of poverty caused or accompanied by sickness would not be avoided by compulsory health insurance of the kind that has been proposed. They show, also, that it would not prevent as much as a fourth of the cases of dependency upon charitable agencies for material relief."

Samuel Gompers, President, American Fed- ation of Labor, says:

"The fundamental fact stands out paramount, that social insurance cannot remove or prevent poverty. It does not get at the causes of social injustice. * * * The efforts of trade organizations are directed at fundamental things. * * * In attacking the health problem from the preventive and constructive side they are doing infinitely more than any health insurance law could do which provides only for relief in case of sickness and yet the compulsory law would undermine the trade union activity. There must necessarily be a weakening of independence of spirit and virility when compulsory insurance is provided for so large a number of citizens of the State."

"The cash and other benefits provided by alth insurance are not bestowed or given; ey are paid for in accordance with actuarial practice by those who are responsible for the conditions that occasion the need for benefits. They are not 'relief' any more than compensation for accidents is 'relief.' Especially is this true in a governmental system of health insurance where employers, employees and public maintain and administer the funds."

This is pure demagogism.

If the insurance were maintained entirely by the insured contributors (employers perhaps included) and the contributions were scaled in proportion to the risks, etc., "in accordance with actuarial practice," then nothing might be "bestowed or given." But where the taxpayers' money is used for the benefit of the insured or where the infirm, the sickly and the shirkers are insured at less than cost at the expense of the healthy and industrious, then a donation essentially indistinguishable from poor relief is "bestowed or given." All the European sickness insurance laws (including the voluntary insurance laws of France, Denmark and Sweden) are and are generally recognized to be measures of poor relief—or charity. And it is a common point of criticism that "nothing is gained by disguising that charity under a false name."

It is significant in this connection that within the last few months a Ministry of Health has been established for England and Wales, to which the supreme authority in all matters of National Health Insurance has been transferred, in combination with the administration of certain of the Poor Laws.

Compulsory health insurance would reduce the amount of time lost by wage-earners in employments.

Under compulsory sickness insurance, between 1890 and 1913, the number sick at one time, out of every 100 insured, increased, per annum, in Germany, from 36.7 to 45.6, and in Austria from 45.7 to 51.8; the average number of days "on the cash benefits" per insured member increased, in Germany from 6.19 to 9.19, and in Austria from 7.98 to 9.45; and the average number of days compensated per sick member increased, in Germany from 16.2 to 20.2, and in Austria from 16.4 to 17.4. The statistics of no other experiences are obtainable—all the other compulsory systems, except the Hungarian and Luxemburgian, being of very recent date.

Wm. A. Brend, M.D., in "Health and the State," says:

> "In taking a broad view, the advantages of the act must not be minimized. * * * *But these benefits are all in the nature of Poor Relief under another name, and* **they do little to alter the conditions which bring about sickness.** *As far as improvement of the public health is concerned, the influence of the Act has probably been almost nil."*

"Most employers opposed the enactment of compensation laws," and their opposition to health insurance is equally unmeritorious.

Most employers did *not* oppose the enactment of compensation laws. In New York, for instance, employers generally favored the original Wainwright-Phillips bills. All that the employers opposed was state insurance monopolies. The records of the Workmen's Compensation Department of The National Civic Federation show that employers and representatives of labor, beginning in 1908, worked together, always favoring some equitable form of workmen's compensation holding the industry liable.

"Prevention is primarily the purpose of insurance and certainly its result."

Sir Arthur Newsholme, M.D., K.C.B., Former Chief Medical Officer of the Local Government Board for England, recently stated that "The National Health Insurance Act * * * has not been marked by its preventive value."

Commissions in New Jersey, Massachusetts and California have reported in favor of Compulsory Health Insurance.

This statement is correct, but:—

Whereas in Massachusetts the first Commission reported in favor of compulsory health insurance, a second Commission appointed to study further into the subject, reported adversely, and several attempts to incorporate provisions for compulsory insurance at the recent Constitutional convention failed.

Whereas two Commissions in California have reported in favor of compulsory health insurance, a proposition to amend the State Constitution to permit such insurance has been defeated by the people, by a vote of 358,324 to 133,858.

Other State Commissions reporting explicitly in favor of or against the immediate adoption of compulsory health insurance, to date, are:

Favorable:—New Jersey and Ohio.

Unfavorable:—Connecticut, Wisconsin and Illinois.

A Commission in Pennsylvania has also reported, recommending no immediate legislation but that the problem be further studied and investigated.

COMMITTEE ON CONSTRUCTIVE PLAN

SOCIAL INSURANCE DEPARTMENT

THE NATIONAL CIVIC FEDERATION

DR. ALVAH H. DOTY, *Chairman*:
Medical Director, Western Union Telegraph Co., New York.

MRS. F. LOTHROP AMES:
Chairman Industrial Committee, New England Section, Woman's Department, The National Civic Federation, Boston, Mass.

MRS. SARA A. CONBOY:
International Secretary-Treasurer, United Textile Workers of America, New York.

MARK A. DALY:
Secretary, Associated Manufacturers and Merchants of New York State, Buffalo, N. Y.

GERTRUDE BEEKS EASLEY:
Director Welfare Department, The National Civic Federation, New York.

DR. LEE K. FRANKEL:
Third Vice-President, Metropolitan Life Insurance Company, New York.

HUGH FRAYNE:
General Organizer, American Federation of Labor, New York.

DR. HARRIS A. HOUGHTON:
Vice-President, Associated Physicians of Long Island, New York.

DR. J. RICHARD KEVIN:
Chairman, Legislative Committee, New York State Medical Society, Brooklyn.

HILL MONTAGUE:
President, International Fraternal Congress of America, Richmond, Va.

GEORGE W. PERKINS:
President, Cigarmakers' International Union, Chicago.

P. TECUMSEH SHERMAN:
Attorney, New York.

J. W. SULLIVAN:
Of the American Federation of Labor; Member International Typographical Union, Brooklyn.

MRS. COFFIN VAN RENSSELAER:
Executive Secretary, Woman's Department, The National Civic Federation, New York.

Russia as Seen By Ex-Military Attaché

(*Continued from page 3*)

"The Communists cannot maintain themselves any longer than the supply of food lasts. Nine million men were mobilized when the war began. There still exists a great reserve of food which has not been consumed. It is being doled out to the people. In my opinion this reserve supply will last a year and a half longer. That, however, does not mean the Bolsheviki will last that long. Other circumstances may hurry their overthrow."

My Days Under the Bolshevist Reign of Terror

THE STORY OF A RUSSIAN WIFE AND MOTHER

By MME. NADEJHDA SHTEINBERG

Mme. Nadejhda Shteinberg, whose thrilling story of her personal experience with the Bolsheviki appears in this number, is the wife of Samuel Petrowitch Shteinberg, former managing director of a Moscow bank. Her husband, who has been missing since his attempted escape from Russia in February, 1918, *is also a noted playwright and at one time edited a Russian newspaper. Mme. Shteinberg attended a three year medical course in Russia and it was largely due to her professional experience that she and her children were spared by the Bolsheviki.*

Service as a surgeon in Siberia by Mme. Shteinberg not only aided her progress through that country, but when the Czecho-Slovaks utilized her skill they awarded the Cross of St. Ann to her. She was wounded by shrapnel while attending the wounded under fire. Mme. Shteinberg still hopes to be reunited to her husband and New York friends are instituting inquiries through banking connections in Britain and Scandinavia as to his possible whereabouts.—Editor's Note.

YOU hear much today about the Bolsheviki. You are told by their agents and defenders, that they are saviours of humanity, leaders of a new order which will regenerate the world. It seems very strange to me to hear people who have never been to Russia exalting, and pleading in defense of, the red leaders. They assert, without personal knowledge of what has happened in Russia, that the testimony of atrocities and terrorization, is untrue, and that Trotzky and Lenine, and their cohorts, are simply misrepresented and maligned. These people, who gain their knowledge of world affairs from arm-chairs, constantly clamor that the truth about Russia be told.

I will attempt to tell the story of the revolution as I saw it, and as it affected me, a Russian wife and mother. I will not deal with the political aspects of this new régime but will tell of Bolshevism as it changed my life, and you can perhaps decide if Bolshevism works for good or evil.

We had lived in Moscow all our lives—my husband and myself, with our two children. We had struggled and worked, until finally, as result of our labor, we were able to live in comfort, and to become what later in the Lenine-Trotzky régime became a thing of hate and scorn,—one of the bourgeoisie. My husband, who was well known as a playwright, had a well paying position in one of the banks.

In my home in Moscow we had been happy. The Great War raged, the hearts of all of us ached in sympathy with those mothers and fathers whose sons were dying on the battlefields for liberty, yet in our own lives we were happy.

Then came that day when the Czar was overthrown. Things moved so swiftly that the mind could not adjust itself to events. Kerensky was in power. Like some huge wave the overthrow of Nicholas swept all of us from our calm quiescence and it seemed as though all would be wrecked. But the wave subsided, and as though nothing had happened we again turned to our daily life.

Under Kerensky the people of Russia had more freedom than they ever had had before. One had no longer to fear what one said in the street. The people were overjoyed.. The tyrant was overthrown, and it appeared that life was at last worth living. There was no lack of anything. In fact, the workingmen had more than ever before. Kerensky was lenient—too lenient.

MME. SHTEINBERG AND HER TWO CHILDREN

One day while walking through the streets I was attracted to a corner by a crowd who were listening to a speaker. There, surrounded by the mob, was a man, dishevelled and uncouth. He spoke in a loud voice, waving his arms like a fanatic and tiny spots of foam gathered at his mouth. What he was saying sounded strange to me.

He said:

"You have fought long enough. Let us now no longer fight. Our men have died for the capitalists, and for the money that the capitalists made.

"The only way to change this whole thing," he went on, ranting, "is to become a Bolshevist. The Bolsheviki will give to everyone bread—bread—bread. And the Bolsheviki will give to everyone—freedom. Think of it—no more fighting—no more fighting—and plenty of bread. Freedom—freedom. Bread—land—and peace! Hurrah for the Bolsheviki."

Gazing about I could see tears in the eyes of those mothers who had given their boys, of those fathers who had sent their children to the front to fight the Huns. How little they could understand all of this! To them it seemed like the promise of the dawn of peace and happiness—this new doctrine.

Yet among the mass I could see there were some who understood, and understanding, saw the evil in what this man was saying. I, too, felt my heart contract in the thought of what this speaker's influence would bring about, should he be successful.

My fears were stilled when I arrived at the house of a friend. My friend said to me: "You need not fear—we have a strong force of White Guards here, and the Bolsheviki can never come to power in Moscow. You know we do not want them, neither do the people. Of course, what they say at first moves the masses, but they will eventually come to their senses and see that it would be for the worse if the Bolshevik gained control of Moscow. Why," and she laughed, "don't the workingmen themselves call them the 'red murderers' ?"

With this assurance I was quieted. But as events proved, my friend's optimism and my own were shattered.

Finally one day in November an army of Bolsheviki entered Moscow. The streets of Moscow were streaming with people. But when the first armed soldiers came into the section of the city where I lived the thoroughfares were instantly deserted. Looking from a window in our home, I could see the retreat of the White Guard. Now and then some soldier or officer wildly threw up his arms, and pitched forward upon his face.

The din became terrific. Bullets rattled upon the roof of our house. The children, frightened, clung to my skirts, and my husband, without gun or sword, madly paced up and down, cursing the devils who had brought about such a pass. The fighting continued and the piles of wounded and dead increased.

I quickly came out of my trance, and my medical training asserted itself. I thanked the day that I had decided to study medicine. We gave to the wounded what care we could. Many died under my hands, for we had little to aid them with. But we bandaged with bed-sheets and towels all those whose blood was flowing, hoping to save all whom we could.

One incident remains clearly fixed in my memory of that day. Not far away from where I was dressing the wound of one I felt certain would die, I saw on the roof top of the Metropole Hotel some White Guards. I knew that in that hotel were many men, women and children, who had no guns or other weapons with which to defend themselves. The soldiers of the Bolsheviki soon surrounded this hotel, allowing no one to escape and opened fire. For a long time their guns crackled and spat fire and finally the whole building was simply a mass of ruins. I doubt if any in that hotel, White Guards or non-combatants—escaped.

One section of Moscow was taken after the other. And in the weeks that followed there came many tales of wholesale murder that froze my veins with the horror of it all. But the Bolsheviki were too strong for the people of Moscow, and they finally gained the upper hand.

One morning early in December, my husband rushed into our home, pale and excited. It was a strange hour for him to return from work, and I felt greatly disturbed, knowing that something unusual had happened.

In answer to my frightened questions, he said:

"While we were going over the accounts of the bank to get them in order for the New Year, and while all the clerks were busy, there came into the bank a number of Bolshevists with guns, with bayonets fixed. They shoved aside those who tried to stop them, and laughing like madmen, they pressed a bayonet against me, ordering all to leave immediately under threat of death. We could not understand. We asked them to explain, and the only response we received was a brusque order to clear out quickly! What could we do? I had to leave. It seems the Bolshevik are taking over all the banks."

Here we were, confronted with the possibility of starvation, little money in the house, only a little food, and two children to care for. We knew not what would happen. Still we hoped for the best, thinking that in a few days the invaders would ask the employees of the banks to return. We thought that it would be impossible for the "red murderers" to run the banks. But in this we were mistaken, as you shall see.

When a few weeks later, an advertisement appeared in a Bolshevik paper ordering all employees of banks having keys and the combinations of safes to appear at ten o'clock the next morning, we believed that the routine would be resumed. In the advertisement it stated that nothing would be disturbed if the people obeyed orders. Yet when the keys were turned over and the vaults opened, they threatened to kill those

who protested when they took out the money and bonds.

As a mother and wife, perhaps one of the saddest things that happened to me was the taking away of my own home. Early one morning my housekeeper came rushing up the stairs to tell me that the Bolsheviki were downstairs and demanded to see me. I was dressing, and I called to my husband. When we got downstairs, without any preamble the leader of the gang announced that we would have to get out within an hour.

What were we to do? There was no place to go immediately, we protested. After much begging they agreed to permit us to keep one small room at the top of the house which had been used by our servants. There we were reduced to the position of menials in our own home. We were forced to feed those beasts with our own food. We were compelled to do their every bidding.

That night, huddled into the small room, fearful and frightened, we heard the revelling of those men downstairs. The shrill cries of women came up to us. My children, not comprehending it all, and very much frightened, commenced to cry. We finally decided to flee, fearing some harm.

Luckily a friend was able to give us two rooms in his suite at the Boyarsky Hotel. God knows what we should have done had not this friend escaped the wrath and hatred of the red murderers. Yet despite the fact that we had been put out of our own home, we hoped that the Bolsheviki would pay us for the seizure of our belongings. But I was to find that this was a fatuous hope.

One day I went to our former home—I could no longer call it my own—for the purpose of taking away a picture. It was a portrait by the artist Aivazofsky, which had been given to me by my husband when we first married, and I prized it dearly. I little dreamed that the robbers would object to my taking it, but I found out differently.

Letting myself in cautiously with the latchkey I had fortunately kept, I walked through the familiar halls and looked into the rooms. My heart sank at the sight of the broken, ruined furniture, the torn and dirty window hangings, and worst of all, the unthinkable filth on the floors. The stench of the place sickened me.

I saw that the picture I had come for had been saved from the ruin that marked most of the things in the place. I was just about to take it down from the wall, when an officer entered quietly. "What," he asked me, "are you going to do?"

Startled, I turned about and faced him. I told him who I was and that I had come to get the picture. He stepped forward and stood between me and the wall on which the picture hung. He leered at me, saying:

"You can not take it."

"But it is mine, and I want it—it was given to me by my husband," I protested. I took a step forward, thinking that he would let me pass, but he roughly pushed me back. Laughing, he told me to get out of the house. I became indignant and that seemed to anger him, for he shouted:

"You counter-revolutionist! You have looked long enough at this beautiful picture, and now it is my turn."

I tried to reason with him further, but he only mocked me. Finally drawing his sabre, he lunged at the picture, slashing the canvas to bits. Then turning wildly, he threatened to do the same to me if I didn't leave. Of course I had to go. It was then that I realized that we would never get back our things, then I knew that there would be no payment for the ruin of our property, and that I had looked for the last time upon the home that had been filled with so much joy for us.

It was hard to live in Moscow at that time. We were allowed two ounces of bread a week, little meat, and that was rotten. Even the meager allowance of bread was mixed with straw and other things. One day my son came to me after munching on a piece of bread, with his lip cut. He had bitten on a piece of glass. After that, whenever we got bread, I carefully inspected it.

They robbed everybody. Whenever you walked the streets some soldier would come up to you and ask to see your passport, and whether you had one or not, he would invariably take away your money, your jewels if you had any, and your watch. They took everything that pleased them. One could not go out with money in one's pocket. But it didn't matter whether you were robbed in the street, or whether they robbed you in your home. The thing was—you would certainly be robbed sometime. But mingling with tragedy is always comedy. From mishap is often born laughter, and even in those awful days when one thought that the world could never smile again, little incidents such as the following came as a welcome respite from the constant dread of our lives:

One of our friends, while walking the street, was stopped by a Bolshevik soldier, and ordered to show his passport. Although he had one, he must have seemed too prosperous to the soldier, for he pickpocketed him and took all his money, which he foolishly carried about. The soldier filched the money from his pocketbook and from his belt.

"Then," as my friend told the story, "he scratched his head and looked at me, as if wondering what else he could steal. He had my watch and all the money I had to my name. My rings were gone. Finally his face lit with a smile, and feeling the texture of my coat he demanded that I take it off. It was cold, bitterly cold, and I had a long way to go, so I begged him to return my coat. Of this he would not hear. But he took pity upon me and offered to give me his muddy, lice-infected one. I had no other choice but to take it. It must have been a good one originally, but in its present state it certainly was not prepossessing. When I arrived home my wife, after hearing how I had been robbed, decided to make the best of it and patch the old coat as well as she could. While sewing a rent in it, she felt something bulging under the lining. On cutting through the stuff she found sewed inside, 800 rubles, which amounted to more than had been taken from me. Of course the coat had been stolen from somebody who had hidden his money in this manner, and the soldier had never discovered it." Such little things we regarded in our helpless state as a great triumph over our hated persecutors.

I have seen the arch-plotter, the leader, the man who sanctions these things—nay, who even orders them—walk through the streets of Moscow guarded by many soldiers. He is guarded because of the fear of being murdered by some brave man whose wife and children had been killed before his eyes, and who is left to suffer longer, only eventually to be killed himself if he dares object to some outrage. Yes, Leon Trotzky goes out into the streets heavily guarded. But he never went far into the streets. Trotzky surrounds himself by chosen men, all as vicious as he is. He is surrounded by men who he knows will not betray him into the hands of the people who have suffered under his misrule. He can feel safe under his guard, for they are scoundrels as he is.

He came to Moscow, silently, in the night. He sneaked in under cover of darkness, slinking into the best palace in the city. He came—as all come who carry the sword of fire, hate, rape and murder—like a rat in the night—to rest upon silken pillows. This self-declared despiser of riches and of capitalists needed for himself the softest beds, the best food, the swiftest automobiles that Moscow could afford him.

At the end of February, 1918, my husband decided that we could not stay any longer in Moscow and decided we should all go to New York, or England, with him. As my children were ill, and I did not dare risk the hazardous journey, I convinced my husband that it would be wiser for him to go without us. I was not afraid to remain as my services had been enlisted by one of the doctors of Moscow. I had taken a three-year medical course in the college, and as there was great need of nurses, I was sure of a certain, if dubious, protection that others were not likely to have. Finally my husband agreed to go alone, knowing that the risk of leaving Moscow and journeying was just as dangerous as staying. I was to follow as soon as the children were better and the times less unsettled.

What days of anxiety, what days of anguish, I went through worrying about my husband. I had heard many tales of what had been done to passengers on trains going into Siberia. And then, one day, the news came that the train my husband was on had been blown up by the Bolsheviki. What had become of him? Was he alive? Had they killed him?

To this day I do not know. I am still living in the hope that he was spared and that one day I shall find him.

I was compelled to work in a hospital and there were many sick and dying to attend. Moscow saw the saddest time in its history. The hospitals were overcrowded, and many died because of lack of care and aid. About the middle of July, the doctor with whom I worked as nurse was called to Kazan. He asked me to go with him. As I have relatives living there, I decided to go, thinking it would be a step nearer my escape from Russia. Though the Bolsheviki controlled Kazan, things seemed to be a bit better there than in Moscow. Then, too, we had heard that an army of Czechs was fighting north of Kazan, and were slowly coming south.

In August we joyfully heard that the village of Samara had been taken by the Czechs and that the Bolsheviki had suffered a defeat. We looked at one another with hope in our eyes, and a prayer in our hearts, expecting to hear at any moment that the Czechs had entered our village and were preparing to drive out our enemies. The people lived in an atmosphere of impatient, repressed expectancy, which expressed itself now and then in some gesture of contempt, as a soldier of the Red Guard passed.

That wonderful day finally came when, looking down the road we saw the dust rising above a moving mass of men. The Czechs had come! In the streets of Kazan the Bolshevik Red Guards gathered also, making ready for battle. The first shot was fired. The uncertainty of inaction passed and gave way to a nervous realization that there would be wounded to attend to. I came down from my watching place in a half trance. The outcome was uncertain. But my duty told me where I should be. The streets were filled with soldiers, running this way and that.

The scene of combat shifted, and I virtually was in the center of the two fighting armies. Bullets whistled over my head, coming from both directions. I felt no fear. I could feel nothing but the sense of duty to tend the fallen. Slowly the Bolshevists retreated, and the street became filled with Czechs, advancing in perfect order, following a definite campaign of offence. They were commanded by intelligent men, while the Bolshevists had as leaders only men filled with hatred and a cruel desire to persecute helpless citizens.

As the Czechs advanced, I feverishly worked, gathering together the wounded, giving what aid I could. While leaning over one of the wounded, giving him drink, a smart pain shot through my arm, I looked down. My wound was slight, a mere graze of the fleshy part of my arm. Returning to my children, I found them huddled together in a room crying. I thanked God

THE NATIONAL
Civic Federation Review

Office: Thirty-third Floor, Metropolitan Tower
1 Madison Avenue New York City

RALPH M. EASLEY, Editor

The Editor alone is Responsible for any unsigned article or unquoted statement published in THE NATIONAL CIVIC FEDERATION REVIEW.

The long strike of the printers and pressmen of New York is the reason for the delay in publishing this issue of THE NATIONAL CIVIC FEDERATION REVIEW.

THE PRESIDENT'S INDUSTRIAL CONFERENCES

President Wilson's second industrial conference board, the personnel of which is described in another column of this paper, has announced that it has agreed upon a set of proposals, looking toward the establishment of industrial peace, which will soon be given to the public for its consideration. In announcing the appointment of this board, the President emphasized his belief that the failure of the former conference was due to the fact that it was composed of three conflicting groups: employers, employees and the public. He stated that he "thought it advisable that in this new body there should be no recognition of distinctive groups." That suggestion, coming from the President, was naturally taken up by newspaper writers, and the public soon accepted it as a complete explanation of the failure of the first conference. We do not believe that that deduction is correct. It was not because there were three groups that the conference failed but because of the unfortunate selection of the personnel of two of the groups. The Labor group was thoroughly representative and its membership the best that could have been secured, but the Employers' group was made up of non-union employers, of bankers and, for some fantastic reason, of farmers. The Public group was not a "Public group" at all and should have been called "the President's group." It had on it nearly as many employers as had the Employers' group. More than that, it had on it a number of incongruous people who could never have agreed upon anything in this world or any other. Some of them had special fads of their own to promote and they were promoting them. The few men in that group who had had any practical experience with the labor question could not agree. Had there been also a group of employers who had collective contracts with trade unions, every one of whom had had first-hand experience in conciliation and arbitration, they would have started the conference on a very different course from that which it took. This is not to say that there were not some of the best minds of the nation in that conference, but they were not the best minds on the propositions with which they were called upon to deal.

Another reason for the failure of the first conference was that no preliminary arrangements had been made. Up to the morning of the first meeting the whole scheme seemed to be a hit-or-miss proposition. The President was out on the Coast and internal jealousies led to friction among those who were trying to handle the conference in Washington. Of course, when so many diverse elements, with so many strong characters, were thrown together, chaos was bound to reign, and it reigned, at least for the first week. In the Canadian industrial conference, which adjourned just before the Washington conference opened, there was no such confusion. Agenda had been sent out six weeks in advance and a program and method of procedure agreed upon. It is true that the Canadian conference did not get anywhere, any more than did the Washington conference. That is to say, the only things it agreed upon were things of comparatively little importance, all the important questions being passed on to Parliament, with the suggestion that it appoint commissions to study and report upon them. This was much better, however, than having such a smash-up as came at the end of the Washington conference, for the moral effect, if for nothing else.

It is boasted that the second conference will not be composed of "groups." That fact may prove a liability rather than an asset, because, unfortunately, there are employers in the conference and no labor men, which fact was at once resented by organized labor. True, Secretary of Labor Wilson is the chairman, but he occupies that position as representing the President of the United States and therefore the public and not the wage-earner.

Those who decry the group method must not forget that the problems the President's conference is called upon to solve are those that affect the relations of employers and employees and that no conclusion reached which both those elements do not approve will be worth much in practical results. While there is much to be said in the interest of the innocent and generally helpless public, the fact remains that the nebulous thing we call "the public" is not by any means "the whole thing." There is much in the declaration by the labor leaders that the public is thoroughly selfish, that it never wants to be inconvenienced by strikes and lockouts. If the street car employees, for instance, are overworked and underpaid, how long would it take the public to wake up and force the companies to do justice? What does the public care, so long as its means of transportation are not disturbed? What does the public care, or even try to know, about the ridiculously low wages paid to its school teachers, its firemen, its policemen, and other civil officers? And yet the public is a third interest in all industrial controversies and must be taken into account. Without public representation in a board dealing with industrial disputes, there is danger of the employer and employee combining against the public. So that any agreement that is reached, looking to the construction of an industrial code, must have the employer, the employee and the public group around the same table. Even then it must not be expected that such an agreement can be easily reached. Under the urge of patriotism, the War Labor Board, organized for dealing with labor questions during the war, with these three interests represented, did agree upon a code which seemed fair to all; but on the signing of the armistice neither side wanted to have anything further to do with it, so badly had it worked. However, while there is life there is hope, and let us hope the new conference will find a way to smooth out our industrial wrinkles. At any rate, it is a fine body of true Americans who can be counted upon faithfully to discharge the duties laid upon them by President Wilson.

THE TEN PER CENT FALLACY

Mr. Frederick P. Fish, in his address at the dinner of the Economic Club of New York, extracts from which are published in this issue of the REVIEW, completely effaced the rosy tinted view of labor conditions in England painted by Mr. Alfred G. Gardiner, editor of that noted pacifist and radical publication, the London *Daily News*. Mr. Fish, however, did not do so well in his elaboration of the familiar assertion by Open Shop employers that organized labor represents only 10 per cent of the workers and is therefore not entitled to speak for labor as a whole. There were two living, husky, unanswerable arguments that followed him on the program—one Major George L. Berry, whose organization includes 85 per cent of the workers in the Major's craft, and one T. V. O'Connor, whose organization includes 100 per cent of the workers in that craft. How much comfort would the commercial job printer in New York or Boston or Chicago or any other important city or a steamship owner on any of the coasts of North America derive from a statement that only ten per cent of the wage earners in the United States were organized, and that therefore he need not pay any attention to the demands from the International Printing Pressmen's Union or the International Longshoremen's Association? Or how much comfort would the building contractors in the industrial centres of the United States or the shoe manufacturers in Brockton, Mass., for instance, derive from Mr. Fish's statement, the shoe workers in Brockton and the building trade crafts in the large cites being anywhere from 95 to 100 per cent union?

Even if the 10 per cent statement were true, (and we will show that it is not), the aspirations, the desires, of the 10 per cent organized are identical with the aspirations, the desires of the 90 per cent unorganized, because they generally relate to increase in wages, decrease in hours of labor and better working conditions. Are there any among the assumed 90 per cent non-union workers who do not want just that? When John Mitchell called out 150,000 miners in the anthracite strike, he had only 8,000 members in his union—considerably less than 10 per cent of the whole—but the 150,000 went out because they wanted just what the union men wanted, more pay, shorter hours and better working conditions.

The trouble with the 10 per cent statement is that it is based on a fallacy. The last United States Census shows that there are 38,000,000 males and females employed in gainful occupations. Of these there are organized 4,500,000, or about 12 per cent of the whole. But, and this is where the "joker" pops up, included in the 38,000,000 wage earners are 12,600,000 agricultural workers, 3,700,000 domestic servants, and several million wage earners in groups which are practically unorganizable. When these are all subtracted, it is found that about 50 per cent (J. W. Sullivan claims in his analysis 55 per cent) are organized. But, as before stated, in many of the key industries from 90 to 100 per cent are organized. This is true in most industrial centres, so that it can safely be asserted that the 10 per cent argument is no argument at all.

Mr. J. W. Sullivan exposes another fallacy, one generally accepted today, and that is that the wage earners in Great Britain are more fully organized than the wage earners in the United States. On this point he shows that the same proportion between organized and unorganized labor exists in both countries, stating that, after subtracting agriculture, domestic service and various unorganizable groups, there are left 9,000,000 wage earners in the United Kingdom. As there are 4,500,000 workers organized, the same number as in this country, it shows that in England also it is about a "fifty-fifty" proposition. But in England, as here, all such figures mean nothing when it comes to considering the potentiality of a union. In a given industry when an outbreak occurs the only question is, how many non-union men are there in that craft from whom workers may be drawn to fill the places of the strikers?

Mr. Fish, is it not time for educated employers like yourself to give that hoary 10 per cent chestnut decent burial? It did good service in the days of Parry, Van Cleave and Kirby and is now entitled to a nice long rest.

THE URGENT DUTY OF LEADERS OF THE CHURCH

At a recent conference held by the Industrial Department of the Interchurch World Movement, Dr. Fred B. Fisher introduced Bishop Francis J. McConnell as "that strange combination, a radical bishop." "The bishop," comments the *Christian Advocate*, "justified the adjective by undertaking a defense of those spokesmen of ad-

vanced social ideas whom he called 'prophetic radicals' and whose voices have been the occasion of some degree of uneasiness in more than one denomination." The *Christian Advocate* quoted Bishop McConnell as saying:

"Whatever we do, we must keep alive in the church the spirit of prophetic radicalism. . . . I can't see that this is a time to silence a man when he speaks out the truth concerning a social situation, as he thinks of it. But all sorts of pressure comes in to take the edge off the man's statement. He had better say one thousand wild things and get some good truth uttered so as to accomplish some purpose."

"Naturally the sentiment was rapturously applauded," the *Christian Advocate* went on to comment, "for the so-called industrial conference was in large part composed of these 'radical prophets' and of persons nominated by them for membership, and so far from being 'silenced' they were vocal at all sessions, both from the platform and in the discussions. . . . 'To say a thousand wild things in order to get some good truth uttered' will seem to most people an entirely inadequate justification of the liberty of prophesying which the agitators now so copiously enjoy. If the multitude who listen possessed the bishop's rare ability to discriminate between raving and reason the case would be different. But in a time of world-wide unrest, when multitudes of people are known to be in a state of nervous excitability which makes reasoning impossible, and when every nation in Europe affords bloody examples of the wild results which wild talking provokes, he does an ill service to the church or to society who encourages the radical agitator to think of himself more highly than he ought to think as a prophet."

Referring to the recent investigations made by Federal and State government officials into the activities of the "Reds," a clergyman in an important New York church recently declared that these "radicals and near radicals" are "going through something similar to the persecution of the Christians in the days of the Cæsars," and of the I. W. W. leaders, who, he said, were being "strung up" in the State of Washington, he declared: "We should ask the question—Who are these Nazarenes? What do they stand for? What are they trying to teach?"

In the Church of the Ascension the Rev. Dr. Percy Stickney Grant declared the other Sunday to his congregation that the anarchists who were to be deported for plotting to overthrow our government were to be compared to the Pilgrim fathers.

The Rev. Dr. Harry F. Ward, secretary of the Methodist Federation for Social Service, in a bulletin on "The Russian Question," compared the Bolshevik régime to the American Revolution, asserting "it is an experiment in a new form of government, . . . an attempt to establish direct democracy both in the control of industry and government." Among the "specific aims" of the Bolshevist régime, Dr. Ward declared, were the following: "To guard industrial workers from overwork, from diseases of occupation, from employment at too early an age; . . . to free courts and judicial procedure from traditional abuses and make them function as instruments of justice to all classes."

THE SECOND INDUSTRIAL CONFERENCE CONVENED BY PRESIDENT WILSON IN WASHINGTON

Photo shows, from left to right: Sitting—Julius Rosenwald, President of Sears, Roebuck & Co.; Henry C. Stuart, Former Governor of Virginia; Samuel M. McCall, Former Governor of Massachusetts; Thomas W. Gregory, Former United States Attorney General; Stanley King, Secretary of the W. E. McElwain Shoe Co. of Boston, Mass., and Secretary of Labor William B. Wilson. Standing—Richard Hooker, of Springfield, Mass.; Martin Glynn, Former Governor of New York; Herbert Hoover, Former Food Administrator; W. O. Thompson, President of Ohio State University; Oscar Straus, Secretary of Commerce in Roosevelt's Cabinet; J. W. Wickersham, Former United States Attorney General; H. M. Robinson, Lawyer, of Pasadena, Cal.; Prof. Frank W. Taussing, Former Chairman of the Tariff Committee, and O. D. Young, Vice-President of the General Electric Co., New York.

Dr. Ward made the familiar plea of Bolshevist agents and sympathizers that Bolshevism is a "disputed issue" and that it is "very difficult to secure impartial information concerning it." Dr. Ward, in addition to being the secretary of the Methodist Federation for Social Service, is also professor of Christian Ethics in the Union Theological Seminary. Students in such an institution are almost helplessly susceptible to the influence of instructors who, if they are inclined to radicalism and pro-Bolshevism, find in immature minds fertile soil for their teachings. Incidentally, the young Rev. Mr. Howell, who led a radical parade on Christmas Day to demand amnesty for "political prisoners," and which was interfered with by the police, is a student at the Union Theological Seminary.

When the Editor of this REVIEW wrote his first letter to Mr. William Fellowes Morgan he expressed a very sincere concern regarding the increase of radicalism in the churches. It must not be assumed, however, that the Episcopal Church alone is menaced by this danger, for, as has long been evident, practically every Christian denomination is infected. There is hardly a social service or industrial commission which does not contain Socialists and revolutionary radicals. Beset with a fanatical zeal, or goaded by an insane desire for self-exploitation and publicity, these folk work with indefatigable industry, night and day, and, in common with many pathological subjects, possess an uncanny cunning in getting things across in an underhand manner. The general laxity, the good-natured acquiescence, the amiable trustfulness of many sound and loyal men and women probably explains how these overbusy zealots put across such insidious propaganda as the last report of the Joint Commission on Social Service of the Protestant Episcopal Church contains.

However, we are living in parlous times, a time of world-wide unrest, when, as the *Christian Advocate* says, multitudes of people are in a state of nervous excitability which makes reasoning impossible, and therefore it is urgently incumbent upon the men who have a voice in the churches to become actively roused to what has been going on in their midst. The promotion of radical propaganda from Christian pulpits is especially dangerous. To Christian congregations Socialism is not honestly preached for what it is, as Marx expounded it, as Morris Hillquit would interpret it, but is presented as being—as a minister has said—akin, if not identical, with the ethics of Christ; as the Gospel put into practice; as a program for the reform of all the world's ills which would bring the Christian millennium.

While this danger has assumed unprecedented proportions of late, it is not new in the church. The so-called "Christian Socialist" movement finds pleasure in referring to the great author, Charles Kingsley, as one who blazed the way, but what Charles Kingsley taught was not Socialism, but social reform. Socialism has nothing to do with social reform, and what such writers as Walter Rauschenbush advocate, what the Church Socialist League is promoting, is nothing but political Socialism—the Socialism that would overturn all our institutions, our government, our ideals, and, if we are to take a recent pronouncement of the Church Socialist League, they do not aim merely at a moral revolution or for changes through evolutionary processes, but revolution by some sort of direct action.

Are the Christian denominations going to permit ministers to prostitute their pulpits in the interest of the party of Debs and Hillquit? Are they going to let their members be bamboozled into becoming political Socialists, into voting the Socialist ticket, in the belief that they are thereby helping to bring about a realization of the teachings of Christ? Do the governing ecclesiastics and officials of the churches not have a very onerous and grave obligation in taking measures to protect their members against these "prophetic radicals" who use church pulpits to preach Socialism, sedition and "a thousand wild things"?

RIVALS TO MADAM THEBES

It has been customary at the beginning of each new year for zodiacal-gowned astrologers and innumerable rural prophets to inform a muddled world, able to see no further than its nose, what the infant year's future holds. They based their predictions on the movements of the stars, hens found crowing in violation of the rules of their sex, upon whether or not strawberries for the winter grew underground, and other peculiar phenomena.

That Messrs. Lenine and Trotzky should come forth at the beginning of the new year as rivals of the card-reading fortune teller, old ladies who see the future in tea cups, and sundry prophets, is to say the least refreshing. In their New Year's greeting to the world the two Cagliostros of Bolshevism foretell that in 1920 "there will be soviets at Berlin, Washington, Paris and London. Soviet authority will be supreme throughout the world." In one respect this prediction is reassuring, for if Messrs. Trotzky and Lenine will now confine themselves to occult and mediumistic pursuits maybe the afflicted people of Russia will enjoy a breathing space in the bloody orgy of destruction, rapine and murder.

Increased Production Through Industrial Training

INCREASED production is recognized by representatives of labor, employers and economists to be essential not only to reduce the cost of living in the United States but to enable us to assist stricken European nations. The relation of factory industrial training to this world-wide problem was given consideration at a special meeting recently called by the Chairman of the Industrial Training Department of The National Civic Federation, Captain Francis R. Mayer, President of the France and Canada Steamship Co. In this connection, it was recognized that there must be created a sentiment among employers in favor of discontinuing the custom of cutting piece rates and giving scientific consideration to the setting of wage scales in the different industries so that payments to workers may be on an equitable and stable basis, ensuring them the full reward of their efforts.

Restriction of output on the part of workers, which came about through the careless setting of rates by employers at the inception of the piecework system, would then no longer be essential as a matter of self-protection. It is recognized that limitation of output to provide occupation for a greater number of workers is no longer necessary, but that increased efficiency, both on the part of workers and management, is now requisite to secure maximum production. When the piece-price system was substituted for the day wage, the output per individual was unexpectedly large and the natural result was the inclination of the employer to cut the price per piece, thus reducing the day's wage. This discouragement of individual effort and its attendant so-called "leveling process" became one of the greatest evils and causes of industrial friction. The change in attitude on the part of employers and workers is indicated by the following declaration adopted at the meeting referred to above. The names of the individuals who have carefully considered that statement and have agreed upon a means of helping to meet the present world-wide crisis appear at the end.

Enormous increase in war production resulted wherever there was introduced in an industrial establishment a so-called vestibule school (i.e., entrance room) used not only to train beginners and to upgrade the skilled, but also to test new employees for proper placement in jobs according to their fitness therefor. Reduction in labor turnover, lessened spoilage and wastage, improved quality and quantity of production and happiness of individual workers due to pleasure in performing their tasks well were commonly experienced. Many national trade associations and large corporations have evidenced the desire to develop peace-time shop industrial training along the lines proven to be efficient in munition making, the manufacture of airplanes and the machinery for making all sorts of tools and instruments. It has indicated that the factories of the United States, with their fine equipment, having a payroll of $5,000,000,000, can be advantageously used for educating in their occupations the 12,000,000 persons who work in them. This covers:

1. New workers without any knowledge of the job.
2. Less competent workers who are handicapped by low efficiency.
3. Able workers for better jobs.

It was achieved by segregating types of machines in a separate room, having instructors especially competent in production and training and paying wages to learners, or by special instruction in shops on certain "tagged" machines where segregation is not feasible.

It was found desirable in each trade to form committees to work out methods of training common to all plants.

DECLARATION AND SIGNERS

The world is in dire need of the necessaries and the comforts of life.

It, therefore, becomes the duty of everyone in industry to exert himself to the limit of health and comfort in augmenting production. This is to be done in the industrial field through improvement in management and in the efficiency of the workers.

While recognizing the value of vocational education, it is deemed necessary as a part of this effort that the workers of America be given every reasonable opportunity to increase their knowledge, skill and interest in production in their several fields and, to this end, it is deemed vital to improve and extend facilities for the development of our workers through the establishment of training departments in the various industrial plants.

This training should take place in the course of production, wages being paid learners. Plans should follow methods jointly approved by management and wage-workers in their respective occupations.

It is imperative that labor should reap the rewards of this increased production by compensation based on its direct contribution thereto; that employers should benefit through decreased overhead; and that the public should benefit by the resulting lowered cost of the product.

CAPTAIN FRANCIS R. MAYER—(President, France & Canada Steamship Corporation), Chairman, Industrial Training Department, The National Civic Federation, New York.

MATTHEW WOLL—(Vice-President, American Federation of Labor, and President, International Photo Engravers' Union), Chicago.

LOUIS A. COOLIDGE—(Treasurer, United Shoe Machinery Company), Chairman, Welfare Department, The National Civic Federation, Boston.

HUGH FRAYNE—(General Organizer, American Federation of Labor), New York.

PERCY S. STRAUS—(R. H. Macy & Company) and Vice-Chairman former Section on Industrial Training for the War Emergency, Committee on Labor, Council of National Defense, New York.

JOHN GOLDEN—(International President, United Textile Workers of America), New York.

JOHN F. PERKINS—(J. M. Forbes & Company), Boston.

H. E. MILES—(Chairman former Section on Industrial Training for the War Emergency, Committee on Labor, Council of National Defense), Manufacturer, Racine, Wis.

JAMES W. SULLIVAN—(International Typographical Union), Brooklyn.

EDWIN FARNHAM GREENE—(Treasurer, Pacific Mills), Boston.

RALPH M. EASLEY—(Chairman Executive Council, The National Civic Federation), New York.

MRS. SARA A. CONBOY—(International Secretary-Treasurer, United Textile Workers' Union of America), New York.

GERTRUDE BEEKS EASLEY (MRS. RALPH M.)—(Director Welfare Department, The National Civic Federation), New York.

ARTHUR E. HOLDER—(Of the American Federation of Labor and Member Federal Board for Vocational Education), Washington.

DAVID SNEDDEN—Professor of Education, Teachers' College, Columbia University, and President National Society for Vocational Education), New York.

C. U. CARPENTER—(The Recording & Computing Machines Co.), Dayton, O.

HERMANN SCHNEIDER—(Dean, College of Engineers, University of Cincinnati), Cincinnati.

ROLLIN S. WOODRUFF—(President, C. S. Mersick & Co.), New Haven, Conn.

E. T. MEREDITH—(Chamber of Commerce, U. S. A.), Des Moines, Iowa.

B. A. FRANKLIN—(Strathmore Paper Co.; Former Chief of Production, War Department, Bridgeport, Conn., and district), Mittineague, Mass.

Chairman Industrial Training Department, The National Civic Federation

Inviolability of Contracts

(*Continued from page 2*)

moment he is beginning a course that will lead surely to the closed shop, which I submit to you, gentlemen, we do not want, for it is an un-American institution."

Major Berry, President of the International Printing Pressmen and Assistants' Union, said:

"To those who represent labor and to those who have studied labor and to those who have labored, we believe that collective bargaining is the very foundation in the matter of the stability of our government. We believe that the successes attained in this country have been largely the results, if not wholly due, to the principle of collective bargaining. We take the position that to deny the principle of collective bargaining you introduce into American life confusion, and confusion breeds Bolshevism, and the American labor movement as such is opposed to confusion and opposed to Bolshevism. The American labor movement stands for collective bargaining, because we believe in American traditions and American principles.

"We believe that only through the principle of collective bargaining, arrived at by sanity, by a sane consideration of facts—and what is that?—conciliation and arbitration—that the men of industry, employer and employed alike, can progress and advance in the interests, not only of the industry, but of themselves.

"Who is the employer in this country that has the unqualified right of determining the life and happiness of the men whom he employs? Haven't they something to say about it? Should they not be considered in the determination of such vital matters as their life, their existence, their happiness? That is what collective bargaining means. It contemplates that men of industry, employer and employee, shall sit down at the round table and there discuss and there adjust the matters in respect to their operations and to their relationship, and if they are unable to adjust their differences, man to man, then they shall proceed to arbitrate the differences to the end that industry might have a continuous life and a prosperous life.

"Upon our investigation and survey of the printing industry of America we found that wherever there existed an arrangement of collective bargaining between employer and employee, the unions recognized and respected, there is where was found the most prosperous, most satisfactory condition, not only for employer, but for employee, and wherever there has been an absence of that relationship between employer and employee was found an unsettled condition.

"Where there are a dozen employers there are a dozen different points of view and a dozen different conditions prevailing, and labor, being the chief cost in production, a very uncertain quality, when those twelve men go into the field of competition. John Brown, employer one, may see through an entirely different eye-glass from Sam Smith, employer two, and in the production of his article, whatever it may be, he is forced to meet possibly an unfair condition from employer one, or the opposite may be the case. But in the application of collective bargaining, there is a definite and specific agreement.

"If unable to settle upon facts in conference, employer and employee proceed to arbitrate, and in the meantime the business in which they are mutually interested continues without disturbance.

"The International Printing Pressmen and Assistants' Union is interested in the printing industry of this country, and the great majority of all our membership are educated to realize that they are as much interested in the printing industry as the employer is, that if the industry is not profitable the employees are to suffer to a greater extent than the employers.

"Here is a union of forty thousand men, scattered over this continent, not an organization with ten per cent membership, but an organization with over ninety per cent throughout the North American Continent. It has spent more than $750,000 in the establishment and maintenance of a trade school, for the purpose of eliminating inefficiency and raising the standard of craftsmanship. It has more than $250,000 worth of printing machinery in the school. By correspondence it gives instructions to hundreds of members throughout the country. It also receives yearly hundreds of young and old men, who come to learn the printing business, in order that they may produce a better article, making their industry more profitable, not only for themselves, but for the employers.

"Under our rules a local deals directly with a local group of employers, and if those two groups are unable to settle they try to conciliate, and if unable to conciliate they proceed to arbitrate, and in the meantime the presses run. If they fail, then the question goes to national arbitration, as in the case of the American Newspaper Publishers' Association and our national body, or as in the case of the International Joint Conference Council, made up of the three or four employing printers group of this country, and the printing trades unions.

"Seventy per cent at least of the appeals coming to the International Union today are from members who have been fined by their local unions upon the recommendation of the chapel or chairman of the shop for the curtailment of product or the malicious destruction of machinery.

"This union, with its more than forty thousand members, in 460 local unions, had two strikes on this continent since the declaration of war. Those two strikes were unauthorized, illegal, and in both instances the International Union joined with the employer in spanking those unions that called the strikes.

"For the past eight or nine weeks in New York City the employer, periodical publishers, and the five International Printing Trades Unions joined in crushing Bolshevism in the printing industry, and today every press in New York is running and every man helping to run those presses has accepted conciliation and arbitration of differences with the employers."

Mr. T. V. O'Connor, President of The International Longshoremen's Association, said:

"The man that got me believing in collective bargaining was the late Senator Hanna. I was a tug captain, working seven days and six nights a week. We maybe got the seventh night off a week if we could be spared or if there wasn't any work to do. That went for eight months a year, one day a week off, probably seven hours, probably eight hours.

"I remember one time of serving on a committee with four other men and asking our employer if he couldn't arrange some way to give us the full twelve hours off once a week, and the whole committee of five was discharged.

"It was just after I married and I couldn't obtain a position in that port at my vocation for the balance of the year and had to go back firing a tug for $35 a month and support a wife on it. That was the turning point in that industry. We organized in that port and in the other ports on the Great Lakes the following winter, and the next spring we told the employer we wanted every third night off. They gave it to us. The next year we asked for every second night off and we had a strike. That strike lasted five months and we didn't lose a man in our organization during that time. Then when Senator Hanna became interested he sent for us and said, 'Is there any way this thing can be settled?' I said, 'Surely, we are willing to meet with the employers and talk it over.' Senator Hanna arranged a meeting and we went back to work under the old conditions, pending an adjustment or an arbitration, Mr. Hanna being the arbitrator. We continued the balance of that fall, and that following winter we had a meeting and Senator Hanna as the arbitrator, granted us every second night off with an increase in pay.

"We weren't satisfied. We tried to induce the employers to give us better time off. They wouldn't. We went to Congress and we had a law passed giving us every twelve hours out of twenty-four off, but the law stood dead for four years on us, as Secretary Nagel, who was then Secretary of Commerce, rendered a decision that if you worked eleven hours of those twenty-four, you could start off after having an hour's rest and work eleven in the next twenty-four, and that is what they did with us. When Secretary Redfield came in he decided that our day's work was twelve hours, no matter what time we started, and we have been doing that since. Last year the employers, after a conference of some duration, granted that class of men a day a week off, and now they are working twelve hours a day, six days a week, and are getting much better wages.

"That was the first collective bargaining that I entered into. We have worked under that system on the Great Lakes from that day to this. We do not hear any talk of open shop or closed shop. We have a hundred per cent organization, so there isn't any need of talking about open or closed shop. We do not have to waste any time on that phase of the situation at all. Every industry on the Great Lakes in the transportation business, except the Steel Corporation, which we are not on speaking terms with, is working under contracts or trade agreements.

"We have just terminated an agreement with the lumber carriers. That agreement covers fifty-four ports, unloading and loading lumber in all the ports of the Great Lakes. After a three-year agreement a committee on grievances to hear grievances on both sides met in Detroit. Mr. Blatch, representing the lumber carriers, said to me, 'Have you got any grievances?' I said, 'No.' 'Well, neither have we,' and we proceeded to make a new agreement for the following year. I believe the employers will agree that when men, longshoremen, can get together with their employers and make an agreement and carry it out for three years without a grievance on either side, collective bargaining is an ideal situation for both.

"In the collective bargaining in New York we weren't quite so successful. Although we had carried out the agreements in this port for a number of years, this last fall, previous to the strike, literature was distributed on the waterfront by thousands of copies, telling the men that they should get a dollar an hour, or two dollars an hour, telling them they could get it if they struck. The saner element in our organization had agreed, after a referendum vote, to abide by the decision of the National Adjustment Commission, appointed by our organization, the employers, and the United States Shipping Board. As to that decision, called the 'Woolworth' decision, I wasn't satisfied with the increase in pay and I voted against it, but we had agreed to abide by the majority.

"A meeting was called in Cooper Union. I believe there were only two of us in the hall that evening that stood for the carrying out of that agreement, Mr. Ryan and myself. But we never changed our position when they came and said that 40,000 were out on strike. I said, 'I don't care if the other five go out, they are still wrong and they must return to work before they will get any consideration.'

"When these men in New York went on that strike they were a part of the organization of Boston, Baltimore, Philadelphia, the Hampton Roads District, Halifax, St. John, and the whole southern country, and when the order went out from headquarters saying there wasn't an authorized strike in New York they remained at work; there wasn't another port quit. They all stayed at work.

"The employers of longshoremen in this port took the position that they should take. They realized that it was a question of organization rule or mob rule, and they decided that they would sooner have the organization.

"The injection of Mayor Hylan and his famous conciliation commission prolonged the strike of the longshoremen in this port for at least three weeks. I don't blame the Mayor, only for letting himself be deceived. I don't think he had any wrong intention. He was deceived by a lot of people that were trying to advance their own interests.

"The men are back to work, under the award of the National Commission, agreeing to abide by it. For the first time in the history of the longshoremen's organization an attempt had been made to repudiate an agreement, and I hope it will be the last. I believe it will. The men were tricked and fooled by false promises.

"Collective bargaining has proven a success for longshoremen. We have locals in New York longshoremen. We have locals in New York City that conduct meetings in the Italian language, the Lithuanian, the Polish, the German, the English, and some ought to be in the Irish language. If a cosmopolitan crowd of men like that can be educated up to carrying out an agreement, it cannot be much trouble educating mechanics and men working at one class of work all the time.

"The question of I. W. W. and Bolsheviki has been mentioned. We had everything under the sun injected in the longshoremen's strike. We had I. W. W. and Russian Soviet handbills; we had the Italians condemning President Wilson in the Fiume question; we had the Sinn Feiners condemning him in the Irish question. There wasn't a question that I didn't hear argued in the strike. But, in spite of all that, after the strike started we gradually got one local back after the other, to carry out the agreement that they entered into, and today all is peaceful on the waterfront, and nobody is going to be able to disturb those men again.

"I can stand here and say proudly that during the whole course of the war there was not one instance where a ship was delayed through a longshoremen's strike. Our members were working in Hoboken every night, at times eighteen degrees below freezing, when we had to hand out hot coffee every hour and relieve them every two hours, so as to get those transports out with men aboard and supplies and foodstuffs and ammunition that were going over.

"Attempts were made before we got in the war to get the longshoremen involved in a strike; money was offered, ten dollars a week, for longshoremen to be pulled out on strike. . . . That matter was turned over to the government, and with the assistance of Secretary Wilson and Chief Flynn it was headed off. Our organization kept clean.

"The closed shop and the open shop and the minimum wage scale—they are jokes. I saw one minimum wage scale established and it immediately became the maximum wage scale. I have seen the open shop established, but not open for a man that belonged to any kind of a union.

"If Ole Hanson were here, I think he would have to verify this statement, that the employers of steamships or of longshoremen were more responsible for the I. W. W. movement in Seattle, than any other possible thing. They were so afraid that the longshoremen would get a 100 per cent organization in Seattle that they took every means in their power to see that not over fifty-fifty was granted to the union men. They hired every man that came in there, so as to keep the ratio even, fifty union and fifty nonunion, with the result that our union men made up their minds that if those fellows are good enough for the employer to hire they were good enough to join our union, with the result that they almost wrecked our organization, as well as wrecking the city. The I. W. W. got control for a while and they made things hum while they had it. Thank God, we got control back again, and the safe and sane element is in control.

"If the employers would choose their employees with a little more care as to their qualifications, as to the day's work they can do or would do, instead of whether they were union men or nonunion men, they would get better results. Our organization doesn't have working rules; we don't want working rules; all we want to know is what we are going to get per hour for so many hours a day, and the man is to do the best day's work he possibly can and get the best day's pay he can for it.

"There isn't any labor organization in this country that wants to reduce the efficiency of the work. If there is, it is a detriment, and the legitimate organizations of this country are taking action to cut out that class of men, to weed out the men that have brought a curtailment of production. The fellow that says 'Enough today, I won't do any more,' we don't want any more than the employers do. The employer is going to say, 'All union men are alike,' because one or two do it, and we want to get rid of him."

Peace Covenant Labor Code

(*Continued from page* 5)

from the memorandum presented to that conference by labor members:

"The individualist system of capitalist production, based on the private ownership and competitive administration of land and capital, may, we hope, indeed have received a death blow . . . And the Labor Party refuses absolutely to believe that the British people *will permanently tolerate any reconstruction . . . involved in the abandonment of British industry to . . . separate private employers . . .* What the Labor Party looks to is a genuinely scientific reorganization of the nation's industry . . . on the basis of the *common ownership of the means of production;* the equitable sharing of the proceeds among all who participate in any capacity, and only among these, and the adoption, in particular services and occupations, of those systems and methods of administration and control that may be found, in practice, best to promote the public interest.

"The Labor Party stands not merely for the principle of the common ownership of the nation's land, to be applied, as suitable opportunities occur, but also, specifically, for the immediate nationalization of railways, mines and production of electrical power."

This program was presented by British labor representatives to a national conference called for the purpose of finding a way to bring greater harmony and productivity into industry! It needed not this final act, however, to denote the position of British labor, for the recent record of English labor is clear. The Labor Party speaks now with the big voice. This voice has been notably strengthened since the recent British Railway strike, out of which the famous Triple Alliance emerged in a condition so weakened that British labor commentary no longer makes of the alliance a thing of much menace. The whole British movement has so run to state control, state this and state that, since 1913, that the idea of state Socialism, in one guise or another, has fastened itself upon the movement like an incubus.

In France, while the political voice is the voice of most volume, still some modification is necessary in setting forth the position faithfully. The French Federation of Labor—Confèdèration Générale du Travail—is a body avowedly distinct from all political forms of organization. It in the past aimed at a purely industrial though radical program. It professed to shy at the state, more or less. The revolutionary syndicalists of the movement sought overthrow of the present social order and the establishment of a new order which might be called an industrial society, minus politics as politics is known today. However, the political and parliamentary idea has been there, whether visible or not, and the latest pronouncement of French labor frankly contemplates a partnership of labor with the present state. That pronouncement is indeed a curious combination of varied philosophies in which a kind word for "Soviet Russia" is not overlooked. French labor, through the "C. G. T.," now demands "the complete transformation of society," declaring that "its essential objective is the abolition of the wage-paying and the wage-receiving classes."

The French Confederation, in congress at Lyons on Sept. 21, this year, reaffirming the Amiens "recognition of the class struggle," goes on to say that "while regarding the trade union of today as a group of resistance, it believes that in the future the trade union will be a group of production and distribution, the base of the social re-organization."

The ink was not dry on this program of industrial revolution before French labor began entering into plans for a partnership between labor and the Government in the operation of industry, a recognition of the state which was so disdained in the Sept. 21 industrial revolution pronunciamento! And, as if to make clear finally that French labor cannot rid itself of its ever-shadowing affection for politics, in the Washington conference the "C. G. T." secretly helped bring about the selection of its friend Albert Thomas, pure politician, as executive head of the new International Labor Office.

In the face of the world situation it is important to American labor to consider what will be the effect of its new relationship with European labor. It is important to consider what will become of the International Federation of Trade Unions. Will it, under the shadow of the new institution, fade into a state of powerless and uninteresting uselessness? What rôle did it play in Washington? How many newspaper readers knew it was in session there?

American labor and European labor are not traveling the same road. They do not think alike, do not view the future in the same light, do not live in the same social atmosphere, do not agree as to tactics, philosophy or goal. Nor have they the same psychology. Despite these truths, it is proposed that they be thrown together in an organization in which they MUST function—an organization which is bone of the bone of that which American labor has always stood out against in regard to the essentials of labor practice and belief. Moreover, many thinkers who have most closely examined the structure of the International Labor Organization set up by the Treaty of Versailles are convinced that the organization is capable of being made to serve the wish of whoever dominates it. For the next three years its official direction is in the hands of a Socialist. A conservative Socialist, to be sure, and one who stood with France and democracy in the war, but a politician nevertheless, probably influenced by the common European prejudices against the American trade union movement.

America will find in this new organization that the weight of the old world concepts will stand against her year after year. Her own nationally developed practices may be unappreciated and her native thought and idealism misunderstood. The world cannot escape the effects of this new machine that has been set up. That machine has power. Is American labor, a national economic organization of firm and profound convictions, going to find itself tortured and twisted in the processes of a misfit internationalism?

—AN AMERICAN.

Socialism or Social Reform in the Church—Which?

IN a previous issue of The National Civic Federation Review appeared certain correspondence on the subject of the inroads made by Socialism in the churches between Mr. William Fellowes Morgan and the Editor of this REVIEW, this correspondence being personal and not official. It was announced that any further discussion would be published, and therefore the correspondence which has since ensued is herewith given.

October 17th, 1919.

Mr. Ralph M. Easley,
The National Civic Federation,
1 Madison Avenue,
New York, N. Y.

Dear Mr. Easley:

I have your very interesting letter of September 27th, replying to mine of August 19th.

You and I are not as far apart in our economic beliefs as might appear from the trend our discussion has taken. For instance, I find myself able heartily to endorse what you say relative to Socialism as it is comprehended in the Hillquit definition which you quote, though I have no doubt that among the "rights," "lefts" and "centres" of the various "Socialist" parties in the United States, not to go beyond our own borders, there would be found many zealous disciples of Marx who would define their creed differently. That, however, is but one of the manifestations of the unsettled condition of the times.

The point you at first raised was as to "the rapid growth of socialism in the churches," and you added that "the Protestant Episcopal Church is especially open to that criticism." Now, however, you disavow any belief that the Episcopal Church is socialistic, "as a church," but insist that individuals and commissions within the Church display marked socialistic tendencies; and if their utterances are not repudiated by the Church, "the public has a right to assume that, if not approved by the Church, they at least are not disapproved."

If by this you mean disapproved by individuals within the Church who speak with an authority equal to those whose utterances you condemn, I refer you back to the statement of Rev. Dr. Manning, Rector of Trinity, which I quoted in my letter of August 10th, and which in your answer of September 27, you approve.

If you mean disapproval by formal act of the Church, I can only repeat that it is the General Convention of the Episcopal Church, meeting triennially, and now in session in Detroit, which voices the policies of the Church, and in the absence of such action by the Convention the Church cannot be held responsible for any definition of policy either by individual or group.

It would not be strange if in the large membership of the Episcopal Church there were some persons of radical and even Socialistic tendencies. To attempt to prevent the expression of their views, or to place any obstacles in the way of a full hearing of both sides of this question, especially in these grave times, would not only be un-churchly, but un-American. Here is a case directly in point. There is meeting in Washington just now an Industrial Conference, called by the President of the United States for the purpose of seeking a means of restoring industrial peace to our sorely disturbed nation. In that body, as representatives of the General Public, and selected by the President with a full knowledge of their economic views, are at least two well known and avowed Socialists, Mr. Spargo and Mr. Russell. You will hardly contend that this conference is Socialistic because of the presence in its councils of Mr. Spargo and Mr. Russell, and possibly other Socialists. Nor would you, I think, ask the conference to go out of its way to repudiate the Socialistic doctrines of these gentlemen. The programme finally adopted by the conference will definitely fix its economic beliefs; and we of The Every-Name and Nation-Wide Campaigns of the Episcopal Church merely ask that the Church be judged upon a similar basis—by the ultimate action of its General Convention.

As a matter of fact, according to your own definitions in your letter of September 27, we Episcopalians have little to fear regarding Socialistic tendencies within our Church. Referring to the Forum which is to be conducted in connection with the General Convention at Detroit—which Forum, by the way, has no official connection with the Church, but is another of those independent movements whose action is not binding upon the Church in any way—you say that we shall "doubtless hear much talk about the elimination of the causes of unrest through the *Democratization of industry* and the enactment of minimum wage, compulsory sickness and unemployment insurance and old age pension legislation. *None of these things, however, is Socialism* except the first named, which could well be termed Bolshevism, dependent entirely upon who defines it."

Well, these proposed remedies you have named embrace the remedies which have been discussed in Episcopalian circles. At least the discussion has revolved around them, and we have your authority for it that the taint of Socialism clings to but one of them, viz.: the democratization of industry, about which you observe there is some doubt as to its classification, though you suggest it may even verge on Bolshevism. You will understand that I am not here discussing the merits of any of these suggestions; merely by way of illustration I call to your attention that Mr. John D. Rockefeller, Jr., not an Episcopalian, it is true, but also not a Bolshevist, nor a Socialist, has laid before the Industrial Conference at Washington, a proposition that the "Democratization of Industry" be made one of the features of the programme which the conference is to formulate for bringing about a restoration of industrial peace.

What is going on in the Episcopal Church is merely a reflex of the situation throughout the nation. It is not forums, terms or definitions, but facts with which the people are concerned. Many a worn-out theory and doctrine went up in the smoke from the battlefields of Europe. The task now is to adjust our lives to the new conditions. Though I deny that there is any tendency in the Episcopal Church toward Socialism as it has been defined—and you will remember that Mr. Hillquit's definition was phrased in 1914—the fact remains that people will not ask whether a proposed reform is Socialistic, but will it work. And I deny with equal emphasis that any real danger threatens from the tendencies you have named.

Permit me to be frank. As I understand the duty of the Church in the present emergency, and it is the aim of the Every-Name Campaign as a part of the Nation-Wide Movement of our Church to awaken its entire membership to the performance of that duty, it is to promote the interests of the whole people, and not the interests of any one class or group. In your letter of September 27 you make frequent reference to the American Federation of Labor and the Railroad Brotherhoods, and their attitude toward pending issues. You note particularly the "conservative influence" which you declare has been brought to bear by these organizations upon the industrial situation.

Now, with regard to this. First, I want to make clear my sincere belief in labor organization. Labor unionism has been a potent force for good throughout the world. Without the effort which it has put forth in behalf of the toiler, his lot would have indeed been a hard one. In a thousand ways labor unionism has been a powerful agency for the promotion of the democracy of which we boast. And labor unionism may look forward to a career of equal usefulness to humanity, provided it heeds the signs of the times and will, in the same measure that it demands of all other potential agencies, adapt itself to the changed conditions which have been brought about by the world war.

The great problem which the nation faces today is embraced in the industrial situation. All the others revolve around it. One of its greatest off-shoots is the high cost of living. It is vital. Unless the cost of living is reduced, no one can say into what abyss the nation will be plunged. It was the cry for bread that precipitated the French Revolution.

How is the cost of living to be reduced? We may rout the profiteer, and attempt other palliatives; but is it not generally agreed that the one permanent remedy, based on the laws of supply and demand, is so to increase production as to bring about a natural fall in prices? Other co-ordinate remedies may be useful; but in increased production lies the main remedy.

How are we approaching the solution of this problem? It might fairly have been hoped that the leaders of organized labor would have arisen to their opportunity in this crisis, and established their movement as a beneficent agency at the beginning of this new era in the world's history. Instead, however, of adopting a spirit of co-operation, union labor has gone to the other extreme, and has virtually declared war on the people of the United States, who are the third party in interest—Labor and Capital being the other two. Unionism's demands are for higher pay and shorter hours of work, with a strike following each refusal of its demands.

See how this works out: Higher pay inevitably leads to higher prices—for the people pay—when the increase in pay is granted. Shorter hours of work lead to a further curtailment in production, and likewise increased prices; while a strike results in a stoppage of all production in the particular industry affected, and again with increased prices as its inevitable attendant. Thus there is created a vicious circle of ever widening proportions. This is one phase of labor unionism in the present crisis.

Another, and one which is much more grave in the menace which it presents, is typified in the recent Police Strike in Boston, and the still pending Steel Strike. Here there is not involved any immediate question of pay or working conditions. The issue is wholly technical. Labor unionism simply seized upon this critical period to press its demands for union recognition.

A third phase of labor unionism, which is more or less the aggregate of the other two, is the general attitude which organized labor has chosen to assume toward the public in the new age which has dawned. I repeat that the interests of all the people are the paramount consideration. But are the interests of all the people considered when a strike is declared which cuts off food supplies, brings local traffic to a standstill, ties up the railroads of the nation, halts industry, stops the printing presses, and reduces

a civilized community to the condition of a border town in the middle ages?

Do not misunderstand me. I make no defense of the capitalist system. On the contrary, I admit that capital has in the past been responsible for many of the injustices which have provoked labor to revolt. I admit further that in the new era which is opening, capital must make concessions, and if we may believe the signs of the times capital is preparing to make these concessions. What you and I, and all other citizens who are aiming at a restoration of industrial peace and order must ask ourselves, and invite labor to consider with us, is whether all of the concessions shall be made by capital, or whether labor will also recognize that in the changed conditions which we face, it, too, must concede, and co-operate toward a solution in the interest of all the people.

One does not have to be a seer or a prophet to see that right now Union Labor is in the furnace with the great white heat of public opinion turned full upon it. Consider the power to which the great unions have attained. It is possible for the Railroad Brotherhoods to tie up the trade and commerce of the United States, at least for a time precisely as Great Britain was tied up recently. We cannot forget that less than four years ago, at the mere threat of such action, the Congress of the United States enacted a law granting the demands made by the Brotherhoods then. The point is not whether the demands are just, or were just on that occasion. The point is whether the Government—the people—should be left to the mercy of a group of leaders owing responsibility to none but the power which creates them in such a way that they can enforce any demands they may make.

Within the month, Mr. Gompers, President of the American Federation af Labor, testifying before a Committee of the United States Senate, declared bluntly that if certain legislation looking to the regulation of the unions was enacted, and was later upheld by the Supreme Court of the United States, Union Labor would not obey the law.

Is that a display of the "conservative influence" to which you referred? Is the Charter of the American Federation of Labor greater than the Constitution of the United States?

I am opposed to orthodox socialism, and will follow you in any proper measures to combat its influence in the United States, but I cannot join in any cry against present evil tendencies which does not include a wise restraint of unlawful and destructive effort wherever found, or however designated, and especially of an unregulated and from a legal standpoint irresponsible force, which flatly threatens to disregard a proposed law that doesn't conform to its wishes.

Let us by all means combat Socialism in your meaning of the term, and let us begin by seeking to induce the leaders of Union Labor to return to moderation and sanity before it is too late. Socialism, or worse, is already rearing its heads within the ranks of organized labor. I am willing to concede that Mr. Gompers would have averted the Boston Police Strike, had he been able, as well as the Steel Strike, and we know that he has put the seal of his disapproval on the Longshoremen's Strike here in New York. A score of other instances might be cited where the unions have taken the bit between their teeth and defied their leaders. If this movement becomes general, chaos will not be far off.

I trust that I have made my point clear. Socialism, so-called, is only one of the menaces, and a minor one, threatening the nation. A great, potential force has grown up among us which is powerful enough to threaten, with successful results, the law making power of the United States; and, because of this success, is now going a step further and declaring an intention, in certain eventualities, to set at defiance the ultimate power and authority of the civil arm of the Government. At the same time, this force and power are unmistakably passing from the hands of those who we will agree, in many of their acts, have been agents of moderation in the past, and are being gathered in by the extreme radicals within its ranks.

Isn't this a real menace, of far graver proportions than anything we have to fear in the near future from Socialism?

We of the Every-Name Movement in the Episcopal Church count it not the least important development of our campaign that The National Civic Federation, through you, has raised the issues which are the subject of this correspondence. I feel that you will not mistake the spirit in which it has been approached on my part, and it is in that spirit that I suggest that The National Civic Federation is in an admirable position to render renewed service to the Nation now in endeavoring to inspire among the Union Labor representatives in its membership a comprehension of the acute situation which they face, and a spirit to cope with that situation in a broad-minded statesmanlike way. You will not have failed to observe that among thoughtful people serious consideration is being given to the question whether it may not be a fact that the strike and the boycott have performed their functions in awakening the people to the evils to which the workingman has been subjected in the past; and that unionism has now reached that stage where, as a force potential alike for good and evil, it ought, together with capital, to submit to a governmental regulation which will conserve equally the rights of both.

Very truly yours,

WM. FELLOWES MORGAN.

Mr. Easley's answer follows:

December 26, 1919.

Dear Mr. Morgan:

I have your letter of October 17, which discusses a number of very important questions. But may I suggest that I think we are getting rather far afield from the subject matter of my first letter to you, of July 25, which I may add was written without any idea of a public discussion resulting therefrom. The only subject with which I dealt in that letter was the rapid growth of Socialism in the churches, and especially in the Protestant Episcopal Church, and I offered my congratulations on the fact that you and other business men had undertaken through the Every Name movement to show that "religion is good business," because, as I stated, it would be "their primary duty to see that the social, educational and spiritual machinery of the church is not captured by the inordinately active Socialists, Socialistic sentimentalists and other fomenters of disorder."

In your letter of August 19, and again in that of October 17, you insisted vigorously that the Protestant Episcopal Church is in no way responsible for the utterances of individuals and unofficial groups.

As I intend in this letter to devote myself entirely to the original question raised by me, viz., the growth of Socialism in the churches and especially in the Protestant Episcopal Church, I quote from your last letter of October 17, in order that we may have a clear understanding as to the specific issue under discussion:

> The point you at first raised was as to "the rapid growth of socialism in the churches," and you added that "the Protestant Episcopal Church is especially open to that criticism." Now, however, you disavow any belief that the Episcopal Church is socialistic, "as a church," but insist that individuals and commissions within the church display marked socialistic tendencies; and if their utterances are not repudiated by the Church "the public has a right to assume that, if not approved by the Church, they at least are not disapproved."
>
> If by this you mean disapproved by individuals within the Church who speak with an authority equal to those whose utterances you condemn, I refer you back to the statement of Rev. Dr. Manning, Rector of Trinity, which I quoted in my letter of August 10, and which in your answer of September 27, you approve.
>
> If you mean disapproval by formal act of the Church, I can only repeat that it is the General Convention of the Episcopal Church, meeting triennially, and now in session in Detroit, which voices the policies of the Church, and in the absence of such action by the Convention the Church cannot be held responsible for any definition of policy either by individual or group.

After we reach a conclusion on the original proposition, I am perfectly willing to take up the other matters you have raised in your last letter —the high cost of living, profiteering, the tactics of the American Federation of Labor, the alleged utterances of Samuel Gompers and other important subjects. But unless a stop can be put to the inroads of revolutionary radicalism among the educated membership of the church, it seems farfetched to criticise the American trade union movement, in which revolution has made only minor headway, and, at that largely among its illiterate foreign membership.

At the time I wrote my first letter I did not clearly understand the relation which such nonofficial bodies as the Church League for Social and Industrial Democracy and the Church Socialist League bore to the Protestant Episcopal Church, nor did I quite understand the official nature of the Joint Commission on Social Service of the Protestant Episcopal Church, of which commission you are the honored treasurer. When you intimate that the utterances and activities of the unofficial Socialist bodies within your church are neutralized and entirely offset by an individual statement of the Rev. Dr. Manning or any other of the many thousands of high-minded, patriotic Americans in the Protestant Episcopal Church, I think that, unintentionally, you misrepresent the situation. It would be a truer parallel if Dr. Manning or any other economically sound American were to organize an anti-socialist league, or an "American League" if you prefer, the purpose of which would be to challenge, to defy and to confound the sentimental Bolshevist preachers and bishops who are flooding the church with libels on American industry and American institutions. That would be a real parallel. But there is no such organization, so far as I can find, in the Protestant Episcopal Church or for that matter, in any other Protestant Church.

Now, Mr. Morgan, when groups of men, clerical and lay, publicly organize into bodies for the purpose of carrying on propaganda within the church, using the machinery of organized religion for the promulgation of revolutionary incitements, does not the church, unless it repudiates these bodies and refuses to permit them to use its pulpits, assume a grave measure of responsibility? Exercising authority over its pulpits, does not the church fail in fulfilling its grave moral obligations if it laxly permits those pulpits to be prostituted to the preaching of Socialism and its church buildings to be turned into radical revolutionary forums? You aver in your letter above quoted that the alleged tendency toward Socialism "is not more markedly developed in Episcopal circles than it is within the body of our citizens as a whole." As we have been dealing in this correspondence with church denominations, permit me to say that after further investigation into this matter I am convinced that the tendency toward Socialistic revolutionary propaganda is more in evidence in the Episcopal Church than in any other Christian denomination and that, in this respect, the Episcopal clergy are the most conspicuous offenders.

The recently organized Church League for Social and Industrial Democracy in the Protestant Episcopal Church, referred to in my first letter, which among other things in its program pledged itself "to give moral and political support" to clergymen in the Episcopal Communion

"who shall clearly be seen to have incurred persecution through the advocacy of social change," indicated the drift of its sympathies by a campaign for conscientious objectors and political offenders. While the General Convention was in session in Detroit, this organization held a meeting, presided over by Bishop Charles D. Williams, at which a speaker declared the proper way of running a war would be to put in the first trench all kings, crown princes, grand dukes and politicians who voted for war; in the second trench, munition manufacturers, all generals of high rank, army chaplains and capitalists, and in a third trench, seventeen miles behind, the working class. "When we were all ready, we would start the shooting," said the speaker, "and I would have the first two lines on either side charge on each other, and when they were shot to hell and perdition, I would have the working classes walk up and shake hands with each other and go home about their business." With American motherhood bowed in sorrow over the loss of America's blood in this last war, with the ideals of this struggle flaming in the hearts of men, would you not imagine that such a disloyal, anarchistic declaration would have brought upon the speaker the reprehension of those ministers and members of the Protestant Episcopal Church who attended that meeting? Would you not imagine that a declaration as atrociously offensive as anything found in Scott Nearing's notorious pamphlet, "The Great Madness," for publishing which the Rand School Corporation was convicted and sentenced to pay a $3,000 fine—would have met with rebuke? Would you not imagine that clergymen of the Anglican denomination, knowing Germany's guilt in starting the war, the guilt of Germany's rulers for the unspeakable atrocities of the war, and knowing England's noble and heroic part in the defense of civilization would have risen in indignant protest against the further declaration: "At the present time the line-up is reversed. The working class is in front; the General is seventeen miles behind, and the King is in London." On the contrary, Mr. Morgan, according to the stenographic minutes of that meeting, which I have before me, those statements were greeted with enthusiastic applause.

Applause also greeted the declaration: "Industrial justice and economic justice labor will have, peacefully if they may, but they will have it." It is true that this speech was made by a Detroit labor man, but he was known by the promoters of the meeting to be a radical of just the type his speech indicates. The audience, however, was not made up of radical labor men, but largely of Protestant Episcopal clergy and laymen attending the Detroit convention.

According to a statement made at this meeting by the Very Rev. Bernard Iddings Bell—who is advertised as "bringing a new vision into the work of the Every Name Campaign," who was also one of the founders of the Church Socialist League and who includes a study of Socialism and the I. W. W.ism in a course at St. Stephen's College, of which he is president and which is under the absolute control of the Episcopal Church— ten bishops of the church, with priests, deacons and laymen of prominence, have actively associated themselves with the new League, which he said is "approved by many others who do not feel that the time is ripe for them to take any formal action." The names of the bishops who had joined the league were withheld, announced the secretary, the Rev. R. W. Hogue, "for the reason that other bishops are coming in soon."

You may say, Mr. Morgan, that the League for Social and Industrial Democracy, with its plans for the so-called socialization of industry, does not speak for the Episcopal Church. But what will you say concerning the fact that a resolution demanding amnesty for political prisoners, conscientious objectors, et al., engineered by this League and in line with the old propaganda of the radicals, anti-conscriptionists, pacifists and pro-Germans, while defeated in the House of Deputies of the General Convention, was passed by the House of Bishops? Do you see no connection between the work of these Socialistic propagandists and that vote by the House of Bishops?

Does the Episcopal Church have no responsibility in regard to this organization, engineered and directed by radicals of various hues, some of them political Socialists, when, according to its own announcement, it has asked all bishops of the church whether they would sanction the work of the League in their diocese and help to secure for representatives hearings in pulpits?

Of the twelve members of the temporary executive committee of this League, five have acted on the executive committee of the Church Socialist League, which was founded in 1911 mainly through the efforts of President Bell of St. Stephen's, and which declares itself in the last issue of its official organ, *The Social Preparation*: "WE ARE NOT REFORMERS, TRYING TO PATCH UP AN OUTWORN GARMENT, BUT REVOLUTIONISTS," etc., the identical claim made by I. W. W.s and Syndicalists.

Among these "revolutionists" presumably are the Rt. Rev. W. A. Guerry, former vice-president of the Church Socialist League, the Very Rev. Bernard Iddings Bell, William F. Cochran and Miss Vida D. Scudder, who are also members of the Joint Commission on Social Service of the Episcopal Church, the official body of which you are treasurer.

You may perhaps contend that the church cannot be criticised for taking no action in regard to this Church Socialist League, composed largely of ministers of the church, not to speak of ten or more bishops, when it declares in a recent manifesto that "at this supreme hour of the world's history. . . .the church is apostate to its divine mission," when it implies that the church has supported "the capitalist system of production, with its unholy emphasis on profits, privilege and exploitation," and when it calls upon the church "to endeavor to understand and assist the working out of that social and industrial revolution, with the conscious purpose of helping to prepare the way for such complete revolution of our present economic and social disorder that a Christian order may be evolved."

But does the church have no responsibility one way or the other when this organization in the church, seeking to attain political ends through the machinery and pulpits of the church, interprets as the "Christian order" what is nothing more nor less than Socialism, and when among its avowed stated purposes we find the following: "To help the advance of Socialism by every just means. To convert church people to the principles of Socialism."

Unless the Episcopal Church approves of political Socialism, unless it espouses as the basis of a "Christian order" the materialistic doctrines of Karl Marx, does the chuch not have a duty to perform in protecting its members against the insidious propaganda carried on by the Church Socialist League through churches and pulpits?

In itself, so far as numerical membership is concerned, the Church Socialist League may not be important; but when one of its chief founders, Dr. Bell, is president of a college responsible to the church and when other members hold important charges where, by reason of their authority and prestige and of the confidence accorded them, they are able through camouflaged Socialistic preachings to poison the minds of church members, as it would not be possible for notorious Socialists such as Morris Hillquit, Judah Magnes and others to do, it seems the purposes and activities of the League cannot well be ignored by a church whose avowed mission is spiritually to protect all in its fold. According to a press announcement sent out by the Every Name Campaign, the course at St. Stephen's, which includes instructions in Socialism and I. W. W.ism, will be in charge of the Rev. Lyford P. Edwards, himself an avowed radical, who went to such startling extremes as to imply that Socialism and Christianity are identical. I ask, does the church have no responsibility in protecting young students in a college officially conducted under the sanction of the church from possible pernicious and destructive teachings?

Does the church have no responsibility concerning the activities and propaganda of a minister of standing and the president of a college conducted under the official sanction of the church—I refer to the Very Rev. Bernard Iddings Bell—when in a published book he expresses as the basis of his preaching what is the basis of crass materialistic un-Christian Marxian Socialism: "It is an established principle of Sociology that the two great needs which impel mankind to most of its actions and which determine most of its institutions are the same two primary needs which impel toward action and evolution all living creatures, the need for food and the desire for sex expression."

Commenting on the Church Socialist League, the boast is made in the American Labor Year Book, the official handbook of the Socialist Party published by the Rand School. "Its influence within the Episcopal Church is not at all measured by its numerical strength. In spite of the conservatism of the Episcopal Church and of its numbering many leading capitalists of the country among its members, *yet the church has officially adopted radical and even revolutionary resolutions, and the influence of the Church Socialist League is discernible as giving color to them.* (The italics are mine.) A considerable share of the clergy are tinctured with Socialism." With but 6,000 clergy, we are told "several hundred are avowed Socialists."

If it is true that the church, through any of its duly authorized committees or commissions, has officially adopted radical and even revolutionary resolutions, could one be blamed, Mr. Morgan, for attributing to the church a tendency toward Socialism? Is it true, for instance, that "the influence of the Church Socialist League is discernible as giving color" to any of the reports of authorized committees or commissions, such as the Joint Commission on Social Service, four of whose members have been affiliated with the "revolutionistic" Church Socialist League?

When action was taken last summer by the Attorney General of New York State for the cancellation of the charter of the Rand School, one of the executives of the school, George Goebel, "as an example of the importance of the persons interested in the school," informed a reporter of the New York *World* that no less than eighteen Protestant Episcopal clergymen, all of them except one from the metropolitan district, had assembled at the school to discuss means of spreading the tenets of Socialism among their congregations. When the raid was made on the Rand School by agents of the Lusk Committee there was found in the files a letter addressed to Scott Nearing by A. Wagenknecht, of the Department of Organization and Propaganda of the Socialist Party of the United States, Chicago, Ill. This letter, which was turned over by Nearing to David Berenberg, of the Rand School, read:

"Some time ago I wrote you about a visit to Bishop William M. Brown, who resides at Galion, Ohio. Bishop Brown is a member of the Socialist Party, a bishop of the Episcopal Church, and a heretic of the reddest hue."

Telling of the intention of Bishop Brown to visit New York, the writer asked that a meeting be arranged at the Rand School or at some hall for the "Red" Bishop. "Comrade Brown is 63 years of age," the letter continued. "When

I tell you that Comrade Brown is a Bolshevist, is making a trip to New York to consult you and Comrade Eastman about a series of three booklets he intends publishing and that he does not ask a fee for his speaking services, I am sure you will do what you can."

In answering this letter, Berenberg informed Comrade Wagenknecht that he would be only too glad to make what arrangements he could for Comrade Brown, adding, "I believe that the circumstances under which he comes out publicly for Socialism and Bolshevism are of sufficient publicity value to insure successful meetings for him."

You may say that for Bishop Brown's "hereticism" of the "reddest hue" the church has no responsibility, and that when one of the lights of the church, such as Bishop Brown, "comes out publicly for Socialism and Bolshevism," the public would not be justified in assuming that the individual expresses the opinion of the church, of the General Convention, of the Joint Commission, or any of the official committees of the church. But what have you to say, as treasurer of the Joint Commission on Social Service, when officials of your own Commission exploit movements and forces analogous to Socialism and Bolshevism as praise-worthy and valuable? What have you to say when the executive secretary of your Commission, the Rev. F. M. Crouch, addressing a so-called national industrial conference called by the Industrial Relations Department of the Inter-Church World Movement, held early in October, suggested as a possibility the transference of industry from those who have to those who have not—a prospect paralleling what the Bolshevists through their Soviet scheme have endeavored to put in practice in Russia. "Are we prepared to maintain the present system of industry as an indispensable condition to perpetuating our organizations?" asked Mr. Crouch, your executive secretary. "Is the right to 'take and hold' to be the principle today?" "Is capital to be socially controlled or individually controlled?" "Is the present industrial relation a sensible relation, let alone a justifiable relation?" "It is an absolute fact that there are increasing numbers of men and women today who say: 'If the church will not assist us, we will leave the church.' . . . Can we solve the problem of industrial relations unless we recognize the radical movements outside? We are bound to think of them in terms of the present economic and industrial order." "What is Socialism based upon?" Karl Marx's "Capital," declared your Executive Secretary to his audience, "is there for you to read."

Do you, as treasurer, approve of the point of view which the Rev. Mr. Crouch must bring to his activities as Executive Secretary of your Commission as was expressed in his declaration; "The system of industrialism which we still largely know, working out in the exploitation of fellow men by fellow men, cannot endure in the face of justice." If the system of industrialism which we at present know cannot endure in the face of justice, what system does your executive secretary propose?

You may say that the Joint Commission on Social Service cannot be criticised or be held accountable for any views expressed by its executive secretary before another body, and that the Rev. Mr. Crouch, apart from his official duties and when not appearing as a representative of your Commission, speaks as an individual. What have you to say when the then secretary of your Commission, the Rev. J. Howard Melish, addressing a conference of your body on October 14, 1913, declared that, because the church was not sufficiently obedient to the teachings of Jesus, masses of men had gone into Socialism as a religious substitute; when he extolled and glorified Socialism as supplying a spirituality and reality which many did not find in the church, and when, further, he held up for honor the leaders of the I. W. W., many of whom were, later, convicted of criminally conspiring against the government in its conduct of the war and sentenced to long terms of imprisonment?

Mr. Melish's speech is printed in the official report of your Joint Commission. If any one among the members of your Commission dissented from the Rev. Mr. Melish's views there is no record in your report of such dissent. Neither, so far as a careful examination of the report reveals, were the Rev. Mr. Melish's sentiments repudiated, nor was the Rev. Mr. Melish rebuked. On the contrary, despite his openly expressed views, Mr. Melish continued to serve as secretary of your Commission, is still a member, and, moreover, as was expressed in a talk at St. Mark's-in-the-Bouwerie as recently as December 7, still considers the lawless I. W. W. movement as embodying a "beautiful ideal."

"Big Bill" Haywood—doubtless one of the I. W. W. leaders whom the Rev. Mr. Melish lauded as deserving honor—in a speech delivered at Cooper Union at a date previous to Mr. Melish's address to the meeting of your Commission, had boldly declared:

"Can you wonder that I despise the law? I understand the class struggle. I am not a law-abiding citizen. More than that, I do not believe that you here ought to be law-abiding citizens.

"We want to overthrow the capitalist system and establish in its place an industrial democracy. Why, then, say we are law-abiding?"

Ignoring "Big Bill" Haywood's expressed declaration, the Rev. Mr. Melish, comparing the I. W. W. with the Zealots—"from whom Jesus chose more than one disciple"—told your Commission there was no reason for the church to be hostile to Syndicalism although Syndicalism was altogether hostile to the church. He declared:

"Syndicalism, as every investigation has shown, finds a field only in our industrial centres where immigrants are herded. Without a vote, strange, bewildered, 'put upon,' deserted by the church, the labor union and the Socialists, it was Syndicalism which went to them in their distress and gave them courage and hope. All honor to the I. W. W. leaders that they were found at the hottest point of the industrial conflict."

Does the Joint Commission on Social Service of the Protestant Episcopal Church accept or reject the Rev. Mr. Melish's interpretation of Socialism—of materialistic Marxian Socialism whose appeal is made through class antagonism and class hatred—as providing a "real religion," a "reality" in which the churches are lacking, a "spirituality" which has for masses of men made Socialism a substitute for the church? Does the Joint Commission accept or reject the declaration that the churches have been insufficiently obedient to the social teachings of Christ, while, on the contrary, among Socialists "is found a feeling of brotherhood, service and sacrifice for man, confidence in the triumph of justice and righteousness, single devotion to truth, faith, hope and love"? Does the Joint Commission believe, or does it not believe, that the leaders of the I. W. W., including "Big Bill" Haywood, should be given all honor, and that its terrible program of incendiarism, sabotage and terrorism should not be condemned? Is the Joint Commission inclined, with the Rev. Mr. Melish, to excuse and condone the long history of outlawry of the I. W. W.?

The Joint Commission on Social Service may evade assuming any responsibility for radical statements made by your present executive secretary and former secretary—even for notorious pro-Socialist and pro-I. W. W. utterances made at its own meetings—on the ground that these were but expressions of individual views, for which the Commission is not responsible. But you will admit that the Joint Commission on Social Service cannot escape responsibility for its own official report as rendered to the General Convention of the Episcopal Church.

If it is found that in that official report there is the same insidious promotion of socialistic propaganda, propaganda favoring the Soviet control of industry by the workers, the same extenuating and favorable advancement of the I. W. W., is it not incumbent upon those members of the Commission who abhor such views to repudiate it openly?

All of which brings me to a consideration of the third Triennial Report of the Joint Commission on Social Service which was submitted to the General Convention of the Protestant Episcopal Church this last October in Detroit. I wish specifically to deal with Part II on "Industrial Relations."

"Before the war, Socialism," says your report, "which had at first been viewed askance if not with actual hostility by the majority, had largely lived down its ill repute and been accepted at least in theory by an increasing number of those interested in social thought and action, as well as by workers themselves."

This was due to the fact, it is explained, that the Socialism of Marx and Engels, "had been softened down into a compromise doctrine and movement which was content with a half loaf if it could not get the whole loaf."

It must be borne in mind that what appears in the last report of the Joint Commission was presented to the General Convention long after the revolution in Russia and after the disloyal pacifist pro-German record of the Socialist Party in America had alienated the support of many members of that party.

Discussing State Socialism as distinct from Marxian or "orthodox" Socialism, the following is said:

"Its danger, as he* sees it, largely consists in the fact that, while apparently much easier, more rapid of accomplishment, and offering more immediate relief to the present situation than the distributive process, it plays into the hands of those who still remain in possession of large property, resulting in a perpetuation of the inferior or servile status of the workers rather than in an elevation of them to a position of equality with their fellows. It is in fact the perception of this danger by an increasing number of the workers themselves as well as of their sympathizers and the apparent inability to force a distinction between Socialism proper and its corrupted form, State Socialism, which has led to a general turning away from the Socialist movement and program as such by those members of the working class who are increasingly determined to insist upon and to secure an improvement of their status not only as workers but as members of society, involving a real equality with those now in more favorable positions."

Are the members of the Joint Commission among the "sympathizers" of those who would bring about in the United States identically what the Bolsheviki undertook in Russia?

"The issue now raised by the workers, in short," your report continues, "is not that of wages, hours and conditions, but precisely the issue just stated, of status, involving control of the industries in which they earn their living and of their own destinies as men, which they maintain has been denied them under contemporary conditions."

That identically what the Bolsheviki undertook in Russia is favorably viewed in your report is indicated by the above; that the writer of this part of your report is sympathetic with that program is indicated by his considering State Socialism dangerous to that plan.

That the writer, or writers, of this section of your report are avowedly socialistic is demon-

*Note: This reference to the author of this section of the report is in the singular.

strated irrefutably by the declaration—made in a footnote, page 64—"The modern reader is no longer interested in Marx's dialectics, but is compelled to recognize that the central position for which he stood is not only tenable but is really impregnable."

"The principles of pristine Socialism revolve about the central fact, since Marx's time increasingly apparent to many, that there is and must be under present conditions exploitation of the workers by those who are in a position to profit by their labor."

Do you, Mr. Morgan, as treasurer of the Joint Commission, endorse not only as "tenable" but as "impregnable" the central position and "principles of pristine Socialism"—the Socialism of Karl Marx, of Morris Hillquit, of Lenine and Trotzky?

The report of your Commission, in a footnote, declares as a fact:

"Marxian Socialism would give the worker *full* value of his labor, though that might mean curtailing the illegitimate 'right' of the capitalist to more than his due share; in the process many parasitical capitalists, indeed the whole system, would, in Marx's expectation, go to the wall. The popularity of strict Socialism with the workers is, in a word, due to this very insistence on their individual rights, which—Socialism correctly holds—can be secured only by collective effort."

Is this Socialist propaganda or is it not? And just how "popular" with American workers is Socialism? The Socialist Party has less than 50,000 members, while the American Federation of Labor and the Railway Brotherhoods, 95 per cent of whom are anti-Socialist, have 4,500,000 members.

Commenting upon "an elaborate attempt" "made toward the end of the last century by the famous Austrian economist Boehm-Bawerk," "to prove that Marx's theory of economic exploitation was all wrong," the declaration is made in your report that the Austrian economist's contention "CANNOT EXPLAIN AWAY THE FACT THAT THE PRESENT ORDER, AS MARX WAS ONE OF THE FIRST TO RECOGNIZE, HAS WORKED OUT TO A DEGREE OF INJUSTICE WHICH CANNOT ESCAPE THE ATTENTION OF EVEN THE MOST CASUAL OBSERVER."

I ask you, Mr. Morgan: Would not the public, reading these statements in the report of your commission, be justified in assuming that your Commission is opposed to the "present order" and that, ergo, it accepts the Marxian as a better and more just order?

Mr. Melish's notorious defense of the I. W. W. in a speech delivered at a meeting of your Commission in 1913, above referred to, was made before the I. W. W. had become an auxiliary to the German espionage system in America, before it had engaged in the destruction of munition plants and railroads, before it had embarked on a program to hinder the United States in its conduct of the war against Germany, and before over a hundred of its leaders were convicted of criminal conspiracy. At that time your speaker and secretary might have pleaded ignorance of the lawless character of this organization as expressed previously by Haywood and other leaders; at that time the Joint Commission may have been excused for not publicly repudiating Mr. Melish's utterances on the ground that it was not in a position to know from established proof that this organization was an enemy of the American government, that it was in its philosophy, its program and its acts criminally disloyal and treasonable. But what shall we say when, after the I. W. W. had been convicted by evidence produced by the Department of Justice of having preached sedition and opposition to the draft, of having sought through the destruction of munition plants, railroads and ships to render the nation impotent in its warfare against the Huns, we find that the sentiments expressed by Mr. Melish in 1913 are in 1919 reechoed in and give color to the report of your Joint Commission?

Admitting that in the United States "its (the I. W. W.s) effects especially during the war have become notorious," it is stated that these effects were "in large measure deliberately or unconsciously misconstrued by the great body of the American public." The statement is made: "It has never yet been proved that there was any connection between German gold and the American I. W. W." Going out of the way, as it were, to whitewash the criminal I. W. W. of abetting Germany and seeking to give aid to Germany in the war, your report totally ignores the facts brought out in the Chicago trial of the accused I. W. W. leaders, as well as the established fact that Germany's official agents in this country were instructed to employ, and did employ, these same forces of revolution and disorder.

The same tendency to whitewash the I. W. W., to find excuses for its criminal existence and palliation for its crimes which was evinced by Mr. Melish in his speech of 1913, is found in the 1919 report of your Commission. "One cause" for its rapid spread, your report declares, "has been the fact—until at least comparatively recently—that the American Federation of Labor, including some three million skilled workers, has ignored, either deliberately or unconsciously, the claims and aspirations of their unskilled fellows, who have therefore flocked to the banner of Syndicalism." As against this statement, I want to quote from my letter to you of September 27, where, referring to Mr. Melish's dramatic eulogy of the I. W. W., I said:

> This simply means that the Rev. Mr. Melish, Secretary of the Social Service Commission, had accepted at face value all the fantastic claims of the I. W. W. propagandists about the Utopian program of that organization and was repeating, parrot-like, the misrepresentations of the trade union movement put out by William D. Haywood and his band of thugs to the effect that the American Federation of Labor was neglecting the unskilled immigrant workers, when, at that very time, the American Federation of Labor had twenty-five times more unskilled laborers organized than the whole membership of the I. W. W. Every month the Federation spends more money in endeavoring to organize the unskilled laborers of the country than the I. W. W. has done since its inception.

You say in your last letter: "I want to make clear my sincere belief in labor organizations. Labor unionism has been a potent force for good throughout the world."

Can you, therefore, approve of the effort made in the report of your Commission to disparage American trade unionism as reactionary, as less worthy of support than the radical revolutionary movements which would overturn society and establish the Bolshevist Soviet I. W. W. system under which labor would take over, own and operate all the mills, mines, factories and railroads?

Your report, in a footnote, page 105, says (italics are mine):

"Organized labor in America is still *lagging behind* its European colleagues in the sense that it *is still concentrating its attention upon specific amelioration of the worker's lot* through the more primitive trade union practices of collective bargaining and trade agreements. *The ingrained conservatism, if not reactionism,* of the A. F. of L. under its present leadership was strikingly manifest at its last annual convention."

This characterization of the A. F. of L. convention as "reactionary" parallels the description of that convention by the *New York Call,* the official organ of the Socialist Party, the *New Solidarity,* the official organ of the I. W. W., and the *Revolutionary Age,* the official organ of the Syndicalists. It certainly is a curious coincidence to find the report of the Joint Commission in Social Service and the reports of those revolutionary journals to be in such accord.

The Joint Commission's report refers its readers on this point to an article on the A. F. of L. convention published in the pro-Bolshevist *Nation* and written by one, Charles P. Sweeney, a frank pro-Bolshevist newspaper writer. I ask you, Mr. Morgan, does the Joint Commission accuse the A. F. of L. of conservatism and reactionism because, at its last convention, to quote *The New York Call,* "the Gompers machine crushed all proposals of the radicals," because, to use the words of the *Call,* "there will be no strike to save Tom Mooney; the Soviet government has been denounced; . . . the Labor Party idea has been smashed," because "the convention . . . is opposed to the democratization of industry to the extent of refusing to recommend the election of foremen on jobs by the workers, refusing to assist in the formation of soldiers' councils," etcetera?

Does the Joint Commission disparage "specific amelioration of the worker's lot" through constructive measures and favor a catastrophic revolution which will place the workers in control, as is advocated by the less "conservative" and less "reactionary" Bolshevists, Socialists and I. W. W.? Does the Joint Commission, or does it not, take a stand of sympathy and approval regarding the I. W. W., when in the same report in which it charges the A. F. of L. with "conservatism" and "reactionism," it declares:

"THERE IS IN THE SYNDICALIST MOVEMENT, IF WE CAN FOR THE MOMENT LEAVE OUT OF CONSIDERATION ITS VIOLENT TACTICS, A POSSIBILITY OF SOCIAL AND EVEN ULTIMATELY OF RELIGIOUS VALUE WHICH NEITHER THE CHURCH NOR THE STATE CAN AFFORD TO IGNORE OR TO CONDEMN UNTIL IT HAS GIVEN THE MOVEMENT A FAIR HEARING."

As treasurer of the Joint Commission, you would confer a great favor upon many of us by explaining just what there is in this self-confessedly lawless organization which may be of ultimate religious value.

In seeking to excuse and condone the I. W. W., your report makes the same pleas, the same defense, uses the same line of argument employed by the *New Republic,* by the National Civil Liberties Bureau, by Carlton H. Parker and by Robert Bruère, I. W. W. defenders, and which would place the blame for all the crimes of the I. W. W. upon social conditions.

Considerable space is given in the report of the Joint Commission to quotations from such so-called "representative opinions" as the following:

"For some time past there has been a growing conviction that democratic institutions have failed to realize their early promise. . . . There can be no question as to the depth and the extent of the prevailing scepticism concerning the adequacy of representative government as it exists today." (Richard Roberts in the *Nation,* May 5, 1919.)

"It seems fairly certain that, for a considerable time to come, the main struggle in Europe will be between capitalism and some form of Socialism, and it is highly probable in this struggle the strike will play a great part. To introduce democracy into industry by any other method would be very difficult. And the principle of group autonomy justifies this method so long as the rest of the community opposes self-government for industries which desire it. Direct action has its dangers, but so has every vigorous form of activity." (Bertrand Russell, a notorious pacifist.)

Your report proceeds to comment:

"Workers whose temper runs thus—" (who believe that democratic institutions have failed, etc.)—"are not likely long to be satisfied with any scheme which does not result in the introduction of substantial democracy into our eco-

nomic life." Your report explains that the term "industrial democracy" has been almost discredited because of its application to such "absurdly inadequate proposals as profit-sharing, bonuses and welfare work." What the workers want "is what they say the employers will not concede without a struggle—practical control of the industries in which they spend their lives."

Does the Joint Commission advocate such control of industries by the workers?

Commenting upon the "common charge" made "by practical citizens and even reformers," that the Syndicalist program is incoherent and indefinite, your Commission's report concludes:

"In partial reply, it may be remarked that the Syndicalist method of 'direct action' is based tacitly on the principle—'Act and the way will become clear,' which has, it must be admitted, some affiliation with current philosophical thought and even with certain aspects of the Christian faith."

In other words, all that the Bolshevists, Socialists and I. W. W.'s have to do is to act, to take over all industries, and everything will work itself out to a league of millennial perfection, as has not happened, you and I will admit, in this so-far imperfect world, unless it be in Petrograd and Moscow.

In dealing with Guild Socialism, which, according to your report, "viewed from within as a constructive industrial program . . . offers much ground for hope," the statement is made:

"The stock argument advanced by the ultra-conservative against any movement that would tend to give greater control into the hands of the worker is of a piece with similar arguments advanced in former times against intrusting the functions of political government to the common people."

The National Guild Movement, your report says, "would seem to offer much hope and much promise for a better ordered industrial future."

Section 10, Part 11, of your report, is headed significantly: "The Issue: Not Wages, Hours and Conditions, but Status—Control of Work and Life."

"It is becoming increasingly clear," your report goes on, "that a growing and substantial section of the workers of the world are convinced that their present status is at least semi-servile if not wholly so. . . . Wage-workers are asking themselves how their condition compares with that of the feudal serf or the chattel slave and their answer to this query is by no means favorable."

Your report says further:

"No conscientious thinker who is at all familiar with the situation can deny in the face of patent facts that the workers' contention is largely right and that something must be done in the way of an effective answer."

Do you want the public to believe for one moment that men like yourself and other men of standing on your Committee, have anything but a wholesome contempt for the idea that the condition of the wage-earner today compares unfavorably with that of the feudal serf and the chattel slave? It is an insult to the intelligence of any American even to ask such a question, and therefore I do not ask it. At no time in history (and this was just as true in 1914 as now) have the American wage earners had such large wages and such consideration for their comfort and well-being, and, as is evidenced by the number of strikes we see today, been so independent in their conduct. "Feudal serfs or chattel slaves" do not strike. What do you, as president of the New York Manufacturers' Association, a body of 5,000 employers, as well as director yourself in any number of corporations, think of such a statement?

To return to your report, it apparently advocates and approves of a program aiming at nothing short of control of industry in whole or in part by the workers. The term "industrial democracy," again repeats your report, "had almost been discredited in recent months by its facile application to all kinds of industrial experiments and programs which at the same time leave the control effectively in the hands of the present employer.

"Such proposals or devices, however they may masquerade under the name of 'industrial democracy,' the workers are in increasing numbers repudiating, insisting that they will not be satisfied until they have at least an equal share in control of the industries in which they are engaged."

This is a straight-out attack on the so-called "democratic" plans advocated by Mr. Rockefeller, the International Harvester Company, the United States Steel Corporation, the General Electric Company, the Standard Oil Company of New Jersey and the Leitch plan. Do you and all the members of the Joint Commission approve of this attack on these "democratic" plans, and do you approve of this Bolshevist program? Apparently yes, because the report concludes:

"To answer that this is utterly impractical because the workers are not now competent to manage their industries, is to judge the workers by their actual rather than by their potential faculties, which they justly assert can be trained only as they have opportunities to apply them to administrative and managerial functions. It may well be that for a time at least workers in control of an industry would have to depend upon the trained direction and expert advice of those who have been their employers or actual directors, but the experience of history shows in the large that those who are charged with responsibility ultimately prove themselves capable and worthy of it."

This is a bold attempt to justify the policy of Lenine and Trotzky in confiscating and running the factories in Petrograd and Moscow. Is it possible that the patriotic Americans on your Commission have read and approved this statement? The Bolshevist, I. W. W. and Socialist propaganda largely defeats itself by reason of its extremism and vehemence. May it not be possible that such "tempered," adroitly phrased and seductive propaganda as is embodied in the report of the Joint Commission may do for these unrestrained zealots what their own literature fails by its very excesses to accomplish?

Let us meet the issue, Mr. Morgan. If the notorious activities of the Church Socialist League and the somewhat camouflaged radical propaganda of the Church League for Social and Industrial Democracy, both seeking to operate through the machinery of the church and to use the pulpits of the Church, are not repudiated by the Church through its General Convention, does not the public have a right to assume they are at least not disapproved? Further: Is the public not justified in assuming that the report of the Joint Commission, embodying as it does pro-Socialistic, pro-I. W. W. and Bolshevistic propaganda—nothing more nor less—in not being rejected by the General Convention was therefore acceptable to that body? Does not the church, by accepting at its General Convention and by disseminating such a report, without qualification or criticism, make itself responsible for its contents? If it is a fact that the Church Socialist League, by reason of its members being on such bodies as your commission, has been able to "give color to" such reports, then is not the situation a very serious one?

Let me close this letter, which has lengthened into an essay, by referring to my first letter to you, when I congratulated the business men of the Protestant Episcopal Church on having inaugurated the Every Name Campaign, "because," as I said "it would be their primary duty to see that the social, educational and spiritual machinery of the church is not captured by the inordinately active socialists, socialistic sentimentalists and other fomenters of disorder."

Since I wrote that letter on July 25, having had brought to my attention further evidence of the inroads made in the Episcopal Church by this inimical propaganda, only a small part of which can be quoted in this letter, I have become convinced that there is a hundredfold more need for vigorous effort on the part of your organization than I had believed at that time was necessary.

Not only has evidence accumulated of dangerous propaganda in the Episcopal Church, but in other churches as well, and we are now examining the social service and industrial commissions of those bodies.

As the one hundred and thirteen international organizations composing the American Federation of Labor have declared their intention of driving out of their organization all Bolshevists, I. W. W.ites and other revolutionists, is it too much to hope that the Every Name movement, including as it does many of the most public-spirited, loyal and representative men of the nation, will perform that vitally necessary and patriotic service for the Protestant Episcopal Church? I am sure, Mr. Morgan, that you will do everything in your power to help bring about this purging of the temple.

Sincerely yours,

RALPH M. EASLEY.

My Days Under the Bolshevist Reign of Terror

(*Continued from page 9.*)

they were still safe. It seemed to me an incredibly short time since the firing started that the lull came. No shots were fired. The same question was on the lips of all of us—"Have the Czechs been routed?" "My God, my God, it can't be so!" some one said. A woman went to a window and gave a happy cry. All of us flocked to the door.

In the streets, half timidly at first, the citizens of Kazan were venturing out. First doubtfully, then with more assurance, they rushed down the streets. Then, with joyful shouts, weeping happy tears, they flung themselves upon the necks of their liberators. The Czechs had utterly routed the enemy! All night the celebration continued. Women threw flowers at the Czechs, decorated their hats with ribbons. Arm in arm, the population walked with the brave Czechs who had defeated the overwhelming host of Bolsheviki. It was a time for joy, even in the face of tragedy. My doctor told me to go out and I walked the streets sharing in the happiness of the people.

I came to Gorgolia street and found a mourning crowd. On all sides the beautiful homes of the rich were marked by rifle shots. But most horrible of all, laid out along the streets, were the bodies of men not in uniform. Young and old, they lay—stiff. Only weeping old women, incoherently screaming, tore in and out of the houses. Then I learned from some witnesses of the scene that had been enacted on that street. The Bolsheviki when they saw their fight was lost, in passing the street, surrounded the houses, broke in the doors, and killed all the male inhabitants. They took with them all the young girls, leaving only the old. And these young girls they dragged with them, bruised, crying aloud and weeping, dragged them along in their retreat to their camps. The thought of it all, the sight so sickened me, I turned away and went back to tend the wounded. And I could not help but compare their fortunate fate to that of those poor girls to whom death would have been a happy deliverance from an unspeakable horror.

Vol. V. NEW YORK, APRIL 1, 1920 No. 2

UNIVERSITY OF ILLINOIS LIBRARY

URGENT NATIONAL PROBLEMS

COMPULSORY ARBITRATION, COLLECTIVE BARGAINING, INDUSTRIAL TRAINING, COMPULSORY SICKNESS INSURANCE, WORKMEN'S COMPENSATION, AND REVOLUTIONARY FORCES AT WORK IN AMERICA DISCUSSED AT TWENTIETH ANNUAL MEETING OF THE NATIONAL CIVIC FEDERATION

THE twentieth annual meeting of The National Civic Federation was held at the Hotel Astor, New York, January 29 and 30. Convened at a time when the nation is undergoing the process of reconstruction following the war and when problems relating to industrial and social unrest and to a restoration of equilibrium in all phases of national life are uppermost in the public mind, the discussions at the sessions are of unique and timely interest. Judge Alton B. Parker presided at the meeting.

Among the subjects under discussion were "Increased Production Through Industrial Training," "Arbitration, Conciliation and Collective Bargaining," "Compulsory Sickness Insurance," "Workmen's Compensation—Occupational Disease," "The Revolutionary Forces in Our Midst," and "The Demand for Amnesty for Pacifists, Conscientious Objectors and Anarchists."

The subject of collective bargaining, over which the President's first industrial conference split, was discussed by employers and labor officials who have had practical experience in dealing with questions of wages, hours and conditions of labor, and included: Samuel Gompers, President of the American Federation of Labor; Timothy Shea, President of the Brotherhood of Locomotive Firemen and Enginemen; Jeremiah W. Jenks, of the Alexander Hamilton Institute; Louis B. Schram, Chairman of the Industrial Accident Prevention Department, The National Civic Federation; James H. McNutt, Secretary and Treasurer of the Western Bar Iron Association; John A. Voll, President of the Glass Bottle Blowers' Association of the United States and Canada; F. A. Silcox, of the United Typothetae; Frank Sutliffe, President of the John Woods Manufacturing Co., and Ralph M. Easley, Chairman of the Executive Council of The National Civic Federation.

JUDGE ALTON B. PARKER
President of The National Civic Federation

Industrial training of new and incompetent workers in shops as a means of obtaining maximum production, and the bearing of lack of such training and low production on the high cost of living, was discussed by Allen Walker, Foreign Department, the Guaranty Trust Company; Hugh Frayne, General Organizer, American Federation of Labor; Percy S. Straus, R. H. Macy & Co.; John Golden, President, United Textile Workers of America; T. C. Spence, Superintendent, Norton Grinding Company; Prof. David Snedden, Chair of Education, Teachers' College, Columbia University; H. E. Miles, Manufacturer, Chairman, Former Section on Industrial Training for the War Emergency, Committee on Labor, Council of National Defense; and by Mr. Gompers.

A session was devoted to Compulsory Sickness Insurance, and in this connection there was presented a practical substitute for it, incorporating health conservation measures, and the pro and con of compulsion by legislation.

Dr. Frederick L. Hoffman, a member of the Federation's Committee on Foreign Inquiry, who has just returned from England, Scotland and Ireland, where he spent five months inquiring into the operation of that act, reported upon findings relative to the British National Health Insurance Act. Other speakers included: Hon. Frederick M. Davenport, the proponent for compulsory sickness insurance legislation in the New York State Senate; James W. Sullivan, of the American Federation of Labor, Chairman of the Civic Federation's Committee on Foreign Inquiry and Member International Typographical Union; Mark A. Daly, Secretary, Associated Manufacturers and Merchants of New York State; and Dr. A. H. Doty, Chairman, Committee on Constructive Plan. August Belmont, Chairman, Workmen's Compensation Department, spoke on "Workmen's Compensation—Occupational Disease."

Miss Maude Wetmore, Chairman, read a report on the work of the Women's Department of The National Civic Federation. The program at the special session of this department included a discussion of "Our Educational System," "A Com-

munity Program for the Prevention of Juvenile Delinquency," and "National Americanization."

Lieutenant A. W. Kliefoth, formerly of the American Military Intelligence Service in Russia, and Peter W. Collins, Director-General of the Employment and Reconstruction Service of the Knights of Columbus, told of the extent and purposes of Socialist and Bolshevist propaganda in this country. Dr. Condé B. Pallen submitted a proposal for the formation of a committee to investigate and expose the principles and tactics of the Socialist party and other revolutionary groups, and to work out and further constructive measures for social and industrial betterment. Major Lucius Breckenridge, of the American Legion, protested against the disposition of the War Department to give honorable discharges to "conscientious objectors" in the Army, and against the propaganda of those seeking release from prison of shirkers, pacifists, anarchists and others convicted of opposing the war under the Espionage Act.

FREEDOM OF SPEECH AND PRESS VS. LICENSE

Judge Alton B. Parker, President of The National Civic Federation, who presided, made the following opening statement:

"For twenty years and better now The National Civic Federation has been trying to do its bit, and I congratulate you upon its achievements during that twenty years. The future seems, I am sure, both to you and me, to hold out opportunities for work which may be even of greater value to this country, which we love, than has the service in the past.

"I listened the other night to a very distinguished speaker, as well grounded in the history of this country as any man, a patriot, a man who has ever lent himself and his voice to any and every good cause so far as this country is concerned, who took a very pessimistic view of the future. He was not thinking about our financial prosperity; he was not thinking about the question whether the earth would continue to produce the food we needed; but, as he reviewed the facts of our history, he was discouraged lest the form of government, which we believe to be the best on earth, should not serve the people in the end as helpfully as it has served it in the past.

"Now, I take a very different view, not of the facts that he presented, for with them you would, I feel, agree, had you listened to them, as would I. But I cannot help but feel that as a people we will prove ourselves equal to an emergency, no matter what it may be, when it comes.

"I look back over the number of years before there was any world war, and I recall your efforts and mine, and those of others who worked with us all over this country, to make preparation for the future with an adequate navy and an adequate army, an adequate coast protection. It was hopeless. Our people were opposed to war and they didn't see any reason why they should be contributing towards getting ready for war. Weren't we here all alone by ourselves? How could it be possible that we would ever have occasion to worry about war? And we didn't get ready.

"We will never forget while we live when the war came how every man and woman in this country, with an ounce of patriotic blood in their veins, went to work. All religion, politics —everything—was cast aside, and as one the women and the men of this country went to work to win that war.

"Now the evidence is abundant, of course, that we are menaced today by those who really belong and should belong of right to the criminal classes, those who come from the world at large with the thought that they would like to divide among themselves the result of the efforts of the people of this country from its very beginning down to date. The war advertised to all the world the wealth of us here. The very generosity of the efforts which this government made and this people made, in order to end that war as it should be ended, focussed the attention of the anarchists, the Bolsheviki and the I. W. W.'s, the quasi-criminals the world over, on the opportunity which this country presented to those who were willing to take from others that which belonged to them and divide it by force.

"Now, I believe that, while there is abundant evidence of this as we all know, the people of the United States when they awaken to this fact, and awaken fully, will take hold of the situation precisely as they took hold of the war, and every patriotic woman and every patriotic man who loves this country and wishes it passed on as it is now to those who are to come after him, will see to it that the children of this country are to be educated along sound lines; will see to it that the government of this country puts up the bars against the criminal classes of the world who wish to come and despoil us, and that in the end they will so arouse the people of the United States that for a long time there will be no fear of bomb throwers and those who would overthrow the government by force.

"I have just read, and with great regret, a public statement signed by Bishop Brent and other bishops, and some twenty-two clergymen. Now, if you will pardon me, I should like to speak briefly about this contribution to a subject that very keenly interests the executive and the legislative departments of our Federal Government and of our several state governments as well as every citizen in this country who has taken pains to inform himself or herself of the threats which have been made and are being made to overthrow our Government by force. Let me read from it:

> 'We, the undersigned, ministers of the Church of Christ, believing that the political institutions of our country commend themselves to the reason and conscience of mankind sufficiently to stand the test of such freedom of speech as has hitherto in time of peace been accorded by our Government to the aliens who have come to us for asylum, as well as to our citizens, are moved to make an appeal to the people of the churches of America on account of certain measures unconstitutionally undertaken which threaten the basic principles of our government. We have in mind, in particular, the deportation of men without judicial trial. * * *'

"I shall read the rest of the sentence later. I wish to comment briefly upon the first ground of protest.

"Of course we understand what they mean. They intended that all of the people should understand that they were making a protest against our National Government because it has been engaged, and will, I hope, continue to be engaged, in sending back to Russia the Russian 'Reds.' If they mean to convey the idea that the Government is sending back to Russia men without evidence justifying it, they are mistaken. The three thousand men who are about to go, if they are aliens, carried all of the evidence needed in their pockets, and it consisted of a card showing their membership in the 'Red' organization. What more is needed, pray? Do these kindly hearted clergymen wish seriously to urge upon the people that it is the duty of the Government to have a solemn trial for the purpose of introducing the evidence that the accused alien openly carried on his own person—the evidence that he belongs to the class which by crime overthrew one government and criminally organized and largely through crime maintains another on a basis that shocks the civilized world? To criticise the method employed by the Government at all is most unfortunate, for it assumes that it is not the usual method, whereas it is. It is the one we have always made use of, and it is the only practicable one. The writer of the statement apparently has it in mind that our people are obliged to stand still and mute while the scum of the earth flock together here with the view of finally seizing our Government by force and dividing the richest country on earth among themselves. Fortunately, we have no treaty with the Russian Government to embarrass us in denying 'asylum' to her 'Reds.' We should go further, I think, and close our doors against those whose purpose in coming here we well understand. I know these good gentlemen are accustomed to follow the direction of the Scriptures that, if he strike you on one cheek, turn to him the other also, but, my friends, that doctrine does not apply to officials of the Government. They are guardians. They have no right to shut their eyes to the fact that in certain quarters of the world there are classes of men who have never labored and who want to live the rest of their lives without labor, who are coming here in shoals for the purpose of overthrowing our Government, and the Government is just as much in duty bound to stand out at the front and prevent their coming and to send them back the moment they find them in possession of the 'Red' card as it is the duty of the watchman at the savings bank which holds the millions of the people in small amounts to give up his life if necessary that the burglar shall not break in and take them.

"Now, we come to the last part of the same sentence which they also regard as wrong. I will read the entire sentence, although part of it has already been read to you:

> 'We have in mind, in particular, the deportation of men without judicial trial, the proposed repressive legislation now before Congress threatening the primary rights of free speech, free press, and peaceable assembly.'

"I think those gentlemen should have waited until Congress finished before they undertook to characterize its legislation as in effect unconstitutional. It seems to be the notion of the 'Reds,' of the anarchists, and of the I. W. W.'s that they have a right to stand up and say whatever they choose, that it is their privilege to advocate on the stump the overthrow of the Government by force. Now, the people who framed our constitutions, both Federal and State, provided for an amendment to both the Federal and to the several State constitutions whenever it should appear to the people that there should be amendment, and so we have been amending the constitution of this State of New York almost every year, sometimes one amendment, sometimes two or more, and sometimes the people reject them, but the opportunity is at our hand in both the State and Federal governments so to amend the several constitutions as will make them conform to the will of our people. That is our method. That method we take advantage of whenever we are so minded. But, that is not what we are confronting. We are confronting people who advocate that this Government of ours shall not be changed by the amendment of our several constitutions in accord with the wishes of the people, but that it shall be overthrown by force.

"Now, if the learned clergymen who signed this paper are of the opinion that such advocacy cannot be made a crime by statute and still be within the meaning of the constitutions, both State and Federal, upon the subject of free speech and free press, they are mistaken. We have a statute in this State which answers that purpose very well. We have a statute which has been tested in the courts of this State, including the Court of Appeals; and the decisions should receive attention.

"The constitution of this State provides 'Every citizen may speak, write and publish his sentiments on all subjects, being responsible for the abuse of that right, and no law shall be passed to restrain or abridge the liberty of speech or of the press.' Some of you may recall the case of Most, which is reported in 171 New York 423. At the time that case was decided by the Court of Appeals, I was a member of the Court and so

am quite familiar with the decisions. There was unanimous agreement of the seven judges. Nor have I ever heard of the decision being criticised by any court in the United States. It has been cited with approval since by the Supreme Court of the United States. Now, that was a case in which Most had advocated by a circular the overthrow of the tyrants who govern the world, including our own officials, whom he deemed tyrants. The leading method recommended by him for the overthrow of tyrants was to murder them. Now, the question presented to the courts was whether a man who was trying to advocate such sentiments in this State was guilty of a crime under Section 675 of the Penal Code as it was then, and 43 of the Penal Law of today. You are all familiar with the way these questions are raised, I am sure. When Most was tried, he asserted that the statute under which he was finally convicted was in violation of our constitution, which said that he may freely speak, write and publish his sentiments on all subjects, being responsible for the abuse of that right. Now, in effect, the statute condemned what he wrote and published; and so when the matter came before the Court of Appeals, it was unanimously held that the statute was constitutional and that Most had been properly convicted. A very learned opinion was written by Judge Vann of Syracuse, and from it I take a single sentence which I read to you:

> 'While the right to publish is thus sanctioned and secured, the abuse of that right is excepted from the protection of the constitution, and authority to provide for and punish such abuse is left to the Legislature.'

"So, this State has provided, and other States with similar constitutions may, if they will, provide for the punishment of the abuse of the right to speak and publish statements such, for instance, as advocating the overthrow of the Government by force. I wonder if the critics realized when they referred to this subject that it is only the abuse of the right to speak that has been covered by statute. I hardly think so, for certainly they cannot wish to protest against that.

"There is one other case that I wish to refer to and then I will detain you no longer; a case decided by the Supreme Court of the United States. It is reported in 247 U. S. 402 and 419. In that case there was pending before a Federal District Court an injunction proceeding. A Toledo newspaper was very much interested in the disposition which should be made of it, and it charged in effect that a particular decision would evoke public suspicion of the judge's integrity and fairness and bring him into public odium, and would be met by public resistance. Now, the judge promptly brought the Toledo newspaper people before him, under a statute of the United States which authorizes a judge, in case any one had been guilty of a criminal contempt of his court, to punish him for such contempt, and the judge summarily adjudged them guilty of contempt. By certiorari the case came before the Supreme Court of the United States. The opinion was written by Chief Justice White. He stated the proposition before the court in this way:

> 'The asserted inapplicability of the statute under the assumption that the publications complained of related to a matter of public concern and were safeguarded from being made the basis of contempt proceedings by assuredly secured freedom of the press.'

And then he says:

> 'We might well pass the proposition by, because to state it is to answer it, since it involves in its very statement the contention that the freedom of the press is the freedom to do wrong with impunity and implies the right to frustrate and defeat the discharge of those governmental duties upon the performance of which the freedom of all, including that of the press, depends. The safeguarding and fructifications of free and constitutional institutions is the very basis and mainstay upon which the freedom of the press rests, and that freedom therefore does not and cannot be held to include the right virtually to destroy such institutions. It suffices to say that however complete is the right of the press to state public things and discuss them, that right, as every other right enjoyed in human society, is subject to the restraints which separate right from wrongdoing.'

Compulsory vs. Voluntary Arbitration

LEGISLATIVE COERCION WOULD VIOLATE RIGHTS OF LABOR, DECLARE LEADERS—COLLECTIVE BARGAINING AND SPIRIT OF CO-OPERATION KEYNOTE FOR SOLVING INDUSTRIAL DISPUTES

SAMUEL GOMPERS, President of the American Federation of Labor, spoke on compulsory arbitration. Mr. Gompers said:

"Compulsory arbitration in any form and for any cause, insofar as working people are concerned, will be not only unjust, but will prove abortive, regardless of what declarations may be made in advance of compulsory arbitration. In all these projects there is one fundamental fact omitted from consideration, and that is that the men and women of labor are men and women; that they are humans, and that they have the same feelings, the same thoughts and the same aspirations as the people in every other walk of life. What we are pleased to call strikes, cessations of labor, are the expression of an aspiration for a better life.

"How shall the workers' just cause, just aspirations, be satisfied? Through generosity, through the charity and the human consideration of employers? Has the history of the industrial and political and social world given the guaranty that the rights of the workers will be protected and furthered by such considerations? The system of slavery and peonage and serfdom and the conditions in modern industry disprove such a claim.

"Our movement is not destructive. There is not anything we would undertake to destroy that would be worth the maintaining and which could even remotely result to the advantage of the people of our country. Our movement is constructive; not revolutionary, but evolutionary; constructive to bring about better conditions of life and of work and of home, to cultivate the best that is in man and woman, and to secure the opportunity to take the children out of the workshops, the mills, and the mines, and to have them in the homes, in the school-rooms, in the playgrounds, to imbibe God's sunshine, that they may grow into the manhood and the womanhood of the future, upon which the success and the perpetuity of the Republic of the United States depends. Any attempt, particularly by legalistic methods and appliances, with governmental authority and power in any form, interjected in the industrial conflict, will not only fail to avail anything, but it will be the provocative cause for many of the disputes which otherwise would be avoided."

After referring to the disbandment of the President's Second Industrial Conference, from which the Labor group withdrew, Mr. Gompers continued:

"The President in his wisdom has appointed another body of men to consider the same subject which he referred to the first conference. I have no desire to criticize the President's action, but may I call to your attention the fact that in the seventeen names of men constituting this group, there are three members of the Cabinet, or former members of the Cabinet, and not one man who could speak in the name of, and as a representative of, labor. And yet I feel persuaded that these gentlemen are endeavoring to do the best they know how in order to find some solution to this great subject of industrial unrest for the establishment of better relations between workers and employers. It is an attempt to accomplish the settlement of industrial disputes by political machinery, with a national board of adjustment, three of whom are to be appointed without designating by whom, three by the Secretary of Commerce and three by the Secretary of Labor. I want to say now that I think it is true that the administration of the country at the present time is fairly or sympathetically inclined toward the aspirations of the workers. Otherwise I fancy that Mr. William B. Wilson would not have been appointed as Secretary of Labor.

"The political pendulum swings at different angles at different times. Supposing the political complexion shall change, and with the political complexion of a new administration shall come the spirit so manifest among large numbers of people who desire to repress and suppress labor, and labor's normal activities. Can we imagine what kind of a national Board of Adjustment would be appointed? There are to be constituted, as proposed, twelve regional boards, and if there be a failure to adjust the dispute in any region, then there is the right of appeal to the National Board of Adjustment. Is it difficult to understand that if one side to a controversy shall feel that they have either a poor case, or that the Board may be inclined to make an award against them that they will prevent a decisive vote or award, so that the case may be referred upon their right to the National Board of Adjustment in the hope that the National Board may take a more favorable view of their contention, so that the National Board would without question be overwhelmed with appeals, as well as of cases over which they would have original jurisdiction?

"The machinery is based upon the partisan or bi-partisan character, with the exception that there shall not be more than a majority of one political party constituting the board. Surely the party in power would not give the majority of any of those boards except to their own political partisan adherents. And as changes would be made in the politics of the administration, all these Boards from the National down to the regionals would all be changed from a political partisan standpoint. The awards that are made under such conditions, whether they be Democratic or Republican—will these awards, or the withholding of awards, or the generosity or the unkindness or the unfairness of an award, have no tinge of political partisanship nor the possibility of political advantage? Unless, of course, we recognize it as a fact that one political party

in our own country never tried to put the other political party in a hole.

"Then again, the theory upon which these proposals are based is founded upon judicial rules and regulations and all of them are given the character of judicial procedure. In addition, there is another fancy provision; that is that, not the Chairman, but the arbitrators or the regional boards of adjustment, outside of the Chairman, shall be drawn from a panel of names to be submitted by the Secretary of Commerce and the Secretary of Labor at each of these regional points. The Secretary of Commerce, the Secretary of Labor, sympathetic towards the cause, might suggest names for the panel of men sympathetically inclined toward labor. If there be that swing of the pendulum the other way to which I have referred, and an administration brought into power whose sympathies are lacking and whose conceptions are dulled, or whose position is that of opposition to the hopes and the aspirations and the activities of labor, you can imagine what that panel might mean. But in any event, I would just as lief submit the cause for a better life for the workers to the toss of a penny as to submit it to a panel of jurors haphazardly drawn.

"The penalties for those who do not respond to the peremptory orders of the chairmen of the regional boards are many. Among them is tardiness, for any reason, in selecting the immediate representative from either side. As a penalty the number of peremptory challenges of those in the panel is lessened materially. A panel, of course, of a jury in our civil procedure in the courts, or a panel of a jury in any criminal proceedings is much different from a panel drawn by chance for determination of human relations between one man and another, particularly when those relations are of employer and employee. In the first instance, before the courts, the jury is drawn and at least, presumably, known to be of fair-minded, self-respecting citizens of the United States, who will deal fairly as between two litigants before the courts. Neither of them is, or is supposed to be, interested except to do justice as between the contentions of the two. In the other, the criminal procedure, people of the State of New York, or the people of the United States, against John Doe, the defendant is faced by a jury of his peers, his fellow citizens. With the long history of trial by jury, and yet with its many mistrials and sometimes injustices, I think that the faith of the people of all democratic countries would resist to the last any attempt at the abolishing of our jury system. But in the case of industry, in the case of the relations between employer and employees, much as we try to hide it, the fact is that all of us, you and I, are either employers of labor, or employees. Whether that be in a great industry, whether it be in great transportation systems, whether it be in the professions, whether it be in the newspapers or magazines, whether it be whatever we may consider, the cleavage is that of people occupying the position of employers or employees, and though many of us—and a large portion of the people of our country are generous minded and fair—there is not one man or woman who can escape the influence of the position they occupy in life.

"Labor asks nothing for itself that it will not accord to every citizen. It asks, as it will give, support to every group or to any individual man or woman who aims to help in the solution of a given problem or the prevention or adjustment of any dispute. But it protests and will continue to protest against any feature such as is contained in the labor clauses of the Cummins Bill to return the railroads, or Congressman Esch's provision to accomplish the same result. It will oppose to the very last legislation which is attempted in our time to curb the rights and the freedom of the people of the United States.

"There is perhaps no exemplification anywhere, here or elsewhere, of such a magnificent character of work of a voluntary body of men and women as is found in the purpose and the accomplishments of The National Civic Federation. And there has been no compulsion; there has been no penalty. The work has been for public education on great industrial and commercial principles. It has helped, by its policy and activity of mediation and conciliation, to bring both parties to a contemplated controversy together and bring about an adjustment of the dispute or when a disruption has occurred, it has brought the parties together and helped toward a readjustment. We are perfectly satisfied to have this National Conference of the President's carry on its work and promulgate proposals, but they must be voluntary, growing out of the earnest and honest purpose of both sides, with a consciousness of responsibility resting upon both. That increasing responsibility has come with time. It is not yet understood how perfectly safe freedom is. So far as my associates and I are concerned, we are determined to do our level best and give all that is in us to see that that freedom, which has been the historic development and the final achievement in the Republic of the United States, shall not be destroyed through the hysteria of those who are afraid of the freedom of the people of our country."

RIGHTS OF LABOR

Timothy Shea, acting president of the Brotherhood of Locomotive Firemen and Enginemen, said in part:

"Organized labor in the United States has always been opposed to compulsory arbitration as a method for the settlement of industrial disputes. We had thought that as a result of past discussion the impracticability and ineffectiveness of such a policy had become fully apparent. Recently, however, the controversy has been revived by the ill-advised action of the Senate Committee on Interstate and Foreign Commerce. In formulating a bill for the termination of Federal control and the return of the railroads to private ownership and operation, this committee has recommended that railroad employees be denied the right to strike under legal penalties, and that they be required to submit all grievances to the adjustment of joint boards, consisting of an equal number of representatives of employees and railway officials, and has vested the final right of the determination of all grievances in a body, appointed by the President, to be known as the Transportation Board. Expressed in other terms, this proposed anti-strike legislation provides for the compulsory arbitration or adjustment of all labor disputes.

"In its final analysis the opposition of the wage-earner to compulsory arbitration is threefold in its main aspects. In the first place, it is looked upon as an ill-concealed scheme by which the employer hopes to gain a mastery over his employees, by making strikes illegal and thus depriving working people of their only economic power, by suppressing and disrupting labor organizations in depriving them of the power to effect their purpose, and by creating rates of pay and conditions of employment through arbitrary judicial process instead of through the relative economic strength of collective bargaining.

"The wage-earners consider the forces behind the movement for compulsory arbitration really a symptom of the mental and moral degeneration through which all great and prosperous nations have passed, when the fundamental principles of individual liberty are forgotten, when the attitude for which the founders of liberty were honored falls into social disrepute, and when the struggle for wealth overshadows all other considerations with a consequent disregard for the rights of the working classes.

"Aside from the railway labor situation, and in addition to the fundamental objections of labor to compulsory arbitration, it should also be borne in mind that this method of settling industrial disputes is not feasible. Being u just and undemocratic, free men will not endu it. It is, therefore, impracticable. In past year all the leading industrial and commercial natio of the world have endeavored so far as railroa and other public utilities are concerned to pr hibit strikes and require labor disputes to b settled by mediation or arbitration. With th exception of France, and Russia under the ol régime, they all found that such a policy woul not work. In Russia, discontented public servic employees were executed, and in France, becaus of its laws for military service, strikers on rai roads were called to the colors and required t work through military coercion. Hundreds o thousands of men cannot, in the event of a strik or a refusal to accede to the rulings of industria arbitration, be arrested and placed in jail. Me will not submit to the confiscation of their finan cial resources or property because they have re fused to accede to inadequate rates of pay o unjust working and living conditions. In Aus tralia, where compulsory arbitration in a com plete form has been attempted, it has not suc ceeded where applied. Statistics for the Com monwealth of Australia show that ninety-tw strikes occurred during the period 1913-191 alone, thirty-six being reported during the yea 1917, the last year for which official informatio is available. During the fiscal year precedin the World War there were forty-six strikes i New Zealand. The judicial records of New South Wales show six convictions for illega strikes in 1918 and four convictions for the firs six months of the year 1919. The number o industrial disputes in Australia, as a whole, have steadily increased since the enactment of compulsory arbitration laws, and the principal method of their adjustment, as all official records show, has been mediation and not compulsory arbitration.

"Wherever compulsory arbitration has been successful, it has been when certain fundamental conditions have been sanctioned in a preliminary way such as the principle of a living wage, of an eight-hour day, etc. It is only under such conditions, in my opinion, that compulsory arbitration would be effective, and, of course, it is unnecessary for me to say that if the working people of this country had their fundamental rights guaranteed to them, there would be no need of compulsory arbitration as the wage-earner would have secured a sanction for all of the fundamental grievances which otherwise might have been the occasion for strikes. In the light of Australian experience, however, it seems clearly evident that in the United States, where we have, comparatively speaking, a much wider extent of territory, a vast complexity of industry, great variations in industrial standards, wages, and industrial conditions, and absolutely no consensus of opinion as to the fundamentals of industrial relations, the establishment of a compulsory method of adjusting industrial disputes would be wholly futile and impracticable.

"No one will gainsay the claim that the public interest is predominant in industrial disputes, especially in the case of public utilities and industries like coal, which are so directly connected with the subsistence and comfort of the people. The difficulty has been up to this time that no one seeks to define the public interest and welfare except in physical terms. Strikes, it is asserted, interfere with business and industry, threaten the food supply of urban communities, or may result in the lack of heat and light to the masses of the people, and, therefore, men must be forced to remain at work so that the public convenience and well being may not be disturbed. This attitude is correct on the surface. Further analysis, however, reveals two fundamental fallacies: (1) the assumption that the public is interested in coercing men to work under conditions and relations which are unjust and intolerable, and (2) the further assumption, that, in the face of indefensible conditions of this

aracter, strikes can be prevented by legal probitions and penalties. For instance, does the iblic interest require and does the public deand that wage-earners shall work for a substence wage which is not sufficient to maintain eir families in health and reasonable comfort, id which makes it necessary to supplement e earnings of the husband by the work of ives and children? Does the public demand at men shall work excessive hours, to their ysical detriment and their intellectual degraition, or, that the conditions of labor should be intense that workers should be thrown on the dustrial scrap heap by the time they are forty-e years of age? Does the public interest deand that men shall continue to work under nditions of industrial serfdom wherein they e prohibited from joining labor unions, and, e denied the right to organize and deal collectively through their own representatives with ist and selfish aggregations of capital? It is ear to my mind that the public does not deand these sacrifices of labor, or, the establishent of compulsory arbitration to perpetuate ch conditions.

"An industrial bill of rights or fundamental iarantees and safeguards must be extended to bor before it can consider other constructive easures. We must be assured of the right to living wage, the right to a reasonable workiy, the right to organize and to deal collecvely through representatives of our own choosg, the right to deny that labor should be treated a commodity, and similar rights and princies which were adopted by our own government its war-time policy towards labor, and which ave been sanctioned and assured by the enlightied opinion of the civilized world in the labor ovisions of the League of Nations in the Treaty Peace."

Professor Jeremiah W. Jenks said in part:

"Before people understand conciliation, or artration, or collective bargaining, or any other ays of settling disputes, there are certain funamental principles that have to be understood both the workers and the employers. If those rinciples were clearly understood there would no use for any other method of settling inustrial disputes because disputes would not rise. In newspaper articles and in discussions etween employees and employers there seems be a wrong opinion as to the individual interst. The interest on capital—the wages of mangement—the cost of raw material, all the exenses that come in connection with business, ave to come out of the income of the business. his fundamental principle is forgotten. It is apossible for wages to be paid out of profits. may be that for a short period wages could paid out of profits, but to keep on doing so is apossible. It seems to be assumed on the part a good many that the profit of the employer ally comes from closing down on wages. The act is that there is one great common fund out which all the expenses must be paid, wages, axes, etc.

"We have heard a great deal said with referice to the community of interest of employer id employee. Some say they are identical, some y we are between the employer and the emloyee. Both statements are true, and neither true. If what I have said with reference to ie product being the source from which the xpenses are to be paid, then the interests of the mployer and the employee are identical, if they ncrease the output. Anything the employer can o to lessen the cost is increasing the profit. If, a the other hand, the workmen can increase ie amount of the output, or equal it without verwork, they have the opportunity to get igher wages and the employer has the opporinity to get his higher profit. Both of them ught to try to increase the value of their prodct as much as possible.

"Various expenses must be counted on before employers will get their profit. The employees will get their wages, but this is assuming that no conflict arises. When both understand this fundamental fact, there will not be any serious trouble. I will assume still further that in very many instances both of them want to do the square thing. An absolute just wage would be paid for the exact amount which the laborer would contribute, but there are so many other factors coming in that you cannot be quite sure. Nobody knows, and the question is so complicated, no one can find out. By going at the thing in a fair spirit, with an idea of coming as near the truth as possible, with the idea of taking and giving the just amount, they will be interested about it and come nearer to the truth than in any other way. While the interests are not conflicting, the community of interest is so close that they will come near together.

"In considering the share in the business, the share in the management that is to be given to the working man, we are likely to forget fundamental things. For instance, regarding the share in the management that is to be given to the working man. There are no two industries, no two plants where you can get the same kind of men. In one industry the employees do contribute a much larger proportion to the profit than in others. In some working conditions determine it, transportation, housing, etc. Each industry and each plant must be considered by itself to get at the exact amount of participation in the management that can be obtained. There must be recognition of rights on both sides. I can see no reason why the employees should have a share in the management unless they are qualified to share, but only on questions of wages, hours and conditions of living. On such questions as to whether you should borrow thousands of dollars, as to discounting, etc., etc., you can get no help from the workers."

CONCILIATION AND CO-OPERATION

Louis B. Schram said in part:

"To attempt compulsory arbitration would be an experiment which, if unsuccessful, would involve results so disastrous that we might well hesitate to enter upon it. We have not yet exhausted other methods and they must be tried first.

"Arbitration as the public understands it is not the true understanding of the matter. If you ask the man in the street what he understands the Board of Arbitration to be, he will tell you that it is a judicial body consisting of an uneven number of men selected by the participants in a dispute to decide the dispute. It isn't. It is a body of advocates selected by the contending parties with a view to their representing the interests of these parties to the best of their ability, and in case of their disagreement an umpire is selected whose decision shall be final.

"Now the great difficulty has been—which I must say the students of industrial problems are largely getting away from—the prevalent idea that compulsory arbitration was a satisfactory method of settling disputes. Both sides are afraid that the fifth man will turn out not to have the qualifications which they anticipated, and that therefore it is a gamble, a chance, as to whether the body when completed will be an efficient body, one calculated and one able to do justice.

"Conciliation, on the other hand, or rather bodies selected to represent both sides in an industrial dispute consisting of an even number of representatives of the disputants, are not subject to that criticism, and in practice do not make for a deadlock.

"Now all human relations in order to be satisfactory ought to involve the principle of mutuality. Yet we employers criticise the workman for leaving his job, and the proposition has not yet been advanced that we should compel the manufacturer to remain on his job or that a man engaged in business may not cease doing business because by doing so he would throw the workmen out of a job.

"From my own experience and from observation I am forced to conclude that in any event at this time compulsory arbitration is neither advisable nor justifiable, if for no other reason than this, that efforts to secure another and more feasible method of settling industrial disputes have not yet been exhausted. By the cultivation of a spirit of co-operation and good feeling a better method can be found."

Report of the Woman's Department to the National Civic Federation

Miss Maude Wetmore, chairman, presented the report of the Woman's Department to The National Civic Federation, which was as follows:

The report of the Woman's Department to The National Civic Federation was presented by Miss Maude Wetmore, chairman, and was as follows:

"In reviewing the work of the Woman's Department of The National Civic Federation during the war period, an absolutely inadequate report would be made were we to confine ourselves to the activities of our members in our own Department. Civilization has been in the throes of a world war for three years, and, when in April, 1917, we joined forces, all loyal Americans—civilian men and women alike—immediately assumed their individual responsibility, and, until the signing of the Armistice, contributed in no uncertain degree to the winning of the war.

"It can be readily understood that such times were not propitious for the specialized type of work our Department was organized to do. Surveys and programs gave way to patriotic service in and out of season. Soldiers had to be fed and cared for; hospital supplies had to be made and food conservation taught and practiced. All hands helped in the sale of Liberty Bonds, and no national movement was undertaken in which hundreds of our women did not participate.

"The Woman's Department took the position that the many agencies, Government and otherwise, specifically organized for war service, should be the medium through which our members could best concentrate their energies, and it is interesting to note that the training and discipline which the members of this Department acquired, through their years of service, placed them at once as leaders in their communities in the Woman's Committee of the Council for National Defense, the Red Cross, the Y. M. C. A., the National League for Women's Service and other war organizations.

"Such work as was vital to the Woman's Department was carried on, however, and, in addition as a unit in different localities, certain specific war services were started and put through, such as the War Camp Community Unit No. 3, which was entirely financed and operated by the New York and New Jersey Section.

"In Boston a Food Kitchen and Demonstration Station was maintained on the Common. These are but examples; the full report will be in print in a short time.

"It is the future, however, with its untold possibilities and responsibilities, that now con-

Compulsory Sickness Insurance

RESULTS BRITISH NATIONAL HEALTH INSURANCE SYSTEM—PROPOSED LEGISLATION IN NEW YORK STATE—OPPOSITION BY EMPLOYERS AND ORGANIZED LABOR

THE SOCIAL INSURANCE SESSION of the Federation's Annual Meeting, opened by Timothy Shea, Acting President Brotherhood of Locomotive, Firemen and Enginemen, and presided over by Samuel Gompers, President of the American Federation of Labor, was devoted to discussions upon compulsory sickness insurance, workmen's compensation extensions, including occupational disease, and health conservation.

BRITISH ACT CONDEMNED

DR. FREDERICK L. HOFFMAN, third Vice-President and Statistician, The Prudential Insurance Co. and a member of the Civic Federation's Committee on Foreign Inquiry, reported upon findings relative to the British National Health Insurance Act. Dr. Hoffman had just returned from England, Scotland and Ireland, where he spent five months inquiring into its operation. He interviewed representative panel physicians (seeing them in active work), clerks (managers) of administrative insurance committees, public health officials, both national and local factory inspectors, leaders of labor and commercial enterprises, executives of friendly societies, actuaries of the Joint Committee of National Health Insurance, editors of insurance papers, persons connected with the Poor Law and medical associations, and prominent public men, more than 250 in all. He also inspected the drug practices.

In a summary of his conclusions he stated:

The act is condemned by insurance authorities as an unsound insurance measure; by medical authorities as an unsound method of medical relief; by pharmaceutical authorities as an unsatisfactory method of drug administration; by labor leaders as contrary to the best interest of the labor element; by large employers of labor as a menace to productive industry; by the organized medical profession as opposed to the best interests alike of panel practitioners and those who limit themselves to private practice; by public health authorities as of no real value in the furtherance of public health measures; by authorities in charity, philanthropy and those who administer poor relief as not rendering satisfactory aid and assistance to those whose needs are most urgent.

Among Dr. Hoffman's explanatory statements were the following:

When the National Health Insurance Act of Great Britain went into effect, the social condition of British wage-earners had made enormous progress during half a century. Wages had increased and hours of labor had been diminished. The evil of child labor had been measurably decreased and conditions affecting the employment of women in industry had been improved. Industrial accidents were less common and the general health of the population had shown great improvement. No other country showed a corresponding reduction in the death rate from infectious, transmissible or otherwise preventable diseases. The public health administration of England had become a model for the civilized world.

British health insurance has not raised the standard of sanitary progress. The lowering of the English death rate during the previous 30 years, challenging favorable comparison with all other countries, had been achieved without compulsory health insurance of any kind.

The fundamental error of the act was to underrate the voluntary form and to establish a subsidized system of relief. National health insurance does not promote public health or the prevention of disease.

There are, broadly speaking, two classes of insured—members of approved societies and so-called deposit contributors who pay their insurance dues individually to government agencies. A deposit contributor seldom has enough to his credit to admit of more than a week or two of sickness benefit, and his wife can practically never get maternity benefit.

The benefits under the act consist of medical attendance, strictly limited both as to doctor's services and medicine to a minimum which would be considered decidedly inferior in the United States, even in the case of the very poor; of a so-called sanatorium benefit, a form of poor relief; of a maternity benefit of 30s.; a cash payment in the event of illness when there is total incapacity to work. There is a disability benefit, virtually an invalidity pension,* up to the age of 70, when the old age pension goes into effect. Provision is made in the act for the payment of additional benefits not yet forthcoming after nearly eight years.

The act has applied to all wage-earners receiving less than £160 per annum, but was recently raised to £250.

The administrative machinery necessary to carry the law into effect is of truly colossal proportions. It is probably safe to assume that certainly not less than 50,000 persons, directly or indirectly, in paid or unpaid capacities, are required to meet the basic administrative necessities of the act.

The ill-defined provisions regarding medicines and appliances are disastrous failures. There has come into existence a complicated system of drug pricing and checking involving the handling and re-handling of not far from 30,000,000 prescriptions accounts a year.

The main objections on the part of organized labor are that the benefits under the act are inadequate and insufficient. The act has had the effect of diminishing the sense of self-reliance, independence and thrift. Malingering in its most subtle forms has become a matter of common occurrence. The proportion of cases investigated found fully able to work is rarely less than 40 per cent. and often exceeds 50 per cent. With respect to the insurance the labor element is demoralized and thoroughly discontented with the benefits which invariably fall short of expectations. A doubling in value of the benefits is practically unanimously demanded as an imperative duty on the part of the State.

After seven years of experience with the act, the viewpoint of leading manufacturers and other employers of labor throughout Great Britain is that national health insurance has no direct relation whatever to labor efficiency except that a larger amount of malingering tends persistently toward a diminution of normal output.

As to the problem of destitution, once a people becomes accustomed to receive public aid in a skilfully disguised form, the demand is insistently for more. Great Britain is confronted with this situation today. There have been changed conceptions of State duty and private liability for individual welfare, particularly with reference to adequate support during illness, invalidity and old age.

Efforts to make the question of an adequate provision for illness and old age on the part of wage-earners a matter of government concern are perilously near to methods of doubtful public finance by which a part of the wage-earner's income is capitalized for the use of the spending authorities in charge of the government.

The British act does not rest upon an adequate actuarial basis, but upon arbitrary assumptions as to cost.

It is impossible to state the true expense rate of the insurance on account of a grotesquely inadequate system of governmental balance sheets and revenue accounts.

The medical benefit regulations are extensive, burdensome and complicated in the extreme. In the opinion of the chairman of the Consultative Council of the Ministry of Health, "the needs of the nation require a comprehensive re-organization of the medical services." The listing of doctors by the "panel system" has resulted in a division of the medical profession. The fees of the panel doctor, over which there has been much contention, usually bring the doctor, when the accounts are settled, less than his regularly allotted payments. A revision of the terms of remuneration is under consideration. There is a never-ending discussion as to the proposed limitation of panels, now fixed at 3,000 names.

It has become the rule rather than the exception for panel patients to seek medical attention in the case of serious illness elsewhere than in the office of the panel doctor. There are frequent prosecutions for violation of rules and regulations—over-prescriptions, lack of attention, unsuitable surgery accommodations, unsuitable hours, incivility, etc.

Public faith and confidence in medicine as a profession is gone. The public is confronted continually by quarrels and discussions concerning terms, allowances and gratuities. What was once the most highly respected of all professions has been practically reduced to a trade, and there is open advocacy of the incorporation of the British Medical Association into a trade union to secure pecuniary ends and better terms.

As to sanatorium benefits, the Minister of Health has given expression to his dissatisfaction with present methods. In regard to the duration of treatment for tuberculosis, which is 180 days in Chicago and 90 days in Germany, in England the institutions average probably only about 60 days. There has never been developed in England, as in the United States, a large and well-sustained voluntary movement in a crusade against tuberculosis. No new or effective machinery has been brought into existence for the prevention of sickness.

The alleged benefits to result from national health insurance in removing ill health producing conditions in particular trades have not materialized.

PROPOSED LEGISLATION

SENATOR FREDERICK M. DAVENPORT, who introduced the pending measure for compulsory sickness insurance in the New York State Senate, advancing arguments favoring its enactment, said in part:

My notion is that it ought to be tried out under the general terms of this bill which are something like this: Within a great industrial establishment there is a Board of Directors for illness prevention and illness care. This Board of Directors is made up of representatives of the employees, three of them; representatives of the employers, three of them; and the six select a neutral chairman, those seven men working within the industrial establishment only upon

* 5s. a week for men and less for women.

those matters that have to do with illness care and illness prevention.

Now, so far as that phase of this bill is concerned, I think it has its great value in our time. If an industry is organized, it gives an opportunity for men on both sides to sit down together over the things that have to do with simple human sympathy and, being brought into a more definite relation with each other in matters of this sort, it ought to be easier for those men to get along together in greater and more intricate matters of a larger sort. And if the industry is unorganized, then it ought to show to the whole industry how great, where the need is, are the benefits of that form of organized-working-together which brings the representatives of the organization of the men and the representatives of the organization of the employers together in working out the great problems of our time.

I agree with every man who says illness prevention is the big thing, that illness insurance is a secondary thing compared to it. Even in America, where we know we are better off than any other people in this world, and are proud and happy about it, we know that illness is not satisfactorily taken care of; that the whole burden of illness, the burden of sickness, which falls with crushing weight upon certain individuals and certain families and not upon others, which does not fall like rain, upon the just and the unjust at all, but falls in particular places, that the handling of the whole subject of the burden of illness and of human health in America is not being done as well as it ought to be done.

Now, I have also been impressed by the great necessity seemingly of the growth of medical charity. Everywhere you hear about the necessity of extending the State Health Department and the City Health Department, and doing everything possible to care for the great volume of illness that more and more seems to be uncared for under the regular medical professional life of our time. That, in the first place, is a great loss to the medical profession, which is not right. I want to see a system developed in America that handles those things earlier, before the time comes that disease breaks down into the necessity for the dispensary and into poverty. I want to see it organized in the great industrial units of America and in the great industrial communities of America, so that those things will be taken care of in time and taken care of by and with the consent and assistance of the great body of industrial workers themselves

Now, I claim that any system that undertakes to work that out, imperfect though it may be at the start, is far less paternalistic than any system which in its unorganized form allows the whole thing to drift into free dispensaries and medical charities, increasing from time to time in great volume, until it seems likely to overwhelm us. I want to see that taken care of ahead of time, by and with the advice and consent of the great body of industrial workers themselves, working hand in hand in industry with the liberal capitalists of America.

I don't want to see this or similar matters tied up to a State in such a way that you have the elements of Socialism in your process. What I want is to have this thing done by mutual cooperation—democratic units inside of industry itself, so that the initiative of men and the quality of men to be represented in industry will be worked out side by side with this great human problem. And I want to have the State have just as little to do with it as possible. The State has got mildly and reasonably to supervise a great many of the associated activities of a commonwealth. We understand that. But the less of it, the better. And I want that understood as my position and as the rootage of this bill. And so from the standpoint of State Socialism or enormous burdens on the taxpayers, it seems to me that this project is entirely free from those stigmas.

LABOR AND SICKNESS INSURANCE

James W. Sullivan, of the American Federation of Labor; chairman of the Civic Federation's Committee on Foreign Inquiry, made the following points:

The state may justly carry out measures intended to protect all its citizens alike against the various menaces to health and to control treatment of the sick. In the matter of meeting wage losses, the State may be expected to supervise associations for the purpose, and supply the machinery for such supervision. How much further should it go? The trade unionist stops to reflect when in theory he is brought to the line which sets the wage-workers aside as wards of the State, as subjects of special regulation, and as material for a social machinery run by State officials.

Sickness insurance! What is to be insured? What is sickness? Who is sick? Who is to decide when one is sick? Who is to say when one's sickness is his own fault? Who is to determine justly many questions in the matter of sickness? To what degree is sickness a mere matter of the mind? People of robust mentality ignore the aches and pains which frighten timid people. One's habitual attitude toward sickness counts for much. Some have the doctoring habit, some the patent medicine habit, some the habit of ignoring what sends other people to bed. Under any form of sickness insurance, voluntary or compulsory, a certain proportion of the members of any group would quickly develop the habit, to be indulged in to the maximum degree, of being "on the funds."

A fair statement of the present attitude of organized labor is that, in the case of sickness insurance, as with respect to many other propositions, it refuses to take a plunge in support of a project which is part of the program of Socialism. Nor is it prepared to support without careful scrutiny measures drawn up by associations not in its membership; it will not approve of any law which will tend to break down its own systems of mutual assistance; it regards the degree to which the interposition of the State shall extend as a matter to be settled in favor of the principle of liberty of the individual; it resents an indiscriminate classification of wage-earners as objects of public relief; it looks to wider measures than sickness insurance in the social campaign for the reduction of the death rate, the prevention of sickness, the improvement of public methods of caring for the sick and, finally, for the general sharing of the burdens of sickness.

EMPLOYERS' ATTITUDE

Mark A. Daly, General Secretary, Associated Industries of New York State, offered arguments in opposition to Senator Davenport's position. Some of Mr. Daly's statements follow:

Everybody, I presume, will admit that if the percentage of illness were anything like what the proponents of compulsory health insurance say it is, some infinitely drastic means should be taken immediately to repair some of it, at least.

Last June the Associated Industries, which is probably the largest State association of manufacturers in the country, determined to inquire into the percentage of illness among workers, that we might know the truth ourselves. I have here the record for the first three months, July, August and September, covering three hundred firms, employing a total number of 131,146 employees and all these records were substantiated by personal investigation, regardless of cost.

In the three months, with this coverage of one hundred and thirty-one thousand people odd, the total number of absentees for all causes was 9,973, or seven and six-tenths per cent. of the total employed. Of this absenteeism there were 4,250 employees absent because of illness, or 3.2 per cent. 3.2 per cent.! The number absent through accident was 580, or .4 of one per cent. The number absent for personal reasons, such as fishing, papering the spare room, and so on, is 5,143, or 3.9 per cent.—greater than the percentage absent for illness. Now, then, the days lost through illness were 43,899½ days, through accident, 5,433½ days, and for personal reasons, 41,015½ days. The hours lost for illness were 336,468½ hours; for accident, 47,788; for personal reasons, 357,931½. The value of time lost through illness is $138,816.83.

These figures mean that the average wage loss in industry, due to sickness, for each three months, is a little less than $1.06 per workman. Multiply that by four and you have an annual wage loss, if these figures are correct, and I believe they are, of $4.24 per workman. Contrast that figure, that $4.24 annually, with the figures which are part of the propaganda of proponents for compulsory health insurance. These proponents declare that every workman in industry loses nine days per year through sickness, or approximately $36, at a very conservative estimate.

The claim of proponents of compulsory health insurance is that poverty is a direct result of sickness; that workmen cannot afford to pay for a doctor's care or for necessary medicines, etc. Does it seem possible that the statement is true, in the face of the figures I have just quoted to you? Would you think it necessary to expend hundreds of millions of dollars annually to make up a wage loss of $4.24 a year—one day's pay? Would you say that the self-respecting, independent workman of this State of New York, the man able to earn $8 to $12 or $15 per day, would become a party to foisting upon the State this thinly disguised form of poor relief?

Do you know that the average wage in New York State, for males and females, is approximately $26 per week? These figures are given out by the State Industrial Commission. In November the average weekly earnings of factory employees were $25.37; in December the average weekly earnings were $26.32. I make these points concerning wages merely to show you the class of people that Senator Davenport would legislate into pauperism. And the cesspools of the State, the unfortunates and the victims of heredity, who might possibly furnish an excuse for this class of legislation but are excluded from participation in it, go by the board as negligible, as not worthy of consideration.

Now, one of the things that Professor Davenport said was in connection with the number of people needing medical attention. According to these figures on absenteeism, 55.8 per cent. of this general average were attended by a physician, and 44.1 were not attended by a physician. But there were only 881 major illnesses in this experience, or 20.7 per cent., while the bulk of the illnesses were minor illnesses, 3,369, or 79.2 per cent.

It may surprise some of you to know that out of the approximately 10,000 people absent from all causes in this survey, 2,882 carry one type of insurance, either life, health, accident, benevolent, or fraternal; that 1,043 carried two types of insurance; that 195 carried three types of insurance; that 130 carried four types of insurance, and 39 carried all five types of insurance. So it looks as if, perhaps, the workers were able to take care of themselves a bit.

I make the statement now, without fear of successful contradiction, that for medical benefits and cash benefits, medical supplies, and so forth, under this bill, the cost would be not one penny less than $125,000,000 annually. The proponents say it will cost 24 cents a week.

On the basis of Senator Davenport's bill, which provides that not less than 5,000 persons shall be members of any one fund, and because the Davenport bill as originally introduced covered 8,925,000 persons, the mere cost of administration is a staggering item of more than thirty and a half millions.

On the basis of the first bill, there would be 892 funds, permitting 10,000 people to a fund, not 5,000. We will say that to do the business

of 10,000 people, one fund could get along with 25 persons. That means 22,300 persons as the minimum required force for the administration of this act alone.

A recapitulation of estimates follows:

7 directors each fund, one meeting each week, at $5 each, 52 meetings @ $35 each, × 892 funds	$1,623,440
892 medical directors @ $5,000 per year each	4,460,000
892 managers @ $2,500 each per year	2,230,000
892 funds, 25 employees each, at average of $900 each per year	20,070,000
Furniture and equipment, $500 each fund	446,000
Office supplies, 892 funds @ $300 per year	267,600
Rent of offices, 892 funds @ $100 per month each, or $1,300 per year	1,070,400
892 funds, two typewriting machines each, at $100	178,400
Postage, 892 funds @ 5,000 members each, equals 4,460,000 members @ .02c. each per year, and average of $3 per week for regular office postage	228,352
Telephones, 892 funds @ $75 per year each	66,900
Grand total	$30,641,092

Businessmen do not admit that they are responsible for the illness of the worker aside from occupational diseases.

The economic limit has almost been reached through which industry can pass on to the public burdens of questionable merit. If any more is added to production costs, the public won't buy, the employer cannot manufacture goods to put in storage, and, consequently, the workman won't have a job.

SAMUEL GOMPERS UNALTERABLY OPPOSED

Chairman Gompers: I was a bit surprised to hear the statement made by Senator Davenport that if this subject of compulsory health insurance should be thoroughly discussed and it be proven to be impractical, then that nobody would want it. I venture to say that there is quite a group of people in the State of New York and in other states that, no matter how convincing would be the proof that it is impractical and impossible and, instead of being beneficial, prejudicial, would not be changed in the slightest, and they would still want it, not necessarily for themselves but for the masses of labor. There are some people of which this group is a part that, if you present facts to confute their position, they will answer in point of controversy, "So much the worse for the facts."

We should have for any proposal a good purpose but the most important thing is the results. And has compulsory health insurance where employed produced the results that we should adopt? That is the thing. Is the health condition, is preventive work, better in other countries than ours? Surely we have not attained the acme of perfection. Is the length of life of the people of other countries greater than the length of life of the people of the United States? Statistics can demonstrate that easily.

I can understand how we may have privately conducted membership in voluntary health insurance, and there are not in all the world so many people who have insured themselves voluntarily and co-operatively as among the people of the United States, but even if it were State health insurance, with all the other good or best provisions in the bills before the various legislatures of the State of New York and of other states, if they were of a voluntary character scarcely any one would interpose objection.

But bear this in mind, that once compulsory health insurance is enacted into law in the State of New York, no matter how wrong it may be to any individual or many of the individuals, you cannot escape it. You have got to remain a member of that compulsory insurance under the law. No matter what grave injustice may have been done, you cannot get out except you move to another State, and we are not all of us prepared to move from the State of New York.

If the health insurance is to be conducted by the State, then let it be of a voluntary character, and every man or woman who desires to come under the provisions of the insurance law of a voluntary character in the State of New York, he or she may join, and come under its provisions, and if any injustice, if a great wrong is done to an individual or to a group of people or to numbers of people, they can then resign from it and be free.

The question is, after all, which is best. No one will dispute the fact that out of our wonderful progress industrially and commercially and in transportation, the ills of modern industry are terrible. The injury of the workers in modern industry and transportation is terrible, but there is an old saying in our language that often the cure prescribed is worse than the disease.

I should want the people of our country to have the very best conditions and standards, and the labor movement has done more than any other group or any other agency in our country to bring, first, prevention, second, insurance, and thus provide a large mass of the workers with those things sought to be accomplished through State agency.

The organization of labor of which I am a member, and have been a member for many years, has this statistic—this data to its credit. Before 1886 the members of my craft worked any hours—any hours. There was established a law in that organization, adopted by the membership, that eight hours were to constitute a day's work. In connection with the organization, a death benefit was established. That is, in the event of the death of a member, a certain amount of money should be paid his widow, his family, his dependents. Sick benefit was provided, but I want to refer to this particular benefit, the benefit in case of death, because that is the exact data upon which will depend the statement that I am about to make to you. As a consequence of the death benefit it was necessary for the claimant to present to the local union of which she or he was immediately a member, the health certificate and the paper showing the time when the deceased was born and the time that he died. These were official certificates, authenticated then by the Board of Health or the Mortuary Board of the locality and sent in to the general office of that organization. There could be no collusion between the health officers and the mortuary officers or the officers of the local unions and the claimants to those benefits. And within a period of ten years the records showed that the average length of life of the membership of that organization had increased more than fifteen years, the longevity of the members of that craft had increased more than fifteen years. The length of life of the wives of the members, for whom also if they died was paid a burial benefit, had lengthened over ten years. The sick benefits for which we provided showed a falling off of the amounts paid in proportion as the hours of labor were reduced, bringing better standards of life, giving more leisure, more opportunity for decent homes, or, rather, better homes, better and more nutritious food, the opportunity for leisure and recreation. This all brought sickness prevention, and the health insurance was in the form of the organization. Now, what is true of the organization to which I owe my primary membership in the labor movement is equally true, more or less, of every other bona fide labor organization of America.

So far as I am concerned, all these great sums of money which have been referred to and which have been quoted here—if they brought about the desired result without greater injury—would prove no obstacle on my part to my favoring the proposals. To me the matter is far deeper and more fundamental. I have said time and again that I will take second position to no man in America in my veneration for the spirit and the institutions and the ideals of the Republic of the United States. And yet I am opposed to giving even our great Government additional powers over the lives and the normal activities of our people. You give government authority to determine as to whether any worker is entitled to the benefit under such a compulsory health insurance law, and I assure you it will take jurisdiction and exercise power. We have lived as a nation for over a hundred and forty years. The people lived in the Colonies a few hundred years before that period. As a nation we have grown wonderfully in numbers, in territory, in wealth, in industry, in commerce, in science, and in all the attributes that make up a great people, and we have lived upon the foundation of freedom and the ideal of liberty.

We have blundered in many things. In what group would there be no blunders? Who is infallible as an individual? No one claims that for himself or herself in the United States. There is one great personage in the world who has the attribute of infallibility. We are not He. The fallibility of man finds its manifestations in groups and finds its expression even in a country. I am of the opinion that in considering these experiments with the humans formed into society, into a state, into a country, with its power, not only judicial, not only legislative, and executive, but with the armed force of the country or of the state, that when it comes to matters of this character, we should bear in mind that we are human and have all the frailities of humanity and that frequently that fraility and weakness are exaggerated when we organize as a group or as a country.

I was astonished when I heard Senator Davenport speak of the compulsory health insurance as a tendency to bring employer and employee together. How? Where? By what process of reasoning would that be brought about? The establishment to which he referred, the Johnson establishment, is not compulsory. That is not administered by the law of the State. That is administered somehow by the employers and probably some of the employees. And, as the Senator said, this establishment and the men "beat the unions to it." I don't know in which respect except the one he mentioned. I would like to know something about the wages and the hours and the standards of life and labor which are in that establishment. It is all very good to provide sickness insurance, but how about the wages sufficient to fill the needs of the family budget? And not only that. As far as I am concerned, I protest against the concept that all that should be paid to a man in the form of wages is enough to allow him to fill the stomachs of himself and his dependents until the wages have been expended. A man needs something more. The wage-workers, whether men or women, are entitled to something more for the great service they are rendering to society, and service without which progress and civilization would come to a standstill and perish. The workers of our country and of our time are deserving of something more. But even I would like to know something of the wages and hours of labor and conditions of employment in that establishment before I will consent to say "Amen," that the people over at the Johnson establishment have "beaten the trade unions, the labor union, to it."

Of course the subject is a very broad one. It is largely speculative except from the fundamental principles involved, to which I have tried to refer. But I do want to take occasion just now to say that it has come to me that recently some person has declared that Gompers has been won over to compulsory health insurance. I have already made my answer, which is that I am unalterably opposed to it.

The complete addresses on "Compulsory Sickness Insurance," "Compensation for Occupational Disease" and "Health Conservation" have been published in pamphlet form and may be secured at Federation Headquarters, 33rd Floor, Metropolitan Tower—price $1

Health Conservation Plan

SOCIAL INSURANCE DEPARTMENT RECOMMENDS THAT SPECIAL STATE COMMISSIONS STUDY SICKNESS, EXTENT, CAUSE, PREVENTION, TREATMENT AND CARE, WAGE LOSS REPLACEMENT, AND EXTENSION PUBLIC HEALTH EDUCATION

IN transmitting the report of the Committee on Constructive Plan, the Chairman, DR. ALVAH H. DOTY, said that, after months of careful study and deliberation, the Committee had determined to recommend presentation of the statement incorporated therein, particularly to the Legislature of the State of New York, believing that it might properly be sent to other legislatures in states where compulsory sickness insurance legislation is under consideration.

WARREN S. STONE, Chairman of the Federation's Social Insurance Department, approved the recommendation and sent to legislatures convened in important industrial states this year statements identical to the one for New York, which follows:

STATEMENT ON DISEASE PREVENTION

To the Legislature of the State of New York:

The undersigned, the Committee on Constructive Plan of the Social Insurance Department of The National Civic Federation, has given careful consideration to the bills introduced in the New York Legislature in the years 1916-1919, commonly known as the Mills, Nicoll, and Davenport-Donohue bills. Our views upon the arguments advanced by the proponents of this type of legislation have been expressed in a pamphlet recently issued by the Committee entitled "A Refutation of False Statements in Propaganda for Compulsory Health Insurance." For this reason we believe it inadvisable at this time to enter into any further discussion of this phase of our subject.

We desire, however, to call the attention of the Legislature to a lecture* before The New York Academy of Medicine on October 2, 1919, by Sir Arthur Newsholme, formerly Chief Medical Officer of the Local Government Board for England. Commenting upon the British Health Insurance Act, he says: "The act in its present form is now generally condemned; and it is significant that the need for its radical reorganization appears to be universally accepted. Two medical benefits (medical and sanatorium) and a maternity benefit were conferred under the act; but, as they have been administered, it cannot be affirmed that any marked public benefit has accrued; and it is certain that if the same amount of money had been placed in the hands of the public health authorities to provide adequate medical aid to those needing it, of the kind most lacking and which they could least afford to obtain, great benefit to the public health would have been secured."

Rather than continue the discussion of legislation for compulsory health insurance, we have attempted to evolve a Constructive Plan to be dealt with by the Legislature. It is our unanimous opinion that the immediate problem for consideration is not that of insurance against sickness, but the larger and more important problem of the extent of illness and the methods for its prevention. We have set ourselves to this task and desire to submit the following facts:

At present, there is no exact information as to the extent of illness. It is clear, from studies which have been made, that a considerable proportion of the population does not receive any medical care whatever; that others are unable to obtain adequate medical treatment and that a very large percentage of existing sickness could be eliminated if proper preventive measures were employed. Large sums are being paid annually by the different states for the maintenance of institutions for the treatment of disabilities and their consequences, due largely to neglect. A large number of communities are engaged in no active health work and have grossly insufficient appropriations for health activities.

Statistics of other sickness surveys in the hands of this Committee prove beyond doubt that a large percentage of disabling illness is caused by communicable diseases. There is competent medical authority for the belief that many of the diseases of later life are the sequelæ of infectious diseases contracted in childhood.

The subject of sickness needs to be considered from the following aspects, in the order of their importance, namely:

1. Prevention.
2. Treatment and Care.
3. Replacement of Wage Loss from Sickness.

1. PREVENTION. This is largely a problem of the education of the public concerning the preservation of health and the prevention of disease. The care and treatment of communicable diseases are essentially functions of the public health authorities, since one individual may transmit infection to another and thereby become a menace to the public health. Already police powers are given to Health Officers to remove, even forcibly if necessary in the interest of the public health, and to treat individuals suffering from these diseases. These powers affect all the people alike, regardless of their ability to pay for treatment. The time has come, in our opinion, when the State should display greater activity in the treatment and care of all communicable affections—particularly tuberculosis and venereal diseases—similarly from the standpoint of public health protection rather than from the standpoint of poor relief. More, also, ought to be done to educate the people relative to public and personal hygiene. Insurance, on the other hand, is not to be considered in connection with this branch of the problem. The prevention of illness is not a function of insurance.

2. TREATMENT AND CARE. The critical fact, in our opinion, is that a large proportion of the people do not receive adequate medical care and treatment. How to remedy that condition is a problem that should be given exhaustive study, particularly by the medical profession, which profession should be called upon to devise a system whereby proper medical aid may be brought within the reach of every individual in the State. Only by thorough investigation can there be obtained the information necessary to enable the Legislature to take such action upon this subject as will result in the greatest benefit to the public.

3. REPLACEMENT OF WAGE LOSS FROM SICKNESS. This is an economic loss; and, consequently, it is a subject appropriate for insurance. But we are convinced that the information at the disposal of the Legislature and the People is as yet insufficient for the successful solution of this problem; and that the precipitate adoption by the Legislature of any academic plan of insurance would, among other unfortunate consequences, defer such determination for years. We believe, therefore, that employers and wage workers should be called on to confer and determine how best to meet this loss.

In any event, we are satisfied that sickness prevention, treatment and care constitute by far the most important factors upon which efforts and attention should be concentrated for the time being, and that only after we have learned more about the extent of sickness, its causes, and the means of prevention, will it be appropriate to take up the question of how to relieve its economic consequences.

INVESTIGATION COMMISSION.

Therefore, we respectfully recommend that the Legislature consider the appointment of a Special Commission, competent and duly empowered, to make a careful and exhaustive investigation and study of the extent, prevention and treatment of sickness, and that such commission be instructed specifically to study and report upon the following questions:

1. Methods and means for the prevention of disease.
2. Methods and means for the education of the people in the fundamental principles of health.
3. Methods and means for bringing adequate medical care within the reach of all.
4. The establishment of diagnostic clinics throughout the State.
5. The establishment of clinics or other facilities throughout the State for the periodic physical examination of persons *applying* therefor.
6. The further development of public health nursing throughout the State.
7. Methods and means for the adequate care of maternity cases.
8. Co-ordination of public and private health promoting agencies.
9. The determination of the extent of dependency upon public or charitable relief in the State and of the extent to which such dependency is due to illness.

All of which is respectfully submitted.

DR. ALVAH H. DOTY, Chairman. Medical Director, Western Union Telegraph Co., New York.
MRS. F. LOTHROP AMES; Chairman Industrial Committee, New England Section, Woman's Department, The National Civic Federation, Boston, Mass.
MRS. SARA A. CONBOY; International Secretary-Treasurer, United Textile Workers of America, New York.
MARK A. DALY; Secretary, Associated Manufacturers and Merchants of New York State, Buffalo, N. Y.
GERTRUDE BEEKS EASLEY; Director, Welfare Department, The National Civic Federation, New York.
DR. LEE K. FRANKEL; Third Vice-President, Metropolitan Life Insurance Company, New York.
HUGH FRAYNE; General Organizer, American Federation of Labor, New York.
F. L. HOFFMAN, LL.D.; Third Vice-President and Statistician, Prudential Insurance Company, Newark, N. J.
DR. HARRIS A. HOUGHTON; Vice-President, Associated Physicians of Long Island, New York.
DR. J. RICHARD KEVIN; Chairman, Legislative Committee, New York State Medical Society, Brooklyn.
HILL MONTAGUE; President, International Fraternal Congress of America, Richmond, Va.
P. TECUMSEH SHERMAN; Attorney, New York.
J. W. SULLIVAN; Of the American Federation of Labor; Member International Typographical Union, Brooklyn.
MRS. COFFIN VAN RENSSELAER; Executive Secretary, Woman's Department, The National Civic Federation, New York.

COMMITTEE ON CONSTRUCTIVE PLAN,
SOCIAL INSURANCE DEPARTMENT,
THE NATIONAL CIVIC FEDERATION.

New York, January 27, 1920.

Workmen's Compensation for Occupational Diseases

INITIAL ACT LIMITED MAINLY TO POISONOUS TRADES—HIGHER MAXIMUM WEEKLY COMPENSATION FOR INJURED WORKERS PLANNED

August Belmont, Chairman Workmen's Compensation Department: The activities of The National Civic Federation's Workmen's Compensation Department, composed of employers, representatives of labor and insurance experts, have been limited during the past half dozen years to giving advice and furnishing material where sought in the few states which only recently have enacted such legislation. The war tended very much to interfere with and almost paralyze in some directions the activities of those instruments for the development of progressive improvement in such matters. The war problems of the Government overshadowed particularly our department, its contribution having been the drafting by a committee of our experts of the War Risk Insurance Act.

At the outset our department did not attempt to do more than try to promote legislation which had to do with compensation for disability due to accidental injuries and it was not deemed wise to attempt so large a subject as compensation for occupational disease attributable to the industry, although recognized by us as a proper extension of workmen's compensation legislation and a proper tax on industry. But the time has come and the discussion has been indulged in which has finally resulted in a bill being introduced into the New York State Legislature. In several instances, such legislation has been enacted as the result of the efforts of others.

The system employed in Great Britain has given more general satisfaction than the laws adopted here in Massachusetts, Wisconsin, California, Connecticut, or by the Federal Government. We have therefore adopted the British law as the basis for our recommendations in New York State with a few improvements relating principally to administrative features.

In the initial act, it was deemed wise to limit the schedule in the main to poisonous trades, such as anthrax, lead, mercury, phosphorus, arsenic and others; to miners' nystagmus, glanders, compressed air illness and others resulting from mining; and cataract in glass workers. In all twenty occupational diseases have been specified.

Provision has been made so that additional diseases may be included within the scope of this act, as experience is developed, by recommendations from the State Industrial Commission and Industrial Council in joint session to the Legislature.

In a general way, this bill, which was introduced in the Senate by Honorable John Knight and in the Assembly by Honorable G. E. D. Brady, provides that the disease must be contracted in the employment; that it must be caused by the nature of the employment; that liability shall be limited to diseases contracted within one year; that there shall be no liability for an occupational disease where the workman at the time of hiring has falsely represented in writing that he had not previously suffered from that disease; that awards for occupational diseases should not be based upon the opinion evidence of physicians selected by the claimants; that disputed cases should be determined by impartial physicians; that there should be a rebuttal presumption in favor of a claimant disabled by a disease peculiar to industrial operations in which the claimant was employed immediately prior to his disablement; that there should be distribution and determination of liabilities between the different employers in cases where the disease had been contracted gradually in two or more employments; and that the occupational diseases, except where resultant from an accident for which employers should be held liable, should be enumerated in the statute.

It is hoped that this will be enacted in New York and will become a guide for future legislation in other states of our Union.

FURTHER EXTENSION OF NEW YORK STATE LAW

It is also believed that the New York State Act should be extended to include all except casual employments. How expediently this may be done is a matter which our Department is now studying. Also, it has under consideration the recommendation of Speaker Sweet made in his opening address to the 1920 Assembly, which is that under the present high cost of living the schedule of the Workmen's Compensation Law, enacted under quite different conditions, does not provide today adequately. It stipulates that the injured worker shall be paid 66 2/3 per cent of his or her average pay, not exceeding $15 per week. An amendment to provide a higher average weekly compensation will be drafted.

BRITISH COMMISSION

A recent inquiry from England refers to the appointment of a commission there to consider workmen's compensation legislation. That commission desires to ascertain the experience of the working acts in the various states of the Union, and it is especially interested in the question of insurance by employers and the operation of state insurance laws. I understand that in England employers are not required to insure their liabilities for workmen's compensation and that for such lack of insurance occasionally an injured workman loses his compensation. The Civic Federation has recommended, in its "Suggestions Upon Main Provisions Requisite to Adequate Compulsory Workmen's Compensation Legislation," that employers should be compelled to insure, but that all responsible and authorized methods of insurance should be preserved, including self-insurance with proper safeguards. It has resulted in self-insurance being one of the several types permitted, the employer being allowed to take his choice in this State. The English Commission has before it a demand for compulsory insurance, due to the fact that lack of insurance has resulted in loss of compensation on the part of injured workmen. An effort is being made there on the part of some to secure monopolistic state insurance.

The desire of the British Commission to have the facts concerning the operation of our methods of insurance in the various states raises the question as to whether we should undertake an inquiry along that line. It is believed, and it is only natural, that official reports on the part of those administering State insurance funds would favor that method of insurance. An inquiry into the facts and experience to date with the different methods employed in our various states might not only be useful to the British Commission but help us in the United States to secure greater uniformity. In any event, propaganda at present is directed toward an extension of State insurance, despite a strong feeling of opposition. In 1914 this department reported upon the operation of workmen's compensation laws then on the statute books. It would seem proper to make an impartial inquiry at the present time into the status of such legislation and its benefits to the wage-earner.

Revolutionary Forces in Our Midst

PEACE WITH BOLSHEVIST REGIME WOULD AID EFFORTS TOWARD WORLD REVOLUTION—RED PROPAGANDA ACTIVE IN AMERICA—BOLSHEVISM AND SOCIALISM IDENTICAL

Lieut. A. W. Kliefoth, formerly of the American Military Intelligence Service in Russia, at the session devoted to a discussion of the "Revolutionary Forces in Our Midst," said in part:

"The Bolsheviks have done a good job from their point of view in Russia, and they are not only out for Russian business, but they are out for world domination. The program of Lenine has always been that of a world social revolution.

"Marx away back when he wrote his book said the domination of the proletariat can most easily be accomplished in a war-weary country; that is, in a worn-out, will-less and weakened land. When Lenine was sitting in Switzerland, he read this part of Marx's book, and thought, 'Russia is the land.' After he arrived in Russia he set out to promulgate his Marxian socialistic form of government, and he succeeded. But he kept constantly before the eyes of the people the idea of world social revolution. The one word which you hear repeatedly in the address of their Bolshevik commissar today is that of world social revolution, 'We will spread the revolution all over Europe and then we will get America.' That phrase occurs more often in every speech of their Bolsheviki commissar than the one word 'capital' occurs in the speech of an American soap-box socialist.

"On March 14, 1919, Lenine said: 'Often the daily routine of administration and details that could not be avoided in the work of construction are pushing us to one side and forcing us to forget the great task of world revolution. The task of construction depends entirely on how soon revolution will triumph in the more important countries of Europe.'

"Kalinin, the President of the Executive Committee of the Soviets, on April 10th, says: 'The stronger we are the greater are the chances of a Western European revolution.'

"On April 23rd, Trotsky added: 'In order to assist the uprisings of workmen in Poland, Germany, and all Europe and North America, we must establish definitely and irrefutably the Soviet authority over the whole extent of Russia, and then ask for peace.' Consequently at the present time the Bolshevik government is throwing out its peace feelers over all the world, promising Bolshevik gold to American and English merchants.

"But what have they said of a peace? After the time of the German peace, of the Brest-Litovsk, Zinoviev, the President of the Soviets of Petrograd, said:

"'We are undertaking the move towards peace with a clear realization that in the course of time this peace will be profitable to us and not to our enemies. Signing such a peace with the Allies, however, would not mean that we would, for a second even, stop building up our Red Army. It would only mean that we would put no trust whatever in the bit of paper which we should sign. We would continue to build up our army, but at the same time we would allow our workmen and peasants to draw a few free breaths.

"'We should be bound to accept the conditions that the Allies would grant us in the full assurance that history is working for us and that every hour brings us nearer to the final ruin of our enemies, that we should use the breathing spell so obtained in order to gather our strength, in order that the mere continued existence of our Soviet government would continue the grand scale propaganda which Soviet Russia has been carrying on for more than two years.'

"Consequently the Bolshevik government of Russia today has found it necessary to spread out all over the world feelers for peace. We are advised that it is time to settle the Russian question by concluding a peace with the Soviet form of government of Russia. In other words, we are doing exactly what Lenine, what Trotsky, what Zinoviev have said a thousand times in Russia to the Bolsheviks of that country—that 'the Allies will find it necessary for economic reasons in the near future to make a peace with us,' but that peace does not mean peace but the revolution. The minute the peace is signed with the Allies, the world's social revolution assistance to the Soviets all over the world will be given.

"Consequently one of the main activities of the Bolshevik government since the time of its establishment has been that of propaganda. More energy of that government, more efforts of all of its commissars, and more of its money has been used for propaganda, internal and external, than for all other purposes of the Soviet government.

"I have seen at these propaganda headquarters literature printed in every language of the world—not only every language, but in every dialect. I counted sixty different Chinese dialects, forty different Hindu dialects. Chinese and Hindu are not very well understood in Russia, nor is English. Consequently the idea of that government is to send out this literature to the country to which it belongs. Two years ago in Petrograd and Moscow I do not remember seeing a single Hindu, but last autumn when we were there last we saw more than two thousand Hindus in Moscow that had been imported by the Soviet government. They had been drilled, they had been made into commissars, and now they are ready to be sent out of the country to be returned to India to assist in the Soviet establishment of the world's Soviet Federation.

"We are led to believe that this form of political government in Russia is a new experiment in democracy. But, as I have stated, Lenine laughs at the word 'democracy.' He will have none of it. He advised the American workmen, in a pamphlet printed in English, meant for distribution in this country, 'not to fiddle with the ballot box. It is a worn-out institution. The only argument worth while to you in your country (that is, in the United States), is the bullet.'

"However, as Lenine has so wisely pointed out, this large middle class of which we are composed—we are so indifferent that he need not worry about us. Consequently we permit the official representatives of this government, of this sort of philosophy, to live, to carry on its business in the United States. And Lenine, understanding the base motives of many of American business men, knows that his offer of gold may be accepted. Where does this gold come from in Russia?

"At the time of the German advance into Roumania, the Roumanian government was obliged, unfortunately for them, to evacuate their entire national reserve of gold from Bucharest to Petrograd. That constitutes one-half of the Bolsheviks' gold reserve. The other half was taken from all of the business men of Russia, from you and from me. Your bank deposits constitute this gold reserve in Russia. Are you willing to accept this gold for your merchandise from these former Russian business men? Is our Government to stand for the recognition of the Soviet form of government of Russia which offers us the gold stolen from its citizens? Are we content to remain quiet and indifferent, as Lenine has pointed out, to this form of propaganda going on in this country? Is Bolshevism a danger to us or is it only a problem to be solved by the Bolsheviki of Russia?"

MENACE IN AMERICA SERIOUS

Peter W. Collins, Director-General of the Employment and Reconstruction Service of the Knights of Columbus, said in part:

"After having traveled in the United States in the last eight years alone over three hundred thousand miles, and talked to many millions of the American people of all classes, and answered in that time many, many thousands of questions, and in the last year alone having traveled forty-seven thousand miles in the United States, and answered three thousand questions in the last six months alone, I make this statement advisedly, weighing my words exactly for what they mean in the English language: That there is more danger of revolution, that there is more Bolshevism to the square inch in New York City, and more Bolshevism to the square foot in the United States of America than there is in the whole tremendous expanse of the Russian Soviet Federated Socialist Republic.

"And from two sources this revolutionary propaganda is being most insidiously spread: By the so-called pink tea officers of the parlor radical variety, and then by the other type which we might properly designate as the wood-alcohol proletarians. And I would say this, as one having some experience, that I have less fear from the danger of the wood-alcohol philosopher than I have from the parlor radical, because the parlor radical can get into centers, with his so-called type and with his so-called presence of contact, that the outspoken, revolutionary, unhypocritical I. W. W. could not enter.

"Do not allow anyone to deceive you that there is any difference between Bolshevism and Socialism, because Bolshevism has a language of two separate and distinct branches. First, it has the language of the university, under which it hides from the ear and the mind of the average man and woman a doctrine which, if the working men actually knew what it was, he would get away from it so fast that he would almost burn the soles off his shoes. On the other hand, it has the language of the soap box, the language to appeal to the working men, manufacturing bitterness and hatred and illegitimate discontent in the minds of the working class, to use the working class as a crow-bar to pry society off of its foundation.

"You may think that this movement has only recently started, and you might think that some of the men now in the public eye have only recently been preaching this kind of a doctrine. Is it a question of ballots or bullets? Lenine said that ballots were worn out. A man who was elected to the American Congress, and who got unseated by the American Congress, advocated that ten years ago. Victor Berger, in his editorial in the *Democratic Herald,* the Socialist paper then existing, wrote, July 31st, 1909: "I say to each of the five hundred thousand Socialist voters and of the two million working men who instinctively incline our way, they should, besides doing much reading and still more thinking, also have a good rifle and the necessary rounds of ammunition in their home and be prepared to back up their ballots with their bullets." That was not written by Lenine. That was written by Victor Berger, elected by the Milwaukee constituency, and I make this statement advisedly.

"Out in Milwaukee they are afraid to fight them in the open. The only way to fight Socialism and Bolshevism and revolution is to fight them toe to toe. If necessary go out on the soap box and meet them not with heat, but with light, and when you put the light, the spotlight on Bolshevism, there won't be the danger in a thousand years of the working men being poisoned with Bolshevism.

"Socialism and Bolshevism never put a single penny in the pay envelope of a working man, and the gold they have got today, that they have stolen from Russia, is being used in this country, in this city, in many of the industrial centers of this country, to poison the wells of Americanism and to stifle the heart of the American working man. The *Soviet World,* published in Philadelphia, under the shadow of Independence Hall where the Liberty Bell rang out our independence to the world, under date of March 8, 1919, says in a special appeal to the working man: "Shall the workers of this nation, America, remain in slavery while the workers of Russia live as free men and free women, owning the land and industry as common property? . . . Toilers of America awake! March in solid millions against the institutions that oppress you. Build for yourselves upon the ruins of the wage slavery the new society of the producers under the dictatorship of the proletariat. Awake! Arise! Forward to the revolution!" Think of that! Right in these United States!

"Marx says in the Communist Manifesto that they openly declare that their ends can be obtained only by the 'forcible overthrow' of all existing conditions. 'Let the ruling classes tremble at a Communistic revolution! The proletariats have nothing to lose but their chains; they have a world to gain.' There is the definition of the revolution enunciated by the authorities of socialism.

"These miserable triplets of destruction, Bolshevism, Socialism and I. W. W.ism are of the same treasonable flesh and blood. There is no question about that. Any man that knows anything about socialism knows it.

"The theory of Socialism, the doctrine of the class struggle, is one of the most dangerous and insidious that ever possessed the hearts and souls and conscience of an individual or people. According to Bolshevism and Socialism, the working man must hate the man for whom he works. There is no such thing as class struggle except the class struggle manufactured, on the one hand, by the soap-box orator who is putting bitterness and hatred into the hearts of the working people who do not hear the other side of the story, and the class hatred which is manufactured on the other hand by the unscrupulous employer who wants to grind dividends out of the flesh and blood of the working people, the exploiter of Mammonism and gold and dividends, and this exploiter is as much to be condemned as the other exploiter who works at the soap box. Remember this: The soap-box orator will never be able to bring about the revolution if you stop exploiting. Capital must wake up. It must meet labor properly. It must understand its aims, hopes, and desires and its aspirations, and we must meet with labor around the conference

THE NATIONAL
Civic Federation Review

Office: Thirty-third Floor, Metropolitan Tower
1 Madison Avenue New York City

RALPH M. EASLEY, Editor

The Editor alone is Responsible for any unsigned article or unquoted statement published in THE NATIONAL CIVIC FEDERATION REVIEW.

GROUP METHOD OF REPRESENTATION THE ONLY PRACTICAL ONE

This number of The National Civic Federation Review is given over entirely to the proceedings of the Twentieth Annual Meeting of The National Civic Federation and its sequel, the meeting held two weeks later. No better illustration could be given of the soundness of the Federation's fundamental principle of bringing to bear on industrial questions the three divisions of society—employers, employees and the public—than the similarity of the programs of the Twentieth and the First Annual Meetings. It was the contention of the founders of the Federation when it was organized in Chicago in December, 1899, that the only way to deal with great economic and industrial problems was this method and The National Civic Federation was the first organization ever perfected along those lines in this country or any other. In the prospectus issued in July, 1899, this principle is described as follows:

> "The manufacturers have their national organization and meet annually to discuss the questions that affect their special interests; the agriculturists have their national grange meetings and farmers' congresses to discuss their interests; the great labor bodies of the country have their annual meetings devoted to their special questions; also the National Bankers' Association, American Bar Association, American Economic and Social Science Associations, the great church bodies, mercantile, trade and traffic associations, and many other strictly class organizations meet annually or oftener to discuss their various interests; while the object of The National Civic Federation, in addition to creating departments to study national problems, will be to provide a national forum, by means of which representatives of all these great divisions of society may come together and discuss the problems in which all have a common interest."

A brief résumé of the twenty years' work of The National Civic Federation, enumerating by title only the subjects dealt with through this group method, would require more space than is available in this article. Suffice it to say that the results have justified the hopes and expectations of its founders. Five members of the original Executive Committee are still members of that committee, viz.: Samuel Gompers, Franklin MacVeagh, Oscar S. Straus, J. W. Jenks and the editor. More than half of the members of the present Executive Committee have been on the board for fifteen years.

On questions particularly of wages, hours and conditions of work in industry it has been found absolutely essential that employers and employees should be equally represented and where the problems involved were of sufficient magnitude to affect public interest, the public was always represented.

Every question under consideration at the Twentieth Annual Meeting was treated from these three standpoints, whether it was industrial training, social insurance, workmen's compensation, industrial conciliation and arbitration or collective bargaining. Emphasis is laid on this point at this time because of the attempt made in many quarters to belittle this so-called "group method." For many years the social and charity workers, who were generally half-socialists, sneered at the idea of working out industrial problems by this method and generally they sneered further because on our labor group there were no representatives of the socialists or I. W. W.'ites. True to form, they still keep on sneering in that direction.

But the criticisms referred to in a previous paragraph of "the group method" do not come from charity or social workers. The critics include no less a personage than the President of the United States. President Wilson was moved to make his criticism as the result of his unfortunate experience with the group method in appointing his first Industrial Conference which ended so ingloriously. He voiced his criticism, in calling his second Industrial Conference, by stating that he "thought it advisable that in this new body there should be no recognition of distinctive groups." The trouble in the first conference was not with the method but with the personnel.

To avoid "recognition of distinctive groups," he turned in his second conference entirely to one group—the public, omitting both the employer and the employee. It was not illogical for the President to conclude that, while in the first conference he had so many people who "knew all about it" and failed, he might succeed if he took a group most of whom knew nothing about it. Well, he has now had a chance to see what both methods can do. While the employers and employees in the first conference,

Declaration Against Recognition of Soviet Russia

We believe that recognition of Soviet Russia would be a repudiation of all that our national life has represented for a hundred and fifty years, and of all the spiritual ideals for which modern civilization has striven for two thousand years.

Aiming to destroy the bulwarks of morality and social order, Soviet tenets attempted to interdict the teaching of religion, disfranchised the clergy, and made marriage a mere civil contract which may be broken by either party. Its system and franchise destroy representative government, which, since the Magna Charta, the world has come to regard as the first essential political factor of the modern state. Its program breaks every law of economics and in practice destroys production.

The fundamental principle and purpose of the Bolshevist propaganda abroad is world revolution, whether that propaganda is carried on by official Soviet representatives, by political parties which belong to their Communist International, or by independent organizations that support Sovietism because of its temporary ability to maintain its power. Bolshevism by all of its decrees, publications and acknowledged acts has demonstrated that it is a destructive movement, depending for its success in Russia upon terrorism and a minority dictatorship, and in foreign countries upon support and sympathy obtained through propaganda. Zinoviev himself, while President of the Petrograd Soviet, declared that the very existence of the Soviet régime is a menace to all other governments. Where government is most stable, as in America, every element of disloyalty, disorder and discontent is stimulated by this propaganda. Where government is unstable, as in Germany, revolutionists are subsidized and aided, and an early Soviet revolution is confidently reckoned upon. Even if only temporarily successful, such an overturn, which might become an upheaval in all Central Europe, would be a world calamity. Civilization must face and meet this deadly challenge. Concessions of any kind whatever can only encourage the enemy.

With the recognition of the Soviet régime, the presence of an ambassador and consular agents enjoying immunities (each a center of intrigue), the propaganda of the Lenin-Trotzky régime against civilization, already working through so many radical and pseudo-liberal organizations, and recently augmented by an endless stream of inspired press stories from Moscow and Petrograd, would be further ramified and dangerously extended. It is their declared intention, first, to undermine and then to gain control of the organized labor movement in the intensive promotion of labor unrest, the stimulation of "strikes of protest" "into general political strikes and then into revolutionary mass action for the conquest of the state." Thus we have in our own country waging deadly and underground warfare against us an enemy more dangerous and with objects infinitely more far-reaching and inimical than was Imperial Germany with her host of agents and spies.

We, therefore, believe that the people of the United States, acting through their Government at Washington, should now, once and for all, declare that they cannot consent to admit into the family of nations or in any other way countenance this "government" of violence and terror.

There must be no compromise between American democracy and Russian Bolshevism.

sticking to their own interests, got nowhere, members of the second conference, made up from the public, stuck to their own interests and it is safe to predict will equally "get nowhere." For it is not likely that Congress will ever enact any measures putting into effect the proposals of the so-called "Hoover conference," they being opposed both by the employer and employee interests of the country. This is not to say that the work of that conference will be entirely wasted, for the efforts of a body of men of such high character and culture as are the gentlemen composing this conference, who gave three months of their valuable time to the consideration of those complex questions embraced in the so-called "labor problem," cannot fail to furnish much food for thought, and their published proceedings will be a great contribution to the literature on the subject.

OUT OF THEIR OWN MOUTHS

Whatever question may have been raised as to the expediency of the method of suspending, pending an investigation, five Socialist Assemblymen-elect from the New York State Legislature, the trial of the Judicial Committee had the salutary and wholesome result of making clear and establishing, through official Socialist platforms, manifestos and publications and statements of their recognized leaders, certain major facts concerning the Socialist Party.

This evidence indubitably demonstrated that the National Socialist machine is not a political party, but a dues-paying membership organization, composed largely of minors and aliens, and part of an international movement whose aim is the forcible overthrow of all existing governments; that the Socialist organization, in its official platforms, programs and acts, has been anti-American and disloyal, and that members, elected to office, cannot, by reason of their obligations to abide by the mandate of their organization, consistently take oaths of office; that the Socialist organization does not confine itself to the ballot as a method of overturning the present order of society, but carries on its propaganda and campaign with the supreme purpose of organizing workers in order to bring about a revolution at the opportune time through industrial action, or the general strike.

While certain Socialist propagandists, such as John Spargo, have attempted to make a distinction between Russian Bolshevism and Socialism, and to win converts to Socialism by disclaiming the actions of the Soviet Government, the Socialist Party of America, in a referendum vote of 3,475 to 1,444, recently adopted a minority report offered at the national convention last year in Chicago, which declares the Socialist party in support of Lenine's Bolshevist Third International, held in Moscow last March. The Manifesto of that International rabidly calls for world-wide revolution by force and a dictatorship of the proletariat. If any doubt existed as to the concord in methods proposed and unanimity of purpose of the Russian Bolsheviki and the American Socialist party, if any thought persisted that between Socialism and Bolshevism there were shades of difference, such uncertainty may be dispelled by the recent action of the National Socialist organization. Following the adoption of the minority resolution by the party membership, official application was made on March 18 for membership in Lenine's Communist International by Otto Branstetter, national executive secretary of the Socialist party.

As was fully demonstrated in the course of the hearings of the Judiciary Committee of the New York Assembly, there is no need to go further to convict the Socialist organization than their own official actions and evidence out of their own mouths.

Why, if the Socialists are opposed to and propose to overturn all parliamentary government, do they seek to have candidates elected to office? They have themselves declared their object. In a volume, "The Dictatorship of the Proletariat," published by the Jewish Socialist Federation, which was entered as evidence, the following is said:

"Socialists seek to enter into the government for two reasons: First, to be nearer to the doors of the chambers where dictatorship sits, and, second, to hinder the dictatorial work in any way. The first reason is the most important. Sitting in Parliament or Congress, being inside of the government councils, affords Socialists an opportunity to find out the plans, the strategy of the State. And, knowing this, they can carry out their propaganda the better."

The national organization has officially instructed its members elected to Congress, State legislatures and local bodies to vote against all appropriations or loans for military, naval and war purposes. Evidence introduced at the Albany trial proved that all Socialist aldermen elected to that body during the war had followed those instructions. G. Zinoviev, Bolshevist president of the Executive Committee of the Communist International, to which the Socialist party of America now solicits admittance, further outlines how Socialists may get into and utilize "bourgeois parliaments" to develop the revolutionary class struggle. In a communication on the program of the Third International, Zinoviev says:

> "The Russian Communists, the Bolsheviki, voted in the election for the Constituent Assembly. They met in its hall. But they came there to break up this Constituent within twenty-four hours and fully to realize the Soviet power. The party of the Bolsheviki also had its Deputies in the Czar's Imperial Duma. Did the party at that time 'recognize' the Duma as an ideal or at least an endurable form of government? It would be lunacy to assume that. It sent its representatives there so as to proceed against the apparatus of the Czarist power from that side, too, and to contribute to the destruction of that same Duma. It was not for nothing that the Czarist Government condemned the Bolshevist 'parliamentarians' to prison for 'high treason.' The Bolshevist leaders were also carrying on an illegal work, although they temporarily made use of their 'inviolability' in welding together the masses for the drive against Czarism.
>
> "The Bulgarian Communists have successfully exploited the tribune of Parliament for revolutionary purposes. At the recent elections they won seats for forty-seven Deputies. Comrades Blagoieff, Kirkoff, Kolaroff and other leaders of the Bulgarian Communist Party understand how to exploit the parliamentary tribune in the service of the proletarian revolution. Such 'parliamentary work' demands peculiar daring and a special revolutionary spirit; the men there are occupying especially dangerous positions; they are laying mines under the enemy while in the enemy's camp; they enter Parliament for the purpose of getting this machine in their hands in order to assist the masses behind the walls of the Parliament in their work of blowing it up.
>
> "Are we for the maintenance of the bourgeois 'democratic' Parliaments as the form of the administration of the State? No, not in any case. We are for the Soviets."

In the face of the impudent effrontery of their self-declared treacherous designs, can the American people take seriously the farce of these people seeking to achieve their ends merely by use of the ballot? Can they risk allowing them to be placed in positions of responsibility and trust?

A. F. OF L. POLITICAL PRONOUNCEMENTS ONLY REPEAT HISTORIC POLICIES

In an editorial in *The New York Times*, under the heading, "A Labor Union Party," and an editorial in the New York *Globe*, under the heading, "Gompers Follows the Rainbow," and, in fact, in editorials in various newspapers throughout the country, the writers are making much ado about the latest pronouncement put out by a committee of the American Federation of Labor charged with conducting Labor's political campaign at the coming primaries and subsequent elections, but they all largely miss the point.

When the first announcement was made a few weeks ago that the American Federation of Labor was going into the forthcoming national campaign to support its friends and oppose its enemies, considerable consternation was evinced in the public press, but it began gradually to dawn on the editors that this meant nothing more than what the American Federation of Labor had done four, eight, twelve and sixteen years ago. In fact, in Mr. Gompers's own announcement was the phrase, "our historic policy," the word "historic" relating to the four campaigns referred to.

But the public mind had no more than become settled on that point than out comes a much more startling announcement. This time, according to the two editorials specifically mentioned above, the thing is settled: Gompers has gone crazy, according to one; and he has not much sense left, according to the other. The new statement that has upset our editorial friends is contained in a circular letter sent to the one thousand central labor unions, signed by Samuel Gompers, Frank Morrison and James O'Connell, Campaign Executive Committee, as follows:

> "Our brothers all over the land have entered into this movement in a magnificent spirit of co-operation. We believe every man and woman of the labor movement will be ready to volunteer when called upon. With this object we are sending a letter to each local union in your city requesting co-operation in this work with your central body by the selection of a committee of three.
>
> "Our central bodies and our local non-partisan political committees have a great opportunity in the primaries. Here a smashing effort can be made to nominate members of trade unions for elective office.
>
> "Where these brothers are candidates in the primaries our central bodies and non-partisan political committees should endeavor to give every assistance possible to aid them to victory, regardless of party.
>
> "In communities where this plan cannot be made successful our brothers should exhaust all their resources to defeat every enemy of labor.
>
> "This is a duty we owe to ourselves, an obligation upon us to perpetuate our liberty as working men and women and all citizens of our country.
>
> "By all means endeavor to secure co-operation of sympathetic farmers and farm organizations, and appeal to all other liberty-loving citizens for support.
>
> "We urge each worker to use the ballot to advance the principles for which labor stands. Then there will be no question in the future as to the power of all the people to achieve their just demands.

It is true that this language may sound very threatening in the editorial sanctums, but if the editors would call in from their city rooms the political reporters and ask them to interpret it for them, they would hear something like this:

> "The labor movement in America has a fight within its ranks which a few months ago threatened to become serious. This was occasioned by a few radicals attempting to organize a Labor Party along the lines of the British Labor Party. In squelching that movement and in declaring 'its historic policy', the American Federation of Labor used very vigorous language which, without close inspection, would seem to mean a number of things which it does not mean. Now, all the difference between this last pronouncement and the previous one is that the American Federation of Labor is now saying to its members, in effect: 'Do not wait until the election comes to make your selection of a candidate. Go first to the primaries—that is, to those where you are enrolled members of the Republican or Democratic parties—and where there is a labor man running, support him. If there is no labor candidate, support the candi-

date who is most friendly to the labor movement.' But, gentlemen, this is totally different from the Labor Party idea, which is: 'Keep away from the Republican and Democratic primaries and have a Labor Party primary.'"

and the political reporters would probably add this comment:

"The little joker in the situation is that there are very few Congressional Districts in the United States where members of the American Federation of Labor are enrolled in either the Democratic or Republican primaries. They are, as a rule, independent voters and cannot, therefore, participate in an official party primary. Mr. Gompers himself will not likely be eligible to vote at either the Republican or Democratic primary in New York State, his home, because he is not enrolled either as a Democrat or as a Republican. He is an 'American Federationist,' first, last and all the time. Every four years it is a joke to see the chairmen of the Republican and Democratic National Committees scrambling around, trying to find enough Republican or Democratic trade unionists to put on committees. For the same reason that the labor leaders are generally independent voters, they are not candidates for delegateship to the national party conventions. You can probably count on the fingers of one hand all the American Federation of Labor leaders who will sit as delegates in the forthcoming national convention at Chicago and on the fingers of both hands those who will sit as delegates in the national convention at San Francisco. This is just as true when it comes to the election of delegates for congressional, state and other party conventions."

But might it not be much better for the common good if these real labor men did go to these conventions and take a part, and also accepted nominations as officers, instead of leaving it to professional lawyers or blatherskite politicians who, in trying to curry favor with labor, go so much further than labor itself would go. Some of the most dangerous men we have in this country are lawyers who are playing the labor game. Every one can name half a dozen of them. Labor knows better what it wants than they do and labor is more conservative in stating and asking for it. Again, one could well wish that good labor men were candidates in Chicago for Congress, rather than some of the lawyers whom the American Federation of Labor has just endorsed there. The answer to the question: "Then, why is not the view of the Labor Party in Chicago right, that they should name their own men?" is, because, even if the Labor Party were not composed of and run by the most radical element, a labor candidate could not carry any one of those Districts on a labor issue. The Labor Party of Illinois had a very wholesome illustration of the futility of its program last fall when it rushed in and selected labor delegates to the Constitutional Convention, instead of doing what Mr. Gompers advised, throwing its votes for candidates friendly to labor. As it turned out, they did not elect a single labor delegate, in a convention of two hundred delegates, whereas a number of men who were friendly to labor could have been elected if they had thrown their votes for them.

Again, the question may be asked, if labor cannot win through a party and cannot win without a party, how can it win at all? The answer is that it *cannot* win, that is, if it means securing control of Congress or state legislatures. Organized labor, important as it is, constitutes only a minority of the voting strength of the American people. The farmers may get control in a few Western states, as they have done in North Dakota, but there are no states that labor has such a preponderance of votes as have the farmers in the states referred to.

But labor does not need a majority in Congress or a majority in any legislature to secure legislation in its interest. In the first place, much of the legislation for which it asks is right and just, and is so recognized by all other classes, and it only needs active labor leaders at the state capitals or at Washington to impress that fact upon the just and fair-minded legislators. Besides there are many close Districts in the country where the labor vote is sufficiently powerful to be the controlling factor. It is just in this situation that the American Federation of Labor's program successfully functions.

INDUSTRIAL TRAINING

The relation of factory industrial training to increased production is a question of such vital importance to our nation, and the addresses upon that subject made at the Federation's annual meeting were of such a practical character, that it was deemed desirable to defer publication until the next issue of the *Review* when space adequate to proper treatment may be devoted to them.

Revolutionary Forces in Our Midst

(*Continued from page* 11)

table, and I never met a working man in my life that did not give full value, one hundred per cent., when that working man was treated as a human being, and when it was recognized that he was something other than a mere cog in the progress of industry. Labor believes in justice. The working man is inherently conservative. He never started a revolution in his life. Get behind him, and when we get behind the working men, aiding in their constructive movement, standing for justice and righteousness to them, then capital and labor, with the people behind them, will drive Bolshvism into the sea."

AGAINST "HONORABLE DISCHARGES" FOR SHIRKERS

Major Lucius Breckenridge, a member of the American Legion, spoke on "The Demand for Amnesty for Pacifists, Conscientious Objectors and Anarchists." In part he said:

"There is present in the papers at times a movement on the part of long-haired men and short-haired women to turn everybody out of jail that has ever been put in there.

"The American Legion at the National Convention in Minneapolis last November defined their stand as being for one hundred per cent. Americanism. And they mean that they will not only stand for one hundred per cent. Americanism, but will stand for no other sort.

"The agitation for the release of these so-called political prisoners has its roots, there is no doubt, in the same sort of movement that attacks the foundations of this Government. The man who is a genuine conscientious objector in the vast majority of cases has been more than leniently dealt with. He was allowed to pick his own form of service. He was allowed to choose what he would do. He was allowed practically to choose where he would go.

"There is a tendency in the War Department and other places even to reverse convictions against these men, to give them honorable discharges. I do not know whether many of you realize what an honorable discharge means to a soldier or a sailor. But it is the character of his record. It is the absolute proof given under official form that he has performed duty, honest and faithful to the country in its time of stress; that he has not shirked his obligations; that he has performed his duties; that he has seen liberty as a right he was willing to fight for and if necessary die for. An honorable discharge puts on exactly the same basis these shirkers, these men with consciences who have been before courts of justice, these men convicted of crimes on the books of the statutes of this country—it sends them out into the world the same as any relative of yours that may have died the death that these policies we cherish may not perish.

"The attitude of the American Legion is simply this, that having stood for scattering to all the winds of treachery, disloyalty, aggression from the outside or aggression from the inside, that having met their enemies on the field of battle they will, if necessary, meet those same enemies on the fields of politics; that they will express in no uncertain terms that Americanism means Americanism in war as well as Americanism in peace; that it means that the man who claims protection under the laws of this government has got to assume the full duties and obligations of citizenship.

"The procedure has been, with a man drafted, where they have refused to obey orders, to arraign them before courts martial. There is not a man being held under executive order or executive warrant in the jails now that has not been fully and properly tried and convicted. To urge now that these men be released because the war is over, when they have committed crimes, it seems to me, is no more than to urge the release of every criminal in our jails. It is no more than to urge the subversion of the very foundations of our government."

Report of the Woman's Department to The National Civic Federation

(*Continued from page 5*)

cerns us the most, not past performances. Sane thinking and sane action are imperative if this country is to regain the stability which the war temporarily destroyed. Nations can sign treaties of peace with each other but there can be no peace at home until each and every individual is willing to work hard and assume his or her responsibility as a law-abiding citizen. There is no room in the Woman's Department for Socialism or Bolshevism, and, at the risk of being called conservative, we want none of it.

"We do not apologize for the Constitution of the United States; we believe in the evolution of social reform by lawful methods and we intend to take our responsibilities seriously under the new era now open for women under the Suffrage Amendment.

"No one duty is more imperative on the woman of this country than that relating to the schools. The position of school teacher should be the one of highest honor in the community. No profession deserves a greater respect and none receives smaller recognition. None is more poorly paid, or works in worse surroundings or often lives in a more uncongenial atmosphere. This is especially true of the teachers in the rural communities.

"In the hands of teachers lies the making or marring of our future citizens. They are the training basis of the problems that reach into the home and from there spread into and affect the industrial life of the country. Their influence for good or evil is far reaching, and we women must inform ourselves and learn of the inefficiency of the school system as a whole, and how it affects the children and then use our right of franchise in the direction of improvement.

"These and similar problems of national interest will be our work for the coming months; the local situation will continue to be met adequately by the sections, and we stand ready to take our share of the broader work in co-operation with the program of The National Civic Federation as a whole."

To Aid Progress and Combat Revolutionism

COMMITTEE TO INQUIRE INTO THE OBJECTIVES AND TACTICS OF REVOLUTIONARY FORCES IN THIS COUNTRY APPOINTED BY JUDGE PARKER—TO PROMOTE CONSTRUCTIVE MEASURES

AT the session of the meeting of The National Civic Federation Friday afternoon, January 30, Dr. Conde B. Pallen introduced a proposal that a committee be formed both to oppose the forces seeking to undermine and overthrow our institutions and to give support to all practical measures promotive of industrial and social progress.

In making his proposal, Dr. Pallen said in part:

"When we arose this morning, we took our breakfast comfortably. We went about our business in the usual routine way. We have assembled here in a comfortable room, well heated, well lighted, and traffic and people along the streets going about their usual business, and all seems well with the world. Well now, if we realized that there was boring under the city of New York, through subterranean channels, a great army of people determined to blow this city up by dynamite at any moment, I wonder how many of us would sit here as comfortably and complacently as we are now, and I wonder what would be the consternation of the population of this city, if they were aware of that. That may not be physically true, but it is morally true. This community here in New York, in fact the whole of the United States is being undermined by the pernicious activity of people who are absolutely out of harmony with our institutions and out of harmony with our civilization, whose purpose is to destroy that civilization root and branch. That is their declared open purpose, and it does not matter how they seek to destroy it, whether it is by the ballot or by the bullet. The method does not count. The ultimate aim is the destruction and the sweeping away of our civilization and our institutions, because they declare that civilization and those institutions are upon a rotten foundation, the foundation of capitalism, or the right of private property."

Dr. Pallen's proposal was in pursuance of an invitation sent out on February 9 by The National Civic Federation, which follows:

PROPOSAL FOR A THOROUGH INQUIRY INTO THE OBJECTIVES AND TACTICS OF THE SOCIALISTS, I. W. W.ITES AND BOLSHEVISTS IN THIS COUNTRY

A thoroughly disturbing situation exists in this country today which demands understanding and correction if our civilization is to be maintained. We seem to be so over-confident that nothing could occur which would furnish an opening for those who would destroy the foundations of our republic, that we are in danger of permitting just that thing to happen. The evidences of this danger lie on every hand and are too numerous for complete statement.

No sooner had the Department of Justice, after months of investigation, arrested several thousand criminal aliens, who were found advocating the violent overthrow of our government, than a wail went up from their ill-informed sympathizers, both low and high, charging that the government was disgracefully persecuting these men at the expense of our American ideals of freedom and justice. But still more disquieting was the action of a body of clergymen, including important bishops, in criticising the government for deporting these men "without a fair trial," after the Department of Labor had reviewed the case and handed down a decision which was beyond criticism except by the criminals themselves.

The movement for amnesty for all so-called "political" prisoners is of the same character. Special privileges are demanded for all persons convicted of interfering with the draft or denying military and other obligations to the country in the crisis of war. The humane and liberal policy of the nation in these matters is presented as "Czarist" and "Prussian" until the name of America has been blackened throughout the world as being the most reactionary of nations. Leniency having been extended to 90 per cent of the culprits, they demand complete pardon for the remainder which contains all the worst offenders. This movement is dangerous because it is based not upon extreme humanitarianism nor morbid sentimentality but upon openly expressed sympathy with the disloyalty and violent revolutionism of the prisoners. In it appear the names of the identical persons who are trying to make America safe for the preachers of revolutionary violence by camouflaging their agitation as "a campaign for free speech."

Only a few weeks ago an organization calling itself the American Civil Liberties Union was announced, with a professor in a theological seminary as its chairman. Its committee is made up of socialists, Bolshevists, pacifists, so-called "liberals," and anarchists. That organization charges that "the whole gamut of activities aimed at 'reds, radicals, Bolshevists and I. W. W.' is in substance only the one purpose of suppressing the revolt of labor against intolerable industrial autocracy," and announces that lawyers and investigators will be sent into any part of the country to prevent "illegal" interference with free speech, free press and free assembly. This, from their standpoint, means that any interference whatever, even with those who openly advocate revolutionary violence, is illegal.

Since the Allies have announced a qualified lifting of the embargo on Bolshevik Russia, great joy is manifested in many parts of our land and a perfect avalanche of foreign Bolshevik correspondence is appearing in our daily papers and other periodicals, applauding the virtues of the soviet system. All the pro-Bolshevist books on Lenin, Trotzky and the soviets are being advertised anew. A conspicuous one this week begins thus: "Now that the Russian blockade is lifted and we shall have trade relations with Russia, you will want to know all about the remarkable man who is guiding the destiny of that country." *The Springfield Republican* is quoted as saying about this particular book:

> "Those who fear the permanence and spread of the Soviet form of government will do well to watch and study Lenin and his methods closely, if the reports of Williams, Robins and Ransome can be accepted as an accurate and expert diagnosis of the diplomatic resources of Russia's premier."

A U. S. officer recently returned from military service in Russia states that when, in response to Lenin's boast of being able to capture the United States, it was pointed out that there was a great middle class here that could not be stampeded, he retorted: "The middle class and the capitalist class are too stupid to know what is going on. They are too well content with the pleasures they get from their stolen wealth to interfere with our program." When one sees what is going on here today, the question arises: "Is Lenin right or wrong in his estimate of Americans?"

But the most prominent source of Red propaganda at the present moment is the Albany controversy over the ouster of the five elected socialist Assemblymen. In that matter very many high-minded citizens hold that in their suspension, the Legislature has ruthlessly violated their constitutional rights, thus, they assert, committing a crime greater than anything charged against the socialists. Other citizens, equally high-minded, believe that the Legislature did just the right thing and some blame it for not having raised the question of socialist fitness for membership in the Assembly years ago, when the first socialist presented himself. Unfortunately, politics, legal technicalities and personal feeling are so obscuring the controversy, that there is great danger of the main question being lost sight of—and that is: "Do the socialists propose to accomplish the overthrow of our Government through constitutional means,—the ballot—or do they propose to obtain such results through physical force—the bullet?"

Whatever the merits of the other questions raised in this controversy, or its final outcome, it is of the highest importance for the people, not only of New York but of the nation, to learn just what the Socialist Party proposes to substitute for our "overturned," "overthrown" or "destroyed" Government? Because, while the socialists or any other group of citizens could destroy the Constitution and undermine all our cherished institutions, provided they did it through legal and constitutional methods, it is the right, as well as the duty, of all loyal Americans to protect themselves, by legal and constitutional methods, against the would-be destroyers.

To indicate the character and intention of the Socialist Party, we herewith attach some quotations from the published utterances of their leaders, their platforms and their publications, from the time of the issuance of the Marx and Engels' *Communist Manifesto,* the Magna Charta of Lenin and Trotzky, of Berger and Hillquit, down to the apparent recent delivery of the whole socialist machine in America to the propaganda of Russian sovietism. Continuously running through these quotations, covering a period of seventy years, is the spirit of class hatred and incentive to violent revolution. Any one reading these, or any of the thousand other pronouncements equally disquieting, would inevitably raise the question whether, holding such views, the socialists intend to do the terrible things they propose by means only of the ballot or whether "in cases of emergency," as expressed in their recent Manifesto, they would "reinforce" their "political demands . . . by industrial action," the general strike; whether with Victor Berger, as expressed in one of the quotations, they are "prepared to back up their ballots with their bullets if necessary."

And further, the question is: "Do the American people want what the socialists want, no matter how they propose to bring it about, and do the American people under any circumstances want to elect or appoint to any office, federal, state or municipal, or to tolerate in their colleges, pulpits, editorial sanctums or other positions of influence men and women who subscribe to such principles and views as are indicated in these quotations?"

It is no secret that the socialists and their sympathizers are today pushing their propaganda through schools, colleges, churches, lecture forums, the press, labor organizations, women's clubs, charity organizations, and so forth, even the posts of the American Legion not being im-

mune, and the ends of this propaganda are served by the very confusion and lack of understanding existing in the public mind as to what Socialism is and how it would affect industry, labor, private enterprise, the family, religion, education, our social and spiritual life.

This suggests the urgent need of a thorough and prompt study and exposition of the principles, policy, tactics and objects of the Socialist movement in this country.

Through the expenditure of large sums of money and the use of all the machinery of the federal and some of the state governments, a tremendous amount of authoritative and invaluable material has been gathered, which is available to all citizens sincerely seeking the truth.

In order that the public mind shall be clarified as to the right and wrong of these questions —deportation of criminal aliens, amnesty for political prisoners, limitation of free speech, free press and free assembly, and above all, the objectives of the Socialists, I. W. W.'ites and Bolshevists, it is proposed that a number of organizations representing the different elements of our national life—labor, agriculture, manufacturing, the Church, the bar, women's organizations, educational institutions, professional and technical organizations and so forth and so forth —shall join in making a study of these questions, reporting their conclusions to the American people, to the end that they may be equipped intelligently both to oppose those forces now seeking to undermine and overthrow our institutions and to give support to all practical measures promotive of industrial and social progress.

With the invitation was sent the following Exhibit:

SOCIALIST PRINCIPLES AND PURPOSES: EXPRESSED BY SOCIALIST MANIFESTOS, PLATFORMS, LEADERS AND ORGANS

From "The Communist Manifesto," by Marx and Engels:

> They (the proletarians) have nothing of their own to secure and fortify; their mission is to destroy all previous securities for, and insurances of, individual property.
>
> . . . Their ends (the Socialists') can be attained only by the forcible overthrow of all existing social conditions. *Let the ruling classes tremble at a Communistic revolution!*
>
> . . . The proletariat, the lowest stratum of our society, cannot stir, cannot raise itself up, without the whole superincumbent strata of official society being sprung into the air.

Frederick Engels, in his "Working Class of England," gives this picture:

> The proletarians, driven to despair, will seize the torch which Stevens has reached to them; the vengeance of the people will come down with a wrath of which the rage of 1793 gives no true idea. The war of the poor against the rich will be the bloodiest ever waged. . . . It is too late for a peaceful solution. The classes are divided more and more sharply, the spirit of resistance penetrates the workers, the bitterness intensifies, the guerrilla skirmishes become concentrated in more important battles, and soon a slight impulse will suffice to set the avalanche in motion. Then, indeed, will the war-cry resound, "War to the palaces, peace to the cottages," but then it will be too late for the rich to beware.

The "Socialist (Perpetual) Campaign Book," "compiled under the direction of the National Executive Committee," referring to the merely reformist measures of the movement, says:

> . . . Each and every one of the separate planks (of the "Immediate Demands") are parts of a symmetrical program as its object the ownership and control of the earth by the workers. . . . The growth of Socialism means the growth of a power that proposes to TAKE ALL. (Capitals original.)

H. M. Hyndman, of London, who is recognized as one of the foremost living exponents of Socialism, makes this rather disquieting suggestion:

> . . . Chemistry has placed at the disposal of the desperate and the needy cheap and powerful explosives, the full effects of which are as yet unknown. Every day adds new discoveries in this field; the dynamite of ideas is accompanied in the background by the dynamite of material force. *These modern explosives may easily prove to capitalism what gunpowder was to feudalism.*

Victor Berger, in the *Social-Democratic Herald,* in 1909:

> In view of the plutocratic law-making of the present day, it is easy to predict that the safety and hope of this country will finally lie *in one direction only—that of a violent and bloody revolution.*
>
> Therefore, I say, each of the 500,000 Socialist voters, and of the two million workingmen who instinctively incline our way should, besides doing much reading and still more thinking, *also have a good rifle and the necessary rounds of ammunition in his home and be prepared to back up his ballot with his bullets if necessary.*
>
> Now I deny that, dealing with the blind and greedy plutocratic class, as we are dealing in this country, the outcome can ever be peaceable or that any reasonable change can ever be brought about by the ballot in the end.

While the above editorial was published in 1909, reference to it is timely today by reason of Victor Berger's remark at his trial last year in Chicago: "I would say that today."

From the *New York Call,* official organ of the Socialist Party, Aug. 15, 1914:

> We want to see the workingmen of all these lands turn on their butchers and murderers, and rend them into fragments, and stamp out forever the abominable class rule, the capitalism that has turned a continent into a shambles. . . .
>
> And now the thing has started, we don't care how they do it, whether with cannon, musket and sabre, or with confiscation and legislation. Any old way that is most convenient, provided only that they do it. . . .
>
> We have not started this thing (the War) and we hope that our correspondents will comprehend us when we say that, now that it is started, the most cold-blooded calculation on our part at the present moment is that they should all bleed each other to exhaustion so that the *coming social revolution may have an easier job of sweeping out the stinking fragments. We are through with protesting, mourning and deploring.* THAT be what they will. *It may cause the slaughter* TIME HAS PASSED AND NOW WE STAND FOR DESTRUCTION—THE DESTRUCTION OF CAPITALISM.

From the *New York Call,* Aug. 29, 1914:

> If it means literal war to put capitalism down and out, we are always ready to wage it for that object. . . . We have a deadly score to settle with the capitalist system, and despite what we may do now or what we are forced to do, we never forget the ultimate enemy, and its supporters owe us nothing for the part any of us may take in the European War, in any country. And unless we are grievously mistaken they will find that out as an aftermath of the present struggle.

The *Appeal to Reason,* a paper which claims a million circulation, testified as follows:

> Labor demands all the products of its hands—and it is going to have them, let the consequences be what they will. *It may cause the slaughter and massacre of millions.* None has a right to live who will not help to produce the wealth that sustains the people of the planet.

From "Debs: His Life, Speeches and Writings":

> It is a question not of reform, the mask of fraud, but of revolution.
>
> The flag, the only flag of Freedom, we reaffirm it and on this day pledge anew fidelity—come life, come death—to the blood-red Banner of the Revolution.

Morris Hillquit in "Socialism in Theory and Practice":

> The transition from the present order of individual wealth and competitive industry to a system of collective ownership and co-operative production *by whatever means and in whatever manner accomplished,* is bound to be accomplished by very thoroughgoing changes in all relations of men, and by a decided remodeling of the entire social and political structure of society.

After the revolutionary communists had left the Socialist party last year, Mr. Hillquit issued a pronouncement advocating the friendly relations that ought to continue to exist between the Socialists and "their honest brethren" who, he pointed out, had not ceased to be Socialists and are to continue to be regarded as a part of the Socialist movement. Hillquit said:

> The split in the ranks of American Socialism raises an interesting question of policy. What shall be the attitude of the Socialist party toward the newly formed "Communist" organization? . . .
>
> The division was not brought about by differences on vital questions of principles. It arose over disputes on methods and policy, and even within that limited sphere it was largely one of emphasis rather than fundamentals.

Is this not an endorsement of violent revolution for the overthrow of government, including democratic governments, such as the Communist branch boldly proposes?

Mr. Hillquit proceeded to state that certain minor differences do exist, but he immediately pointed out that the communists and Socialists are still united against the common enemy, and that all quarrels between them are to be regarded as quarrels with "brethren" and a form of internecine strike. Hillquit said:

> Let us center our whole fight upon capitalism, and let us hope our Communist brethren will go and do likewise.

Mr. Hillquit's "honest brethren" in their Manifesto, state as their objective:

> The Communist Party shall keep in the foreground its consistent appeal for *proletarian revolution,* the overthrow of capitalism and the establishment of a dictatorship of the proletariat. . . .
>
> Communism does not propose to "capture" the bourgeois parliamentary state, but to conquer and destroy it.

Morris Hillquit, testifying in May, 1914, before the Industrial Relations Commission as the representative of the Socialist Party, defined Socialism in its economic aspects as follows:

> Stated in more concrete terms, the Socialist program requires the public or collective ownership and operation of the principal instruments and agencies for the production and distribution of wealth—the land, mines, railroads, steamboats, telegraph and telephone lines, mills, factories and modern machinery.
>
> This is the main program, and the ultimate aim of the whole Socialist movement and the political creed of all Socialists. It is the unfailing test of Socialist adherence, and admits of no limitation, extension or variation. Whoever accepts this program is a Socialist; whoever does not, is not.

Mr. Hillquit did not explain that these farms, factories, mines, etc., are to be taken over by confiscation, but others in his party are more frank. William Mailly, former secretary of the Socialist Party and, later, editor of *The Call,* expressed concretely the views of hundreds of other leaders:

> Myself, I favor absolute expropriation. I cannot believe that society, through organized government, owes anything at all to the present possessors of industry.

The Appeal to Reason was more direct:

> We make no apology for advocating the confiscation of the nation's industries as soon as we have the power to confiscate them.
>
> We would have no one under any mistaken impression so far as our position on confiscation is concerned. We want the capitalists themselves to know that we are organizing to take from them the right and power they have had since the beginning of capitalism to take from us the proceeds of our toil.
>
> *The Appeal to Reason* unfurls the flag of confiscation and appeals to all the toilers of the nation, in the mills and mines, on the railroads and the farms, to rally beneath its folds and hasten the day of their deliverance.

Concerning the activities of the Socialists in the labor field, Jack London, at that time president of the Intercollegiate Socialist Society, said:

> *With the control of the police, the army, the navy, and the courts, they will confiscate, with or without remuneration, all the possessions of the capitalist class* which are used in the production and distribution of the luxuries and necessities of life. They mean to apply the law of eminent domain to the land and to extend the law of eminent domain until it embraces the mines, the factories, the railroads and the ocean carriers.
>
> The Socialists turned their energies upon the trade-union movement. To win the trade unions was well-nigh to win the victory.
>
> Instead of antagonizing the unions, the Socialists proceeded to conciliate the unions. "Let every good Socialist join the union of his trade. Bore from within and capture the trade-union movement."
>
> Today the great labor unions are honeycombed with Socialists. At work and at play, at business meeting and council, *their insidious propaganda goes on.* Night and day, tireless and unrelenting as a mortgage, they labor at their self-imposed task of undermining society.

In the Manifesto of the Communist Party the following is stated:

> The Communist Party recognizes that the A. F. of L. is reactionary and a bulwark of capitalism.
>
> Councils of workers shall be organized in the shops as circumstances allow, for the purpose of carrying on the industrial union struggle in the old unions, uniting and mobilizing the militant elements, these councils to be unified in a Central Council wherever possible.
>
> It shall be a major task of the Communist Party to agitate for the construction of a general industrial union organization embracing the I. W. W., W. I. I. U., independent and secession unions, militant unions of the A. F. of L. and the unorganized workers, on the basis of the revolutionary class struggle.

How the Communist Party of America proposes to take advantage of small strikes of protest and develop them into a larger revolutionary mass action, with the purpose of overthrowing the government, is shown in the following paragraphs from the party's Manifesto:

> Strikes of protest develop into general political strikes and then into revolutionary mass action for the conquest of the powerful State. Mass action becomes political in purpose while extraparliamentary in form; it is equally a process of revolution and the revolution itself in operation. . . .
>
> The Communist Party shall participate in mass strikes, not only to achieve the immediate purposes of the strike, but to develop the revolutionary implications of the mass strike.

The *Jewish Daily Forward,* New York, of March 23, 1919, printed in Yiddish, is the largest Socialist and biggest foreign-language publication in the country. Addressing its 150,000 or more readers, the *Forward* declared:

> Let us say openly what we want and let us openly fight for what we want. . . . We must keep a clear mind and must not make any mistakes, which would prolong the struggle and delay victory. We must not give our foes any excuse to attack us before we are prepared for battle. We must not provoke the people who believe in us with revolutionary phrases into a fight for which we are by far not ready.

Does this indicate that while they say they do not preach immediate revolution, they do preach revolution at the proper and opportune time? Are we going to wait for the Socialists to prepare adequately and then themselves fix the day?

In a letter sent to a correspondent, dated June 7, 1916, entered as evidence at the hearings of the Lusk Committee, sent out by the Correspondence Department of the Rand School, the generally recognized chief propaganda institution of the Socialist party in the East, the following statement appeared:

> When we read of "Preparedness" that is in full force in the camps of the capitalists we realize that unless we organize and fit ourselves to resist, and to take over the government, we will one day find ourselves where our French and German brothers are today, dead or maimed in the fray.

In another letter—apparently also a form letter sent out to correspondents by David P. Berenberg, director of the correspondence department—the following appeared:

> WHAT ARE YOU GOING TO DO WHEN THE STATE ROBS YOU AND YOUR UNION AND SO MAKES YOU HELPLESS TO STRIKE? There is only one thing to do: TAKE OVER THE STATE. . . .
>
> Are the members of your local prepared to take over and conduct wisely and well the affairs of your town and county? Are you ready to meet the militia when the powers of the state and courts are against you?

Is it implied that the members of the Socialist Party be "ready to meet the militia" not with guns but only with ballots in their hands? Is it merely a political party whose leaders, organs and schools urge the "taking over of the state," armed "preparedness" and readiness to meet the militia?

Since the Soviet revolutions in Bavaria and Hungary last March, the Socialist Party publications have not merely advocated Sovietism—their pages have contained hardly anything else. All the Lenine documents have been printed in full, not as news but as propaganda, accompanied by innumerable endorsements, and (except in the rarest cases) by no criticism.

The following paragraph from the proclamation of the Communist International Congress, held March 2-6, 1919, and printed in the *New York Call* of July 24, 1919, is typical:

> The revolutionary epoch demands that the proletariat should employ such fighting methods as will concentrate its entire energy, viz., the method of mass action, and lead to its logical consequence—the direct collision with the capitalist state machine in an open combat. All other methods, e.g., revolutionary use of bourgeois parliamentarism, will in the revolution have only a subordinate value.

Does this not show the true meaning of the phrase "mass action" so much employed in the entire literature of the Socialist Party? Does it not mean simply a violent revolution at the propitious moment and include all methods from insurrectionary strikes and street riots to civil war?

At the convention of the National Socialist Party held in Chicago, on September 4, 1919, a platform was adopted, containing the following declaration concerning the terroristic revolutionary régime in Russia:

> We declare our solidarity with the workers of Russia in establishing their Soviet Republic and we indorse the Socialists of Germany, Austria, and Hungary in their struggle for freedom. We condemn the counter-revolution in Russia backed by the Czarists and the Entente nations.

At the meeting at which the above declaration was adopted, it was reported that the delegates "jumped to their feet and cheered for several minutes when the paragraph was read approving the Soviet Republic of Russia." In the document the Russian revolution was compared to the American Revolution of 1776.

In the Manifesto of the Socialist Party, adopted at its Chicago convention last September, the stand of that party was stated:

> Recognizing the crucial situation at home and abroad, the Socialist Party of the United States, at its first national convention after the war, SQUARELY TAKES ITS POSITION WITH THE UNCOMPROMISING SECTION OF THE INTERNATIONAL SOCIALIST MOVEMENT. . . . We, the organized Socialists of America, pledge our support to the revolutionary workers of Russia in the maintenance of their Soviet government; to the radical Socialists of Germany, Austria and Hungary in their efforts to establish working-class rule in their countries.

Referring to its proposed organization of American workers, with the clearly stated purpose of seeking to bring about its political ends by "industrial action," or general strikes, it was stated:

> They must be strongly organized on the economic field on broad industrial lines, as one powerful and harmonious class organization, cooperating with the Socialist Party, and ready in cases of emergency *to reinforce the political demands of the working-class by industrial action.* . . . Long live the international Socialist revolution, the only hope of the suffering world!

So amazing was the enormity of the 1917 St. Louis majority resolution, opposing our participation in the war, that it is not to be regarded as strange that it took several years for the American people to wake to a realization of what it is. Calling upon "the workers of all countries to refuse support to their governments in their wars," it declared:

> The wars of the contending national groups of capitalists are not the concern of the workers. THE ONLY STRUGGLE WHICH WOULD JUSTIFY THE WORKERS IN TAKING UP ARMS IS THE GREAT STRUGGLE OF THE WORKING CLASS OF THE WORLD TO FREE ITSELF FROM ECONOMIC EXPLOITATION AND POLITICAL OPPRESSION.

As the official statement of an organization pretending to function as a political body, its stand in regard to patriotism was clearly stated:

> As against the false doctrine of national patriotism we uphold the ideal of international working class solidarity. . . .
>
> Our entrance into the European war was instigated by the predatory capitalists in the United States who boast of the enormous profit of seven billion dollars from the manufacture and sale of munitions and war supplies and from the exportation of American foodstuffs and other necessaries. . . . The war of the United States against Germany cannot be justified even on the plea that it is a war in defense of American rights or American "honor." . . . In all modern history there has been no war more unjustifiable than the war in which we are about to engage.

The resolution urged:

> Continuous, active and public opposition to the war, through demonstrations, mass petitions, and all other means within our power.
>
> Unyielding opposition to all proposed legislations for military or industrial conscription.

That the National Party undertook to dictate the action of men elected to Congress or State Legislatures, was clearly stated in the recommendation:

> We recommend that the convention instruct our elected representatives in Congress, in the State Legislatures, and in local bodies, to vote against all proposed appropriations or loans for military, naval and other war purposes.

From the "Dictatorship of the Proletariat," published by the Jewish Socialist Federation, is taken the following significant statement:

> "Socialists seek to enter into the government for two reasons: First, to be nearer to the doors of the chambers where dictatorship sits, and, second, to hinder the dictatorial work in any way possible.
>
> "The first reason is the most important. Sitting in parliament or congress, being inside of the government councils, affords Socialists an opportunity to find out the plans, the strategy of the state. And, knowing this, they can carry out their propaganda the better. Socialists seek to be elected into the government principally for the sake of propaganda."

This may explain why so many socialists worked themselves into positions in the government during the war, even the Military Intelligence Bureau being invaded by them, and raises the questions: Through whose recommendations were they placed in such positions of trust? and, Are there any of them remaining there?

Is there any doubt that the Socialists of America are in accord with the Socialists of Russia? In a report on conditions in Europe, which he visited "to re-establish relations between the party in this country and the parties in the various nations in Europe," according to the official Socialist Bulletin, James Oneal, member of the national executive committee of the Socialist party, said:

> The Moscow Congress certainly has in mind the ideals of Socialism, not the concept of communism of wealth which has characterized many religious sects. Its membership is made up of

all the elements of the Socialist movement that oppose war and militarism, relies upon the class struggle to chart the course of the movement and keeps in mind the fact that the real struggle in the modern world is one between the workers of all countries as against the ruling classes of all countries.

The Communist International Congress at Moscow, above referred to as being guided by "the ideals of Socialism," adopted a manifesto addressed to the "proletariat of all countries," in which violent revolution was urged:

> The working class must answer blow for blow, if it will not renounce its own object and its own future, which is at the same time the future of all humanity. . . .
>
> This makes necessary the disarming of the bourgeoisie at the proper time, the arming of the laborer and the formation of a Communist army as the protector of the rule of the proletariat and the inviolability of the social structure. . . .
>
> The revolutionary era compels the proletariat to make use of the means of battle which will concentrate its entire energy, namely, mass action, with its logical resultant direct conflict with the governmental machinery in open combat. All other methods, such as revolutionary use of burgeois parliamentarism, will be of only secondary significance.

From this it is seen that Lenine's Moscow congress laid emphasis upon the concentration of the entire energy of the proletariat upon "mass action" and declared parliamentary methods to be "secondary." The Socialist Party of America—which by referendum vote recently declared itself in support of Lenine's third international—adopted at its convention in Chicago last September a manifesto in which is specifically declared the Socialist Party's purpose of organizing workers, of undermining and gaining control of the organized labor, so that at the opportune time they could employ "mass action," or the general strike, to bring about a revolution. That the Socialist Party of America does not intend to confine itself to legal and constitutional, or "parliamentary," methods for bringing about social and revolutionary changes, that, in fact, it regards as its "supreme task" such organization of workers as would make a general strike possible, is clearly brought out in the following:

> To insure the triumph of Socialism in the United States the bulk of the American workers must be strongly organized politically as Socialists in constant, clear-cut and aggressive opposition to all parties of the possessing class. They must be strongly organized on the economic field on broad industrial lines, as one powerful and harmonious class organization, co-operating with the Socialist party, and ready in cases of emergency TO REINFORCE THE POLITICAL DEMANDS OF THE WORKING CLASS BY INDUSTRIAL ACTION.
>
> To win the American workers from their ineffective and demoralizing leadership, to educate them to an enlightened understanding of their own class interest, and to train and assist them to organize politically and industrially on class lines in order to effect their emancipation—that is the supreme task confronting the Socialist Party of America. . . . LONG LIVE THE INTERNATIONAL SOCIALIST REVOLUTION, THE ONLY HOPE OF THE SUFFERING WORLD.

Many connections between the Soviet bureau and the Socialist Party were revealed at hearings of the Lusk Committee. Through Socialist Party locals were arranged lectures for Santeri Nourteva, of the Soviet bureau.

According to a letter from the National Office of the Socialist Party, signed by the Executive Secretary, Adolph Germer, dated Chicago, Ill., February 15, 1919, and addressed to him, Nourteva, an alien, an official representative of Lenine and Trotzky, and with Martens one of the chief official Bolshevist propagandists in America, was nominated to represent the Socialist Party of America as a delegate to the International Congress. If the Socialist Party of America elects as a delegate an alien and a professed revolutionist, can it claim to be merely a political party, such as the Republican and Democratic parties, with the right to function as such in the United States?

According to a bulletin issued by the Bureau of Information of Soviet Russia, of which Nourteva was director, Morris Hillquit, the Socialist leader, who is now making capital talking about safeguarding Constitutional rights, was appointed a representative of the revolutionary Bolshevist régime in Russia. The bulletin stated:

"MR. MORRIS HILLQUIT HAS ACCEPTED THE POST OF COUNCILLOR OF THE RUSSIAN SOVIET BUREAU IN THE UNITED STATES. MR. HILLQUIT WILL BE IN CHARGE OF THE LEGAL DEPARTMENT OF THE BUREAU. . . . MR. HILLQUIT HAS BEEN IN CLOSE TOUCH WITH MR. MARTENS AND HIS BUREAU FROM THE VERY DAY OF MR. MARTENS' APPOINTMENT."

In a letter addressed to American workingmen, Nicholas Lenine paid a tribute to Eugene Debs, leader of the Socialist Party:

> I recall with pride the words of one of the best loved leaders of the American proletariat, Eugene V. Debs, who said in the *Appeal to Reason* at the end of 1915, . . . in an article entitled "Why Should I Fight?" that he would rather be shot than vote for war credits to support the present criminal and reactionary war, that he knows only one war that is sanctified and justified from the standpoint of the proletariat—the war against the capitalist class, the war for the liberation of mankind from wage slavery.

Correspondence between Debs and Nourteva showed the cordial relations existing between the two. To Nourteva, Lenine's agent, Debs wrote:

> My heart is with you, Dear Comrade, and I wish you all success in the splendid service you are rendering and the fearless manner in which you are rendering it.

Planning simultaneous Bolshevist revolutions in Europe and America, the International Communist congress of the Bolsheviki at Moscow, at a secret session last March, designated Debs, now serving a prison sentence for preaching resistance to the draft, as President of the future Soviet Republic of the United States.

The May Day literature sent out last Spring by the national office of the Socialist party declared for a change in the American government to a government in which the representatives of the people would be elected out of the shop; hailed a "dictatorship of the proletariat" and announced that "whether or not blood is spilled depends upon the tyrants of today." For May Day celebrations the national office outlined meetings and prepared a program of speeches, the last and doubtless most important of which was one by Eugene V. Debs, in which Debs said, "I am going to speak to you as a Socialist, as a revolutionist, as a Bolshevist. . . ."

Referring to the Peace Conference at Paris, he wrote:

> Out of Russia there comes a voice and out of Russia there shines a light which claims their fearful attention even while they pretend to be drafting a constitution for the world. It is no longer Wilson—it is Lenine who dominates the Peace Conference . . . When Lenine spoke it was to tell the truth and the working class of every nation in the world responded to his utterance with a mighty shout.

Serious Conditions and Need of Proposed Work Discussed at Conference

As a result of the invitation sent out by The National Civic Federation a conference on Socialist Tactics was held under the auspices of the Federation at the Hotel Astor on February 16. The sessions were attended by notable leaders of the various elements of our national life and included representative members of various patriotic organizations.

Judge Alton B. Parker, who presided, declared in his opening address that citizenship in America has been made too easy and too cheap, and that as a result there is a large population of naturalized aliens who do not speak English, who have never been assimilated, and neither understand nor appreciate the American Constitution and system of government. Judge Parker said:

"Now, nothing can be done about that, for they are citizens. But one of the things that the people of this country should do is to see to it that so far as the future is concerned, our citizenship shall not be granted to those who do not speak the English language and who do not really understand our scheme of government. It is but a little time back, as it seems to us, when we began to learn the efforts of the Bolsheviki, the I. W. W.'s, the anarchists, the socialists. We did not realize at first, nor could we, that they had any ambition to overthrow our government and substitute one like the Soviet government of Russia. It seemed so unreasonable, so unnatural, that it took us a long time to open our eyes to the fact that such efforts were being made in this country. Now we realize it.

"The evidence is abundant, and the question which seriously confronts our people is, shall we do our part toward preventing a successful attempt to overthrow the government, and shall we do our part to make good citizens out of all those who are here, to make them understand that this is in reality a government of the people, by the people and for the people? In order that that may be accomplished, it is not enough that the government shall deport those whose ambition it is to overthrow the government by force; it is necessary that we should carry on a propaganda on our side—a propaganda of education to enable the people who do not understand our language, through teachers who can speak their own language, to understand the fact known to all of us, that the best government which the world ever saw is the government of the United States, a government which the majority of the people can amend from time to time as circumstances seem to them to require it."

Henry A. Wise Wood said, in part:

"I am not as much afraid of those who come to our country who do not speak English as of those in it who do speak English, but who do not believe in its traditions. Since 1914 I have watched this pot of social apostasy boiling down on the lower East Side. In the latter part of 1914, with Colonel Roosevelt and Leonard Wood, I started in on the preparedness movement, began going up and down through the lower East Side, the upper East Side, Cooper Union, and then I commenced to realize that such a thing as the thing we now call Bolshevism was in existence, was being prepared in this country. We could not make the authorities realize then that that existed here. We could not make our people realize that it existed here. The newspapers would take no notice of it until one night at Cooper Union, when some of us were speaking, they spat on the flag. Then for the first time the newspapers in this city commenced to realize what we had here in our midst.

"Let me give you an idea of what the pot of Bolshevism, the poison of social apostasy that was being brewed right down here in our midst, resulted in. Robert Wilton, the correspondent of the *London Times* in Russia for a number of years, has recently stated that of the 384 Bolshevik commissars which ruled Russia right after the Bolshevists took charge of it were composed of two negroes, thirteen Russians, fifteen Chinamen, twenty-three Georgians and Armenians, and over 264 men who had come out of the United States from the lower East Side—Trotsky among them. Those men, known to our authorities, were not only permitted, but assisted, to go into Russia, into the midst of an ally who was at arms with us fighting a common enemy, and bring their ally down. Trotsky himself was held up in Canada and not permitted to go through by the Canadian authorities, and I am informed on good authority that he was released and sent on his way at the earnest request of our State Department. A man in whom I believe stated to me the other day that sixty per cent of the officials in the State Department in Washington are Socialists. I know from my experience during the war that the Socialists have been a stronger force in this country than any of us—any of the rest of us realize.

"I want to give a few examples of the damage that has been done by this poison of national apostasy which has been brewing and has been distributed throughout our intelligent states, our colleges and universities, by its organs, such, for instance, as the *New Republic* and the *Nation* and the *Survey,* the *Dial* and the *New York Call.* I was speaking two months ago—remember, this is after we had fought a great and victorious war—before the students of a college within one hundred miles of this city, discussing the fundamental American policies, traditions, and the Constitution of the United States. Of the young men before me, as I found when I commenced to question them, there was hardly an infinitesimal proportion that cared anything about a single American tradition or the Constitution of the United States, and who was not ready to scrap the whole thing if they could gain some temporary advantage by doing it. That was explained when later on I was taken to meet the president of that college, and in talking with him about various things the question of universal training came up. He said he was opposed to it because those who administered it would teach the boys patriotism. That man was an American, the president of an American college, and the boys I was talking to were Americans, excepting a few who had strongly pronounced foreign blood in them.

"I have just received a letter from a member of the faculty of a very prominent western university, who says: 'Just now a man on the staff of our engineering college told me it was too early to form an opinion whether Lenine and Trotsky were to be commended or not.' Yesterday at a luncheon of none but American people a New England woman whose ancestors had been here for nearly three hundred years asked me this question: 'Is it a matter of very great importance whether our government survives or not?' I am not afraid of these people who do not speak English. I am afraid of these people who speak and write English too fluently.

"Macaulay in 1857, writing, I think it was, to Bancroft, said: 'Either some Cæsar or Napoleon will seize the reigns of government with a strong hand, or your Republic will be as fearfully plundered and laid waste by barbarians in the Twentieth Century as the Roman Empire was in the Fifth, with this difference, that the Huns and vandals who ravaged the Roman Empire came from without, and your Huns and vandals will be engendered within your country, by your own United States.' That was written by Macaulay in 1857. The threat of that condition is present today. We have a conflict between the ideas of the East and the ideas of the West. It comes down to that. You have got men of eastern mind who put on our civilization as people put on their clothes, and men of western mind who believe in western civilization and in our traditions of government. There is your conflict, and Bolshevism is the expression of men of eastern mind who have not taken on the western mind, in their desire to overthrow western civilization. They believe that the institutions of private ownership, the church and the family are inimical to mankind, and they have given expression to those beliefs in one nation that has come under their power—Russia.

"We are suffering from the reflex action of that here, and we must not forget that for what has happened to Russia we are largely responsible. It was pulled off not so much with German money as with American protection, patronage and money.

"We are not going to solve our problems by merely educating these people to speak English. We have got to solve our problems by teaching them, whether they speak English or not, to believe in our traditions. We have got to enforce our criminal laws. We have got to handle this thing, not with kisses and gloves and flowers, but strongly by the enforcement of our laws. And when these people are found guilty, don't hang wreaths around their necks. Send them up and drive them out of your legislative halls. Face the issue. The issue is not a question of education. The issue is the same old issue, and you have got to meet it vigorously and with courage."

Rabbi Joseph F. Silverman said, in part:

"To my mind the Socialistic Party is not a political party in any sense that deserves to stand on a par with the Republican or Democratic Party. They are American political parties, and their whole intention is to uphold our government, the Constitution and to stand by the flag and the American people. Though they may differ in their methods in some respects and in their advocacy of certain measures, those political parties mean and intend to uphold the liberty of our country, the laws of our country, the free institutions of America, free education, individualism, private property, the home and religion, the fundamental props of our nation. Any group of men that combine to overthrow those props of our American government and of the American people seek to destroy the structure, and do not constitute a political party, but a conspiracy to overthrow. This is a conspiracy, and the men that are engaged in it are traitors.

"We do not care whether a man is a Republican or a Democrat. We know that he is an American, after all. But when I meet a Socialist, I can look him squarely in the eye and say to him, 'You are not an American.' And that is the stand that we should take—that a Socialist is not an American citizen in the true sense of the term.

"A campaign of education is in order, but it is not sufficient. We cannot hope by merely a campaign of education to reach the leaders and the teachers who are disseminating the poison. We must reach them. We must throttle them. We must seek to institute such measures by which those in authority in schools and in colleges will unseat the men and the women who today occupy seats of authority in schools and in colleges, teachers and professors, who teach these false doctrines, and by that false teaching undermine the citizenship of our country."

John L. Tildsley, Assistant Superintendent of the Board of Education, said:

"We have at the present time a struggle between two distinct civilizations, eastern and western. If that idea could be hammered home to the people of this country it would not be necessary for so many of us to be all the time in an apologetic attitude. In school work, at the present time, those of us who believe that the public school exists as a means of perpetuating an order based on experience and preserving law and order are looked upon as reactionaries.

"I think we are in a dangerous condition in this country at the present time, because our educational systems are being so largely influenced by people who have no patience with the idea that progress must always be based on experience, and must come about in an orderly fashion.

"The situation in this country today is more dangerous than those of you who are not directly connected with education can realize. The hope lies pre-eminently in a campaign of education of the young so as they grow up year by year they shall be trained to think straight and to have a right attitude toward government. After all, those who are full grown at the present time are rather beyond any means that you can use to educate them. But this great aim of taking millions of children in this country and out of them making good American citizens who shall really clearly understand our institutions is a tremendous task which can be performed only by teachers who are themselves steeped in Anglo-Saxon American traditions. And at the present time in this country of ours we are no longer able to secure such teachers. We are not securing them in our secondary schools, and we are not securing them in our colleges.

"Take this campaign of education which we all favor. On the one side you have Morris Hillquit and Scott Nearing, and a host of other men who write well and who speak well, all of whose utterances are tinged with a deep emotionalism and reach the persons to whom they are addressed. On the other side we have a decreasing number of able leaders of education. The danger at the present time lies in our educational system, from the highest to the lowest, in the fact that we have a steadily decreasing quality of person teaching the small children, the middle-sized children and the grown-up children of this country, and the condition is going to grow steadily worse because at the present time you have made teaching so unattractive by your failure to support it financially.

"Your campaign of education in this country has got to start with your schools, and the country has got to awake to the fact that it must preserve its old-time ideas if it is going to have growing citizens who are like those who went before them. They have got to be trained by men and women who are free from the financial worries so that they themselves can be optimistic and helpful. We need at the present time in our colleges and universities men of large ability. It is certainly as important for this country that in Columbia University you shall have as a professor of economics a man who because of his ability is capable of being a Supreme Court Justice of the United States, and yet in this day and generation we do not get them.

"We must try to bring up our children to realize that government is the most tremendous force in the world for the upbuilding and protection of the ordinary humble citizen, and therefore he must realize that life without government is absolutely impossible. Therefore his attitude toward that government should be friendly, kindly, and, above all things, hopeful, optimistic. That is the great work that our educational system must do. It must be permeated with optimism in order to have optimistic citizens, and men in high places throughout this country should realize that wherever possible they should impress that idea.

"I come back to my original thesis. The remedy lies in our educational system and in having leaders of thought who are big enough to impress their thoughts upon the young people of our schools and colleges. Let it be no longer said that the real thinkers of the country are found

only in the Rand School and the New School."

John McDowell, Chairman of the Social Service Commission of the Presbyterian Church, said:

"I think the time has come when we need not only to remind these foreigners, as we call them, who come to our shores, that we are a government of laws; we need to remind ourselves that we are a government of laws, and need, therefore, to again review our laws, re-learn our laws. I have been amazed, as I have gone from place to place, to find how ignorant men are of our fundamental law, the Constitution of the United States. I believe the time has come when we must refuse to call any man an American who does not believe in the Constitution of the United States. Now, how can they believe in a document that they do not know? How can they believe in a body of laws a knowledge of which they do not have?

"We stand with our forefathers more than ever on the Constitution, and believe and are willing to go so far as to refuse to give the right to a man to be known as an American who does not believe in our fundamental law. In the second place, we must see to it that these men have a chance to learn what these laws are. Primarily that will come through our public and private schools. I do not believe that we ought to support any school in this country that is not willing to teach the fundamental laws of our nation as embodied in the Constitution. But, after all, our schools are not enough. You may educate a man, train his mind, but if you fail to train his conscience you have not a safe man. We must have not only mental training, we must have moral training to go with our mental training, if we are to have a thoroughgoing American.

"I am not pleading here for a church education, but for an education that shall have morality in it. To have morality in it that is real in these days, it must be in some way related to that which is fundamental in man, namely, his religion.

"America is sound at heart, and we need have no fear so long as we keep in mind the fundamental principles that an American is a man who believes in the Constitution, is willing to practice it in his private and public life, and embodies in his daily conduct the spirit of the Golden Rule."

Samuel Gompers, in part, said:

"I endeavored to impress upon Congress that immigration should be limited or practically stopped for a period of two years. These people who are here who cannot speak our language, and who do not understand the institutions of the country, are carrying the prejudices of their home country into the United States. This has been going on despite the fact that the American Federation of Labor and this splendid organization, The National Civic Federation, have done everything within their power to bring to the attention of the people of our country the dangers confronting it. This seething has been going on a long time. I doubt if there have been any other two groups anywhere in all our country and its activities who have done so much as The National Civic Federation and the American Federation of Labor to bring to the attention of our people the dangers of this character of immigration and conduct toward the immigrants. I count myself fortunate to have had a long experience and to have given to my fellow countrymen the fundamental fallacies and sophistries of socialism and socialistic political action.

"During the war the elements to which I have referred had their opportunity of declaring themselves pacifists or anti-militarists and showing their disagreement with our entrance into the war. We did our share in trying to prevent their activities from having any influence upon the conduct of the war, to prevent them from sowing the seeds of dissension among the people during the war, and to prevent by any means any slacking of the activities of the workers in industry and transportation.

"Now that the war is over the law-making bodies of our country and of our states have failed totally to give any reasonable, decent consideration to reconstruction policies, so that we might go on upon a peace footing. With industrial reaction, with an ever-increasing cost of the necessaries of life, with the men of business acting the part of pirates upon the people of the United States in their form of profiteering, creating dissatisfaction such as can be known only to those who themselves suffer severely and cannot meet the new conditions opportunity is given for all this radicalism that we have seen and heard. The attempt to meet the situation by restrictive, repressive, suppressive legislation, if it were serious and could be put into effect, would be a declaration of the impotence of the United States of America.

"Our work, the work of patriotic, loyal Americans, is the work of education. It requires not only education in our schools, colleges and universities, but education in our homes, education through our associations, our clubs, our organizations, such as The Civic Federation, and such as the American trade union movement. It requires that character of organization to teach our people not only the spirit of Americanism, our laws and Constitution, but also to teach them sound economics and sociology that will stand for the right of the people and at the same time make them, each one of them, a bulwark against the sophistry of socialism.

"We fought for freedom and ideals during the war. We stood before the war for the principles upon which the war was conducted and for which we aimed to secure permanency during the war. Now that the war is over, we have not changed our purposes to work on to try and make today a better day than yesterday and tomorrow a better day than today."

Before the close of the meeting Mr. Gompers said further:

"The things which more than any other make up the labor movement and the cause for its activity in these affairs is that we believe in freedom, and no one who understands what freedom means doubts the fact that freedom and the exercise of freedom bring some ills in its wake.

"We are opposed to autocracy in any form, whether it be the autocracy of an enemy oligarchy or a political oligarchy, or whether it is the dictatorship of what has come to be known as the proletariat. Democratic freedom is predicated upon the will of the people.

"The masses of the people may just as readily make mistakes in groups as any individual, perhaps not in so aggravated a form, but yet make mistakes. We have held in concepts of freedom that it is better that the masses of the people shall make a mistake occasionally, and by the mistake and the experience of the mistake learn to avoid making the mistakes in the future, rather than have even the wisest among men to dictate what the people shall do. A dictatorship which may be founded upon great wisdom is just as liable to err as are the people in a democracy, and so when the wise autocrat makes a mistake, the people have learned nothing. When the people have made a mistake they rectify it; they are not likely to make the same mistake again. And so we prefer to have a system of government where each man and woman in the community and in the country may have the opportunity of expressing themselves and generally arrive at the result which is most beneficial to all.

"In America we have a labor movement founded upon the spirit, the idea and the concept of democracy. We are going to fight our cause for the improvement of the condition of the wage-working masses of our country. We have nothing of antagonism or bitterness to any other group or class of people. We are citizens with every other citizen, but in addition we have this great work of endeavoring to drive home into the conscience and the hearts of the people of America that as a reward for the services rendered by the toiling masses of America, we are entitled to better consideration than we have thus far received. This improvement must come by a rational policy, by a natural development, and not by a violent overthrow of the government of our country and the establishment, instead of this democracy which we have, of a dictatorship as exists in Russia, which promised peace and land, bread and work and gave neither."

At this conference a resolution, providing for the appointment of a General Committee and expressing the scope of the proposed work, was adopted as follows:

"WHEREAS, The present unrest of the world is greatly accentuated by the strenuous efforts that are being made to spread the political, social and economic teachings of socialism, as exemplified by Bolshevism, Communism, and I. W. W.-ism, which seek or tend to undermine and overthrow all representative government and the free institutions that are guaranteed by the Constitution of these United States, and by the constitutions of the several states,

"RESOLVED, That it is the sense of this conference that the fundamental principles upon which the progress of this country rests include the following:

"1. The maintenance of a government of law based upon our existing constitutional guaranties and restrictions.

"2. The right of the individual to the enjoyment of life and liberty, freedom of religion, of speech, of press and of peaceable assembly and to other civil freedom as provided under our constitutional guaranties.

"3. The right of the individual to private property under constitutional guaranties.

"Upon these basic principles there has been developed our social system which embodies certain features that should be safeguarded in the progressive development toward our ideals. These include among others:

"I. Equality and equal opportunity that must be guaranteed under the law.
"II. The encouragement of individual initiative.
"III. That the State exists for the individual and not the individual for the State.
"IV. Orderly progress based on experience.
"V. The principle of representation, and the rule of the majority.
"VI. The family as the unit of society.

"FURTHER RESOLVED:

"1. That to aid the various associations and individuals who are interested in upholding American ideas and combating revolutionary activities, it is desirable that a means be provided for co-operation through a general committee;

"2. That the general purposes of the committee shall be to provide means of co-operation between the represented societies and associations in matters particularly connected with the upholding of American ideals and the combating of revolutionary activities; to make an intensive study and survey of the program and principles of socialism in its various forms, such as Communism, Bolshevism, and I. W. W.-ism, and, through the knowledge thus gained of the revolutionary purposes of this group, to aid in the defense of American rights, liberty and ideals, and the defeat of its propaganda and efforts to displace or supersede our form of government, also to give support to all practical means promotive of social and industrial progress."

COMMITTEE ON INQUIRY APPOINTED—DIVISION OF WORK

In pursuance of the above action, Judge Parker appointed a committee to inquire into the objectives and tactics of revolutionary forces in this country; to inquire into the extent to which these forces have permeated the various divisions that make up the body politic; to make a survey of industrial political and social progress; and to give support to all practical means tending to improve the general well-being of our people.

To accomplish these purposes, the General Committee, at a meeting held on February 24 at the headquarters of The National Civic Federation, divided the work as follows:

1. *A Committee on Socialist Doctrine and Tactics,* whose work shall include the preparation and distribution of literature, and the organization of a training school for speakers.
2. *Committees to Make an Intensive Study* of the extent to which *Revolutionary Forces* have penetrated into the following and other fields: Labor, Agriculture, The Church, The College, The Public School, The Press, Social Agencies, Philanthropic Agencies, Foreign Groups, Women's Organizations, Public Employees, Negroes.
3. *A Committee to Study Text Books on History, Political Economy and Civics in use in the high schools and colleges.*
4. *A Committee on Soviet Propaganda in the United States.*
5. *A Committee on Survey of Industrial, Political and Social Progress,* and Constructive Recommendations.
6. *A Committee on the Fundamentals of our Constitution* and their application to every-day life, including the *Limitations of the Right of Free Speech, Free Press and Peaceable Public Assembly.*
7. *A Bureau to Evaluate Federal, State and Municipal Official Statistics,* as well as socialist deductions from same.

The Committee on Inquiry so far appointed by Judge Parker consists of the following:

Lawrence F. Abbott (Editor, *The Outlook*).
Cyrus Adler (Acting President, Jewish Theological Seminary of America).
Herbert Barry (Attorney-at-Law).
Wheeler P. Bloodgood (Loyal Legion of Wisconsin).
Miss Helen Varick Boswell (President, Republican National Women's Committee).
Rome G. Brown (President, *The Minneapolis Tribune*).
Rev. Gustav A. Carstensen (Rector, Holy Rood Church).
Thomas N. Carver (Professor of Economics, Harvard University).
D. L. Cease (Editor, *The Railroad Trainman*), Cleveland, Ohio.
Maj. Elihu C. Church (Chamber of Commerce of State of New York).
Bird S. Coler (Commissioner of Public Charities, City of New York).
Mrs. Sara A. Conboy (International Secretary-Treasurer, United Textile Workers of America).
Mark A. Daly (General Secretary, Associated Industries of New York State), Buffalo, N. Y.
Hugh Frayne (General Organizer, American Federation of Labor).
John P. Frey (Editor, *International Molders' Journal*), Cincinnati, Ohio.
A. L. Frothingham (Professor, Princeton University).
John Golden (International President, United Textile Workers of America).
Philip Hiss (formerly Special Assistant for Housing, Navy Department).
James P. Holland (President, New York State Federation of Labor).
John B. Kennedy (Knights of Columbus).
Capt. George B. Lester (Formerly of the Military Intelligence Division, United States Army).
John W. Lieb (National Electric Light Association).
Dr. Earl P. Lothrop (Physicians' Protective Association), Buffalo, N. Y.
Edson S. Lott (Insurance Federation of America).
Lieut. A. W. Kliefoth (Formerly of the American Military Intelligence Service in Russia), Fond du Lac, Wis.
John McDowell, D.D. (Secretary, Board of Home Missions, Presbyterian Church).
Capt. Hugh S. Martin (Formerly of the American Military Intelligence Service in Russia), Meridian, Miss.
Hill Montague (President, National Fraternal Congress), Richmond, Va.
Mrs. Philip North Moore (President, National Council of Women), St. Louis, Mo.
Dr. Charles P. Neill (Bureau of Information, Southeastern Railways).
T. V. O'Connor (President, International Longshoremen's Association), Buffalo, N. Y.
Prof. William Bradley Otis (College of the City of New York).
Condé B. Pallen, LL. D. (Author, "A. B. C. of Socialism").
Clifton Reeves (Willys-Overland Co., Inc.).
Montgomery Schuyler (formerly U. S. Chief Intelligence Officer at Omsk, Siberia).
Timothy Shea (Acting President, Brotherhood of Locomotive Firemen and Enginemen), Cleveland, Ohio.
Rabbi Joseph F. Silverman (Temple Emmanuel).
Walter George Smith (American Bar Association), Philadelphia, Pa.
Maj. Lorillard Spencer (Chairman, Committee on Anti-American Activities, The American Legion), New York County.
Archibald E. Stevenson (Attorney).
Lionel Sutro (Chairman Committee on Education, City Club of New York).
John L. Tildsley (Associate Superintendent of High Schools), New York City.
Daniel J. Tobin (President, International Brotherhood of Teamsters), Indianapolis, Ind.
Charles R. Towson (Secretary, Industrial Department, International Committee of Y. M. C. A.'s).
Mrs. Coffin Van Rensselaer (Executive Secretary, Woman's Department, The National Civic Federation).
John A. Voll (President, Glass Bottle Blowers' Association of the United States and Canada), Philadelphia, Pa.
Allen Walker (Guaranty Trust Co., New York).
Maj. Stanley Washburn (Formerly Military Aide to Root Diplomatic Mission to Russia).
Miss Maude Wetmore (Chairman, Woman's Department, The National Civic Federation).
Everett P. Wheeler (Attorney-at-Law).
Clarence H. Wilson, D.D. (President, Congregational Club of New York and Vicinity).
Matthew Woll (President, International Photo Engravers' Union), Chicago, Ill.
Arthur Woodward (President, New York Rotary Club).
Mrs. John Francis Yawger (National Society, Daughters of the American Revolution).

Answer Stock Socialist Detractions with Facts

AMAZING RECORD OF POLITICAL, SOCIAL AND INDUSTRIAL PROGRESS WILL CONFOUND MUCK-RAKERS

(Address at Conference on Socialist Tactics, Held Under the Auspices of The National Civic Federation at Hotel Astor, New York, February 16, 1920)

By RALPH M. EASLEY

IN dealing with the situation confronting this country today with respect to Socialism, I. W. W.'ism and Bolshevism, there are, as I conceive it, two separate and distinct policies to be pursued, because there are two separate and distinct classes of people with whom we have to deal.

First, we have the definite and outspoken revolutionaries who, under the name of Socialism, Bolshevism, I. W. W.'ism and so forth, have been shown by the Federal and State Governments to be committed to a program of destruction of our Government and all our cherished institutions by force. The last link in the evidence needed to put a quietus upon those socialist sympathizers who have been defending the Socialist Party and contending that it is anti-Bolshevist and anti-Communist was the official report last week of the referendum taken by the Socialist Party membership on the question of affiliation with the Third International of Moscow. The vote was two to one in favor of such affiliation, thus wiping out all practical differences between the Bolshevists and Communists of Russia and the Socialist, the Communist and the Communist Labor Parties in the United States. One and all are thus committed to the destruction of the State by force at the most opportune moment—and that moment is when, thanks to our indifference to this danger, they think they can win through a bloody uprising.

So far as this element of the problem is concerned, it can be dealt with only by the strong arm of the law, Federal, State and Municipal, as it is today being dealt with vigorously and properly. Fortunately, these revolutionary bodies which have to be grappled with in that manner comprise numerically only a small minority of our population, not one per cent at most; but it is a most venomous minority and largely foreign-born. To talk about education or Americanization as a method of dealing with such people is a waste of time, effort and money. Only the fear of the law, backed up by the police, the militia, the army and the navy if necessary, has any terrors for such terrorists, and it is our duty to make this situation clear to all loyal Americans, that they may uphold the hands of our Federal, State, and Municipal Governments in their efforts to enforce the law against these impudent and brazen would-be destroyers of the State.

The second class, which is by far the more numerous and dangerous, because it is not so outspoken, is composed not of foreign-born but largely of American-born, and, more frequently than not, its members do not even belong to the Socialist Party nor to any other revolutionary body. They can be found in the college and the school class room, the pulpits, and the editorial sanctums of daily papers and magazines. They

can be found tucked away in governmental positions, Federal, State and Municipal. The labor and farm organizations also have them to cope with. The philanthropic field is a peculiarly fertile one for them. Charity workers necessarily deal with poverty; they are constantly coming into close contact with the misery and squalor of their respective communities. What is more natural than for them in time to argue that if our present institutions can produce only such conditions as those they see, the sooner they are scrap-heaped and some other system tried, the better?

This second class can be argued with and, whether convinced or not, care can be taken to see that its vicious work is neutralized by exposing the fallacies and meeting the arguments its members put forth. For instance, a stock argument which can be found in all their literature and in their public utterances is based on the assumption that under our present wage system things are rapidly becoming worse; that the rich are growing richer and the poor poorer, meaning the ultimate enslavement of the worker—all of which is based on the old cataclysmic theory of Karl Marx, and has been proven utterly false and admitted to be false by even socialist writers themselves; but this means nothing to the average socialist, who repeats it parrot-like just the same. One hears continually from them the expression, "as long as we are under the present competitive system," or "the present wage system" or "the present capitalistic system," nothing better can be expected than the great poverty we see all around us. When we ask them what system they propose to substitute, they will not make a direct reply; they say that "the old order" is past, and that they want "a new order"; when further pressed, it is easy to see that they have in mind some kind of a "co-operative commonwealth" or some fantastic socialist guild idea, which system was discarded centuries ago.

Now, the way to confound these promoters of socialism is to cross-examine them on the actual facts about the *present* system—the progress that has been made under it, whether they call it "the present régime," "the wage system," "the capitalistic system," or what not. Then the amazing discovery is made that they know little or nothing about it, save what they have gathered from socialist muck-rakers, who in turn have based much of their output on alleged statistics gotten out by socialist statisticians, whose figures are generally vitiated by their philosophy that everything that is is wrong and that the sooner things get worse, the better, so that the revolution can the sooner come and we can begin all over again!

Nothing so upsets these people who are denouncing the "terrible industrial conditions of this country" as to confront them with the facts regarding the industrial, political and social progress actually made. For instance, tell them what has been accomplished in the last fifty years by the labor movement alone in the matter of improvement in wages, hours of labor and conditions of living and employment. Show them that the labor legislation enacted within the last fifteen years—not even suspended during the war—is of itself a crushing argument against those who want to substitute for our institutions a nebulous form of government under the rule of a dictator of the Lenine or Trotzky type, and that the factory legislation alone in the last twenty years has revolutionized the methods of state sanitation in the workshops of the country and is safeguarding the lives and limbs of the workers today in a manner that was not dreamed of fifty years ago. Call their attention to the fact that not so very long ago it was a penal offense for a man to join a labor organization or for workers to ask collectively for an increase in wages, while now a mere declaration from the officials of the trade unions that they are going into politics is sufficient to create consternation in both political camps.

Show these scoffers what has been accomplished in practically every state in the Union in the matter of reducing hours of labor for women and children. Point out that in the last twenty-five years 95 per cent of all child workers under fourteen years of age—the requirements of the Model Child Labor Bill—have disappeared from the factories, mines and mills of the country; that 85 per cent of the ill-smelling sweatshops and reeking tenement houses have been abolished. Call attention to what has been achieved by employers, even in the last decade, in the matter of increased provision for the welfare of their employees through sanitary and safe work places, opportunities for recreation and education, model houses rented and sold, and relief funds for sickness, accident and death benefits, as well as voluntary old age pensions—all affecting millions of railroad, factory and department store workers. Call attention to the complete reversal in the matter of dealing with accidents in industry when Workmen's Compensation Acts took the place of the Employers' Liability laws in over forty states, the former placing the burden on the industry, while the latter placed it upon the worker. Point out the magnitude and usefulness of the health organizations, public and private, devoted to securing more efficient methods of sanitation and the prevention of disease, and in this connection refer to the fact that the death rate in New York and Chicago in 1919 was the lowest ever known in those cities.

Tell them the great work being done by the Rockefeller and Carnegie hundreds of millions of dollars in the interest of humanitarianism, a mere enumeration of the subjects dealt with staggering the mind to contemplate.

Call attention to our public school system and other educational institutions enabling the children in this country today to receive twelve times as much free schooling as was enjoyed by their grandparents—which factor in our advancement, by the way, also accounts for much of the normal unrest, without which no progress could come.

There are a hundred other reforms in the industrial world alone which could be cited to confute those who are railing at our institutions. But we must not forget that there are other fields where astounding progress has been made. Cases in point are the political reform that has come through the institution of the Australian ballot and the abolition of the free-for-all primaries; the change in the public attitude toward Civil Service reform, which was opposed by nearly everyone except the cranks twenty-five years ago, whereas today the two great political parties vie with each other in seeing which can secure its greater extension. Then there are the reform of legal procedure, wiping out unnecessary delays and cost of litigation to the poor; the revolutionary changes that have come about in the regulation of food and drugs; the institution of the rural free delivery, the postal savings banks, the parcel post, and so forth and so forth.

Ask them to consider the improvements that have come in the farming world. Tell them of the six and a half million farm owners. Show them the improvement in the standard of living among the farmers, not forgetting the hundreds of thousands of automobiles they own and their up-to-date labor-saving machinery, which was unheard of fifty years ago. Also bring in something about the hundreds of thousands of stockholders in our railroad companies and large industrial corporations and the millions of savings bank depositors, showing an increasing distribution of wealth and not its concentration in a few hands, as charged by the socialist agitators.

Point out that within the last twenty-five years there has been a remarkable gain in the popular concept of the rightful relation of industrial, railway and municipal utility corporations to the public. Twenty-five years ago they owned the country. Today—and in this I am not referring to the serious situation growing out of the war—the corporations have learned that they are the servants and not the masters of the public. And, strange to say, they now admit the justice of this reversal of attitude.

The abolition of rebates and free passes, and the placing of railroad, telegraph, telephone and express companies absolutely under the regulatory power of the Interstate Commerce Commission are changes that also have come about in the last twenty-five years.

I could go on indefinitely enumerating reforms such as the foregoing, which need only to be mentioned to be recognized but which the scoffers at the present régime have forgotten or deliberately ignored.

Last but not least, call attention to the thousands of women's clubs, the boards of trade and chambers of commerce, the thousands of labor and farm organizations, fraternal societies and church organizations—all working to improve conditions, and deserving the credit for the great progress referred to above.

Also tell the detractors that while the progress made has been so tremendous, you realize that along none of these lines has the ideal yet been reached; that there are yet many dark places and perplexing problems demanding attention on the part of those who love their fellow-men; but that the same courage, intelligence and humanitarianism that have accomplished so much will not now falter but will press forward, and with greater vigor than before, to the end that tomorrow will be a better day and tomorrow's morrow a still better day.

Then point out how foolish it would be to destroy a system that had accomplished so much good in a few decades and to substitute a socialist régime which has made such a horrible mess of things in Russia, for Bolshevism is only Socialism in action.

So sure am I of the effectiveness of such a method of treatment that I would suggest that one of the things which this body could undertake would be a survey of the actual progress made, industrially, politically and socially, at the same time pointing out what remains to be done, resolving that we will turn our energies toward the removal of the remaining ills.

In other words, I would start a campaign to Americanize the Americans, by showing just what has been accomplished under the present system, of which in the nature of things they know little except what has been told them by those who paint conditions in the darkest hues.

BRITISH CAMPAIGN

Under the leadership of Rudyard Kipling, Sir Rider Haggard and other distinguished men, an association known as the Liberty League has been formed in England with the purpose of combatting the advance of Bolshevism in the United Kingdom and throughout the Empire. In a communication sent to the press the following signed declaration appears:

> Bolshevism is the reverse of all that mankind has built up of good by nearly two thousand years of effort. It is the Sermon on the Mount writ backward. It has led to bloodshed and torture, rapine and destruction. It repudiates God and would build its own throne upon the basest passions of mankind. There are some misguided people of righteous instincts in this country who believe in Bolshevism; there are others who have been influenced by secret funds.
>
> We, the undersigned, and those we represent, being assured that if it is allowed to conquer it will mean in the end the destruction of individual rights, the family, the nation, and the whole British Commonwealth, together with the handing over of all we hold sacred into the power of those foes who stand behind and perhaps have fashioned this monstrous organization, appeal through you to the people of the Empire to aid in expelling its doctrines from their midst.

Loyalty to Constitution Test in Education

IMPERATIVE NEED OF SUCH EXAMINATION OF TEXT BOOKS USED IN PUBLIC SCHOOLS AND COLLEGES AS THE NATIONAL CIVIC FEDERATION PROPOSES

By TALCOTT WILLIAMS

THE school book decides teaching. Teaching and school books decide alike the knowledge and the thinking of the child. What the child knows and thinks, the voter will decide fifteen to three years hence, as school children from six to eighteen years old, from the elementary grades to the end of the high school, reach twenty-one. Put it into the school and it will come out in the nation, whatever it may be.

As about nine-tenths of those who go to the public schools are in the elementary and grammar grades, the character of the teaching in the school books used has never been of much consequence or directed to any special discussion or question. How much can be done even here, however, is apparent when it is remembered that a few women in the Women's Christian Temperance Union, just forty years ago, began the fight which is consummated today in the triumph of prohibition by getting one legislature after another to pass a law requiring the teaching of the deleterious effect of alcohol as a topic in the text books on physiology used in the elementary and grammar schools.

If this is true of primary and grammar schools in their school books on subjects like arithmetic, grammar, geography, physiology, and short and arid histories, it is still more true of high schools. The pick of the public schools go to these. High schools are called "the colleges of the people." They are more than that. They are character makers. Between the ages of fourteen and eighteen character is made, not to change again.

The principal result is that in the primary and grammar school what is put in comes out in the mass of voters. It is possible to take some single evil like alcohol and attack it there. It is not easy, and it has not so far proved practicable to deal with those subjects which require maturity, knowledge and the mind which comes from the fourteenth year or thereabouts. Such subjects are taught in every high school. They must be. They should be. And the high school sends out in its four years ten-fold as many as the college and furnishes, under the present conditions of American life, at least ten-fold as many young men and women who lead the communities in which they live. The college graduate occupies a more conspicuous place. The high school graduate is nearer to the leadership of those small social groups formed by trade, economic opportunity, distribution, transportation, and all the various units which constitute that great organization which we call "society" in its largest and fullest sense. Give a bent to the mind between the ages of fourteen and eighteen and, if it be a wrong bent, it is doubtful whether any hammering in active life will ever straighten the warp given.

Very few in this country fully appreciated this, until the Great War came. There has never been a war which, like it, was a struggle for the foundations of society. Instantly it became clear to every one that in such a struggle the future safety of the Republic, as it was founded by the fathers, as it has been developed by the sons, and as it is beloved by its citizens, might be undermined by the teaching of history, political economy, economics and various studies in which the manifold problems of social relations come before the minds of men and women at the threshold of active life.

The way in which these topics are taught in the high schools is of overmastering national importance. These schools are paid by taxation. Every citizen who owns property contributes to them. In most of our American states very nearly one-half of our citizens own property which directly pays a tax. The opinions of the citizenry of the land differ on these issues. These opinions ought to differ. The United States will be a mere stagnant pool, instead of a rushing stream, growing larger with each decade and carrying life and prosperity over every plain which it waters with its fruitful tide, unless this stream is open to new ideas and discusses new projects, is willing to know all that is in doubt or in question. It is also true, and the purpose of the American people, that the high school shall be used for the propaganda of no sect in religion and of no kind of opinion not consonant with our opinions, in teaching lessons of history, expounding the economic action of the community or informing students of the government under which they live. Every good school is a moral institution of the highest order and no more vital code of morals does a pupil come in contact with than the life and example and utterances of a good teacher. But the American public long since decided that it would not permit the teaching of morals to run into the teaching of any particular faith or any particular religion.

This sound doctrine has been applied to subjects which come close to religion and teach conduct, which is, after all, the heart of all religion. Sound at this point, this principle needs to be applied also to every subject taught in the high school or in the grades below the high school. In all of them, exactly as the teacher is not permitted in dealing with conduct and the inner life, to add or tincture by his personal religion the method by which the teacher himself or herself explains and sustains these things in his or her personal life, so, in using history as a guide to the present, in analyzing the economic operations of our system, in teaching history and in dealing with the relations of men and women to the family, teaching governments, its laws, its legislatures, its courts, its constitutions and the final authority of the people, these things ought to be so taught that, as was found necessary in the other field, the guides and metes and bounds of this teaching shall be those things on which all are agreed. These all have their shape and record in the State Constitutions and the Federal Constitution which the American people have established.

This is the test by which the teaching of these subjects must be judged. This teaching must be such as a people desire. Men and women can take up any of these problems and deal with them, discuss them, arrive at new conclusions and go before the American people asking for the adoption of those conclusions. This is the right of every citizen; but every citizen has also the right to ask, exactly as he is unwilling to have even his own religion taught in the public school at the public expense, so his special opinions on any of these subjects, however valuable they may be in the future, however he may advocate them in the present, shall not be taught, but the instruction in the public school in all grades, but most of all in the high school, shall be required to be, in the criterion of Jefferson, "loyal to the Constitution of the United States," the Constitution whose purpose, as stated in the first sentence, is "to form a more perfect union."

With this principle and under this principle, it is not only salutary but necessary that the school books used in our high schools, and in general in our schools, shall, from time to time, receive careful examination. They have had none heretofore. The selection of school books is one of the least agreeable aspects of American public education. Great corporations, rival corporations, to whom the selection of a school book means profits running into millions, are confessedly using every agency open to honest men—and in some cases agencies not in that category—to secure the adoption of a particular book. The states which print their own books find themselves in the meshes of a great educational system without the agencies by which they can judge the school books which they publish. Every school board, township, town, municipality and state is besieged with the pleas of publishers. In a big state it means instant fortune to have a particular history adopted. Some choice is left to the teacher but there, too, the decision is influenced by the zeal which a particular individual teacher, man or woman, has shown for the works of one firm or the publications of another corporation. If the only authority which selected school books was the teaching staff of the schools, matters would be better. True and loyal is this staff, with a few exceptions, so few that those who are treacherous to our institutions, being exposed, become at once notorious on exposure. The educational expert is almost always a man who has studied many phases of each subject and seeks an impartial presentation in consonance with the agencies who are working in American institutions in all fields.

Only such books should be used; only such should be open to the choice of the teacher; only such teaching should be permitted in our high schools. Even in our colleges a line ought to be drawn between the opinions men hold and the teaching they give, precisely similar to the line which is drawn in teaching morals between the religious opinions on which these morals are based and the code of morals which the American people supports and desires to have taught in the schools, which its taxes sustain and in which all its children receive their first and most lasting impressions. An examination should be held which shall decide first, whether the school books of the high school and, next, the school books below the high school and above it, accept the law of the land as expressed in our Constitution and in the working of administrative, economic and social life as ordained by the American people, or whether, instead, they are endeavoring to subvert the opinion of the American people by discussion under the unchallenged autocracy of the teacher, whose pupils are, in the nature of things, unable to argue with him.

The National Civic Federation proposes to take up this question dispassionately, to examine text books in the light of American principles and to expose those things which are contrary to the convictions and the practice of the American people by law established and declared. Nothing will be done except by those competent to pass an opinion. No decision will be reached except to sustain such a judgment. Sound text books there are in abundance. Those who are seeking to de-Americanize our institutions and to sap the foundations of the Constitution in and under which the American people lives, are few, but they demand exposure and exclusion, lest liberty and human rights and the rule of the majority be wounded to death in the house of their friends, the public schools of America.

The Dishonesty of the Socialist Mind

By GERTRUDE ATHERTON

In the following communication, which comes as an answer to a letter written to Gertrude Atherton regarding the unduly advertised alleged endorsement by her of Upton Sinclair's book, "Jimmy Higgins," a gross libel on the American army, the celebrated novelist applies to the Socialists and ultra-radicals that quality of psychological analysis which has marked her delineation of human character in her books and has placed her among the greatest of modern novelists, not only of America but of the world. Mrs. Atherton's succinct observations are in timely order, and may help to make clear to those not yet "wise," the mysterious processes of New Republic, Nation, Dial and Survey cerebration.

EDITOR.

Editor THE NATIONAL CIVIC FEDERATION REVIEW:

You reproach me for "endorsing" Upton Sinclair's book, "Jimmie Higgins." Permit me to explain how and why I did nothing of the sort.

I have never happened to meet Mr. Sinclair, but I liked his attitude in seceding from the disloyal Socialist party when we entered the war; and when he sent me a copy of a little weekly paper he was publishing, called by his name and breathing the most patriotic sentiments, I thought he should be encouraged and sent him a subscription for five years. An intermittent correspondence ensued.

I read the first three or four installments of "Jimmie Higgins" with a good deal of interest, for it was a glimpse of a life that was novel to me, and I am always curious about anything new. I wrote him to that effect, and it was this brief and not over enthusiastic letter that he used for advertising purposes later.

But the constant repetition soon wearied me. I found the story as it progressed dull and uninspiring, and after the fourth or fifth week I ceased to read it. I never looked at it again, although two copies of the book were sent to me.

Now comes the point. Mr. Sinclair merged his paper with that of a radical weekly, calling one page after himself and continuing to air his views. This paper was sent to me, a compliment, no doubt, to my former subscription.

I soon perceived that he was developing a sympathy for Bolshevism, but paid no attention for a time, as so many sentimental half-baked, second-rate minds were going off half cocked. One woman had said to me, shaking her head sadly: "Poor Lenine! Fighting on eighteen fronts!" Even the policy of certain of our weeklies was merely amusing at the time; they were timidly—but cannily—putting out feelers, not caring to risk loss of circulation, as Bolshevism might go by the board any moment.

But it soon became evident that Sinclair was in earnest, that this vicious experiment in Marxism appealed profoundly to his natural taste for horrors and sensationalism. Moreover, he had been a socialist for many years, and as socialism seemed to be a dead issue everywhere, outside of Russia, and as it was his expressed belief that you must be radical to be intellectual, as his highly developed publicity sense rebelled at anything resembling conservatism, and as he is moreover, excessively sentimental and weeps periodically over the woes of the working class, his conversion to Bolshevism was quite in order and become more apparent every week.

Now, as it happens, this order of mind is one for which I have an unmitigated contempt. It shows a lack of the most elemental knowledge of the logic of history, of co-ordination and foresight. It is radicalism for the sake of radicalism, because there is no other way of establishing an outstanding position, or of satisfying one's own self of superior cleverness. That is what is the matter with the *New Republic*, the *Nation* and all the rest of the hardworking second-rate intellectuals; and it is precisely the spirit that animates the callow minds of sophomores and undergrads in universities. It is the shortest and surest cut toward appearing intellectual and "advanced." The truth of the matter is, of course, that it takes a far higher order of mental endowment to be forcible and original without the cheap and easy method of radicalism. The fact that possibly the majority of the educated (or half educated!) people who go in for any sort of radicalism that happens to be fashionable at the moment, are honest and sincere, as Mr. Sinclair no doubt is, may be greatly to the credit of their hearts, but sadly interferes with the reputation of their heads.

Heaven knows, no one is more dissatisfied with the existing order than I am. Swollen fortunes are an outrage on democracy, and the word "strike" never would have been invented if the employing class could have curbed their greed and love of power. Poverty is a greater disgrace to the world than war; and injustice, in its every manifestation, is the fundamental cause of all the misery in the world. It is possible that the grievous faults of our present civilization may be rectified under the constitution which has fostered their growth, but if this is not to be, and some prophet will appear with a revolutionary slogan that promises better things for *all classes*, I shall be the first to enroll under his banner. But so far, not a single radical suggestion for change in the existing order of things, from the program of the revengeful Marx, foaming with class hatred, down to these last fantastic developments of his misbegotten theories which would turn the United States with its enormous middle class over to the proletariat, has promised the betterment of human conditions. Every revolutionary program now before the public denotes a poverty-stricken mind—except in those instances where it is the frank expression of a cynical and blatant selfishness. Far from promising us better things, we may well anticipate the worst if radicalism ever gets its way in this country.

Therefore, as may be imagined, after Mr. Sinclair had reiterated "I am not a Bolshevik, but—" some six or eight times, I wrote and told him what I thought of him, and added that this was my last letter; nor did I wish to hear from him again. I stated in no measured terms that I regarded the Bolshevik movement as the most stupid, the most unintelligent, with which civilization had yet been cursed, and had no respect for any one that endorsed it.

It never occurred to me that anybody with a spark of natural pride would use my name for self-advertising purposes after such a letter, or I should have warned his publishers, Messrs. Boni and Liveright, whom I happen to know personally. When I saw their advertisement I was both astounded and furious, and called up Mr. Liveright at once. He said that Mr. Sinclair had sent him the extract from my letter, with the assurance that he had my permission to use it. Mr. Liveright was very much disturbed and withdrew the advertisement at once.

When I was in Los Angeles last August—and some time after this episode—a youthful aspirant to literary honors wrote and asked me if I would not endorse his book so that he could send out slips to a large number of addresses, as Mr. Sinclair was doing with my unfortunate lines about the first chapters of his "Jimmie Higgins." So it was apparent, that although Mr. Sinclair must have heard of my attitude from Mr. Liveright, he was continuing to use me to advertise his book.

I must confess that this sort of psychology is beyond my powers of analysis. It seems to me that the only attitude possible after such a letter as I wrote the man was a lofty disdain, an immediate obliteration of my very name from the slate of his consciousness.

Is it possible that any mind is utterly without pride, or that pride may be cynically subordinated to a grim determination for publicity at any cost? Is it a fault of upbringing, the absence of a code instilled early in life, an entire ignorance of *noblesse oblige?* I confess, I give it up.

There is another point that may as well be mentioned here, if I have not consumed too much space already.

It seems that in the last chapters of "Jimmie Higgins" the hero, now, a soldier with the American forces in Siberia, is hung up by his thumbs and treated to other ingenious cruelties by his superior officer. Several of the newspapers, including the *New York Times*, remarked that the author should be prosecuted for libel.

Some time after there was an official investigation into the disciplinary methods of certain of our officers in Siberia, and the fact was given to the world that unethical modes of punishment had been practised. Whereupon, Mr. Sinclair wrote a triumphant letter to the *Times*, which they published, with tongue in cheek.

For, this is the point—although a man of Mr. Sinclair's warped mentality probably never could be made to see it: He had taken an isolated instance and inserted it in a work of fiction as typical. Probably not more than two or three of our officers were guilty of such practices, and I would be willing to swear that they were none of them West Pointers, but men who were having their first taste of authority. Every working man will tell you that the most brutal foremen are those that have risen from the lowest ranks, and that the most tyrannical employers of labor were once laborers themselves.

The socialist mind is essentially dishonest, although in the case of the finer breed of socialists not consciously so; but this subconscious dishonesty (the natural result of a weak cause) leads them to play up one side of any occurence that gives them a momentary advantage, and to ignore the whole truth. It is especially unfortunate in Mr. Sinclair's case, for he has a considerable gift for fiction, and his mental lopsidedness will exclude him from even a second-rate position in American letters, unless he reforms. There is a certain light and fire in most of his books (entirely absent from "Jimmie Higgins") that carries you along in spite of the frequent lapses of taste; but this same absorption in theme, particularly if there is an opportunity to excoriate some one or some thing, has stunted his artistic development, and has even prevented him from becoming a good craftsman. If "Jimmie Higgins" had possessed art and craft, or even the power to interest, as "King Coal" did, for instance, it would have done incalculable harm, but as it is, no one will read it outside of select Bolshevik circles; and the publisher (who had not read the end, by the way, when he signed the contract) will be the chief sufferer.

Personally, I am glad of an opportunity to explain the misuse of my name in advertising a book which I was unable to finish.

GERTRUDE ATHERTON.

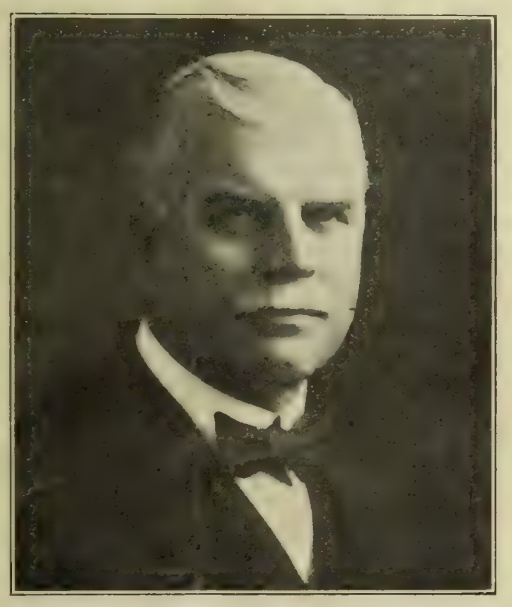
Vol. V. NEW YORK, MAY 10, 1920 No. 3

"THE BIG FOUR" WIN VICTORY

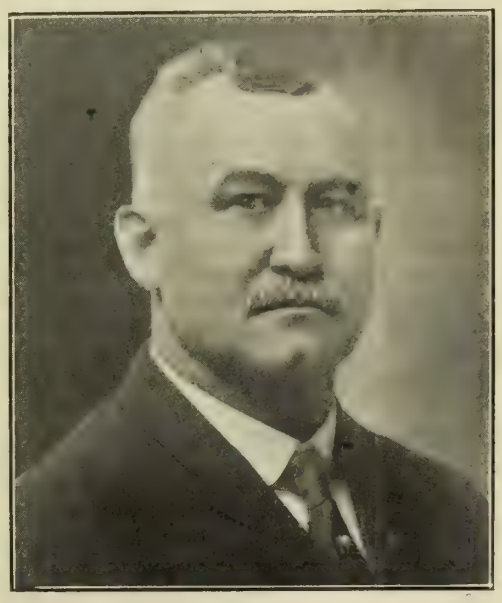
HOLD NINETY PER CENT OF MEMBERSHIP OF RAILWAY BROTHERHOODS AGAINST OUTLAW MOVEMENT AIMING TO DESTROY ORGANIZATIONS AND PROMOTE "ONE BIG UNION"

By WILLIAM C. ROBERTS



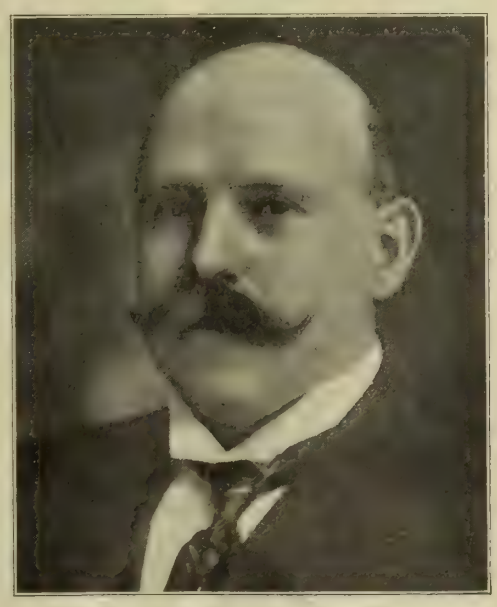
THE strike of railroad employes in the transportation service established two facts: That organization of labor is necessary and that the needs of the workers must be considered justly and without delay.

The fact that the railroad employes were organized and had strong leaders prevented the spread of the "wildcat" strike. The delay of the Government and railroad officials in answering the appeals for higher wages was responsible for the strike.



If it had not been for the discipline secured through years of organization by the brotherhoods the strike would have been nation-wide instead of being confined to a number of industrial centers.

For more than a year the railroad employes had appealed time and again to the Railroad Administration for increases of wages that would meet the continued advance in the cost of the necessaries of life. But month after month passed without an answer to the appeal from the Railroad Administration. The situation became similar to a law suit in court. The Railroad Administration used its efforts in putting off from month to month any decision as to wage increases. While admitting that the demands for more money were just, the idea seemed to be to drift along until after the railroads had been turned over to the owners.



When it is known that the railroad employes up to 1917 never had received anything near a proper wage scale, and that the additions then received were inadequate, it cannot be wondered why demands for a strike became insistent during the summer months of 1919.

President, Brotherhood Locomotive Firemen and Enginemen

Appeals were made to President Wilson for relief. He was told that a strike of both brotherhoods and shopmen was inevitable unless a wage sufficient to meet the high cost of living was conceded by the Railroad Administration. President Wilson in a public letter stated that the cost of living would recede and urged that the men remain at work. He contended that the cost of living would be reduced and gave as his authority the Department of Justice. The railroad employes, always loyal to their country, agreed to call off the strike. This was done. Everybody continued at work and watched the price barometer on the necessaries of life. Instead of falling it continued to rise and is still going up.

Then the railroads were turned back to their owners under a law which provided that all disputes over wages should be considered by a Labor Board to be appointed by the President.

There was much dissatisfaction among the railroad workers throughout the country and this was intensified as day after day passed and no Labor Board was appointed. The men in the yard service began to charge that it was their officials who were responsible for the delay in securing an increase in wages, that if they had done their duty and called a strike the whole matter would have been settled long ago. This strike sentiment had been long withheld. The yardmen in the various terminals had voted to strike in February last if their wages were not increased. This would have been a legal strike. As time passed and nothing was done they began unjustly to attack the chief executives of the

brotherhoods. The latter were blamed for the delay.

This sentiment was so extensive that when the brotherhoods' chief executives met in Washington in February some of them believed that it would be impossible to hold their members in their employment unless there was quick action on wages.

It is not generally known, but it is a fact, that the Brotherhood of Railroad Trainmen was prepared to call a strike February 23, 1920. They had given the Railroad Administration the regular thirty-day notice that its contract with the railroads would terminate February 23. The sentiment for a strike was very strong and general. A committee with full power to order the strike was in Washington. The rank and file of the Brotherhood of Railroad Trainmen were continually sending telegrams to President W. G. Lee, demanding that a strike be called unless concessions in wages were granted. President Lee was much concerned. Before he left Cleveland he was certain that a strike would be called. He had no hope of securing any concessions. In fact the twenty members of the committee, which had full authority to call the strike, all felt the seriousness of the situation. They had arranged their financial affairs so that in the event the strike was called and the Attorney General of the United States began proceedings the courts could not touch their property or funds.

When the trainmen's committee arrived in Washington the members refused to join with the shopmen and other trades in a letter to the Railroad Administration and later to the President. President Lee and the committee demanded a separate hearing from Director General Walker D. Hines and in that conference Mr. Lee, after increases were refused, declared he feared that a strike could not be prevented. The chief executives of all the other organizations urged the trainmen's committee to await the action of the President, who had promised that in the event no law was enacted covering the issue he would appoint a commission to settle the wage dispute. He had pledged that this commission would act immediately. But a law was enacted and President Lee appeared before the trainmen's committee, whose members were still rebellious, and asked that they agree to cancel the contemplated strike. The members refused.

This conference was held in the National Hotel in Washington. Then Lee, it is stated in labor circles, told the members of the committee:

"The constitution gives this committee full power to call the strike. Now, you choose a man to lead this strike and I will back him, but I will not conduct it myself." This changed the sentiment of the members and they voted to accept the recommendations of President Lee and cancelled the strike order.

When these facts became known among the rank and file there was a great uproar. A leader of the insurgents appeared in Chicago and denounced President Lee, and the yardmen declared for a strike. The meeting which favored the strike was unauthorized and contrary to the constitution of the Brotherhood of Railroad Trainmen. The strike began the first week in April.

While President Lee and the other brotherhood officials had done everything they possibly could to secure wage increases, spent day after day in Washington appealing to the administration, they were unsuccessful. Instead of directing their antipathies to the Railroad Administration the insurgents blamed the chief executives for their troubles. They denounced the Brotherhood of Railroad Trainmen as well as the other brotherhoods and their officials and declared for a new organization. At a meeting held April 9 in Washington the chief executives of the big four brotherhoods issued the following statement:

> The present strike of men engaged in switching service was originated in Chicago by a new organization that has for its purpose the destruction of the Brotherhood of Railroad Trainmen and the Switchmen's Union and in its inception had nothing to do with the wage question, but was a demand for the reinstatement of the leader of this opposition organization. After this strike was instituted for this purpose, the leaders of the new organization then injected the wage question for the sole purpose of deceiving the yard men throughout the United States and promote the "one big union" idea.
>
> There can be no settlement of pending wage questions while this illegal action continues. We insist that every member of these brotherhoods do everything within his power to preserve their existing contracts, which if abrogated may take years to rebuild. The laws of all of these organizations provide penalties for members engaging in illegal strikes, and these penalties will be enforced.
>
> (Signed) L. E. Sheppard, President Order Railroad Conductors; W. G. Lee, President Brotherhood Railroad Trainmen; W. S. Stone, Grand Chief Engineer, Brotherhood of Locomotive Engineers; W. S. Carter, President Brotherhood Locomotive Firemen and Enginemen."

President Lee made an additional statement in which he pointed out to the yardmen that the only hope of securing an additional increase in wages was through the Labor Board which had been created by law. He said:

"The fifteen railroad labor organizations have entered into a signed agreement to present their wage demands to such board, according to the law, and it is unreasonable to expect that any increase will be granted except by the board."

But there was no board then in existence. The President had failed to make the appointments, although urgent requests were coming from all parts of the country as well as from the chief executives of the brotherhoods. The failure of appointing the board immediately after the law was enacted stirred the insurgents and made their agitation for a strike more successful.

President Lee revoked the charters of lodges having an aggregate of 18,000 members. The railroads set a date when the strikers should return to work or be barred from their seniority. While many returned to work quite a number remained out.

While the strike was in progress the 600,000 railroad shopmen in the United States, the telegraphers and railway clerks remained at work. While their grievances were as great as those of the switchmen, they listened to their officials and agreed to wait until the Labor Board could act.

These facts prove that if it were not for the discipline of the organizations ninety per cent. of the employes who were seeking wage advances would have joined the strike. Nothing could have held them. It was only the influence of their organizations that prevented them from quitting work.

Since the Labor Board was appointed and began its hearings on the wage increases desired, much concern has been created by the evident intent of the railroad officials to delay as much as possible any awards being made. They appeared before the board with what appeared a very innocent request which, if adopted, would delay a decision for a year or more. This was that every railroad should be sent a questionnaire regarding the issues at stake. This was to be a complicated affair and would require much time to answer. The plan was bitterly fought by the brotherhoods' officials.

In the present case the Labor Board is an arbitration board. Arbitration to the railroad employe is not a fascinating word. The firemen and engineers a few years ago spent half a million dollars preparing a case which required several months of hearings, and the award was so objectionable that at that time it was said the engineers and firemen never would submit to arbitration again. If the Labor Board persists in delaying a decision the danger of further illegal strikes will increase daily.

It is the duty of the public to support the chief executives of the railroad brotherhoods and the shopmen in their efforts to maintain peace until an award has been made. Where so many men are involved it is not surprising that a number of them will "jump the traces" and cease work.

Much credit is due to President Lee that under the circumstances fewer men joined the unauthorized strike. It establishes the fact that his administration has proved effective. Mr. Timothy Shea, acting president of the Brotherhood of Locomotive Firemen and Enginemen, also had a difficult problem. The locomotive firemen were restless and it was only by using every influence possible that so few members of that organization joined the "wildcat" strike.

The Brotherhood of Locomotive Engineers and the Order of Railroad Conductors were not materially affected. Warren S. Stone, grand chief of the Engineers, and L. E. Sheppard, president of the Conductors, laid the failure to affect their members to the discipline of long organization.

The strike teaches a lesson. If the railroad employes had been unorganized and had been drifted along from day to day and year to year with the hope that they would secure an increase in wages some time they would have rebelled long ago.

No more loyal citizens than the railroad employes can be found in the United States. No others were more concerned in winning the war. They had grievances unnumbered, but they were placed in the background while the nation was fighting for the freedom of not only itself but the rest of the world. They believed, and justly, that they should receive proper recognition for their grievances. They did not expect delay. They did not realize that a persistent propaganda had been launched to discredit the railroad workers.

There is no intention to defend the strikers. There should be only condemnation for men who violate their obligations to their organizations. The intent is to point out that were it not for organized labor in peace time as well as in war there would be continual strife in the industrial field. Where men are unorganized they are voiceless. They have no method of preparing their grievances collectively. Naturally, they become morose, sullen and finally stampede from their employment like cattle from a prairie fire. They are heedless of the future and think only of their grievances.

The present strike is similar to that of the American Railway Union in 1894. In that strike Debs expected to unite all the railroad workers into the American Railway Union. The success of his organization meant the downfall of the railroad brotherhoods. But the brotherhoods stood firm and although greatly injured by that strike they gradually recovered. Debs' idea of "one big union" proved to be ineffective. The present insurgent movement against the four brotherhoods will also fail.

In the meantime the railroad employes and the public should support the chosen officials of the four brotherhoods. While they are not responsible for the present wage situation, in fact have exhausted every means except endorsing a strike to secure advances in wages, they have believed in an orderly way of obtaining results.

The strike is also a warning to the Government officials that they cannot dillydally with questions that govern the economic conditions of the people. It is also a warning to the officials who are now operating the railroads that they must listen to the just grievances of the employes. Unless they do there is no telling how soon the strike spirit will spread among those who refused to join the present unauthorized walkout.

One thing is certain. The railroad brotherhoods will recover from the effects of the strike and will grow stronger and stronger until such illegal walkouts will be impossible.

Shop Industrial Training

ITS RELATION TO MAXIMUM PRODUCTION—HIGH COST OF LIVING REDUCTION—CONTENTMENT IN EMPLOYMENT—HELPING TO SUPPLY WORLD'S NECESSARIES

(Discussion at Annual Meeting The National Civic Federation, January 29, 1920)

Judge Alton B. Parker, the Federation's President, presided at the annual meeting session on "Increased Production through Shop Industrial Training" and, in making the opening statement, referred to that part of the report of the Woman's Department concerning the effort to secure adequate salaries for public school teachers, saying:

"I listened to a very prominent member of our educational system in this city the other night and he spoke of the fact that we are not now receiving from the great women's colleges of this country any recruits to our educational force in New York; that in the past we were accustomed to receive them because the wages paid here were as fair and as good as they were anywhere else but that today the wages are about half what a good stenographer gets in the offices downtown and, therefore, they do not come and there has been no recruit added to our teaching force from those great colleges. But there have been teachers! There is no trouble, he said, about getting teachers, teachers who could pass the examinations all right—equipped intellectually. But the great majority of them are from Russia.

"Well, now, really, it didn't occur to me, when I listened to it, that we ought to do very much to favor the development of the Russian idea of government, at least in our school system!'

Allen Walker, of the Foreign Department, Guaranty Trust Company, New York, in dealing with his subject, "Why Production?" made the following statements:

"There is need for universal recognition of the fact that the whole problem of minimum expenditure and maximum production today is not exclusively that of the economist, the financier or the government legislator or administrator. It is every man's problem. There never was a time in the history of the world when it was such a vital question with us all as it is today. Most of the world at this hour finds its financial structure weakened, stocks exhausted, productive forces impaired, its inhabitants agitated by polical unrest; conditions which impose upon us a responsibility quite out of proportion to anything in past experience.

"A great many thoughtful men lately have been giving their minds to the solution of the great economic problems with which we have been brought face to face, and in the last analysis there is but one common verdict—increased production. Every wage earner, every housewife, every home builder is crying out against the abnormally high prices for the necessities of the breakfast table. The manufacturer and the producer of raw materials seek monetary facilities for necessary expansion and find their operations restricted because of tight money, which means limited financial resources everywhere. There is but one answer—increased production. We are asked to find the means of extending credits to Europe in order that lives may be saved and the wheels of industry kept going. The same answer always—increased production. Under-production is not limited to a local or even a national malady. It is a worldwide condition at this moment; everywhere the demand exceeds the supply. World consumption has increased to the most amazing degree during the past few years. There is little fear of our catching up quickly or of reaching any market where the supply may exceed the demand, especially in this country.

"We cannot find money to help reconstruct the world and simultaneously spend our earnings in luxuries which are beyond the means of the prudent and thrifty. We cannot listen to the demand for 6-hour days and 5-day weeks and still hope to produce the materials for our own needs, let alone what the world requires of us. Neutral countries are sending raw materials into Germany with a pledged lien on the finished product, in response to the German request that she shall have an opportunity to employ her people and start her factories going. It is reported that the German workers are pledging themselves, through their local organizations, to be satisfied with a 10-hour day, and that in many places they are urging a 12- and 16-hour day, until the peak of reconstruction be reached. I, for one, am not an advocate of any speeding-up processes calculated to be harmful to the health and general welfare of the individual, but I would suggest that if these reports be true—if Germany does this—and in the meantime we, in America, are content to witness a gradual shortening of working hours and automatically restrict our production thereby, who, in the last analysis, will have won the war?

"What the country needs as much as anything else is an invasion of common sense. A condition of half-strike, half producing, *all* consuming, cannot endure. Five minutes of restraint from purchasing what you can do without at this time is worth ten years of cussing the profiteer. During the war universally we were inspired to put every ounce of energy into the raising of men, money and materials and into organizing the nation to go out and destroy militant life. Now, we are called upon to produce in order that we may lend money and send the products of every man's brains and arms to save life and preserve civilization.

"No thoughtful American industrialist has ever quarreled with high wages, high, let us say, in comparison with wages paid for similar work in other parts of the world. For many years the wages paid to American railroad men have been considerably higher than those paid to railroad employees anywhere else on the face of the globe, yet we have been able to carry a ton of freight per mile cheaper than the railroads of any other country. It is the tendency to decrease production that the patriotic American citizen quarrels with today. However many and whatever be the theories offered for the solution of the vexing problems facing us today, I hold that there are two maxims which if universally and effectively applied will solve most of our difficulties both here and in every other part of the world. They may be embraced under the two words "Save" and "Produce"—and above all, in God's name, let us *produce*!"

Hugh Frayne, of Scranton, Pennsylvania, General Organizer, American Federation of Labor, among others made the following points:

"There should be a sound and unified system of promoting vocational or industrial training throughout the country. The need for highly and specially trained workers in industry is more apparent than ever before. This is not only necessary to meet the emergency of reconstruction now but it is a fundamental that applies to the social and economic life of the country for all time.

"It is possible to increase production. I agree to that but when production is increased to the detriment of the worker, his health or general welfare, the line should be sharply drawn. People can, however, be trained or re-trained, taught to work right, that is, with the least effort and in an efficient manner. They can be trained to avoid the wrong way of doing things.

"Take a man of middle age, not an apprentice but a helper. Often he never goes beyond that point. When a man shows ability, teach him and make a good mechanic of him and train some one else below him to be a good helper.

"There is a right and a wrong way to pick up a broom or a shovel and work with it. An experienced trained man with a shovel can work as many hours as necessary without strain and do efficient work, whereas an untrained man, not knowing how, will work harder and accomplish less. This will apply to any worker who has not been properly trained in the handling and use of tools. There is a right and wrong way to sit on a chair or at a bench and work; a right and wrong way to stand at a machine and to adjust it. When properly worked out it tends to increase production without causing extreme physical strain upon the worker. This extra production should be recognized and the workers should share by an increased compensation.

"The greatness of a country can be best judged by the economic value placed upon its people. Its success is assured only when it recognizes that human life and progress are its greatest asset, all others being secondary. Opportunity for development of the workers will bring its reward as no other human force can.

"There should be a central organization or head to promote this work along safe and proper lines. There should be local advisory boards, including representatives of the industries, the employers, and organized labor, as the trade unions are a strong factor in promoting this work.

"Another problem confronting us is the proper training of the boys and girls in order that they may be fitted to enter into industry and take their places fully equipped to perform their respective tasks in a highly skilled and efficient manner so they may not only establish themselves upon higher living standards but give to industry and the country generally, the benefit of their knowledge as better trained and skilled workers. To do this, there must be a strong public sentiment aroused along educational lines.

"There are many so-called trade schools in this country where young men and women are educated in a way—taught trades and parts of trades—and turned out after a time, absolutely unfit to take their proper places in any of the trades or callings, and they become dangerous competitors of the unions who have worked to establish themselves not only as skilled in their trades but to establish a high standard of living. In many of the private trade schools I know of, employers train young men especially for their private employment and when that young man leaves that employment he is helpless to go out into the world because he is not competent to work as a skilled, efficient mechanic and command the rates established by the unions.

"I want to take this opportunity of refuting the statement, made by those who do not understand trade unions, that the unions are opposed to the American boy or girl learning a trade, but we are opposed to the exploitation of either one of them in placing them in shops and factories or schools for the purpose of specializing them in part of some trade and then sending them out

in competition with skilled workmen who are the breadwinners of families. We believe that the public schools should teach the theory of the trade while the actual practice and processes should be taught in the shops. Instructions in a trade should be taught by an experienced, practical journeyman of the trade, with ability to impart knowledge. We are agreed that there should be industrial training, shop training for those who are not now trained, training for those already trained, a better training to bring them up to date, to meet present day conditions."

T. C. Spence, of the Norton Grinding Company, Worcester, Massachusetts, described its methods employed precedent to the introduction of the training service and especially during the war through advertising, and by sending to other communities and offering inducements to workers to change, with temporary results. He stated that through the training department, established in 1915, the company specialized in taking green workers and giving them some degree of skill in the manufacture of fine machine tools, grinding machinery and grinding wheels.

He gave as some reasons for training in a special department the following:

"First, few men have the faculty to teach. Oftentimes, the best workman is the poorest teacher. Hence it is easier to find one teacher and let him do the bulk of this work. Second, the press of output prevents a foreman, even if a good teacher, from giving proper attention to beginners; and third, it does not pay to have a high class executive foreman spend time on a beginner."

Concerning the methods employed in his plant, some statements made by Mr. Spence were that:

"We made the training school, from the beginning, a production department and not in any sense a place for practice. Every article has to be made according to the shop standards and is saleable.

"We attempt in eight or ten weeks to give beginners a fair idea of several of the main tools used in building machinery. Graduates from this department are by no means machinists but better workers than my employment man can get.

"After a worker is put on regular production, the supervisor of training follows him up for a period of about six weeks more because beginners, put into a plant in strange surroundings, lose their confidence and leave through discouragement. Periodical visits of a man, known to be their friend, straightens them out with the foreman and keeps a great percentage of them with us.

"Among these young men going through will appear the usual proportion of those who are mentally above the rest. We see to it that they are moved from one department to another. In the four years that this work has been in operation, we have raised engine supervisors, inspectors, sub-foremen—men who are on their way to be some day superintendents, managers, and owners of business.

"In addition to training manual workers, we pick up whenever we can, graduates of technical schools, colleges and ex-service men, and train them to become demonstrators, salesmen, agency workers and foreign representatives.

"As to the source of supply for this training, we get the sons of present employees, young men in the city who have heard about it through others, and daily we receive letters from fine young men in surrounding towns. We had 750 men in the war service. When those boys came back this department was a Godsend in helping to restore them to industry.

"Now, the results: At the time of the Armistice, over fifty per cent. of our people had had less than four months' experience and still we were building one of the finest machine tools in this country. Fifteen per cent. of them were women. We were very successful in training women to run machine tools.

"In 1917 and 1918, on the average, with twice the number of people we had in 1912 and 1913, we put out three times the product. Not in money; it was very much more in money; but in actual production, there was a gain of fifty per cent. per capita. Wages had increased over one hundred per cent. but direct labor cost had increased only fifty per cent. We are still gaining in production because we are gradually pushing the training idea out beyond this training department and into the main shop. We keep a record of each producer, and if he falls below a certain output—just now eighty per cent. of what we know is easily possible for an intelligent worker to produce—that man receives attention."

Percy S. Straus, of R. H. Macy & Co., New York, who aided actively in developing industrial training for the war emergency in connection with the Committee on Labor of the Council of National Defense, emphasizes, in his remarks, the value of the part time continuation school, and the difficulty of convincing manufacturers of the fact that training could be introduced without much expense and to the mutual benefit of themselves and their employees. His address included the following statements:

"We did succeed—Mr. Miles, particularly, did effective work—in introducing training into some three hundred factories, but the difficulty was not to convince the workmen that it would help them, but the employer that it would pay him to start vestibule schools. Since the war, those of us who have been interested in this movement have been talking to employers.

"I am in a particularly favorable position to realize the handicap manufacturers are now working under in trying to bring their production up to the demand. There is a very large demand for merchandise of all kinds, much larger than manufacturers can meet. When, in my organization we send an order to an employer, instead of accepting it—say the order is for $25,000 or $30,000—he writes back and says, 'Your allotment for this season is $5,000 or $4,000,' or in some cases one-tenth of the order we would like to place. We ask him what his trouble is, why he cannot give us what we need, and the first answer we get is always, 'We cannot get the men to do the work.' I suggest the possibilities of training. And I am always met with the statement that the unions would not stand for training. We know perfectly well that Mr. Gompers is the one who started the movement in this country, and from Mr. Frayne's, Mr. Golden's, Mr. Sullivan's and Mr. Woll's activity in these matters, that the trade union movement is not opposed to industrial training where it is used not only to train but to upgrade and that the trade union movement favors training in factories not only to up-grade production but also to up-grade wages. If those two are combined, I cannot see that there would be any possibility of disagreement between employer and the representatives of employees on the question of training. I don't think anybody, who is interested in the social and industrial progress of the country, would care to see the present high rate of wages reduced unless the cost of living goes down before that time. But every one, who is interested in the problems of today and the cost of living and all the evils that go with it, would like to see the cost of production reduced—in other words, that the element of wage in each particular item of production be reduced, and the only possible means of doing that is by better training.

"If this movement, which the Civic Federation is trying to foster, can be brought before the employers of the country in a straightforward way, I think we can bring about a state of production and a condition in industry which will enable us to maintain the wages we are now paying and enable us to increase our output.

"At the present time, the potters of this country say they cannot meet by one-quarter the requirements of industry. They are trying to persuade the distributors to place orders with them for 1921, which is practically twelve months away, and at present day prices, with the understanding that the manufacturer has a right to increase them. The distributor has the right to accept them when given and at the price at which the manufacturer cares to sell. If the distributors throughout the country would agree to conditions of that kind, there would be no possibility of reducing the cost of manufacture and cost of living. If the manufacturer has his book full of orders for twelve months, there is no incentive to try and bring down the cost. Now, if the potters, who are able to do so, would start the introduction of training, many of the processes which they now consider can be done only by men who have been born and bred in the trade could be done by properly trained beginners and those who are now in the trade could be upgraded to do the more delicate and intricate finishing processes. But it requires a concerted movement."

John Golden, President, United Textile Workers of America, Fall River, Mass., spoke of his experience in connection with a commission appointed by the Governor of Massachusetts to study vocational education fourteen years ago, thus indicating his close interest in the subject over an extended period. He referred especially to defects in public school methods, and said on this point:

"In my home city of Fall River there were few boys or girls who remained in the school after they had passed the age limit of fourteen years and the mill was ready to receive them. When they came from school they knew absolutely nothing about even the stable industry of their city and I thought it would not be a bad idea, without making a workshop out of the school, to give them training a little along industrial lines.

"Well, the result of the work of that commission was that textile schools were built in most of the big textile centers, such as Fall River and New Bedford, only one having been in existence at Lowell. Working men could go there nights and Saturday afternoons and perfect their mechanical education. And it so came about that day schools were opened and the younger element could go."

Mr. Golden explained the transition, in Fall River, from plain print cloths to fancy weaves requiring new and intricate loom attachments with which the loom fixers were unfamiliar, and said:

"They had never seen the new looms or inventions and, consequently, could not fix them. Not a mill man attempted to do anything to remedy the evil. What did we do? We happened to have perhaps a dozen members in our union from England and they had had the benefit of the textile institutes there. They had known something of this new loom and this new fabric that had to be woven, and those men helped us build up a loom down in the basement of the Union Meeting Hall where our men used to spend two hours each evening learning how to fix and operate that loom.

"I have not much confidence in the man or woman who comes out with a regular cut and dried definite plan of solving this problem. It has to be worked out. You are dealing with human nature, not with the machine. I have been told: 'Here is a spinning machine, here is the size of the gear, it will go so many revolutions per minute, and consequently will produce so many thousand yards of cotton yarn.' It cannot be done, because after you have figured up that machine you have to figure up the human being that is working on it and you cannot figure up

(*Continued on page* 18)

Inadequency of Public School System

EDUCATIONAL PROGRAM ADOPTED AT ANNUAL MEETING OF WOMAN'S DEPARTMENT OF THE NATIONAL CIVIC FEDERATION AFTER ILLUMINATING DISCUSSION OF URGENT PROBLEMS

OF the many lessons taught by the great war, none has been more impressive than the value and necessity of the education of a nation to meet the problems of armed defense, as well as the duties of citizenship in a country at peace.

There has come with a shock to the great proportion of the American people the realization that their much-vaunted public school system has not produced the results to have been expected. The figures of the draft proved the staggering percentage of illiteracy among our men, not by any means confined to the foreign born. The growing sense of the inadequacy, under present conditions, of the school as "a melting pot" is being more definitely acknowledged; and the failure to establish in the public mind the profession of teaching as the most honorable service to be rendered to the State is reacting in the leaving of that service of over 145,000 men and women, forced out through the lack of a fair wage and a fair future in their profession.

This is, to a great extent, a woman's problem, and one in which she must take an intelligent interest. The laws governing the control of public education differ in states and communities; the length of the school year is not the same, even in adjoining states (in some only twenty-two weeks); the qualifications for teachers' certificates are not standardized; the salaries for the same beginning grade range from $234 per year to $1,500. All these matters must be intelligently adjusted; we must come to realize the weaknesses and shortcomings, not simply to criticize and condemn, but to aid in making right.

The Woman's Department of The National Civic Federation, recognizing this obligation, at its annual meeting in January, 1920, asked Dr. John R. Tildsley, Assistant Superintendent of Schools in New York City, and Miss Fannie W. Dunn, Instructor of Rural Education at Teachers College, to speak of the existing situation and the responsibilities of the ordinary citizen to the subject.

Dr. Tildsley said in part:

"Going back to actual conditions, a Government report published some three years ago estimated that the value to the nation of an educated child was something like twenty thousand dollars more during the course of that child's lifetime than the value of an uneducated child; inasmuch as the educated child had been approximately twelve years in school, a total of some twenty-four hundred days, if that twenty-four hundred days in school added an increased valuation of twenty thousand dollars, the value of a day in school is something like $9 to the child, and the value of education in the United States to the nation is something like one hundred and eighty million dollars a day; and yet that great industry—the greatest industry in this country—is on the way to being put in the hands of a receiver and is already one of those industries in which we cannot recommend our young people to engage because it is a closed alley industry.

"Education as an industry in this country, at the present time, is a parasite industry, and, as business people, you know that something is radically wrong. If you asked me, 'What are you going to do in the light of the disappearance of your skilled workmen,' and I were to tell you that although the old time workman is leaving our industry, we hope to carry it on by importing four or five hundred thousand foreigners and put them in the industry, you would stop and think a little and wonder whether this was a wise policy at the present time, even if the demand for those goods was greater than it could supply; and yet that remedy, or some such remedy, is the one that we are applying. In other words, in days gone by in this country, teaching was very largely the occupation of our native American stock, largely women, and women brought up in good surroundings. Even then, it was a parasite industry, because the ordinary young girl of seventeen or eighteen went into teaching with the idea that within four or five years she would be married, and therefore she received from teaching enough for clothes, and her father and mother paid the actual living expense.

"Now, the situation at the present time, therefore, is this: When we need more workmen, we can obtain them in two ways, following the custom of the business world. We can either raise wages, and thus secure the type of workman we need, or we can take workmen of a lower order. In the educational world there is a tendency everywhere to reduce standards, and so the result is that half the children of the United States at the present time are being taught by young people who have had no training for that work. Now, imagine any industry in this country in the hands of workmen who have not had any training for that especial work, and yet are called upon to deal with a product which can easily be spoiled forever by one of those workmen. Yet here in this great industry of ours we are putting young children in the hands of untrained workmen, under conditions that make it possible to ruin the life of that child and make him ineffective as a workman himself during the fifty years that are his normal span.

"There is no more reason why a teacher should take the vow of poverty than the plumber, the machinist, the lawyer or the business man. And they have at last awakened to that fact. The chief of the Bureau of Labor Statistics states that at the present time the minimum sum on which a man can support a wife and three children in the United States—that means as a member of the laboring class—is $1,850. Only two per cent of the teachers of the United States at the present time receive a larger salary than $1,850, and the average salary paid the teachers of the United States at the present time is $634.

"Conditions were bad enough five years ago, and the cost of living in these years has increased at least one hundred per cent. During that time the salaries of teachers in the United States have increased but twelve per cent. In 1913 an estimate was made that the absolute minimum for social efficiency at that time of any person in any industry was $1,200, and in 1919, when prices have gone up more than one hundred per cent, only twenty per cent of the teachers of the United States received salaries of over that minimum amount for social efficiency.

"The National Labor Board set $15 a week as the minimum weekly amount upon which a girl in Schenectady can live. Sixty per cent of the teachers in the United States are receiving less than this minimum amount of $780 a year, and having all the extra expense to which a teacher is put. The average wages of a machinist in Schenectady at the present time is $1,716, of a carpenter, $1,287, whereas the average salary of any high school teacher is $1,139. Do you wonder that one of our school boys, a graduate of the high school, who was expected to enter Stevens Institute last fall, when met by his teacher and asked what he was doing, said, 'I am working.' He said, 'This summer I kept the payroll and I found that a man in charge of the work, who was a graduate of the Massachusetts Institute of Technology, was making $200 a month, where some of the laborers on the job were making $85 a week, and I concluded that I couldn't afford to get an education.' Now, under these conditions, the demoralization extends in all directions. The boys and girls are coming to realize that it doesn't pay to become teachers, and as teachers on the whole are a most highly educated body of workers, they are apt to draw the conclusion that education in itself doesn't pay, while all figures are to the contrary.

"May I suggest a possible remedy for the condition? The real trouble is, at the present time, that our boards of managers have so many other interests and so many other ways for spending money that they do not spend it adequately for schools. Our boards of managers, namely, our boards of estimate throughout the country, have many other interests. For example, the other day the Board of Education in New York raised the salaries of its janitors twenty-five per cent, but they did not raise the salaries of the teachers. Why? In the first place, the janitors have a very strong organization, on a par with the steel workers' organization—a most effective one. If they had not gotten that twenty-five per cent increase in their pay, their helpers would leave and go and work in an apartment house or in a business building, and we would have our buildings with nobody caring for them, and the schools would close. So they immediately got their demands. On the other hand, our product is too far away. People don't realize that the work that is being done in the primary grade might turn out years later a spoiled product.

"We shall never have conditions right until we have boards of education in our communities, whether large or small, with absolute financial independence of the city authorities, and those boards of education must be entirely independent of other political consideration, as well. They must be either elected by the people of the community or appointed by some responsible body of citizens which shall meet for this purpose and this purpose only. In other words, in my judgment, it is not safe in this country of ours, with universal suffrage, to commit the great school system to the chance of a municipal election in a city made up, for instance as is this, so largely of foreigners.

"There is a second principle that we must realize if we are going to have an adequate school system. No community in this country can live to itself alone; it cannot be allowed by the State of which it is a part to become a plague spot which shall undermine, not only that State, but the Nation, and if there is a State so negligent, so unmindful of the absolute need of better educational methods, that it neglects its bounden duty, the nation cannot afford to allow that plague spot to exist. And so I ask you as women interested in the welfare of the State, to work first for independent boards of education made up of high-grade men and women, with complete control of the finances. I ask you to throw your support to a national movement, by which the nation itself shall aid by subsidies

those states which, because of their limited resources, are not able to educate properly their children. I ask you, above all things, in your several communities, to impress upon the citizens that the greatest danger confronting the people of the United States is the gradual undermining and destruction of its educational system."

At the conclusion of Dr. Tildsley's address, Miss Dunn spoke of the situation in the rural schools. The main points of her remarks are as follows:

"The three points which have caused the public to-day to turn an anxious eye toward education are, first, the proved failure or failures of education in the past; second, the threatened bankruptcy in the future; and, third, the increased realization of the absolute necessity of education in a democracy that will stand.

"When I speak of the proven failures of education, I do not mean to say, of course, that education is an absolute failure. In spite of all its failures, education has done much for the people; but war conditions indicated that it has distinctly and specifically failed in many respects. These are: the enormous amount of illiteracy in our country, the very serious health conditions, and the failure of the melting pot to melt. You may wonder what the school has to do with physical disability. I like to think of the function of the American public school as two-fold: In the first place, it is a means of giving to every child in the nation that quality of opportunity which is our national boast; in the second place, or primarily, I should say, it is a means of preparing for adequate citizenship, for adequate workmanship in the United States, in the government of the United States, in which every one of our citizens must share, these boys and girls who are growing up among us. It is the function of education to see to it that fitness in the physical life is produced. We rejected one-third of our men from the army; they were not fit to fight. Are they fit for peace?

"The school ought at least to prevent defects from development. As a matter of fact, it has caused defects. I want you to picture with me the conditions that are found in the schools where forty-one per cent of our children are educated. The figures are something like this: About forty-one or forty-two per cent of our children are in rural schools; about the same number in city schools; and the remaining seven or eight per cent are in the schools of the small villages; and so we may say, approximately, the same number of children are in the cities and open country schools.

"In these open country schools one of the very serious defects which we find is injury to the eyes. Hygienists tell us that a school room should have one-quarter or one-fifth of its floor space in window space. Now as a matter of fact, you hardly ever find that in rural schools; a survey made in 1914 indicated that seventy per cent of the rural schools had opposite windows and sixty per cent had inadequate light! In a middle northern state a health survey was made in some schools, and it was found, in one school, that out of forty-four children, forty-two were suffering from eyestrain, and a large number of them were absolutely without sight in one eye.

"Another one of the very common defects in these schools is the seating conditions. Desks are bought because they are cheap, and they are usually bought by a school board that knows nothing whatever of the needs of children. You go into a school and you see small children with their feet dangling, and again you see large boys with their shoulders stooped and their knees crowded, and you don't wonder at the resultant spinal curvature and misshapen bodies that come out of that school. And there again you have to meet not only parsimony but ignorance of those who are dealing with the situation.

"I must speak of the ventilation. In these country schools, as a rule, they have a big stove in the centre of the room, kept very hot, so that the heat will penetrate all corners of the room. Hanging around the walls are the wraps that have been rained and snowed on as the children have come to school, and there isn't any ventilation; there is no provision for it excepting the windows, and if you open the window there is a draft, and the children are afraid of drafts; the teacher probably is, too.

"You know the relation of the schools to illiteracy and what the condition is in that regard. This obligation is absolutely recognized.

"I wonder if you know what the lowering of standards means, if you know what standards we have had for public education. I will give you the certification requirements of a certain city which is about an average. It gives three grades of certificates, a first-grade certificate that one gets by passing the examination on the elementary school branches and one or two high school branches, and on a percentage of an average of eighty-five, in no grade less than seventy or seventy-five. Now that is the first-grade certificate. When one gets a second-grade certificate, some of the high school branches are cut out and an average of seventy-five—and no grade less than sixty—is made. And there is still a third-grade certificate in which one takes absolutely nothing but the elementary school branches, and makes an average of sixty-five per cent, and no grade less than fifty per cent. Now would you like to think of a boy or a girl seventeen years old, which is the age limit at which he is supposed to begin to teach, and who has made as low as fifty per cent, teaching your children? Those have been the accepted standards; but since the war emergency even these standards have been dropped, and emergency certificates may be issued whereby a teacher who cannot make any one of those certificates and who cannot make the additional certificate which is provided in the high school graduation, which automatically entitles one to a certificate—such a person as that may, because of the emergency, be put into that school to teach it. Isn't it a question whether we had better close the schools which compel children to be taught by people of that ability? And there are sixty-five thousand of that kind in our schools to-day. There are one hundred thousand schools in the United States to-day that are either closed because we cannot get teachers, or taught by those of the type that I have described.

"We need laws with higher requirements instead of laws with lower requirements. The biggest mistake we made in education in the United States was two years ago when teachers began to flock out of the schools. What we should have said was, 'The teachers are flocking out of the schools and we must close this school because we cannot get anybody else at this salary paid.' Instead, we lowered the standard and got inadequate material.

"The salary matter is extremely important, and it varies very much in different states. I have here just a few figures. Mississippi is one of the lowest. The salary of teachers in Mississippi is $233.64 a year. The highest salary on my list here is New York, with $967.20 per year, and the salaries range all the way in between. The future needs of the United States demand that the children of Mississippi be educated just as well as the children of Illinois or New York. Otherwise we have got a plague spot in the Union, we have got illiteracy.

"I should like to give you just a few contrasts which have been collected from various sources. This is from a North Carolina paper, 1919: 'Wanted, a colored porter. Guaranteed $25 a week. The right man can get $35 a week. Wanted in a log camp.' In the same paper there appeared this advertisement: 'Wanted, for the high school—of such and such a place—teacher of Latin. $70 a month.' Which is better, to b a colored porter or a high school teacher? Fifteen Illinois miners one month recently were found to have an average salary of $217.78 a month. Fifteen teachers in the same town, the same month, had an average salary of $55.

"If you are going to build up a teaching profession, you first of all have got to have a salary adequate to the kind of work you want. I think you have got to make your requirements as big as your salary. In other words, you have got to buy a better brand of teachers than you have ever bought before, and you have got to refuse to pay for the other kind. Then you must provide the possibility of decent home life, with all the sympathy and co-operation and understanding that comes with it. The whole conception of education is different to-day, and in order to be a good teacher, one spends years in normal schools and colleges and universities, and perhaps goes to a community which abuses and criticizes and rejects, and all the vision and all the hope and all the desire to do something progressive and constructive, to get ahead, is killed.

"If you women want to help, the first thing for you to do is to find out facts. Find out whether in your community the school system is a good school system; whether the school administrators are there because they know anything about school administration or for some other reason; find out whether the buildings are decent; find out whether the children are being really educated, or whether they are wasting six hours a day in a poor school; and when you find what is good, take it for all that it is worth, and when you find what is bad, you will know what to do with it."

At the close of the meeting, the Woman's Department of The National Civic Federation adopted the following outline, or survey:

1. EDUCATIONAL SYSTEM

Methods of Control:
- Elective
- Appointive
- Boards
- If Boards:
  - Size
  - Qualification
  - Tenure of Office
  - Representation of teaching branch in administration and policy forming.
- Laws covering:
  - Tenure of Office of Teachers
  - Advancement for Teachers
  - Pensions and sick funds for Teachers.

2. TEACHERS

Number
Grades of Certificate
Qualification for Certificate—Form of Application and subsequent procedure.
Examinations—Physical, Mental, Citizenship
Salaries—Present salary
- Raise during ten years
- Grade salaries
- Proportionate raise in cost of living.

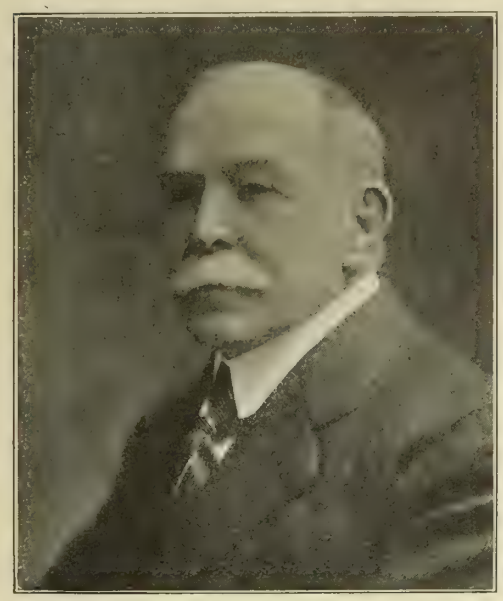
Housing and social position in Community.

3. SCHOOL BUILDINGS

Air, light, seats, nurse, rest-rooms for staff, etc.

4. TEXT BOOKS AND CURRICULUM

It is hoped in the various communities where the Department is organized, through the method necessary to answer adequately these questions, that a personal touch will be established between a large body of women and the school authorities and teaching groups, and others that are affected by the problem, who have already made intensive and exhaustive studies on these subjects; and to crystallize public opinion into an intelligent interest in and a sense of responsibility toward this great national laboratory, on the successful development of which rests the future of our Republic.



Democracy in Industry

By JAMES W. SULLIVAN

THOSE who engage in discussing sociological problems find, if they are to make any progress in reaching one another's minds, that they must define their terms. Similarly, in discussing democracy in industry, the first stage, rather a difficult one, is to designate which of various theoretical industrial democracies is the subject to be dealt with.

The American Federation of Labor stands favorable to certain proposals for democracy in industry, is rather indifferent to some other proposals, and maintains a decided opposition to still others. If the question is Rochdale cooperation, a democratic form of commerce and production, the American trade union movement upholds its principles to the extent of the possibilities and assists it practically through a standing committee. If the question is the uniformity and majority approval necessary to the workers' side in collective bargaining, trade union employees now have the vote on every proposition deemed by them worth while, a form of group industrial democracy in which the wage-workers, acting in equality, unitedly command their own labor power, a rightful possession. If the question is the organization of labor, the trade unions of this country present in principle a model of democratization, since from any one of the tens of thousands of local unions any question whatsoever relating to trade union policy or proceeding may be started on its way to the annual convention of the Federation as a whole, which gives authorized expression to the sentiments and convictions of labor. If, next, leaving the field of practical life and moving into the region of theory, the question for discussion is the alleged democracy of State Socialism, many special phases of the argument are to be considered, with numerous definitions of terms. In no branch of society has Socialism been more thoroughly discussed than in the trade unions, the outcome being that their members are generally convinced that that form of so-called democracy is unpromising, unjust, unworkable and undemocratic. Syndicalism, also (in the English sense), by its proponents commended as democracy, and I. W. W.-ism, and one-big-union-ism, and the new-fangled guildism bring, in the judgment of the unionists, anti-social methods. Society faces in these "isms" disorder or confiscation or anti-democracy—the domination of all society by a minor fraction, regardless of the majority, through direct action, the general strike, secession from trade unionism and rebellion against the State. These are not the ways of the A. F. of L., whose principles and methods are pro-social.

Yet another proposal for democracy in industry, the subject of this review, is the one whose fruits thus far have chiefly been in phrases—"the workers to be real partners in the business," "wage-workers at the directors' table," "economic democracy," "workers' control." An advocate of this proposed experimental form of industrial democracy has described its principle and purpose in these words: "Workers' control is an elastic term. It means first a little control in the workshop in regard to welfare and general workshop conditions; then more control in relation to discipline, sanitation; and so on up to full participation in control over the industrial process inside the shop and in the industry as a whole, the degree of control to be set by the capacity of the workers for exercising control." To that program there stands no moral or economic obstacle *if* the workers are prepared to observe the law in acquiring their employers' property and *when* they are qualified to carry out their proposed task of management.

JAMES W. SULLIVAN

Much has been written recently relative to the progress of this workers' control in Great Britain. Supporters of the concept, enthusiastic visionaries, see the way, in their blue prints, clear to their final objective—complete industrial democracy, projecting, planning, directing, controlling production. Observe, the steps they imagine are: First, the wage-workers are to have their spokesmen in the workshop. Next, autocratic control is to be surrendered piecemeal by employers. Lastly, entire control by the workers. The gradual movement toward this democracy is to be assisted by the government through works committees, local district councils and joint standing industrial councils. In support of this program and its eventual purposes there has been much enthusiastic writing and speaking in Great Britain, with alluring echoes in the United States. It is a fact that in this country during the war works (or shop) committees sprang up in many of the new war supply factories, and adaptations of that branch of establishment organization have since been considerably adopted, mainly in non-union establishments, and recently joint standing industrial councils have also received the stamp of recognition from at least one important temporary Federal body in which organized labor was not represented.

What effect is this particular incipient movement toward democracy in industry likely to have on American trade unionism, on American life in general, on American industry, on the relations of American employers with the wage-workers? To these relevant and matter-of-fact queries the American Federation of Labor has its reply and explanation in the events and conditions, the solid and incontrovertible facts, relative to the genesis of the shop committees and the rise of industrial councils in Great Britain. Broadly, dissimilar basic circumstances interpret the differences in status, customs, methods and especially organization, between the wage-workers' division of society in Great Britain and that in the United States. Further, as a matter of vital fact, in the operation both of works committees and industrial councils in Great Britain the advanced boundaries of their present or possible activities fall far short of the envelopment of the employing class by employees exercising the usual directive functions of employers. Theorists, buzzing about the subject, have let their fancy far outrun the actual progress of events, have misunderstood the facts of the British situation, and have disregarded the facts of the American situation.

The trade unionism of Great Britain is rudimentary in form, incomplete in its administrative system, indefinite in its social purposes and inharmonious in its economic and political activities. In certain of the principal occupations the trade union organization and administration end in deliberately establishing a state of disunion among the unionists in the workshop. Also, as a whole, the crafts themselves are split up into numerous separate unions, regional or local, independent of one another, each with its own salaried administrative staff. Whereas the A. F. of L. is made up of 120 or more affiliated autonomous craft or industrial unions, each covering an occupation in our country's entire territory and population; in Great Britain there are more than 1,200 unions, as high as ten or twelve in a single trade, often overlapping in occupational or territorial jurisdiction, having disparities in dues and wage-scales, and in most cases acknowledging no one national centre of union authority for trade or occupation.

The phrase "shop (or works) committee" in English speech signifies a radically different idea from the same phrase in American speech. In America, the trade union shop chairman is generally the head of an advisory shop committee which carries out union rules and regulations in a works force, is an authorized representative of the general (international) union, and a recognized essential of its administrative force. In Great Britain, the shop organization is not the same. In the working force of one establishment—a fact puzzling to American union men—there may be unassociated members of several branch unions of a single trade, the basis of the English branch membership being the place of residence of the union members and not the work places of a locality, as is the case in America. In a British works force the union chairman has usually performed petty duties pertaining to the establishment, and has had slight, if any, responsibility with respect to the laws of the general union. The shop chairman has not been charged with enforcement of the union scale, and certain other union regulations. Such matters have gone to the branch union of the particular man or men directly interested in a cause calling for a decision. Here was a gap of union organization and function in the shop, giving rise to loss of time in settling disputed points of trade practice and causing friction between members of different unions of one trade in one shop as well as between employers and the general unions. Grievances which, under the American system, could be settled on the spot through the interpretation by a shop chairman or his committee of the general union's rules, or by the shop committee of the interested allied trades, were, under the English system subjects for reference first to the branch and then to the district and the general union of the man or men in cause. It can be seen that under pressure of war speed employers and employees became united in calling for shop committees which could dispose of trade union or any practical workshop labor points without postponement. The new shop committeemen thus called into being soon took on important powers, grew in strength, fell away from union authority, and on being recognized by the government assumed a workshop "control" in some large establishment organizations of certain industries. A further step was to make themselves heard in radical politics, and it was then that they caught the attention of the intellectual improvisers of an immediate millennium.

During the flood tide of talk about the newly developed powers of the newly invented works committees—made out of old half-finished union materials—the Whitley Committee report brought before the British nation the project of a systematic establishment of works committees, to be connected higher up with occupational district and national employers and employees' joint industrial councils. But the Trades Union Congress Parliamentary Committee, and later the Congress itself at its 1918 annual session, made a declaration of the trade union attitude toward these works committees and joint councils which placed narrow and practical limits to their activities. Toward the Whitley report recommendation "that works committees representative of the management and of the workers employed should be instituted in particular works to act in close co-operation with the district and national machinery" of the councils, the Parliamentary Committee assumed a critical attitude. Conceding "that much useful work might be done by works committees in relation to questions affecting the welfare of the workers employed in particular factories," it "strongly urged that such committees should not interfere with the general questions affecting the working rules of the trade respecting the hours of labor, rates of wages, overtime rates, etc." Moreover, in June, 1918, the Minister of Labor wrote: "It is for the Parliamentary Committee to decide whether it would be well to call the attention of its affiliated societies to the importance in drafting constitutions to safeguard collective bargaining against interference by works committees." With relation to standing joint industrial councils as well as works committees, the Parliamentary Committee next passed this resolution:

> "The danger of allowing works committees too much power in connection with wages agreements referred to in our observations on the first report is extended in relation to industries only partially organized, and the Parliamentary Committee cannot accept any form of joint negotiations either by works committees, district councils, or national councils, which may be developed as a substitute for trade union organization and by such organization the establishment of effective representative bodies."

And further:

> "Where well established means exist for negotiation as between trade unions and employers' associations no effort should be made by the government to interfere with existing arrangements."

These decisions of the Trades Union Congress and its Parliamentary Committee have been observed in the organization of the fifty standing joint industrial councils now organized in Great Britain. The radical shop committeeman has disappeared from both the political and the trade union field. British unions are to-day studying or carrying out the reorganization of shop committees as workshop units of the craft organization. The unions thus have in hand whatever of the British "democracy in industry" movement survives.

The present place and functioning of shop committees in their relation to industrial councils were described in September, 1919, by Robert Young, M.P., formerly General Secretary, Amalgamated Society of Engineers, in an address at the annual convention of the Industrial League:

> "Workshop committees, in my estimation, can do a great deal to enable us to get over a great many of the difficulties which in the past have disturbed our industrial life. I have been, as you know, the General Secretary of a large organization. I am not a great believer in carrying everything to headquarters for settlement. I believe that the men themselves, given the proper machinery and using democratic instincts in selecting the best men they can, can themselves form shop committees which, co-operating with employers in particular establishments, can keep these things from being heard of and disturbing our life at the present moment. Let me give you an instance. In a very large shop in an engineering centre in this country, there were many disputes cropping up almost daily in relation to piece-work prices and bonus prices. There were endless threats of strike. The thing was altogether bad for the workers and bad for the firm. The workshop committe was formed, and, would you believe it, after the formation of that workshop committee it was not until about the fiftieth question had cropped up in the workshop that we ever heard anything of it. The other forty-nine had been settled in their own board room in their own establishment. That is what we want to see in our country right through in all industries."

At the convention of the Industrial League the Rt. Hon. J. R. Clynes, M.P., General Workers' Union, spoke of the joint industrial councils' work:

> "It will tend to relieve the trade unions of most of those lesser workshop troubles which, because of the absence of permanent facilities for conciliation and settlement, frequently lead to trouble. Small troubles often develop to a serious dispute, and after perhaps weeks of a strike the parties come together and arrange a settlement which might very well have been arranged between themselves before suffering the losses which strikes always involve. . . .
>
> "Within the trade unions themselves there is real and increasing need for reform. The newer movements and changed conditions of recent years cannot always be well handled on the lines of rules and regulations arranged to fit the industrial situation of a generation ago. Questions of internal management, the more rapid movement of executive action and the degree of authority which appointed representatives or officials may exercise, have all become questions of the greatest interest to trade unions, and these questions should be viewed in the light of present-day industrial needs. The red tape grievance against which trade unions rail in the case of government departments has its counterpart in some of the movements of the trade unions themselves. I am not imputing any special defects whatever to some of the unions whose members have been involved in recent trouble. There are societies whose procedure and method are out of date, and as so many of them are linked up with others in alliances and federations, the need for reform becomes the more real and urgent. The 'rank and file' of the membership should more often be brought to the front line of service and not be left at the point of mass meetings for formal indorsement of decisions reached by other people. . . .
>
> "The workman must be brought into his proper groove for dealing with these recurring workshop problems, and I believe he can be given a place in connection with the settlement of industrial subjects which would fill him with a sense of real pride at being of service to his mates, feeling that he has authority to act for them, that he was authorized on their definite instructions to plead their cause and to act practically as their counsel. Now once the individual workman is given his proper share of this work he is not necessarily disqualified from taking a leading part in other matters that belong now to the trade union leaders, who must handle industrial and labor problems in a higher region."

The quotations just given clearly indicate what is expected among the foremost trade union men in England as to the outcome of the Whitley shop committees and district and national joint standing councils. The shop committees will do the work that has long been done in America in various trades by shop chairmen or the chairmen with their assisting committees. The joint councils as organized by the government will have as their principal duty simply conferences between representative employers and employees, which has long been the custom in America, and has been systematically promoted through The National Civic Federation.

Information as to the subjects with which the British joint industrial councils are actually dealing to-day is to be obtained from an article in the "Labor Gazette" of the Ministry of Labor for March, 1920. The article mentions that "among the more important topics with which joint industrial councils have dealt recently are the reorganization of industry, education, unemployed insurance and workmen's compensation." No explanation ensues as to what is meant by the "reorganization of industry" or by "a scheme of democratic control for voluntary adoption." The greater part of the notes referring to different industries relate to trade agreements as to wages.

So long has college instruction in trade unionism been centered mainly on the history of the English unions, with the assumption that they are the models of unionism in organization, spirit, customs and practices, that our American "intellectuals" are startled at the assertion that the organization and methods of the American Federation of Labor, inclusive of the Railroad Brotherhoods, offer a superior mechanism in practice to the British unions. The American Federation of Labor has for decades stood ready to take any leaf from the English books of trade unionism which would lead to their improvement. The American international union officials, including the editors of the numerous official union publications, are constant readers of the English union publications, which are few in comparison with the American. Twenty-five years ago the American Federation of Labor began sending annually two or more fraternal delegates to the British Trade Union Congress, and in such capacity in that period at least fifty of the most active leaders in the American labor movement have spent some time in Great Britain, all keenly desirous of bringing back to their respective constituencies any new ideas of practical application in connection with their work or organization. Besides, our separate international unions have sent representatives to British trade or industrial conventions, such as those of the miners, the ironworkers, the printers. The general testimony from American delegates on their return has inevitably been in the form of comparisons which showed the British unions far short of the American in organization mechanism and methods. The much-talked-of reforms in British industrial reorganization with the object of bringing employers and employees into closer relationship merely amount to a roundabout way of starting toward a goal long since reached by the old-established American unions.

Testimony in support of the general assertion of the superiority of American trade unionism is found in various statements in the elaborate report made by George A. Isaacs, General Secretary of the British National Society of Operative Printers and Assistants, who attended as delegate in 1914 the annual convention of the International Printing Pressmen and Assistants' Union of North America. As to the office of shop committeeman, Mr. Isaacs said:

> "The member in the American press-room holding the office known to us as the 'father of the chapel' is called the 'Chairman of the chapel.' His duties are similar to those performed by fathers of chapels, and, *in addition*, the laws hold him responsible for seeing that the laws of the international and the by-laws of the local union are fully observed."

Mr. Isaacs thought it noteworthy that the American union label was protected by the laws of most of the American states.

Admitting foremen to trade union membership attracted Mr. Isaac's attention:

> "Another thing that compels my sincere admiration and the strongest possible desire to have the same in the old country, and that is your control over the foremen of the machine departments. . . . When a pressman not directly connected with our organization becomes a foreman it is either upon the understanding that he gives up absolutely his trade union and has nothing further to do with it, or agrees to give up all active work in his union and be a neutral person. As a rule the union man promoted to be an overseer and who drops his card is a bigger tyrant than the man who has worked all his life with the blacklegs, as we call them, and gets a job in a union office.
>
> "I have been talking with your delegates about your trial committees. That is a new innovation

Socialism Unmasked

AMERICAN SOCIALIST ORGANIZATION NOT A POLITICAL PARTY, BUT PART OF AN INTERNATIONAL MOVEMENT AIMING AT WORLD REVOLUTION—PHILOSOPHY AND OBJECTS OF BOLSHEVISM AND SOCIALISM IDENTICAL

By T. EVERETT HARRÉ

I.

SOCIALISM AND INTERNATIONALISM

BOLSHEVISM is a term which has come to have a definite meaning in the popular mind. By its methods of violence, by its maintenance in power through Red Guard terrorism and the imposition of armed force, by its program and objects effected in whole or in part in Russia, Bolshevism stands clearly revealed for what it is. There can be no argument as to authentic events which have transpired in Russia, as to facts made manifest for nearly three years, as to the philosophy, tactics and purposes expressed in the Soviet constitution, decrees and published official documents. No curtain of deceitful apology and camouflage can obscure that appalling tragedy, unsurpassed since the beginning of history, at which the civilized world stands aghast. Even among sentimental "liberals," radical clergymen and pseudo-intellectual "parlor reds," there can be no defense of the admitted excesses of Lenine and Trotzky's bloody regime.

SOCIALISM, on the other hand, is a term of no such concrete and definite meaning. It is not specifically a synonym for Bolshevism, Communism, revolution by force, for the overthrow by violent and unlawful methods of the American Government and the institutions of civilization. It is rather a term of confusion to the general public, which has come vaguely to distinguish between Bolshevism and Socialism, Socialism and Communism, between the Socialist party and the Communist and Communist labor factions. It is not uncommon to find high-minded, loyal Americans making a distinction between Bolshevism, which they regard as violent, lawless and dangerous, and Socialism, which they accept as parliamentary and pacific in its methods, and legitimate in its objects. It is not unusual to hear such persons say that while they are opposed to Bolshevism, there is much good in Socialism. Socialism to them loosely means an effort toward social reform, toward the readjustment of industrial inequities, a peaceful, beautiful but perhaps utopian and impractical plan for perfecting an imperfect world. We are told by one that the Man of Nazareth was "the first Socialist," and by another that Socialism, after all, is only "applied Christianity." "Socialism—a program to be social. Why, we are all Socialists," amiably declares a financier after dinner, in a spirit of expansive and liberal good-feeling equalled only by his ignorance. Such declarations are not surprising when such a man as Attorney General A. Mitchell Palmer says (in a speech delivered in Detroit, March 15, 1920):

> "The Socialist Party in America has cast out the radicals and forced them to organize the Communist and Communist Labor Parties. The Socialists are loyal and patriotic men, though radical. Their aim is to change the Government by lawful means, while the 'Reds' would destroy lawful authority."

This confusion as to Socialism, its character, its specific objects, program and tactics, is largely the result of the designing efforts of Socialist leaders themselves, an effect of the adroit Socialist propaganda, and serves to further the Socialists' sinister ends. The Socialist organization has presented itself as "a mild mannered party seeking political reform, advocating humanitarian principles and practices, abhorrent of the idea that it should be identified or confused with the Communist Party of America." Writers such as John Spargo have turned out seductively phrased and subtly deceiving volumes purporting to prove and demonstrate that Socialism is opposed to, and is the antithesis of, Bolshevism. Masquerading as the "right wing" of the Socialist movement, opposed to the violent, revolutionary program of the Bolshevistic "left wing," the Socialist party of America, so-called, has enlisted the confidence, support and sympathy of many sincere if ill-informed people to whom any program of revolution by mass violence would be shocking and repugnant.

It therefore happened, when the New York Assembly suspended, pending investigation, five Socialist assemblymen-elect, that a number of distinguished Americans, of irreproachable character, integrity and loyalty, came to the defense of the suspended members, declaring that the action of the Assembly was a violation of constitutional rights and a persecution of a minority party. Their contention was that the Socialist organization is a legitimate political party, enjoying a status, character and privileges such as the Republican and Democratic parties, and that, as such, its candidates when elected to office cannot be challenged or denied taking their seats. Whatever differences of opinion may exist as to the method and expediency of the action taken by the New York Legislature, the hearings of the Judiciary Committee into the eligibility of the suspended members, which resulted in their final expulsion, developed an issue of greater importance than the mere seating or ejection of the individuals under trial. That issue involves the actual character, program, purposes and proposed tactics of the Socialist party of America.

OUT OF ITS OWN MOUTH

The Albany hearings served to focus the attention and interest of the people of the country, including both those who approved and those who disapproved of the original suspension, and the results of that investigation, aside from the permanent suspension of the five members-elect, are of vital importance to every citizen who believes in American ideals and desires the preservation of American institutions. No occasion has ever resulted in the assembling of such a mass of evidence concerning the principles, policy, tactics and objects of the Socialist movement in America. That evidence consists not of the testimony or interpretations of opponents of Socialism, but of official platforms, programs, manifestos and publications of the Socialist party itself and utterances of its recognized leaders.

Does that evidence establish the Socialist organization in the United States as a legitimate political party, seeking only through constitutional and parliamentary methods to bring about changes in the existing order? Does it establish Socialism as opposed to the objects and tactics of Bolshevism? Does it reveal Socialism as a mild, beneficent, humanitarian program of social reform, as "Christianity put into practice"?

Convicted on evidence out of its own mouth, the Socialist party, on the contrary, is unmasked and uncovered as a revolutionary movement, anti-American, anti-patriotic, traitorous, anti-national, anti-political, aiming through illegal and violent methods to overturn all existing democratic governments, "whose national program in this country is to be fashioned upon the plan of the Soviet regime of Russia, inspired by its originator and dictator, Nicolai Lenine," and which "proposes to carry into effect its purposes in this country as the purposes and objects were accomplished in Russia."

SOCIALIST ORGANIZATION PART OF WORLD REVOLUTIONARY MOVEMENT

From the evidence of the Socialist party itself—consisting of official platforms, programs, manifestos, reports, publications and utterances of its accepted leaders—it has been established:

That the Socialist organization in the United States is not a political party, but part of an international movement preparing for and attempting to bring about a revolution in this country as part of an international social revolution; that the Socialist organization has officially taken "its position with the uncompromising (or extreme revolutionary) section of the International Socialist movement," and has officially pledged its support as an organization to the extreme revolutionary wing of International Socialism, of which the Russian Bolshevists are the most conspicuous part; that in a referendum vote, by an overwhelming majority, the party membership adopted a report declaring the organization in support of Lenine's Third Internationale, convened in Moscow, March, 1919, whose program advocates world revolution by armed violence and world-wide dictatorship of the proletariat, and that in pursuance of the adoption of the Minority report, in March of this year, the party through its national executive secretary, made official application for recognition by and membership in that revolutionary Communist International which was inspired, convoked and controlled by Lenine and his major associates.

Instead of seeking as a purely legal political party to bring about social changes and human betterment by constitutional and parliamentary methods, the Socialist party of America proposes in the United States to accomplish its revolutionary program—according to the summary of evidence made to the New York Legislative Judiciary Committee by Martin Conboy, special counsel—by the following unlawful methods:

> *"First: It has opposed and obstructed and continues to oppose and obstruct the Government of the United States and of this State in all measures relating to the national and State defense. Its purpose in so doing is a manifest one: to weaken and leave defenseless the government of State and Nation against the attacks of foreign and domestic enemies, and thus deprive it of that right of self-preservation which is admittedly the first law of governments as it is of individuals.*
>
> *"Second: It has advocated and incited the destruction of the existing government of the United States by illegal mass action.*
>
> *"Third: While professing to utilize political action, it constantly denies that existing evils or defects may be remedied by such action, and insists that such political action must be supplemented by violence and mass action, which it advocates, both directly and by insinuation and suggestion.*
>
> *"Fourth: The political action of the party is responsive only to the dues-paying membership. Those who are elected to office are bound to follow the dictates of such membership and their*

THE BLACK PHOENIX RISES FROM ITS ASHES

In the days when the heroic manhood of America and the Allied nations were being immolated in the great sacrifice of the war, when self-surrender and sorrow immeasurable exalted humanity above the frailty and sordidness of common existence, the more ardent of us expected what would have been well-nigh miraculous had it happened. When the war should be over, the evil that is ever mixed with good in the relations of mankind would be vanished. Intrigue, covert contrivings to foment racial and national discords would be done with. There would be a great spiritual regeneration in which every nation, in which the most ordinary existence, would share. Germany, vanquished, in sackcloth and repentance, would be welcomed back into the family of nations, and the brotherhood of man and universal good-will would reign.

To admit that all this has not happened is not to confess defeat, nor to diminish what has actually and concretely been won in the war. Such a miracle has never occurred, because mankind does not proceed *en masse* to perfection; there is no equal measure in the pace of men's feet on the long road of evolution. So, while it may bring a pang of disappointment, there need be no discouragement in recognizing that international amity, trust and concord have not been established; that Germany has not proved herself a prodigal son among the nations; that sinister propaganda to estrange the nations united in the war has not ended, but that, instead, we confront a recrudescence throughout the world.

It is universally the experience, of individuals as of nations, after a hard-won struggle, to relax and rest on one's oars. Such reaction is human, natural. Yet it is of this very natural relapse from the tenseness of a great strain that the enemy ever seeks to take advantage. Where one demon has been vanquished, seven ever seek to return. The thief eternally comes in the night. To no less degree that we did in the days when victory hung in the balance, is it necessary today that the people of America, and of the Allied nations as well, stand vigilant against the hostile forces which have risen, which are no less real, no less formidable than were the armies of Huns, and whose victory at any time would be no less fearsome than would have been world-subjugation by the Imperial masters of Germany.

While the sinister forces of world revolution have intensified their activities since the end of the war, there has come a revival of German intrigue and propaganda, and with it a joining of all the forces of pacifism and defeatism which had during the war been rendered inert or innocuous. All these elements are found, upon examination, to interlock with one another.

There is being carried on today in this country, without concealment or disguise, a movement to organize "all men and women of German blood in one great political organization," the purpose of which is to exert pressure upon the political parties and to elect candidates to office who are sympathetic to Germany or the interests of the German element here, and who are opposed to the carrying out of the Versailles treaty. Propaganda is spread broadcast vituperating the Allies, seeking to create hostile feeling toward England and France, attacking the American Government and vilely calumnying the American president. All those agencies, publications and individuals who campaigned for a compromise peace with Germany, who defended and endorsed the Bolsheviki, are seeking, on the one hand, to estrange us from the peoples who first gave their blood in self-defense and to bring about concessions to Germany, while, on the other hand, they are endeavoring to bring about recognition of Soviet Russia and the affording of economic assistance in order that Bolshevism may be strengthened and its propaganda facilitated. In their insidious activities they are seeking to use the churches, the press, educational institutions, and the most effective assistance is often given by pacifist, "liberal" college professors and clergymen.

In England voices are raised against France, to whom imperialistic ambitions are charged; yet upon investigation it is found that this emanates from the very people who preached defeatism and advocated a compromise peace, notably through the proposed Stockholm conference. In France the government is denounced as "a government of treachery, which, under the pretext of obtaining execution of a still-born treaty, seeks to crush the pacific revolution in Germany." It was a deputy, a Socialist, Vaillant-Couturier, who made this charge in an address inciting the 1920 class of recruits to disobedience. When prosecution was threatened, the entire Unified Socialist membership of the Chamber of Deputies, numbering sixty-five, came forward to Vaillant-Couturier's defense and subscribed to his infamous statement. In all the Allied countries another propaganda is being carried on, the purpose of which is to persuade the world that Poland is imperialistic and militaristic. The immediate purpose in the United States is to obstruct the floating of the authorized $50,000,000 loan, but is specifically designed to prevent the creation of a strong Poland in order that Germany may have free access to Russia and gain trade control in the Slavic provinces. Maurice Francis Egan, formerly American Minister to Denmark, recently issued a warning against all this propaganda which, he declared, the Germans have especially concentrated upon in the United States.

At a time of widespread social discontent and industrial disturbance, when people lack normal balance and their point of view is distorted, there is more than ordinary danger that the evil seeds of international animosity, suspicion and discord may find fertile ground. It is the duty, therefor, of all Americans to be on guard, not only against the attempted revival of hyphenism and divided loyalty, but against all the insidious efforts which seek to estrange the nations as they likewise seek to foment class warfare and turn us one against another in our midst. Where civilization had one visible foe to face in German Imperialism, it now confronts a foe of international scope and character, of multifarious phases and deceiving guises. The black phœnix has risen from its ashes, and its heads are hydra.

FACTS EXPLODE ARGUMENTS FOR AID TO SOVIETS

Throughout the world, and especially in the United States, from which economic assistance was mainly desired, there has been a crying aloud that the sufferings of the stricken population of Russia were due not to the maladministration, inefficiency and criminal excesses of the Soviet régime, but to the blockade maintained by America and the Allied nations. Lift the blockade, send to Russia industrial supplies and foodstuffs and "her restoration would begin and proceed as if by magic." Another argument for the re-establishment of trade with Russia has been that, if England and America did not take advantage of the overtures of Lenine, the vast resources of Russia, industrial concessions and economic products, would fall into the hands of Germany.

While it has been pointed out by many well-informed persons that an establishment of trade would facilitate the promotion of Bolshevist propaganda, a matter calling for most serious consideration, there are other points which seem to have escaped proper attention. In an article in the *New York Times* Mr. John Spargo raises some very pertinent questions: "How much can be accomplished by philanthropy? To what extent can trade with Russia solve her problems? How far is it a matter of granting credits and to what extent can such credits be secured?"

Mr. Spargo shows that "by expending the entire gold and platinum reserves in the country" (amounting to about $275,000,000) "the Soviet government can import approximately as much as was imported into Russia in two months in normal times under the old régime." Because of the utter collapse of industry, the breakdown of transportation, wastage and almost complete lack of all needed raw supplies, it would now be necessary, to bring about restoration, to supply infinitely more than was needed in normal times, and to buy this Russia does not have the money. What about the "concessions" offered by Lenine as a basis for credit?

Much of the stock in railroads and industries confiscated and nationalized by the Bolshevik government was held by foreign investors. "If American capital is furnished for the reconstruction of these railway lines," writes Mr. Spargo, "are the investors to be secured by some sort of control of the lines and their earnings? In that case, what of the original investors, owners of the stock? . . . If American capital is to be advanced for the installation of machinery in Russian mines and their development, and ownership or part ownership of the mines for a period of years is offered as security, what will be the relation of the American creditor and security holder to the American investor who holds part of the original stock and whose interests were confiscated by the Bolsheviki?"

If American financial interests are biting at the bait held out by Lenine, here are questions to give them pause. Mr. Spargo makes clear that if the entire reserve of platinum and gold —much of it stolen from Roumania—and all her exportable goods, were "exchanged to-morrow for their full value in goods chosen by the Soviet authorities themselves, there would still be famine in Russia." Even if vast amounts of foodstuffs were sent, would it to any small degree ease the general condition?

This is answered by actual facts supplied by Bolshevik officials themselves. As revealed in the reports of A. Rykoff, President of the Superior Council of the National Board of Economy of the Soviet Government, which are quoted in an article by Gregor Alexinsky, Social Democratic member of the Second Russian Douma, in this issue of the Review, there are not sufficient locomotives running in Russia to transport food and supplies, even if these arrived at Russian ports. Russia has a limitless supply of ore in the Ural mines, yet, according to Rykoff, the Bolsheviki have been able to ship only one trainload of metal a month to Central Russia. To supply the textile mills of Moscow it would be necessary to transport 500,000 poods of cotton a month from Turkestan, yet the Bolsheviki are able to run only two trains a month and, as the Bolsheviki head of industry admits, it would take decades to fill the needs. The output of the textile mills is only ten per cent of the normal output.

Before the war Russia supplied more than 85 per cent of the flax of the world, more than 20,000,000 poods being harvested annually. In 1918, the Bolshevists having nationalized the crops, only 4,500,000 poods were harvested, and in January of this year there was only enough in reserve to meet the most urgent needs for eight months. Rykoff reported they could not export any appreciable quantity abroad. "The catastrophical decrease in the crop makes us foresee that in 1920 the supply in the linen in-

lustry may be affected with a famine similar to hat which has affected the cotton spinning industry."

Of 4,000 plants, including almost all of the large and medium sized industries in Russia, which were nationalized by 1920, only one-half are in operation. Of 1,200 metallurgical plants, 614 were nationalized, and these in 1919 were able to obtain only 15 per cent of the quantity of metals assigned to their needs. The furnaces in operation are producing less than 20 per cent of their normal output. Out of 10,000,000 men normally employed, only 1,000,000 are now working, according to Rykoff, but Trotzky himself says that in reality there are only 800,000 workmen. Even if fuel and raw materials were available, Rykoff says they could not operate industry "because competent skilled labor is lacking." And this spokesman of the régime which got into power by the promise of "bread and land peace" makes this admission:

"When we speak, in the factories and mills, of the increase of the productivity of labor, the workmen always answer us with the same complaint—'give us bread and then we will work.'"

These official reports of the Bolshevist officials themselves explode the contention of Raymond Robins and the propaganda of the Soviet "Ambassador" Ludwig C. A. K. Martens that the break-up of Russia and the sufferings of its population are due to the Allied and American blockade. They prove that Russia, as a basis for trade, has nothing to give in return, and reveal to what an infinitesimal, negligible degree would be the greatest economic help that we could give. It is a terrible situation, one in which the Russian people, on the verge of starvation under their bloody oppressors, cannot but have the sympathy of the world. It is, moreover, an appalling object lesson, one which the "intellectual" and liberal sentimentalists among our clergy, college professors, editors and writers might well take to heart. An experiment has been tried in "the new order," in the "abolishment of the wage system," in short, in Socialism. Do the American people want, in any form or aspect, what they have in Russia?

THE PASSING OF A GREAT AMERICAN

If, as is true, the good men do lives after them, it is unhappily one of the failings of human nature to criticize rather than praise men of greatness and high position while living. No human being, certainly, is impeccable, and no man in public life and no institution in their course of conduct can meet with universal popular approbation. It is only too common that greater publicity is given to criticisms, just or unjust, than to credit for achievements and social service. In this, Theodore N. Vail, of the Executive Committee of The National Civic Federation, who recently passed away, was no exception.

The American people are familiar with Mr. Vail's colossal life work—his building up of the greatest and most efficient telephone system in the world. In that he performed a service to society that is unprecedented of its kind and of a value almost beyond comprehension. Of his quality as an American citizen, of his sterling patriotism, of his devotion to the cause of America and the Allies during the great war, the people of this country know little or nothing. Mr. Vail was inordinately unobtrusive and retiring, and while his influence and his work were great, they were not such as are marked by military titles and decorations. There were masterful generals in the field of military operations; there were likewise powerful leaders among the greater army of citizens who performed their services at home and whose vigilance, devotion and industry were no less necessary in that great struggle than was the work of the fighting armies in France.

In the days following America's entry into the war, our difficulties at home were acute. The nation was not roused to the war spirit; there was division, confliction of opinion, lack of that unity and enthusiasm which alone can carry through the fire of such an ordeal and bear the flag to victory. To meet this situation The National Civic Federation organized, in Washington, September 12, 1917, The League for National Unity, whose purpose was to unite all elements in the country to back the government, whole-heartedly and unreservedly, to continuing the war until military victory was achieved and the autocratic power of the Imperial German Government was broken. That League proved a power in a time of need. It undertook to counteract the propaganda of all those who worked for a premature compromise peace which would have left Germany victorious; it sought to neutralize the baneful effects of fault finding with the Administration, most of which was inspired and disseminated by agents of and sympathizers with the foe. At a time when all the forces which sided with Germany were throwing their influence to the election in the Congressional primaries of candidates opposed to the war, the League carried on a campaign, calling upon all voters, regardless of party affiliation, to vote against disloyal candidates and elect only war-till-victory Americans. On many occasions the League was called upon for special service by departments of the government. Until Germany surrendered and the Imperial government collapsed, the League continued its work, of nation-wide scope, with results that were vital and concrete.

Among the most active spirits directing the work of the League was Mr. Vail, the chairman. Fully alive, by reason of his business experience, to the disintegrating, morally destructive influence of the criticisms of the President and the War and Navy Departments, he especially devoted himself, heart and soul, to offsetting this widespread cavilling and making the people realize the necessity of getting behind the President in a united support of the war. In a letter sent in January, 1918, to the Editor of the REVIEW, approving of some of the material prepared by the League, Mr. Vail said:

> "It seems to me that the American people are too much inclined, the moment they are not satisfied or think they are not satisfied with what is going on, to want to tear down everything and build up something new. They forget that the experience obtained by those who have been at work is a valuable asset, and is much more likely to accomplish something than by replacing everybody with new men who have experience to gain."

Mr. Vail pleaded that the Administration be "given an opportunity untrammelled, free from nagging and irritating investigations, to do its work in comfort and peace. This is no time for partisanship, to make partisan capital."

In a speech delivered at a meeting of the Executive Committee of the League, May 10, 1918, Mr. Vail with incisive logic pointed out the difficulty of changing a nation from a peace to a war basis and called for unified and absolute support of the Government. He said:

> "A united nation will prevent some, and make up for many, mistakes. It takes more time and is more wearing to answer captious criticisms and make every act self-explanatory than all the rest of the responsibility combined, and takes the precious time and wears the mind that should be free to meet duty and responsibility. Discuss freely if you will but only on the basis of full knowledge of every action, not on hearsay or prejudice. Criticize constructively, but do not criticize without knowledge or destructively. Always remember where responsibility lies and action must originate—that many things which control cannot be known by all. In this way we can make our help and the help of all more efficacious; in this way only can we win this war without increasing the sacrifice."

In these troublous days following the war, when reconstruction is retarded by seditious agitation, Mr. Vail's words still bear a message—a message gained from a large practical human experience:

> "Dispassionate discussion and constructive criticism with a full knowledge of facts and a full understanding of the objective, whether about things done or about to be done, or methods of doing, cannot but be helpful. Impassioned prejudiced criticism, even if more or less justified, is not corrective—it immediately arouses defense and intensified self-justification. Without knowledge and understanding, discussion and criticism can but be absurd, fallacious and entirely misleading."

WHAT DOES "INDUSTRIAL DEMOCRACY" MEAN?

On another page of this issue of the REVIEW will be found an article on "Industrial Democracy" by Mr. James W. Sullivan. Mr. Sullivan has been recognized for forty years as the leading expert and authority here on labor matters in this country and Europe. He was the labor member, nominated by Samuel Gompers, on the commission sent by The National Civic Federation in 1919 to study labor conditions in Great Britain and France. He was also the labor member on the Civic Federation's more recent commission to Europe to make a study of social insurance, the report of which commission will soon be ready for distribution. We bespeak for Mr. Sullivan's article a careful reading, not only because of his qualifications to speak but also because of the importance of the subject matter.

There is no phrase, unless it be "self-determination," that has been more misused and overworked than "industrial democracy" or "democratization of industry," which later terms, in the literature of the day, are interchangeable. Particularly are all the writers in the social service commissions of the churches making much of the term. We quote a paragraph from a pamphlet, entitled "Christian Principles and Industrial Reconstruction," by Francis J. McConnell, Bishop of the Methodist Episcopal Church and a member of the General Committee of the Interchurch World Movement of North America, as follows:

> "The battle for a voice in wage-fixing has been pretty well fought through; but industrial democracy really implies more than such collective bargaining in wages and hours. It implies that labor shall be heard in all questions which have to do with the conditions in which the laborer works, with the shop and its control, with the control of the industry itself through place on boards of directors."

From "The New Spirit in Industry," a book by Rev. F. Ernest Johnson, Secretary of the Research Department of the Commission on The Church and Social Service of the Federal Council of the Churches of Christ in America, is taken the following paragraph:

> "The 'hot spot' in the industrial situation is not wages or hours, but management, in which labor is demanding an increasing share. This is in part the industrial counterpart of the demand for political democracy that is sweeping the world. It results from a growing conviction that freedom for the individual, the paramount democratic ideal, is not satisfied by a political formula, but must be realized in daily life and work. This means free choice of occupation; a voice in the determination of hours and wages, conditions of work, and shop discipline; and, in its fullest import, participation also in financial procedure—buying, selling and investment."

In both of the above quotations is the declaration that higher wages, shorter hours and better working conditions is not the desideratum for which the wage earner is striving, but it is for a voice in the business and executive management of the concern in which he works that he aims. This idea will be found running all through not only church industrial literature but the writings of those who are termed "industrial experts," "the intellectuals" and the "parlor Bolsheviki." When traced back to its source, it is to be found that those writers have imbibed this notion not from the American labor move-

ment, but from the comparatively small handful of I. W. W. and Bolshevik wage workers, plus the radical labor factions in Europe.

There is also much confusion in the public mind as to the meaning of the phrase because entirely opposing forces use it with equal glibness to represent their own particular views. For instance, there are employers who in using the phrase mean nothing but profit sharing. The A. F. of L. officials use the phrase when they mean only collective bargaining; while, when the socialists use it they mean the taking over of industry by the state and, in the case of the I. W. W. and Bolsheviki, when they use it, they mean the taking over of the industry by the workers. Curiously enough, the definition of the phrase by the church writers is that of the I. W. W. and Bolsheviki. The labor organization that is most outspoken in this matter and the operation of which is responsible for the spread of the radical idea of industrial democracy is the Amalgamated Clothing Workers of America, which frankly admits its purpose to be the training of its workers to take over and operate the industry. Sidney Hillman, president of that organization, gave an interview, published in *The World* of Sunday, July 27, 1919, in which he showed how that organization had absolute control of the clothing industry in New York City, Rochester, Baltimore and Chicago, concluding his statements with the following frank expression:

> "By gradually increasing our power and our responsibility in the industry, we are preparing to be ready to conduct it when the day for complete industrial democracy arrives."

To facilitate the equipment of the workers for taking over the industry, Mr. Hillman and other radical organizations are promoting so-called "Labor colleges" and schools. This sounds well to the uninitiated, but in the light of the known philosophy and objectives of such organizations and the radical character of their "intellectual" promoters, they are anything but patriotic and uplifting devices.

The American Federation of Labor, which speaks not for a mere handful of workers but for four million organized wage earners, at its last Annual Convention, held at Atlantic City, by a practically unanimous vote placed its stamp of disapproval upon the idea that the workers want to take over and run the business. Mr. John P. Frey, secretary of the Convention's Committee on Resolutions, reported as follows:

> "I would call your attention to the fact that in the literature which has been circulated upon the question of electing foremen and in the speeches made in trade union meetings upon this same question, the subject does not stop with the election of foremen, because the argument is then made, and it is a logical one, that the election of foremen would be of no value because the foremen would be under the general manager and the board of directors, and if we could only get the trade union movement to commit itself to the election of foremen in industries, it would logically follow that we would have to elect the board of directors and determine who the general manager would be. It is not, therefore, a trade union proposition and I have made this statement so that you will more thoroughly understand what is included in the resolution in purpose, if not in language."

And, on motion of Mr. Frey, the proposal was defeated by a 100 to 1 vote.

Another topic with which Mr. Sullivan deals that is commanding interest at the moment is that of shop committees, shop stewards, etc. This is referred to by many writers as a method of democracy and, in so far as these committees deal with wages, hours and working conditions and with all kinds of grievances that arise in the shop, it is, in a sense, an approach to democracy — some people might call it only good common sense. But this is no different from the "democracy" that obtains today in every industry where collective bargaining exists or, in cases where the men are not organized into unions, there are shop committees. There is, however, in this whole question a serious aspect which, where the committees are not under the discipline of organization, may develop a kind of shop committee that means the I. W. W. or Bolshevist idea of taking over the industry.

In this connection, it is highly important to consider the following quotations from Bolshevist authorities.

In the appeal to the Communist Party of America from G. Zinoviev, as president of the executive committee of the Communist Internationals, which was taken from a courier captured en route to the United States, is found the following significant declaration: (The italics are the Editor's.)

> "The most important task confronting the American Communist at the present moment is to draw the wide proletarian masses into the path of the revolutionary struggle. The party must have for its goal the dissolution of the American Federation of Labor and other unions associated with it and must strive to establish the closest connection with the I. W. W., the One Big Union and the W. I. I. U. . . .
>
> "*The party must support the formation of factory workers' committees in factories, thus serving as bases for the every day struggle and for training the advanced crowd of labor in managing industry.*"

In the manifesto of the Communist Party of America last fall was the same idea, to wit:

> "The Communist Party must engage actively in the struggle to revolutionize the trade unions. As against the unionism of the American Federation of Labor the Communist Party propagandizes industrial unionism and industrial union organization emphasizing their revolutionary implications. Industrial unionism is not simply a means for the every day struggle against capitalism; its ultimate purpose is revolutionary, implying the necessity of ending the captialist state. Industrial unionism is a factor in the final mass action for the conquest of power as it will constitute the basis for the industrial administration of the Communist commonwealth.
>
> * * * * * *
>
> "The Communist Party recognizes that the American Federation of Labor is reactionary and a bulwark of capitalism.
>
> "*Councils of workers shall be organized in the shop as circumstances allow for the purpose of carrying on the industrial union struggle in the old unions, mobilizing the militant element; these councils to be unified in a central council wherever possible.*"

From *The One Big Union Monthly,* the official organ of the I. W. W., the following very illuminating paragraphs on the subject of the Shop Stewards' control are taken:

> "At a National Conference of Shop Stewards and Workers' Committees, held in London, England on January 10th and 11th, 1920, it was unanimously decided, after hearing the I. W. W. representative, George Hardy, that the National Executive Committee should 'take steps to link up with the I. W. W.'
>
> "This event, which probably has been passed up, as not worth noticing, by the capitalist and the conservative labor press, is an event of great importance.
>
> "*Coming as it does at the same time as the invitation to an Industrial International, sent out by the Industrial Unionists of Russia, it points towards a speedy realization of our fondest dreams, the organization of the world's workers in industrial unions on a world basis, to take over production and distribution.*"

We do not mean to imply that because Lenine and Trotzky are planning, through the shop committee system, to capture the industries of this country, that they are going to capture them. There are many things this precious pair of dreamers, schemers, and murderers are planning and not accomplishing, and this is undoubtedly one; but it does give warning to every employer who has the shop committee system to keep a sharp lookout for this very danger. Mr. Sullivan's article throws much light on this whole situation.

AMERICAN EMPLOYERS' PROFIT-SHARING PLANS

NEW VOLUME JUST ISSUED BY THE NATIONAL CIVIC FEDERATION

"Profit Sharing by American Employers," the report of a second inquiry concerning profit sharing between employer and employees, has been published by The National Civic Federation and is now being distributed.

In 1916 the Federation published the first edition of this work. A constant aim in the inquiry was an accurate and unbiased statement of facts. The resultant material was published with the intention of meeting a demand, especially from executives of manufacturing establishments. The entire edition of the volume issued was soon exhausted, and there has been an unsatisfied call for it ever since. A new edition has therefore been prepared.

Reading the statements of fact and opinion educed, one becomes a spectator in a forum in the discussions of which each speaker, giving his name, comes out into the open and relates his experiences with his own or his company's plan. He tells of his hopes and expectations and finally utters his judgment as to the weaknesses or points of strength in the methods he, as a closely interested observer, has seen tried. Some contributors are enthusiastic over their successes; some are resigned to having their plans work passably well; others are uncertain as to the outcome, and still others have frankly abandoned plan and principle. But all bring to the general attention the practical side of the question. They exhibit actual experiments now going on in business and industrial life.

Every paragraph relates to present activities in the production of material things affecting human existence. The testimony, mostly from managers of companies and wage-workers' spokesmen, has direct relation to an important phase of the big labor problem. The inquiry common to all is the shortest and best cut to certain practical objectives. The results desired are maximum production with minimum waste, increased satisfaction to both employers and employees, steps in the activities of trade and manufacture toward a more highly civilized society.

The considerable percentage of dubious results shown by this inquiry should not lead to the sweeping conclusion that all profit sharing experiments are worthless. Many of them, from the standpoint of special local conditions or by contrast with some previous order of things, no doubt show a net improvement in the welfare of the employees affected and the morale of the plants. The real significance, both of the organized labor attitude and of the proportion of failures and doubtful results, lies in their bearing upon the possible value of profit sharing as an industrial remedy of general application.

This in turn involves consideration of the fear of organized labor that the employers' real interest in profit sharing lies in its alleged usefulness as a means to weaken and disrupt the trade unions, and that with this once accomplished the employing interests would be free to regulate wages and hours to suit themselves, with no effective equality of bargaining power left in the hands of the workers.

It is not within the scope of the present inquiry to examine the merits of organized labor's objections to profit sharing, nor to determine whether the interests of labor generally would be safer under profit sharing than with the economic power of organization in its own hands.

The import of the testimony, as a whole, in this work carries the reader to one general conclusion: The personality of the conductor may lead to great good in a faulty plan and it may bring ruin to a sound plan. More than mechanism must enter into profit sharing. Whether

"What Is Socialism?"—A Clear-Cut Answer

COMMITTEE ON SOCIALIST DOCTRINES AND TACTICS, CONDÉ B. PALLEN, CHAIRMAN, ISSUES STATEMENT SHOWING LAWLESSNESS OF METHODS AND IDENTICAL OBJECTS OF ALL FACTIONS

THE various ostensibly conflicting factions in the International Socialist movement, and the constant masquerade of the Socialist organization in the United States as pacifist in its methods and humanitarian in its objects, has led to so much confusion in the public mind that the true character and aim of Socialism, as well as its program and tactics, have come to be generally misunderstood. This confusion, which serves the ends of the Socialists and renders the American public susceptible to their adroit and dangerous propaganda, was conspicuously illustrated by Attorney General A. Mitchell Palmer when, in his speech at Detroit, March 15, 1920, he differentiated between allegedly lawful and admittedly outlaw Socialist factions, and characterized the Socialist Party, as distinguished from the Communist and Communist-Labor parties, as a "loyal" organization. Mr. Palmer said:

> "THE SOCIALIST PARTY IN AMERICA HAS CAST OUT THE RADICALS AND FORCED THEM TO ORGANIZE THE COMMUNIST AND COMMUNIST-LABOR PARTIES. THE SOCIALISTS ARE LOYAL AND PATRIOTIC MEN, THOUGH RADICAL. THEIR AIM IS TO CHANGE THE GOVERNMENT BY LAWFUL MEANS, WHILE THE 'REDS' WOULD DESTROY LAWFUL AUTHORITY."

Mr. Palmer makes three allegations, to wit:

1. "THE SOCIALIST PARTY IN AMERICA HAS CAST OUT THE RADICALS AND FORCED THEM TO ORGANIZE THE COMMUNIST AND COMMUNIST-LABOR PARTIES."

The Socialist Party of America has not "cast out the radicals." The element represented in the Communist and Communist-Labor parties voluntarily broke away from the Socialist organization, and that break was not due to "differences on vital questions or principles," as explained Morris Hillquit, but, "It arose over disputes on methods and policy, and even within that limited sphere it was largely one of emphasis rather than fundamentals." The general impression, which Mr. Palmer seems to share, that the Socialist Party differs in objects and lawless methods from the Communist factions, that the Socialist organization is a legitimate political party, seeking only through parliamentary means to bring about social changes, and that it abhors association with the out-spokenly revolutionary left wings, has no basis in fact. All three factions, with Russian Bolshevism, have their basis in Marxian Socialism—the only extant Socialism—and the differences between the Socialist organization and "left" wings, according to Mr. Hillquit, are to be regarded merely as quarrels between "brethren." Their aims are identical; their differences are merely minor differences as to expediency of methods to be employed under certain conditions. As against Mr. Palmer's assertion, Mr. Hillquit, the official spokesman of the organization, has said of the Communists:

> "They have not deserted to the enemy. The bulk of their following is still good Socialist material, and when the hour of the real Socialist fight strikes in this country, we may find them again in our ranks. . . . Let us center our whole fight upon capitalism, and let us hope our Communist brethren will go and do likewise."

Instead of the Socialist Party "casting out the radicals," the contrary has happened. All individual members who were loyal to this country in its war against Germany, who placed the interests of the United States above those of the international program of Socialism, found that they could not, consistently with their duty as citizens, remain with the party. They were, therefore, obliged to leave the organization. It is not "the radicals" who have been repudiated and denounced by the organization, but those loyal and patriotic members who have been stigmatized as "opportunists and social traitors." At the Emergency Convention held in Chicago, September, 1919, as against those Socialists who were loyal to their respective countries in the war against Germany, the Socialist Party of America officially declared:

CONDÉ B. PALLEN, LL.D.
Chairman, Committee on Socialist Doctrines and Tactics

> "We unreservedly reject the policy of those Socialists who support their belligerent capitalist governments on the plea of 'national defense' and who entered into demoralizing compacts for so-called civil peace with the exploiters of labor during the war and continued a political alliance with them after the war."

Eugene V. Debs, the supreme voice, the hero-martyr and the prospective presidential candidate of the Socialist Party, in an interview given in the Atlanta Penitentiary on April 14, declared that there was no ground on which the Socialists could consistently divide and that if both "recognize that it is the mission of the working class to emancipate itself by every possible method, to utilize every legitimate weapon to accomplish human freedom, and if each works in his chosen path toward the open road that leads to human freedom, then their interests are common." Debs, from behind prison bars, sardonically scoffed at Mr. Palmer's declaration that the Socialist Party had "denounced and spurned" the "anarchist element," declaring:

> "When the Socialist Party becomes so safe and sane that the capitalist politicians can point to our 'eternal credit' in their personal political appraisements, there is certainly something the matter with us. . . .
>
> "I have been asked many times if I believe in changing the present system by force and violence. That is a silly question, and none would ask it who has the slightest knowledge of history. . . . All along the track of the ages, wherever a government has been overthrown by force and violence, that government has been maintained by force and violence.
>
> "You can always depend upon the capitalist class to force the workers to adopt different tactics. For the time being they have the power, and we are on the defensive. Therefore, we must do the thing best fitted to meet a given situation."

2. "THE SOCIALISTS ARE LOYAL AND PATRIOTIC MEN, THOUGH RADICAL."

The Socialist Party of America was anti-war, anti-national and anti-American from the very outset of the war. At its National Convention in St. Louis, March and April, 1917, it adopted its notorious war program, in which it declared:

> "The Socialist Party of the United States in the present grave crisis solemnly reaffirms its allegiance to the principle of internationalism and working-class solidarity the world over and proclaims its unalterable opposition to the war just declared by the government of the United States."

It called upon the workers to refuse support to the government during the war:

> "The only struggle which would justify the workers in taking up arms is the great struggle of the working class of the world to free itself from economic exploitation and political oppression, and we particularly warn the workers against the snare and delusion of so-called defensive warfare."

It expressly and solemnly repudiated any sentiment of patriotism and allegiance to the government of the United States:

> "As against the false doctrine of national patriotism we uphold the ideal of international working-class solidarity."

It officially pledged itself as a party and "recommended" to workers, a course of action, including:

> "1. Continuous active and public opposition to the war through demonstration, mass petitions and others means within our power.
>
> "2. Unyielding opposition to all proposed legislation for military or individual conscription," etc.

In addition to this war program, the party adopted a platform including, among others, the following demands:

> "Resistance to conscription of life and labor.
>
> "Repudiation of war debts."

For attempting to carry out that war program, 2,000 members of the Socialist Party were arrested and the principal members of the executive committee were indicted, convicted and sentenced to terms of imprisonment.

3. "THEIR AIM IS TO CHANGE THE GOVERNMENT BY LAWFUL MEANS, WHILE THE 'REDS' WOULD DESTROY LAWFUL AUTHORITY."

During the war the Socialist Party of America proclaimed and maintained its adherence to the

program of the international radical revolutionary Socialists formulated at Zimmerwald in 1915 and at Kienthal in 1916, under the leadership of Lenine. After the armistice it formally and officially committed itself to the revolutionary program developed and laid down by the Third Internationale of Moscow.

The Third Communist Internationale issued a manifesto, March 26, 1919, signed by Lenine, Trotzky, Rakovsky, Zinoviev and Platten, under the title of the "Manifesto of the Communist Internationale," which is characterized by the Literature Department of the Socialist Party—by which it was published and disseminated in the United States—as "*undoubtedly the greatest declaration ever issued from any working class tribunal since the Communist Manifesto of Marx and Engels.*"

The Moscow Manifesto planted itself squarely upon Marxian doctrines, and advocates violent revolution, the arming of the workers, declares for the world dictatorship of the proletariat and repudiates opportunism, "social patriotism" and democracy, which it pillories as a bourgeois institution—in short, reiterates and emphasizes the Socialist doctrine and program of force laid down by Marx over seventy years ago, of which it declares the Third Internationale are the "fulfillers."

As a direct answer to the call issued by the Moscow Internationale the Socialist Party of America at its Emergency Convention in Chicago last September unanimously adopted a Manifesto endorsing the Third Internationale and taking its stand with revolutionary International Socialism as against the United States:

> "Recognizing this crucial situation at home and abroad, the Socialist Party of the United States at its first National Convention after the war, squarely takes its position with the uncompromising section of the International Socialist movement."

Pursuing the identical policy adopted at Lenine's Zimmerwald conference in 1915, and developed in the Manifesto of Lenine's Third Internationale, the Socialist organization adopted, as its "supreme task," a program of systematically undermining and gaining control of labor organizations and welding the workers into "one big union," with the specific and ultimate purpose of employing the weapon of "industrial action," or the general strike, at the opportune time as a means of effecting a revolution!

> "To insure the triumph of Socialism in the United States the bulk of the American workers must be strongly organized politically as Socialists in constant, clean-cut and aggressive opposition to all parties of the possessing class. They must be strongly organized in the economic field on broad, industrial lines as one powerful and harmonious class organization, co-operating with the Socialist Party and READY IN CASES OF EMERGENCY TO REINFORCE THE POLITICAL DEMANDS OF THE WORKING CLASS BY INDUSTRIAL ACTION."

Referring to the loyal leadership of organized labor, it was said:

> "To win the American workers from their ineffective and demoralizing leadership, to educate them to an enlightened understanding of their own class interests, and to train and assist them to organize politically and industrially on class lines, in order to effect their emancipation—that is the supreme task confronting the Socialist Party of America."

Realizing that it cannot win in this country by working exclusively along parliamentary and legal lines, by educational propaganda and by the use of the ballot, the Socialist Party has cast aside all camouflage of being confined to pacific and parliamentary methods, and, as its only hope, has committed itself to the "One Big Union" plan of mass action. In the preamble to their constitution, as in their Chicago Manifesto, they preach the gospel of coercion of the majority by direct action. Advising the workers "to vote as they strike and to strike as they vote," they proclaim: "This is the only way the worker can get control of all the economic factors of life." "It is our purpose," this Manifesto says, "to place industry and government in the hands of the workers with hand or brain, to be administered for the benefit of the whole community." This is Communism or Bolshevism, pure and simple—in one word, Socialism.

Of two reports submitted to referendum vote by the Chicago convention, the more radical Minority report was adopted by a majority of over two to one. This report further stresses the stand of the party with the "uncompromising" international section of the movement, of which the Russian Bolsheviki are the most conspicuous part, and specifically declares its "solidarity with the revolutionary workers of Russia in the support of the government of their Soviets with the radical Socialists of Germany, Austria, Hungary, in their efforts to establish working class rule in their respective countries and with those Socialist organizations in England, France, Italy and other countries who during the war, as after the war, have remained true to the principles of uncompromising international Socialism."

In accordance with the action of the membership, the American Socialist Party asked for recognition by, and made formal application for membership in, the Third Communist Internationale in a letter dated March 18, 1920, addressed to G. Zinoviev, President of the Executive Committee of the Communist Internationale, and signed by Otto Branstetter, national executive secretary of the party. This constitutes the final break of the organization with the moderate wing denounced both in the Moscow and Chicago Manifestos. The stupendous significance of this action has entirely escaped Attorney General Palmer and the American public as a whole, who still persist in differentiating between Bolshevists, Communists and Socialists, meaning by the latter the members of the Socialist Party of America.

It is a serious matter in this grave crisis, when the very foundations of our civilization are threatened, to allow oneself to be deceived by specious appearances. It behooves every citizen to inform himself upon the true character of Socialism and its consequences. This is as great a duty now as was the defense of our country during the time of war. The Socialist is more dangerous than was the external enemy, for he is a foe within the gates, bent not openly upon conquest but upon the radical destruction, by any instrument he can seize, of Christian civilization, democratic government and all the ideals and institutions that we hold dear. This enemy recognized no law, no humane and moral codes, no religion, for these are stigmatized in the Manifesto of Marx and Engels—the Red Bible of Socialism—as merely "so many bourgeois prejudices, behind which lurk just so many bourgeois interests."

Democracy In Industry

(*Continued from page* 8)

> to us. We have in England an Executive Board for the whole of the union. The board in each of the branches is termed the branch committee, and the appeal of the member goes before that branch committee and they decide the question. I learn that you appoint separate committees entirely as your trial committees to deal with the men if there are any infringements of the law."

Mr. Isaacs admired the trade union health "homes" of this country, owned and controlled by the labor organizations, whereas similar institutions in the same trades in Great Britain are under the guardianship of the employers. The same state of facts applied to trade technical schools. The inflexibility of the old-fashioned apprenticeship system, and the difficulty if not impossibility of a man passing from one subsection of a trade to another in Great Britain, Mr. Isaacs contrasted with the practical methods of learning the essentials of a trade and the occupational mobility of union labor in this country. The habitual offensiveness of the British foreman, his haughtiness and dictatorial airs as compared with the democratic manners of men and foremen in American establishments caused Mr. Isaacs to institute rather odious comparisons. Twenty-two different unions in the printing trades in England attempting the work of unionism done by five international unions in those trades in America, with many times the membership, he also recognized as food for reflection. As to the general spirit in any force of American wage-workers, Mr. Isaacs said:

> "The men were all working at a normal pressure, and there was a far more friendly feeling between the men, the foremen (overseers) and the management than exists in England. The foreman exercises his control with a democratic attitude, and there is an entire absence of that dogmatic officiousness which far too often marks an English overseer. The workmen in America are known to their foremen by their Christian names, and vice versa, whilst the relationship of one to another is of a most cordial character. . . .
>
> "Men are encouraged to think in American workshops, and employers recognize that the brain of the workman is just as likely to conceive useful ideas as the brain of the manager. We know what happens in England if a man thinks he can see a fault in the press or has an idea of an improvement. He is generally told he is not there to do the thinking, somebody else is paid for that job, and he can get on with his work."

It may appropriately be added that one of Mr. Isaacs' conclusions was: "The American workman has a great advantage over the London workman when considering the purchasing power of his wages."

It is, as a fact, pointedly relevant in considering our subject to bear in mind wages. What workers want, aim at and battle for more than anything else, is the highest wages production can yield. Hours and conditions are subordinate to the idea of wages. The shorter day signifies that through it a worker, as the year goes round, can gain the highest wages. Good working conditions are desirable first of all because they maintain the workman's strength necessary to produce wages.

In view of the foregoing considerations, the importers to America of those visions of democracy in industry which were popular among the millennium makers in Great Britain a year or two ago can at this point be asked these questions: Has not English trade unionism abolished the political shop committeeman and his fellow radicals as developed during the recent war? Has not the British Trade Union Congress itself interfered to prevent the joint industrial councils from assuming powers of collective bargaining, or in any way establishing wage scales and conditions, in cases in which trade unions have already occupied that field? Is it not a fact that through its better mechanism the American trade union movement has long customarily performed the essentials of the work proposed for the joint industrial councils formed in consequence of the Whitley Committee report? Are not real wages in the poorest of the one hundred and twenty or thirty international unions and brotherhoods of America at least half again as high as in similar occupations in Great Britain? Are there not many unions in which real wages are double or treble those in Great Britain? Is not, then, the case of a greater possible evolution for democracy in industry in America to be

(*Continued on page* 17)

Socialism Unmasked

(*Continued from page 9*)

compliance is compelled by drastic and comprehensive provisions in the constitutions of the party.

"Fifth: These methods and tactics are prescribed for the members of the party as an integral part of the party's principles and program, by a great International Body. In the employment of each and all of these methods, the Socialist party of America is in harmony and accord with the radical revolutionary Socialists in all the countires of the world."

The Socialist organization has long paraded as a political party, the right wing of a movement opposed to the left or revolutionary wing. By its recent official action, in applying for membership in the Third Internationale, that camouflage is utterly stripped away. Between the right and left wing of the Socialist movement in the United States there is no difference whatever in purpose and objects, simply a difference, of minor importance, as to expediency of methods and tactics. As openly admitted by Morris Hillquit, in a pronouncement issued after the split and advocating the continuance of friendly relations between the Socialists and their "honest brethren": "The division was not brought about by differences on vital questions of principles. It arose over disputes on methods and policy, and even within that limited sphere it was largely one of emphasis rather than fundamentals." As between the "right" and "left" wings, so it is likewise between Socialism in America and Bolshevism in Russia. There is no difference whatever in purpose and objects, and, stripping away the deceptive devices of verbiage, no difference even in the violent methods admittedly to be employed. Bolshevism in Russia and Socialism in the United States are identical in philosophy, program, objects and methods. They are interrelated, of one spirit and blood, allied with and in support of one another.

THE UGLY FACE BEHIND THE MASK OF INTERNATIONALISM

Socialism in the United States and Bolshevism in Russia are integral parts of an International body, repudiating nationality, fundamentally intent upon the destruction of the existence of nations as entities, fixed determinedly upon revolution by mass force in every country where organized democracies exist, and differing only in such outward expression and methods as may be opportune under different conditions.

In the face of evidence contained in the official pronouncements, proclamations, manifestos, declarations, platforms and writings of the Socialist party itself, and the statements of its accepted leaders, all pretense that this movement is political and parliamentary, that it seeks simply social and industrial reforms and changes by constitutional methods, falls away. The very defense that has been made that the organization is entitled to enter candidates at the polls, and that its members when elected are entitled to office, is left without a prop.

Baseless to a degree of fatuity become the easy statements that Socialism is "applied Christianity" or has anything in common with humanitarian efforts for social betterment. Fundamentally in contradiction of, denying and repudiating, the spiritual ideals of Christian civilization, of the Christian religion itself, materialistic and atheistic in its basic philosophy, proposing to destroy all existing order by force, popular ignorance of the real nature of this movement, a tolerating spirit of compromise toward, sentimental, superficial sympathy with it, simply play into the hands of the fell enemies of civilization. Clergymen who unctuously expound it as "applied Christianity," who promote its propaganda in Gospel phraseology, are deceiving their followers into supporting a movement set upon the destruction not only of all that Christian civilization upholds, but of Christianity itself.

So profoundly malign, inspired by esoteric underground forces of vast international power, with far-reaching purposes aiming to undermine the foundations of the Christian world, of such subtle and concealed danger, is this movement, that it is all-vital that the people of this country recognize and understand this thing for what it is—that they comprehend Socialism in America as thoroughly as they comprehend Bolshevism in Russia, and that they identify the forces back of both.

TRAITOR TO UNITED STATES

There is in process of organization at the present time, or has already been organized, the Third Communist Internationale. This was preceded by two others, the First, which died after the outbreak of the Franco-Prussian war, when the German Socialists found adherence to the "Fatherland" stronger than international Socialism, and the Second, organized in 1889, which collapsed when the majority Socialists of Germany, France and Belgium respected their national allegiance upon the outbreak of the war of 1914. The Third Internationale was inspired and brought into being by Nicolai Lenine and his associate leaders of Russian Bolshevism. Affirming its international character and revolutionary purposes, it set itself in opposition to all those Socialists who were loyal to their respective countries during the war. The Socialist party of America by referendum vote overwhelmingly declared itself in support of that Moscow Internationale as against the loyal Socialists in the United States and all other countries. It has, by its official programs, manifestos and actions, put its allegiance to Internationalism and the principles of universal revolution above its allegiance to the United States. In fact, it denies all allegiance, and refuses support to, the United States. The Socialist party of America, on March 18, 1920, made official application for membership in Lenine's Third Communist Internationale. In a letter addressed to G. Zinovief, president of the Executive Committee of the Communist Internationale, Otto Branstetter, national executive secretary of the Socialist party of America, on behalf of the party, officially informed the Third Internationale of the adoption by referendum vote of the Minority resolution offered at the convention in Chicago, September, 1919, providing "for direct and immediate affiliation with the Communist Internationale."

His letter said:

"I therefore have the honor to apply to the executive committee for recognition of the Socialist party of the United States of America and its admission to the Communist Internationale."

In its report of this action, the New York *Call*, the authoritative Socialist newspaper, said: "The call for a constituent congress to organize a Third Internationale, in place of the Second Internationale which had met a month previous in Berne, Switzerland, *was sponsored by the Russian Communist party* and supported by the Communist parties of Poland, Hungary, German-Austria, Lettland, Finland and the Balkan Revolutionary Federation." The American representative at the Moscow congress, according to the *Call*, was Boris Reinstein, private secretary to Nicolai Lenine, a Russian Jew hailing from Buffalo, who was an informer and advisor of Colonel Raymond Robins when he was in Russia. "Among those who actively participated in the work of the conference," continued the *Call*, "were Lenine, Trotzky, Bucharin, Kamenev, Tchicherin, N. Steklov, of the Russian Communist party; Rakovsky, of the Balkan Socialist Federation, and Captain Sadoul and Guilbau, of the French Socialist party." The leaders, admittedly, were all committed to bloody revolution. The Manifesto of the congress was drafted by a committee consisting of Nicolai Lenine, Leon Trotzky and I. Zinovief, of Russia, Charles Rakovsky, of Roumania and Frederich Platten, of Switzerland, all men committed to bloody revolution. The Manifesto of the Third Internationale, to which the Socialist party of America pledges support and of which it officially seeks recognition, declared for revolution by force, the arming of the proletariat, the undermining and gaining control of labor organizations with the purpose of employing mass or industrial action, the general strike, as a means of bringing about the overthrow of democratic governments.

DECEIVE IN PHRASEOLOGY OF IDEALISM

The stand officially and publicly taken by the Socialist party of America with the "uncompromising" or revolutionary section of the International movement, its pledge of allegiance and support not to the United States but to International Socialism, its commitment to a program calling for revolution by violence, by industrial action or the general strike, its disloyal, antinational, anti-American stand against the United States in the war against Germany, do not indicate a change of recent development or merely new radical phases of its character.

Directed by minds of peculiar subtlety and cunning, by leaders whose intellects are more oriental than Anglo-Saxon, masters of craft, resourcefulness and hypocrisy, the Socialist party has for years sought to promote its ends, win sympathy and members, by a scientific propaganda designed to influence different classes of people and meet varying conditions. To the general public it has sought through camouflage and beguiling phraseology to conceal its real character and appear pacific and humanitarian. It has, for instance, specialized in propaganda specifically designed to influence church people, and has not hesitated to employ New Testament phraseology, the terms of Christian justice and brotherhood of man. Repudiating violence, disclaiming any unlawful and unjust methods or purposes among one class of people, it has, on the other hand—for instance, in its Yiddish propaganda for distribution among Russian Jews—sought to inflame by outright incitements to revenge, violence and bloody revolution. Another phase of its propaganda, carried on mainly through the Intercollegiate Socialist Society, has been adapted to meet another condition and appeal to educators, college professors and students. To conceal its basic character to all except its revolutionary *cognocenti*, to create confusion in the public mind, has been one of its chief purposes. In fact, it has made headway among cultured people, among sincere if sometimes superficial folk, among those generally called "intellectuals" and "liberals," by an appeal of phraseology—by the employment of beguiling phrases of altruism and idealism. Its entire propaganda, protean to a bewildering degree, yet masterful, able and amazingly effective, has been inevitably confusing to the Western mind, which is open and direct, and which finds it difficult to think in the terms, and to follow the casuistical, cunning and machiavellian workings, of the asiatic intellect of a Trotzky or a Hillquit.

In its fixed objectives, program and activities the Socialist party has been persistent and consistent. In committing itself to the program outlined in the Manifesto of Lenine's Third Internationale, in declaring as its supreme task the undermining and gaining control of labor organizations with the purpose of employing mass action, or the general strike, as a means of revolution, in having sought to hinder the nation in its war against Germany, the Socialist party was simply following a program adopted by the group of revolutionary International radical Socialists who met, under the leadership of Lenine, at Zimmerwald, Switzerland, in September, 1915, and later at Kienthal in 1916, and who, at the Third Internationale last March declared themselves but the "fulfillers of the program

proclaimed seventy-two years ago." By its official action in casting its lot with the Moscow Internationale, of which it becomes an integral part, the Socialist party of America announces that henceforth, as during the war, its allegiance and support in time of crisis would not be given to the United States, but to International Socialism. In this, it but fulfills, as have the Bolsheviki, the program of the furious and vengeful Marx.

COMMITTED TO ACTUAL WARFARE AGAINST UNITED STATES

"We are, therefore," declared Martin Conboy, in his summary of the evidence before the Judiciary Committee of the New York Legislature, "confronted at this day and by virtue of these recent events and facts with the necessity of determining how we shall treat this group of persons who are in the United States but not of it, who, while accepting the benefit of our laws and institutions and sacrifices of blood and treasure given to support them, refuse their support to them, who take all they can get but will not give a life or a dollar to preserve, defend, perpetuate the government that is their sole and only guaranty of life, liberty, property and pursuit of happiness.

"It is the first time since the rebellion of 1861 that notice has been plainly and explicitly served upon the government of the United States by a group of men residing within its borders that they will not support or defend it, but that on the contrary they will by all means in their power obstruct and resist it in its effort to maintain in time of stress its national honor and existence. The present issues transcend in importance even the war program of the Socialist party of America adopted in April, 1917; for disloyal and traitorous as that program was, the present international affiliations and the purposes of the same are the evidence sufficient and satisfactory to the point of demonstration that what transpired at that time was not an isolated act of disloyalty, but only the initial step in a program of treason. The Socialist party of America is not a loyal organization, disgraced occasionally by the traitorous act of a member, but a disloyal party composed of perpetual traitors."

While the majority Socialists of Germany, France and Belgium forsook Internationalism and heeded the call of their country in the war, the Socialist party of America stood by the principles of Internationalism as against patriotism and nationalism. It called upon the workers of America and all other countries to refuse to support the war, and 2,000 members of the party were arrested for their anti-war activities and the principal executive officers and members of the executive committee were indicted, convicted and sentenced to terms of imprisonment. Members of the party who were loyal to the United States were compelled to withdraw from the organization. By pledging support to Lenine's Third Internationale and by its application for admission, the organization is further committed to continue perpetual and actual warfare against the government of the United States and all American institutions. Nor is that warfare, aiming at nothing less than the overthrow of the Constitution and the destruction of our form of government, to be parliamentary, legal and pacific.

NOT A POLITICAL PARTY, BUT INTEGRAL PART OF INTERNATIONAL MOVEMENT

In the words of Mr. Conboy, in his masterly summary:

"The Socialist party of America is neither a party nor American. It is an organization created for the purpose of accomplishing in the United States by any available means, determined only by national conditions and exigencies, the social revolution and the establishment of a Socialist commonwealth as part of the international revolution of which the present Soviet government of Russia is a part.

"The Socialist party is a membership organization distinct from enrolled voters. It numbers among its members infants and aliens. . . .

"The philosophy on which the Socialist party of America, as the domestic expression of an international doctrine is based, is the very antithesis of national existence. This philosophy constitutes the unvarying platform of the Socialist party of America. . . .

"The Socialist party of America adheres to the theory that the citizens of the United States, as well as those of every other country in the world, are concerned with no other consideration than a continuing bitter struggle between two imaginary classes of society, the one seeking to keep the other in perpetual bondage; that it is only in this struggle that those who are adhering to the principle and policies of the Socialist party of America can possibly be interested; that inasmuch as this is a capitalistic government, its aims and its purposes do not deserve, and will not receive, the encouragement, support and fidelity of those who constitute the members of this party, and that it is necessary, therefor, in order to secure the triumph of the principles of the party, that the government of the United States should be overthrown and in its place should be substituted a so-called cooperative commonwealth operated as part of an international institution of the same character, devoted not to the interests of the entire people of the United States, but exclusively to the alleged interest and for the imaginary benefit of the propertyless elements throughout the entire world denominated the proletariat of all countries, in whose hands, in the phrase of its present chief exponent, Nicolas Lenine, there shall be placed an immutable and perpetual dictatorship."

The Socialist party, without mincing words, has repudiated patriotism, nationalism, loyalty and allegiance to the United States. In the war program adopted at the National Convention of the Socialist party held in St. Louis, April, 1917, and later confirmed by referendum to the dues-paying membership of the organization, the international and anti-American character, policy and stand of the party was expressed:

"The Socialist party of the United States in the present grave crisis solemnly reaffirms its allegiance to the PRINCIPLE OF INTERNATIONALISM AND WORKING-CLASS SOLIDARITY THE WORLD-OVER, and proclaims its unalterable opposition to the war just declared by the Government of the United States."

In plain language it called upon the workers to refuse to support the government in the war and outlined a policy to be followed in opposition to the war. On the other hand, it revealed its unpacific character and violent and militant intentions by a declaration of armed class warfare:

"The only struggle that would justify the workers in taking up arms is *the great struggle of the working-class of the world* to free itself from economic exploitation and political oppression, and we particularly warn the workers against the snare and delusion of so-called defensive warfare."

Patriotism, belief in and loyalty to national ideals, love of country, were held up to ridicule, as something false, degrading, to be despised and condemned:

"As against the false doctrine of national patriotism *we uphold the ideal of INTERNATIONAL working-class solidarity.*"

NOT CITIZENS OF UNITED STATES, BUT SUBJECTS OF INTERNATIONALE

In the preamble to the Constitution, dated Chicago, Ill., October 25, 1919, it was said further:

"The Socialist party of the United States is the political expression of the interests of the workers in this country, and is part of the INTERNATIONAL WORKING-CLASS MOVEMENT."

"The explanation of the anti-America attitude of the Socialist party of America during the war lies in the anti-national and pro-international character of its program," declared Mr. Conboy. "Its members are not occasional but perpetual traitors, in constant conflict not merely with the purposes of any temporary administration of the affairs of this government, but with its very institutions and fundamental laws. They are citizens not of the United States but subjects of the Internationale whose pronouncements are to be given their moral support—a support which they not only withhold from but deny to the government of the United States."

The first act of the Socialist party after the armistice was to repudiate those Socialists who had supported their countries in the war, and who engaged in an attempt to revive the Second Internationale at Berne. As against them, the organization officially took its stand with the "uncompromising" group of which the Russian Bolsheviki are the most conspicuous part.

In the Manifesto adopted unanimously at the Emergency Convention of the Socialist party of America, Chicago, September 4, 1919, the International, anti-national and unpatriotic character of the Socialist party was clearly self-expressed:

"We unreservedly reject the policy of those Socialists who support their belligerent capitalist governments on the plea of 'national defense' and who entered into demoralizing compacts for so-called civil peace with the exploiters of labor during the war and continued a political alliance with them after the war."

Again:

"Recognizing this crucial situation at home and abroad, the Socialist party of the United States at its first National Convention after the war, squarely takes its position with THE UNCOMPROMISING SECTION OF THE INTERNATIONAL SOCIALIST MOVEMENT."

Just what is the "uncompromising section" of the International Socialist movement? This is answered in the Manifesto itself. Condemning the loyal Socialists who supported their governments in the war with Germany—who "entered into demoralizing compacts for so-called civil peace with the exploiters of labor during the war"—the Manifesto went on to say:

"We, the organized Socialists of America pledge our support to the revolutionary workers of Russia in the support of their Soviet Government, with the radical Socialists of Germany, Austria and Hungary in their efforts to establish working class rule in their country, and with those Socialist organizations in England, France, Italy and other countries, who, during the war, as after the war, have remained true to the principles of UNCOMPROMISING INTERNATIONAL SOCIALISM."

Elsewhere:

"It now becomes more than ever the immediate task of INTERNATIONAL SOCIALISM to accelerate and organize the inevitable transfer of political and industrial power from the capitalist class to the workers."

According to the "Official Bulletin" of the proceedings of the Chicago Convention, the convention sent to Ludwig C. A. K. Martens, the so-called Ambassador from the Bolshevist Government, the following telegram of greetings:

"The Socialist Party of America in National Emergency Convention assembled sends you fraternal greetings and wishes you success in your endeavors to establish friendly relations between the peoples of the United States and Soviet Russia of which you are an accredited representative. We assure you that the Socialist party will do all in its power to rally the support of the American workers to the aid of the proletarian republic which is an inspiration to THE SOCIALIST MOVEMENT OF THE WORLD."

CONSISTENTLY STEADFAST TO "REVOLUTIONARY AND INTERNATIONALISTIC SPIRIT"

At the national convention in Chicago two reports—one headed Minority Report and the other Majority Report—were offered. The Majority Report was adopted and submitted to referendum by the national convention. But in the referendum vote, which was recently completed, the membership of the Socialist party, by a vote of 3,475 to 1,444 (the usual proportion voting), rejected the more conservative Majority Report and adopted the more radical Minority Report, which declares the Socialist party in support of Lenine's Third Internationale held last March at Moscow. The anti-national and international character of the Socialist party of America is again emphasized in the report just adopted by the membership of the party, in which it repudiates the Socialists who were loyal to their countries in the war against Germany and takes its stand with the elements represented by the Russian Bolsheviki:

"When leading Socialists join their national government upon a coalition basis they accept and sanction policies which hinder Socialists and the working class generally from taking full advantage of the opportunities for deep-seated change which the war creates. This makes the workers content with superficial reformist changes which are readily granted by the capitalist class as a means of self-protection from the rising tide of working class revolt. . . .

"The Socialist party of the United States, in principle and in its past history, has always stood with those elements of other countries that remained true to their principles. The manifestos, adopted in national convention at St. Louis (1917) and Chicago (1919), as well as Referendum 'D' 1919, unequivocally affirm this stand. These parties, the Majority parties of Russia, Italy, Switzerland, Norway, Bulgaria, Serbia, Greece and growing minorities in every land are uniting on the basis of the preliminary convocation, at Moscow, of the Third International. As in the past, so in this extreme crisis, we must take our stand with them."

Alexander Trachtenberg, director of the Bureau of Labor Research of the Rand School, published in the New York *Call* of November 26, 1919, a letter advocating the adoption of the Minority report, as follows:

"By its past record—the adoption of the Zimmerwald program in 1915, the support of the Kienthal manifesto in 1916, the adoption of the St. Louis resolution in 1917, the general position of the party and the sentiment of the rank and file throughout the last five years—the Socialist party could not do anything else but ally itself with those Socialist groups who have like itself remained steadfast to the revolutionary and internationalistic spirit of the Socialist movement."

"THE IDEALS OF SOCIALISM"

To understand every official pronouncement and act of this organization, it is necessary to comprehend the significance of the underlying affiliation of the Socialist organization with the Third Communist Internationale. When the Socialist party, at its Emergency Convention last September, decided to affiliate itself with the Moscow Internationale and on the other hand rejected the program of the Berne conference as not being sufficiently radical and revolutionary, it had before it a report made by James Oneal, who was sent abroad by the Socialist party, which, declared Mr. Conboy, "is of great importance because of its explanatory statement of the nature of the Third Internationale." Bearing in mind the repudiation by the Emergency Convention of Socialists who "join their national governments" and its stand with the "uncompromising" or revolutionary group, one can appreciate the significance of the response of the American membership to the Bolshevist Internationale. Mr. Oneal, in his report, quoted from the central organ of the Soviets, *Isvestiya*, an extract, which, he said, "undoubtedly reflects the view of the Moscow Congress":

"The establishment of the Communist International, which places itself in opposition to the international of opportunists and social traitors, has now confronted all the hesitating elements in the Socialist movement who have not yet sold their principles to the imperialistic bourgeoisie with the option either of joining the advance guard of the proletariat in its fight for the Social Revolution, or of going over to the league of capitalists struggling for social reaction. There is no longer a third way."

Mr. Oneal frankly stated: "The Moscow Congress resolved to take over the work of the Zimmerwald and Kienthal groups after a report by Balabanoff, Secretary of the Zimmerwald International Socialist Committee, in which he was joined by Lenin, Trotzky, Zinovieff, Rakowsky and Platten as members of the Zimmerwald Association."

As against those camofleurs, such as John Spargo, who seek to make capital for Socialism in America by attacking Bolshevism, by throwing dust in the eyes of the general public as to the identity of purposes and methods of the American Socialists and the Bolshevistic Internationalists, Mr. Oneal reported to the National Executive Committee of the Socialist Party:

"*The Moscow Congress certainly have in mind the ideals of Socialism*, not the concept of communism of wealth which has characterized so many religious sects. Its membership is made up of all the elements of the Socialist movement that oppose war and militarism, relies upon the class struggle to chart the course of the movement and keeps in mind the fact that the real struggle in the modern world is one between the workers of all countries as against the ruling class of all countries."

"PATH OF UNCOMPROMISING REVOLUTIONARY ACTION"

The Manifesto of the Moscow Congress, adopted March 26, 1919, was signed by Rakovsky, Lenine, Zinoviev, Trotzky and Platten, and is addressed to the "Proletariat of all Lands." This Manifesto, according to the record of the Albany hearings, was published and distributed in the United States by the Literature Department of the Socialist party of America, by which it was characterized as "undoubtedly the greatest declaration ever issued from any working class tribunal since the Communist Manifesto of Marx and Engels."

The purpose of the Manifesto and of the Third Internationale is described in the introduction:

"Reformistic opportunism is pilloried as it deserves to be. It [the Manifesto] will assist the Socialist movement everywhere into the path of uncompromising revolutionary action that alone can usher in the triumph of International Socialism."

To that Manifesto, whose declarations are frank and unequivocal, the Socialist party of America has officially responded. To the Third Internationale, and the program outlined in its Manifesto, the Socialist party of America has officially pledged its support. To the Third Internationale, dominated by Lenine and his Bolshevist confederates, the Socialist party of America, humbly asking recognition, has officially applied for membership.

The Third Internationale, of which the Socialist party of America becomes an integral part, represents the objects of Russian Bolshevism, and as a means of obtaining those objects in all other countries advocates the same methods, the same program, the same policy of force pursued by Lenine and his bloody associates in Russia. The Third Internationale represents and expresses not only Russian Bolshevism, but that of which Russian Bolshevism is a part and an expression—International revolutionary Socialism.

No one can defend the Socialist party of America, no one compromise with or have sympathy for any aspect, group or wing of the Socialist movement in the United States, without defending, compromising with and giving sympathy to that grisly monstrousness whose unveiled head has lifted itself out of Russia and which reaches out to destroy Christian civilization and democratic government in every country on the globe through violence, terrorism and bloodshed.

(*In the following article will be unfolded the program of the Third Internationale, to which the Socialist party of America is committed, showing the identity of methods and ultimate purpose of Russian Bolshevism and American Socialism. This will clearly expose the hypocritical farce of the Socialist party being different from the Communist wings in seeking to effect a revolution through evolutionary or parliamentary methods, or the use of the ballot, and define unmistakably what is proposed in this country through mass or industrial action, the general strike.*)

Democracy In Industry

(*Continued from page* 14)

studied as an American rather than an imported British problem, the plans to be adaptable to American conditions?

As to any attempt to set up democracy in industry bit by bit, establishment by establishment, the trade unionist would first of all propound to the projectors a query in economics. What guarantee in the absence of trade unionism are the workers in a democratic capitalistic enterprise to have as to the maintenance of the prevailing or union rate of wages? The trade union came into being because individual workers applying for employment were played by employers in competition against one another, the resultant tendency being a general decline of pay toward the level of the final submission of the most necessitous. The unions have worked wages for the mass up to certain standards, the basic requirement being living wages as the term is commonly accepted in this country and a further aim the highest possible share for labor that industry can afford.

The principle of ruinous competition is just as true of establishments as units as it is of individual wage-workers as units. In the highest conceivable democratic conditions the financial results might at times fail to bring to the workmen their desired standard of wages. The processes of competition between establishment enterprises are continuously visible. The keenest organizers of business, the shrewdest bidders in obtaining orders or contracts, the most unscrupulous managers in reducing wages, are factors having their positive advantages. Buyers give their orders for like goods to those who deliver them cheapest. Cheapness often arises from low wages. Wage-workers unprotected by unions will and even must reduce wages on the demand of managers, whether capitalists or men from their own ranks, in dull seasons, or during the decadence of their part of an industry or in case of an oversupply of labor. The workmen of one establishment competing with the workmen of another in these circumstances are unable to prevent wage reductions in both. In accepting the principle of democratizing the industry and in abandoning the principle of trade unionism, wage-workers may therefore enter upon the road to ruin. In the competition between workmen and workmen in groups as well as between workman and workman as individuals, the cheapest drives out of occupation the dearest.

When the query on this capital point finds its answer from the proponents of democracy in industry, the trade unionist may be prepared to consider further principles of the proposition and the details of its possible effectiveness in operation.

Shop Industrial Training

(*Continued from page* 4)

that human being with pencil and paper. You can put six men on six identical machines, same construction, same work, and everything, and there will be a first and a last among them, and a middle one. We are not all born alike; we are not all equipped alike.

"On the one side you will hear the manufacturer say, 'The more we raise wages the less production we get.' That is not true. The great trouble I find is that when the employer raises his wages, he expects the equivalent in production to that raise, and if he doesn't get it he feels that the worker is slacking on the job. Sixty per cent. of our people in the textile industry are piece-workers and there is where the human element comes in. You may have a slacker here or there in a group but the human ambition is to get all they can possibly get in dollars and cents, and they know they can only get it through production. As for the day worker, the other fellow will look after that part of the game. He can soon tell when the workers are slacking, and they don't stay if they do it too much.

"In approaching and solving—and it can be solved—this subject of up-building systems for better production, for more efficiency, for the training of the worker, let us not forget the human element. It is not a matter of dollars and cents, nor a matter of production alone. It is a matter of dealing with it in a human manner, of creating a feeling of confidence, a get-closer-together-feeling between the employer and employee—not to have the employee think and feel that the employer is driving him, and not to have the employer feel that the employee is slacking on him, but to bring about a mutual feeling of confidence, and of determination to give the best remuneration for services rendered, on the one hand, and on the other the workers to give the service that they can without reaching the stage of exploitation."

Professor David Snedden, Chair of Education, Teachers' College, Columbia University, made the following statements concerning the theory of vestibule and upgrading vocational schools:

"Superficial thinkers are apt to imagine that vocational education should be of one general type for all workers. A few years ago we could think of vocational schools only in terms of professional training—four year courses, fundamental abstract subjects, laboratory methods, and the like. Many of us now commonly think of it in terms of trade school training. But among the sixty million adult workers (40,000,000 wage-earners and 20,000,000 home-makers) in the United States fewer than 2,000,000 belong to the professions even when teachers are included; and it is doubtful whether more than four million more belong to the trades in any adequate historical meaning of the term.

"The war intensified the demand that had been growing for generations for operative specialty workers. The true trades—of baker, shoemaker, wheelwright, stonecutter, bookbinder, and the like—are essentially the products of handicraft production; and they survive today of course, in house carpentry, barbering, locomotive firing, electric installation, shoe repair, and wherever else power driven machinery cannot well be used. But in industry and commerce especially America has committed itself to power-driven machinery, specialization of service and scientific organization of means and methods. From the manufacture of pottery to the adding of columns of figures, from the printing of newspapers, to the laying of concrete, we move steadily towards mechanization of process—with no corresponding intention, surely, of mechanizing the human souls helping in the processes—and subdivision of labor. In times of peace our incessant demands for quantity production with its inevitable accompaniment of standardized parts is but slightly less than in war time. Hardly an American worker today but aspires to an abundance of the shoes, shirts, table-ware, hats, phonographs, parlor furniture, watches, magazines, street-car transportation, canned fruits, crackers, and carpets that are the daily output of highly specialized machinery.

"But for the millions of workers found in these elaborately organized fields of production we have today hardly more than a faint suggestion of systematized vocational education. The "pick-up" school is here found at its worst; occasionally it is slightly offset by voluntary corporation schools, usually designed however, to assist potential leaders. No one seriously thinks that true apprenticeship can live in the atmosphere created by factory specialization.

"Would workers, directors of production, consumers, the country at large, be substantially helped by extensive, well organized, and even publicly supported factory schools of the intensive types exemplified in the vestibule and upgrading schools?

"All available evidence points to the conclusion that for most of the simpler operative specialties found in modern factories and other types of production similarly organized, the best training is that given through short intensive full-time courses, often only a few weeks or months in length, on productive work and under shop or factory conditions, such training being directed primarily to improving the proficiency and conserving the health and interest of the young workers. (Obviously the conditions of good professional or trade education are very different and provide no workable analogies.)

"Similarly, all available evidence supports the conclusion that for the more difficult operative specialties as well as for foremanship and other forms of direction, where maturity and previous experience as well as special qualities of native fitness are required, the most economical and effective vocational training consists of short, intensive training under conditions of productive work, available for persons of proved native ability, maturity, and related experience. (It is now intended that evening schools, correspondence schools, and other extension courses shall meet this need, but at best they give fragmentary offerings and quite out of relation to the actual work and needs of the individual.)

The vestibule school can best be tied up with the employment and selective service of a given establishment and its effectiveness is obviously greatly enhanced when the worker from the moment of trial employment can be put in receipt of a learner's wage."

H. E. Miles, Manufacturer, Chairman, Former Section on Industrial Training for the War Emergency, Committee on Labor, Council of National Defense, said in part:

"Shall each of our thousands of factories be left to work out its own method of training by the slow processes of infiltration and experiment, with infinite mistakes and corrections for a long period of years, or shall a central agency be established where a few of the most expert and experienced leaders in training and in production shall accumulate for the general use a fund of principles, methods and practices that will enable any factory to introduce this training easily and with assurance of success?

"Time is an essential element in this consideration. The world is suffering as never before for the necessaries of life and millions are said to be dying for want of food, clothing and shelter, while, in the judgment of the Department of Labor and many others, our wage-earners are doing not more, on the average, than 60 per cent. of what they might if better trained for their work. Masterful training incites interest and enthusiasm. "No one can be happy in doing things poorly. Neither quality nor quantity can be expected of poorly trained workers in any field. Our best workers are a match for any in the world. The problem, therefore, does not concern them, but that majority of poorer workers, and especially that 80 or 90 per cent. who are in trades that have never been included in the field of vocational training, like shoe making, garments, textiles, jewelry, silversmithing, rubber boots, and specialized processes generally. In these trades the operatives have no use for mathematics, and little use for the general courses given in day or night vocational schools, and yet they need training as much as any other.

"There is extreme need of a central agency to be associated with the national and other organizations in each of these trades to work out its special methods of training. Great producers and wage-earners in every field want this assistance. The value of it was demonstrated by the U. S. Training Service, a war service now defunct. This Service secured this co-operation in many trades, thereby uniting the best production experience of the factories. Scientific training was begun in such new fields as the making of shoes, men's suits, foundry, shirts, collars, corsets, textiles, small hardware, airplanes, liberty motors, etc. In the metal trades some excellent training had been in use for years, but quite commonly there has been no systematic method, and the need of it in such trades is indicated by letters from 600 foundries earnestly requesting assistance.

"This training is not an expense, but a tremendous saving over the present methods of hit-and-miss employment. Only through training in connection with employment can efficiency be attained. Public education is already at the point of bankruptcy. The cost of education per pupil and also per capita of population, doubled in the fifteen-year period, 1900 to 1915. It is now about $700,000,000 per annum and an additional $250,000,000 is now required for increase of teachers' salaries. How much more is required for the new compulsory continuation schools, which the states have now decided upon, we do not know; but for New York City only the salaries of new teachers will amount to $4,500,000 annually with other sums for school plants and maintenance. And yet these new schools are for no one over eighteen years of age! From one-third to two-fifths of all local taxes now go to education. So much is now required that local authorities find it difficult to save enough from taxes for such other purposes as public health, streets, police, etc.

"May we not confidently expect that the relatively small amount of funds needed for the establishment of a central agency for this training will speedily be found and, consequently, that we shall soon see that improved spirit in industry and better production which will meet the world's requirements at reasonable cost."

Samuel Gompers, President, American Federation of Labor, Washington, D. C., said:

"At the outset let me say that there has been no view expressed within my hearing upon this subject from which I would dissent. I just want to add a thought to correct a misapprehension—the thought or misapprehension that the organized labor movement has at any time in its history opposed vocational training or industrial education. I assume that the fact upon which this feeling is based is that organized labor generally has been opposed to the old trade schools, which not only turned out, as Mr. Golden has said, half-baked journeymen but also fully developed antagonists to union labor.

"As a substitute for these trade schools, and in the interim of the transition from the trade schools to vocational training and industrial education, in nearly every trade union official journal expert workmen and designers employed by the organizations made contributions for the

Bolshevists Officially Admit Economic Failure

By GREGOR ALEXINSKY

(Former Social Democrat Deputy of Petrograd in the Second Imperial Douma, who suffered imprisonment by the Bolsheviki and who recently arrived in the United States)

DURING my recent stay in Bolshevist Russia I had an opportunity to acquire a large amount of information as to the economic situation under Bolshevism. This information has exceptional value, in the first place because it relates to conditions up to the end of January of the current year, and also because it is drawn from official Bolshevist sources. Among the documents of which I am in possession are the stenographic reports of A. Rykoff, President of the Superior Council of the National Board of Economy, and of M. Tomsky, President of the Central Council of the Trade Unions, and also those of Trotzky, Lenine and I. Kameneff, President of the Moscow Soviet.

What are the reports given by these chiefs of Bolshevism in regard to the economic situation of Bolshevist Russia in January, 1920?

A. Rykoff is chief of all the economic institutions in Bolshevist Russia and directs the work of industrial reconstruction. Although Rykoff is not a gifted organizer, because of his official position he is nevertheless the best informed person as to the political and economic effects of his government's rule, and is by no means inclined to exaggerate the exposition of the negative phenomena of this régime.

On January 25, 1920, Rykoff made a report to the assembled Congress of delegates of the Economic Councils, the Trade Unions and the Moscow Soviet:

> "After the years of the war—both Imperialist and civil—the exhaustion of all European countries, and *especially* of Russia, has reached unheard of proportions. This exhaustion was felt during the whole period of the Imperialist War, *but so far as the wastage of the national wealth and the ruin of material and human forces are concerned, the civil war has led to much heavier losses than the Imperialist War;* because the civil war affected the greatest part of Russian Soviet territory and was manifested not only in the form of conflicts between the armies, but also in the way of destruction, arson, annihilation of commodities and wealth, the value of which is incalculable."

In order to describe this crisis, Rykoff gives figures which I quote from his report:

> "Before the war the percentage of sick locomotives (that is to say, those which need repair), even in most difficult times, did not surpass fifteen per cent. To-day the percentage is 59.5. In consequence, of every 100 locomotives in Soviet Russia there are 60 which are out of service and only 40 which are in working order. The repairing of the sick locomotive diminishes with extraordinary rapidity. Before the war 8 per cent were repaired every month. After the October revolution of 1917 this percentage was reduced sometimes to 1 per cent; at present we have been able to raise this figure, but only to 2 per cent. Under the present condition of the railroads the work of repairing cannot keep pace with the destruction of the locomotives and each month we register a decrease in the number of locomotives at our disposal as compared to the preceding month. This decrease amounts monthly to 200 locomotives. . . . For the great masses of the population, for the workman and peasant of Soviet Russia, these figures signify that it is impossible to exploit any of the grain regions, as well as the regions containing raw materials and fuel which we re-annexed to Soviet Russia as the result of the victories won by the Red Army."

Rykoff gives two concrete instances clearly illustrating the results of Bolshevist policies in the field of transportation:

> "We have a metallurgical region in the Urals, but up to the present time we have been able to dispatch but one train per month in order to ship metals to Central Russia. At this rate it would take us decades to ship 10,000,000 poods from the Urals.
>
> "In order to supply the textile mills in the Moscow region with the cotton of Turkestan, we would have to transport more than 500,000 poods per month. At present, however, we have for this purpose only two trains per month and several decades would be required to transport from Turkestan the 8,000,000 poods of cotton which we could use, but which we are powerless to deliver to our mills."

Nevertheless, it would be a mistake to assume that the lack of raw material is solely explained by the transportation crisis. In the same report of Rykoff's we read as follows:

> "Because of the disorganization in the transportation system, we are unable to procure cotton because the railways are not in position to transport it. But the crisis exists even with regard to commodities which are produced in Central Russia; as, for instance, flax, wool and hides. There is a lack of all these materials because of an acute crisis."

And again the President of the Superior Council of National Economy supplies us with very instructive figures. The production of flax decreased 30 per cent as compared with the prewar period. Before the war more than 20,000,000 poods of flax were harvested in Russia. In 1918, the Bolshevists, having nationalized the crops, obtained only 4,500,000 poods and in 1919 "there was a great decrease." For 1920 Rykoff foresees a further decrease which will be still more considerable. The reserves of flax at the disposal of the Bolsheviki are only sufficient for eight months.

The same negative phenomena manifest themselves in the production of hides and wool.

> "One notices there the diminution in the number of live stock, especially of the kind which furnishes wool for our textile fabrics."

In the first half of 1919 they were able to collect in all the territory of Soviet Russia only about 1,000,000 hides; for the year 1920 Rykoff foresees a decrease which may reach 650,000.

> "The quantity of hides which the state will probably have at its disposal (through 'nationalization') decreases from one month to the next."

Not having enough raw material, industry in Bolshevist Russia is not sufficiently supplied with fuel. The Council of People's Commissaries had fixed the necessary quantity of wood for fuel to be produced for the winter of 1919-1920 at the figures of 12,000,000 to 14,000,000 of cubic sagenes (one cubic sagene being equal to two cubic metres). But the Administrations which were charged with the work forwarded to the railroads and to the rivers less than 2,500,000 sagenes. There is no reason for astonishment that, according to the report of Rykoff, the population of Moscow suffered terribly from lack of fuel which "they lacked even for heating the hospitals." It must be added that of these same 2,500,000 sagenes, the Soviet Administrations were not able to transport to the cities and industrial centers more than a very small quantity and "even the minimum program of supply of fuel for the factories of Moscow could not be carried out because of the lack of means of transport." Rykoff nevertheless finds that the problem of the supply of wood fuel is relatively better than with regard to the coal supply, saying, "things are going badly for the production of coal and petroleum."

Let us pass from the question of the supply of the factories and mills to the problem of the supply of laborers who work in them. Rykoff says:

> "When we speak, in the factories and mills, of the increase of the productivity of labor, the workmen always answer us with the same demand and always present us with the same complaint: Give us bread and then we will work."

Rykoff asserts that in 1919 the Bolshevist government had collected reserves of wheat (by requisitioning it from the peasants) with more success than in 1918 and was able to concentrate in its elevators about January 1, 1920, 90,000,000 poods, whereas the year 1919 gave only 60,000,000. But this success was only relative because in 1919 the peasants only turned in half of the quantity of wheat which the government had decreed that they should give. For the entire population (several tens of millions of persons) which had to be supplied these 90,000,000 poods did not amount to much and Rykoff himself, basing his statement upon the most optimistic estimates, nevertheless says that "in the grain elevators there are reserves which assure the supply for workmen and peasants for three months." And this supply is estimated upon the minimum ration, which is below that which the physical organism of a robust workman requires. Finally, it must be repeated again that the fact that the elevators are filled with grain does not signify that the workmen have bread, and Rykoff states that the Bolshevist Administrations "cannot transport the grain which is stored in the elevators in order to deliver it to the population," and for that reason "the workmen and the peasants have not yet received bread."

Tomsky, President of the Central Council of Trade Unions, describes, in a report, the supply situation in a manner even more disquieting than Rykoff. He says, notably:

> "So far as food supplies are concerned it is evident that under the present conditions of transport we will not be able to accumulate reserves of provisions sufficiently great so that each workman may have a sufficient ration. We must renounce the principle of equality in rationing and reduce the latter to two or three categories of workmen's ration. We must recognize that making our first steps (*this is stated two and one-half years after the seizure of power by the Bolsheviki*) upon the road of ameliorating the situation of industrial workers, we must introduce a system of so-called 'supply of essential occupation.' Above all, we will have to supply those groups of workmen who are essentially necessary to production."

It becomes obvious that such aristocracy in the distribution of bread has nothing in common with the Communist equality which the Bolsheviki promised to the proletariat at the moment of their arrival in power.

Rykoff states in his report that the workmen in their meetings "demand the breach of the economic front of Bolshevism," that is to say, the re-establishment of the freedom of commerce. But the Bolshevists will not have it. The general economic crisis prolonged by the failures of the Bolshevist policy, and the crisis of the food supply, bring with them a great decrease in the number of industrial workers. Out of 10,000,000 workmen which the industrial enterprises included there remain, according to the report of Rykoff, only one million.

Tomsky puts in this report this interesting question: "Where have the living forces of the industrial proletariat become dispensed?" And he formulates this still more interesting answer:

> "If in the capitalistic society the lack of skilled labor usually coincides with the periods of the

most intense work of industry, under our system this phenomenon appears under peculiar conditions of which the capitalistic economy has as yet had no experience. Only a small part of our industry is functioning and at the same time both in the cities and in industrial centers a lack of workmen is making itself felt. We observe a reflux of workers from industrial centers which is explained by bad living conditions. From among these hundreds of skilled workmen who are needed in industry for the most elementary work, the lesser part has returned to the villages and the greater part is found in the army. But the proletariat also deserts industry—to our misfortune and to our shame—in order to engage in speculation and in commerce. This fact cannot be passed by in silence. There is one more circumstance which injures industrial life and stands in the way of the systematic organization of production. This is the vagabondage of the workmen who wander from one place to another, seeking better living conditions."

In order to better appreciate the figures and the data which I quoted in the preceding part of my article, it is necessary to take into consideration that they apply to any industry which is almost entirely "nationalized." In 1918, the Bolshevist government confiscated and nationalized 1,125 private industrial enterprises; in 1920, this figure rose to 4,000. These 4,000 nationalized industries constitute almost the whole of the large and medium-sized industries in Russia. Rykoff reports:

"Out of these 4,000 establishments about 2,000 are working at present. The rest are closed and remain idle. The number of workmen who are working according to approximate estimates, is 1,000,000. You can see for yourself—that the number of workmen as well as the number of establishments which are in operation prove that industry is suffering from a crisis. . . . The Soviet State, the workmen's and peasant's government, has been unable even to utilize those trades and machines or the stock of technical tools which it had at its disposal, and a considerable number of the mills and factories are shut down, while the rest work only at part of their capacity; certain shops are in operation while others remain closed."

What is most serious is that strikes have affected the most important enterprises. Bolshevist reports give very detailed information in regard to two branches of industry; metallurgy and textiles. Out of 1,200 metallurgical plants, 614 are nationalized. They were able to obtain in 1919 only 15 per cent. of the quantity of metals which was assigned for their needs. The general reserves of metal in Soviet Russia did not reach one-quarter of the quantity which the country had to have "in order to sustain the minimum of industrial life." Before the occupation of the Urals by the Red Army all the furnaces on Russian Soviet territory were extinguished. In the beginning of 1920, out of 97 furnaces located in the Ural region, only 14 were in operation and the number of workmen in them was twice as small as in times of peace. The furnaces which are in operation are able to produce less than 20 per cent. of the normal production. The railroad repair shops repaired in 1919 only 40 per cent. of the number of locomotives which were repaired in 1913. As to cars, the percentage falls as low as 10 per cent. and for the spare parts, it falls as low as .3 per cent.

Here are some figures, given by Rykoff, pertaining to the textile industry:

"It is completely nationalized but we cannot exploit it even to the extent of a strict minimum. If you take the production of our nationalized textile factories, you will not find even 30 per cent., but only 10 per cent. of the normal output. And out of 164,000 textile mechanics only 11 per cent. were working in 1919."

Rykoff adds that of course it would be possible to find several bright spots on the dark background of the industrial crisis in Russia but "these bright spots cannot change the general conclusion, namely, that national economic life in Soviet Russia is going backwards all the time."

Shop Industrial Training

(*Continued from page* 18)

education of the members, drawings, problems—all for the improvement of the mechanical skill of the workers.

"Not only during the war was an efficient committee on industrial training created as part of the services of the Committee on Labor of the Council of National Defense, but the prosecution of that work was even more extensive and practical than Mr. Miles or Mr. Straus will claim for themselves and for their splendid work.

"Years and years ago, probably fifteen, the American Federation of Labor appointed a committee, made up of labor men, one or two labor women, representatives of the public, men who had given special study to the subject of industrial education and vocational training. That committee was in existence for about three years, and for each year submitted a report, showing a study, deep and broad and high, of this great subject of training the people of the country for service. Those reports were approved and endorsed by the various conventions of the American Federation of Labor and by the organizations affiliated with it. That committee's report was made the basis of the legislation fathered by Senator Page and a member of the House of Representatives whose name I don't recall. The effort was made to include it in the argicultural education bill so that it would be 'agricultural and industrial education and vocational training.' We failed to secure the passage of that legislation as a whole, and in order not to block the passage of the measure in the interest of the agricultural workers of our country, we consented that the industrial portion of the bill should be eliminated and deferred to some other time. We succeeded in having the agricultural bill enacted, and then after several years, we succeeded in having established the federal board for vocational education.

"But, better than all, not only this general official system of education, is the idea of bringing it into the factory, into the shop, anywhere where the toilers are employed, so that they can become more efficient and more highly skilled and better developed in order to make for greater and better production.

"My criticism of the schools is that they teach the academic course. Little, if anything, is taught to the pupil in our public schools that will be of practical value to him or her when he or she may find it necessary to deal with the actual facts of life. I don't want anyone to misinterpret or infer that I am opposed to the academic education. On the contrary, that should be taught, but there should be teaching of the actual facts of life to fit the public to meet the duties of workers. It is unfair, I think, to assume that the old acadamic teaching in our public schools is predicated upon the concept that to work, to give service in manual labor, does not carry with it the dignity carried by education for the professions. It is to prepare boys and girls and men and women to do the real service of our country and of the world, to which we should, in my judgment, devote our attention. Anything that can help to make men and women more efficient really, for the individual as well as the collective good, will make for a higher and a better citizenship and help much toward the perpetuation of this wonderful Republic of ours."

American Profit-Sharing Plans

(*Continued from page* 12)

efficiency is the aim, or philanthropy, or aloofness from the "labor movement," or paving the way to a better society, what is requisite is the leadership of a strong, wise, patient and practical character, especially during first steps.

While for convenience the classification of the book is in chapters on percentage of profits, special distributions, stock ownership and exceptional, abandoned and proposed plans, etc., the fact is that few of the plans are distinctly and wholly in one or the other of these divisions. Many are not, accurately, even profit sharing plans. The variety presented tells the fact that if there is to be a science of pure profit sharing few employers have arrived at a clear perception of its true principles and logical practices. No reason this, of course, for its advocates to weaken in promoting their ideals. Different conditions may give rise to permanent variations in details. Meantime, by reading the interesting experiences of their collaborators, many of the contributors to the book may learn what is not—as well as what is—profit sharing.

There is no monotonous reiteration of one method of treatment, or of one accepted prescription, for the industrial ailment of unrest. Nor is there one invariable code of rules and regulations for establishing justice in all industries alike in the division of profits. There is not only a dissection of business and industrial undertakings in their relation to labor, but there is multifarious presentation of particular phases of the subject.

In general the advocates of profit sharing emphasize these arguments: It promotes more continuous service; reduces cost of production; secures more regular attendance at work; builds up confidence and creates a spirit of co-operation; gets rid of rolling stones; encourages home building; enables a company to keep its employees during rush seasons; keeps down expenses; induces salesmen as well as others interested to work harder; promotes efficiency, interest and loyalty; and increases the profits of the business. On the other hand, disappointment is thus expressed: The efforts of employers were not appreciated by the men; they seemed to prefer their total earnings in fixed wages with no variable element; they were suspicious of the employer's motives; they insisted upon joining unions and presenting demands in spite of the employer's efforts to give them a share in the extra gains of the business; when stock was sold to employees upon favorable terms they would dispose of it on a profit when its value rose, and so get the habit of watching the stock market; when the profit distribution was large the employees learned to expect a similar bonanza every year, and were disgruntled if they did not get it, to say nothing of their discontent if conditions forbade any extra payment at all; and all schemes of this sort are necessarily complicated and hard to understand, so that the workers, especially of the less intelligent grades, are not easily convinced that the system really benefits them and isn't merely a device to withhold a part of what they might otherwise demand and get.

However, if "the sort of profit sharing that is practiced between partners in business" is to be followed in the methods of profit sharing between employers and employees, the books of the employers must be open to representatives of the employees, so that grounds of mistrust as to what the profits really are may be removed, and when that stage of clearing the way to declaring the funds to be divided is reached many of the difficulties in winning the confidence of the wage-workers are overcome.

The expense of printing, almost quadrupled since the first report was issued, the securing and tabulation of first hand data from England and France and other expert preparatory work, necessitate a charge for the new book which will ensure coverage of those items. It may be had at the Federation's headquarters, thirty-third floor, Metropolitan Tower, New York. There are available a limited number of cloth bound copies at $10.00 and in paper cover at $7.50 each.

IS THE LABOR PROBLEM UNSOLVABLE?

GOMPERS-ALLEN DEBATE DEMONSTRATES THERE IS NO OVER-NIGHT NICKEL-IN-THE-SLOT MACHINE SOLUTION OF CAPITAL AND LABOR PROBLEMS—ATTEMPTS TO FORCE MEN BY LAW TO WORK HAVE UNIFORMLY PROVEN A FAILURE

By RALPH M. EASLEY

THE widely heralded debate between Mr. Samuel Gompers and Governor Henry Justin Allen of Kansas on the labor question in general took place, as agreed, at Carnegie Hall, New York, on Friday evening, May 28; but the place was the only thing of consequence that the two managing committees could agree upon.

SAMUEL GOMPERS

GOV. HENRY J. ALLEN

Typifying what was to follow, the committees, after several prolonged and heated conferences, failed to agree upon a statement of the question to be discussed, nor could they agree on the order in which the speakers were to discuss whatever it was they would happen to discuss. So, on the first point, they left it to a "free for all," "catch-as-catch-can" effort, and on the latter they resorted to that highly intellectual method originated by the cave men of "tossing up" for it. In referring thus flippantly to the troubles of the committees which started out with such high hopes of settling the labor problem "face to face," "man-fashion," and all the rest, it is only to place emphasis on the size and the highly complicated character of the job. Of course, starting out in such an atmosphere of disagreement, it is not strange that no debate took place. What did occur, however, and it was entirely worth while and a credit to Mr. Sol Fieldman, who conceived and brought about the meeting, was that three hours of time was evenly divided between two eminent and eloquent speakers, in which, as in all talk-fests of this nature, each attacked the weak spots in the other's armor and, of course, said nothing about his own.

Mr. Gompers, in his first speech, laid the groundwork for a forcible, fundamental argument against compulsory arbitration or the attempt to make a man work against his will. Governor Allen's reply was practically an admission of Mr. Gompers' premises, ignoring the important fact that, by so doing, he was left logically with not a leg to stand upon. The Governor made much of a hypothetical question which he put to Mr. Gompers three times and which Mr. Gompers did not directly answer. In fact, all Mr. Gompers' critics have made much of his "dodging it," as they call it. Mr. Gompers himself said the question—or questions, as there are two included in the one—was a catch question and, to be consistent with itself, should be answered both "Yes" and "No." The questions, as put by the Governor, were:

> 1. "When a dispute between capital and labor brings on a strike affecting the production or distribution of the necessaries of life, thus threatening the public and impairing the public health, has the public any rights in such a controversy, or is it a private war between capital and labor?"
>
> 2. "If you answer this question in the affirmative, Mr. Gompers, how would you protect the rights of the public?"

If the first question had been properly drafted, Mr. Gompers could well have answered "Yes" to the first part and "No" to the second part.

To the second question, Mr. Gompers could well have replied: "I don't know, nor do I believe any one else knows." Of course, the Governor would have maintained that the Kansas law would furnish the remedy; but, with Mr. Gompers pointing out that, at that very moment, 12,000 men in a basic industry were on strike in Kansas, in spite of the law, which the Governor did not deny, he would not have gotten very far; and, so far as showing that the Kansas law was an answer to his own question, he did not prove his case throughout the whole discussion.

But, even if every man in Kansas were kept at work under the law, it would have little, if any, bearing on the general problem. What might work in Kansas, an agricultural state, with a comparatively small handful of industrial workers, furnishes no key as to what would work in the great industrial states. There are propositions that might work in Colorado, Utah and South Dakota that would not "get anywhere" in Illinois, Indiana, Ohio, Pennsylvania, Massachusetts, New York and other industrial states. But we do not have to depend upon the operation of the Kansas law, which is barely six months old and under which so far nearly every case has been decided in favor of the men, to ascertain how you can or cannot make a man work against his will. New Zealand, Australia and Canada have been trying it out for from fifteen to twenty years, and, while the arbitration laws in no two of those countries are identical, they all in common aim, under certain contingencies, to prevent a man from striking and to make him work against his will, or go to jail, with the result of uniform failure. As in Kansas, these laws were at first highly respected by some of the workers, because the decisions were practically always in their favor. Times were good and the employers could afford to pay high wages; but when business began to slacken and

the boards of managers began refusing the advances demanded by the men and in some cases reducing the wages, the whole thing "blew up," so to speak, and right here is where it "blew." When the board refused to grant the advance demanded by 10,000 abattoir workers in New Zealand, the men struck in defiance of the award. The court being appealed to, placed a fine of $100 on each man, which every man refused to pay. The next step would have been to jail the 10,000 workers. Of course, there were no jails big enough to hold them all, nor were there any office holders with sufficient courage to lock up the ten thousand men, even if there had been plenty of jail room. This showed the men that the law could not be enforced and they lost all fear of it and, consequently, all respect for it. In Canada, to come nearer home, a similar situation arose, in connection with 12,000 miners, with exactly the same result.

Mr. Dorr E. Felt, president of that very live and rather anti-union labor organization, the Illinois Manufacturers' Association, in an address last December before the National Association of Employment Managers, said:

> In studying the industrial history of England, I am rather discouraged respecting much that is being advocated; for instance, compulsory arbitration.
>
> I am very well acquainted with Mr. George S. Beeby, Minister of Labor for New South Wales, Australia, where labor legislation has been carried further than in any other place in the world, involving a complete system of Wages Boards and Courts for the settlement of industrial strife instituted and now in operation since 1901. Mr. Beeby is the author of the present law. He tells me that, instead of reducing industrial strife, under laws which forbid strikes, industrial strife and strikes have increased. In fact, the time lost on account of industrial disputes in New South Wales was six times as great in 1917 as in 1913.
>
> In one of our recent bills in Congress, there was a proposition to forbid strikes on the part of public employees—in this case railroad employees. I am not in favor of that, because the experience with such laws in Europe has always been a failure. It is a good deal like plugging up a volcano—sooner or later you have an explosion that is greater than anything that would have happened had the vent been open all the time.
>
> After the Black Death—the Great Plague—I think that was in 1347—there was a great scarcity of labor, something similar to the present. Laws were passed forbidding labor organizations and strikes. The first one was passed in 1351. It didn't do the work, so from time to time more severe laws and penalties were enacted, until they finally got to the point where those that struck were worked in chain gangs, and some were branded with hot irons.
>
> I have never found a case where laws forbidding strikes were effective. In the early middle ages, under conditions of extreme ignorance and serfdom, it seemed to work for a time, but in the end it always failed.

Bearing so cogently upon this same phase of the question at issue is the following extract from a speech made recently in the Federal Parliament of Australia by Prime Minister Hughes:

> The industrial question, looked at from one point of view, is the result of eternal conflict between the classes. Looked at from another point of view—and, I believe, the right one—it is the inevitable consequence of modern civilization and modern methods of production and distribution.
>
> I confess that I have no remedy at hand. This House has been a laboratory of industrial experiments. I listened to Alfred Deakin introduce the arbitration and conciliation bill in a most glowing and glorious speech, and I feel now as I felt then that along the lines then outlined mankind ought to walk, abandoning the crude barbaric methods of industrial warfare. Years have passed and this perfect piece of legislation has turned out to be, despite every kind of minister in office, the most inefficient and hopelessly futile effort to solve the industrial question that ever came out of the laboratory of any industrial workshop. Even the president of the court had from time to time indulged in gloomy jeremiads and had been torn with pangs of despair.
>
> It is a court the approach to which is marked by barbed wire entanglements. At the very threshold of its portals there is an almost bottomless pit, and those who by happy chance found their way into the court wander aimlessly about, and at last come out almost without knowing it and saying "Where are we?" or "What has happened?" It has frequently been necessary to strike in order to get into the court, which was designed to prevent industrial strife! Law-abiding unions which had been waiting patiently have then been pushed aside, and the others have gone in and come out full to repletion. The jurisdiction of the court has been riddled again and again by High Court judgment.

Mr. Hughes, continuing, said that they intended to call a conference of employers and employees. They believed that the remedy was in the hands of the parties themselves and that without a good understanding between both sides, no means, no legislation, nothing which was forced upon them from outside would serve.

In other words, after twenty years' experience with all kinds of devices to prevent strikes and lock-outs by law, the Prime Minister, himself a labor man and a statesman, comes back to the original proposition of holding voluntary conferences.

Further testimony to this same effect is found in the English labor paper edited by W. A. Appleton, General Secretary Federation of Trade Unions, London, in its issue of June 11, 1920. A two-page article on Compulsory Arbitration in Australia embodies a letter from Reg. J. Burchell, member of the House of Representatives, Melbourne, in which he encloses a paper read by Hon. H. Y. Braddon, M.L.C., at the annual meeting of the Associated Chambers of Commerce of Australia, held in Sydney in March, 1920. In Mr. Burchell's letter occurs the following sentence:

> I must confess that compulsory arbitration in Australia has resulted in the widening of the breach between capital and labour, and I feel that our present practice needs serious amendment.

And the speech of Mr. Braddon is a critical analysis of the twenty years' legislation and experience under the Australian Compulsory Arbitration Act.

This is not to say that the public has no interest in a strike in basic industries, for it has; but it is to say that compulsory laws do not meet the case, and it is no answer to any one who points out that fact, to retort: "Well, if that will not work, what do you propose?" Granting that in controversies affecting the public as a whole the public interest is paramount, no man or set of men has thus far evolved an effective method for securing to the public those paramount rights. One can easily picture a state of affairs in which it would seem that starvation or freezing to death confronted the American people, yet, without any laws, a way has always been found thus far in our hundred years of industrial development to prevent either of those awful things from happening. In the great anthracite coal strike in 1903, as Mr. Gompers pointed out, the President of the United States created a voluntary commission that settled the controversy in time to prevent any freezing of the public and, as pointed out by Mr. Gompers, in the celebrated "stop-watch" strike of the Railway Brotherhoods, it was settled not by any law but by a commission appointed by the President, consisting of two representatives of the railroads and two representatives of the railroad workers. In the great coal strike last year, the Lever law was appealed to, but the strike took place in spite of it, and it was finally settled by voluntary effort. At one time it looked as though the railroads of the nation would be tied up, but the President again intervened and there was no strike. In the present anthracite coal controversy, after a long series of joint conferences, at which agreement could not be reached, the whole matter was referred to a commission named by the President. In fact, it can pretty safely be counted upon that the President of the United States whenever any great crisis arises will step in, or appoint a national commission of the highest character and standing, which will meet that particular emergency, which is much better, for many reasons, than legislation creating a standing commission to inject itself into every controversy that arises.

Governor Allen stressed his whole argument on this paramountcy of the public in industrial conflicts and the great losses in dollars and cents to all concerned. In public utilities, including in that category coal mining, as in Canada, it goes without saying that such is the case, but there are limitations to this argument. If the workers depended on the public alone, they would rarely, if ever, make any progress, for the fundamental reason that the public is wholly selfish. It does not want to be inconvenienced. In a strike on a street railroad the public does the walking and the swearing. It makes no difference how long may be the hours the men work or how small may be their pay. "If they don't like their jobs," the public generally says, "they should get others, but, under no circumstances make us walk." How long would it have taken the public to wake up and organize to force the "bloated coal barons" to give shorter hours and increases in the pitifully low wages of the anthracite coal miners in 1903?

In regard to the appalling cost to the wage-earners, there is another side to that question. The big headline figures about the losses of hundreds of millions of dollars on account of millions of days' wages being lost are frequently great fallacies. In some cases not a cent is lost and the increase in wages is a clear gain. The 1910 anthracite strike of six weeks only changed the date of the annual shut-down of the mines. Just as much coal was produced for the year, but the miners got more for the portion mined after the strike. The headline statisticians can always scare the public by multiplying days by the wage rates, but no headliner has ever pointed out another startling fact, and that is that in any normal year there are more days of labor lost on any three of the seven national holidays than in all the strikes of that year. Think of the three billion days lost on Sundays and Saturday afternoons, and yet nobody counts that a loss, but a gain. It is not meant by this that there is not unnecessary loss, suffering, injustice and abuse of power many times by the unions, but it does mean that a good deal of the statistics put out on the subject is pure and unadulterated rot.

But to return to the debate. It is safe to say that not a man represented by Governor Allen's committee was impressed by anything said by Mr. Gompers. As one of the committee said in the hearing of the writer: "Well, the Governor wiped up the floor with Sam. He got him going in the first round and never let up." It is equally true that not a trade unionist or a sympathizer with the trade unionists was convinced by anything said by the Governor. A member of Mr. Gompers' committee expressed the general feeling in that regard when he said: "Well, the old man put it all over the Governor tonight. In his second speech he kicked him all over the stage."

In fact, from the standpoint of an outsider, the discussion could be considered a replica of what would have occurred any time in the past twenty years with Mr. Gompers on one side and any of the presidents of the National Manufacturers' Association on the other. But suppose a railroad or a coal strike should occur, law or no law, would the American people starve or freeze? There was a time when the very thought of such a calamity would send the shivers down our backs, but something happened within the last twelve months that threw a new light on this matter or, may I say, put some starch in the backbones of the public. First, there was the threat by the railway unions to tie up all

(*Continued on page 5*)

Socialism Unmasked

THE RELATION OF THE SOCIALIST PARTY OF AMERICA TO THE THIRD INTERNATIONALE—FORCE AND VIOLENCE, THE GENERAL STRIKE, ADVOCATED IN OFFICIAL PROGRAM

II.

SOCIALISM AND MASS ACTION

By T. EVERETT HARRÉ

WHEN the Socialist party of America through its National Executive Secretary, on March 18, 1920, made application for recognition by and admission to the Third Communist Internationale, it discarded all masquerade of being a purely political party seeking only through parliamentary and legal methods to bring about changes in our industrial and social system and form of government. It cast away all pretense of being fundamentally different from the extreme left wings, known respectively as the Communist and Communist Labor parties. Two months later, at its national convention in New York City, the Socialist party, it is true, made a play of qualifying that action; it made what was, so far as the uninitiated public was to be impressed, a grand stand play by which it referred to the Moscow Internationale as only "the nucleus of a Socialist International" and rejected the formula of "the dictatorship of the proletariat in the form of soviets." But while it rejected what is essentially a matter of phraseology, a phase of conditions peculiar to Russia under the Bolshevik revolution, the Socialist party reaffirmed its stand with the Third Internationale.

The significance of this official act of the Socialist party in affiliating with the Third Internationale is not generally appreciated nor popularly understood. Nothing so revealing has ever occurred in the history of the Socialist movement in the United States—not even the adoption in April, 1917, of the notorious St. Louis war platform and program, in which the party committed itself to a course of opposition to the war, for attempting to carry out which 2,000 members were arrested and the principal members of the executive committee were indicted, convicted and sentenced to terms of imprisonment.

The program of the Socialist party in the United States cannot but be interpreted in the light of the program laid down at the congress of the Third Internationale held in Moscow, March, 1919. The activities and propaganda of the Socialist party in the United States, to be understood, must be considered in the light of the avowed world mission and international purposes of the Third Communist Internationale, of which it seeks to become a member and of which, in this country, it would be an official operating part. The recent opportunist camouflage play of the Socialist party, at its New York Convention, cannot obscure the incontrovertible, concrete and basic facts.

THIRD INTERNATIONALE THE OFFSPRING OF BOLSHEVISM

The call for the first congress of the Communist Internationale, later called the Third Internationale, was issued by the "Central Committee of the Russian Communist Party" and the signatures included those of Lenine and Trotzky. This Internationale was born out of the Zimmerwald Conference, held in Switzerland in September, 1915, which was composed of those groups who took a stand against the Socialists who supported their countries in the war. Of these groups, beside the Russians and the French radical Syndicalists, the Italian Socialist party was particularly conspicuous. Following the Zimmerwald conference, at which Lenine was most prominent, a conference was held at Kienthal, Switzerland, April, 1916, and one at Stockholm in September, 1917. These conferences perpetuated the organization of the uncompromising, international, direct-action Communistic Socialists. It was at Petrograd, December, 1918, that the leaders of the Soviet government held a conference at which they decided to found, on the above lines, the Third Internationale, and the call for a meeting in Moscow in March followed. At the Moscow Congress the Russian Communist party, or Bolsheviki, was represented by Lenine, Trotzky, Zinoviev, Stalin, Bukharin, Chicherin, Osinsky and Vorovsky. Four of these are the highest officials in the Soviet hierarchy.

The chairman of the Executive Committee of the Third Internationale, of which the Socialist party of America seeks to become a part, is G. E. Zinoviev, who is chairman of the Petrograd Committee of the Russian Communist party, president of the Executive Committee of the Petrograd Soviet, and a member of the All-Russian Central Executive Committee. The vice chairman of the Third Internationale is N. I. Bukharin, a member of the All-Russian Central Executive Committee, editor of the Moscow *Pravada,* an official Bolshevist organ, and one of the acknowledged leaders of the party.

The headquarters of the Executive Committee of the Third Internationale are at Smolny Institute, which is also the headquarters of the Executive Committee of the Petrograd Soviet and of the Petrograd Committee of the Bolshevist party. The official organ of the Executive Committee of the Third Internationale, the first issue of which appeared May 1, 1919, is issued simultaneously in Russian, English, French and German. The editorial offices are indicated: "Petrograd, Smolny, Office of G. Zinoviev," and the "Kremlin, Moscow," the headquarters of the Central Soviet autocracy.

Zinoviev, as president, addressing a special session of the Petrograd Soviet, November, 1919, declared:

> Long live the future ruler of the world, the great Communist Internationale.

The Third Internationale is regarded, and is spoken of by the chief Bolshevist leaders, as the offspring of Russian Bolshevism, as one of their most important achievements, and as their "own" agency for bringing about in every country of the world a revolution such as has made of Russia a bloody shambles. Zinoviev, in an article in the Petrograd *Pravda,* of November 7, 1919, said:

> OUR THIRD INTERNATIONALE now already represents one of the greatest factors of European history. And in a year, in two years, the Communist Internationale will rule the whole world.

The Third Communist Internationale, conceived in the brains of Lenine, Trotzky and their major associates, brought into being by Russian Bolshevism, of which it is the international agency, gives directions and orders to the Communist parties in other countries, just as, presumably, it will give directions and orders to the Socialist party of America, if Lenine is willing to admit it to membership with the reservations recently specified. "Thus," reads a report made by the Division of Russian Affairs of the United States Department of State, "the Communist Internationale settles a dispute between two Communist parties of the Ukraine, and Kalinin, in the name of the All-Russian Central Executive Committee, sends a message to the Soviet of the Bashkir Republic. Zinoviev, in the name of the Third Internationale, makes certain demands of the Communists of the Ukraine; at the same time Lenine similarly addresses the workmen and peasants of the Ukraine. Also, the Communist Internationale issues appeals to the French workmen and, as already pointed out, to the 'Proletarians of all Countries.' . . . Finally, the Executive Committee of the Communist Internationale issues formal statements protesting against the measures of repression with respect to Communists in other countries, for example in Hungary."

ZINOVIEV TO AMERICAN COMMUNISTS.

Messages to leaders of the Communist movement in other countries are sent from Russia by wireless, which is under strict official Soviet control. Instructions toward an armed revolution and the overthrow of the American government were sent out by Zinoviev, as president of the Executive Committee of the Third Internationale. Documents found in the possession of a Bolshevist courier captured in February at Riga while en route to the United States, and made public by the Department of State, urged "armed insurrection," the "formation of an underground organization for revolutionary propaganda among the masses," and the establishment of a "dictatorship of the proletariat in the United States."

In his message to the Communists in America Zinoviev, repeating sentiments previously expressed by Morris Hillquit, deplored the split in the movement in this country, and laid down a plan for unification. "The split is a heavy blow to the movement," he said; "unprecedented sacrifices must be made by the American proletariat. The question of tactics is the principal source of disagreement and this split is, therefore, unjustified." He went on:

"The party must take into account the every day incidents of the class war. The stage of verbal propaganda and agitation has been left behind. The time for decisive battles has arrived. The most important task confronting the American Communists at the present moment is to draw the wide proletarian masses into the path of revolutionary struggle."

Zinoviev declared the party must work toward the goal of undermining and destroying the American Federation of Labor and other unions associated with it. He urged the establishment of connections with the I. W. W. and the W. I. I. U., and the formation of workers committees, or councils, or local soviets, in factories, "these serving as bases for the every day struggle and for training the advance guard of labor in managing industry."

He concluded:

"The Executive Committee urges American comrades to establish immediately AN UNDERGROUND ORGANIZATION FOR THE PURPOSE OF REVOLUTIONARY PROPAGANDA AMONG THE MASSES AND FOR CARRYING ON THE WORK IN CASE OF VIOLENT SUPPRESSION OF THE LEGAL PARTY ORGANIZATION. The fewer people who know about it the better."

In a third memorandum, Zinoviev said:

"We Communists do not believe it possible

to capture state power by using the political machinery of the capitalistic state." Armed insurrection must be employed. While the recent convention of the Socialist organization in America took occasion—obviously for reasons of expediency—to emphasize its political character, its choice for presidential candidate, Eugene V. Debs, has expressed approval of those who stand for the methods advocated by Zinoviev.

Discussing revolutionary parliamentarism, Zinoviev said:

"Communists elected to congress or legislatures have as their function to make propaganda." Zinoviev extolled "Bill" Haywood, Victor Berger and Vincent St. John, who were all convicted of violating the Espionage act, as "laudable examples."

In Zinoviev's communication to America was a direct incitement to armed revolution, specific instructions for welding all radical parties, for disintegrating the organized labor movement, and for the organization of workers into "One Big Union" for the purpose of using mass action for the overthrow of the Government. At its recent National Convention the Socialist party declared for the "One Big Union."

The memorandum prepared by D. C. Poole, Chief of the Division of Russian Affairs of the Department of State, was based on material from original sources, including the utterances of Bolshevist leaders, extracts from their party organs, extracts from the official press and wireless messages of the Soviets and the publications of the Third Internationale.

The memorandum states:

"The leaders of the Third Internationale are also officials of the Soviet institutions. The propaganda literature of the Internationale is printed in the Soviet printing establishments and included in the official organs of the Soviets.

"The interrelation of the Bolsheviks, the Russian Soviets and the Third Internationale is such, in fact, that while the three may be distinguished theoretically, in practice they represent a single movement, backed by the administrative machinery and the resources of Soviet Russia. This is important, especially from an international viewpoint, because *the aim of the Communist or Bolshevist party is worldwide revolution and the purpose of the Third Internationale is to propagate revolution and communism throughout the world.*

"Therefore," the memorandum concludes, "while the Soviet institutions, as such, may agree to abstain from subversive propaganda abroad, neither the Russian Communist party nor the Third Internationale would be bound thereby."

PROGRAM OF WORLD REVOLUTION.

Here is the crux of the situation as regards official recognition of the Soviet régime. In order to gain recognition and obtain economic assistance, it has been represented that the Soviet government would agree to cease all revolutionary propaganda in other countries. To obtain raw materials and manufactured products, as well as financial aid, from the western nations, the Soviet régime stands ready to make concessions. The life of the Soviet régime depends upon the securing of economic supplies. Therefor the Soviet representative at Copenhagen, Maxim Litvinov, has declared: "We respect the right of every country to dispose freely of its own affairs, and will not interfere in the interior politics of other nations."

The Soviet régime can well make such a promise. Technically the Soviet régime can keep that agreement. The Soviet régime will not itself officially conduct subversive propaganda or seek to foment a proletarian revolution in other lands. But propaganda throughout the world will continue; the masses will be incited to violent revolution. In this the Socialist revolutionary elements in all countries will be directed and controlled, not by the Soviet government as such, but by the Third Internationale. This is so thin a subterfuge it seems superfluous to expose it.

And for the dissemination of revolutionary propaganda, for underground intrigues to bring about a revolution, for widespread efforts to disintegrate the loyal labor movement and to organize the workers into a revolutionary class organization for the purpose of overthrowing the government, the Third Internationale, it is not illogical to conclude, will have as its agency in the United States the Socialist party of America.

The Socialist party of America, while it has through the utterances of its leaders and its official publications, expressed support of and sympathy with the Bolshevist government of Russia, has not, it is true, committed itself to the program of the Bolsheviki. In regard to that specific program, as to the form of soviet organization and the "dictatorship of the proletariat," it took an adverse stand at its recent convention. Declaring for "the principles of the class struggle and uncompromising working class politics," it asserted that the Socialists of every country must be free to "work out their problems in the light of their own peculiar economic, political and social conditions." While the Bolshevist autocrats were long insistent upon the formulas of the Russian revolution, to which the leaders of American Socialism have taken verbal exception, they have since the beginning of the present year come around to the very point of view expressed in the Majority report adopted at the last convention of the Socialist party of America, and that is that the Socialists, while one in their objectives, may find different methods expedient in different countries, and that therefor, in working toward revolution, they must adapt themselves to existing exigencies. Despite the camouflage set up by the Socialist party, it did not repudidate the program of the Third Internationale, the keynote of which was the keynote of the previous Zimmerwald program, and which is still the keynote of the program adopted by the Socialist party at Chicago of last year. Of the Third Internationale, the memorandum issued by the United States Department of State declares:

"The Program of the Russian Communist party is one of world revolution, and the Communist Internationale is avowedly the directing and coordinating centre of an international revolutionary movement to establish the 'World Soviet Republic.' It is impossible to differentiate as to world policy between the Russian Communist party (or Bolsheviki), the Third or Communist Internationale, and the official Soviet administration, because of the system of 'interlocking directorates' common to all three."

By affiliating with the Third Internationale, the Socialist party of America becomes an acting agency in America of an international body which was brought into being with the supreme purpose of bringing about in all countries, according to methods which different exigencies may demand, what the Bolsheviki, through violence, bloodshed and terror, effected in Russia. To those "liberal sentimentalists," those half-baked reformers, those professional "uplifters," those superficial or sensational clergymen who promote this sinister thing as "Christian Socialism," the application for admission to the Third Internationale by the Socialist party might well give pause.

STIMULATION OF INDUSTRIAL UNREST.

A secret meeting of the Third Internationale was held at Amsterdam for several days, beginning February 3, 1920. The purpose and chief accomplishment of that conclave was the establishment of an Executive Bureau, to be permanently located at Amsterdam, which would receive, and carry out through its world agencies, orders from Moscow. Sub-bureaus are to be established in East Asia, Spain, Mexico and the United States. According to the arrangements, there will be a meeting every three months at Amsterdam of representatives from the Socialist movement in all countries which are members of the Third Internationale.

A report of this conclave was published in the Amsterdam *Handelsblad.* According to this report, the conference was attended by representatives from Germany, Switzerland, the Netherland East Indies, England, Belgium, Hungary, Russia and the United States. It was announced at the conference that the Russian Soviet Government had placed at the disposal of the Executive Bureau, a collection of diamonds, pearls and other precious stones to a value of 20,000,000 rubles. And for what purpose are these funds to be used? What is the immediate program of the Executive Bureau? In what work will the sub-bureaus in other countries, including the United States, cooperate?

S. J. Rutgers, a Dutch engineer employed by the Soviet government, a Bolshevist propagandist who has contributed articles to pseudo-intellectual pro-Bolshevist weeklies in this country and who was one of the principals at the Moscow Congress, went from Moscow, where he lives, to Amsterdam as the representative of Lenine and was the bearer of the "glad tidings" of the gift of diamonds and pearls. The *Handelsblat* quoted Mr. Rutgers, who apparently spoke for Nicholas Lenine, as saying that the money realized from the sale of the jewels "must be used for the support of every strike and every movement which bears a revolutionary character."

Amsterdam is one of the world chief markets for diamonds and jewels, and is the regular market for jewelry stolen in Russia, looted from palaces and churches, by the Bolsheviki. One of the brokers employed by the Bolsheviki is a Communist member of the Amsterdam city council. The *Handelsblat* stated that Mrs. Rutgers admitted bringing to Amsterdam a diamond cross, a pearl necklace, one very big and one small diamond, which were to be sold and the cash turned over for furthering the Communist movement.

Further details concerning these jewels are given in a recent article in the Paris *Matin.*

"These jewels were remarkable. There were a great cross in diamonds, a collar of pearls and a number of large solitaires, one of which weighed forty-one carats and was worth a million francs. . . . Three times following Mme. Rutgers made the same trip to Russia and return. Each time she brought new diamonds, which were turned over to a diamond worker at Amsterdam, Lisser, a member of the Communist party of Holland." One of the large stones, it was asserted, was taken from a statue of the Virgin in the Cathedral of St. Isaac at Petrograd.

The first important result of the establishment at Amsterdam of the Executive Bureau and the raising of a huge fund out of the sale of the stolen jewels, according to the *Matin,* was the calling of the general strike in France May 1. This strike, which was successfully crushed by Millerand, was to have been the beginning of a revolution in France, under the leadership of Loriot and Monatte, who with other strike leaders were arrested by the French government. There were found in their possession letters from Trotzky giving directions as to how the French coup was to have been effected. These letters came by way of Amsterdam, and in them Loriot and Monatte were named as the official lieutenants of Moscow.

Speaking of the purposes and accomplish-

Department on Study of Revolutionary Movements

EXECUTIVE COUNCIL APPOINTED—COMMITTEES TO STUDY AND COMBAT REVOLUTIONARY RADICALISM BEGIN WORK—IMPORTANT ORGANIZATIONS TAKE ACTION TO COOPERATE

As a result of the proposal made at the annual meeting of The National Civic Federation in January and of the subsequent conference on Socialist Tactics held at the Hotel Astor on February 16, there has been completed the appointment of an Executive Committee and the organization of various subcommittees, the chairmen of which form the Executive Council, of the Department on the Study of Revolutionary Movements. The campaign will be of nation-wide scope. The committees have begun their work, and already a number of important organizations have officially offered to cooperate.

In the proposal for this movement, sent out in February by The National Civic Federation, it was pointed out that the revolutionary radicals have been promoting their propaganda through schools, churches, colleges, lecture forums, the press, labor, charity and other organizations. Information as to these insidious activities has accumulated since then and evidence in the hands of the committees emphasizes the urgent need of such work as was proposed.

The response has been inspiring and promising. Notable and representative leaders of the various elements of our national life, business, agriculture, labor, the church, education, etcetera, have joined in the movement. In response to a letter sent out by Judge Alton B. Parker, president of The National Civic Federation, to a number of national organizations, including commercial, fraternal, social and labor bodies, resolutions pledging the efforts of these organizations in promoting loyalty and devotion to American ideals and authorizing the appointment of national service committees, which should cooperate with similar organizations, have been passed at their annual conventions by the National Association of Credit Men, which includes one hundred and eighty-eight local organizations; by the Association of National Advertisers, and by the Associated Advertising Clubs of the World. Favorable action from many other organizations is assured.

The resolution sent out by Judge Parker as a suggestion for action by these organizations is as follows:

> *Whereas,* American ideals and the American form of government are being assailed in an insidious and active propaganda of destructive radicalism; and
>
> *Whereas,* we believe that the present situation demands an unmistakable expression of defensive and constructive loyalty upon the part of all organizations and individuals who are devoted to the American principles of Liberty, Representative Government, the Supremacy of Law and the Enlightened Rule of the Majority; therefore be it
>
> *Resolved,* that the (name of organization) hereby pledges its sincere interest in the suppression of disloyalty and the promotion of Americanism, and, to this end, be it further
>
> *Resolved,* that a National Service Committee of (number) members to be appointed by the President of this organization, be and hereby is constituted to take active and adequate steps of co-operation with all other similar committees in other organizations in order to bring about a restoration of the national spirit of the public good which was so conspicuous and inspiring a feature of wartime patriotism.

The objects of the Department on the Study of Revolutionary Movements are:

To inquire into the objectives and tactics of revolutionary forces in this country;

To inquire into the extent to which these forces have permeated the various divisions that make up the body politic;

To make a survey of industrial, political and social progress; and

To give support to all practical means tending to improve the general well-being of our people.

To accomplish the purposes of the Department, the work was divided among various committees, which are as follows:

1. *A Committee on Socialist Doctrine and Tactics,* whose work shall include the preparation and distribution of literature, and the organization of a training school for speakers.
2. *Committees to Make an Intensive Study* of the extent to which *Revolutionary Forces* have penetrated into the following and other fields:
   - Labor,
   - Agriculture,
   - The Church,
   - The College,
   - The Public School,
   - The Press,
   - Social Agencies,
   - Philanthropic Agencies,
   - Foreign Groups,
   - Women's Organizations,
   - Public Employees,
   - Negroes.
3. *A Committee to Study Text Books on History, Political Economy and Civics in use in the high schools and colleges.*
4. *A Committee on Soviet Propaganda in the United States.*
5. *A Bureau to Evaluate Federal, State and Municipal Official Statistics,* as well as socialist deductions from same.
6. *A Committee on the Fundamentals of our Constitution* and their application to every-day life, including the *Limitations of the Right of Free Speech, Free Press and Peaceable Public Assembly.*
7. *A Committee on Survey of Industrial, Political and Social Progress,* and Constructive Recommendations.

The Executive Council of the Department consists of the following: Condé B. Pallen, Department Chairman; Clarence H. Wilson, First Vice-Chairman; Sara A. Conboy, Second Vice-Chairman; Ralph M. Easley, Chairman Executive Council; A. L. Frothingham, Chairman Committee on Socialist Doctrine; Talcott Williams, Chairman Committee on Text Books; Stanley Washburn, Chairman Committee on Soviet Propaganda; Howard White Starr, Chairman Committee on Evaluation of Official Statistics; Harry Chase Brearley, Chairman Committee on Organization; Everett P. Wheeler, Chairman Committee on the Church; John Hays Hammond, Chairman Committee on the College; Walter George Smith, Chairman Committee on Fundamentals of our Constitution; John L. Tildsley, Chairman Committee on the Public School; James P. Holland, Chairman Committee on Labor; Lorillard Spencer, Chairman Committee on Soldiers and Sailors, and Arthur O. Townsend, Chairman Committee on Philanthropic Agencies.

The Executive Committee is as follows:

LAWRENCE F. ABBOTT (Editor, *The Outlook*), New York.
CYRUS ADLER (Acting President, Jewish Theological Seminary of America), New York.
HERBERT BARRY (Attorney), New York.
SAMUEL A. BERGER (Deputy Attorney General, New York State), New York.
WHEELER P. BLOODGOOD (Loyal Legion of Wisconsin), Milwaukee, Wis.
MISS HELEN VARICK BOSWELL (President Republican National Women's Committee), New York.
ROME G. BROWN (President, *The Minneapolis Tribune*), Minneapolis, Minn.
JOHN FOSTER CARR (Director Immigrant Publication Society), New York.
GUSTAV A. CARSTENSEN, D.D. (Rector Holy Rood Church), New York.
THOMAS N. CARVER (Professor of Economics, Harvard University), Cambridge, Mass.
D. L. CEASE (Editor, *The Railroad Trainman*), Cleveland, Ohio.
W. I. CHAMBERLAIN, D.D. (Board of Foreign Missions, Reformed Church in America), New York.
MAJOR ELIHU C. CHURCH (Chamber of Commerce of State of New York).
BIRD S. COLER (Commissioner of Public Charities, City of New York).
PETER W. COLLINS (Knights of Columbus), Chelsea, Mass.
MARTIN CONBOY (Attorney), New York.
THOMAS DARLINGTON, M.D. (Sachem, Tammany Society), New York.
EDWIN L. EARP (Drew Theological Seminary), Madison, N. J.
CHARLES AUBREY EATON (Associate Editor, *Leslie's Weekly*), New York.
HUGH FRAYNE (General Organizer, American Federation of Labor), New York.
JOHN P. FREY (Editor, *International Molders' Journal*), Cincinnati, Ohio.
JOHN GOLDEN (International President, United Textile Workers of America), New York.
F. G. R. GORDON (Writer), Haverhill, Mass.
WILLIAM GREENOUGH (Attorney), New York.
Mrs. NATHANIEL E. HARRIS (President, Council of Jewish Women), Bradford, Pa.
PHILIP HISS (Formerly Special Assistant for Housing, Navy Department), New York.
JOHN B. KENNEDY (Knights of Columbus), New York.
WALTER LAIDLAW, D.D. (Executive Secretary, New York Federation of Churches), New York.
CAPT. GEORGE B. LESTER (Formerly of the Military Intelligence Division, United States Army), New York.
OLIVIA LEVENTRITT, New York.
BURDETTE G. LEWIS (N. J. State Commissioner of Institutions and Agencies), Trenton, N. J.
MARTIN W. LITTLETON (Attorney), New York.
EARL P. LOTHROP, M.D. (Physicians' Protective Association), Buffalo, N. Y.
EDSON S. LOTT (Insurance Federation of America), New York.
ELISABETH MARBURY (Women's Democratic Political League), New York.
CAPT. HUGH S. MARTIN (Formerly of the American Military Intelligence Service in Russia), Meridian, Miss.
MARK A. MATTHEWS, D.D. (Pastor First Presbyterian Church), Seattle, Wash.
CHARLES R. MILLER (Editor, *New York Times*), New York.
HILL MONTAGUE (President, National Fraternal Congress), Richmond, Va.
MRS. PHILIP NORTH MOORE (President, National Council of Women), St. Louis, Mo.
DR. CHARLES P. NEILL (Bureau of Information, Southeastern Railways), Washington, D. C.
MORGAN J. O'BRIEN, JR. (Atorney), New York.
T. V. O'CONNOR (President, International Longshoremen's Association), Buffalo, N. Y.
WILLIAM BRADLEY OTIS (College of the City of New York).
CLIFTON REEVES (Willys-Overland Company), Toledo, Ohio.
MONTGOMERY SCHUYLER (Formerly U. S. Chief Intelligence Officer at Omsk, Siberia), New York.
TIMOTHY SHEA (Acting President, Brotherhood of Locomotive Firemen and Enginemen), Cleveland, Ohio.
MARION D. SHUTTER, D.D. (Pastor Church of the Redeemer), Minneapolis, Minn.
RABBI JOSEPH SILVERMAN (Temple Emanuel), New York.
ARCHIBALD E. STEVENSON (Attorney), New York.
LIONEL SUTRO (Chairman Committee on Education, City Club of New York).
CHARLES R. TOWSON (Secretary, Industrial Department, International Committee of Y. M. C. A.'s), New York.
MRS. COFFIN VAN RENSSELAER (Executive Secretary, Woman's Department, The National Civic Federation), New York.
JOHN A. VOLL (President, Glass Bottle Blowers' Association of the United States and Canada), Philadelphia, Pa.
MISS MAUDE WETMORE (Chairman, Women's Department, The National Civic Federation), New York.
MATTHEW WOLL (President, International Photo Engravers' Union), Chicago, Ill.
ARTHUR WOODWARD (President, New York Rotary Club), New York.
MRS. JOHN FRANCIS YAWGER (National Society, Daughters of the American Revolution), New York.

Is the Labor Problem Unsolvable?

(*Continued from page* 2)

the railways of England and then the real attempt to put the threat into effect. The people replied to the radical demands of the railroad men: "No! Our backs are against the wall. Go to it and we will show you where you get off." And they did show them. The same thing happened in this country when the coal miners threatened to force, through a strike, an unreasonable set of demands. The people said: "Strike! We will not have a government by miners or any other class of people." In that situation the public suffered, but it showed the miners that it was willing to suffer. Governor Allen himself gave the most effective exhibition of how to meet unreasonable demands from wage-earners.

But both of these crises were met without

Plan to Create National Service Committees

COMMITTEE ON ORGANIZATION OFFERS PLAN WHEREBY ORGANIZATIONS CAN COOPERATE TO PROMOTE DEFENSIVE AND CONSTRUCTIVE LOYALTY

The Committee on Organization, Harry Chase Brearley, chairman, has sent to the business, labor, fraternal, professional, social and other organizations of the country a proposal that they organize national service committees, under which will work local subcommittees, each of which would be an organ of cooperation in a nation-wide movement to defend American ideals against disloyal revolutionary propaganda and to promote the spirit of constructive loyalty.

It is pointed out that there are more than 800 national and interstate organizations of a commercial, industrial and professional nature, also large national labor bodies, most of which have state and city sub-divisions. By the appointment of national service committees in these organizations, as would be analygous to the war service committees, a nation-wide cooperative movement can be obtained whereby the efforts to undermine our national ideals and destroy our form of government could be effectively fought. While this is the immediate task in the present emergency, such an organization would have in mind a bigger and more permanent work in the promotion of national consciousness and in efforts for making a better America.

The proposal issued by the Committee on Organization is as follows:

During the past few months, the public has been of half a dozen minds in regard to the nature and degree of the menace offered by the extreme radicals who have been known under various names as "communists," "I. W. W.'s," "Bolsheviks," "anarchists," "socialists" and "reds." There have been periods of alarm followed by periods of skepticism as to the existence of a menace. These in turn have given way to renewed concern when some fresh occurrence or rumor has seemed to justify it. Out of the entire confusion the following facts seem to be emerging:

First: there is a definite menace in the present situation—one that it would be foolish to ignore or to under-estimate.

Second: the destructive radical element is purposeful, well organized, fairly well financed, numerous, and, as regards a large part of its membership, dangerously sincere.

Third: general public conditions of social and industrial unrest, including the high cost of living and the uncertainty as to future developments, offer favorable soil for the propagation of radicalism.

Fourth: the presidential campaign is always more or less a period of excitement during which clear thinking may be obscured by appeals to prejudice. The present campaign presents large possibilities in this respect.

Fifth: in spite of these reasons for concern, it is undoubtedly true that the great mass of the population is patriotic, intelligent, industrious and law-abiding, also that it is capable of great self-sacrifice for the public good.

AN ATTACK UPON IDEALS

There has been a good deal of crying "wolf," but back of it all there *is* a wolf and it is unwise to shut one's eyes to perfectly plain facts. Documents and other evidence now in the possession of the authorities indicate a purpose upon the part of a determined and dangerous minority to attack the American ideals of Liberty, Representative Government, the Supremacy of Law and the Enlightened Rule of the Majority. Therefore, questions of ways and means for opposing the organized and purposeful minority with an organized and purposeful majority become immediate and important.

We have only to turn our minds backward for two or three years to recall a condition which has not been sufficiently emphasized in the present discussion. When the United States entered the war it found itself confronting a great emergency but in a condition of loose organization. In a sense we went to war, not as a nation but as a collection of American units, big and little, and this fact cost us many months of delay in attaining any degree of efficiency.

WHY THE COMMITTEES WERE FORMED

A very important truth soon manifested itself; namely, that the war would have to be fought not merely by the army and navy, but by the entire nation—by its industries, its transportation, its agriculture, its mines, its finance, even by its newspapers, churches and schools. When we had once grasped this fact we began to organize every resource that the nation possessed in order to make it effective. There probably was hardly an industry, a profession or an interest which did not form its own War Service Committee, charged with the duty of organizing for war purposes its particular line of activity. These committees worked in different ways for they had very dissimilar tasks to perform, but they all had one fundamental and unifying purpose—namely, that of winning the war, and the Government itself acted as the coordinating agent.

By the middle of 1918, we had pretty well passed through the flag-waving and band-playing stage of our patriotism and had settled down to such definite, systematic and closely organized work that America might literally be said to be fighting as a single, vast, unified organism of almost immeasurable strength.

By the end of 1918, however, a process of disintegration set in because the war had been won and people, industries and professions alike turned back to a consideration of their own individual affairs. Now when we are confronted with a new emergency, the perfectly plain lesson of this war organization seems to have been strangely overlooked by the many patriotic movements that are trying to arouse and to organize our citizens. Let us state the proposition very simply:

NEW ORGANIZATIONS NOT NECESSARY

The situation demands the efforts of an organized America, *but America already is organized in its essential parts, and if these parts can be put together as they were during the war—Presto! there is an organized nation.*

Most activities have started out with the thought that new organizations are needed. This is not the case. The organizations already in existence are ample and efficient. They possess all the necessary machinery, all the necessary brains and all the necessary patriotism; they need only to be awakened and set to work, when they will operate with an efficiency not to be expected of any new organization.

There are at the present time more than eight hundred national and interstate organizations of a commercial, industrial and professional nature. There are also a large number of national labor bodies. Most of these organizations have state sub-divisions; many of them have city sub-subdivisions. They generally have paid secretaries or other executives; they maintain offices; they have their own mailing lists; they have their own monthly or weekly publications. They have their executive committees or other governing bodies; they have their lines of influence and appeal. Some of them are more efficient than others, but the average of efficiency is high, and the aggregate of all these institutions with all of their direct membership and all of their indirect affiliations is the aggregate of the material, the intellectual and the spiritual resources of the nation. Put them together and they constitute America. They were put together during the war and they made it possible to win the war.

RESTORING COOPERATION

In the present emergency it should be perfectly possible to restore the cooperation of these incalculable forces. How can they be put together? The war gives us our answer. They can be put together by means of special committees organized by each interest adapting their methods to the peculiar conditions of their respective fields of action, but combined as to purpose and working in harmony as to certain essential ideals. Such committees would be analogous to the War Service Committees. In other words, we propose a deliberate attempt to make it possible for all business organizations, all labor organizations, all professional organizations, and all other organizations of every kind whatsoever, which sincerely represent the best interests of any portion of the American public, to employ their full organization efficiency for the purpose of promoting defensive and constructive loyalty.

Assuming an expression of willingness upon the part of a considerable percentage of these organizations the question then arises as to what we shall suggest for their accomplishment. This reaches the crux of the whole discussion. If our structure is to be important, our foundations must be solid; if our appeal is to be capital and labor alike, to men and women alike, to Republicans and Democrats alike, to North, East, South and West alike, it must start with fundamental principles upon which all American people can unite.

OUR PROBLEMS PRIMARILY SPIRITUAL

Therefore, please note that our present national problems are not primarily political and are not primarily economic. These are important phases, but they are secondary. *Our problems are primarily spiritual, since they concern the spirit of the American people.* It is equally true that they cannot be settled politically nor economically; they will never be settled until they are settled spiritually.

This reduces the question at once to a matter of ideals. America has always stood for certain specific ideals and several times it has shown its willingness to go to war in their defense. Four of the most important of these ideals are: *Liberty, Representative Government, the Supremacy of Law and the Enlightened Rule of the Majority.* Loyalty to America is essentially loyalty to its ideals. Defensive loyalty is the defense of these ideals when they are in danger; constructive loyalty is the application of these ideals to new problems of national life.

We submit, therefore, that all true Americans in all spheres of action can find absolutely common ground in defensive and constructive loy-

Need for Legislation Against Disloyalty

DISCUSSION ON SO-CALLED LUSK BILLS SHOWS NECESSITY FOR MEASURES TO MAKE PROSECUTIONS POSSIBLE—CRIMINAL ANARCHY STATUTE OF NEW YORK NOW A DEAD LETTER

(Photo by Gessford)

ARCHIBALD E. STEVENSON

BECAUSE of the lack of effective legislation, providing for the investigation and prosecution of such crimes, the criminal anarchy statute of the state of New York, enacted after the assassination of President McKinley eighteen years ago, has been a dead letter. Until the Lusk Committee, which investigated disloyal and seditious activities in the state, obtained evidence and turned it over to various prosecuting officers and district attorneys, there had never been a single prosecution under the Criminal Anarchy statute. As a result of the evidence unearthed by the Lusk Committee, there have been some eighty-five indictments, and five cases have been tried. In each of these, there has been a conviction.

This amazing situation was revealed at a conference on the so-called Lusk bills, held May 11 at the Hotel Astor, New York, under the auspices of the Committee on Socialist Doctrines and Tactics of The National Civic Federation. Condé B. Pallen presided and the chief speakers were Samuel A. Berger, Assistant Deputy Attorney General, and Archibald E. Stevenson, special counsel of the Lusk Committee, who had much to do in drafting the bills. It was established, in the speeches of Mr. Berger and Mr. Stevenson, and in the general discussion that followed, that such legislation as was proposed is vitally necessary to stamp out organized sedition and anarchy and to safeguard the young generation from disloyal and unsound teaching in schools, both public and private. While the bills as they were written may possibly have been defective, and have since been vetoed by the Governor, the principles underlying them are sound, and, as a result of the discussion, the Committee on Socialist Doctrines and Tactics will urge the redrafting of the measures.

Samuel A. Berger, assistant Deputy Attorney General, discussed the bill known as "Senate Bill 1272," and entitled "An Act to amend the executive law, in relation to powers of attorney-general with respect to prosecutions for criminal anarchy, and making an appropriation therefor." Mr. Berger said:

"Before discussing the bill itself, I think it might be proper to read those portions of the criminal anarchy statute which are relevant and without a proper understanding of which it is quite impossible to get the true purpose and object of this bill. In 1902, following the assassination of President McKinley, there was placed on the statute books of this State an act known as the Criminal Anarchy Statute. According to our Penal Law, criminal anarchy is defined as follows:

"'Criminal anarchy is the doctrine that organized government should be overthrown by force or violence, or by assassination of the executive head or any of the executive officials of government, or by any unlawful means. The advocacy of such doctrine either by word of mouth or writing is a felony.'

"Now that has been a law of this State some eighteen years. There never has been a prosecution under that statute until the Lusk Committee obtained certain information and turned it over to various prosecuting officers and various district attorneys in this State. To date there have been some eighty-five indictments, and but five of these cases have been tried. In each of the five cases there has been a conviction, and in each case the defendant was sentenced to the maximum term of imprisonment in State's Prison, and in each instance each defendant is now in State's Prison serving the sentence given to him by Mr. Justice Weeks, of the Extraordinary Criminal Trial Term of the Supreme Court. In each one of those cases the evidence was furnished and the cases prepared in cooperation with the counsel for this Committee. I do not think that, on behalf of the Committee and its counsel, I am speaking immodestly when I say that if it had not been for the work of our Committee in obtaining the evidence, in turning it over to the District Attorney preparing the case, and sitting in with the District Attorney, furnishing interpreters, investigators and operatives, that there never would have been any indictment; there never would have been a trial or conviction, and those five men who are today serving sentences, each one justly imposed and a conviction properly found, would today be at large, continuing to preach criminal anarchy and continuing to preach the doctrine that organized government should be overthrown by force, violence and unlawful means.

"There are some eighty other indictments in different counties in the State that have not yet been tried and, without meaning in the slightest degree to reflect upon the zeal, ability, or industry of the various district attorneys of those counties, I believe those cases have not been brought to trial because the particular offices of the district attorneys in whose counties those violations occurred are not equipped to try those cases. It requires a great deal of work. You must understand the proposition from the ground up; you must have interpreters and investigators. Although a year has elapsed, with eighty-five indictments found, there have been but five trials. In Kings County five men pleaded guilty. They were not placed on trial. They pleaded guilty to unlawful assembly. I don't know really whether they have been sentenced.

"That is the situation with reference to the existing Penal Statute, denominated criminal anarchy, and entitled Article 14 of the Penal Law. The Committee and its counsel have been of the opinion that there should be no repressive legislation enacted in this State, but that this criminal anarchy statute, where it has been violated and where a person has been found guilty of violating it, should be rigidly enforced, and the person tried, convicted and sent to jail.

"We believe that if this statute is a salutary measure, it should be enforced, and if the people of this State do not want that statute enforced and on the contrary want to foster and encourage the teaching of criminal anarchy, then the proper thing to do is to repeal it.

(Photo by Bachrach)

SAMUEL A. BERGER

"We believe that by creating a bureau in the office of the Attorney-General for this purpose, the statute will be effectively enforced. The Attorney-General by this bill is not given executive jurisdiction. A reading of the bill very clearly indicates that the Attorney-General is merely given concurrent jurisdiction with the various district attorneys of the various counties of the State. That serves as an effectual check on some district attorney who may not be zealous in a prosecution or who is not well equipped to start a prosecution. It gives the Attorney-General the right to appear before the Grand Jury in the first instance and to supply it with information from which there may or may not be an indictment found, and it authorizes him in cases where there has been an indictment found, to prosecute that indictment to its conclusion.

"By giving the Attorney-General concurrent jurisdiction with the district attorneys, we have not any radical departure from precedent. The Attorney-General at the present time has original jurisdiction in a number of instances. For instance, the Public Health Law. Certain portions of it empower the Attorney-General with original jurisdiction, and I will digress for a moment to show the very salutary effect of that. For years spurious dentists—that is, persons calling themselves dentists—practiced dentistry in this State without being licensed. The various district attorneys in the various counties had jurisdiction over the prosecution of those cases. Dental societies prosecuted these cases, and this prosecution, or, rather, lack of prosecution, was such that the State was just swamped with men and women practicing dentistry who had no legal right to do so. Some three years ago, in the early part of 1917, a statute was enacted which empowered the Attorney-General in the first instance to prosecute persons violating the Public Health Law with regard to dentistry, and I think Dr. Downing, Assistant Commissioner of Education, will bear me out when I say in the State of New York there are now practically no unlicensed dentists. I know that of my own knowledge, because some years ago when this act

was made into a law I happened to have charge in the Attorney-General's office of that particular branch of the work, and the records of our office show that, without exception, wherever a person was charged by the Attorney-General with practicing dentistry without a license, there was a conviction, and in that branch of our work the Attorney-General's office has a one hundred per cent. batting average. Not one man charged with a crime was acquitted, and the presumption is that the courts would not have convicted those particular defendants unless they had been guilty.

"The Attorney-General has jurisdiction in enforcing and prosecuting violations of the Agricultural Law. He has similar jurisdiction in the case of the Election Law. In various other ways the Attorney-General has original jurisdiction, or, rather, concurrent jurisdiction, as is sought to be provided for by this statute. There has never been one single instance in the past, either under the present Attorney-General or any one of his predecessors, where any one of those statutes was abused. There seems to be a disposition on the part of many people in the community to imagine that every law will be enforced in the worst possible way. The minds of some of these people seem to be so constituted or warped that they imagine every one at all times and under all circumstances is crooked, dishonest, and bad, and they don't give anybody credit for actually performing a public duty with a broad, fair mind, and with the intention of benefitting the great body politic. They may only criticize, but it has been my personal observation in this city that those gentlemen who are always ready to criticize are rarely ever in a position to offer a constructive suggestion that will be of some value.

"Now this bill has been called a spy bill, and at first blush the word 'spy' seems to give one a shock. We don't like a spy. But it is not a spy bill at all, and there is not a word in this bill that can lend itself to a legitimate interpretation of calling it a spy bill. It provides for an appropriation of $100,000 for the employment of investigators, translators, stenographers, process-servers, and other necessary assistants. I maintain that $100,000 is a very small price, indeed, to pay for the prosecution and the investigation of persons whose life work it is to preach criminal anarchy. That is the only subject with which this bill is concerned. Let me read you this:

" 'The attorney-general may investigate as to violations of article fourteen of the penal law and may conduct prosecutions for violations of such article.'

"This act is limited solely and exclusively to violations under Article 14 of the Penal Law of this State, and Article 14 refers solely, only and exclusively to criminal anarchy.

"Without meaning to be harsh in my criticism, I think that we all ought to take a definite position one way or the other. Either we want criminal anarchy to be rampant, to be committed and to increase, or we want it wiped out. There is not any question about the necessity in my mind for taking either one view or the other. If we want it eradicated, if we want the men who violate that act prosecuted fairly, impartially and expeditiously, I believe this bill should be enacted into law."

Mr. Stevenson described the four bills that were recommended by the Lusk Committee amending the educational law of New York State. He said:

"Having in mind that although only eighty-five were indicted, there were a vast number of other men in this State that were violating the criminal anarchy statute, and bearing in mind the method by which these men came to be criminal anarchists—namely, that when young men they were taught to be criminal anarchists—the Lusk Committee turned its attention to the school sysem and methods of instruction which exist in this State. And the inducing cause for the preparation and offering of these bills was this:

"The Committee felt that it was better to begin at the source. Schools and classes exist in this State which hold themselves out to be schools and classes of instruction. Young people, potentially splendid citizens, attend these schools and classes and are there made criminals. The Lusk Committee felt that it was the duty of the State to protect its citizens from such an act, rather than to lay the emphasis on punishing them after they have been made criminals. Therefore there were two bills in particular that were offered. In the first place, I refer to Senate Bill No. 1275, which is an act to amend the education law, in relation to the qualifications of teachers, and making an appropriation for expenses.

"This bill requires teachers in the public schools, union free and common school districts of this State to make application for and obtain a certificate which shall show that the person holding the same is of good moral character, also show to the satisfaction of the Regents that he is obedient to the constitution and laws of this State, and that he is desirous of the welfare of the country and in hearty accord and sympathy with the government and institutions of the State of New York.

"No matter how splendid the school buildings, how elaborate the curricula, how profound the textbooks, in the very last analysis the success of the school system depends upon the character of the teachers. In many other walks of life this is self-evident. For many years no man has been admitted to the bar of this state, even though he has attained all the legal knowledge which is required, unless he has passed a severe and rigid character test. On the other hand, our methods of choosing teachers has been solely upon their pedagogical attainments. There is no inquiry into the character of those teachers, into their loyalty to the institutions of this State.

"We must bear in mind that the public schools are carried on at the expense of the State, and they have no reason whatsoever to exist unless it be to train the young of our community to carry on the responsibilities and duties of future citizenship. Secondly, the purpose of the public schools of this state is to train the pupils to revere, respect and honor the government under which they live, and to train them that citizenship does not only carry privileges but carries responsibilities and duties. The public school cannot succeed in imparting that point of view to its students unless the teachers themselves are in full accord, harmony and sympathy with the government under which we live, and are trained and eager to combat all influences that tend to subvert the pupils from that course.

"I have noted in some of the criticisms of this bill, and notably by a report gotten out by the Committee of the Association of the Bar of New York (and I might say at this point that the Bar Association itself has never passed upon the report or accepted the report of that committee) that the question is asked—What is loyalty and what are the institutions of this State? I think the very asking of that question shows the need of public school training. The primary thing which an American should know is loyalty, and the primary thing which an American should know is what are the institutions and government of his State and of the United States. I cannot see how the application of such a statute can in any possible way be a limit to the growth and progress of education in this State. My own opinion is that it will raise the dignity of the public school teachers. It will put them in the class of a profession. It will mean that every person who holds a public school certificate has a warrant in his pocket certifying to his good character and to his loyalty, and I think that every public school teacher should be glad of an opportunity of bearing witness to that fact.

"With respect to a second bill which has created a great deal of comment and no little opposition, known as Senate Bill No. 1274 and entitled, 'An act to amend the education law, in relation to licensing and supervision of schools and school courses, and making an appropriation therefor.'

"The purpose of this bill is to require all persons, firms, corporations, associations, societies who conduct schools, courses or classes, to make an application for the granting of a license from the University of the State of New York, that is to say, from the Board of Regents. There are certain exceptions made in the bill; that is to say, the public schools, union free and common schools, all schools incorporated or institutes incorporated by the Regents, or all schools or institutes and so forth that are admitted to the membership in the University, and finally all schools that are carried on or hereafter to be carried on by any well recognized religious denomination or sect.

"The bill is intended to reach a real and very serious situation in the educational conditions in our state. As I mentioned before, there are thoroughly well organized schools to teach the doctrine of criminal anarchy, to teach that organized government should be overthrown by force, violence and unlawful means. At the present time it might be possible to bring criminal action against a number of these schools. It might be possible in two or three years to punish a number under our criminal law. It might be possible to imprison some of the teachers after two or three years; but the criminal law has no provision for stopping the school, and no way of keeping it from continuing its work in precisely the same way as though no prosecution were had. An interesting illustration of that is shown by the conviction of the Rand School of Social Science last year, under the Espionage Act. They were convicted. They took an appeal. The conviction was affirmed. All they have to do is to pay a fine, and they continue to carry on the same work for which they were convicted. That is a very unhappy and a very improper situation to permit to exist. Either we want to stop the teaching of the doctrine of criminal anarchy or we want to proceed.

"Now this bill is designed to enable a competent number to pass upon the character and purposes of the teaching that is subversive to the interests of the State. The particular phrase used is 'inimical to the interests of the state,' and it is precisely the same general term as is used in the defining of the police powers of the state which is 'prejudicial to the interests of the state.' It is a broad term, and is meant to be broad. As a matter of fact, it was broadened at the request of the counsel for the Education Department of the State of New York. As originally suggested by the Lusk Committee the bill was meant to cover only such schools in which was taught the doctrine that organized government should be overthrown by force, violence or unlawful means. But the counsel for the Educational Department saw an opportunity of broadening the bill so as to permit the Department to reach certain other schools which had been carried on here for many years as fraudulent institutions. At the present time I understand that there are a large number of institutions masquerading as schools that actually are simply methods of fleecing the general public out of money, such certain correspondence schools that teach you how to play the piano in twenty-four hours, and various other schools of that character. Up to the present time there was no method by which the Educational Department could reach those schools, and it was therefore that this general term was introduced in this bill.

Facts Concerning Health Insurance Propaganda

CRITICISMS BY DR. HENRY J. HARRIS OF PAMPHLET, "A REFUTATION OF FALSE STATEMENTS IN PROPAGANDA FOR COMPULSORY HEALTH INSURANCE" ANSWERED

By P. TECUMSEH SHERMAN

MY attention has been called to an article in the *American Economic Review*, for March, 1920, by Dr. Henry J. Harris, criticising a pamphlet entitled "A Refutation of False Statements in Propaganda for Compulsory Health Insurance," recently issued by the Committee on Constructive Plan, Social Insurance Department, The National Civic Federation. As I was a member of that Committee and the author of much of the pamphlet criticised, I take it upon myself to answer.

Dr. Harris's first criticism is that "most of the quotations" in the pamphlet are from the writings of Dr. Frederick L. Hoffman, "vice-president of the Prudential Insurance Company." That is a bad beginning for Dr. Harris; for what he says is palpably untrue, only a small proportion of such quotations being from Dr. Hoffman's writings. Moreover, most of the quotations from and references to Dr. Hoffman in that pamphlet relate to statistical data, upon which subject Dr. Hoffman is a recognized authority; and it is significant of the weakness of Dr. Harris's case that he should seek to evade the force of Dr. Hoffman's facts and figures by an appeal to prejudice.

Dr. Harris then goes on to charge that many of the arguments and quotations presented in the pamphlet are partial and misleading. The following are the specifications of this charge and the answers thereto:

(1) Dr. Harris complains that, on page 15 of the pamphlet, is given an extract from the Fabian Society's report of 1914, to the effect that the maternity benefit has failed of its purpose, that is misleading because it fails to mention a qualifying statement in the report, which reads:— "but this does not mean that the specific beginning of an 'endowment of maternity' which Mr. Lloyd George has effected . . . is not already proving an enormous boon."

In truth, however, the extract quoted is full and fair, containing all of the original that is relevant upon the point under discussion in that part of the pamphlet, namely: "Is compulsory *insurance*, providing maternity benefits, desirable to reduce infant mortality?" The extract quoted is to the effect that the maternity benefits ought to be removed from the insurance and provided in some other way; and nothing in the context to that extract qualifies such conclusion. Medical care and pecuniary aid to needy mothers in childbirth are of course a "boon"; but the point contended for in the passage criticised is simply and solely that the right way to provide such boon to the needy is not through compulsory health insurance.

(2) Dr. Harris criticises as partial and misleading a statement, on page 15 of the pamphlet, to the effect that "the average number of days compensated per sick member increased in Germany from 16.1 to 20.2" per annum, between 1890 and 1913, because in connection with such statement no reference is made to the law of 1902 which raised the minimum benefit period from 13 to 26 weeks and included certain diseases not previously compensated.

This is a vain and misleading criticism. Had the pamphlet gone into details it would have shown that the time on the sick benefits in Germany has increased steadily from year to year, such increase being contributed to by a number of subordinate factors—including the one mentioned by Dr. Harris. But, whether stated in detail or summarized as in the passage criticised, the facts tend to refute the proposition they are cited to refute, namely, that compulsory health insurance "would *reduce* the amount of time lost by wage-earners in employments"—for which proposition there is no evidence whatsoever.

(3) Dr. Harris charges that, "in order to give the impression that malingering is a serious evil under the British system" there is given, on page 40 of the pamphlet, a misleading statement of the results of examinations by medical referees in Ayrshire, to the effect that "nearly one-half [of those receiving sick pay] were found fit for work."

The statement criticised does not contain the words nor convey the meaning expressed by the words inserted by Dr. Harris in brackets in the matter he quotes. On the contrary, that statement says, unambiguously, that "of *the persons who were examined* . . . nearly one-half were found fit for work"—which is entirely correct and in no wise misleading.

(4) Dr. Harris objects to statements on page 9 of the pamphlet which read as follows: "The Final Report of the British Health of Munition Workers Committee . . . is equally cold towards the Health Insurance. It credits that insurance with no evidence or data bearing on sickness or the problems of health. . . . And the recommendations of that Committee have no reference to the Health Insurance as a means of promoting health and are all as feasible without health insurance as with it." In refutation he cites a blanket expression of thanks, in that report, to various public authorities, including the national insurance commissioners, for assistance afforded and information received, mentions that the assistance of one official was obtained from the insurance commissioners, cites a single reference in the report to the experience of insurance authorities, and insists that the principal purpose of the investigation was to study conditions of work and output in munitions establishments and only rarely touched the subject of health insurance.

All that Dr. Harris here alleges is true; but the fact remains that the statement he criticises is, nevertheless, likewise entirely fair and true. The matter under discussion in the part of the pamphlet where this statement appears is an assertion by the partisans of compulsory health insurance that "the needs for the care . . . and *prevention* of illness among wage-earners can be met by a comprehensive system of health insurance." But this report of a most thorough study of the *health* of munition workers (see Bulletin No. 249 of the Bureau of Labor Statistics) in fact credits the health insurance with no specific evidence or data bearing upon the subject, and barely refers to or touches upon such insurance or the medical service provided as a benefit of such insurance as a means for the prevention of illness, thereby indicating that the ways and means for promoting the health of wage-workers are to be looked for principally outside of insurance. Certainly that conclusion is "cold" toward health insurance considered as a means of meeting the needs for the *prevention* of illness among wage-earners.

(5) Dr. Harris criticises the statement, on page 8 of the pamphlet, that: "Not a single commendatory reference to National Health Insurance can be found in any of the reports of the Registrar General for all the years since the insurance took effect, nor in any of the large number of local health reports for representative cities and towns." And in refutation he quotes extracts from reports of three health officers.

But obviously the statement criticised means that there can be found no commendatory references to the *results* of the health insurance. Of the three extracts quoted by Dr. Harris, the first, written in the early days of the health insurance, merely expresses the opinion that "in time it is *probable*" that the medical and sanatorium benefits of the insurance ."*will* have a profound influence on the public health." The second, written about a year later, refers to the reduction of mortality from tuberculosis during recent years [including years before the advent of national insurance] "as evidence of the good effect of the crusade against disease carried on by public and *private* persons and bodies throughout the country, which had reached their [sic] most *promising* development in the Medical and Sanatorium Benefit provisions of the National Health Insurance Act"—the reference here to the insurance relating altogether to expectations and not at all to performance. And the third extract he quotes, being from a report for 1916, stated merely that there had been a considerable diminution of the percentage of births occurring in workhouses and other institutions, probably because of the payment of the maternity benefit under the national insurance—all of which may be entirely true but is beside the point without something to show favorable results therefrom in the way of reducing the mortality or morbidity of mothers or infants. Manifestly if such limited commendations as these are all that the health officers of England, after nearly eight years' experience, have had to say in favor of the large and expensive scheme of providing medical care through national insurance—and they seem to be all that Dr. Harris has been able to find—the substance of the statement criticised is thereby confirmed:

(6) Dr. Harris criticises a statement in the pamphlet (page 12) which bluntly denies the prediction that: "Compulsory insurance will stimulate the needed campaign for the prevention of illness." In reply he cites a familiar statement by an authority, that the British national health insurance "has done great service in bringing to light a mass of suffering and a number of social evils, as to which the nation as a whole was ill informed or indifferent. It will now be substantially easier than in 1911, both on account of the new knowledge available and of the state of public opinion, to make adequate provision to advance the health of the community."

Perhaps the denial in the statement criticised is too positive and unqualified, as is the assertion denied, and consequently Dr. Harris's criticism may be in a degree justified. But in substance such denial is sound. This authority's opinion that it will now be substantially easier than in 1911 to secure adequate provision for the health of the community, is entitled to respect, especially as it is concurred in by others. But it is merely an opinion, in the nature of a prediction, first expressed about 1914, and the prediction has not yet been fulfilled. The insured medical service, which in 1914, was grossly in-

"A Challenge to the Protestant Episcopal Church"

REV. BERNARD IDDINGS BELL'S "RIGHT AND WRONG AFTER THE WAR" DECLARED MISCHIEVOUS IN REVIEW BY PROMINENT MEMBER OF BAR AND OF P. E. CHURCH

By ARTHUR O TOWNSEND

AT the outset of this brief review, we will do the author the justice of noting his standpoint and the claims made for his book. The Rev. Mr. Bell is a priest, of the Protestant Episcopal Church, who has been entrusted with the presidency of a college maintained by that Church for the education of candidates for its priesthood. (St. Stephen's College, Annandale, N. Y.)

In examining his book, we have had the unusual advantage of a subsequent and very recent recapitulation of his views, upon the conspicuous occasion of a sermon by him at the Episcopal Cathedral in New York City, Sunday, May 23d, 1920; an advantage which enables us to avoid placing any possible mis-conception upon his book. The *sermon* kept a few paces ahead of the *book* at all points.

His publishers present it as:

> "a forward-looking book, written by a man who has * * * thought deeply, and who believes the church should be preparing now to assume a real leadership during the period of reconstruction."

The reviewer has studied Mr. Bell's book, with the interest both of a fellow-churchman and a fellow-citizen. He believes it to be of timely and momentous importance that others within and without the church, who have not read this book should know what is being taught, without repudiation, under the auspices of one of the great churches, in respect of "right and wrong" concerning property, government and revolution.

In the first half of his book, Mr. Bell applies himself to the discussion of economic and national problems, in the spirit of avowed radicalism. To his observation, the thing which other socialists do not hesitate to call "the revolution" is not *coming;* it is here; and those who resist, or even protest, its engulfing scope and purpose, the author considers blind, deaf, and doomed. His wish fathers his thought. (P. 164.)

Seldom has a writer made so complete a self-revelation in so brief a space, as the Rev. Mr. Bell has done in these two short discussions. He exhibits, as to those matters of personal morality and individual helpfulness, touched on in the latter half of the book, the kindly and reasonable views of a parish or institutional priest, at home with his subject; but for the rest, he exposes with näive simplicity, the pitiful unfitness of such an one, who, naked of intellectual equipment for the tasks of statesmanship, rushes into the market place, demanding auditors upon great public questions, but offering them only a whirlwind of words, picked up in the purlieus of radicalism, the mad-houses of disastrous and abandoned European experiment.

One would look to find the pages of a book sponsored as this claims to be, full of ideals of the world's best enlightenment, the recognition of the spiritual side of human nature as its real characteristic.

But to our amazement, we find this author planting himself waist-deep in the miserable, discredited rubbish of Prussian materialism. We find him adopting from that slough, as if they were axioms of intelligent modern thought, the sordid notion, for instance, that man's thrift and his legitimate ambitions are no more than a manifestation of that same animal "hunger urge," which impels the hog and the tiger. And that "family life," upon which he admits the whole structure of society has been erected, arises from "the sex urge," an appetite that is generally recognized as being "back of" loose living, not chaste monogamy—an appetite whose *limitation*, not its *indulgence*—is held by modern thought to be the thing that is "back of the family," and thus "back of" civilization. Thus, at page 23:

—*Photo by Gessford.*

ARTHUR O. TOWNSEND

> "It is an established principle of sociology that the two great needs which impel mankind to most of its actions and which determine most of its institutions are the same two primary needs which impel toward action and evolution all living creatures, the need for food and the desire for sex expression."

What a platform for a Christian minister! What a crude, narrow, archaic pronouncement for any teacher to put forward, in this day of world-progress and large comprehension!

Not a word of the immense, overwhelming part played by mind and soul in human activities. No room in his program for any but materialistic motives or promptings.

Resting upon such premises (which occupy Chapters II. and III., respectively, of the five chapters of his book), Mr. Bell next apparently adopts, in its full scope and consequences, the idea of *Proudhon*, which has furnished the slogan of all revolts against law and order, viz., that "property is theft": and his pages are accordingly sprinkled with the senseless patter made familiar by doctrinaire and soap-box oratory, about the "iniquity of rent and interest," and all the rest of it; the author arguing that for a man to charge and collect *rent* or *interest* is a "gross abuse of trust." (Pp. 47 and 51.) Further, says he:

> "The only rational basis under the Christian dispensation under which a man may hold any property whatsoever, is as a trust to be administered for the profit of its real owners, namely, all his brethren." (P. 46.)

It is not surprising after this, to discover that Mr. Bell evidently prefers Henry George to St. Paul; for he tells us (P. 12) that "a good part of his" (St. Paul's) "sociology today is simply bosh." While he swallows, without a chew or a grimace, the whole untried doctrine of "single tax," with its inevitable corollary of confiscation; telling us with a smack of the lips his belief that (P. 110):

> "Increasingly, thinking people are adopting the theory of taxation advanced by Henry George as the sanest method of stopping land speculation and preventing congestions."

Admirers of Mr. George's character, patriotism, and moderation, whether they deem his ideas to contain the germs of truth, or not, will resent the effort made to tie up his name and fame with the mad extremes now preached by some of his alleged followers.

But this impending abolition of private income is not, in Mr. Bell's judgment, a mere theory or possibility. "It is a thing in actual being." (P. 45.)

> "Everywhere we see evidences that by increasing masses of our people investment for profit is looked upon with grave suspicion, as a thing demanding rigid regulation at least and sometimes prohibition." (P. 43.)

"Profits are become suspect" (P. 44) and the Church must "restate her teachings about the morals involved in rent "and interest holdings." (P. 45.)

Whether "restate" is meant to include *revise*, Mr. Bell does not disclose: for he evidently conceives that "the Church" has *always* held interest or profit-taking to be immoral. (Pp. 47-49.)

If the author could see or hear beyond the smoke and fury of his friends of the Rand School, he might be disconcerted by noticing the ever-widening circle of *real workers* in the factory and field, who save and invest money for their individual worldly betterment; to secure an old age of rest for themselves; and to provide a future of education, prosperity and refinement for their children.

When one sets out, in a tiny book of 187 small pages, of big type and wide spacing, to solve the greatest problems, to crack the hardest nuts, that have baffled the philosopher and the statesman for centuries, it is perhaps unavoidable for one to be a bit dogmatic. One must be prepared to discard along with St. Paul's "bosh," many other things that we have regarded as admirable, excellent and true. Thus, if we travel with Mr. Bell, we must be prepared to kick aside as obstructions in the path of progress, such things as "Tennyson's poetry" and Sir Edwin Landseer's "Stag at Bay": for these things Mr. Bell considers "anachronistic"—(perhaps he means "antiquated"?) (P. 161.)

But even broad-minded, up-to-date, readers, however patient, will be jarred to find startling assertions like the following, put forward by a college president and an Episcopal priest, as basic facts, entitled to acceptance:

"Poverty is, and has been for a number of years, rapidly increasing among us." (P. 25.)

"One out of every ten people in the United States is living in poverty, hopeless poverty, below a decency income figure." (P. 29.)

"One in ten in this land is forever barred" from good meals, noble books, converse with cultured people, etc. (P.30.)

"Poverty is * * * the result of injustice in distributing the fruits of the earth and of labor. It is the result of social maladjustments which need not be." (Pp. 36 and 38.)

Outside of war disturbances, there is now no more need for increased "production." (P. 38.)

> "Instead of having too little to go around, we have more than we need." (P. 39.)

Public charities are jeered at. Of factory "welfare work"—"bathrooms and gymnasia and paid nursing and doctoring, and the rest of it"—"most of it is excellently meant; but the hands neither appreciate nor welcome it. They do not wish" these things. (P. 54.)

> "The workers are apt, even when they use many of our social settlements, to damn heartily" the givers of them. (P. 55.) (And see page 56.)

(*Continued on page 17*)

Revolution in U. S. Preached to Methodist Clergy

Y. M. C. A. WORKER EXTOLS BOLSHEVISM, PRAYS FOR ITS SUCCESS AND HAILS REVOLUTION IN AMERICA—SAYS SOVIETISM IS AS DEMOCRATIC AS METHODISM

By T. EVERETT HARRÉ

AN amazing event transpired in New York City on June 7. The occasion was the weekly conference of the clergy of the Methodist Episcopal church, at 150 Fifth Avenue. Before the assembled ministers Bolshevism was lauded as the "open door" to democracy in Russia. It was extolled as having done wonders in education. The Soviet system was represented as "an exact copy of the Methodist system of representation," "just as democratic as the Methodist Church." The Red reign of terror and wholesale killings were said to be "not very much when compared with the French Revolution and the Russian revolution in 1905."

"To have an economic service, to have education, no booze, to have a philosophical and natural system of government, and finally to have spiritual freedom," the speaker declared, was to have the "open door" to democracy. And he said: "That is what Bolshevism is."

The Methodist ministers of the city of New York were told that many people and some Methodist ministers "oppose Bolshevism because they do not know anything about it." The speaker presented himself as an authority on Bolshevism, and he "hoped to God" for its success. He further voiced this sentiment:

"We in the United States are not yet prepared for Bolshevism, and therefore we will be obliged to handle our revolution in a different manner. But that it is coming there is no doubt."

The man who, before the Methodist clergy of New York, hailed a revolution and the overthrow of government in America, spoke with the prestige of his association with the Y. M. C. A.; moreover, with the weight and authority of his position as Director of the Russian Investigation Bureau for the General Committee of the International Y. M. C. A. His name is Julius F. Hecker. He is a Methodist clergyman in good standing.

It is an open secret that the U. S. Government has refused this man a passport to go abroad, for grave and justifiable reasons.

To the credit of that assemblage of clergymen, this man's anti-American, disloyal and revolutionary preachments did not meet with unanimous approval and applause, but on the contrary called for vehement reproof. Many ministers were on their feet to declare his speech un-American and subversive of law and order.

"I do not wish to seem uncharitable," declared the Rev. George Adams, pastor of the Beekman Hill Church, "but it is my conviction after listening to Mr. Hecker's address that he lays himself open to grave charges before the Methodist Conference. His entire address is un-Christian and I am quite sure he is liable to charges."

While he presented himself as an authority on Russia, and as while on this very stand he holds the directorship of the Russian Investigation Bureau of the International Y. M. C. A., it was brought out in the questioning of the Rev. Mr. Hecker that he had not been in Russia for eighteen years. That Mr. Hecker should have the audacity, the stupendous gall to get to his feet before the Methodist clergy of New York and hail a revolution in the United States as inevitable, to say that he hoped to God Russian Bolshevism would succeed, may seem startling; but while his speech may be unique in its brazenness and rawness, the promotion of revolutionism in the churches is not new; it has been going on for a long time, and the Hecker incident serves a purpose in calling attention to what is generally camouflaged in humanitarian or religious verbiage. Mr. Hecker's speech, which was taken down by a stenographer, confirms what has been suspected for a long time, and that is that his main function in America is to promote Bolshevist propaganda, mainly by reason of his position with the Y. M. C. A., through the churches.

Mr. Hecker prefaced his Bolshevist speech by what was presumably meant to be a compliment to his audience. He expressed his pleasure in being a Methodist, and said that while he had addressed many different professions, he had found no groups "as liberal as the preachers are." Mr. Hecker attempted to present the Bolshevist movement as growing out of an historical past. He failed to present it as a minority movement, dominated by a few leaders who gained power by a coup. Between Czarism and Bolshevism, he declared, there was no in-between, totally ignoring those Socialist groups who far-outnumbered the Bolshevist group. "You have got to be a Czarist or a Bolshevist."

He admitted that Bolshevism is a "despotism, but a despotism with the open door to democracy." He said:

"What is the open door? If you want to have democracy you must have first of all an economic service in the population; you can't have democracy if 80 per cent. are living below the margin of necessity of subsistence. There was no possibility of cultural education. That was the economic situation—two-thirds of the land was in the hands of less than 3 per cent. of the population. The Bolsheviki who had nothing to lose by being radical first declared the land belongs to the people. Therefore, today I would say that 95 per cent. of the population in Russia has the possibility, through being over the economic margin, of turning their thoughts to cultural and spiritual improvement, and this comprises the first step towards the open door of democracy.

"The second thing is that the Bolshevists believe in education; they are taking it up for their own self-preservation, and they are teaching their children, as they want to bring up a new generation of men who are trained in the new type of civilization. They are making every sacrifice to give the whole population the best possible education, and therefore today every man is either teacher or pupil. They have passed a law that everyone has to read and write, or they put him on third rations, and for this reason everybody is teaching some one else. These men have done more in three years for education than the Romanoffs have done in three hundred years of their history, and they have expended more money for education in these three years than the Czarists did in 300 years. These are the facts which can be obtained by even the most biased. When you have the education you are well on the way to democracy."

Mr. Hecker's attempt to win the Methodist clergy to Bolshevism was adroit, clever. He cunningly and with calculation emphasized it as a religious movement, committed to prohibition:

"The third thing, is that the Bolsheviks are the most fanatical prohibitionists, and they know you can't have democracy if you have booze. Do you know how far they went? If a man is a member of the communist party and he is found drunk, they put him up against a wall and shoot him on the spot—I wish they would try this here. There is no booze in Russia."

Mr. Hecker failed to state what are the facts—that the manufacture and use of vodka was prohibited by the Czarist government after Russia was drawn into war, and that under the Bolsheviki this prohibition was removed. According to the official report of V. Melutin, assistant chairman of the People's Economy League and a member of the Supreme Council of National Economy of Soviet Russia, which appeared in *Ekonomicheskaya Zhisn* (Economic Life), November, 1919: "The beet-sugar industry has furnished the initial step in the creation of the rural industries, since this particular industry has been preserved during the transitional period of the revolution. *The Vodka distilling industry occupies the next place,* and its development has been begun by the Supreme Council of National Economy during the last few days."

Mr. Hecker went on to say:

"The fourth thing is the Soviet system. What is it? It is easy to explain the Soviet system to the Methodist people. The Soviet system is an exact copy of the Methodist system of representation. It is the most exact copy of the Methodist way of government, and it is just as democratic, or autocratic, as the Methodist Church.

"The Soviet system is nothing but the same old community meeting we had here. That is another step to the open door to democracy in Russia. Then there is another thing, a vital one, and perhaps in many ways the most important one, the religious aspect of it. Now the Bolsheviks are always supposed to be atheists, and so I was not very much surprised by getting a report from a respectable association lately that Hecker is a free lover, an atheist and a Bolshevik. This charge was sent to quarters where it raised quite a disturbance for a while, but I was able to explain matters, and the affair blew over.

"The fact is this, that religion was never as free in Russia as it is now, and the Russian people were never as religious and as closely interested in religion as they are now. I have just been studying that problem and perhaps I will put a little book out on the religious phase of Bolshevism as I have discovered the tremendous revival of religion in Russia.

"Take the Russian Church today. Before the war it was nothing but a department of the department of justice or state; the priests were used as police and there were 12,000 school teachers alone, who went to Siberia because of reports by these priests. The Russian Church prelates have for centuries condoned and blessed all the outrageous crimes perpetrated by the Czarists."

Mr. Hecker then went on to relate the conditions of the church under the old régime as compared with the "improvement" of the church as it is today.

"This is the last step towards the open door to democracy. To have an economic service, to have education, no booze, to have a philosophical and natural system of government, and finally to have spiritual freedom, and then you have the open door. *And that is what Bolshevism is.*

"The present situation is that Russia has passed the Russian revolution; it has come to the end, and it was officially announced so in February when the National Soviet said there was to be no more capital punishment in Russia. This after there were some ten thousand heads

APPROVE STAND OF STATE DEPARTMENT

With Lloyd George carrying on conversations with Krassin, the Bolshevist Minister of Trade and Commerce, regarding the opening of trade relations with Soviet Russia, the unequivocal and uncompromising stand just taken by the Department of State will meet with general approval. Excepting a small handful of Bolshevist sympathizers and certain financial groups who, out of base and unpraiseworthy motives, are lured by the bait of economic concessions held out by Lenine, the American public as a whole is back of the Department of State in refusing to countenance any support which would give renewed life and strength to a régime set upon the destruction of our own government and of every other democracy in the world. To give economic assistance to the oligarchy of Lenine and Trotzky would be consciously to play into the hands of the Judas of civilization, to give the weapon for killing to those intent upon one's own murder.

As is recognized by Secretary of State Colby, the forwarding of economic supplies, even indirectly, to Soviet Russia would be tantamount to informal recognition and the opening wedge toward ultimate official recognition. The Department of State has taken a stand in wholesome contrast to the wavering and dickering maneuvers of the British, and the following letter of appreciation, sent to Mr. Colby by Judge Alton B. Parker, president of The National Civic Federation, doubtless expresses the sentiments of the American people as a whole:

NEW YORK, JUNE 7, 1920.

The Hon. BAINBRIDGE COLBY,
Secretary of State,
Washington, D. C.

My dear Mr. Secretary:

The National Civic Federation has noted with great appreciation the action of the Department of State in refusing passports to a commercial delegation seeking to visit Soviet Russia with the object of establishing trade relations, and also its announced purpose of refusing any recognition of the Soviet régime, politically or commercially, as well as any trade relations with it, direct or indirect.

As is well-known to your Department, it was officially stated by the Soviet Government, through its Commissioners who went recently to Stockholm to open trade negotiations, that neither the great Co-operative Organizations of Russia, with which the Allied Powers had expected to deal, nor any individual firms or persons, can legally transact any business, because, since private ownership is abolished in Russia, the Soviet Government alone is the owner of all property, and any dealings in the matter of sales, purchases or exchanges must be with the Soviet Government itself. As a consequence, any business transactions would involve dealing with and virtually recognizing the Soviet Government. We believe there is no middle course possible.

Our natural sympathy for the Russian people must not blind us to the fact that since the Bolshevist leaders seized power by violence in November, 1917, they have not only refused to give the Russian people a chance to select by universal suffrage the government under which the people would wish to live, but have stated that they never would do so because they knew that the majority would be against them.

Until there is in Russia a government represented by the free choice of its people and based on acknowledged and tried foundations of democracy and morality, any trading for financial advantages or economic concessions—a bait held out by Lenin—would be to prolong the life of and give strength to a régime set upon the destruction of every democratic government. It would be a betrayal, for sordid and ignoble ends, of American honor and American ideals. The Chamber of Commerce of the State of New York, in passing a resolution against any recognition of the Soviet Government, rightly declared that such trade would be immoral, inasmuch as payment for goods would be made out of resources unlawfully expropriated from their owners. As was admirably expressed by Dr. Nicholas Murray Butler, President of Columbia University:

"Such recognition, if based upon grounds of possible commercial advantage, would be to sell American principles for money."

Very truly yours,

(Signed) ALTON B. PARKER,
President, The National Civic Federation.

Voicing sentiments similar to those expressed in Judge Parker's letter, the American Federation of Labor, at its recent Montreal convention, by an overwhelming majority, passed a resolution opposing any trade relations with Russia until a democratic government has been established.

Reports of Bolshevist officials, quoted in the last issue of the REVIEW by Gregory Alexinsky, a former Socialist member of the Russian Duma, prove that Russia has no raw materials to offer in exchange for supplies. Even if raw materials were available, even if valuable economic concessions might be given American or British financiers, the forwarding to Russia of supplies, of foods, rolling stock, machinery and other commodities, would merely prolong the life of the incubus which has fastened itself upon Russia, prolong the servitude of the Russian people, prolong the menace which strikes vitally at every democracy. It would make only the more remote the establishment of world peace, international security and amity, the permanent release from oppression and terror of the Russian people themselves.

LAYING DOWN ONE'S ARMS TO THE ENEMY

If America's entry into the war demonstrated anything to us it was our own deplorable negligence in the supreme matter of our own safety. Lack of vigilance, of precautions, of effective laws and an efficient secret service laid us open to the enemies who worked against us within our midst, and it was notorious that for information regarding the activities of German agents and spies we were largely indebted to the intelligence service of the Allied nations.

America, and every democratic government in the world, is today the object of attacks of foes no less dangerous than were the Germans; in fact, the designs of this foe are more fundamentally destructive than were the designs of imperial Germany. Are we to profit by the painful experiences and sacrifices of the war? Or are we again to relax into a criminal inertia and lay down abjectly before those who would destroy every ideal and every institution which we hold sacred?

Shortly after our entry into the war the New York legislature enacted special war emergency legislation which gave to the office of the Attorney General unique powers to subpoena witnesses and compel them to testify under oath. By reason of this legislation, the office of the Attorney General was enabled to round up many German agents, secure evidence and uncover the vast ramifications and purposes of the German propaganda in America.

Legislation which would give to the Attorney General similar powers in the investigation and prosecution of cases of criminal anarchy was recently introduced into the New York legislature. Other proposed legislation provided for amending of the educational law of the state, so that teachers should be required to establish their good moral character and loyalty, while another bill provided that, with certain exceptions, it would be necessary for persons, associations or corporations conducting schools or classes to secure a license from the University of the State of New York, or the Board of Regents. While these bills have been vetoed by the Governor, the discussion concerning them, under the auspices of the Committee on Socialist Doctrines and Tactics of The National Civic Federation, is of timely interest, and, as was pointed out by Samuel A. Berger, Assistant Deputy Attorney General, and Archibald E. Stevenson, associate counsel of the Lusk Committee, the enactment of such legislation is imperative if we would effectively protect ourselves against those who would overthrow our government and who seek to propagate subversive teachings.

It must startle many people to learn that, while the Criminal Anarchy statute of New York State was passed after the assassination of President McKinley, eighteen years ago, there had been no single prosecution until the Lusk Committee, in its recent investigations, uncovered evidence of criminal activities, as a result of which there have been some eighty-five indictments and the trial of five cases, each of which resulted in conviction. In other words, without adequate legislation providing for investigation of criminal anarchy, the statute is a dead letter.

It is quite possible, as has been claimed even by supporters of the so-called Lusk bills, that they are defective; but in principle they are sound, and it is to be hoped these bills will be redrafted and passed. Considerable noise was made by those who campaigned against these bills, and among the opposition were the names of many people who, we are certain, if they had understood the situation and the purposes of the bills, would not have lent themselves to an agitation started by the very forces against whom the bills were designed. It is significant that the loyal teachers of the state did not protest against their becoming a law. Where, then, did this propaganda against the bills originate? As Mr. Stevenson declared, the opposition to the bills in large measure started with a committee of eight in the Rand School of Social Science. Among those who joined together to fight the bills, under the aegis of the notorious Rand School, were representatives of the *New Republic,* the *Nation,* the *World Tomorrow* and the *Survey.* The same method which had been used in 1917 by the old groups of Socialists, pacifists, pro-Germans, et cetera, to keep us out of the war against Germany, were used to stir up public sentiment against these bills. Because of their organized system, Mr. Stevenson declared, they were then able at the press of a button to have 25,000 letters go to the President.

It is wholesome to note that President Wilson has just signed a bill enacted by Congress which makes membership in organizations advocating sabotage, revolution or destruction of property in itself sufficient grounds for the deportation of alien residents of the United States. The bill is aimed to make subject to deportation all foreigners who are members of the I. W. W. and the Communist and Communist Labor parties. The bill declares that the contribution of money to any organization, society or group that advocates the overthrow of the government by force or violence, or of all forms of laws, or destroying property, or sabotage, or of assaulting or killing officers of our own or any organized government, shall constitute membership. The passage of this law will give added strength to the government in combatting the subversive activities of aliens. Doubtless, we shall hear much about the violation of the "right of asylum" and from the quarters of the sentimentalists and "liberals" will come protests that deportation under the law will be deportations of heroes akin to the Pilgrim Fathers.

How loyal Americans, who should know better, are gulled by specious appeals to "liberalism" into supporting the cause of the very groups who sought to render this country impotent before German aggression just as they now seek to render us impotent against revolutionary aggressions, is one of the phenomena of the times.

AN EXAMPLE WORTH IMITATING

The resignation of Mrs. Finley J. Shepard from the national board of the Young Women's Christian Association not only struck consternation into religious circles at the time, but started a discussion on certain fundamentals, which will continue for an indefinite period.

There were two reasons given by Mrs. Shepard for her action. One dealt with the matter from an exclusively Christian point of view, taking the ground that the changes proposed in the By-Laws of the Y. W. C. A. meant the abandonment of its purely religious activities and the adoption of an industrial program which, to her mind and the minds of those who acted with her, meant simply the addition of one more to the many social reform movements.

Mrs. Shepard's second point was that, having once taken this new position, the Y. W. C. A. entered the field of politics. She could well have pointed out the dangers lying along that path by referring to the records already made by a number of Y. W. C. A. branches. Her resignation was construed by many as the result of a sudden outburst of indignation on her part and that of her friends, but there has recently come to this office a pamphlet which clearly shows that this inference was wrong. This pamphlet, entitled, "Ten Thousand Words of Protest from Churches and Christian Leaders Against the Proposed Personal Test for Student Association Membership," and "Published by The Council of Adherents to the Evangelical Basis of the Young Women's Christian Associations," was issued "For Consideration Prior to the National Convention of the Young Women's Christian Associations" at Cleveland, Ohio, in May, 1920. It is filled with ringing protests against the proposed change in the By-Laws from bishops and clergy of various Protestant churches, presidents of theological seminaries and church colleges, ministerial associations, general assemblies, synods, national conferences and other influential bodies of Christians. So representative are the persons and organizations entering these protests that one wonders why the Cleveland convention of the Young Women's Christian Associations took the action it did. It certainly would seem that it could not have represented the Evangelical Church at large.

But it is not with the religious aspect of the matter—a subject for discussion by religious journals and religious bodies—that we are especially concerned in this editorial. It is the proposed entry of the Young Women's Christian Association into industrial politics that concerns a publication like The National Civic Federation Review. If the membership of the Y. W. C. A., composed largely of students and young women, is to enter the field of labor politics, experience shows that there is only one door through which it will pass—that of radicalism. No better illustration of this can be given than what happened at the last session of the New York Legislature. In this connection it will be well to read the article by Mrs. Alice B. Locke, who represented the 300,000 members of the Women's Benefit Association of the Maccabees, to be found on pages 14 and 16 of this issue of the Review.

When the delegates to the Cleveland convention of the Y. W. C. A. declared, as they did with all seriousness, for "an equitable share for labor in the profits and management of industry;" "that an ordered and constructive democracy in industry is as necessary as political democracy, and that collective bargaining and the sharing of shop control and management are inevitable steps in its attainment;" and "that the first charge upon industry should be that of a wage sufficient to support an American standard of living;" and when they advocated "the guarantee of a minimum wage, the control of unemployment through government labor exchanges, public works, land settement, social insurance and experimentation in profit-sharing and co-operative ownership," they were making sweeping declarations on highly controversial, technical and even political subjects about which they, personally, knew little. No one will contend that the Y. W. C. A. has ever made any adequate study of those subjects. It has not the facilities for so doing; nor has it the necessary practical experts. If it is going simply to repeat, parrot-like, the declarations of other organizations of a radical type, it is adding nothing to the sum total except confusion.

Mrs. Finley Shepard is deserving of all credit for having had not only the perspicacity to discover the fallacies and dangers of the action contemplated but the courage to take the stand she did, at the time she did. It is a welcome surprise to find one woman of great riches who keeps her head and does not follow the revolutionary fads of the hour. It is to be hoped that the discussion growing out of the incident at the Cleveland convention will result in the more sober directing elements in the Y. W. C. A. putting a brake on the enthusiasm of those youthful members who rush after any will-o'-the-wisp, if it is only labelled "social reform."

Questions for Every Good American

The following letter, addressed to a member of The National Civic Federation, has been referred to the Department on Study of Revolutionary Movements. This was a personal communication, but the writer has consented to its public use, stipulating, however, for obvious reasons, that his name be withheld. As the letter raises questions that are in the minds of many thoughtful citizens today, Chairman Condé B. Pallen is sending it to several thousand representative men and women to get their views before taking action. Dr. Pallen also invites the readers of The National Civic Federation Review *to address him on this subject.*—Editor.

My dear Sir:

A friend has sent me the program of your Department on Study of Revolutionary Movements, which proposes:

> To inquire into the objectives and tactics of revolutionary forces in this country;
> To inquire into the extent to which those forces have permeated the various divisions that make up the body politic;
> To make a survey of industrial, political and social progress; and
> To give support to all practical means tending to improve the general well-being of our people.

This program plans to meet the menace of revolutionary radicalism and I am pleased with its sanity and thoroughness. It has evidently been drafted by those who know what Socialism is.

For the last two years my wife and I have been reading and studying Socialism and Bolshevism. We have visited the Rand School and read much of its literature. We have listened to socialists in their halls and at the street corners; we have heard them in church circles, social clubs and educational meetings. Among the speakers were clergymen of prominence, professors from important universities and principals and teachers from the public schools, with now and then an editor. From all that we have heard and seen, we have come to detest the very word "Socialism." We regard its economic program of confiscating and operating all factories, farms, mines, stores and railways—or, as the socialists themselves state it in their platform, all means of production and distribution and the land—as an impossible scheme, leading only to chaos and wretchedness, as we see it worked out in Russia today. We regard the doctrines of economic determinism, or the materialistic interpretation of history, as an abomination, leading straight to atheism and the destruction of the family. We regard their theory of internationalism, with its contempt for love of country, as one leading to disloyalty to our government and the destruction of all nationality.

Believing, as we do, that Socialism menaces all that Christian civilization has achieved and that it should therefore be extirpated, root and branch, from every soil where it has found a foothold, we face some very serious questions.

We have three sons and two daughters, the eldest two being ready for college, the others still in the public schools. For their well-being we alone are responsible, not only to society but to God. Have we not a duty to see that their minds are not poisoned in school and college by attending classes taught by socialist teachers and professors? In one noted woman's college, where we thought of sending our daughter, we found that one of the important professors was a woman who boasted that she had been a socialist for thirty years and, in a signed and published article, declared:

> It is a great thing to be both Christian and Socialist in these days—it is especially great if one is a teacher of youth.

While there is so much being said about the right of the teacher to teach anything he thinks is the truth, without question from faculty or trustees or school boards, have not the parents of the boys and girls—the future citizens, who will carry on or destroy this republic after we are gone—the right to protest against any teaching that is disloyal to our Constitution? Is it not more than a right? Is it not a patriotic duty?

Again, my family are members of the..... Church, and there we face the same danger of Socialism; but in a more insidious and subtle form. Two years ago, before we had made any study of the subject, we should hardly have recognized it as Socialism, although we should have wondered at some of its implications, the minister constantly harping upon "social injustice," "capitalism," and the "awful conditions of labor under our present system." As an employer of more than one thousand workmen, mostly molders who belong to a union, I know something about the conditions of labor and I took the minister to task for his utterances on the subject. It turned out that he had imbibed his whole store of misinformation from two I. W. W. agitators, with whom he seemed to be very friendly. I also took up the matter with officials of the molders' union, who represent my employees in our collective contract, and they said: "Why, don't you know that ..... (mentioning the name of our minister), is an out-and-out I. W. W. sympathizer; that he attends their meetings and counsels with them? We would not trust him as far as we could throw a bull by the tail."

Now, what is our duty in the church? We have been taught to beware of "tainted money." Is it not just as necessary to beware of tainted preaching and teaching? Shall we withdraw without giving the reason or shall we make a fight within the church? We feel we must do something, but what is the best thing to do?

Then again, we are subscribers to several philanthropic agencies and charities, and my wife is a member of some of their boards. In these organizations she frequently finds Socialists filling important positions. Shall we con-

Compulsory Insurance Opposed by Women's Benefit Societies

(Statement upon the attitude of the Fraternal Benefit Societies of New York State, and particularly in behalf of the Woman's Benefit Association of the Maccabees [30,000 members in New York State], at the hearings before the Labor and Industries Committee of the New York Senate, April 7, 1920)

By MRS. ALICE B. LOCKE

MRS. ALICE B. LOCKE

IT would be impossible more than briefly to outline the real menace which lurks behind the cloak of this so-called "welfare" legislation, which not only threatens the very life of the many fraternal benefit societies in the State, with their membership of three-quarters of a million, but which strikes at the very roots of our state and national institutions. It is a well-known fact that the plan of Compulsory Health Insurance was conceived in Socialism, born in Germany, and fostered by the American Association for Labor Legislation, the American branch of the International Association for Labor Legislation, with headquarters in Switzerland. For more than fifteen years this system of Compulsory Health Insurance, as practised in Germany, has been agitated in this country with indifferent success by well-known radical Socialists, chief among whom was Eugene Debs, now serving a well-merited sentence of imprisonment for sedition, and Victor Berger, expelled from the Congress of the United States on sedition charges. It is advocated by the leaders of the International Ladies' Garment Workers' Union and by the Women's Trade Union League, of which Miss Mary E. Dreier is, or was, State President, and her sister, Mrs. Raymond Robins, is National President.

In spite of the activities of the Socialists to induce the American people to adopt their program of Compulsory Health Insurance the fact remains that their converts are few. The underlying principle in a democracy is not that the State owes every man a living, but rather that the State owes its citizens an *opportunity* to make a living, and in no country in the world can any man or woman who is able and willing to do an honest day's work for an honest day's pay find such wonderful opportunities as these United States afford. An immense gulf separates our laboring classes from the poverty-stricken, brow-beaten lower classes of Germany who so gratefully accepted the sop of social insurance thrown to them by the astute Bismark. State paternalism is not wanted, and I feel sure will not be tolerated in this country.

The proponents of the bill tell us of the great economic loss due to sickness, but they very carefully refrain from calling attention to the fact that the economic loss on account of strikes is about *twice* as great as the loss from sickness. So that it would seem that this entire problem of reimbursing the people and the State for the economic loss from sickness is a simple matter of employer and employee getting together to eliminate all strikes, thereby not only enabling the worker to meet his doctors' bills but leaving him a tidy sum to set aside for the future. Moreover, from 40 per cent to 60 per cent of all sickness is preventable. Then why not direct all our energies for the present at least toward prevention?

Compulsory Health Insurance is *not* "welfare" legislation. It is purely socialistic. It is class legislation of the most vicious type. It would compel the thrifty, moral, independent citizen to accept a thinly disguised form of poor relief, which he neither needs nor desires; it would compel him, against his will, to contribute to the payment of doctors' bills for a host of habitually immoral-living people who are financially able to provide for themselves, but many of whom prefer a system of charity to honest work and thrifty planning for the rainy day.

The proponents of the bill say: "To be effective it must be compulsory on all, because there are some who are too shiftless to save, and this is the only way in which they can be forced to provide for themselves." Because few workers are shiftless, therefore *all* shall be placed in the shiftless class. And as to the cost—well, nobody seems to know! The New York Federation of Labor sent out handbills in 1919 in which they promised all the benefits set forth in the bill for the sum of twenty cents per week from employer and employee. Then comes the Women's Joint Legislative Conference, composed of the New York League of Women Voters, the Women's Trade Union League, the Y. W. C. A., the Woman's City Club of New York, and the Consumers' League, with their attractive but misleading propaganda (likewise scattered broadcast over the State), promising these benefits for twenty-four cents per week. Then comes Miss Olga Halsey, of the American Association of Labor Legislation, with the statement that it will probably cost about thirty cents per week. Then comes Dr. Ira S. Wile, teacher of "sociology" and advocate for the Davenport Bill, with the statement that "nobody knows what it will cost, but regardless of cost the State of New York should adopt Compulsory Health Insurance."

The proponents of the bill know, and they admit publicly, that this system of Compulsory Health Insurance *will not reach those who need it most*—namely, the chronically sick, the itinerant workers, the unemployed, all of whom will have to be cared for by charity, as at present, while we proceed to pour out our beneficence to those more fortunate workers who do not need it. Why not also pay their rent, and buy their shoes and food?

The proponents of the bill know and admit that there are neither enough hospitals nor nurses in the State to meet the thousands upon thousands of demands which will be made for service if this plan is forced upon millions of people who do not want it and who resent its charity. They know that in every country where Compulsory Health Insurance is in force that the drain because of malingering has been enormous, and that the people's sense of honor and independence has been gradually dulled as a result of forcing an independent thrifty people to accept poor relief.

The United States Bureau of Labor has published and circulated their estimates, as a result of their investigations early in 1919, that the cost per year per person for medical, dental and oculist's service was *$26 per year*. And yet in the face of these official figures, the proponents of the bill have promised not only medical and dental service, but $8 per week cash sickness benefits for twenty-six weeks, maternity benefits to all insured women and the wives of insured men, and $100 funeral benefit—all for the sum of twenty-four cents per week, or about $24.16 per year—which is two dollars less than the official estimates of the Department of Labor for medical service only.

Because we prefer to believe the official statistics of the Department of Labor in preference to the alluring promises of the proponents of Compulsory Health Insurance, the opponents of the bill have been abused, and accused of exercising a powerful and perilous influence over public opinion. We are accused of interfering with orderly legislative action on important measures; we are accused of sending out misleading and inflammatory propaganda.

Since when has a dictatorship of "Me and Gott" been established by the leaders of the New York League of Women Voters, the Women's Trade Union League, and others? Since when are free-born American citizens forbidden to make known their honest convictions in the matter of any or all legislative measures which are to be passed upon by the servants of the people? Since when do three-quarters of a million citizens of the State of New York, who are insured in the fraternal benefit societies, have to accept in humility and with a due sense of reverence for their "superior" intelligence, any kind of "raw" legislation that paid uplifters and Socialists may see fit to hand out to us? Since when must the members of the State Grange, the Federation of Women's Clubs, and the hundreds of thousands of other loyal 100 per cent Americans cower under the lash of the men and women who are seeking to push through our legislature this bill, which is obnoxious to millions of patriotic, self-respecting independent citizens?

Why should leaders of the New York League of Women Voters tear their hair and go into hysterics because the pet bubble of their Socialist friends has been pricked and has vanished into thin air? The question of Compulsory Health Insurance has never been adopted as a part of the program of either the National Suffrage Association or the National League of Women Voters. It is true that Mrs. Raymond Robins, Chairman of the Committee of Women in Industry of the National Suffrage Association and President of the National Women's Trade Union League, embodied in her report a recommendation that social insurance be adopted as a part of the working program of the Suffrage Association in the various States; but upon my request for a hearing in the matter of Compulsory Health Insurance, it was referred back to the committee for "further investigation and information." And there it still slumbers! At a meeting of the National Suffrage Association and League of Woman Voters in Chicago, February, 1920, no further attempt was made to foist the question of Compulsory Health Insurance upon the convention.

Just whom do the leaders of the New York League of Women Voters represent in their demand for Compulsory Health Insurance? They certainly do not represent the thirty thousand

(Continued on page 16)

Pro-Bolshevist Propaganda by American Correspondents

"The propaganda of the Lenine-Trotzky régime against civilization, already working through so many radical and pseudo-liberal organizations, and recently augmented by an endless stream of inspired press stories from Moscow and Petrograd."—*From a declaration against the recognition of Soviet Russia signed by several thousand well-known Americans.*

By T. EVERETT HARRÉ

THIS inspired propaganda referred to has appeared in various important metropolitan dailies and has borne a number of signatures. Among the most influential pro-Bolshevist writers are Lincoln Eyre, Isaac Don Levine, and Michael Farbman. Lenine does not permit any correspondent to come into Russia unless well assured in advance that he is practically certain to take the pro-Bolshevist position. After arrival, these correspondents are taken in hand by Bolshevist officials, shown what it is desired that they should see and told what they are expected to repeat. One of them, Arthur H. Copping, states that he was in Moscow for **two weeks** "and during that time investigated social conditions in conversation with *many* government leaders and subordinates as well as with *several* critical outsiders." Nearly all of the other correspondents have thus let the cat out of the bag from time to time.

In the introduction to Lincoln Eyre's articles, republished as a pamphlet, is the statement that this reporter in **90 days** (under Bolshevist tutelage) witnessed **"all** the workings of the Red régime," that "he approached his task with an impartial mind" and that "his conclusions may be relied upon as giving a true picture of the Russia of to-day and its prospects!"

In making out a cause for the Bolshevists Eyre freely contradicts his own evidence. His main point is that the Bolshevists are willing to reform if they are recognized:

> The Bolsheviki freely confess their desperate need for help from foreign capitalism. They have demonstrated their willingness to give almost any concession short of political annihilation to foreign capitalists.

On the day preceding the publication of this statement, Eyre had given a far different view, namely that the Bolshevists were *not* ready to give up their work for world revolution. On February 24th, he cabled:

> The Bolsheviki are as eager to precipitate a world revolution as ever. But at the moment they are even more eager to establish relations with the markets of the world, so that Russia may be saved from economic catastrophe.

In this same despatch Eyre even explains just how the Soviets will continue to work for world revolution—no matter what their promises:

> The Russian Communist Party, which is the Bolsheviki's official political title, no longer exports agitators chosen from among members to kindle the flames of revolt in foreign lands. They are too wise for that antiquated process nowadays. What they do in these scientific times is to import from the country of his birth the crudely fashioned product of his own domestic Bolshevism, subject him to certain finishing processes (including perhaps a gold lining) and ship him back home again complete in every detail, smooth running and highly inflammable.
>
> Another reason for the Soviet's willingness to quit propagandizing abroad is that it has already turned over to the Third Internationale all business of that kind.
>
> Now, the Third Internationale has no official connection with the Soviet Government. It is supposed to be a separate institution. Yet all its leaders hold office under the Soviets, and its funds, which are considerable, must be derived from Soviet sources. Nevertheless, it is technically, indeed legally, non-governmental, wherefore the Moscow Cabinet is justified in pledging itself to leave propaganda to "friendly" foreign states alone.

Eyre even proves his point by the following quotation from an interview in which Zinoviev, president of the Petrograd Soviet, says:

> The Third Internationale is primarily an instrument of revolution. It reunites at Moscow the intelligence and energy of all the Communist groups the world over. Delegates from the various national organizations come to us and give and take knowledge about the cause and return to their respective home countries refreshed and invigorated. This work will be continued no matter what happens, legally or illegaly. The Soviet Government may pledge itself to refrain from propaganda abroad, but the Third Internationale—never!

Why, then, does he repeat Lenine's self-evident falsehood that the Soviets have demonstrated their willingness to give almost any concessions short of political annihilation to foreign capitalists?

And why does he speak of this régime as the dictatorship of the Russian "proletariat" when, in the very same article, he mentions Lenine and Trotzky as the dictators and devotes an entire article to describing the "Soviet aristocracy" created about the Kremlin as a new ruling class? The only answer is that in large measure—though, of course, not always—he has parrot-like reproduced as his own judgments the ideas Lenine has put into his head and often the very words Lenine has put into his mouth. It was "the most impressive assemblage" he had ever beheld. . . "There was about it a virility, a strenuousness, an inflexible seriousness of purpose that is seldom detectible in the Parliaments of Europe and America. . . . . One felt that these men knew what they wanted. . . . One felt, too, the presence of a profound concern for the fatherland."

Lenine, he says, instructed the Bolshevist majority in what they should do, but this does not trouble Eyre, who blandly remarks that "even the G. O. P. might take lessons from the Bolsheviki in the strategy of the steam roller." But there is even an insinuating comparison of the Soviet Congress with the United States Senate! Could any Bolshevik fanatic use stronger language than this, in an Eyre despatch published March 28, 1920: "Whether the Bolshevik revolution has benefited any other class of the population is open to doubt, but that it has bettered the lot of the Russian peasant mentally, morally, and materially to an enormous degree cannot be disputed."

One of the most amazing of Eyre's performances is his interview with Peters, the Executioner. Mr. Eyre reports asking Peters: "Are you going to the opera to-night? Shaliapin is singing, you know," and so the correspondent and the Executioner enjoy the opera together. Mr. Eyre finds out, in general, that the Executioner is not a bad fellow after all, and remarks that "in his homelike room in the First Soviet house, formerly Hotel National (quite a proper residence for a 'proletarian dictator') books, mostly poetry, were all over the place. On the walls were a few old prints and photographs, among them some snapshots portraying Col. Raymond Robins in a smiling conversation with Peters and other Bolshevist leaders."

It is hardly necessary to touch upon the immense amount of documentary evidence of the Bolshevik Reign of Terror—which they confess has only just been ended—in order to demonstrate the real character of Peters and his associates. Eyre's entire article puts both Peters and the Reign of Terror in a favorable light! The famous Socialists, Gorky and Martof—both revolutionists now in Russia and close to the Bolshevists—speak of tens of thousands of cold-blooded killings for which the Bolsheviki were wholly and directly responsible, beginning even before the Reign of Terror was officially declared. But Eyre found no traces of all this! Martof wrote:

> From the very first day of their coming into power and proclaiming the abolition of the death penalty, the Bolsheviki began to kill. They killed prisoners captured in the battles of the civil war. They killed enemies who surrendered on the condition that their lives would be spared.
>
> These wholesale murders organized at the instigation of the Bolsheviki were followed by murders directly ordered by the Bolshevist Government. The death penalty was declared abolished, but in every town and in every district various "Extraordinary Commissions" and "Military Revolutionary Committees" ordered hundreds and hundreds of people to be shot. Some, as counter-revolutionists; some, as spectators; others, as robbers. No court ever examined their cases; no one knew whether the person shot was really guilty of conspiracy, speculation, or robbery, whether perhaps someone settling personal accounts with the man killed or taking personal revenge had caused him to be shot. What a number of innocent persons have thus been killed in the whole of Russia! With the silent approval of the Council of the people's Commissaries, men sitting on the Extraordinary Commissions, unknown to anybody—men among whom escaped criminals and the Tzar's agents—provocateurs are discovered from time to time—are issuing orders for executions to be carried out.
>
> Having assassinated tens of thousands of men without trial, the Bolsheviki started their execution by verdicts of their courts. . . . The party of executioners—the Bolshevist Party—is just as much an enemy of the people as the party of Pogroms.

After the recitals by thousands of eye witnesses of the Bolshevik persecutions of religion and their numerous decrees, newspaper attacks and pronouncements against religion, Eyre has the effrontery to say that "the Bolshevists are too wise to belittle religion or insult its professors." The only basis for the statement is that the Bolshevist *outward* and *official* policy has of late been more tolerant, but this does not change the ardent anti-religion tone of the Bolshevik leaders or Bolshevik administrators. A half truth may be the most effective form of falsehood.

On this point there is no better authority than the leading Roman Catholic dignitary of Russia, Archbishop Ropp, who has been in Soviet Russia during all the revolution and was imprisoned by the Bolsheviki. Archbishop Ropp shows that even the new policy of the Bolsheviki is fundamentally anti-religious in that it aims to Bolshevize the youth and children:

> Bolshevism, despite its ostentations atheism, does not prevent Christian work in churches, but there is a constant effort to demoralize the youth of the country. Their theory is that a child does not belong to the parents, but to the state.

After Lenine, Bucharin, editor of the *Pravda*, is the great Communist theorist. Here is what Bucharin says (in his book "The A. B. C. of Communism," published in Moscow last October) about the attitude of his party and government toward religion:

> There are some soft-headed communists who say that their religion does not prevent them from being communists. They say that "they believe both in God and in Communism." Such a view is fundamentally wrong; religion and communism do not go together either in theory or in practice. Between the precepts of communism and those of the Christian religion, there is an impassable barrier.

Only when criticisms are perfectly innocuous does Eyre ever turn against the Communists at all. Could any better example of out-and-out Socialist propaganda be found than the following preposterous statement:

> Meanwhile, however, they are offering to the dark masses of peasants and industrial workers an opportunity for enlightenment that transcends anything hitherto known in this line not only in Russia but in most other parts of the globe.

It is only necessary to read the contradictory and absurd statements of Eyre and of the Bolshevist Minister of Education Lunacharsky, whom he quotes, to realize that not only is this statement utterly without foundation but that the truth is evidently almost exactly the reverse.

Eyre himself states elsewhere that the agricultural 90 per cent is being dealt with "tenderly but firmly," that *only about* a *third* of the crops than *can* be produced are being seized by the Bolshevists—as a forced loan without security! He also admits that the peasants are being driven to compulsory labor in carting wood and clearing the railways for their Communist masters. How do such facts appeal to the American farmer? Michael Farbman, a notorious Soviet propagandist, admits that the Communists are systematically repressing all the more industrious and least inefficient peasants who have two horses and giving them to those with none. What does this show as to the level of Russian agriculture and the effect of Bolshevism?

Farbman, a correspondent upon whose inspired statements certain newspapers base their editorials, confesses that he was favored in entering Russia, being allowed to accompany the Bolshevist peace delegation on their special train. Certainly he made the most of his opportunities.

Among his remarkable dispatches is one in which he plays up the wonderful decree of the Soviets, "uniting all the co-operative societies into one all-Russian union and making all-Russian citizens practically members of the co-operative"—presuming on the hasty newspaper reader not stopping to think that co-operation, throughout the entire world, means a voluntary movement and that there can be no more preposterous contradiction in terms than to speak of establishing compulsory co-operation.

Another pro-Soviet correspondent is Isaac Don Levine. The official organ of Sovietism in America "Soviet Russia," has also publicly expressed its confidence in Isaac Don Levine. After a comparatively brief conducted tour in Russia we are not surprised that this correspondent does everything in his power to promote Bolshevism —reproducing, for example, in a favorable light, and without the slightest criticism which he freely applies to the anti-Bolshevists, Trotzky's statement that "the dictatorship of the proletariat is almost entirely the result of the war." Yet this has been the main doctrine of the Bolshevist propaganda from the very beginning and to suggest that the war brought it about rather than the Bolshevik movement amounts to nothing less than a complete exoneration of Bolshevism.

While certain newspapers do not hesitate to accept pro-Bolshevik stories they evidently wish to reject all the mountains of evidence against the Bolsheviki. Hence we read in an editorial in an important daily that one really important fact has been established, namely, that "Russia is now orderly, and, so far as can be discovered, more contented than under the Czar." There is little question that any kind of Russia would be less discontented than under the Czar. Hence this is a miserable subterfuge.

Aside from the inspired propaganda, above described, which is carried on through the columns of certain metropolitan dailies, the country for the past two years has suffered a deluge in books, pamphlets and radical magazines of short or continued duration. The pro-Bolshevist activities of the *New Republic,* the *Nation* and the *Dial* have been notorious. Among magazines which have been recruited to the cause of the Russian Soviets, is *Asia,* "published monthly under the auspices of the American Asiatic Association," which includes among its officers and executive committee a number of loyal Americans, of notable integrity, who would not, we are certain, approve of the pro-Bolshevist policy and propaganda of this magazine. A recent number, devoted almost exclusively to the glorification of the Bolshevist régime, advocating recognition, has been advertised, in large display space in the biggest newspapers throughout the country—a campaign to bring before the American public all this insidious propaganda which must have cost many thousands of dollars.

In a recent issue of *Asia,* Norman Hapgood, now one of the most prominent advocates of some form of political recognition, suggests that, in order to trade with Russia, we "leave the political arrangements" to the cooperatives —though the cooperatives are officially declared by the Soviets to be a branch of their government, which, moreover, has served an ultimatum on the nations that it has declared a monopoly of foreign trade.

Hapgood violently attacks the French, British and American governments, accusing them of deliberate misrepresentation and other crimes, while he defends the Soviets! It is the other governments he accuses of propaganda—thus camouflaging the most aggressive and notorious propaganda the world has ever known. Even the news articles of our press "on the whole" are directed by "old gentlemen" who are guilty of the heinous offense of desiring "to avoid at any cost the real or apparent triumph to the Lenine government."

The few harmless criticisms of the Bolshevists Hapgood's article contains, merely strengthen it as a partisan Bolshevist plea for the recognition of the Soviets—a plea that might have been prepared in Moscow.

We are told that Lenine holds the confidence not only of the Communists but of "a large revolutionary but non-Communist element." A contrast is made between the good and wise Lenine, and the bad Derzhinsky, head of the Extraordinary Commission for Repressing Counter-Revolution. This man and his following represent what is evil in the Soviets! Hapgood has thus invented for them a scapegoat—an idea that never occurred to them in all their multiform, clever, and unprincipled propaganda!

Now, in view of this invention, we are warned against exerting any pressure or influence whatever to bring the Soviets around to democracy. "The more menacing the situation for the Soviet cause the greater has been the power of the Commission"—i. e., Derzhinsky. So all Entente diplomacy of whatever character directed against the Soviets helps the Soviets!

Would Lenine have Hapgood write any differently?

The same issue contains an article by Paul S. Reinsch, formerly American Minister to China, which states certain facts as to the causes of discontent in Asia, but concludes with a whitewash of Lenine. Lenine, declares Reinsch, "must be given credit for calmly facing the enormous problems that confront him at home." Bolshevism "is a serious attempt at economic and social reconstruction." Was the revolution and the institution of a reign of Red guard terror "a serious attempt at economic and social reconstruction?" Reinsch declares: "Mob violence and individual bomb throwing, as well as military expeditions against other countries, with a view to overthrowing the system there, find no encouragement.

It is to be inferred, apparently, that the Bolshevist régime has not only not been guilty of violence itself, but piously holds all violence in abhorrence. As a matter of fact, Reinsch is technically correct in telling that mobs are not encouraged in violence or individuals in bomb-throwing; mob or individual acts of violence would probably be regarded as counter revolutionary, for violence as a method of attaining and armed terror as a means of maintaining its power has been the official program and policy of the régime which Reinsch declares is "a serious attempt at economic and social reconstruction." Violence and terror are a Bolshevist governmental monopoly.

Compulsory Insurance Opposed

(Continued from page 14)

members of my association, nor the hundreds of thousands of women in other fraternal orders. Neither do I believe they represent the Federation of Woman's Clubs, the Women of the State Grange, and other millions of well-balanced women in the State. Neither do I believe that the leaders of the New York League for Women Voters in their demand for Compulsory Health Insurance represent the views of a majority of their own members for whom they assume to speak. In fact, the only people whom I can find that they do thoroughly represent and with whom they seem to be in full accord in this matter are the Socialistic leaders of various organizations with whom they have chosen to align themselves. I am referring now particularly to the Women's Trade Union League, of which Miss Dreier is State President, and whose sister, Mrs. Raymond Robins, is National President. It is a matter of common knowledge that this lady, Mrs. Robins, who tried to thrust Compulsory Health Insurance into the legislative program of the National Suffrage Association, was one of the radicals who participated in the famous—or infamous—Moyer-Haywood parade in Chicago, in 1907, riding behind the *red flag* as President and guest of honor of the Women's Trade Union League. I quote the following from the Chicago *Inter-Ocean,* May 20, 1907:

> "*Mrs. Raymond Robins,* settlement worker and president of the Women's Trade Union League, yesterday led thirty-seven hundred cheering, boisterous *Socialists, anarchists,* trade unionists, members of liberal societies, Jewish *revolutionists* and sympathizers through downtown and west side streets in a demonstration designed to create sympathy for W. D. Haywood, Charles Moyer and George A. Pettibone, leaders of the Western Federation of Miners on trial in Idaho *charged with the murder of former Governor Steuenberg.*"

I also call attention to the following extract from the Chicago *Tribune,* under date of May 20, 1907:

> "The day was made the most of by anarchists, Socialists and other free thinking advocates. . . . The parade started at 3:00 o'clock. *Mrs. Raymond Robins, being accorded the post of honor as the head of the members of the Women's Trade Union League, rode in carriages behind a band of twenty-five musicians. Mrs. Robins carried a large bunch of roses, and was cheered frequently along the line of march. Along with her were Miss Agnes Nestor, Miss Elizabeth Maloney, Miss Emma Steghagen and Miss Georgia Tooters.*"

One might reasonably suppose that with the passing of the years the Women's Trade Union League and their leaders might have changed their radical views, were it not for the fact that at their national convention held in Philadelphia, in 1919, they *adopted resolutions demanding the recognition of the Russian Soviet Government by the Government of the United States.* Not only that, they demanded the *"immediate release of all those whose offense is purely of a political or industrial nature."* They further demanded that our Government *"put a halt to deportation of alien enemies."*

These are the women who are now demanding Compulsory Health Insurance, and who dare question the motives of those loyal citizens who have opposed, and who will continue to oppose to the bitter end this vicious socialistic measure.

We will gladly co-operate in furthering *sane* methods for solving the problems which confront us, but we oppose most emphatically the Socialist program which looks to the nationalization of insurance and medicine—the *nationalization of industry, and the nationalization of women.*

Challenge to the P. E. Church

(*Continued from page* 10)

He assumes as a fact, and ha.. it, that we are in the

> "dawning of a new period, in the way of convictions and practices involved in the satisfaction of the sex urge." (P. 59.)

Before passing from his *facts* to his *remedies*, Mr. Bell lets us understand that he wants and welcomes the social upheaval and revolution, which he politely styles "the new order," because he finds that every one

> "knows among his own friends able men who cannot make enough to live decently, and inefficients and incompetents who have a surplus of this world's goods; people who have souls honorable and beautiful who starve, while others, rascals fit for hell, hold places of power and plenty." (Pp. 34 and 35.)

To cure such inequalities by pulling down all these "places of power and plenty," and promising a paradise to ignorance, sloth and sedition, has been the plan of *other* would-be *reformers* in every age.

Listen to Jack Cade in the 15th century:

> "Be brave then, for your captain is brave, and vows reformation. There shall be in England, seven halfpenny loaves sold for a penny * * * all the realm shall be in common; * * * there shall be no more money; * * * I will apparel them all in one livery that they may agree like brothers."
>
> "Now show yourselves men; 'tis for liberty. We will not leave one lord, one gentleman. Spare none but such as go in clouted shoon." * * *
>
> "And henceforth all things shall be in common." (2 Henry VI., Act IV., Scene 2.)

Having thus discovered the cause of poverty, and the fact that rewards are not always measured according to apparent deserts, Mr. Bell cheerfully girds himself for the task of remedying these conditions. His prescription is not new, being the simple and familiar plan of the anarchist and mob leader; namely, those persons who persist in retaining private property, and hiring labor—whom he groups as "exploiters"—are to be "policed and dispossessed;" and "the common people * * * come into their own." (Pp. 164 and 165.)

The closing pages of the book purport to announce "the Christian attitude toward internationalism."

Mr. Bell evidently regards patriotism and love of country as things of the past—if they ever were virtues, they are no longer so—and he concludes that, before long,

> "there will come, regardless of theorists for or against it, the breaking-down of nationalities and the coming in of the United States of the World." (P. 172.)
>
> "Internationalism, the creation of a pan-national grouping wherein democracy may come to flower politically and industrially, this is the end for which the present conflict is being waged." (P. 186.)

Those who disagree with him as to internationalism, Mr. Bell styles "a certain powerful group of hate-mongering imperialistic pseudo-patriots" (P. 186); and he ends his work with words which, whether meant as a prophesy or as a threat, are at least his supreme effort to pen a crashing climax:

> "From this war we shall go on to one of two things, Internationalism or chaos.
>
> "Then shall we hear above the thunder of the guns and the moanings of the wounded, the cry of those who over Bethlehem's plain sang, 'Peace on earth to men of good will.'" (Sic) (Pp. 186, 187.) * * *

Of Mr. Bell's book, after a hunt for the "deep thoughts" his publishers promised us on the cover, we may truly say, as has been aptly said of a far more famous doctrinal book:

> "What is new in it, is not true; and
> What is true in it, is not new."

One flash of unconscious humor, however, enlivens the work under review, viz., where the author demurely observes (P. 140):

> "There is nothing quite so pathetic as the prophet become the lecturer."

May we not add to that sentence—still in quotation marks, but from a different writer,—

> —"unless it be the man who *thinks* he is *thinking* when he is only feeling?"

But shallowness of thought, and total absence of originality, though sometimes tending to harmlessness, lend no justification to the issuance of an utterly radical and mischievous book purporting, as this one does, to speak for, or at least with the sanction of, the Protestant Episcopal Church.

Incalculable damage to church and community, irremediable injury to all society, must flow from the unrebuked circulation through press and pulpit, of inflammatory follies like this, at a time when America is needing all the sense and all the sinew of her manhood and her churches, to stem the organized, though furtive, Bolshevist invasion, and to pillory the vicious, paid propaganda of the "Third Internationale."

Such a book and such a sermon, by reason of their author's office, as an accredited spokesman and educator in his Church, demand both the close attention and the fearless action of the clergy, the laity and the responsible organized management of that Church.

Mr. Bell has frankly challenged the great, sane, patriotic body of the Protestant Episcopal Church, *either to salute or to pull down,* the red flag he has hoisted over their stronghold.

Some Modern Public Health Problems

By JAMES A. TOBEY, S. B.

(Assistant Director, Department of Health Service, American Red Cross, Washington, D. C.)

ONE of the results of the war which may prove beneficial to this country is the revelation of the necessity for a better national vitality. The results of the draft examinations in which about 30 per cent. of the men in the prime of life were rejected on account of physical incapacity astounded not only the general public but also the medical and sanitary professions. It would seem that this country has neglected that most priceless of all its personal possessions, its health. It has been estimated that 60 per cent. of the defects of those who failed to pass the army examinations were due either to ignorance or neglect. Thus, most of the defects are preventable and further neglect will be an annual national disaster.

There are two factors in the spread of disease. One is the presence of the causative germs and the other the relative susceptibility of the individual. By sanitation, which is the hygiene of man's environment, the germs can be eliminated, reduced, or rendered non-effective. Pure water supplies and efficient methods of sewage disposal are examples of good sanitation. The quarantine and isolation of the sick and of disease carriers is likewise an important measure. Germs, however, are generally harmless if they attack those who possess sufficient bodily strength to resist them. Some people have natural immunity against disease, while in cases where such immunity is lacking, science has provided vaccines and antitoxins for prevention and cure. Smallpox vaccination and diphtheria or typhoid anti-toxin are examples of such methods.

Certain diseases must be controlled in a different manner, however. Tuberculosis and the venereal infections are social diseases and the fight against them involves many factors. Education plays no small part in their control, and treatment of existing cases is one of the means to reduce their spread. Thus, clinics and hospitals must be provided. Malaria is a disease which can be done away with by community action, that is, by getting rid of those mosquitoes which carry it.

The protection of public health is concerned not only with adults, moreover, but must begin at the bottom. Infant welfare is fundamental and child hygiene is one of the most important functions of every health department. Parental instruction and care of infants require clinics and the services of competent infant welfare nurses. Supervision of the milk supply is likewise an essential in this connection. Later in life, school hygiene must be furthered. The rôle of the public health nurse in general cannot be too strongly stressed and that community which has an insufficient number of such nurses, is a distinctly backward place.

Public health administration must also be improved. The protection of the health of the community is a science and requires an expert, provided with proper funds and facilities. The financing of health departments has been entirely inadequate in recent years. The average expenditure on health has been only about 29 cents per capita. Compare this with the several dollars per capita spent on schools, police, parks, roads, libraries, fire protection, and other municipal functions. Qualifications for health officials must be improved. It is not always necessary to have a physician, as now various colleges give courses for health officers in which laymen are adequately trained for these positions. The health officer should always be on a full time basis. At present only 32 per cent. of all the cities of over 10,000 population in this country have full time health officers, and even of this number a great many lack the proper qualifications.

Because the official health organizations have been unable to cope with the situation, many private agencies, such as visiting nurses associations, anti-tuberculosis societies, and the like have been formed. There are over one hundred such national bodies, all working more or less independently, sometimes overlapping in their efforts, but more often leaving gaps. Each is doing valuable work but greater efficiency would be obtained if a scheme of co-ordination could be put into effect. This is another problem of public health.

One of the solutions of many of the problems confronting us is the establishment of a chain of health centers in this country. A health center is a place where people come to get well, keep well, and learn how to stay well. It is the physical headquarters of some productive form of coordination of the health agencies and activities of the community. A health center may in its most elementary form have only one room, or even part of a room, where information on public health is given and where educational work is carried on. In a more advanced stage there may also be a public health nurse and possibly an infant welfare station. Thus, the health center would evolve until finally it might be housed in a building containing the offices of the health department, a laboratory, offices of the various private agencies, and clinics for child hygiene, tuberculosis, venereal diseases, dental hygiene, mental hygiene and physical examinations. It would serve as a clearing house for health information; it would be prepared to render first aid or be the headquarters for disaster relief. Any group in any community which desires to produce something constructive, something very much worth while, can contribute to the welfare of the people by the establishment of a health center. This is the next step in modern preventive medicine.

American Legion Defended from Attacks of New York Central Federated Union

(Editorial from The Garment Worker, May 7, 1920).

By B. A. LARGER.

THE action taken by the New York Central Federated Union on April 30 in deciding to boycott the American Legion appears to us to have been taken without due consideration.

It was certainly a grave matter to condemn an organization created to uphold American institutions and to stand for their defense at all times against forces which are working for their overthrow, to urge all workingmen to withhold their support as to membership and encouragement to such an organization.

The charge that the American Legion had used its members as strike breakers seems to have rested on very inadequate evidence. Such a charge was brought by a local of the Brotherhood of Painters, Decorators and Paperhangers before the central body and it immediately came to the conclusion that the charge was true without giving the officials of the American Legion any chance of defense in their refutation.

It is quite possible that some of the members of the Legion may have acted as individuals in strike breaking for which the Legion was in no way responsible, and about which its leaders had no knowledge.

No organization can be held responsible for the individual acts of its members. Trade unions have their difficulties with members who violate their principles and bring odium on the labor movement, but to judge the whole trade union movement as unworthy of support by wrongful acts of members would not be just. It would be most unreasonable, but unreasonable as is such judgment, that is often the way in which the organized labor movement suffers in public estimation.

Nowhere is there any evidence that the American Legion has authorized its members to become strike breakers, or that it would sanction such a course in any emergency except in the case of a

B. A. LARGER

revolutionary movement directed by a radical element that is seeking not only the destruction of the organized labor movement of America but our democratic institutions. And in such a situation the American Legion would have the support of every patriotic American should it mobilize its force in defense of our government and of our social and economic institutions.

By its action the Central Federated Union has placed itself in a position that must be regretted by every patriotic American, and we trust at a future meeting it will rescind its action and take the only proper course in the appointment of a committee to investigate the charge and then reach a conclusion after it has ascertained all the facts.

Achievements of George W. Perkins

IT will not be only for his notable business success, for his accomplishments in the New York Life Insurance Company, in the firm of J. P. Morgan & Co., in the organization of the International Harvester Company and the International Marine, as well as other corporations and enterprises, that the name of George W. Perkins will go down among the names of the men who have contributed to the greatness of America. As a business man, Mr. Perkins' career offers an admirable example to the youth of the country in application, honesty, and integrity. In politics, he was inspired by the highest ideals of Americanism. He fought against the defacement of natural beauty and was one of the first in the movement to save the Palisades from destruction. His philanthropic work was inspired by kindly humanitarian qualities. Yet one of his greatest achievements was in the work of conciliation between workers and their employers—a problem which has taxed the greatest minds and which is one of the most difficult and challenging.

Mr. Perkins was chairman of the Department on Profit Sharing of The National Civic Federation. In his efforts to bring about a more harmonious spirit of cooperation between employers and workers, Mr. Perkins brought a clear vision and a large human sympathy.

In a notable address before The National Civic Federation conference on profit-sharing, September, 1919, Mr. Perkins outlined his plan of profit-sharing. This plan specified that every business should earn operating expenses, depreciation and returns on honest capitalization; that profits over this sum should on some percentage basis be divided between the capital used in the business and the employes engaged in the business; that in neither case should these profits be immediately withdrawn. These profits should be left in the business for a reasonable length of time; in the case of capital, its profit should be carried to surplus; in the case of employes, their share should be distributed in some form of security representing an interest in the business, and they should be required to hold these securities for from three to five years.

Under such a plan, which he declared he found to be the best, Mr. Perkins said that each employe becomes a partner in the business; he naturally develops a desire to see his investment succeed and bring further profits, and this in turn brings higher efficiency.

In establishing profit-sharing, Mr. Perkins advocated pitiless publicity. "Any profit-sharing plan without an open, honest balance sheet and detailed annual report will never succeed," he declared. "The annual statement of the concern should be full and explicit, so that every man engaged in the enterprise will know what business was done in the preceding year and on what basis profits were and are to be distributed. An honest detailed annual statement tells him officially what the profits were, if any, and this fixes a minimum goal for the coming year, which everyone, individually and collectively, will bend every energy to reach and exceed by as large an amount as possible. . . A detailed annual report is not only necessary to show the organization in prosperous years how the profits were arrived at and what they amounted to, but equally necessary in lean years to show how the losses were arrived at, what they amounted to and why there are no profits to distribute."

Mr. Perkins spoke from a large practical experience. In the early days of his insurance career he found that the agents shifted from one company to another and lacked interest and loyalty. In order to establish a community of interest between the company and its employes he organized the "Nylic" profit-sharing system, which so stimulated the work of the agents that it not only cut down the expenses of the company but in eight to nine years increased the business from $125,000,000 to $347,000,000 a year. Mr. Perkins inaugurated the plan of profit-sharing in the United States Steel Corporation by which preferred stock is sold to employes below the market price. Two statements made by Mr. Perkins give the keynote to his own business career and his efforts in the interests of the workers and the public.

"I have never been in business merely to make money," he said on one occasion. "I easily learned that any man who starts out merely to make money never gets very far."

Several years before his retirement from the firm of J. P. Morgan & Company, in a speech at Columbia University, he declared:

"The corporations of the future must be those that are semi-public servants, serving the public, with ownership widespread among the public, and labor so fairly and equitably treated that it will look upon its corporation as its friend and protector rather than an ever-present enemy; above all, believing in it so thoroughly that it will invest its savings in the corporation's securities and become partners in the business."

Mr. Perkins' belief in publicity and the value of honest criticism was applied to himself. After America entered the war he headed a committee appointed by Mayor Mitchell to prevent abnormal increases in the prices of foodstuffs, and at one time himself had brought into New York large quantities of food in order to prevent extortion by dealers. He was nominated, in September, 1917, by Governor Whitman to be chairman of the State Food Control Board, but was refused confirmation by the State Senate. In the controversy over his appointment he was bitterly opposed by several agricultural societies of the State. Samuel Fraser, head of these societies, was asked why he did not publicly state the reasons for the opposition of the agricultural bodies, and replied that they could not get space in the newspapers. Mr. Perkins told the agricultural organizations to state fully the reasons for their opposition and assured them he would give their criticisms the widest publicity. These criticisms Mr. Perkins had published in 140 New York newspapers at a cost of $25,000 to himself.

At a time of widespread unrest, when passions and prejudices are lashed to high heat by violent and bitter agitation, when the spirit of conciliation and compromise is needed for readjustment, the nation can ill afford to lose such a spirit as that of George W. Perkins.

Problems of a Trade Union Official

[It is a common belief of many who are disposed to be unfriendly toward organized labor that the officials of the unions are always leading the men toward a strike—that these heads feel that unless they are continually denouncing the employers they will lose their own jobs. Quite the contrary is the case; the leaders, up to the point when a strike is called, are almost invariably found counseling peace. As an illustration not only of that spirit but also of the character of the problems with which a union has to deal, we quote from an editorial in the official organ of the International Brotherhood of Teamsters, Chauffeurs, Stablemen and Helpers of America, written by Daniel J. Tobin, its President. Our readers will be impressed by the sane, level-headed arguments advanced by Mr. Tobin. —Editor.]

DANIEL J. TOBIN

THE other day in a conference with the Express Company officials, they held that it is impossible for them to grant an increase in wages to the drivers, chauffeurs and helpers in any one particular district. The national agreement signed between our International Union, the Clerks' International Union and the Express Company officials, deals only with working conditions, and it does not deal with or cover the question of wages.

As our membership understands, the system pursued by us in the past, has been that each city or district takes care of the wages of the men or members of our organization, in that particular city or district. The Clerks' International Union, like the Railroad Brotherhoods, present an agreement which covers their membership throughout the country, although the wages are not the same in each city, because the wages in each district, are usually governed by the cost of living in that district. For instance, it costs more to live in New York, than it does in Des Moines, Iowa, or other cities in the middle west. Rents are higher. Clothing is usually higher and meats and vegetables are higher in the eastern cities than they are in the middle west. Besides, it is usually considered that much more skill is required in driving an auto truck or wagon in a large, congested, industrial center than in a smaller city where there is not much congestion. Therefore the wages of drivers and chauffeurs vary somewhat in the different districts, depending on the locality. I am of the opinion that the rule that has prevailed that express drivers take care of their own wage scales in each district, that it will be impossible to pursue said rule in the future, as the several companies that operated individually prior to the war, have practically amalgamated into one large company, and I believe the time is coming when we must present a wage scale for the men in the employ of this company who are covered by our jurisdiction, that said wage scale will have to deal with the question of wages for our men employed in every section of the country. For instance, we might discuss the question of granting a ten, fifteen or twenty per cent. increase in wages to apply to all men covered by our jurisdiction, which would eliminate the unpleasant conditions that now exist, where one city after another is asking for an increase in wages. In other words, we might be successful in settling up a wage scale in Cincinnati, and two weeks afterwards find that the men in St. Louis or Philadelphia may be on strike. The drivers and chauffeurs in New York City might go on strike in order to get their agreement signed, and our men in St. Louis, Cincinnati, and other places, would have to handle the stuff that was handled at the other end by strike-breakers. Whereas, if a general agreement prevailed, governing wages, the question could be settled for a definite period in every section of the country. That does not mean, that equal wages would prevail in every city and town in the country. The wage increase would be based on a certain per cent. of wages the men are receiving. As stated above, I think the time is coming when we will have to consider the advisability of asking for a general increase in wages for all drivers, chauffeurs, helpers, stablemen, and others, in the employ of this company, that are covered by our jurisdiction, and this is one of the questions that will be discussed and considered by the General Executive Board.

This wage board which has been appointed to take up the question of wages for the railroad brotherhoods, and other common carriers, was to consider the question of wages and the men were not to go on strike while the question was under discussion, but some of the membership of the railroad brotherhoods have gone on strike, although the majority of the membership have remained at work until such time as the question has been considered by the wage board created for this purpose. Increased rates for the railroads and express company are also to be considered by the interstate commerce commission, acting jointly with the wage board, as I understand the law. The express company officials contend they are losing two million dollars a month, or twenty-four million dollars a year. In other words, that their revenue is not sufficient to meet the running expenses, or, that they are losing twenty-four million dollars a year because their rates are not sufficient, or high enough, to meet the increased cost of operation. The government is subsidizing the express company, or has guaranteed to pay 5½ per cent. on the invested capital, besides paying all other deficits suffered by the express company up until next January. In a conference I had with the express officials in Cincinnati, they claim that the government will not allow them to increase wages, which would increase the operating expenses of the company, because of the fact that the government itself would have to pay the increased cost of operation. In other words, the company's stockholders will not lose anything until next January, no matter how much the increased cost of operation may be, because the government guarantees them 5½ per cent. over and above all expenses on the invested capital of the company. This is one of the reasons why the express officials say they cannot open up the question of wages. Another reason is, they claim they have not the power to adjust wages, that that is a question which must be decided by the new wage board, created by Congress. After this board is appointed, it will take some time to get ready, then they will have to listen to all the evidence that will be submitted by each of the large organizations of railroad brotherhoods, then listen to rebuttal evidence submitted by the railroad companies, offsetting the claims of the brotherhoods. The express company is asking for a 25 per cent. increase in rates. They cannot increase their rates one cent without permission to do so. The question confronting us is, when will this wage board get around to discussing the question of an increase in wages for the express employes? You understand that the wage boards I have dealt with before were very slow in rendering a decision. It is true, they may make their award retroactive, but it is also a fact that they do not hurry in their deliberations, or in their decisions. In the meantime, the increased cost of living continues up and our membership are working under a hardship, especially in the districts where wages are low. However, it must be taken into consideration that if strikes can possibly be avoided, this is the best course to pursue. If you quit your work, and by your action endeavor to defeat not only the express company, but the government, which is practically back of the express company, undoubtedly you will lose your wages, and the question is, will you not be worse off than before? I am stating the case plainly to our membership engaged at this work, so that each member may understand his position. There is this possibility, that when the wage board does meet, they can make their award retroactive, or date back to a certain time. There is also the possibility that the wage board may not grant any increase, or they may grant a substantial increase, or something else.

The company officials contend that having universally established the eight-hour day amongst their employes is a step in advance of other drivers and chauffeurs, while I contend that a man who works eight hours on an express truck or wagon is doing more than the average driver who works nine or ten hours on any other kind of a wagon or truck. Milk wagon drivers, bakery drivers, tea and coffee drivers, and other branches of our trade, in many instances, work but six or seven hours, or a sufficient length of time to cover their routes, while the average man who drives a team of horses although required to be on the job ten hours does not put in more than eight or nine hours of actual work, and in most instances he does not have to hustle and rush like the express driver or chauffeur. I trust that our express employes will use careful, calm, cool judgment after reading this article and will make no mistake. Above and beyond all, rash or radical action very seldom gets anything for any one. You may say, it is all right for me to argue from this standpoint, and that if I had to work on a wagon for one hundred dollars a month, I would find it a different story, but I wish to say, I have also worked on a wagon, and for much less than the amount mentioned; I have had some trouble making both ends meet; that I understand every phase of the situation; I also know that the most dangerous remedy to apply is the remedy of strike, and that this remedy should not be applied except when all other remedies fail.

Is the Labor Problem Unsolvable?

(*Continued from page 5*)

attempting by law to force any man to work, and, speaking by and large, the determination by the public to resist tyranny broke both strikes.

One of the most popular arguments for the Kansas law is that it treats industrial disputes in the same manner as society treats all other disputes, through courts of law. Do we not submit all our differences, of whatever nature, to judges and juries, even our most intimate affairs? The control of our children, our marriage relations, the question of inheritance and thousands of other matters are controlled by statutes which are interpreted and applied by courts of law. To say that there are any more delicate questions arising in the relations between the employer and the employee than between a man and his wife is, they argue, an absurdity. This view is so generally maintained by the public that it is almost accepted as an axiom. Every lawyer, educated to revere and trust the courts in his every-day practice, naturally upholds this view. The fact that so many distinguished lawyers were on the President's Second Industrial Commission doubtless accounted for the court idea, panels and juries bulking so large in its conclusions. But are industrial disputes to be classed with all other disputes? Emphatically, No. The principles governing disputes in general have been evolved out of centuries of experience, by long and tedious processes, and, concededly, just codes and precedents have been established governing almost every conceivable phase of human misunderstanding. Not so in the industrial world. There is no agreed code, no agreed precedent. Changes in public sentiment from the time not long ago when, as Mr. Gompers pointed out, it was a crime to ask for higher wages, when legislation was sought for a maximum wage, while now it is sought for a minimum wage, have been so revolutionary as to baffle all attempts to determine a status from which a code could be evolved. Recall the President's First Industrial Conference last October, composed of some of the ablest and most representative men from the three groups—the public, labor and capital.

It was hoped that this conference might be able to establish a code which should govern industrial relations, but it could agree upon nothing and adjourned, each group denouncing the others and many members denouncing their fellow members within their own groups. The President then called a second conference, composed only of representatives of the public, leaving out representatives of the two groups—capital and labor—which had to be reconciled. This conference, of course, had no trouble in agreeing, but both capital and labor vigorously disapproved of its findings. The same result would have followed any conference called by either of the other groups. The Chamber of Commerce of the United States is now taking a referendum on the subject. It will have no trouble in reaching an agreement because only one side is doing the voting. With equal facility, the American Federation of Labor unanimously agreed upon an industrial program at a meeting representing the 113 international organizations composing that body. Take the latest and, may I say, most conspicuous illustration, the so-called Gompers-Allen debate itself. Could any one glimpse the faintest outline of code in the tense, and at times heated, atmosphere at Carnegie Hall that night? On the codes, civil and criminal and the precedents established for the government of all the other disputes with which society has to deal, there could not be staged a debate at Carnegie Hall, nor would the President's conferences, composed as the first one was, even have the least difficulty in agreeing on them. In fact, even to suggest the holding of such a conference would be taken as a sign of lunacy. But when it comes to the so-called capital and labor problems, as stated in the first paragraph, the only thing Messrs. Gompers and Allen could agree upon was the time and the place of the debate.

But can nothing be done to bring about better relations between capital and labor? Must we sit with folded hands and look upon these industrial conflicts with utter complacency? No. Certainly we should strive to do everything in our power to hasten the day when selfishness, ignorance, social, religious and class hatred and all those things that interfere with the operation of the Golden Rule are swept away. Then will come industrial peace.

But that means the millennium, says one. True; but industrial peace is not the only great problem that is awaiting that day for solution. International peace is in the same category. Then there is religious union and concord yet to be attained. Observe the differences, for instance, between the Protestant and the Catholic churches, to say nothing of the differences among the various denominations of the Protestant Church, and between factions within individual Protestant denominations, for example those between the Northern and Southern branches of the Methodist Episcopal Church, which forty years' earnest endeavor has been unsuccessful in reconciling.

Moreover, consider the distressing problems in our methods of government—federal, state and municipal—that are unsolved, and some of which seem to be unsolvable. Look at the municipal government in our large cities. What Christian citizen can here feel proud of the results of his use of the great privilege of the ballot? What progress have we made in two thousand years in dealing with that terrible problem, the social evil, to mention only one among many others? Are we not expecting too much when we hope to discover some mechanical slot-device solution for the intricate and baffling problems involved in the relations between employers and workmen?

But because we have never found a complete solution to all these problems, is no reason to despair. We are making tremendous progress in many fields of human endeavor. Compare the conditions of the wage earner, for example, fifty years ago with those to-day—his wages, hours of work, hours of toil for children, conditions of labor for women, etc. An enumeration of the beneficent legislation in the last twenty-five years in the interest of the worker would alone furnish justification for the hope that, slowly but surely, we are working towards a better understanding and appreciation of our industrial problems, which, of course, in the end means industrial peace. But let us not be discouraged because it is not achieved over night.

Revolution Preached to M. E. Clergy

(*Continued from page* 11)

cut off—not very much when compared with the French Revolution and the Russian revolution in 1905. And so Russia has stated that the actual revolution has come to an end, and there is now awakened a spirit of conciliation, and they have begun to compromise, and the word Bolshevik is no longer popular in Russia, and the Bolshevists do not like to be called that themselves, and they want to be known as the Soviets.

"There are a good many folks and some Methodist ministers who oppose Bolshevism because they do not know anything about it. . . . We in the United States are not yet prepared for Bolshevism, and therefore we will be obliged to handle our revolution in a different manner. But that it is coming there is no doubt. There is one party, however, that understands Russia very well and that is the united plutocracy of the world, and they know that if Bolshevism succeeds in Russia then plutocracy is doomed in the world at large. And therefore they have combined their resources and influences to kill the thing before it conquers the world. They are working hard to kill the 'infant' before it learns to walk. *If Russia succeeds as I hope to God it will,* then I say that plutocracy is doomed in the world, and that is my last word to you."

Rev. Dr. Henry stated he differed with Dr. Hecker in some of his remarks and then asked: "I want to ask a question in regard to this morning's paper. There was an item in that paper stating that the Russian leaders were trying to carry a revolution into France, and if I understood Dr. Hecker in his statement a little while ago he made the declaration that Trotzky was not interested in anything but the Russian people, in helping them, but I have felt myself that Trotzky is interested elsewhere outside of Russia."

"I think that Trotzky is interested in Russia," Hecker answered. "I do not like to mention his name myself, personally, but it is true that the Russian revolutionists have made up their minds to carry the revolution all over the world. I know that man who was arrested, according to the report you read there. I know Loriot. They were regular French Bolshevists and they are fighting to organize a similar thing in France, and are dead determined to bring a revolution on in France; after that in England and other countries. I think the Russians are divided into two groups, those following Lenine and those following Trotzky. Lenine wanted to have a conciliatory policy in regard to the other countries, and Lenine is trying particularly to furnish friendly relations with America, *and in this connection Raymond Robins has done more than any other one man.* Trotzky represents the radical group and wants to carry the thing into the whole world. I know they know that I am opposed to it, but particularly as far as our America is concerned. I want to see Russia on its feet and try out the experiment, but I do not want them to pour something down our throat—we have our own brains to use, but I am also opposed to forcing anything into Russia's throat. The world is ready for the revolution and I know it is working for it."

Rev. Dr. George A. Simons, who had been head of the Methodist Mission in Petrograd, had just previously entered the meeting room and took the floor. "I have not had the pleasure of looking into Dr. Hecker's face since eight years ago. I want to be fair to Dr. Hecker, as I want to be fair to the real Russia, and I came in a few minutes ago and heard from one of the men upstairs that someone was whooping it up for Bolshevism down here. Now, I did not hear the address. I do not know whether on the whole it was pro-Bolshevik, anti-Bolshevik, pro-Soviet or anti-Soviet. I would like to put a few questions to Dr. Hecker. First, when were you last in Russia?"

"I was last in Russia geographically eighteen years ago, but among the Russian people I was up to the time I have come back, so I have been with millions of them," Dr. Hecker answered.

Dr. Simons said:

"Dr. Hecker is right that we must not confuse the terms Sovietism and Bolshevism; that they are not synonymous, but it so happens that Bolshevism is camouflaged for Sovietism. We know a rat when we smell one, and whether he calls himself a supporter of Sovietism or not, he is a Bolshevik. Now, I have no patience with this kind of propaganda. I do not say he is making propaganda for Bolshevism, but I do say that so long as the State Department issues statements I will believe these statements in preference to any others. The last statement came from Robert Lansing, and there you will find under the official stamp of the United States Government absolutely reliable data as to the conditions in Russia under Soviet rule."

Socialism Unmasked

(*Continued from page 4*)

ments of the Third Internationale, Zinoviev, president of the Executive Committee, declared, in an address dated "Smolny, November 5, 1919:

"The proletarian revolution is moving forward with powerful steps. In the unprecedented wave of strikes, which has started in Europe and America, the old, rotten trade organizations and their 'leaders' struggle helplessly. These pitiable pygmies are unable to stop the powerful rush of the waves of proletarian revolution. The strike of millions of English railway men, the grandiose strike of American longshoremen, of German metal workers, and of Italian workmen of almost every trade, have a world-wide historic significance. This same strike wave has begun in all Europe, just as such a wave preceded the proletarian revolution in Russia. . . . The powerful strike wave, rushing over the whole world, gives new strength to the Communist Internationale. . . . The Communist Internationale serves as the speaking trumpet of the millions of workmen of Europe and America. . . . The Communist Internationale listens attentively to every movement of the soul of the working class. . . . The Communist Internationale will continue to grow and become strong as the proletarian revolution develops. . . . In a year, two years, the Communist Internationale will rule the whole world."

In working toward the objectives of the Third Internationale, in seeking to undermine and destroy the organized labor movement, to build up "one big union" of class conscious workers, which shall be responsive to one supreme authority, to the end that the general strike shall be employed to overturn the present order, is it to be supposed that the Socialist party in America will not act as the direct and chief agency? In the immediate work of the Executive Bureau at Amsterdam and of its subbureaus, to foment and finance strikes, to develop small strikes of protest into larger phases of revolutionary activity, will the Socialist party of America—the chief arm of the Third Internationale in the United States—remain unresponsive and inert?

The answer to this is to be found in the program laid down at the Congress of the Third Communist Internationale in Moscow, March, 1919, and in the direct answer made to that program in the Manifesto adopted by the Socialist party of America at its Emergency convention in Chicago, September, 1919. That response, which stands today, is plain, unequivocal and direct.

AMERICAN SOCIALISTS' RESPONSE TO MOSCOW.

The Manifesto of the Moscow Congress, dated March 26, 1919, was signed by Lenine, Trotzky, Zinoviev, Rakovsky, and Platten. It was published and distributed in the United States by the Literature Department of the Socialist party of America by which it was characterized as "undoubtedly the greatest declaration ever issued from any working class tribunal since the Communist Manifesto of Marx and Engels."

The world program of the Third Internationale is introduced by a denunciation and repudiation of those Socialists who were loyal to their governments in the Great War and who have advocated social changes by legal and parliamentary methods. It voices the aspirations and program of the "uncompromising," revolutionary section of the movement, of which the Russian Bolsheviki are the chief exponents and of which Lenine stands as the supreme commanding figure. It declares that in its program and methods it but follows and fulfills the program laid down in the Manifesto of Marx and Engels. It begins:

> Seventy-two years have gone by since the Communist party announced their program to the world in the form of a Manifesto drawn up by the two greatest teachers of the proletarian revolution, Karl Marx and Frederich Engels. . . . We, Communists, representatives of the revolutionary proletariat in different countries in Europe, America and Asia, now assembled in the powerful Soviet city of Moscow, both feel and consider ourselves to be the followers of, and participants in, a cause for which the program was drawn up seventy-two years ago. Our duty is to gather together the revolutionary experiences of the working classes, *to free the movement from the harmful interference of opportunist and social patriotic elements, to unite the forces of all genuine revolutionary parties in the world proletariat, and thereby to facilitate and hasten the victory of the Communist revolution.*

The Socialist party of America, at its Emergency Convention last September responded to this, repudiated the "opportunist and social patriotic elements" denounced by Lenine's Moscow congress, and accepted the invitation to join "the forces of all genuine revolutionary parties" under the aegis of the Internationale begotten by Lenine. The sentiments of the Chicago Manifesto directly echo those of the Moscow Manifesto, the phraseology is often identical, the terms used are analogous, but in some cases the language of the Manifesto of the Socialist party of America is even stronger and more violent than that of the Congress which was organized by, and now functions as the world revolution agency of, the Russian Bolshevist régime.

The Chicago Manifesto declares its repudiation of loyal and parliamentary Socialists and its stand with the Russian Bolsheviki thus:

> Recognizing the crucial situation at home and abroad, the Socialist party of the United States at its first national convention after the war, *squarely takes its position with the uncompromising section of the International Socialist movement. We unreservedly reject the policy of those Socialists who support their belligerent capitalist governments* on the plea of "national defense" and who entered into demoralizing compacts for so-called civil peace with the exploiters of labor during the war and continued a political alliance with them after the war.
>
> We, the organized Socialists of America, pledge our support to the revolutionary workers of Russia in the maintenance of their Soviet Government, to the radical Socialists of Germany, Austria and Hungary in their efforts to establish working-class rule in their countries, and to those Socialist organizations in England, France, Italy and other countries, who during the war, as after the war, have remained true to the principles of UNCOMPROMISING INTERNATIONAL SOCIALISM.

The Manifesto of the Moscow Internationale further denounces the Socialists who supported their governments in the war and who oppose revolution by violence, thus:

> The opportunists who before the war exhorted the workers, in the name of the gradual transition into Socialism, to be temperate; who during the war asked for submission in the name of *Burfrieden* (domestic peace) and defense of their Fatherland, now again demand of the workers self-abnegation to overcome the terrible consequences of the war. If this preaching were listened to by the workers, capitalism would build out of the bones of several generations a new and still more formidable structure leading to a new and inevitable world war. Fortunately for humanity this is no longer possible.

The Socialist party of America, in the Minority report on International Relations, recently adopted by an overwhelming majority in a referendum vote of the party membership, echoes the denunciation of Moscow:

> Any Internationale, to be effective in this crisis, must contain only those elements who take their stand unreservedly upon the basis of the class struggle, and their adherence to this principle is not mere lip loyalty.
>
> When leading Socialists join their national governments upon a coalition basis they accept and sanction policies which hinder Socialists and the working class generally from taking full advantage of the opportunities for deep-seated changes which the war creates. This makes the workers content with superficial reformist changes which are readily granted by the capitalist class as a means of self protection from the rising tide of working class revolt.

After referring to the collapse of the Second Internationale upon the outbreak of the war, and the failure of the Berne Conference, the Minority report further says of the loyal Socialists who supported their governments in the war:

> We consider that a new Internationale which contains those groups which contributed to the downfall of our former organization must be so weak in its Socialist policy as to be useless.

The Minority report declares that "in principle and in its past history" the Socialist party "has always stood with those elements of other countries that remained true to their principles"—the revolutionary extreme parties of Italy, Switzerland, Norway, Greece, Bulgaria, and the Russian Bolsheviki.

> The Socialist party of the United States, therefor, declares itself in support of the Third (Moscow) Internationale.

The Third Moscow Internationale, in its Manifesto, deflected the blame for precipitating the world war from Germany and laid it chiefly to Great Britain. It declared the war to be an "imperialistic war," which has passed into a "civil war which lines up class against class:"

> The war, which had been prepared for decades, broke out through direct and conscious provocation on the part of Great Britain. The British Government reckoned on giving support to Russia and France until they were exhausted and at the same time had crushed Germany, their mortal enemy. But the strength of the German military machine proved too formidable and called forth not only an apparent, but an actual intervention in the war on the part of England. It was the military superiority of Germany that caused the Government at Washington to give up their apparent neutrality. The United States assumed, as regards Europe, the same part that England had played in former wars and has tried to play to the last, namely, the plan of weakening the one side with the help of the other, by joining in military operations for the sole purpose of securing for themselves all the advantages of the situation. . . .
>
> The imperialistic war which pitted nation against nation has passed and is passing into the civil war which lines up class against class.

The Socialist party of America, in its Chicago Manifesto, deflected the blame for precipitating the world war from Germany and lays it to "the struggle for foreign markets" of "competing imperialistic nations." After denouncing the peace as "a peace of hatred and violence, a peace of vengeance and strangulation," it declares the ending of the war as ushering in "the new order" and the time for the "immediate task" of accelerating the class struggle, of organizing the workers on class lines, and of bringing about the Socialist revolution:

> It now becomes more than ever the immediate task of international Socialism to accelerate and organize the inevitable transfer of political and industrial power from the capitalist class to the workers. . . . The workers of the world are already ushering in the new order of true civilization. . . . Even in the United States the symptoms of a rebellious spirit in the ranks of the working masses are rapidly multiplying. The widespread and extensive strikes for better labor conditions, the demand of the two million railway workers to control their industry, the sporadic formation of labor parties apparently though not fundamentally in opposition to the political parties of the possessing class, are promising indications of a definite tendency on the part of American labor to break away from its reactionary and futile leadership and to join in the great emancipating movement of the more advanced revolutionary workers of the world.

The Third Communist Internationale lays the responsibility for civil war, or violent and drastic methods during a revolution, to the "arch-enemies" of the laboring classes. Driven to violent methods, civil war is forced upon the working class, and, the Moscow Congress declared, they "must answer blow for blow." The Manifesto declared "necessary the arming of the workers."

(*To be continued*)

Need for Legislation Against Disloyalty

(*Continued from page 8*)

"Now, I might say just a few words in passing with respect to the opposition which has arisen against these bills. Those who have been opposed to this bill are in large measure those against whom the bills are directed. I may say that it started in a committee of eight in the Rand School of Social Science, to which were added members of committees from various revolutionary unions. When I speak of revolutionary unions, I mean exactly that thing. I mean those unions that have broken away from the American Federation of Labor and organized under the tutelage of the revolutionary elements in this country, and are organized for the purpose of putting into effect a general strike if the time ever arrives when they see a prospect of success. Those unions have schools and are teaching their members the doctrines that organized government should be overthrown by unlawful means, by means of the general strike, and, although some of the professors that teach in these schools are professors in various colleges or have lately been professors in various colleges, they also joined this committee of protest. Then there joined them some very earnest and, I believe, sincere people representing the settlement houses.

"I had a very interesting illustration of exactly the methods of procedure. I got a letter about two weeks ago. The letterhead is 'Committee for Freedom of Education,' and in small type it says, 'To aid the Rand School of Social Science in Its Fight to Prevent Interference with Freedom of Study and Teaching.' And then appear the names of Francis Hackett, of *The New Republic;* B. W. Huebsch, of *The Freeman;* Freda Kirchwey, of *The Nation.* I may say Huebsch was one of those who went over with the Ford Peace Party and has been a great pacifist ever since. Freda Kirchwey, of *The Nation,* is the wife of Evans Clark, one of those who is in charge of the commercial section of the Ludvigh Martens' Bolshevik Bureau here. And then were the names of Winthrop D. Lane, of *The Survey*; Norman Thomas, of the *World Tomorrow*; and Mary R. Sanford. This letter says:

"'Do you know that the right of people to study and learn what they choose is being jeopardized in New York State at this minute? The Lusk Committee is trying to throttle the traditional American right to an untrammeled education. If Senate Bill Introductory Number 1120 should become a law, every class conducted by a labor union, every club formed by a social settlement, every course of study carried on by a Socialist organization or any other private agency would be subject to the censorship of the State Board of Regents—a body of twelve men elected by the Legislature.' As though that was any very serious condemnation! And then it says at the bottom:

"'Money is needed at once. We must have $25,000 to fight this bill,' and asks me to send them some money.

"If anyone really took the trouble to follow the issues of the *New York Call,* they would see that exactly the same method which was adopted to keep us out of war has in a smaller measure been adopted to stir up public opinion against these bills; namely, a small committee in the Rand School reaching out by accretion, bringing in more and more sympathizers, and then writing letters. They have a system—they had before the war when, at the press of a button, twenty five thousand letters went to President Wilson on a given day so as to urge him to keep us out of war. That system is organized, is the result of a definite plan, it gives the appearance of representing public opinion, and it has the effect of really misleading some very fine people, because, in the first place, they don't tell the truth about the bills. In the second place, people are very much like sheep; they will follow where they think the biggest crowd is.

"All of this is part of a general plan to meet the general subversive movement, in a constructive way. We don't think it is complete; we don't think it is any more than a step, but we believe that each one of these bills is a step forward and will be helpful."

In the general discussion which followed, J. E. Armstrong, of the Brooklyn, Y. M. C. A., asked:

"With regard to Bill 1274, I want to say I am in entire sympathy with the objects sought by the bill. One question naturally arises, as to whether the exemption which is granted there to a well established sect or denomination does not defeat one of the purposes of the bill in that it might exempt certain denominations which claimed to be denominations or sects, which have been prosecuted for the very thing the bill seeks to stop."

"What you say may very well be true," answered Mr. Stevenson. "However, we felt that one of the most dangerous things to do was to pass upon or in any way regulate the religious expression of the people, and we didn't think that even the Board of Regents was competent to pass upon the religious expression of the people, and we have to rely on the loyalty of the various religious denominations themselves in respect to the schools that they start. It may be some schools carried on by some denominations may teach disloyalty. We cannot close all doors at once. We have got to take a step at a time, and must be careful what steps we do take."

"To press the point one step further," said Mr. Armstrong, "seeing that a school founded by a specific denomination or sect would therefore be exempt, but if several denominations got together jointly, as they are represented in the Y. W. C. A. and the Y. M. C. A., then that exemption does not prevail; or is it the intention of those who drew the bill to offer such exemption to a recognized institution such as these?"

"I don't believe the exemption would prevail and I don't believe the Y. W. C. A. or the Y. M. C. A. is teaching anything that is going to be subversive of the interests of the State, or going to teach disloyalty," answered Mr. Stevenson. "Consequently, I don't see they have anything to fear."

"We haven't anything to fear," said Mr. Armstrong, "but it seems unfair for us to be outside the class of religious organizations."

"Some of them have already dropped some of the religious part. The Y. W. C. A. has simply dropped from its platform its really religious feature at its latest convention, I believe.

"I don't know whether there are any representatives of the Y. W. C. A. here or not—" protested Mr. Armstrong.

"It has been brought to my attention that it has," said Mr. Stevenson.

Rev. F. Ernest Johnson, Research secretary of the Commission on the Church and Social Service of the Federal Council of the Churches of Christ in America, referring later to Mr. Stevenson's statement that the Y. W. C. A. "had decided to drop religion from its program" remarked: "I hope you will not make that statement anywhere else."

"I believe they—in referring to Jesus as their Savior—struck out 'as their Savior' from their program, did they not?" rejoined Mr. Stevenson.

"I have the honor to be a member of the National Board," said Mrs. Thomas Gladding, "and was present at the convention to which Mr. Stevenson has referred, and was one of the leaders of the opposition to the motion that was carried by so large a majority. And I want to say that while the Y. W. C. A. has not yet become a non-religious organization, those of us, Mrs. Finley J. Shepard and myself and a number of others, who led the opposition, do feel the Y. W. C. A. is very likely to become a non-religious organization if it goes on in the legislation which began in Cleveland. So Mr. Stevenson is not altogether wrong."

"Radical papers are claiming that Mr. Moot is opposed to these bills and that the Board of Regents is ignorant of them?" said Mrs. Finke of the Cosmopolitan Club.

"May I answer the first part of that?" said Mr. Berger. "With regard to Mr. Moot, I know that I may be committing an indiscretion in saying what I am about to say, but at least I am stating the fact. In Buffalo there has been and is now a woman teaching in the public schools by the name of Pratt—Anna S. Pratt, I think. That has been called to the attention of the public school authorities of Buffalo and they have known it for some four or five months. This woman is a member of the Communist Party and was active in helping to organize that party. I believe that Mr. Moot has something to do with the public school system of Buffalo. Although I may be unkind in my criticism, we may take those two facts in conjunction—the fact that this Pratt woman, a member of the Communist Party and organizer of the Communist Party, is being permitted to continue to teach in the public schools of Buffalo, and Mr. Moot's opposition to these bills."

"What is she teaching?" asked Mrs. Finke.

"She is teaching the various courses of instruction provided by the curriculum of the public schools," said Mr. Berger.

"And not communism?"

"There is a provision in the Educational Law requiring the teaching of patriotism to all the children in our public schools, and it is inconceivable to me how a person who is a member of the Communist Party can teach patriotism to children in this state," answered Mr. Berger.

"Why can't the Education Law——"

"Suppose she does by word of mouth tell the children, 'This is the flag of the United States; you must revere it.' She can't do that with sincerity and with feeling and with depth, and get her message over, and be a member of the Communist Party at the same time."

"Is she teaching communism in the Buffalo public schools?" insisted Mrs. Finke.

"She is not," replied Mr. Berger.

In answer to a question by one of those present as to whether a teacher cannot teach communism "between the lines," without mentioning the word "communism," Mr. Stevenson answered:

"I think it is the easiest thing in the world to do that. A teacher need not say, 'This is communism', or 'These are the principles of the Communist Party', but by emphasizing certain things and minimizing others and saying half truths and saying a great many other things in the clever way that most of the organizers of the Communist Party have, and the way in which they evade the law, it is a very easy thing to teach children communism by indirection. I have not the slightest doubt that is being done."

The Rev. Mr. Crouch, of the Interchurch World Movement, said:

"The *Times* this morning carries the story that a half million and odd appropriation was rejected by Congress on the ground that it did more harm than good. Isn't this a parallel case? Here is the national legislature throwing out a request for an additional five hundred thousand dollars to extend the activities of the Attorney General of the United States in prosecution which some people consider persecutions. How can we tell that the hundred thousand dollars, if granted by the Legislature of this state, would not work in the same way in the state, and by and large in the nation? How can we tell the proposition put up here is at all the right thing to do? How are we sure that we are conforming to American traditions when introducing a

system of repression, when the thing to do is to ask these dissatisfied aliens to come and talk it out. A prominent social worker made the suggestion in a paper not long ago—invite these people to the City Hall and talk it out. Don't prosecute them until, you know what they are after. It seems to me we must see this side of it."

Mr. Berger answered: "I thought I made it quite clear this bill 1272 has specific reference to the prosecution on the charge of criminal anarchy. Let me for the benefit of the gentlemen, who evidently did not hear what I said, again read the meaning of criminal anarchy as defined by the lawmakers of this State eighteen years ago.

"It is this: Section 160 of the Penal Law: 'Criminal Anarchy defined. Criminal anarchy is the doctrine that organized government should be overthrown by force or violence, or by assassination of the executive head or of any of the executive officials of government, or by any unlawful means. The advocacy of such doctrine either by word of mouth or writing is a felony.'

"I really think the time has arrived when people in this country should commit themselves either in one camp or the other. All those who by indirection, by direction, or by coddling or apologizing, or encouraging in any way, shape or manner the teaching of the doctrine that organized government should be overthrown by force and violence, and the executive heads of government be assassinated, should go in one camp, and all the other people in the country who are opposed to the propagation of this doctrine should go in another camp. We have had altogether too much of this apologizing for the revolutionary radical.

"Furthermore, I believe the persons who are encouraging criminal anarchy are not students of history. They have not read the story of the French Revolution and the stories of a few other revolutions. They have been so busy and so active, to give the impression that they are 'broad' and 'liberal' that they have leaned over backward."

"As I read the history of the Alien and Sedition Act of 1798, the country was then faced with the same kind of danger as we say it is faced with today," pursued the Rev. Mr. Crouch. "The propagandists of the safeguarded alien were absolutely inimical to the state or nation, as any other aliens are today. Those acts were passed by the forces of the Federal Party. Practically they were the last legislation passed by the Federal Party. The Democratic Party today, who are proposing certain acts of this kind, is the same party which under the leadership of Thomas Jefferson had to do with the acts, alien and sedition, of 1798, in the face of a danger just as grave to the fathers of our country as what we think we face today. Now, I ask you again, is that the way to go about this business?"

Prof. William Bradley Otis, of the College of the City of New York, challenged Mr. Crouch:

"Tolerance is admirable, but there is a point where it ceases to be a virtue. Lincoln at times during the Civil War even denied the writ of habeas-corpus. Shortly after the Proclamation of Neutrality was issued, 'Citizen Genet' arrived at Charleston, April 8, 1793. Genet apparently regarded the United States as an appendage to the French Republic. Without consulting Washington, he at once issued commissions to privateers which began capturing British vessels off the Atlantic coast. He demanded immediate payment of our debt to France, although payment was not yet due. Numerous 'Democratic Clubs' were organized here in imitation of the French Revolutionary clubs. Genet was told that he must respect the Proclamation of Neutrality. He threatened to appeal to the people as the true sovereigns in America, in the belief that Washington would be forced to resign. Washington then demanded and obtained Genet's recall in 1794.

"In the light of this incident may we not infer that were Washington president of the United States today, he would deal with the self-styled 'Ambassador of Soviet Russia', 'Comrade' Martens, now in this country, in much the same way that he dealt with 'Citizen' Genet?

" 'Nations, like kings,' says Emerson, 'are not good by facility and complaisance. The kindness of kings consists in justice and strength. Easy good-nature has been the dangerous foible of the Republic, and it was necessary that its enemies should outrage it, and drive us to unwonted firmness, to secure the salvation of this country in the next ages'.

"I think that is a quotation, Mr. Crouch, that we should have in mind, in discussing these things."

Plan to Create National Service Committees

(*Continued from page 6*)

alty, meaning thereby the preservation and the application of American ideals. This sounds a little academic, but we shall not deal with it upon an academic basis. Having found a common basis, what are we to do?

First and foremost, let us secure a line-up—get people pledged—give them an opportunity to express themselves. Let us do this officially with organizations and then, working through organizations, do it individually with their members and with the persons within the range of their influence. We shall find that multitudes of them are awaiting the opportunity, and awaiting it eagerly.

One large business organization, the National Board of Fire Underwriters, recently undertook a diagnosis of this nature. A letter was mailed to local fire insurance agents in different parts of the country and a pledge card reading as follows was sent to them:

> "Realizing the great importance of maintaining American institutions and preserving American ideals in the face of widespread and insidious attempts to destroy them, I desire to express my full sympathy with the FIRE INSURANCE AMERICANIZATION MOVEMENT."

It is understood that my signature commits me to nothing beyond the following specific points:

1. To exercise my influence as opportunity may offer for the suppression of disloyalty and the promotion of Americanism;
2. To support the widest possible dissemination of American ideals through the schools, the press, the pulpit and in public meetings."

This pledge was purposely made in the simplest form, but was so phrased as to include both the defensive and the constructive features. Almost at once a flood of signatures began to pour in and soon aggregated between twenty-five and thirty thousand; many of them were accompanied by added expressions of enthusiasm and of great desire to assist.

We have become fully convinced that there are millions of people in the United States who are literally chafing under the necessity for remaining silent in the face of a continuous propaganda of disloyalty, and yet lack the means for direct expression.

How shall we make this early part of the proposal operative? We suggest that there be formulated a series of pledge resolutions aligning first the national organizations and then their sub-divisions—these to be followed by a systematic promotion of the obtaining of signatures that shall in time include the largest possible proportion of the American public.

A MECHANISM OF LIMITLESS POSSIBILITIES

Now let us assume that a large number of national organizations will make satisfactory response, will pass the desired resolutions, will appoint the desired national service committees and will secure the passage of similar resolutions, together with the appointment of service sub-committees, by their state and local subdivisions. *There would then be in existence a mechanism, national in its scope and of almost limitless possibilities for national welfare.* How may it be put to work? Obviously, by applying general principles to diverse conditions such as are found in various fields of activity. In other words, the credit men will be dealing with one set of conditions, the brick manufacturers with another, the sheet metal workers with a third, the fruit raisers with a fourth, the railway conductors with a fifth, and so on indefinitely. All of them are American, all of them are potentially patriotic and all of them are actively patriotic when a sufficient occasion arouses their interest, as in the time of the war.

Aside from certain fundamentals, the method of application—which is to say, the intensive work, must be differentiated. This can hardly be dictated from an outside source; it may be advised upon and its results may be coordinated with the work in other fields by means of a general Advisory Committee, but it must be developed through the special knowledge of the special committee which has it in charge. Therefore, we suggest the following points as to the character of the work to be undertaken by the proposed committees:

THE FUNCTION OF THE COMMITTEES

1. Each would be an organ of *cooperation*—i.e., would make it possible for the work to become national in scope and harmonious in character among the various organizations.

2. Each would be an organ of *application*—i.e, would apply such general work intensively to the particular organization which it represents, adapting it to the conditions therein existent.

(Note) Thus no committee would be dependent upon the success of any other but all would contribute directly to the general result and collaterally to one another's morale.

3. Each should endeavor to secure the nearest possible approach to a 100 per cent. enrollment within its field to a fundamental pledge of defensive and constructive loyalty.

4. Each should endeavor to exercise the largest possible influence to the same end upon that portion of the outside public with which it comes in contact.

5. Each should have a sub-committee upon publicity to make its activities known within its particular sphere. This committee should secure the cooperation of its particular class and trade publications and should consider other means such as advertising, press bulletins, window posters, etc., for enlisting the support of its organization members and of its particular public.

6. Each should vigorously attack any centers of disloyalty or lukewarm patriotism which may develop within its own sphere.

7. Each should take immediate steps to see that the question of unqualified loyalty to American ideals be kept actively to the fore during the present political campaign. To this end it should subordinate partisan politics to an absolute insistence upon untainted loyalty as the *sine qua non* for every candidate and every platform.

8. Each local sub-committee should seek to develop cooperative relations with sub-committees of all other organizations in the same locality in order to avoid duplication and waste motion.

RECAPITULATION

This plan involves, first, the creation of National Service Committees by all national organizations that are potentially patriotic;

Next, the creation of local sub-committees of these national committees to work intensively in

and through local sub-divisions of these national organizations;

And, finally, an opportunity for the various sub-divisions of the whole American public to align themselves with and to express themselves through their natural affiliations.

Its most immediate application would be, of course, defensive. Let people say what they will, there *is* now in progress an attack upon our national ideals and our form of government. It cannot be smiled out of existence but it can be manœuvered out of existence through organization. The best way to avoid serious disorders is to show a degree of preparedness and an emphasis of intention that will render the attack nugatory.

That, specifically, is the task for the next few months, but such an organization as we have in mind has its bigger and more permanent work in constructive efforts for a better America. It is the application of the old maxim "United we stand; but divided we fall." When we become self-centered or class-centered we lose the dominating sense of our nationalism and are no longer conscious of our American ideals. Then we begin to think in terms of politics and of economics; then we lose our hold upon spiritual principles; then dangers multiply and progress slackens. With the lessons of the war vividly and freshly in mind, we are convinced that the most urgent need and the most potent safeguard of the present and the future will be found in a restoration of our *national consciousness,* freed from emotion and placed upon a basis of practical, efficient organization.

Facts Concerning Health Insurance

(*Continued from page 9*)

adequate and badly administered, still remains grossly inadequate and badly administered. There has been some increase in accommodations for the treatment of tuberculosis; but such increase has not been notable. It is true that a Ministry of Public Health has been created to coordinate public agencies for health promotion; but such coordination remains yet to be effected, and it remains yet to be demonstrated that the health insurance, with its heavy financial commitments, will not be a drag to retard, rather than a stimulus to hasten, proper reorganization and development. As has recently been stated by such an eminent medical authority as Sir Arthur Newsholme, M. D., K. C. B., former Chief Medical Officer of the Local Government Board for England: "It cannot be affirmed that any marked public benefit has accrued" from the health insurance, whereas, "if the same amount of money had been placed in the hands of the public health authorities, to provide adequate medical aid to those needing it, of the kind most lacking and which they could least afford to obtain, great benefit to the public health would have been secured." It stands to reason that the enormous expenditures for health insurance leave just so much less money available for the direct measures needed for the prevention of illness and the improvement of the public health.

It is true, as the authority referred to indicates, that the health insurance has served to spread knowledge of the need of, and to increase the public demand for, more adequate provisions for the health of the community. But the health insurance act was itself the result—and not the cause—of a highly aroused public sentiment on the subject, which sentiment has since merely been accentuated by experience with the insurance, principally by its shortcomings and defects; and one of the effects of the insurance has been to divert public interest and attention towards the pecuniary *relief* of and away from the *prevention* of illness.

Surely the adoption of compulsory health insurance would at least be a mighty dubious and indirect way of hastening adequate and proper public provisions for the prevention of illness, and, consequently, the positive assertion that, "compulsory insurance will stimulate the needed campaign for the prevention of illness," merits at least to be sharply challenged, if not quite so positively denied as in the statement criticised.

(7) Finally, Dr. Harris criticises two statements on page 25 of the pamphlet reading as follows: "Health insurance in Switzerland, except in one or two Cantons, is voluntary. Since the Swiss system did not take effect until well in 1914, when normal operations were promptly disturbed by the war, there is yet no evidence accumulated to show that it is successful or otherwise."

Although inaccurate in details, according to information later obtained, those statements are yet substantially true, whereas Dr. Harris's statements in criticism are very misleading. In Switzerland sickness insurance is generally voluntary (subsidized); but it has now (end of 1918) been made compulsory, variously for some classes of workers, in three Cantons and in a number of Communes in eight other Cantons—out of a total of twenty-two Cantons. The statements criticised were made in refutation of a statement by a partisan of compulsory insurance to the effect that "health insurance, on a *compulsory* basis, is in force in . . . Switzerland, and is successful." . . . But the fact is, as above specified, that health insurance in Switzerland is generally *voluntary.* Dr. Harris argues that the success of the *voluntary* insurance can be inferred from the number of persons who have of their own accord applied for admission. Granted. But it is the prevalence and success of the *compulsory* insurance that is question. And there is nothing to show that such insurance has yet proved to be "successful" or otherwise. It is true that the official reports show that such insurance has been successfully inaugurated; but true success is to be determined by results, and there is no information yet available to demonstrate its successful results in practice. It is simply begging the question in controversy to assume that compulsory insurance is successful without waiting to observe how it works. That something or other—presumably disturbed conditions arising out of the war—did retard the inauguration and normal operation of the Swiss insurance system, is most positively indicated by the official reports; and, in that respect also, the statements criticised are more accurate than the criticism.

Concluding his attack, Dr. Harris says: "The tone of the pamphlet is extreme throughout; the statements of the persons named above" [some of whom are of the highest character] "are referred to as 'malicious untruth', 'rhetorical assertion', 'pure demagogism', etc." The tone of the pamphlet is in truth strong, as is required and justified by the character of the propaganda against which it is directed. But when Dr. Harris insinuates that the persons he mentions are each and all affected by the application of some such epithet as those he quotes, he is seriously misleading.

The pamphlet criticised, containing some forty pages of highly condensed data, was somewhat hurriedly prepared, and it would be marvelous indeed if it were entirely free from errors. One inadvertent error therein has been discovered. On page 6 appears a quotation from the editorial page of the London "Democrat", which, upon the authority of a trade union representative, was attributed to the editor, Mr. W. A. Appleton. Later information, however, has disclosed that this was a mistake and that the matter quoted was not written by Mr. Appleton personally. That is the only material error in the pamphlet yet brought to my attention. Dr. Harris's charge that many of the arguments and quotations therein are partial and misleading is very far from the truth.

Questions for Every Good American

(*Continued from page 13*)

tinue to contribute to the payment of salaries to persons who we know are using these agencies for revolutionary propaganda, and who derive their importance largely from the fact that they represent organizations supported by persons of standing in the community?

Another matter perplexes me. I have subscribed substantially to college, church and charity endowment funds and had expected to subscribe still more until I discovered the undermining work of the radicals in those institutions. I then saw that, if the doctrines of Socialism which these preachers and teachers are promoting should be accepted, the endowments to which I had already contributed would be rendered useless. If all profits, rents and interest are to be abolished by confiscation of property, how will the bequests made to those various institutions be carried out ? Of course, they cannot be, as we see by the experiment in Russia, where Marxian Socialism has had so complete and disastrous a trial.

Once again, I am an advertiser in my own business and in other corporations that advertise in a much larger way. I have been shocked to find that I was advertising in publications which I regard as wholly dangerous sheets. Of course, this advertising is all placed through agencies, and I have found I could have some voice in saying where, and where not, the advertising should be placed. Shall I do it?

The question I want to ask you, or through you, the Department on Study of Revolutionary Movements, is: Shall we go on contributing to or patronizing any institution that cannot show 100 per cent. Americanism, or that is not free from professors who advocate Socialism or any of its appendages, Bolshevism, Communism, I. W. W.'ism, etc.? As to schools, we could afford to provide private tutors for our children, but many are not in a position to do this. In the case of the church, we can choose another where the clergyman is a good, sound American, but would not that be a cowardly running away from duty?

I raise these questions with you, because I know there are thousands of other parents who feel as we do. If we could get together, I think we could make ourselves felt. As it is today, the Rand Schoolites, with their hosts of affiliated interests, the revolutionary weeklies and the so-called "liberal" preachers and college professors, have so intimidated the responsible boards of directors and trustees of our public institutions that they are afraid to rid their pulpits, classrooms and organizations of these teachers of disloyalty and revolution lest they should be attacked as "stand-patters," "witch-hunters," "minions of Wall Street," etc. If the parents of the children should organize, if the patriotic members of the churches and of the college alumni should organize, and all three groups join hands, there would soon be created in this country a force which could beat down the impudent pretensions of the comparatively few, but noisy, shallow individuals who advocate freedom to teach and to preach contempt for our institutions, our country and our flag.

Will not your Department on Study of Revolutionary Movements take the initiative in this matter? I am not proposing that we organize to boycott every one who disagrees with us, but I know that there are thousands, yes, millions, of men and women in this country who would not wish to sit idly by and permit their children to be made followers of the Red Flag when, by organizing, they could wield a power that would deal effectively with this perilous situation.

Very truly yours,

TYBREL PRINT, NEW YORK.

LABOR AND AGRICULTURAL POLICIES

POSITION OF REPUBLICAN AND DEMOCRATIC PARTIES REGARDING INDUSTRY AND AGRICULTURE AS EXPRESSED IN RESPECTIVE PLATFORMS AND BY CANDIDATES

THE two great groups of producers in America, who are chiefly concerned in any national political campaign, are organized labor and the farmers. Industry and agriculture constitute the basic producing elements of the nation, and the proposed policies of the two great national parties in regard to these are of interest to every citizen. Both the Republican and Democratic parties in their respective platforms, and both Senator Warren G. Harding and Governor James M. Cox, in their speeches of acceptance, have declared themselves on these great interests. These expressions, both in the platforms and acceptance speeches, speak for themselves and are of national importance.

SENATOR WARREN G. HARDING

GOVERNOR JAMES M. COX

REPUBLICAN PLANKS

The platform adopted by the Republican National Convention contains the following planks on agriculture and labor:

AGRICULTURE

The farmer is the backbone of the nation. National greatness and economic independence demand a population distributed between industry and the farm, and sharing on equal terms the prosperity which is wholly dependent on the efforts of both. Neither can prosper at the expense of the other without inviting joint disaster.

The crux of the present agricultural condition lies in prices, labor and credit.

The Republican party believes that this condition can be improved by practical and adequate farm representation, in the appointment of governmental officials and commissions; the right to form co-operative associations for marketing their products, and protection against discrimination; the scientific study of agricultural prices and farm production costs at home and abroad, with a view to reducing the frequency of abnormal fluctuations; the uncensored publication of such reports; the authorization of associations for the extension of personal credit; a national inquiry on the co-ordination of rail, water and motor transportation with adequate facilities for receiving, handling and marketing food; the encouragement of our export trade; an end to unnecessary price fixing and ill-considered efforts arbitrarily to reduce prices of farm products which invariably result to the disadvantage both of producer and consumer; and the encouragement of the production and importation of fertilizing material and of its extensive use.

The federal farm loan act should be so administered as to facilitate the acquisition of farm land by those desiring to become owners and proprietors and thus minimize the evils of farm tenantry, and to furnish such long-time credits as farmers may need to finance adequately their larger and long-time production operations.

INDUSTRIAL RELATIONS

There are two different conceptions of the relations of capital and labor. The one is contractual, and emphasizes the diversity of interests of employer and employee. The other is that of co-partnership in a common task.

We recognize the justice of collective bargaining as a means of promoting good-will, establishing closer and more harmonious relations between employer and employees and realizing the true end of industrial justice.

The strike or the lockout, as a means of settling industrial disputes, inflicts such loss and suffering on the community as to justify government initiative to reduce its frequency and limit its consequences.

We deny the right to strike against government, but the rights and interests of all government employees must be safeguarded by impartial laws and tribunals.

In public utilities we favor the establishment of an impartial tribunal to make an investigation of the facts and to render a decision to the end that there may be no organized interruption of service to the lives and health and welfare of the people, the decisions of the tribunals to be morally, but not legally binding, and an informed public sentiment to be relied on to

secure their acceptance. The tribunal, however, should refuse to accept jurisdiction except for the purpose of investigation, as long as the public service be interrupted. For public utilities we favor the type of tribunal provided for in the transportation act of 1920.

In private industries we do not advocate the principle of compulsory arbitration, but we favor impartial commissions and better facilities for voluntary mediation, conciliation and arbitration supplemented by that full publicity which will enlist the influence of an aroused public opinion. The government should take the initiative in inviting the establishment of tribunals or commissions for the purpose of voluntary arbitration and investigation of this issue.

We demand the exclusion from interstate commerce of the products of convict labor.

DEMOCRATIC PLANKS

The Democratic platform declared itself in agriculture and labor as follows:

AGRICULTURAL INTERESTS

It was a Democratic congress in the administration of a Democratic President which enabled the farmers of America for the first time to obtain credit upon reasonable terms and insured their opportunity for the future development of the nation's agricultural resources. Tied up in supreme court proceedings in a suit by hostile interests, the federal farm loan system, originally opposed by the Republican candidate for the presidency, appealed in vain to a Republican congress for adequate financial assistance to tide over the interim between the beginning and the ending of the current year, awaiting a final decision of the highest court on the validity of the contested act. We pledge prompt and consistent support of sound and effective measures to sustain, amplify and perfect the rural credits statutes and thus to check and reduce the growth and course of farm tenancy.

Not only did the Democratic party put into effect a great farm loan system of land mortgage banks but it passed the Smith-Lever agricultural extension act, carrying to every farmer in every section of the country, through the medium of trained experts and by demonstration farms, the practical knowledge acquired by the federal agricultural department in all things relating to agriculture, horticulture and animal life; it established the bureau of markets, the bureau of farm management and passed the cotton futures act, the grain grade bill, the co-operative farm administration act and the federal warehouse act.

Meanwhile the Republican leaders at Washington have failed utterly to propose one single measure to make rural life more tolerable. They have signalized their fifteen months of congressional power by urging schemes which would strip the farms of labor; by assailing the principles of the farm loan system; by covertly attempting to destroy the great nitrogen plant at Muscle Shoals upon which the Government has expended $70,000,000 to supply American farmers with fertilizers at reasonable cost; by ruthlessly crippling nearly every branch of agricultural endeavor, literally crippling the productive mediums through which the people must be fed.

We favor such legislation as will conform to the primary producers of the nation, the right of collective bargaining and the right of co-operative handling and marketing of the products of the workshop and the farm and such legislation as will facilitate the exportation of our farm products.

LABOR AND INDUSTRY

The Democratic party is now, as ever, the firm friend of honest labor and the promoter of progressive industry.

Laws regulating hours of labor and conditions under which labor is performed, when passed in recognition of the conditions under which life must be lived to attain the highest development and happiness, are just associations of the national interest in the welfare of the people.

At the same time the nation depends upon the products of labor; a cessation of production means loss and, if long continued, disaster.

The whole people, therefore, have a right to insist that justice shall be done to those who work and in turn that those whose labor creates the necessities upon which the life of the nation depends must recognize the reciprocal obligation between the worker and the state. They should participate in the formulation of sound laws and regulations governing the conditions under which labor is performed, recognize and obey the laws so formulated and seek their amendment when necessary by the processes ordinarily addressed to the laws and regulations affecting the other relations of life.

Labor, as well as capital, is entitled to adequate compensation. Each has the indefensible right of organization, of collective bargaining and of speaking through representatives of their own selection. Neither class, however, should at any time nor in any circumstance take action that will put in jeopardy the public welfare. Resort to strikes and lockouts which endanger the health or lives of the people is an unsatisfactory device for determining disputes, and the Democratic party pledges itself to contrive, if possible, and put into effective operation a fair and comprehensive method of composing differences of this nature.

In private industrial disputes we are opposed to compulsory arbitration as a method plausible in theory, but a failure in fact. With respect to government service, we hold distinctly that the rights of the people are paramount to the right to strike. However, we profess scrupulous regard for the conditions of public employment and pledge the Democratic party to instant inquiry into the pay of government employees and equally speedy regulations designed to bring salaries to a just and proper level.

SENATOR HARDING'S SPEECH

Senator Harding, in his speech accepting the Republican nomination for President, said of labor and agriculture:

It must be understood that toil alone makes for accomplishment and advancement, and righteous possession is the reward of toil and its incentive. There is no progress except in the stimulus of competition. When competition—natural, fair, impelling competition—is suppressed, whether by law, compact or conspiracy, we halt the march of progress, silence the voice of aspiration and paralyze the will for achievement. These are but common sense truths of human development.

The chief trouble today is that the world war wrought the destruction of healthful competition, left our storehouses empty, and there is a minimum production when our need is maximum. Maximums, not minimums, is the call of America. It isn't a new story, because war never fails to leave depleted storehouses and always impairs the efficiency of production. War also establishes its higher standards for wages and they abide.

I wish the higher wage to abide, on one explicit condition—that the wage-earner will give full return for the wage received. It is the best assurance we can have for a reduced cost of living. Mark you, I am ready to acclaim the highest standard of pay, but I should be blind to the responsibilities that mark this fateful hour if I did not caution the wage-earners of America that mounting wages and decreased production can lead only to industrial and economic ruin.

I want, somehow, to appeal to the sons and daughters of the Republic, to every producer, to join hand and brain in production, more production, honest production, patriotic production, because patriotic production is no less a defense of our best civilization than that of armed force.

FOR INDUSTRIAL UNDERSTANDING

Let us return for a moment to the necessity for understanding, particularly that understanding which concerns ourselves at home. I decline to recognize any conflict of interest among the participants in industry. The destruction of one is the ruin of the other, the suspicion or rebellion of one unavoidably involves the other. In conflict is disaster, in understanding there is triumph. There is no issue relating to the foundation on which industry is builded, because industry is bigger than any element in its modern making. But the insistent call is for labor, management and capital to reach understanding.

The human element comes first and I want the employers in industry to understand the aspiration, the convictions, the yearnings of the millions of American wage-earners and I want the wage-earners to understand the problems, the anxieties, the obligations of management and capital, and all of them must understand their relationship to the people and their obligation to the Republic. Out of this understanding will come the unanimous committal to economic justice, and in economic justice lies that social justice which is the highest essential to human happiness.

I am speaking as one who has counted the contents of the pay envelope from the viewpoint of the earner as well as the employer. No one pretends to deny the inequalities which are manifest in modern industrial life. They are less in fact than they were before organization and grouping on either side revealed the inequalities, and conscience has wrought more justice than statutes have compelled, but the ferment of the world rivets our thoughts on the necessity of progressive solution, else our generation will suffer the experiment which means chaos for our day to re-establish God's plan for the great tomorrow.

Speaking our sympathies, uttering the conscience of all the people, mindful of our right to dwell amid the good fortunes of rational, conscience-impelled advancement, we hold the majesty of righteous government with liberty under the law to be our avoidance of chaos and we call upon every citizen of the Republic to hold fast to that which made us what we are, and we will have orderly government safeguard the onward march to all we ought to be.

The menacing tendency of the present day is not chargeable wholly to the unsettled and fevered conditions caused by the war. The manifest weakness in popular government lies in the temptation to appeal to grouped citizenship for political advantage. There is no greater peril. The Constitution contemplates no class and recognizes no group. It broadly includes all the people, with specific recognition for none, and the highest consecration we can make today is a committal of the Republican party to that saving constitutionalism which contemplates all America as one people and holds just government free from influence on the one hand and unmoved by intimidation on the other.

We call on all America for steadiness, so that we may proceed deliberately to the readjustment which concerns all the people. Our party platform fairly expresses the conscience of Republicans on industrial relations. No party is indifferent to the welfare of the wage-earner. To us his good fortune is of deepest concern, and we seek to make that good fortune permanent.

The Answer—"Root out Revolutionary Radicalism"

HUNDREDS RESPOND TO ENQUIRY OF DEPARTMENT ON STUDY OF REVOLUTIONARY MOVEMENTS—DECLARE MENACE IS SERIOUS AND CALL FOR ACTION

THE Department on the Study of Revolutionary Movements of The National Civic Federation, Condé B. Pallen, chairman, sent to a representative group of Americans a copy of the letter written to a member of the Federation, in which various grave questions were raised, and which was referred to that Department. This letter was published in full in the preceding issue of the REVIEW under the heading "Questions for Every Good American to Consider." The questions raised were:

> What are the rights and duties of parents in the education of their own children? What are the responsibilities of the church-member and the citizen in the contribution of moneys to philanthropic and charitable organizations under whose shelter and through whose machinery revolutionary propagandists disseminate their doctrines? And what is the responsibility of the business man advertising in periodicals which advocate and propagate a radicalism contrary to our American ideals and institutions?

The opinions of those to whom the letter was sent were asked. The response has been spontaneous and overwhelming, and shows that the questions are regarded as momentous and serious. Answers have come from hundreds of people, including government officials, senators, congressmen, clergymen, college presidents and trustees, bankers, lawyers, business men, editors, officials of organized labor, agriculture, chambers of commerce and patriotic societies, from women as well as men.

The concensus of opinion is: First, that parents have not only the right to demand that their children be educated according to the principles of morality and patriotism, but that it is their duty to see that our schools and colleges be cleansed of all disloyal and subversive influences; Second, that it is the duty of the trustees of colleges and universities and members of school boards to maintain such vigilance that it will be impossible for Socialist and radical professors and teachers to have a place in these institutions, and that, moreover, if disloyal professors and teachers are allowed places, the trustees and members of school boards are themselves responsible; Third, that it is the right and duty of church members to extirpate Socialistic teachings from the churches, to expel Socialist preachers from their pulpits, and to refuse contributions of money to all philanthropic and charitable organizations through whose machinery revolutionary propagandists disseminate their doctrines; Fourth, that loyal American business men cannot advertise in, and thus support financially, papers and periodicals which are propagating radicalism and seeking to destroy American institutions.

It is the general opinion that the menace has become acute, and that if we would save our institutions every American individually must help combat the forces of revolutionary radicalism, in schools, colleges, churches, charitable and philanthropic institutions and wherever found. If it is impossible to clear these organizations of radicals by individual protest, the majority of the writers agree that the time has come for united and organized action on part of all who believe in the Constitution and our form of government.

The writers of the letters, in the majority, attribute the growth of dangerous teachings in our institutions to laxity and indifference. They declare that every college trustee, every official of a charitable institution, every officer of a church in which radicals are allowed to hold positions is directly responsible for any damage done. It is not only the duty of college trustees to safeguard their institutions from pernicious teachings, but their obligation to see that education is in keeping with the moral law and American ideals. Every contributor to religious, charitable and philanthropic organizations, whose workers use their machinery to promote radicalism, shares in their efforts to destroy our government.

It is evident from the letters that the vast body of American opinion is sound and clear on these issues. It has been also gratifying to find that various organizations throughout the country, such as chambers of commerce, patriotic societies, et cetera, have offered to cooperate in the movement to root out radicalism. A very striking significance attaches to a certain small fraction of the replies, in which the questions are evaded or in which "academic freedom of discussion," which would allow the promulgation of radical teachings, is defended. With only a few exceptions these have come from the presidents of certain colleges and persons engaged in the industrial sections of certain religious organizations.

All the letters received are being briefed and will be submitted by Chairman Pallen to the Department of which he is head for its consideration and further action if such should be decided upon.

It is not possible, on account of space, to publish more than brief quotations from a small proportion of the letters received. These will, however, serve to show the unanimity of opinion existing among all classes and professions, and bring together various opinions and suggestions of concrete and practical value.

Mr. William C. Redfield, President, American-Russian Chamber of Commerce, wrote in part as follows:

> One suggestion occurs to me, viz: That in public schools and in institutions of higher learning, supported in any measure by public funds, is there objection to requiring that the teachers and officers should take oath to support the Constitution of the United States? This is not only proper in itself because the teachers in such institutions are public officers, but might serve to eliminate some who could not take the oath. It seems to me to be more than open to question whether a teacher has the right "to teach anything he thinks is the truth" which is antagonistic to our Constitution so long as he accepts pay from the state thereunder constituted.

Mr. S. J. Lowell, Master of the National Grange, Fredonia, N. Y., wrote in part as follows:

> Every adult person owes it to themselves and posterity that they look carefully to the conduct and the subjects which are being taught in our common schools, as well as the higher institutions of education.
>
> I feel quite certain that if advertising were withheld from many of the questionable periodicals which are put out, that they would have no means of support, and would, therefore, be forced to close up their business, and a mighty good thing it would be, too. This would be more effective than Governmental control, as when you go out to censor articles, you stir up division of opinion which really some times accentuates radical ideas. There is much need of a movement of this kind at the present time.

Mr. Daniel J. Tobin, General President International Brotherhood of Teamsters, Chauffeurs, Stablemen & Helpers of America, wrote in part as follows:

> Parents of children should look carefully into their education and guard against having the minds and hearts of their children poisoned against the true principles of our American institutions. . . No money should be contributed to any institution without the principles and purposes of that institution being thoroughly investigated. Many employers and men wtih large incomes contribute their money without making any investigation. . . No man should help publications that are preaching anti-American doctrines by giving them advertising, because, upon the advertisements, which are read by the public, depends the life of the publication. When men pay out money for advertising space in publications that are continually printing articles which attack the principles of our great country and are endeavoring to promote radicalism, such as we find in Russia and other European countries, they are helping to plant radicalism and to destroy the principles for which our fathers fought and died.

Rev. Dr. Ernest M. Stires, Rector of Saint Thomas's Church, wrote in part as follows:

> . . . Americans are too easy-going, too careless. Their boasted toleration is often nothing better than good-humored laziness. It is time, not only that the Church Militant should be truly militant for all that is essential to safety and true progress, and against all that is destructive. The Church must inspire this wholesome spirit in the family and in the state.
>
> It is the duty of parents to know what their children are being taught, and to feel responsible for giving them that education which human experience has thoroughly tested and found protective of happiness and progress.

Hon. Joseph E. Ransdell, United States Senator from Louisiana, wrote in part as follows:

> In all public schools at least thirty minutes of every school day should be devoted to discourses by members of the faculty on patriotism and the duties of citizens to State and Nation; and a like period before the beginning or after the close of each day should be set aside for religious instruction, conducted in classes adapted to the faith of the children by a member of their own church. Moreover, the greatest care should be exerted to prevent atheists and socialists from being selected as teachers or professors in any of our schools or colleges, from the humblest to the highest; and parents should sternly refuse to send their children to any institution of learning which has atheists or socialists among the members of its faculty.
>
> The National Civic Federation is engaged in a labor of the greatest importance. Never has the world been more disturbed than today. Revolution against the laws of God and the fixed order of society is rampant in Europe, and, unfortunately, has many adherents on this side of the water.

Hon. Howard Sutherland, United States Senator from West Virginia, wrote in part as follows:

> I agree thoroughly with you that socialistic propaganda must be destroyed at its source and that a great deal of this mischievous doctrine is being taught in our schools and colleges and is having a tremendous influence upon our boys and girls in these institutions, and that something definite and practical should be done to curtail or stop it. I am in sympathy with any movement toward that end.

Mr. P. Tecumseh Sherman, Attorney, New York, wrote in part as follows:

> In my opinion the public which supports our universities ought to take a far more positive stand to rid those institutions of their loose thinking and loud talking socialist professors of sociology. Liberty of opinion and of research is one thing. But those who pay for teaching have the right to impose the condition that their money shall be used only for teaching truth and wisdom.
>
> I also believe that parents sending their children to colleges and universities ought to exercise far more supervision than they now do to prevent their sons and daughters from taking the courses of immature, sensational or socialist teachers. To prevent anything of the kind is not only their right but also their duty—a duty both to God and Country.
>
> Legitimate business in America, in popular disrepute because of its past sins, has "laid down" under vilification. That is all wrong. We ought to organize and fight, with all legitimate means in our

power, all propaganda under whatsoever name, by whomsoever conducted and howsoever carried on, which is sensationally exaggerated or falsified, or which seeks to obscure the fact that economic conditions in this country are about the best in the world and difficult to improve.

Mr. E. F. Walker, Secretary Rhode Island Textile Association, wrote:

Parents have a right to insist that the teachers who are instructing their children should be of unquestioned loyalty to this Country, that they should have but one allegiance and that to the School Department that employs them, and that radical preachments and tendencies of any nature should be the cause for instant dismissal.

In reply to the second question, in my opinion, the radicals in the Inter-Church Movement and in various other philanthropic and charitable organizations owe their existence and continued pernicious activities almost entirely to the mentally lazy altruists and philanthropists who contribute to these activities without first ascertaining how, where and why their money is to be spent. . . Refusal of contributions on the part of worthy church members to movements that were un-American or unwise would mean an end of radical propaganda as far as these organizations are concerned.

The business man who advertises in periodicals which advocate and propagate radicalism contrary to our American Ideals and Institutions is either a fool or a knave.

Dr. Harry Pratt Judson, President of The University of Chicago, wrote:

Most parents have the right to regulate the education of their own children and have the undoubted duty of providing the best education they can. Such rights, like all other civil rights are subject to our paramount obligations to the state, and parents should not be allowed to train children in ways subversive of public morality and social order. . . It seems to me quite plain that none should contribute funds to organizations which employ those funds to subvert our American ideals and institutions.

Mr. Angus S. Hibbard, President, United Americans, Illinois, wrote in part as follows:

It is the duty of parents to keep informed about the educational process, what is being taught in the schools and also the teaching and influence which is brought to bear upon students in matters referring to government, and the rights and privileges of citizenship. If disloyalty is being taught, it is in my judgment the duty of parents to make it known and to combat it. If nothing can be done single-handed, parents should join together for this purpose. We should see to it that sedition is not taught in the public schools in this country nor in fact in any other school or college.

Rev. Father E. P. Tivnan, S. J., President Fordham University, wrote in part as follows:

Until the people of America are awake to this peril which is in their midst and refuse to support such institutions by financial contributions or by sending their sons and daughters there for training, the dance of death will continue and it will only be a question of time, before we are in the throes of revolution.

A remedy I would suggest is that publicity be given those institutions in which solid and orthodox principles are the basis of the educational system and that the people at large be urged to support them financially and otherwise.

Mr. R. R. Waddell, of The Dayton Malleable Iron Company, wrote:

It is the right and the *duty* of every parent to see to it that only those things which are right are going into the training of his children. There are thousands who cannot and will not exercise the right or fulfill the duty but it is there none the less.

You have raised some questions here which must be answered in the shed blood of true Americans I fear. More people than we think are nibbling at the bait of Socialism and will be landed for Bolshevism. The great trouble with us as a people is that we do not think. The home life of our people is almost nil and these things are breaking down the very barriers that we have erected against barbarism, and as a people we are going far afield. We shall return in due time but with great suffering and loss.

Mr. A. B. Farquhar, of A. B. Farquhar Company, York, Penna., wrote in part as follows:

You might as well, or better, poison the bodies of people as to poison their minds. Such institutions of the character of the Rand School poison the mind of the young, and should not be allowed to continue their nefarious work. One of the best means of fighting this Bolshevik virus, which is spreading its slimy poison throughout the world, is to touch their pocket nerve, boycott all Socialists. The Socialist includes the anarchist, I. W. W. and Bolshevik. They are all tarred with the same stick. . . . Any minister or school teacher who advocates Socialism should be promptly dismissed. We should not attend a church or school where such teachings are sanctioned.

Mrs. C. H. Ditson, New York City, wrote:

The average American is easy-going and unawake to danger until it raps loudly on his door. Some sort of solidarity that would gather in not only the thinking ones but the un-thinking as well, (in spite of themselves,) could do much to counteract the wave of license and lawlessness that appears to be sweeping over the entire world.

Mr. Henry B. MacFarland, Attorney, Washington, D. C., wrote:

I would no more contribute to support any preacher, teacher, writer or publisher of Bolshevism (comprehending all un-American radicalism) than I would contribute to support any preacher, teacher, writer or publisher of polygamy. In fact the latter, forbidden by law, is less degrading than the former. The time has come to fight for our country, its constitution, its church, its homes, its life against a foe more subtle, more ingenious, more devilish, more deceptive than the Hun!

Mr. W. M. Spaulding, President of The Graton & Knight Manufacturing Company, Worcester, Mass., wrote as follows:

It is most unfortunate that our instructors as well as our clergymen are so thoroughly tainted with these socialistic ideas. That children should come in contact with men of this type is a great menace to the future prosperity of this country, and every effort possible to avoid this contact, either through educational institutions or churches, should be made.

Mr. H. B. Wilcox, of the Merchants-Mechanics First National Bank, Baltimore, Md., wrote:

The responsibility of the church-member and the citizen who contributes to philanthropic and charitable organizations under whose shelter and through whose machinery revolutionary propagandists disseminate their doctrines cannot be avoided, and every means should be adopted to impress upon them the necessity of serious discrimination in such undertakings. The responsibility of the business man advertising in periodicals which advocate and propagate a radicalism contrary to our American ideals and institutions is likewise very serious.

Mr. Albert L. Wyman, Secretary of The Employers Association of Paterson, N. J., wrote in part as follows:

As to the rights of parents, I believe that parents have the right to expect that the Board of Education is going to see to it that instructors are engaged who are loyal to American Institutions, and to eliminate those who are disloyal.

I also think that it is the duty of parents to make it certain that this kind of instruction is being given, and to bring to the attention of the Board of Education any activities or teachings on the part of the faculty of the schools attended by their children which indicate that radicalism prevails in the schools.

Mr. George L. Berry, President, International Printing Pressmen and Assistants' Union of North America, Pressmen's Home, Tenn., wrote:

When it is evident that the policy of the church, the club, the society or advertising medium is being precipitated by un-American influences a strenuous, energetic and outspoken fight and protest should be made. If then an adjustment cannot be made in accordance with American traditions it is manifestly obligatory that the person withdraw from such associations both in membership and financial support.

It is, of course, the obvious obligation to combat at every turn any effort to undermine our national traditions. Silence and inactivity gives encouragement and tacit indorsement to revolutionary tendencies.

Mr. Clifton Reeves, The Willys-Overland Company, wrote:

As a father I would say that it is the duty of any parent to carefully examine, through authoritative channels the kind of education his children are receiving, and to withdraw his child from the school when they persist in teaching un-American doctrines. With reference to responsibility as a Church member: for years I have been a member of the Baptist Church, trustee and a deacon. It is a duty on the part of a deacon of our church to see to it that the pastor does not preach doctrines against the well-being of the laity, including, of course, any doctrines that are revolutionary or against the constitution of the United States. If the Board of Deacons have had their attention called to this matter persist in permitting a minister to preach such doctrines, I personally would withdraw from such a church and seek another of my own faith where they preach sane and American sermons. The same principle holds good in relation to philanthropic and charitable organizations. As a business man, I certainly would not advertise in periodicals that advocate and propagate a radicalism contrary to our American ideals and institutions.

Mr. William E. Halm, President, New York Dock Company, wrote in part as follows:

It is the duty of every parent to give his children an education that will fit them for true Americans, and it is his right that schools shall be provided by the Government that will accomplish that purpose.

Church members and citizens should not contribute money to any organization that is not thoroughly American in every respect. If the minister of the church to which they belong should preach anything but straight Americanism, they should protest with all their might and if the protests are unavailing they should withdraw their support from such person.

Business men should be careful not to contribute their support in any manner to periodicals whose policy is not thoroughly American.

Mr. Charles Adamson, President, Cedartown Cotton and Export Company, Ga., wrote:

I would not contribute a penny to any charity organization or philanthropic organization under whose authority or through whose machinery revolutionary propagandists disseminate their doctrines, and I would not advertise in any periodical that would advocate and propagate a radicalism contrary to our American ideals and institutions.

Mr. Robert J. Aley, President, University of Maine, wrote in part as follows:

I believe it is time for all forward looking Americans to take a vital interest in positive teachings. In the past we have supposed that the attacks on our Government were so fallacious that they would soon die out. I believe now we must offset these attacks by positive teachings in which we will set forth the actual meaning of Americanism and show clearly the oportunities and values of the country. So far as I know this is the best antidote to the dangerous and destructive doctrines that are being advocated today.

Mr. Samuel V. Cole, President, Wheaton College, Mass., wrote:

American parents should see to it that their children are taught and that they are influenced to love and uphold the ethical code of the New Testament and the political ideal of the Constitution. No preacher or teacher who aims to throw discredit on what is fundamental in either should be allowed without protest to preach or teach in the United States. . . . The doctrine that a college discharges its full duty by training the mind and need not concern itself with what the student may do with his mind is utterly false.

The idea of academic freedom has been strangely misunderstood. It means that the teacher may discuss any question on all sides with perfect freedom in his search for truth—for truth, after all, is the ultimate thing. It does not mean that either in the pulpit or in the teacher's chair he may inculcate and endeavor to establish any doctrine which he pleases. His personal as well as his official attitude in this country of ours must be in accord with the standards I have named. He cannot support a double personality—teaching with academic correctness in the class-room and talking recklessly elsewhere. We have not only the right but the duty to demand that he be as conservative as the moral law and as narrow as the Constitution. If he goes outside these limits, he may properly be called to account in the interests of true freedom, which is never an irresponsible freedom.

Mr. Harvey A. Morrison, President of Union College, Nebraska, wrote in part as follows:

I feel that we should give no support to individuals or organizations that operate for the purpose of permeating the people with ideas of Bolshevism.

Catholic "Social Reconstruction Program" Analyzed

FALLACIES IN PROGRAM OF COMMITTEE ON WAR ACTIVITIES OF THE NATIONAL CATHOLIC WAR COUNCIL SHOWN BY NOTED MEMBER OF ROMAN CATHOLIC CHURCH

By P. TECUMSEH SHERMAN

THERE have recently appeared in several periodicals some articles in which it is intimated that Catholics are bound in conscience to believe in the efficacy of and to support certain concrete political measures, proposed as remedies for existing economic evils, among which measures are included general minimum wage laws and compulsory social insurance. To an educated Catholic that proposition is absurd. But a shadow of a basis for it is to be found in some passages in a pamphlet entitled "Social Reconstruction," issued (January, 1919; revised edition later but bearing same date) by the Committee on War Activities of the National Catholic War Council, and in a volume entitled "The Church and Socialism" (The University Press, Washington, D. C., 1919), by Rev. John A. Ryan, D.D., Professor at the Catholic University of America.

But none of such passages has the force and authority attributed to it. In each some ethical principles are laid down, which, to a Catholic, are unquestionable. But, as indicated in the revised foreword to the pamphlet of the National Catholic War Council, signed by four eminent Bishops, the practical applications of those principles—*e. g.*, the particular political measures advocated or proposed—are questionable; and so also are all data of purely material facts and human experience cited in support of such measures. It is, therefore, timely and appropriate to present the reasons why a Catholic, who accepts unquestioningly everything the Catholic Church teaches, under present conditions in this country and in the existing stage of human knowledge and experience, conscientiously may and even ought to oppose the political measures in question.

THE LEGAL MINIMUM WAGE.

Relating to this subject the pamphlet on "Social Reconstruction," above cited, contains the following passage:

> We are glad to note that there is no longer any serious objection urged by impartial persons against the legal minimum wage. The several States should enact laws providing for the establishment of wage rates that will be at least sufficient for the decent maintenance of a family, in the case of all male adults, and adequate to the decent individual support of female workers.

Of the two propositions contained in this passage the first is certainly untrue. That fact alone is sufficient to discredit the second. Why, then, should we accept the latter? In "The Church and Socialism," above cited, Dr. Ryan presents the argument in support of that proposition, from the standpoint of Catholic ethics, in substance as follows:

> The state must enact legislation which will prevent any worker from being compelled to accept less than decent living wages. Between 50 and 75 per cent. of our laboring population got less than this measure of remuneration in 1914 (p. 45). Since that date the increase in prices seem[s] to have been, on the whole, as great as the increase in wages (p. 76). Thirteen states of our country and the District of Columbia have enacted minimum wage laws. The legislation has become universal in Australia and New Zealand and has been extended to a very large proportion of the industries of Great Britain. A considerable beginning has also been made in Canada. This rapid development and application of the movement and measure have been mainly due to the favorable results of the law wherever it has been tried. It is no longer an experiment (p. 99). While Pope Leo did not expressly advocate this measure of state activity, his language seems to imply it (p. 46). Those few Catholics who still oppose the movement for a living wage by law can get little comfort from the encyclical [Encyclical Letter of Pope Leo XIII on the Condition of Labor]. Before they can appeal to it with any show of reason they will have to prove that the evil of insufficient wages can be "met or prevented" by some other means. That task will keep them busy for a long time; so long, in fact, that they will all be dead before it is finished (p. 29).

Now, as a Catholic I am morally bound by the ethical principles laid down by Pope Leo in the encyclical above referred to, including the doctrine of a "living wage." But because I believe in that doctrine it does not follow that I must believe that such doctrine can and would be correctly and consistently defined, applied and enforced through man-made laws, under existing political conditions. I "come from Missouri" and, before supporting a proposed political measure, such as a *general* minimum wage law, I want to be shown that in actual practice it will both be efficient for the purpose proposed and not do more harm than good. That, Dr. Ryan fails to show, and, there are good and sufficient reasons to believe, cannot show. The best he can show is that a legal minimum wage is a debatable proposal, deserving of consideration and, perhaps, of small and cautious experiments.

In his argument for a general legal minimum wage, above epitomized, Dr. Ryan's major premise is the proposition that between 50 and 75 per cent. of our laboring population get less than a decent *living* wage. Those figures are practically identical with the figures used by professional agitators and sensation mongers, and are quite generally discredited. They seem to be obtained by taking as a general standard an ideal conception of minimum needs and comparing that standard with the average annual earnings of the various groups of wage-workers in some selected industries, occupations or neighborhoods. By such a process it is easy to construct data to support any conclusion one wants. That the majority of our wage-workers do obtain wages sufficient to enable them, with good management, to live decently, is obvious from the manner in which they clothe themselves and is also strongly indicated by the extent of their savings. Whether or not such majority obtain "fair wages" is a different question. Moreover, these sensational figures of Dr. Ryan's really do not relate strictly to "wages" but to "average annual earnings" as reduced by unemployment. Consequently they are largely irrelevant to the question of the sufficiency of "wages." Unemployment is an evil distinct from low wages. And it is not to be assumed that a legal minimum wage is the remedy for unemployment.

It should be observed in this connection that the average "real" wage in America is—or more accurately was before the war—more than double such wage in the most advanced countries of Western Europe. It is difficult to believe that wages thus averaging more than double the wages upon which European workers have managed to live and maintain a high degree of physical efficiency nevertheless have averaged below the minimum essential to a decent existence. The truth seems to be that a substantial minority of American wage-workers have attained and set a standard of living unprecedently high for manual workers, which standard we would all like to see attained by all good workers but which in truth is far above the minimum essential for a decent existence, and that it is a wage sufficiently high to maintain that standard, and not a "*living wage,*" which "between 50 and 75 per cent. of our laboring population" fail to obtain.

However, there is undoubtedly a small proportion—but many in the aggregate—of our laboring population who are forced to work for less than true "living wages." Such condition is an evil calling for remedy. But to find the true remedy or remedies we must get down to facts and study causes; and the true remedy or remedies must fit the facts and be directed against the causes.

Dr. Ryan's minor premise is the proposition that a general legal minimum wage is no longer an experiment, but is a well tested and certain remedy for the evil of insufficient wages. That proposition is true only upon the assumption that a social experiment ceases to be an experiment about as soon as it is successfully launched, without regard to final results. For all the minimum wage laws Dr. Ryan is able to cite, with the exception of those of Australia and New Zealand, are unquestionably still experiments, in initial stages of experimentation, and, moreover, are not *general* but are more or less narrow and cautious experiments, being generally restricted variously to apply only to some especially helpless classes of workers or to some highly parasitic trades. As to the New Zealand and Australian laws, we must distinguish. Dr. Ryan argues for a law to apply the moral doctrine of a "living wage." But the awards under those laws go far beyond that. These laws are all (with one partial exception) either expressly or in effect, compulsory arbitration laws; and they all result in fixing a *standard* wage for each particular occupation at such rate, generally far above the "living wage," as, in the opinion of a wage board or arbitration court, may be fair or expedient or a fair compromise between opposed contentions. They are really "minimum wage laws," inasmuch as the wages fixed in arbitrations under them are the lowest any employer in the trade involved is allowed to pay. But the majority of them are also "maximum wage laws," inasmuch as the wages fixed in arbitrations under them are the highest the wageworkers involved may lawfully strike to enforce.* Designed to bind both employers and employees alike, these measures have proved to be wholly one-sided, being practically ineffective against labor. Designed to prevent strikes, and long proclaimed to be wonder workers for that purpose, they have been shown by experience to tend to foment strikes rather than to prevent them. And yet, although gross failures for their original purposes, we are now asked to accept the experience under these measures as a conclusive demonstration of the success of the legal minimum wage, because incidentally they have eliminated "sweating." Hardly! The success of a social remedy is to be appraised from all its results. Judged by that test these measures, even when viewed as minimum wage laws, fall far short of demonstrated success. They have eliminated "sweating" only by making wages *generally* a subject for political struggles and manipulations. That practice has been shown to be the opposite of conducive to industrial peace; there are no well established grounds for believing that it is improving the condition of labor in general, either by raising the level of

*In this connection it should be noted that the law recently adopted in Kansas for the purpose of preventing strikes and lockouts on public utilities and in "key industries" is very similar to these Australasian laws.

"real" wages or otherwise; and there are reasons for fearing that its ultimate political and economic consequences, as affecting the welfare of the community as a whole, will eventually prove to be harmful.

Besides being inconclusive and largely irrelevant to the question of enforcing specifically a "living wage" by law this Australasian experience holds out a warning. It indicates strongly that minimum wage laws in practice tend to develop in the direction of general wage fixing by government at the dictation and for the special advantage of pluralities of the electorate, without regard to any fixed ethical or economic principles whatsoever. And it is the fear of just such a result eventually from experimenting with legal minimum wages that underlies and justifies the strongest opposition to the minimum wage movement. There is, further, reason to fear that a general minimum wage law would not end merely in political *wage* fixing. The habit of looking to government action for class economic advantage, engendered by such a law, leads naturally to governmental *price* fixing for the same purpose. And, having fixed wages, the state might have to provide work at such wages or support many of the laboring class in idleness rather than permit them to work at less than such wages, the final probable consequence being the necessity for the state to distribute and compel labor. Dr. Ryan himself seems to admit the probability of some of these consequences, and rather welcomes them (p. 94). I respectfully submit that the sum of experience with state intervention in the field of industry justifies opposition to a single step on such a dangerous road.

In New Zealand and some of the Provinces of Australia there are, besides the arbitration laws above considered, also laws prescribing that no employee in a factory, shop, etc., shall be paid less than a specified wage per week. The minimum wages fixed by these laws are extremely low—in some cases as low as 97 cents per week. From what little information is obtainable it would seem that these particular laws are practically ineffective and obsolete, and they are never cited by advocates of minimum wage laws as models for imitation.

Whether or not the pending experiments with minimum wage laws will finally result successfully—*i. e.*, with net benefit to the community—is a question about which individual opinions may reasonably differ. But it is unreasonable to assert that they are no longer experiments. They are still just as doubtful and dangerous experiments as was the old Roman emperors' policy of "bread and circuses" during the first years after its inception.

Against those Catholics who, like myself, are not convinced by the arguments for a general legal minimum wage, Dr. Ryan cites the encyclical of Pope Leo XIII, asserting that we can get little comfort from it. Let us see. Directly upon the subject of wages the encyclical says:

> The remuneration must be enough to support the wage-earner in reasonable and frugal comfort. If through necessity or fear of a worse evil, the workman accepts harder conditions because an employer or contractor will give him no better, he is the victim of force and injustice. In these and similar questions, however, . . . in order to supersede undue interference on the part of the state, especially as circumstances, times and localities differ so widely, it is advisable that recourse be had to societies or boards, . . . , or to some other method of safeguarding the interests of wage-workers; the state to be asked for approval and protection.

Plainly this is a declaration in favor of private and voluntary methods and a caution against direct state intervention.

There remains, however, another passage in the encyclical, bearing upon this question and others, which passage reads as follows:

> Whenever the general interest or any particular class suffers, or is threatened with, evils which can in no other way be met, the public authority must step in to meet them.

From this paragraph Dr. Ryan deduces that before Catholics can conscientiously oppose the movement for a general, legal minimum wage they must prove that the evil of insufficient wages can be met or prevented in some other way. That is queer logic. On the contrary, under this doctrine Catholics may conscientiously doubt and oppose the movement for a general legal minimum wage until its proponents, *upon whom rests the burden of proof,* have reasonably proved:

First: That a legal minimum wage will meet the evil—*i. e.*, that it will cure or mitigate the evil aimed at without producing other and greater evils.

Second: That the evil can be met in no other way.

Grounds for rejecting the first of these propositions as unproved have already been indicated. As to the second, even supposing that a legal minimum wage will meet the evil, there are strong grounds for the belief that there are other and better remedies. Among such remedies may be mentioned the following:

(1) The organization of labor in mutual protective associations or unions. Already the influence of organized labor has been one of the principal causes to raise the general level of wages in American industries higher than in any other country in the world or at any other period of history. Dr. Ryan belittles this influence. He contends that the proportion of unskilled and underpaid labor enrolled in the unions has always been very small and shows little tendency to increase (p. 75). Practically he admits that the organization of underpaid labor would be a remedy; but he objects that it would take too much time and effort to effect such organization (p. 75). This objection ignores a number of facts: First, that it is not needed to organize all underpaid labor, the influence of organized labor in bettering the wages and working conditions of wage-workers extending far beyond the enrolled membership. Second, that the effort required for organization is to a high degree essential, no healthy social improvement being possible without effort by those benefited. And, third, that in the past there have been unusual obstacles and difficulties in the way of organization of labor in America, arising out of the racial differences between whites and blacks, the extraordinarily heavy immigration of wage-workers of different races, languages and civilizations, the excessively individualistic temper of the employing class and the public, and organized labor's own occasional mistakes, which difficulties, it is not unreasonable to believe, are now being and within reasonable time will be largely reduced or overcome.

(2) Vocational training and direction. One of the principal causes of insufficient wages in American industries during the past generation has been the high proportion of the workers who have been unskilled and have gravitated toward "blind alley" employments and parasitic industries. Such wage-earners commonly do not produce the equivalent of a living wage. Simply to require that they shall, nevertheless, be paid a living wage or discharged would be a doubtful remedy. The appropriate remedy for this condition is the development and improvement of public and private measures, such as we have only recently begun to resort to, for the education, training and guidance of the untrained and immigrants towards economically efficient occupations, in which they will be able to *earn* living wages.

(3) Measures, public and private, to reduce unemployment and "underemployment." As has already been noted, wages may be amply sufficient per hour, day or week and yet be extremely insufficient per year, owing to interruptions of employment. This is one of the greatest causes of poverty. There are good grounds for believing a legal minimum wage to be entirely inappropriate as a remedy for this evil, and that the true remedy must be sought in a variety of measures to aid the right men quickly to find the right jobs, to mitigate the régime of "hiring and firing," to systematize employment in the seasonal trades, to "decasualize" intermittent employments, and to guide and assist surplus labor away from overmanned industries and centers of population into neighborhoods and occupations where labor is wanting.

It is not contended that measures and means such as just indicated can ever be made perfect or will ever produce the millennium. There will always be some exploited, some subnormal, some misfits and some who *will* not earn or *will* not accept employments in which they can earn a sufficiency for a decent existence. Such exceptional persons or classes, however, need to be dealt with specially. For their benefit and protection it is neither necessary nor appropriate to subject all industry to a régime of political meddling.

In concluding with this subject it should be noted that even if it could be proved that minimum wage laws would meet the evil of insufficient wages and that such evil can be met in no other way, nevertheless no obligation to join in the minimum wage movement as it now is or to accept the specific proposal of the National Catholic War Council would follow from the doctrine laid down in Pope Leo's encyclical. The minimum wage movement is resulting in laws which prescribe as a minimum, not a "living wage," but some individual's or group of persons' conception of what is a fair minimum wage for each particular occupation or industry, fixing the minima for different occupations at different levels, although the minimum needs of the workers in such occupations may be the same. And the National Catholic War Council proposes, not to enforce a "living wage" as a minimum, but to provide for "the establishment of wage rates *at least*" equal to living wages. But, even under the conditions above specified, the encyclical would require support of such legal measures only as would apply and enforce the doctrine of a "living wage" *and nothing more.* Under present circumstances, however, this point is practically immaterial, any and all minimum wage law proposals being open to legitimate doubts and differences of opinion, without involving any religious question.

SOCIAL INSURANCE.

The pamphlet on "Social Reconstruction," above cited, issued by the National Catholic War Council, contains the following relating to this subject:

> "Until" the "level of legal minimum wages" becomes "high enough to make possible that amount of saving which is necessary to protect the worker and his family against sickness, accidents, invalidity and old age," "the worker stands in need of the device of insurance. The State should make comprehensive provision for insurance against illness, invalidity, unemployment and old age. So far as possible the insurance fund should be raised by a levy on industry, as is now done in the case of accident compensation. The industry in which a man is employed should provide him with all that is necessary to meet all the needs of his entire life. Therefore any contribution to the insurance from the general revenues of the State should be only slight and temporary. For the same reason no contribution should be exacted from any worker who is not getting a higher wage than is required to meet the present needs of himself and his family. . . . Finally, the administration of the insurance laws should be such as to interfere as little as possible with the individual freedom of the worker and his family. Any insurance scheme or any administrative method, that tends to separate the

Industrial Peace in Building Trades

TWELVE YEARS' CAMPAIGN RESULTS IN FORMATION OF NATIONAL BOARD FOR JURISDICTIONAL AWARDS—WILL ELIMINATE STRIFE AND SETTLE JURISDICTIONAL DISPUTES

By W. C. ROBERTS

NO greater promise of industrial peace has been made in the United States than that engineered by the Building Trades Department of the American Federation of Labor for the Building Industry.

Coming at this time when housing facilities are 30 and 40 per cent. less than normal and when millions of people are crying for relief, the fact that it soon will be possible for building to be carried on without unnecessary strikes is received with the greatest pleasure.

Years will be required to find homes for the homeless and the added cost makes their erection almost prohibitive because of the inflated cost of material and the occurrence of jurisdictional strikes. Material has jumped as high as 300 per cent. or more and John Donlin, president of the Building Trades Department of the American Federation of Labor, has said that 95 per cent. of the strikes in the building industry are caused by disputes over jurisdiction.

It has been impossible heretofore to tell with exactness where one trade begins and another ends because of the elimination of skilled workmen. Trades are sometimes wiped out by the elimination of skill. The extent of the twilight zones between trades is so great that one is continually encroaching on the other. This has caused innumerable strikes.

A twelve years campaign to bring about this desirable situation has resulted in the formation of the National Board for Jurisdictional Awards in the Building Industry. The employees through their unions and the employers, architects and others through their associations have joined hands and declared that they are determined to eliminate all unnecessary strife. A constitution has been adopted by the board which proposes conciliation and arbitration instead of strikes. The preamble to the constitution sets forth:

> The close of the World War opens an era, in which the people are determined to decide for themselves all matters of common interest. A League of Nations is proposed to bring about unity of action and to settle differences between nations by conciliation and arbitration, instead of by war.
>
> The Building Industry recognizes the equity of this principle and agrees to unite its efforts for the purpose of adjusting, in a conciliatory and co-operative spirit, such differences of opinion that now exist, or may arise in the future. The immediate object is to settle disputes as to jurisdiction over work that is claimed by more than one building trade.

This plan is intended to operate between union workmen and the employers thereof.

While the organization was brought into existence March 3, 1919, it is just beginning to function successfully. The shortage of buildings because of the refusal of the government to permit their erection during the war has caused for the first time in history a famine in housing facilities. In cities like Chicago, for instance, where there are four and five thousand marriages a month, housing is at a premium. New York is also suffering from the lack of homes and no city in the country has escaped the dearth. Years will be required to supply the need.

The creation of the National Board for Jurisdictional Awards in the Building Industry is therefore the greatest step that could be taken in removing the most serious obstacles to supplying homes for the homeless at rents within reason. It may require some time for the machinery of this plant to become fully effective, but those who are striving to establish industrial peace declare they are determined to bring it about.

The hope for such a beneficial condition in the building industry has been expressed for many years. To William J. Spencer, secretary of the Building Trades Department of the American Federation of Labor should be credited the origin of the idea. In 1908 he pointed out the value of such a revolution in industrial methods to the executive council of the department in its first meeting held in Washington after its headquarters were established there. The executive council endorsed the proposition and directed him to work to accomplish the desired results. The agitation in the beginning found few converts. In 1913 the Secretary of Labor was informed of the anti-strike plan by Secretary Spencer and he appointed conciliators who endeavored to convince the contractors and architects that such a desirable condition in the building industry should be sought.

Few employers took an interest in the idea, as many of them thrive because of jurisdictional disputes. Furthermore, jurisdictional complications arise almost daily in the building line. Methods of construction continually change. A workman may have a trade today and none tomorrow. Outside of the basic trades, which also change but not completely, there is always danger of the complete elimination of the skill in a trade.

If the workman should lose his trade through the evolution of the industry the employer also loses his business. It was the desire to avert such an outcome that prevented many of the contractors and others vitally interested from looking favorably on any proposition that would leave them liable to loss.

But the continual agitation brought about by representatives of the Labor Department, officials of the Building Trades Department of the American Federation of Labor and a number of progressive contractors, architects and engineers, gradually changed the beliefs of both employers and union men until it was found possible to organize a board to eliminate jurisdictional disputes.

The lack of building during the war, the shortage of buildings after the armistice and the demand for new buildings compelled those who had blocked the plan to give it their approval. In order that building should proceed with some degree of haste it became necessary that a way should be found to stop cessations of work because of quarrels over jurisdiction.

The increased cost of building also has proved a great factor. It was necessary for the contractor to know that if he started a building on a certain day when he could set a day for its completion. Under such conditions much money could be saved the owner, the builder and the contractor himself.

Not only are contractors interested in the outcome but the architects and building engineers are also greatly affected.

The National Board consists of eight members. Three are selected by the Building Trades Department and one each by the American Institute of Architects, Engineering Council, the National Association of Building Trades Employers and two from the Associated General Contractors of America. The members of the National Board are E. J. Russell, chairman, American Institute of Architects; R. P. Miller, Engineering Council; Col. J. R. Wiggins and F. J. C. Dresser, Associated General Contractors of America; E. M. Craig, National Association Building Trades Employers; Wm. Dobson, William L. Hutcheson and John J. Hynes, Building Trades Department, American Federation of Labor. Wm. J. Spencer is executive secretary.

Among the provisions in the constitution that give promise that the campaign for peace in all building industries will be successful are:

> There is, hereby, created for this purpose a board which shall be known as the National Board for Jurisdictional Awards in the Building Industry.
>
> The duties of the Board shall be to hear claims for jurisdiction over work performed by Building Trades; and to determine by which trade the work in contention shall be performed and to make an award in conformity with the facts submitted by the contendents. At least a two-thirds majority of the voting members of the full Board shall be required to render an award in all cases.
>
> The Board shall have the power to investigate all disputes and to make awards in accordance with its findings, as hereafter provided.
>
> Should the Board fail to make an award an umpire may be agreed upon whose findings shall be final. Should the Board, by a two-thirds majority, be unable to agree upon an umpire, the Secretary of the U. S. Department of Labor shall be called upon to name the umpire.
>
> When a dispute arises the employer to whom the work has been given shall proceed with such workmen as in his judgment he may see fit to employ pending a decision by the Board; but the right of any contestant to dispute shall not be prejudiced in its claim for a final award.
>
> Each signatory to this agreement hereby agrees that the membership of that organization shall not take part in sympathetic strikes in any case of jurisdictional dispute.
>
> Labor organizations signatory to this agreement shall secure the enforcement and compliance of their organizations with the provisions of this agreement and the awards of the Board.
>
> Local organizations refusing compliance with the provisions of this agreement and the awards of this Board shall be suspended from their International organization and the International organization shall proceed at once to man the job and the Employer shall co-operate with the International organization in so doing.
>
> Any architect, engineer or employer represented on this Board through an organization signatory to this agreement shall be suspended from his organization or organizations upon failure to comply with the provisions of this agreement and the awards of this Board.
>
> The decisions shall govern the architects and engineers in writing specifications and the contractors in awarding contracts.
>
> The Board shall certify its awards to the officials of each of the organizations, parties hereto.
>
> It shall be the duty of the officials of affiliated bodies, upon receiving such information, to instruct its members to carry out the decisions of the Board and to use them as a guide in the conduct of their work.
>
> In order to avert jurisdictional strife it is the recommendation of the Board that new materials, specialties and methods of application shall be passed upon by the Board before being specified or used provided that six members of the Board shall have agreed that the subject has not been previously covered.
>
> No member representing the Building Trades Department shall vote on an award in a dispute in which his own craft is involved nor shall any member employing one trade exclusively vote on any award in which that trade is a party at interest.

The penalties for non-compliance with the awards is believed to be of sufficient influence to prevent refusal to accept them. A union that fails to abide by an award is suspended from its national or international union and its members would therefore be unable to work at their trade on any building in the place where the trouble occurred.

Architects, engineers or employers represented in an organization affiliated to the National

Socialism Unmasked

PROGRAM OF AMERICAN SOCIALIST PARTY PARALLELS THAT OF THIRD INTERNATIONALE—PROVES THAT CONTEMPLATION OF POLITICAL ACTION ALONE IS A "PIPE DREAM"

By T. EVERETT HARRÉ

II

(Continued from previous issue).

THE Socialist party of America at its national convention in New York last May rejected the formula of "the dictatorship of the proletariat in the form of Soviets"—essentially a matter of phraseology, a phase of conditions peculiar to Russia under the Bolshevik revolution—but it reaffirmed its stand with the Third Internationale. That action since met with the support of the party membership, a majority of which by referendum vote, according to an announcement made August 21 by the Executive Committee, endorses the Moscow Internationale with the reservation that the party in this country shall work according to its own policies and methods without regard to the methods and policies used in other countries, particularly Russia.

Just what are the policies and methods to be employed in the United States? Do these policies and methods reject all that are illegal and unconstitutional? Does the party advocate, as its sole means of bringing about a revolution, the use of the ballot? In the foregoing article the official program laid down by the Socialist party of America was compared with the program of the Third Internationale. The program of the organization in America must be considered and understood according to the degree that it parallels the program of Lenine's Moscow Internationale. In the previous article it was shown that the Third Internationale and the American Socialist party unanimously repudiated and denounced those loyal Socialists who had supported their governments in the war; that the Third Internationale and the American Socialist party both deflected the blame for precipitating the world war from Germany.

The Third Communist Internationale lays the responsibility for civil war, or violent and drastic methods during a revolution, to the "arch-enemies" of the laboring classes. Driven to violent methods, civil war is forced upon the working class, and, the Moscow Congress declared, they "must answer blow for blow." The Manifesto declared "necessary the arming of the workers" as follows:

> . . . There would be no civil war if the exploiters who have carried mankind to the very brink of ruin had not prevented every forward step of the laboring masses, if they had not instigated plots and murders and called to their aid armed help from outside to maintain or restore the predatory privileges. CIVIL WAR IS FORCED UPON THE LABORING CLASSES BY THEIR ARCH-ENEMIES. THE WORKING CLASS MUST ANSWER BLOW FOR BLOW, IF IT WILL NOT RENOUNCE ITS OWN OBJECT AND ITS OWN FUTURE WHICH IS AT THE SAME TIME THE FUTURE OF ALL HUMANITY.
>
> THE COMMUNIST PARTIES, FAR FROM CONJURING UP CIVIL WAR ARTIFICIALLY, RATHER STRIVE TO SHORTEN ITS DURATION AS MUCH AS POSSIBLE—IN CASE IT HAS BECOME AN IRON NECESSITY—TO MINIMIZE THE NUMBER OF ITS VICTIMS, AND ABOVE ALL TO SECURE VICTORY FOR THE PROLETARIAT. THIS MAKES NECESSARY THE ARMING OF THE LABORERS, AND THE FORMATION OF A COMMUNIST ARMY AS THE PROTECTOR OF THE RULE OF THE PROLETARIAT AND THE INVIOLABILITY OF THE SOCIAL STRUCTURE. . . .

The Socialist party of America concurred in the declaration that "Civil war is forced upon the laboring classes by their arch-enemies" and voices the ambiguous hope that the revolution in America might be effected without resorting to the "drastic" methods of violence "made necessary" in Russia:

> The people of Russia, like the American colonists in 1776, were driven by their rulers to the use of violent methods to secure and maintain their freedom. The Socialist party calls upon the workers in the United States to do all in their power to restore and maintain our civil rights to the end that the transition from capitalism to Socialism may be effected without resort to the drastic measures made necessary by autocratic despotism.

The revolution which resulted in the abdication of the Czar and the setting up of the moderate democratic régime under Kerensky was almost bloodless, less bloody than the American revolution of 1776. Was it the "autocratic despotism" of Kerensky which made "necessary" the "drastic measures" of the murderous Bolsheviki? This declaration, in the light of what precedes it, is nothing less than a threat that the Socialist party does meditate such "drastic" and "violent measures" as are "made necessary by autocratic despotism." For immediately previous to this, the declaration is made:

> In the United States capitalism has emerged from the war more reactionary and aggressive, more insolent and oppressive than it ever has been. Having entered the war "to make the world safe for democracy," our government has enthusiastically allied itself with the most reactionary imperialism of Europe and Asia. . . . And while thus serving as an accomplice of black reaction abroad, our administration and the capitalist interests behind it were busily engaged in the ruthless work of suppressing civil rights and liberties at home. . . . The Socialist party, which during the war was the only party of peace and progress and the sole political defender of civil rights and labor's interests in the United States, was brutally outlawed. Its press was crippled, many of its meetings were dispersed, a great number of its defenders were persecuted and jailed. . . . While the vain conservative labor leaders were bribed by meaningless posts of honor, the courageous spokesmen for the radical labor groups were put behind prison bars.

"SUPREME TASK" OF COMMUNISTS.

The Third Communist Internationale laid down certain Governing Rules. In these political action, or parliamentary methods, as a means of bringing about the social revolution is accepted but declared to be of "only secondary importance." What is of primary and immediate importance, is "mass action:"

> THE REVOLUTIONARY ERA COMPELS THE PROLETARIAT TO MAKE USE OF THE MEANS OF BATTLE WHICH WILL CONCENTRATE ITS ENTIRE ENERGIES, NAMELY, MASS ACTION, WITH ITS LOGICAL RESULTANT, DIRECT CONFLICT WITH THE GOVERNMENTAL MACHINERY IN OPEN COMBAT. ALL OTHER METHODS, SUCH AS REVOLUTIONARY USE OF BOURGEOIS PARLIAMENTARISM, WILL BE OF ONLY SECONDARY SIGNIFICANCE.

The Socialist party, in the Preamble to its Constitution adopted at the Chicago Convention, declared for the organization of "the working class for independent action on the political field, not merely for the betterment of their conditions, but also and ABOVE ALL WITH THE REVOLUTIONARY AIM OF PUTTING AN END TO EXPLOITATION AND CLASS RULE."

But the "revolutionary use of bourgeois parliamentarism" is not of primary importance; what is of primary and immediate importance is the organization of workers industrially so as to employ industrial, or "mass action," to accomplish its ends:

> TO ACCOMPLISH THIS AIM, IT IS NECESSARY THAT THE WORKING CLASS BE POWERFULLY AND SOLIDLY ORGANIZED ALSO ON THE ECONOMIC FIELD TO STRUGGLE FOR THE SAME REVOLUTIONARY GOAL; AND THE SOCIALIST PARTY PLEDGES ITS AID IN THE TASK OF PROMOTING SUCH INDUSTRIAL ORGANIZATION AND WAGING SUCH INDUSTRIAL STRUGGLE FOR EMANCIPATION.

What is the essence of the program laid down by the Third Communist Internationale whereby Socialism shall triumph? Is it the use of the vote? The vote has been declared of "secondary importance." Is it violent revolution? The arming of the workers and the recruiting of "a Communist army" is specifically directed. This is to be accomplished by what method? through what means of organization? What is proposed, throughout the world, is the organization of the workers along class lines, in one coordinated class union, which shall be ready at the proper time to strike in concert and employ the weapon of industrial or mass action, the general strike:

> In an empire of destruction where not only the means of production and transportation but also the institutions of political democracy represent bloody ruins, the proletariat must create its own forms to serve above all as a bond of unity for the working class, and to enable it to accomplish a revolutionary intervention in the further development of mankind. Such apparatus is represented in the workmen's councils.
>
> The proletariat created a new institution which embraces the entire working class without distinction of vocation or political maturity, an elastic form of organization capable of continually renewing itself, expanding, and of drawing into itself ever new elements, ready to open its doors to the working groups of city and village which are near to the proletariat.

What is the essence of the program of the Socialist party of America whereby Socialism shall triumph in this country? Is it the use of the vote? Or is the vote regarded also as only of "secondary importance?" The Chicago Manifesto declares:

> To ensure the triumph of Socialism in the United States, the bulk of the American workers must be strongly organized politically as Socialists in constant, clear-cut and aggressive opposition to all parties of the possessing class. *They must be strongly organized on the economic field on broad industrial lines, as one powerful and harmonious class organization, cooperating with the Socialist party,* AND READY IN CASES OF EMERGENCY TO REINFORCE THE POLITICAL DEMANDS OF THE WORKING CLASS BY INDUSTRIAL ACTION.

The Third Moscow Internationale declares in its Manifesto that the organizing of the workers and the increasing of their power as a class organization *"is now the chief task of the class conscious and honest workers of all countries:"*

> Whenever the masses are awakened to consciousness, workers, soldiers and peasants' councils will be formed. TO FORTIFY THESE COUNCILS, TO INCREASE THEIR AUTHORITY, TO OPPOSE THEM TO THE STATE APPARATUS OF THE BOURGEOISIE IS NOW THE CHIEF TASK OF THE CLASS CONSCIOUS AND HONEST WORKERS OF ALL COUNTRIES.
>
> BY MEANS OF THESE COUNCILS THE WORKING CLASSES WILL GAIN POWER IN ALL COUNTRIES MOST READILY AND MOST CERTAINLY, WHEN THESE COUNCILS GAIN THE SUPPORT OF THE MAJORITY OF THE LABORING POPULATION. BY MEANS OF THESE COUNCILS THE WORKING CLASS ONCE ATTAINING POWER WILL CONTROL ALL THE FIELDS OF ECONOMIC AND CULTURAL LIFE AS IN THE CASE OF RUSSIA AT THE PRESENT TIME.

The Socialist party of America, in its Chicago Manifesto, also declares that such *"is the*

Purifying Politics—A Field for the Churches

AN OPEN LETTER TO REV. WORTH M. TIPPY PROPOSING METHODS WHEREBY RELIGIOUS BODIES CAN BRING ABOUT HONEST AND EFFICIENT GOVERNMENT

THE Federal Council of the Churches of Christ in America sent to the Protestant ministers of the country for use in their Labor Day sermons a "Labor Sunday Message," the economic trend of which raises disturbing questions and which calls for serious discussion. This "Message" has prompted the following open letter, which is addressed to the Rev. Dr. Worth M. Tippy because, in addition to his important relations with the Methodist Church, he is also Executive Secretary of the Federal Council, and is known for his learning, sanity and sound patriotism:

SEPTEMBER 14, 1920.

REV. WORTH M. TIPPY,
Executive Secretary, Commission on the Church and Social Service,
Federal Council of the Churches of Christ in America,
New York City.

MY DEAR MR. TIPPY:

I have just read the Labor Sunday Message addressed to employers and workers by the Federal Council of the Churches of Christ in America, and I must say that I am quite surprised at its radical tone. I am aware that the Commission on the Church and Social Service includes individual radicals of various hues but this pronouncement was sent out, not as representing their views, but those of the thirty-one denominations composing the Federal Council.

I have lately read much of the literary output of clergymen and social service commissions on industrial subjects and I am quite familiar with the socialist tone they nearly all take; but I was not prepared to find such views sponsored by you and other leading men with whom I am acquainted in the Protestant churches and whom I know to have no sympathy with socialism of any character.

Just what right, officially, have the authors of that document to speak for the seventeen million men and women belonging to and supporting those thirty-one denominations that compose the Federal Council? Among those seventeen million members, it is certainly safe to say that there are a few wage-earners, farmers, employers, bankers and other business men—but they do not seem to have any representation on the committees of the Federal Council of the Churches of Christ in America having to do with industrial matters.

Upon reading that Message, one would be justified in charging that it had been drafted by that little group of people called Christian Socialists, because so many of their absurd contentions are woven into it. Running all through it is the idea that industry should be run as it is assumed Christ would run it—for service and not profit, and on the basis of that oft-exploded fallacy that Jesus was a socialist and therefore against profit, rent, interest and the wage system. This is iterated and reiterated throughout the Message in sentences like the following:

> As at present encouraged, the competitive principles necessarily breed wrong ways of making money, suspicion, hatred, antagonism, and sabotage. These are destructive of the Christian life and tend to undo the constructive work of the church, the school and the home.
>
> * * * * *
>
> The Christian principle takes one step farther, and leads to the primary motive of industry. Is the motive of profits, which is the primary motive of modern enterprise, a Christian motive, and ought it not to be supplanted by or rigidly subordinated to Christ's great motive of service?
>
> * * * * *
>
> Now, working exclusively or mainly for profits corrupts men, as working for a salary corrupts a preacher. It tends to make them selfish and grasping.
>
> * * * * *
>
> The commercial spirit, so-called, can be escaped only as men consciously work to produce from the motive of service.

Just how Jesus would conduct business in this country today is explained in an interview in the *New York World* of August 1, 1920, by Charles W. Wood, a socialist who has just returned from China where he made a study of industrial conditions. Mr. Wood was sent to China by the Methodist Centenary and undoubtedly it is to that body that he has reported his brilliant ideas of how industry would be conducted under a Christian régime. As you are a prominent member of that denomination, you doubtless will recognize the quotation I make:

> "It is too simple for explanation. In a factory operated on the Jesus principle no worker would work for wages and none of the product would be sold. The worker would work for the joy of the service he was rendering and for the expression of his own creative powers. The product, of course, would all be given away, because it is more blessed to give than to receive. If it were found that the factory did not produce enough under such a régime, we would call upon our engineering experts to make the work more attractive.
>
> "A nation organized on the Jesus principle would not be interested in its own protection: it would be looking for ways in which to serve the nations roundabout. No good citizen of such a nation would want his property protected from any other citizen, or from any invader from abroad. In fact, no one would think of property as his. People would be free from property and lay up treasures in heaven; in that heaven that will come to earth just as soon as we organize to give and not to get."

The Labor Sunday Message contains the following arraignment of the competitive system:

> "Our industrial life has been built on wrong and un-Christian foundations. Is not our problem to substitute the Golden Rule as a controlling motive for our doctrine of competitive struggle? That law of struggle or competition, as the historic dominant law of industry, has pitted employer against employer, corporation against corporation, nation against nation. It was responsible away back for the great war with its gigantic economic and human losses. It has pitted capitalist and employer against the workers, and the workers against capitalist and employer in a struggle which threatens another cataclysm and at least the temporary shattering of civilization."

Pretty strong language, for a document claiming to represent the views of the Protestant men and women of these United States of America. One would expect to find such expressions only in writings of the Socialist Party leaders. Some of them, as you know, were indicted for having intimated that the war was brought on by the capitalists or the competitive system. Fischer, the man who gave warning of the Wall Street catastrophe, used the same bitter language against the capitalists and the competitive system. Down at the Rand School, they dote on "cataclysms" and they have been "shattering civilization" for years. But to indulge in such perfervid rhetoric in a pronouncement issued officially by the Federal Council of the Churches of Christ in America seems to me rather farfetched, to say the least.

What is more amazing, after the very instructive lessons of Moscow and Petrograd, of Milan and Naples, is that any responsible body of citizens, Christian or otherwise, should talk about abolishing the competitive system and taking on the co-operative commonwealth.

Another paragraph that interests me is the following:

> "The Church, loving the nation, primarily concerned for the welfare of the masses of the people but devoted to the welfare of all, committed by its deepest principles and by the purpose of its existence to righteousness and the safeguarding of life, watches the deepening conflict with profound concern. It can not stand aloof. At whatever risk of becoming involved in the controversy it must go into the midst of the contending forces, if possible between them."

Now, this declaration raises a number of very pertinent questions. How is the Church to jump "into the midst" of employers and employees or "between them" in this cataclysmic conflict? It would be physically impossible for the churches themselves to "jump in," so it would naturally devolve upon representatives, or, more properly speaking, alleged representatives of the Church. This, of course, would mean the paid and unpaid social workers who are responsible for the socialistic document containing that statement—and that very statement doubtless was written by one of the men who are itching to jump "into the midst" of the fray and incidentally into the limelight.

To learn how that works out, it is only necessary to see what has happened when preachers and ex-preachers have functioned by "jumping in between them." Look at Winnipeg, Seattle, and Lawrence, Mass. In each place, the preachers promptly espoused the cause of the I. W. W., two of them very properly landing in jail—and, incidentally, they fought both the employer and the regular loyal trade union organization. I can conceive of no greater calamity to our nation, industrially speaking, and certainly to the pulpit, than to have preachers and clergymen mixing up in all the industrial disturbances that arise throughout the length and breadth of the land. Fortunately, however, it is only a very small percentage of the active clergy who favor such activities; it is generally ex-ministers who feel the urge to "jump in."

The problems between employers and employees are of the most complicated and intricate character and they require the most skilled and expert handling. They cannot be dealt with by men of emotional or "cataclysmic" natures, carrying the Golden Rule in one hand and the "creeds of the churches" in the other—especially when, at the same time, they are promoting the doctrine that the present order, the wage system and so forth, should be scrapped and replaced by the "co-operative commonwealth." Clergymen are no better equipped to deal with labor problems than are longshoremen qualified to deal with the baffling theological dogmas that are producing so many religious creeds. Talk about the crying need for industrial harmony! There is about as much harmony today in the churches as there is in the Balkans! Until the churches have produced harmony in their own field, you can hardly ask others to believe that they can be of much help in another of which they know little or nothing.

Now, I have frankly expressed myself against the wisdom of the churches going "between the contending forces" because I believe they would do infinitely more harm than good. But there is a much greater field, which would include the industrial, where I believe the Church could accomplish wonders and where it would find ample scope for the feverish activities of all the

ministers, ex-ministers and social service workers of the various denominations who want to "go out into the world" and do useful work. It would not be so spectacular but it would be more simple in operation and infinitely more productive of wholesome results. It would enable the Church to make the world a better place to live in, morally as well as industrially—and it must not be forgotten that dealing with morals and souls rather than economics was the original purpose for which the Church was established.

In the Labor Sunday Message, in giving a reason why the Church should jump "into the midst" of the conflict, there were cited figures to show that in twelve months the loss in wages to labor and profits to capital would reach the sum of $275,000,000. Assuming that the statistician has subtracted the gains that would accrue to the workers in the course of years by the winning of their strikes, and considering further that all strikes are not bad nor should be prohibited, suffice it to say that the losses claimed are very great. But in the press of the same week were statistics showing that $500,000,000 of property in this country, nearly twice as much as your estimated loss through strikes, is being destroyed annually by rats—and this does not include the tragic results of the Bubonic plague and other contagious diseases distributed by the little rodent. Surely, from a financial point of view, the rat problem ought to be dealt with before the labor problem, and it certainly seems to be a more simple one.

Again, in the press of that week, we find that the United States Chamber of Commerce has worked out a plan in connection with the railroads that will mean the adding of so many hundreds of cars to the train service, by the simple method of adding a little more "hustle" at both ends of the shipment, that this reform will save over $1,000,000,000. This makes the little $275,000,000 to be saved on strikes and lockouts look measly indeed. When one considers the billions that are lost through wastage in coal mining, water power and forestry, the cost of strikes and lockouts is of comparative insignificance. Even a wastage in the administration of governments, federal, state and municipal, through the lack of as simple a thing as a budget system runs up into billions every year; and yet our Church friends, our social service experts, get excited over a quarter of a billion. Needlessly to say, however, strikes cause much suffering to the families of the strikers and frequently to the public, and they should be eliminated as far as possible on general principles; but they are not an overpowering economic evil so far as wastage is concerned.

To return to the reform that I propose and which I think should be undertaken by the churches if they are to go outside of the strictly religious field: Glance for a moment only at a few of the most flagrant evils we see all around us—evils with which our families come in daily contact and with which the Church so far seems utterly unable to cope. There is the social evil! Little has been accomplished toward its solution in two thousand years. There is the vice of gambling that is carrying misery to thousands of homes and is destroying the souls of millions. There are the obscene books, papers and pictures that are corrupting many of the minds of our youth. There are immoral plays and "movies" brazenly flaunting their shamelessness, not only along the Great White Ways of all our cities but in all our towns and villages. There is illicit trade in habit-forming drugs; adulteration in drugs and food; and the cheating of the poor by short weights and measures. There are political graft and incompetency in our public schools and in our police, fire and street departments. There are graft and criminal incompetency in city and state institutions for defectives, delinquents and dependents. In fact, there is graft everywhere in municipal, state and federal governments and in private business where there is anything to steal. Look at the lack of uniformity in state legislation. Could anything be more absurd than our conflicting state laws for the protection of women and children, or in the matter of divorce? Consider the great evils that the city charter and ballot reformers are aiming at. You can add many other evils to this list, for it is far from complete.

Now, there is a way to clean out much of this rottenness and secure honest and efficient government, and the Church can do it. Let us take municipal government first, because that is the nearest to us. We face it every minute and on every side. Suppose all men and women voters in the Protestant, Catholic and Jewish churches should join hands in a clean-up-the-city campaign—and this is one program on which all denominations can unite, for all want honest and efficient government in the matters I have enumerated as well as in a hundred others. The first thing they should do, once they resolved to do anything, would be to recognize the party machineries as they now exist, for they are nearly scientifically perfect in everything but the one thing that the churches can supply, and that is intelligent determination to make all necessary personal sacrifices to do the job as a Christian duty. With this policy agreed upon, the rest would be easy: Let the program of work provide that the Democratic men and women join their wards or political clubs, and let the Republican men and women do the same. The leaders will be delighted to greet them. Then let them resolve to become active in those clubs, not simply enrolled members. They will soon discover that there is lots of work to do in looking after voters and manning the election districts for both primaries and elections. They will be amazed, for instance, to learn of the great sacrifices made by men and women who have been performing these duties for us in order that we might have even the unsatisfactory government we have been getting. They will also see how vital it is that these election officials who count their ballots should be both intelligent and honest. They work long hours with little pay. The church members should do their share of that work; but important as all that is, there is still a much more insistent duty to perform if they are to secure good government.

So far, I have referred only to the mechanism of the work. They will have to take the time to study the issues that arise and get in touch with the political leader or boss of their ward, precinct or district, depending upon the city in which they live. They should find out what he is thinking about, whom he has in mind for mayor or aldermen or members of the legislature or Congress. If there is to be a convention, talk out with him the names of the delegates, insisting that they be the best men and women in the district or ward, and making some suggestions about the personnel. If they find him evasive or demurring or if they suspect his good faith in any way, they should call a little caucus of their own and put up a ticket of honest and able men and women, not necessarily all church members but citizens who want good government just as surely as do the professed Christians. They may "get licked" at first, but this will only whet their appetites for a real fight, and some day they will be running the precinct or ward and will have kicked out the unscrupulous professional boss.

Now, just consider what would happen in little old New York, Philadelphia, Boston, Cleveland and Oshkosh if the Protestants, Catholics, Jews and Christian Scientists were all on the job! The great sacrifice would also include their acceptance of political office, not leaving it entirely to the professional politicians who make a living out of the business. In saying this I mean no offense to those professional politicians, district leaders or ward heelers as some of them are called, for we owe them a debt of gratitude which it is hard to pay for giving us the government we have. If we had depended upon the clergy and church members and other good citizens for our government, it would have gone out of business. The ward bosses saved it for us.

What would happen in the matter of dealing with all the subjects enumerated in a former paragraph if all government positions, whether municipal, state or federal, were filled by conscientious Christians who had equipped themselves for government service through study of the problems they would be called upon to deal with. Let us take the labor and capital problem which is so alluring to the social service people. All they hope to gain or can gain until the millennium comes along can be gained through the government if they will devote themselves to making the government responsive to the demands of the best citizens—and I do not mean by best citizens only the bankers and business men, but the workers in all fields, the professional men and women and the educators.

Take strikes and lockouts: They should never be meddled with by amateurs or sentimental people, but by experts trained in that special field. For twenty years the State of New York has had a Bureau of Mediation whose duty it is to try to prevent strikes and lockouts; Massachusetts has had one for even a longer period. They have done some good work but they have such meager appropriations that they cannot do more than a fraction of what is required. Suppose the Legislature were made up of the kind of men and women we have been talking about. Enough money would be granted to secure expert service of the highest character with no taint of party politics entering into the situation. These experts could do all that could be done and do it efficiently. They could not prevent all strikes but would reduce them to a minimum. Then also the Federal Bureau of Mediation could be enlarged and strengthened. Then there are the child labor laws, the tenement house laws, the fire prevention laws and a hundred other laws, which have been placed on the statute books for the protection of the people, but which are only partly enforced on account of inefficient and frequently dishonest administration.

I need not go on with this enumeration. You know what it would mean if the churches took hold of government as a part of its religious work. In the little town of New Canaan, Connecticut, where I am writing this letter, they have the old New England town government, the ideal of every writer on democracy. Last month they had to adjourn the town meeting called to pass upon some very important matters, because there were only seven voters present and the law requires eleven to make a quorum. They adjourned for a week and then had only nine voters present; but they went out on the streets and dragged in two others, but in the meantime two of the nine had skipped out, so they had to adjourn again. Now, there are over 1,000 church members in New Canaan. If they had been doing their Christian duty, there would have been no adjournment of the first meeting.

Even the ills of competition, so graphically depicted in your Labor Sunday Message, could be curbed and only the great benefits derived from it could be saved if the Federal Trade Commission, were composed of men of expert knowledge and statesmanlike vision. In fact, if only the intelligent, honest men and women of the Church—of course, a few ignorant, fanatical and crooked people do get into the churches

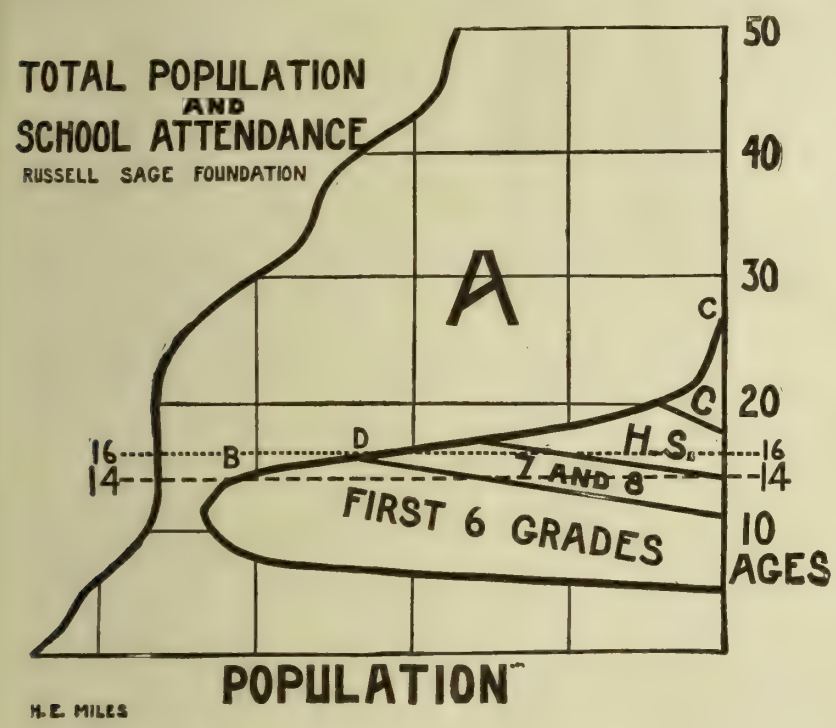
Education—Minus Business Brains



ONE-HALF OF AMERICAN CHILDREN LEAVE SCHOOLS WITH NO CIVIC AND ECONOMIC UNDERSTANDING AMERICA TWENTY-FOUR PER CENT. ILLITERATE

(Speech delivered at the National Citizens' Conference on Education, Washington, D. C., May 20, 1920)

By H. E. MILES

WHAT is the purpose of public education? None other whatever than the development of the social and economic understanding of the individual, of every individual, and so of the entire people.

I present a chart, which shows that the general agency which we call the public school system, built up by our so-called leaders of public education through the generations, is not performing and cannot perform, as they have persisted in making it, this function.

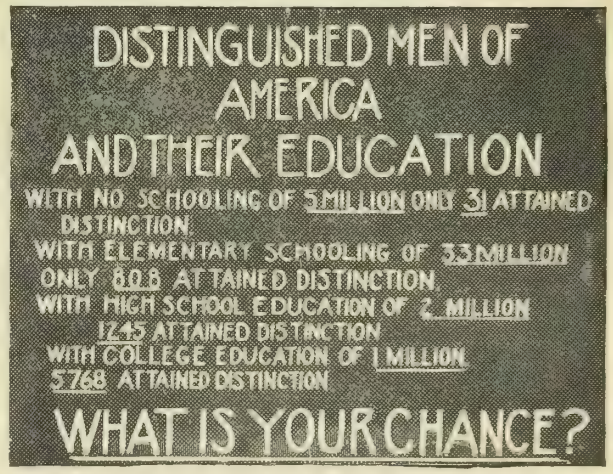
This chart was prepared through many days of painstaking care, by a superior authority on our public schools, the Russell Sage Foundation, Division of Education. The bottom line indicates our total population and the vertical line on the right, the ages of all our people from birth to the fiftieth year. The curved line on the left may be called the death line, indicating as it does the diminishing number of our population as life advances.

The interior diagram indicates the total population in our public schools, their ages and their school grades, from first grade to college graduation.

You will note the great number in the "First 6 Grades". The interior lines rise as they go from right to left because of retardation. In a first-rate school system, as you know, these lines would be nearer horizontal.

As the chart shows, about half of all our children leave school at the end of the sixth grade. Says General Hahn, after examining the records of millions of soldiers, "The average education among *all American adults* is only the sixth grade", and "The average education of the personnel available for enlistment (being some of those from the eleventh grade and substantially all below the eleventh grade) is probably but little above the fifth grade." These records also show that illiteracy averages 24.9% for the entire country and that it is not much worse in any section than in any other. The basis of this test being ability to read an English newspaper and write a letter home—a real test.

In the first six grades there is taught absolutely nothing that develops, or tends to develop, in a formal way, civic and economic understanding. The best educators here say this may be said of the seventh and eighth grades also. Neither time nor the age of the pupils makes it possible to teach more than the "three R's". In fact, you only teach these poorly. For instance, to take the State that is commonly rated highest in the quality of its public schools, Massachusetts, 70% of all the children in her mill towns leave school by the end of the fifth grade. In one of the best department stores in Boston I have seen a large group of 14- and 15-year employees trying to write a simple letter to the firm, as an education exercise, and not one of them knowing how to put the address line, the date line and the signature, right, nor how to spell or punctuate. We don't have to go South for quality!



No one is unappreciative of the necessity and the value of these first six grades. However, as Mr. Pierce, former President of the National Education Association, told me ten years ago, "These grades are not education in any sense whatever. They only provide the tools, the pick and shovel, whereby education may later be acquired."

Giving the schools the benefit of the doubt whether the broken line here shown should not be drawn across the chart considerably higher up, say at the sixteenth year of age, and placing it, as here shown, at the fourteenth year, it shows that at best all public education, the development of social and economic understanding, comes in the narrow area between this broken line and the curved line "B-C". And what do we find?*

Upon this slender and largely worthless foundation rests the great area marked "A", an area of suffering, ignorance, and misunderstanding, in which is all of our adult population under fifty years of age (barring a few school teachers), the burden bearers upon whom rests every hope and accomplishment for ten years to come, and until those now in school take the places of their elders with no better and no different education. In this area are college men who have had, after a fashion, the training that all should have in social and economic understanding, and would have had if our educational leaders had known their jobs. Also here are 43,000,000 wage-earners and 20,000,000 homemakers, wives and sisters of the wage-earners. This total of 63,000,000 working people left school, at best, as you perfectly know, by the end of the sixth grade, with no education, with, at best, only the three R's. Worse than that, there was not the slightest provision made for their acquirement of education—no suggestion to this end from our public school men, halt and blind. The doors of educational opportunity were shut on them forever, when they left the grade school.

As your eyes run from "B" in the chart to the right, you see how frightfully thin is this space between the dotted line and the curved line just above. You get well into the high school area before you find any approximation to an adequate educational basis or foundation under our social and economic structure. You find that the high school pupils drop out in great numbers early in the course, that half the college entrants drop out early, and that few graduate.

Think of this great area from the dotted line and the 14th year of life to the fiftieth year as a great building, our social structure, and you see that under one corner only, the college corner, is there any foundation. There is no alternative. It is "college or nothing." That the school leaders know this is shown by this bulletin which I took from the walls of one of the big, palatial high schools of the country:

This bulletin is true and well meant. There is substantially no chance for an American boy or girl unless he goes to college. All public school people know it, hence their pressure upon the youth to stay in school even through college. But there is another side to this that fits the declaration of this conference that our public school system is not democratic. It has been built and fortified insistently, but unconsciously, by the school people for the favored few, favored in money, favored in their parentage, or favored with the special type of intelligence and energy that lets a poor boy stick to book learning at all odds. This bulletin and all that is behind it is a damning indictment of our public school lead-

(*Continued on page 23*)

* Since this was written leading educators at this Conference declare that there is nothing in sociology or economics taught in the 7th or 8th grades. The Committee on Social Studies in the High-Schools, after investigating 5,054 high-schools, selected at random, being one-third of all in the U. S., reports that 2,404 teach Civics of the old type, dealing primarily with forms of government with little or no reference to economic or social problems. Sociology is taught in 431 schools according to their claims, but the committee doubts "if the subject matter would justify the claim, as only 136 have recognized texts." "But," says the committee, "to know that as many as 136 [high] schools out of 5,054 are actually engaged in teaching sociology indicates a rapid development of these subjects in the last two years." I leave you to draw the base line where you will and add the dotted line at the sixteenth year as doubtless too low. The committee continues "courses of study designed primarily to give direct instruction and training in citizenship are, for the most part, deferred to the last two years of the high-school, thereby bringing their influence to bear solely upon those pupils who have before them a complete high-school education."—H. E. Miles.

AMERICAN *vs.* EUROPEAN LABOR POLICIES

The formation of the National Board for Jurisdictional Awards in the Building Industry, as described in another column by W. C. Roberts, is one of many encouraging signs that sanity in the relations between employers and employees in the United States is fast returning.

While in nearly every country in Europe, the organized workers are threatening the life of their Government, in the United States the organized labor movement has never made even so much as a gesture in that direction; on the contrary, it is co-operating with the Government in all its undertakings, and especially on the very question on which the British, the French and the Italian labor movements are threatening their respective Governments—*i. e.*, the recognition of Soviet Russia. At the Montreal convention of the American Federation of Labor, the vote against Bolshevism was so overwhelming that the pros did not even call for a division. The difference between the policies of the labor movements of Europe and that of the American Labor movement is well illustrated by that action.

Another difference between the American and the British labor movements is shown in the treatment of the coal mining controversies in the two countries. The coal strike here last year was due to a regular trade union controversy over wages, hours and working conditions and it was settled by arbitration. The coal strike now impending in England, however, relates not only to hours, wages and working conditions but also demands that the Government, at the expense of its own exchequer, shall force a reduction in the price of coal to the public and that the Government shall eventually take over and operate the coal mining industry. Robert Smillie, the head of the British Mine Workers, is a pronounced advocate of Lenine and Trotzky and the Soviet form of government.

While in the mining industry in this country, organized labor is far superior in patriotism and sanity to that of Great Britain, the same superiority exists in our other basic industry, transportation. While the railroad workers in England undertook to tie up the country with a strike, which failed, the railroad workers here submitted their demands to arbitration—and outside of the temporary inconvenience caused by the switchmen's "outlaw strike," which undoubtedly was engineered by I. W. W.'ites, there has been no interruption of service.

But it was due to the good sense and conservative character of our labor leaders that a joint movement was not effected between the American and the British labor organizations. Early in 1919, representatives of the Triple Alliance of Great Britain (composed of railwaymen, transport workers and miners) came to the United States to organize the same interests here into a "Triple Alliance" for America. It was the program that these two Triple Alliances would then be united in an International Alliance which at any time could say to the two countries what the British Labor Party said in effect to its Government last month: "Do as we command in regard to Soviet Russia or we will 'down tools' and starve you into submission." In other words, "Abdicate all constitutional forms of government and turn things over to us Bolshevists who are taking orders direct from Moscow." And the leadership in this revolutionary movement did not devolve upon Arthur Henderson, Ramsay MacDonald or George Lansbury, the radicals, but upon the supposedly conservative James H. Thomas, M. P., General Secretary of the National Union of Railwaymen, and J. R. Clynes, the former labor member of Lloyd George's Cabinet and British Food Controller during the War. The spirit of that movement is indicated by a cablegram sent in 1919 to labor bodies in this country by Robert Williams, of the Dock Workers, and Charles Cramp, of the Railway Engineers:

> We in Great Britain, despite our conservative outlook, have fashioned an industrial organization which is probably the most potent ever created—the Triple Alliance. In this body we 300,000 Transport Workers have allied ourselves for defensive and aggressive purposes with 500,000 railroad workers, and 800,000 miners. We believe it is our duty to use every means in our power to challenge the institution of capitalism and its domination of the working people. . . . Today, we of the Triple Alliance are challenging the Government's policy in maintaining conscription, military intervention in Russia, and military intervention in trade union disputes.
>
> We see in the fight against the workers of Russia an attempt to safeguard the interests of English bondholders, and we realize, perhaps more by instinct than by reason, that the fight of the Russian and Hungarian proletariat is in fact our own fight. We know, moreover, through experience, that conscription means the possibility of breaking strikes by means of the intervention of armed soldiers and sailors.
>
> Therefore we are taking the only means at our disposal to compel the Government to abandon conscription and get out of Russia.
>
> We earnestly hope that America will not be the stronghold of capitalism during this world-proletarian crisis which is at hand. America with its international origin should be in the van of the world movement for working-class liberty. May we therefore urge upon American trade-unionists the duty of assisting struggling Europe in what is not a make-believe but a real fight for freedom?

While this appeal utterly failed to win the American labor organizations, there is little doubt that in the Mine Workers', the Longshoremen's and the Steel Workers' strikes, there were radical contingents trying to respond to the call from their "brothers" across the water. There were also indications that in the railroad controversies here last fall there were radicals trying to comply with "Brother Cramp's" request.

In France, the labor movement would choke the Government to death if it could. In fact, it tried to do so last May, but the Government did the choking and the "general strike" remained a theory only. In Germany, they are not choking the Government but they are choking industry instead, through shop committees, democratic control and all that catalogue of schemes devised to give the workers a voice in technical management, financial control and employment supervision. The Socialists as long as they had control of the Government were trying out all the fantastic propositions that they have advocated since the days of Marx.

The labor situation in Italy, of course, compares with nothing in this country with the exception of the programs and aims of a comparative handful of Communists, I. W. W.'ites and Socialists. At this writing, September 18, it may not compare even with those but more nearly with some of the opéra bouffe scenes worked off on the public in the days of Gilbert and Sullivan. The serious aspect of the Italian situation, however, lies in the revelation of the pitiable weakness of the Giolitti government and the discovery that Giolitti himself seems to be a Red only a few shades lighter than Lenine. The program of the workers, who have locked themselves in and their employers out, is quite familiar to those who have read the literary output of certain so-called industrial experts who are advocating democratic government in industry. These experts have greatly excited the imaginations of the social service specialists in certain church organizations who are feverishly promoting this new form of democracy. Here is the way one of them puts it in a book that all the other social service experts are accepting as gospel truth:

> The "hot spot" in the industrial situation is not wages or hours, but management, in which labor is demanding an increasing share. This is in part the industrial counterpart of the demand for political democracy that is sweeping the world. It results from a growing conviction that freedom for the individual, the paramount democratic ideal, is not satisfied by a political formula, but must be realized in daily life and work. This means free choice of occupation; a voice in the determination of hours and wages, conditions of work, and shop discipline; and, in its fullest import, participation also in financial procedure—buying, selling and investment.

This is what Giolitti and the Communists of Italy are going to try out. It is what Lenine and Trotzky have already tried, to their sorrow and to the sorrow of the workers who, after its complete failure, were conscripted into the Red Army and put to work under machine gun supervision instead.

As stated in the opening paragraph of this article, the industrial outlook in this country is becoming more promising day by day. The beginning of a reduction in prices of basic commodities and the consequent reduction in the cost of living mark the beginning of the end of unconscionable profiteering and exploitation, which means that gradually but surely the American people will regain a normal life. That today we are not facing revolutionary outbursts, as in Europe, is due to the patriotic and level-headed leadership of those great bodies of five million organized wage-earners, the American Federation of Labor and the Railway Brotherhoods.

THE SOWERS AND THE HARVEST

On September 16 an explosion, through a time bomb or infernal machine, occurred in the most populous section of Wall Street, between the United States treasury and the offices of J. Pierpont Morgan & Company, in which two hundred persons were injured and thirty-four killed. The catastrophe was hideous and sent a wave of horror throughout the nation. According to Government investigators all clues indicate an organized plot on part of revolutionary "Reds."

Such outrages are generally the work of the more fanatic members of the revolutionary "proletarian army," yet it is just of such that the majority of any mass movement to overthrow a government is composed. It is exactly this fanaticism which the leaders seek to rouse and play upon, at the opportune time, as Lenine and Trotzky did in Russia and as the leaders anticipate doing in this country. The atrocities which have been perpetrated in Russia by the Bolsheviki under their leaders are on a large scale analogous to what, a single incident, was perpetrated in Wall Street. The psychology back of the planting of that bomb is the psychology of the Red Terror in Russia.

Immediately after the calamity, radical papers and radical leaders ostentatiously rushed forth to deplore and repudiate the act. The authorities may find the perpetrator to be another Czolgoz, a weak minded fanatic, who may or may not have had any connection with the Socialist or Communist parties. No one could imagine that the leaders of the Socialist party, or the editors of Socialist and "intellectual liberal" periodicals, or even the I. W. W., could have any part in such a plot—at this time. These know that such an isolated outrage would serve no political purpose and simply bring upon their heads the anger of the people; that it would alienate the sympathy of many of their "liberal" friends, and do more damage than good to their cause. Nevertheless, the responsi-

bility of this horror must be placed where it belongs.

Whoever placed that bomb is blood-guilty of the death of thirty-four human beings. And to the same degree, morally if not criminally, are the leaders of the Socialist movement and the pro-Bolshevist "liberal" periodicals blood-guilty when lives are lost in such a crime. The Wall Street tragedy is the concrete result of their teachings.

With bitterness, with hatred, with malevolence, the Socialist leaders have preached a class war, have told their followers that they were oppressed, exploited and persecuted. They have attacked our Government, our institutions, our industrial system, urging that these be destroyed. The Socialist party officially advocates a program of "reinforcing" its political demands by industrial action, or the general strike, the overthrow of the Constitution and our form of government by force. The carrying out of that program would entail horrors in which the Wall Street explosion would be a trivial and insignificant incident. In their program to gain their object, they would precipitate exactly such catastrophes on a nation-wide scale.

The above is an unpublished photograph of the speakers' table at a luncheon given on May 26, 1917, by THE NATIONAL CIVIC FEDERATION in honor of the British labor delegates who had been sent to the United States by Premier Lloyd George at the request of Samuel Gompers, then Chairman of the Committee on Labor of the Council of National Defense, to address the working men and women of America. August Belmont presided at this luncheon and James H. Thomas, M. P., General Secretary of the National Union of Railwaymen of Great Britain and Ireland, sat at his left. The others at the table were: Oscar S. Straus, C. W. Bowerman, Joseph Davies, H. W. Garrod, Samuel Gompers, Warren S. Stone, W. S. Carter, William Fellowes Morgan, Elisha Lee, Haley Fiske and Ralph M. Easley.

The delegates made a tour throughout the country under the auspices of the American Federation of Labor and THE NATIONAL CIVIC FEDERATION. At Schenectady, Mr. Thomas addressed fifteen thousand employees of the General Electric Company, by his eloquence inducing them to subscribe to $100,000 of Liberty Bonds.

This is the same Mr. Thomas who was a conspicuous leader in organizing the Council of Action in London last month which threatened to overturn the Government of Great Britain unless it surrendered its constitutional prerogatives to the workers. His patriotism and enthusiasm were of such great benefit to our country in 1917 that his turning against his own Government at this crucial time has been a painful surprise to the many friends he made when here.

In academic verbiage, in phraseology of idealism, under the guise of liberalism, a small group of "intellectual" "liberal" magazines have more subtly, and perhaps even more dangerously, carried on the propaganda of the class war, inciting class hatred and revolutionary discontent. They impugned our part in the war, representing it as a Wall Street war in which capitalism alone emerged victorious; they attacked the President for having "betrayed civilization" at the Peace Conference; they have defended the Bolsheviki and have promoted Bolshevism as the advent of their heralded "new order." These, no less than the more rabid Socialist, anarchist and I. W. W. agitators, have sown seeds of which the Wall Street horror is but a single result. Amateurs of life smugly toying with vital things with the intelligence of adolescents, mediocrities seeking to attract attention to themselves by a swash-buckling bravura dare-devilism, they sow a wind, the harvest of which is a whirlwind. Streaked with yellow, mock-heroic and incapable of real self-sacrifice in such a struggle as the last war, these "little young men" would probably turn white-faced at the sight of blood from a pin-prick, and yet it is the "intellectual diversion" of these that finds fruit in a Wall Street catastrophe. Calling for stern justice to those guilty of the act, the Rev. Dr. Manning, in Trinity Church, rightly said:

> "There is also another class that needs to be rightly dealt with, the class that describes itself as 'intellectual,' the class of 'intellectuals' who make themselves safe by declaring they do not advocate force, but at the same time sow the seeds and spread the propaganda which produce acts of this sort. It is a shameful thing, too, that by some among us these people are encouraged and countenanced in this sort of business. Against all this there should be a tide of public sentiment and righteous indignation which would cause the intellectual class to see itself in its true light."

It is to be hoped that America will take heed of this warning, and especially that it will give pause to those sentimental folk who have rushed to every defense of the Socialists, those clergymen who oppose every attempt to curb their teachings and who eagerly lend their names to every attack on Wall Street and capitalism, those rich people who have coddled and helped support the more subtle and academic propagandists of discontent and sedition. It would be well for every American to familiarize himself with the program of the Socialist party and learn just what is proposed by "industrial action." To safeguard our national life, our very existence, it will not suffice only to apprehend and punish the perpetrators of such an isolated outrage, but we must go to the source and deal with those who inspire men to class hatred and violence. If we would prevent the bloody harvest, we must stop the sowing of the seeds of wrath.

CAMOUFLAGE FAILS TO HIDE TRUE CHARACTER

On the same day that the infernal machine wrecked the most populous section of Wall Street and resulted in the death of thirty-four wage earners, the five Socialists who had been expelled last winter from the New York legislature were reelected in the special elections in New York City. This was not unexpected and must not be taken—what the Socialists loudly represent it to be—as a vindication on part of loyal Americans of these members of a lawless organization. The districts from which these men were reelected contain a large number of Socialists and people who, while not enrolled members, vote the Socialist ticket, a majority of them of alien birth or extraction. Although the Republicans and Democrats united on a fusion ticket against the Socialists, it was impossible to get out the vote, and against a vote of 32,516 in 1919, the fusion vote in this election was only 11,336, a decrease of more than 21,000 votes. The Socialists hail this decrease as a repudiation of the action of the New York State Assembly, but in this connection it is also significant that while the Socialists polled 28,469 votes last year they polled in the recent elections only 17,654 votes, which would indicate that more than ten thousand former supporters had been convinced that these Socialists are ineligible to take their seats. The decrease in the fusion vote is more than likely due to a lamentable failure on part of many to fulfill the duty of citizens and go to the polls. The action of the N. Y. Assembly in expelling Claessens, Waldman and Solomon by an overwhelming majority was inevitable, and the possibility that De Witt and Orr will not serve would be in accord with the fitness of things.

The reelection of these five men, and the superficial camouflage adopted at its last convention by the Socialist party of America, does not change the status of the Socialist organization or the ineligibility of its members to office. As pointed out by Mr. Harré, in his article in this issue of the REVIEW, the endorsement of the Third Internationale with qualifications means nothing except a ruse on part of the wily leaders to deceive simple and unsuspecting folk.

The Socialist party, as Mr. Harré's article shows, is still committed to a program which seeks to gain political power by the weapon of "industrial action" or the general strike. It contemplates the overthrow of government and the setting up of a Socialist régime by a minority, through force and violence. Its end and aim is still what it declared in one of the resolutions adopted at the St. Louis convention in 1917: "Social revolution, not political office, is the end and aim of the Socialist party."

Is that revolution to be peaceful? Parliamentary and lawful? One can best find the answer, not in what Socialists prepare for soft and flabby sentimentalists in churches, schools, colleges, et cetera, but in what Socialists write for Socialists. That the Socialist intellectuals realize they can never win by securing a majority of voters, and that they do not even consider the ballot box as their weapon, is indicated by a communication published in the *New York Call*, July 26, 1920, from Benjamin Glassberg, one of the leading lecturers in that training-school of agitators, the Rand School. Glassberg declared against *"our teaching the workers what is fundamentally untrue, that is, that we can vote ourselves into Socialism."* He said further: *"Now is the time to discuss tactics, not when the revolution is upon us."* And he asked: *"Are we to object to the assumption of power by the workers, who may for the time be in the minority, because the minds of the workers have been warped and corrupted by capitalist teachings?"* Alexander Trachtenberg, another leader, went further than Glassberg, and declared: *"We are in the period of the social revolution."*

The Socialist party in 1917 at its St. Louis convention officially admitted that a political victory cannot be hoped for, and called "upon all workers to unite, to strike as they vote and to vote as they strike—all against the master class." "Only through this combination of our powers can we establish the cooperative commonwealth." Mr. Hillquit stated in his keynote speech at the last convention: "We have nothing to retract, nothing to apologize for in connection with our stand in recent years."

Is the Labor Problem Unsolvable?

AN AFFIRMATIVE ANSWER ENDORSING KANSAS LAW INSPIRED BY GOMPERS--ALLEN DEBATE

By ELMER T. PETERSON

(*Associate Editor "Wichita Beacon," of which Gov. Allen is Editor.*)

ELMER T. PETERSON

"IS the labor problem unsolvable?"

This question, interestingly discussed in a recent number of THE NATIONAL CIVIC FEDERATION REVIEW, is accompanied by a good-natured hint that Governor Allen's Industrial Court is a "nickle-in-the-slot" solution. The treatment of the question calls for some comment.

The writer has followed the work of the REVIEW with the greatest interest and has agreed with practically all of it, especially that which concerns Bolshevism. It is that very agreement that causes the writer to espouse the Industrial Court idea. The resort to industrial courts, to his mind, is the fundamental force that will turn democracy into its proper channels and free it from the spell of plausible direct actionists who now have in mind the setting up of an invisible economic government within the shell of our present political government.

The history of America and its great men—its prophets—is full of warnings against the invisible tyrannies of organized groups who use the precious principle of co-operation, not to benefit the general public, but to benefit their own special interests. Washington, in his farewell address, warned the people against the despotism of "artful and enterprising minorities" and pictured, with almost uncanny foresight, the very condition that now threatens the world's democracies.

The *London Times* in a recent editorial regarding the syndicalist railroad troubles in France, said:

> "It is the fundamental issue for all modern democracies. Is the majority to govern or not? If it is, the people everywhere must see that the responsible executive (meaning government in this case) shall govern and nobody else. . . . A hundred citizens organized in this or that corporation have no better constitutional way than a hundred men who are not organized. To attempt to obtain it against the will of an unorganized majority by virtue of their organization . . . is a tyrannical abuse. Organizations of the kind have shown a growing pretension to substitute themselves for constitutional Governments, or to dictate to those Governments the policy they are to pursue. They are threatening to become parasitic governments themselves, eating into the very essence of democratic rule."

The writer does not wish to be misunderstood. He comes from the ranks of labor himself and does not believe that even a small proportion of the laboring men of America believe in government by direct action. But there is every reason to believe that many of the labor leaders, and even Mr. Gompers himself, are becoming permeated with the unhealthy germ, born of power, which generates direct action government.

In the debate with Governor Allen Mr. Gompers inadvertently betrayed the fact that he has a strong leaning toward that use of the strike which has no place in American life. He spoke of the German political strike, saying that the German workers checkmated Von Kapp's imperialistic designs by declaring a general strike. Possibly that was justified in turbulent Germany, with its unstable hair-trigger government. He found fault with the Kansas law on the ground that it would prevent such a general strike by the workers called to prevent a change in government. In plain words, he was defending the use of the strike as a political weapon. That, of course, is one of the main features of I. W. W.ism and Bolshevism. In America the people have a better means of working their will than by means of economic pressure. This is not Germany. Under our form of government there can be no conceivable development that would justify the use of a general strike as a political weapon.

The only kind of a strike prohibited by the Kansas law is the strike whose purpose is to restrict or stop production—in other words, the sabotage kind of a strike. The Kansas law certainly does not prohibit a man from quitting work. Your article says that Mr. Gompers laid the groundwork for a forcible, fundamental argument against compulsory arbitration or the attempt to make a man work against his will, and that this left Governor Allen "with not a leg to stand on." This statement shows a complete misunderstanding and misconception of the Kansas law, for this law does not in any degree attempt to make a man work against his will, as a microscopic examination will demonstrate. Neither does it provide for compulsory arbitration. Mr. Gompers simply set up a straw man and did not hit the Kansas law at all.

Your article says that there were 12,000 men on a strike in a Kansas basic industry at the time of the debate, quoting Mr. Gompers, but you failed to attach Governor Allen's very pertinent rejoinder that according to Alex Howat, president of the union which was under discussion in this connection, had specifically stated that there was no strike at all. It was not to be expected or desired that this law was to keep men from quitting work for legitimate reasons. There have been cases in the mines where large bodies of workers have knocked off work for a day or two. There have been cases where men refused to work until certain demands with regard to the price of explosives were met. The Kansas court has approached such cases wisely and tactfully and has vindicated the real purpose of the law, which is to distinguish between legitimate quitting of work and the syndicalistic conspiracy to hinder or stop production. Every one knows that in the interpretation of law the matter of intent is a very important guiding principle, and there is no reason why this principle may not be applied in industrial as well as in civil disputes.

The citing of the 12,000 men striking is a peculiar example of inconsistency, by the way. In one breath Mr. Gompers condemns the law for stopping strikes and in another breath he ridicules it because it doesn't stop strikes, forsooth.

The Kansas law is not like the New Zealand, Canadian or Australian laws, as Governor Allen explained in the debate. The Kansas law does not provide for compulsory arbitration. What it does, in essentials, is this:

It takes the irrefutable ground that in the four vital industries of transportation, fuel, food and clothing production, the rights of the public are paramount and must be respected by the two economic instruments—capital and labor. The Kansas law says that the public, through its only stable recourse—the government—must see to it that no industrial disputes interfere with the flow of the necessary commodities. It does not recognize the principle of arbitration tribunals because such tribunals are almost invariably composed, in the major part, of special interests. The industrial decision, therefore, is not an arbitration award, arrived at by dickering or compromise, probably not worth the paper it is written upon, neither is it a collective bargain, or commercial transaction, as provided by the President's Industrial Conference scheme, but a just and impartial decree of the government itself, which may not be altered except by recourse to the usual processes of law. To insure fair play to the poor worker, he is enabled to conduct his case without a penny's expense to himself.

Getting down to the fundamental issue, it must be patent to every watchful observer that this thing we call organization has obtained a remarkable grip on American life. Gradually and imperceptibly the two economic forces—labor and capital—have encroached upon the unalienable rights of the people, the rights of life, liberty and the pursuit of happiness. Capital was the first offender, for it was more susceptible to combination, and the anti-trust laws were the effort to curb this form of economic pressure. Now labor has brought organization to the point where it is able to get strangle-hold upon the public. Again the public must act or become the helpless serfs of economic forces.

Economic government is the ideal of Lenin. He takes the materialistic stand that economic determinism is the only proper motive in government.

Economic government usually means government by a minority. The I. W. W. formula, which is the same as that of the Bolsheviki, is "Pressure rather than Participation," and it is accompanied by a repudiation of the ballot box.

Political government means government by the majority, regardless of class or occupation. It acknowledges no autocracy of wealth, position, occupation or organization. Surely government may guarantee life and safety to its people.

There is the issue. The air is full of warnings. The age of materialism is upon us and the struggle for selfish advancement is getting ferocious. Organization, advanced by specialization, invention and other modern developments, has set up an invisible government. The only way the people have of retrieving their political power and staving off economic pressure is to erect governmental tribunals with power to prevent economic strangulation, no matter from which direction it comes. Those tribunals can have the power of affecting conciliation and a better understanding. The Kansas court goes far in that direction. They can be the intermediary between the clashing and hostile camps. "The only remedy proposed by Mr. Gompers for war is more war," says Governor Allen. There is a better way.

Notable Books Make Timely Expose of Socialism

SOCIALISM vs. THE SPIRITUAL

"Bolshevism: Its Cure," by David Goldstein and Mrs. Martha Moore Avery (The Boston School of Political Economy, Boston, Publishers; price $1.50), effectively exposes Socialism—and its aspect Bolshevism—as materialistic and anti-Christian in its basic philosophy and practices, as seeking to destroy man's faith in God, all spiritual ideals, and that bulwark of civilization, the home and family.

By its official manifestos, platforms and the expressed statements of its leaders, the Socialist party is convicted of holding patriotism and loyalty to one's country in scorn, teaching that workingmen have no country, and that their allegiance is due only to the Socialist Internationale. Of especial value is the study of the extent to which Socialist propaganda has been carried on in American schools and educational institutions. "From university down to kindergarten their agents are tearing away the ground of right reason, namely: God the Creator first, next the individuality of the immortal soul, then all things else, the three basal dimensions of thought." The volume recounts the activities of the Intercollegiate Socialist Society, which seeks to promote Socialism in the higher institutions of learning. In one year, it is said, two extreme radical speakers delivered addresses in 120 colleges, to 30,000 students with 12,000 other persons in attendance. In dealing with the Rand School, the history of which is given, the authors say:

> "The Rand School cleverly dismisses, as an outworn notion, the theological seminary. It announces that it is spreading a new faith. . . Turning to the aims of the Rand School its keynote is struck—Socialists are to be equipped for the struggle of 'emancipation.' Emancipation from what? Why, from the law and the Gospels. From the constitution natural to the human race—from the knowledge of Almighty God, from humanity, marriage, liberty, property."

It is shown that there is an organized movement in the Socialist party to secure the appointment of Socialists as teachers in the public schools and to get Socialists upon school boards. The authors quote Socialist authorities who boast of their success. "The Y. P. S. L. is another wide open door through which Bolshevism enters the class room," declare the authors. "Turning the initial letters of their title into Yiddish, they sound 'Yipsel,' which has become a name they love to conjure with the world over. . . In Russia the 'Yipsels' are said to form the most active groups of the Bolsheviki. In the Spartacan revolts in Germany, the 'Yipsels' are credited with forming the backbone of resistance against the moderate Socialists."

Telling of the sinister work of the Socialist Sunday Schools, the authors say:

> "The Arbeiter Ring (Workmen's Circle), a Jewish fraternal, beneficial propaganda society, having some 600 branches with over 71,000 members mostly in and around New York City has been foremost in organizing Socialist Sunday Schools. The Rand School has a special course for training teachers in these schools." The teaching in these schools, as shown by quotations from the lessons, are blasphemous, atheistic, and advocate disobedience to all authority, parental, civic and moral. "To comprehend the debasing character of these 'lively discussions,' one must hold in mind that the doctrine taught rests upon the premise that 'religion is a fantastic degradation of human nature.'" In their literature they refer to the Christian Sunday schools as "schools that deal in dope and chloroform."

The authors of this book very aptly ask:

> "Should there be any wonder that the 'East Side' has supplied so many agents to carry out the Lenin-Trotzky régime in Russia?"

THE A. B. C. OF SOVIETISM

> "What everybody wants to know is not what the Bolshevists *claim* to stand for, nor even what they honestly think they stand for, but what they actually do stand for—according to a fair summary of their own acknowledged words and deeds."

Thus prefacing his volume, "Sovietism—the A B C of Russian Bolshevism," (E. P. Dutton & Co., New York, Publishers; price $2.00) William English Walling proceeds to give this information, to answer these questions, and the evidence gathered and coordinated is from the Bolshevist leaders and authorities themselves.

In view of the popular confusion on this subject, Mr. Walling's book meets an urgent need and is of unprecedented educational value.

Mr. Walling shows that the Bolsheviki are not, and do not claim to be, a political party, representing the majority, but are a sect, a minority, who have seized power and hold Russia in subjection by an admitted reign of terror. He quotes Karl Radek, one of the most influential Bolsheviki, as admitting: "The claim made by some of our people, that the majority of the Russian people favor the Soviet government, is not true. The peasants are against the Soviet government." Various pro-Bolshevist sympathizers, such as Raymond Robins, have declared that the Soviet autocracy represents the will of the majority of the Russian masses and have urged recognition of the Bolshevist régime as a representative Russian government. Mr. Walling aptly shows that "Bolshevism or Sovietism is by no means a Russian or Slavic movement." He says: "It is not 'a natural expression of the Slavic genius,' nor 'the traditional Russian idea of democracy,' as its American apologists have alleged. . . Lenine himself says the idea was taken in part from the Paris Cummune, in part from the American revolutionary Socialist, Daniel De Leon. . . Three-fourths of the self-chosen leaders of the Soviets, members of a non-Slavic race (which they do not, however, truthfully represent) have a German dialect as their mother tongue."

It would be impossible in a review to summarize Mr. Walling's book, but the subject chapters will indicate the comprehensiveness of the volume. These chapters take up and discuss the following: "What is the Chief Soviet Weapon?" "To What Is Their Power Due?" "Can the Soviets Win Back the People?" "Are the Bolsheviki Reforming?" Mr. Walling discusses "The pro-Bolshevists" and the Soviet propaganda in countries other than Russia. He demonstrates that the Soviet autocracy aims at world-wide dictatorship; that the methods proposed are violent and revolutionary; and that they have sought to incite American workmen to revolt. He shows, too, that the American Socialist party, going the way of the Italian Socialists and going even further than "the half way house of the French Socialists" have gone over to Bolshevism.

In dealing with the attitude of the Soviet government toward religion, Mr. Walling corroborates the volume by Mrs. Avery and Mr. Goldstein, and proves by their own decrees and official statements that they have worked out a vast, scientific campaign for the extirpation of religion. The Soviet policy on religion was formulated at the Eighth Communist Congress and, as expressed by that Congress, aims at "the broadest possible scientific and anti-religious propaganda." As declared by Bukharin, a leading authority and high official of the Bolsheviki: "Religion and communism do not go together either in theory or in practice. Between the precepts of communism and those of the Christian religion there is an impassible barrier."

SOCIALISM VS. CIVILIZATION

Mr. Boris Brasol's book, "Socialism *vs.* Civilization," (Charles Scribner's Sons, publishers; Price $2.00) defines modern socialism, analyses its philosophy and objects, and shows conclusively that in practice it is impossible and impractical. Mr. Brasol's volume, with the two other volumes here reviewed, should be in every public and private library in America. It might well be read by all school teachers and would be an admirable text book in colleges. Mr. Brasol has done a great service in dispelling the popular confusion which exists concerning Socialism, showing that every brand and variety, despite their differences as to tactics, are one in their philosophy and object.

Mr. Brasol expounds the theory of Marx and modern Socialism, whose keynote is the class struggle. He shows the inconsistencies and fallacies of the theory and program, including the theory of surplus value, and very clearly explains the difference between equality of labor and equality of opportunity. "Leonardo da Vinci, in painting his 'Gioconda,'" says Mr. Brasol, "presented to the world a masterpiece of sublime quality. Let us assume that it took one hundred hours' work for him to complete this picture. Now, according to the Marxian theory, Leonardo ought to have received for his work the same remuneration as would be given to an ignorant house painter who also spent one hundred hours in painting a wall. This is the kind of equality which Marx advocated. Of course, the more recent Socialists had to abandon the Marxian conception of equality. They admit now, although in a very vague manner, that the quantity of work delivered does not determine the amount of remuneration." Mr. Brasol truly says equality of opportunity is the only kind of equality that can be advocated. The Socialist philosophy denies all spiritual incentive and inspiration in human endeavor, and is absolutely materialistic. It is the work of the hands, and not the work of the brain, that actually counts. Socialism, denying the religion of the spirit, is the religion of the belly.

Mr. Brasol shows how Socialism has worked out in Russia, where it has destroyed industry and killed all creative intellectual effort. Despite that terrible object lesson, Socialist propaganda has increased in the United States and Europe. "Disgraceful as it may seem, nevertheless it is true," says Mr. Brasol, "that Bolshevist agents, enjoying the full protection of the law in civilized countries—such as the United States, Great Britain, Sweden and Norway—have endeavored in all those countries to carry out venomous propaganda, aiming at the overthrow of those very governments which extended to them their hospitality. Thus, Great Britain for many months tolerated the disloyal activities of the so-called Bolshevist Ambassador, Mr. Litvinoff, né Finkelstein. It required the combined pressure of British public opinion to have Mr. Finkelstein finally expelled from Great Britain.

> "In the United States Mr. Trotzky's agents, Nuorteva, né Neuberger, and his German friend, Ludwig C. A. K. Martens, are keeping up their disloyal propaganda, notwithstanding the fact that a Senatorial Committee of the State of New York has exposed the treacherous and dangerous features of their work. These and others of their kind, under alleged names and disguised nationalities, are preaching day by day Marxian theories and actual revolutionary practice."

Mr. Brasol has written a valuable work, replete with constructive suggestions, which we recommend to all Americans who desire to understand, so they may combat, the menace that confronts us.

"The Mountain Labored And—"

A CONSIDERATION OF GIGANTIC CEREBRATION ON PART OF THE "LIBERALS" ILLUMINATI

By T. EVERETT HARRÉ

THE New Republic and the *Nation* during a period of a year and a half were often the subjects of serious indictments in THE NATIONAL CIVIC FEDERATION REVIEW. These indictments were of a grave character. In the opinion of many people they called for an answer. Silence meant admission; yet for eighteen months *The New Republic* and the *Nation* were silent. At last, however, after a period in which there was ample time to assemble all evidence in rebuttal and to prepare an adequate plea of self-defense, the two journals have made their answer. How frankly, courageously, adequately, with what manly directness, this answer is made will be manifest.

In order that the crushing effect of these mighty blows of intellectual pugilism may be fully appreciated, let us consider briefly the charges which have been made against these publications—charges which are now, presumably, finally disproved, wiped out, disposed of.

These journals were charged with un-Americanism, if not disloyalty, during the war. They were charged with pro-Germanism. We sought to show—and cited evidence—that during the war they engaged in propaganda of defeatism, and advocated a premature pro-German peace; that when Germany was finally defeated, they defamed the Allies and sought to estrange us from the nations with whom we had fought; that they agitated for a peace favorable to Germany and that when the Versailles treaty was finally formulated they abandoned themselves to a Vitus dance of frothing rage; that they championed the Bolshevik autocracy, denied or condoned its excesses and sought to promote revolutionary radicalism in the United States. The charges made were not pleasant; in fact, they were ugly. Pretending to influence President Wilson's policies in the days when its editors and satellities had the entrée to high officials in Washington, *The New Republic,* finding that its Judas-counsels did not prevail in Paris, later turned like a cur upon the master it had claimed in hydrophobic viciousness. We indicated that *The New Republic* and its quill-driving satellities were not "red," but only "yellow."

An article in one issue of the REVIEW was devoted to the editor of the journal, Mr. Herbert Croly. We did something remarkable in this article. We performed a miracle. We raised a book of Mr. Croly's from the dead. Ordinarily, this might have been a cause of an unsuccessful author's gratitude. We do not know whether this was so in Mr. Croly's case.

Just six weeks after the United States entered the war, in its issue of May 19, 1917, *The New Republic* published an editorial that was, in the opinion of many people, perilously akin to the same propaganda which caused Bolo Pasha to be executed for treason in France. That editorial sought to make victory over Germany appear hopeless. *The New Republic* said:

> There can be no victory over Germany except as a consequence of as complete an organization of the fighting power of the United States as that which has taken place in France and Great Britain. . . The deadlock could be broken only by the despatch of a huge American army to Europe—one so large that it could not be recruited, equipped and trained until the summer of 1919. Even then it might be impossible to transport it to Europe. . . It is an appalling outlook, and it will go ill with the men responsible for the government which brings consequences of this kind upon the American people. The result would almost certainly be a revolution in America far more bloody and drastic than the revolution in Russia. A war conducted until 1920 on the scale required by a military decision might bring peace with victory, but it would also bring victory with suicide.

It seemed to us that perhaps the opposition of *The New Republic* toward carrying on the war against Germany to a victorious conclusion might be explained somewhat in the light of a past and forgotten book by Mr. Croly, published in 1909, entitled "The Promise of American Life." We found, according to this book, that Mr. Croly, who was against carrying on the war to a victorious conclusion in 1917, had in 1909 justified war, declaring war to be "useful," saying, "These wars, when they come, should . . . be fought to accomplish a desirable purpose and should be decisive in result." The man who campaigned in 1917 for an "indecisive" end to the war against Germany, in 1909 was opposed even to disarmament, and moreover, disparaged England and France while he glorified Germany, justified Germany's part in the Franco-Prussian war and represented the German government as being as representative as that of the United States. To this indictment Mr. Croly made no reply.

In another article we dealt with an associate editor of *The New Republic,* Walter Weyl, and we proved him, out of his own mouth, an advocate of a pro-German peace, bitterly anti-Ally, an "internationalist" of the yellow variety, a spokesman of the "class war" intrigue, a vicious, sneering, ignoble and petty calumniator of the nations who were waging their heroic struggle against German imperialism. To this there was no come-back.

We sought to expose, from its mass of academic verbiage, the true character and intent of *The New Republic,* and the *Nation* as well, so that well-meaning but simple-minded and perhaps sentimental folk might not be deceived by the pretentious poseurs, intellectual adolescents, and "little Trotzkys" who adroitly and speciously made their appeal to human sentiment or sentimentality, and often indeed to the higher human qualities and emotions. There was a time when it seemed *The New Republic* did have influence in certain high circles. One editor, whose "Americanism" would have found safer expression in the work of army "kitchen police," was taken to Europe on a high mission. His activities and associates, some people say, would make interesting reading. Other editors, whose cordial reception in Moscow or Berlin might have been understandable, were actually received at departments in Washington. Strange as this was, even stranger things might yet be told. However, *The New Republic* "diplomat of the new school" was sent back from Europe "without honors," and others went to their fate unheralded and unsung. Even the Washington patron of this breed, the high official whose name suggests sauer-kraut, has passed into innocuous desuetude, where he can only lend his unsavory name to an attack on the Department of Justice.

And now come the come-backs!

In answer to the charge that *The New Republic* was, and is for that matter, un-American and pro-Bolshevist; that it was anti-Ally and advocated a pro-German peace; that in the crucial days of the war it was "defeatist," and that its editor was "militaristic" in 1909, when Germany was strong, and pacifist in 1917 when Germany faced defeat, *The New Republic*—in its issue of July 28, 1920—replies by saying:

> "Sooner or later Mr. Ralph Easley was bound to come a cropper. . . . He was a moving spirit in the poisonous Lusk agitation and the expulsions at Albany. He is to the cause of decent conservatism what a terrorist is to decent liberalism."

The New Republic further charges Mr. Easley with "a private system of espionage, and an intrigue to discredit and obstruct the industrial inquiries of the Interchurch World Movement."

To say that Mr. Easley "was bound to come a cropper" is of course to wipe off the slate *The New Republic's* putrescent war record. To charge Mr. Easley with being "a moving spirit" in the investigations of the New York legislature (which, incidentally, is absolutely unfounded) and to imply "an intrigue" on the part of Mr. Easley against the industrial enquiries of the Interchurch World Movement (another absolute falsehood) is to self-exonerate itself of any and all efforts to let Germany out of the war victorious or to turn civilization over to Bolshevism. Mr. Easley and the REVIEW, of which he is editor, in a twenty-four-line editorial, are exterminated as ruthlessly as an annoying mosquito is crushed on a lily-white wrist.

Likewise, with the *Nation.*

In utter repudiation of the charges that Mr. Oswald Garrison Villard justified the sinking of the "Lusitania," that he opposed America's going to war against Germany, that he campaigned for a premature pro-German peace, that he was pro-German and anti-Ally, and later pro-Bolshevik, Mr. Villard editorially, and after eighteen months, raises the question whether the labor members will remain officers of The National Civic Federation! Mr. Villard explains away all the charges against his loyalty, wipes out all the charges of pro-Germanism and Bolshevism, by charging Mr. Easley with communicating "to an official of the United States Steel Corporation an advance copy of a report which a committee of the Federation had had prepared regarding certain liberals of the Interchurch World Movement." It does not matter, of course, that Mr. Easley never did communicate "to an official of the United States Steel Corporation" such a report. It does not matter that Mr. Easley had nothing, directly or indirectly, to do with alleged attempt to "hold back" the Interchurch report on the steel strike. The past record of the *Nation,* all its infamous Hunnish and Bolshevist propaganda, is cleared away by the awful and sinister implication: "Some day we may learn what share the Federation played in the rumored proposal to hold back the Interchurch report on the steel strike and in the subsequent collapse of the Interchurch Movement."

Gargantuan cerebrums have been at work. As with the mountain, "A mountain," said Phaedrus some nineteen hundred and twelve years ago, "was in labor, sending forth dreadful groans, and there was in the region the highest expectations." The travail, while disappointing, has not been in vain, and history and natural history are not without parallels.

Life is enlivened by a knowledge of psychology and a sense of humor. Goliath was a mighty man in his day, and yet "the poor beetle that we tread upon finds a pang as great as when a giant dies." A rat will turn finally when caught in the corner. And as for the diminutive worm, its classic process is described in deathless adage.

Labor and Agricultural Policies

(*Continued from page 2*)

AS TO COLLECTIVE BARGAINING

We do not oppose but approve collective bargaining, because that is an outstanding right, but we are unalterably insistent that its exercise must not destroy the equally sacred right of the individual in his necessary pursuit of livelihood. Any American has the right to quit his employment, so has every American the right to seek employment. The group must not endanger the individual, and we must discourage groups preying upon one another, and none shall be allowed to forget that Government's obligations are alike to all the people.

I hope we may do more than merely discourage the losses and sufferings attending industrial conflict. The strike against the Government is properly denied, for Government service involves none of the elements of profit which relate to the competitive enterprise. There is progress in the establishment of official revealment of issues and conditions which lead to conflict, so that unerring public sentiment may speed the adjustment, but I hope for that concord of purpose, not forced, but inspired by the common weal which will give a regulated public service the fullest guarantee of continuity.

I am thinking of the railroads. In modern life they are the very base of all our activities and interchanges. For public protection we have enacted laws providing for a regulation of the charge for service, a limitation on the capital invested and a limitation on capital's earnings. There remains only competition of service on which to base our hopes for an efficiency and expansion which meet our modern requirements.

The railway workmen ought to be the best paid and know the best working conditions in the world. Theirs is an exceptional responsibility. They are not only essential to the life and health and all productive activities of the people, but they are directly responsible for the safety of traveling millions. The Government which has assumed so much authority for the public good might well stamp railway employment with the sanctity of public service and guarantee to the railway employees that justice which voices the American conception of righteousness on the one hand and assure continuity of service on the other.

BIG QUESTIONS FOR FARMERS

New conditions, which attend amazing growth and extraordinary industrial development, call for a new and forward-looking program. The American farmer had a hundred and twenty millions to feed in the home market, and heard the cry of the world for food and answered it, though he faced an appalling task amid handicaps never encountered before.

In the rise of price levels there have come increased appraisals to his acres without adding to their value in fact, but which do add to his taxes and expenses without enhancing his returns. His helpers have yielded to the lure of shop and city until, almost alone, he has met and borne the burden of the only insistent attempts to force down prices. It challenges both the wisdom and the justice of artificial drives on prices to recall that they were effective almost solely against his products in the hands of the producer and never effective against the same products in passing to the consumer.

Contemplating the defenselessness of the individual farmer to meet the organized buyers of his products and the distributors of the things the farmer buys, I hold that farmers should not only be permitted but encouraged to join in co-operative association to reap the just measure of reward merited by their arduous toil. Let us facilitate co-operation to insure against the risks attending agriculture, which the urban world so little understands, and a like co-operation to market their products as directly as possible with the consumer in the interests of all. Upon such association and co-operation should be laid only such restrictions as will prevent arbitrary control of our food supply and the fixing of extortionate prices upon it.

Our platform is an earnest pledge of renewed concern for this most essential and elemental industry and in both appreciation and interest we pledge effective expression in law and practice. We will hail that co-operation which again will make profitable and desirable the ownership and operation of comparatively small farms intensively cultivated and which will facilitate the caring for the products of farm and orchard without the lamentable waste under present conditions.

GOVERNOR COX'S SPEECH

Governor Cox, in his speech accepting the Democratic nomination for President, dealt with labor and agriculture as follows:

Disputes between labor and capital are inevitable. The disposition to gain the best bargain possible characterizes the whole field of exchange, whether it be product for product or labor for money. Its strikes are prolonged—public opinion always settles them. Public opinion should determine results in America. Public opinion is the most interesting characteristic of a democracy, and it is the real safety valve to the institution of a free government. It may at times be necessary for the Government to inquire into the facts of a tie-up, but facts, and not conclusions, should be submitted.

The determining form of unprejudiced thought will do the rest. During this process, governmental agencies must give a vigilant eye to the protection of life and property, and maintain firmness but absolute impartiality. This is always the real test, but if official conduct combines courage and fairness our governmental institutions come out of these affairs untarnished by distrust.

SOME PRINCIPLES OF LABOR

Morals cannot easily be produced by statute. The writ of injunction should not be abused. Intended as a safeguard to person and property, it could easily by abuse cease to be the protective device it was intended to be.

Capital develops into large units without violence to public sentiment or injury to public interest—the same principle should not be denied to labor. Collective bargaining through the means of representatives selected by the employer and employee respectively will be helpful rather than harmful to the general interest. Besides, there is no ethical objection that can be raised to it.

We should not, by law, abridge a man's right either to labor or to quit his employment. However, neither labor nor capital should at any time or in any circumstances take action that would put in jeopardy the public welfare.

We need a definite and precise statement of policy as to what business men and workingmen may do and may not do by way of combination and collective action. The law is now so nebulous that it almost turns upon the economic predilections of judge or jury. This does not make for confidence in the courts nor respect for the laws, nor for a healthy activity in production and distribution. There surely will be found ways by which co-operation may be encouraged without the destruction of enterprise. The rules of business should be made more certain so that on a stable basis men may move with confidence.

HELPING FARMER AND CONSUMER

Agriculture is but another form of industry. In fact, it is the basis of industry because upon it depends the food supply. The drift from countryside into the city carries disquieting portents. If our growth in manufacturing in the next few years holds its present momentum, it will be necessary for America to import foodstuffs. It therefore devolves upon government, through intensive scientific co-operation, to help in maintaining as nearly as possible the existing balance between food production and consumption. Farming will not inspire individual effort unless profits, all things considered, are equal to those in other activities.

The price the consumer pays for foodstuffs is no indication of what the producer receives. There are too many turnovers between the two. Society and Government, particularly local and State, have been remiss in not modernizing local marketing facilities. Municipalities must in large measure interest themselves in, if not directly control, community markets. This is a matter of such importance that the Federal Government can profitably expend money and effort in helping to evolve methods and to show their virtues.

The farmer raises his crop, and the price which he receives is determined by supply and demand. His products in beef and pork and produce pass into cold storage, and ordinarily when they reach the consumer the law of supply and demand does not obtain.

The preservation of foodstuffs by cold storage is a boon to humanity, and it should be encouraged. However, the time has come for its vigilant regulation and inasmuch as it becomes a part of interstate commerce, the responsibility is with the Federal Government. Supplies are gathered in from the farm in times of plenty. They can easily be fed out to the consumer in such manner as to keep the demand in excess of that part of the supply which is released from storage. This is an unfair practice and should be stopped. Besides, there should be a time limit beyond which perishable foodstuffs should not be stored.

FOR FARMERS IN EXECUTIVE POSTS

Every successful modern business enterprise has its purchasing, producing and selling departments. The farmer has maintained only one, the producing department. It is not only fair that he be enabled both to purchase and to sell advantageously, but it is absolutely necessary because he has become a competitor with the manufacturer for labor. He has been unable to compete in the past and his help in consequence has been insufficient. Therefore the right of co-operative purchasing and selling, in the modern view, should be removed from all question.

Agricultural thought has not been sufficiently represented in affairs of government. Many of the branches of the Government which deal remotely or directly with the soil and its problems and its possibilities would be more valuable to the general welfare if the practical experience of the farmer were an element in their administration.

To be specific, the Interstate Commerce Commission, the Federal Reserve Board, the Federal Trade Commission and the United States Tariff Commission are administered by business men. Does any one contribute more to the making and success of railroads than the farmer or to the creation and prosperity of the banks, or to the stability of manufacturing and trade units, or to the agencies interested in exporting?

Catholic "Social Reconstruction Program" Analyzed

(*Continued from page 6*)

> workers into a distinct and dependent class, that offends against their domestic privacy and independence, or that threatens individual self-reliance and self-respect, should not be tolerated. The ideal to be kept in mind is a condition in which all the workers would themselves have the income and the responsibility of providing for all the needs and contingencies of life, both present and future. Hence all forms of State insurance should be regarded as merely a lesser evil, and should be so organized and administered as to hasten the coming of the normal condition."

In the revised foreword to the pamphlet from which the foregoing excerpt is quoted, it is said that: "Its practical applications are of course subject to discussion, but all its essential declarations are based upon the principles of justice and of charity that have always been held and taught by the Catholic Church, while its practical proposals are merely an adaptation of those principles." But that does not mean that its practical proposals are an *authoritative* adaptation of those principles and that the efficacy of such proposals as practical means to the ends sought is unquestionable. The objectives of such proposals may be unquestionable; but the practical means proposed for attaining those objectives most certainly are not. The "device of insurance" is a practical device; and for what purposes and under what conditions it can be used efficaciously, and for what purposes and under what conditions it cannot, are essentially practical questions, to be decided by human experience and not by ethical or religious principles. In the excerpt it seems to be assumed that the device of insurance, like Aladdin's lamp, can do anything and everything intended by it and exactly as intended. If that assumption were true, the plan of insurance outlined in the excerpt would be well worthy of consideration. Such assumption, however, is far from true.

Viewed in the light of experience the social insurance proposal of the National Catholic War Council, outlined in this excerpt, is seriously at fault in ignoring the functions, practical limitations and technical requirements of insurance.

Contrary to what seems to be implied in that excerpt, it is the self-sufficient worker, whose earnings are high enough to make possible the amount of saving necessary to protect himself and his family against the risks of illness, invalidity, unemployment and old-age, who particularly "stands in need of the device of insurance." For insurance is a method of using part of his earnings most efficaciously to provide such protection. But it is not *state* insurance that he needs. State insurance, as acknowledged in the excerpt, is an evil; and other insurance, which is not an evil, is obtainable. Undoubtedly industry ought to insure all its workers against the injuries it causes. That duty is being enforced through workmen's compensation laws. Undoubtedly industry, through employers, ought to assist all its workers to secure for themselves good insurance against other misfortunes. That duty is fast coming to be more and more recognized and fulfilled. And undoubtedly the state ought to regulate insurance so far as is needed to protect all insured workers against impositions and unsound finance. That duty is being generally fulfilled. Moreover, it may possibly be expedient for the state, by subsidies or other assistance, to promote among the people moderate insurance against those of the misfortunes above mentioned for which industry is not to be held responsible. But further than this, there is every reason to believe, the state ought not to interfere directly with the insurance of the self-sufficient workers. And in America the self-sufficient include not only a large majority of the native born white workers, who earn or are able to earn a sufficiency to maintain a high standard of living, but also a large proportion of the immigrants and negroes, who are rising toward that standard, but who, for the time being, are able to live in decency and comfort and to accumulate savings on lower but accustomed levels.

But the excerpt quoted seems to imply that, so long as *some* of the workers obtain less than living wages, *all* of them unquestionably ought to be subjected to state provided insurance. If such be the proper construction of the excerpt—and one of the difficulties in criticising that loose and ambiguous pronouncement is to determine what it really means,—we might as well stop right here. It would be absurd to lay it down as unquestionable that the same political medicine ought to be applied to the sick and the well alike—that the front ranks in the development of self-providence among the workers ought to be held back and kept in paternalistic tutelage until the tail-enders can be brought up into line. Therefore it is fairer to dismiss that construction and to proceed upon the hypothesis that it was intended in this pronouncement to prescribe state insurance only for the lowly paid.

The lowly paid—*i. e.* those among our wage workers who do not obtain a sufficiency to provide for themselves—include specifically the subnormal, cripples, chronic invalids, shirkers, tramps, persons of bad habits, beginners, recent immigrants, the untrained, the out-of-place (who cling to employments or neighborhoods wherein their labor is not most needed) and the exploited. For their ills it is doubtful whether the "device of insurance" is at all an appropriate remedy. They stand in need, variously, of prevention, correction, charity or fair wages. Neither prevention, correction nor charity is a true function of insurance. And while free ("non-contributory") or subsidized state insurance is a palliative for unfairly low wages, it is certainly not a cure, but tends rather to perpetuate the evil it palliates. Probably the greatest poverty in America exists among the negroes; and it would be hopeless to look to state insurance for assistance in solving the negro problem.

But the excerpt under criticism lays it down positively that these classes of workers, at least, ought to be insured against sickness, invalidity, old age and unemployment, [presumptively in amounts sufficient for a decent existence], by the state, at the expense of whatsoever industry may employ them, without separating them into a distinct and dependent class, without offending against their domestic privacy and independence, without threatening their individual self-reliance and self-respect, with the insurance "so organized and administered as to hasten the coming of the normal condition" when all wage workers shall be able to provide for themselves. But thus to postulate what *ought* to be done before making sure that it *can* be done is to reverse the rational order. We ought first to ascertain, in the light of human experience, what can be done, and then apply our ethical principles to determine what ought to be done.

Experience holds out no hope that a plan of state insurance can be devised that will comply with all the requirements above specified. On the contrary experience indicates that:—

It is impracticable to "insure" against misfortunes, in amounts sufficient for a decent existence, those among the workers who do not earn such a sufficiency.

It is impracticable for the state to insure any of the working people, at the expense of others and regardless of responsibility for causes, without separating the insured into a "distinct and dependent class" or without threatening their "individual self-reliance and self-respect".

It is impracticable so to insure any of the working people, with the insurance "so organized and administered as to hasten the coming of the normal condition."

It is impracticable so to insure workers, generally and without "selection of risks", save upon conditions that would "offend against their domestic privacy and independence."

Consequently, as a practical proposal, the social insurance program outlined in this excerpt so far from commanding unquestioning acceptance, deserves rather to be condemned as hopelessly visionary and impracticable.

In final analysis, indeed, that program is a day-dream—an aspiration—and not at all a practical proposal. In actual practice misfortunes can be insured against only upon definite terms and conditions. Certainly it would be disastrous for the state to attempt to insure shirkers *unconditionally* against unemployment or workers with bad habits *unconditionally* against the sicknesses and infirmities resulting from such habits. Depending upon its terms and conditions, social insurance may propagate fraud, idleness, improvidence, bad habits and the very misfortunes it is intended to relieve, and may operate as an instrumentality for the demoralization of the weak and the spoliation of the industrious and provident. Yet in the excerpt under criticism the terms and conditions of the proposed insurance are left entirely unformulated. We are simply told what such insurance must do and what it must not do, without a single specification of methods to effect the former and avoid the latter. In effect that states a problem, but offers no solution of the problem. Until the National Catholic War Council formulates all the vital features of its proposed insurance and shows that, in all human probability, the insurance, *as so formulated,* would not be a breeder of social evils, an incentive to fraud and vice or an instrumentality for spoliation, but, on the contrary, all things considered, would be a means for social betterment, its proposal belongs in the realm of pure abstractions, and for practical purposes certainly does not deserve serious consideration, much less command acceptance, by prudent citizens of any religious faith. It is not unethical but on the contrary most ethical to mistrust vague and glittering social panaceas, even when proposed by men of the most correct principles and with the highest ideals. Often the loftier the ideal the more pathetically inadequate the performance.

This pronouncement by the National Catholic War Council has been quite widely hailed as an endorsement by the Catholic Church, not only of state insurance in the abstract, but also of some recently proposed compulsory insurance measures in the concrete. The fact that it is open to such misconstruction has done considerable harm. But, to be exact, none of the measures referred to, and none of the European social insurance systems after which those measures were modeled, complies with the conditions laid down by the National Catholic War Council in the excerpt above quoted. In all of those measures, and under all the European state insurance systems, a contribution would be or is exacted from the insured worker, even though his wages are insufficient to provide for the immediate needs of himself and his family; whereas in the excerpt it is laid down that there must be no contribution exacted in such cases. In all of those measures, and under all the European state insurance systems except one, the workers covered would be or are separated into "a distinct and dependent class"; whereas in the excerpt it is laid down that they must not be so separated. In some of those measures, and under the majority of the European state insurance systems, the state, from its general revenues, would or does contribute heavily to the insurance, its contributions being promised permanently and the tendency being repeatedly to increase them; whereas in the excerpt it is laid down that "any contribution to the insurance from the general revenues of the state should be only slight and tem-

(*Continued on page 22*)

Socialism Unmasked

(Continued from page 8)

supreme task confronting the Socialist party of America:"

> To win the American workers from their ineffective and demoralizing leadership, to educate them to an enlightened understanding of their own class interests, and *to train and assist them to organize politically and industrially on class lines in order to effect their emancipation*—THAT IS THE SUPREME TASK CONFRONTING THE SOCIALIST PARTY OF AMERICA.
>
> To this great task, without deviation or compromise, we pledge all our energies and resources.

While the Socialist party at its recent convention in New York, for obvious reasons of expediency, took occasion in its Declaration of Principles, to emphasize its political character, "its purpose . . . to secure a majority in Congress and in every state legislature," et cetera, it specified:

> The Socialist transformation cannot be successfully accomplished by political victories alone.

Hypocritically declaring, for obvious opportunist reasons, that "the Socialist party does not intend to interfere in the internal affairs of labor unions," the Declaration of Principles went on to declare:

> The Socialists favor the organization of workers along the lines of industrial unionism in the closest cooperation as one organized working class army.

"One organized working class army" is the plan laid down by the Moscow Internationale, adopted by the Socialist party at its Chicago Emergency convention, and reaffirmed at its convention last May. It is the "One Big Union," and its proposed weapon is industrial action.

> THE THIRD INTERNATIONALE IS THE INTERNATIONALE OF OPEN MASS ACTION, OF THE REVOLUTIONARY REALIZATION, THE INTERNATIONALE OF DEEDS. . . .

The Manifesto of the Third Internationale concludes:

> Proletarians of all lands! In the war against imperialistic barbarity, against the monarchy, against the privileged classes, against the bourgeois state and bourgeois property, against all forms and varieties of social and national oppression—Unite!
>
> Under the standard of the workingmen's councils, under the banner of the Third Internationale, in the revolutionary struggle for power and the dictatorship of the proletariat, proletarians of all countries—Unite!

The Governing Rules of the Third Communist Internationale conclude:

> LONG LIVE THE INTERNATIONAL REPUBLIC OF THE PROLETARIAN COUNCILS.

The Chicago Manifesto of the Socialist party of America concludes:

> LONG LIVE THE INTERNATIONAL SOCIALIST REVOLUTION, THE ONLY HOPE OF THE SUFFERING WORLD.

What conclusion must be drawn from this evidence?

If any confusion exists as to what the Socialists mean by "industrial" or "mass action," that may be cleared by the testimony of Socialist leaders themselves. If any hazy notion exists that the Socialist party is not committed to a program of force and violence that also may be dispelled by their own testimony. At the investigation conducted by the Judiciary Committee of the New York Legislature into the eligibility of the five suspended Socialist assemblymen-elect, Algernon Lee, educational director of the Rand School, treasurer of the New York State Committee and secretary of the New York County committee of the Socialist party, under cross examination by Martin Conboy, was asked:

"Are strikes one of the means of mass action which the Socialist party contemplates the use of?"

Mr. Lee answered:

"On occasions where they are suitable for the purposes of the working-class, yes, sir."

Asked whether the general strike is not part of the program of the Socialist party in the United States to back up political action, Lee admitted:

"If the circumstances should exist, which made that necessary, I take that it would be construed so."

Victor L. Berger, now under sentence for violation of the Espionage act, at the national convention of the Socialist party in 1908, declared:

"I have heard it pleaded many a time right in our own meetings by speakers that come to our meetings that the only salvation for the proletariat of America is direct action, that the ballot box is simply a humbug. Now I don't doubt that in the last analysis we must shoot."

William Bross Lloyd, who had been recently the Socialist party candidate for the United States Senate from Illinois, declared in a speech in Milwaukee on January 12, 1919:

"We want to organize, so if you want to put a piece of propaganda in the hands of everybody in Milwaukee, you can do it in three or four hours. If you want every Socialist in Milwaukee at a certain place, at a certain time, with a rifle in his hand, or a bad egg, he will be there. We want a mobilization plan and an organization for revolution."

At the Chicago convention of the Socialist party, September, 1919, according to evidence introduced at the Albany hearings, Louis Waldman, one of the suspended assemblymen, declared:

"If I knew we could sway the boys when they get guns to use them against the capitalist class I would be for universal military training."

Waldman, in a speech delivered at a meeting held November 7, 1919, to celebrate the second anniversary of the Russian Soviet Government, at Brownsville Labor Lyceum, Brooklyn, a transcript of which was entered as evidence, declared:

> **"If you commemorate the birthday of the Russian revolution, if you revere your Russian comrades, if you applaud Lenine and Trotzky, if you believe in the worthiness of their cause, in the accomplishment of their work, then it is your duty to enter the Socialist movement in America, to make it like Russia is today.**
>
> **"We must select between two alternatives: Either Russia lives and conquers the world—not Russia conquers the world, but its ideals and philosophy worthy of the Russian government today should conquer the world—either that, or the ideals or the philosophy of Gary and Wilson and Palmer, Lloyd George and Clemenceau is to conquer the world. Between the two, for my part, and for the part of thousands of Socialists now battling in America today, we choose to stand by the ideals and philosophy and program and principles of Lenine and Trotzky as those we approve."**

Waldman was never rebuked by his party for this presentation of the issues. On the contrary, when he was suspended by the New York Legislature his party defended him, and the chief counsel was Morris Hillquit. The alternative presented by him, of choosing between the ideals and philosophy of Lenine and the ideals of American democracy, are those presented by his party, and the Socialist party stands with Lenine and world revolution by violence, as against the United States. The only difference is that Hillquit and Berger, more experienced in craft and diplomacy, are usually more guarded in their utterances for public consumption.

According to a transcript of his talk at a celebration of the second anniversary of the Soviet government, at the Brownsville Labor Lyceum, November, 1919, which was read into the record, Assemblyman-elect Charles Solomon said:

"If we are going to conduct the fight, generals and lieutenants and captains are not enough, writers and speakers and agitators are not enough; we have got to have an army to fight the battle for emancipation of the working people of our country, and you are the men and you are the women who will have to enlist in that army from the ranks of a fighting army."

Declaring that the Socialists must back up their members in the New York City Board of Aldermen and in the State Legislature, Solomon continued:

"When they speak up there and when you speak down here, we must be able to tell the capitalists, the reactionaries, the politicians, the forces of corruption, that back of our words stand thousands and thousands and thousands of industrially organized workingmen and working women. You and not we must conduct this battle. You are the army."

At the recent national convention of the Socialist party, one of the New York delegates, Benjamin Glassberg, enquired why Socialists should declare that they seek to attain their goal by "orderly and constitutional methods," whereupon the above mentioned Solomon—doubtless to assuage the fears and misgivings of the general public, to whom violence and wholesale killings are abhorrent—said, reassuringly:

"We will do our best to bring about the cooperative republic with a minimum of industrial disorder."

Can it still be contended by the parlor "intellectuals," the sentimental "forward-lookers" and "Christian Socialists" that the Socialist party, despite its stand with the Third Internationale and its advocacy of industrial action as its revolutionary weapon, does not contemplate revolution by force, by violence, by actual conflict with killings? Can they possibly assume that when leaders of the movement speak of a battle they do not mean an actual battle, that when they refer to an army they do not contemplate an army armed with guns? Or if individuals, such as Berger, Lloyd, Waldman and Solomon, express such rabid sentiments, are they to be construed merely as the extreme utterances of excited zealots, who do not represent or express the party officially? On this the Socialist party has, without ambiguity or camouflage, officially expressed itself. In the War Proclamation unanimously adopted at the St. Louis convention in April, 1917, the party, in opposing war against Germany and in calling upon the workers to oppose the conduct of the war, declared itself:

> **"The only struggle which would justify the workers in taking up arms is the great struggle of the working class of the world to free itself of economic exploitation."**

Eugene V. Debs, the choice of the Socialist party for president in 1920, and the supreme voice and leader of the movement, just before entering prison to serve a sentence for violation of the Espionage Act, delivered before the Socialist Party of Cleveland, Ohio, on March 12, 1919, a speech which was entered at the Albany hearings as evidence.

"I am going to speak to you as a Socialist, as a revolutionist, and as a Bolshevist, if you please," said Debs.

He characterized Bolshevism, the Russian revolution, as "The beginning of the end of capitalism and the end of the beginning of Socialism," and declared: "Because we say this they are going to put us in jail. With every drop in my veins, I despise their laws and I defy them. . . Is there a calumny which they have not circulated about Lenine and Trotsky? . . . They are fighting for your liberty, for you, if you only knew it, and I am only too glad to pay my tribute to those men I love."

Did the leader and perpetual candidate for president of the Socialist party at all deplore the violence, terrorism and bloodshed of the Bolshevist revolution? He said:

"We are on the eve of tremendous developments. The world before your eyes is being destroyed and recreated. Russia is making a beginning, the Soviet is just a sample. They have

shed some blood, they have made some mistakes, and I am glad they have."

POLITICAL ACTION A "PIPE DREAM."

The Socialist party of America, at its recent national convention in New York City, found it expedient to declare itself in its Declarations of Principles a political party. "It strives by means of political methods, including the action of its representatives in the legislatures and other public offices to force the enactment of such measures as will immediately benefit the workers, raise their standard of life, increase their power and stiffen their resistance to capitalist aggression. Its purpose is to secure a majority in Congress and in every state legislature, to win the principal executive and judicial offices, to become the dominant and controlling party."

As a result of the evidence introduced at the hearings at Albany, five members of the party, who had been elected to the New York State legislature, were ejected. That evidence established that the Socialist organization is not a political party, seeking through legal and constitutional means to bring about changes, but that it is part of an international movement, composed in this country of dues-paying members, largely minors and aliens, which attempts to exercise a mandate over members elected to office, and which advocates, as the weapon to achieve political ends, the employment of industrial action, or the general strike. In view of the evidence introduced at Albany and of the aroused public interest in the nefarious character, methods and purposes of this movement, was it deemed opportune by Mr. Hillquit and his associates to try to pull the wool over people's eyes?

At its convention, the party apparently modified its previous unqualified endorsement of the Moscow Internationale. It adopted the Majority Report on International Relations, which will, however, be submitted to a referendum of the membership, and which declares:

"The Moscow organization is virile and aggressive, inspired as it is by the militant idealism of the Russian revolution. It is, however, at this time, only a nucleus of a Socialist Internationale, and its progress is largely impeded by the attitude of its present governing committee."

Perhaps Messrs. Hillquit, Berger, Debs and other leaders of the party in America do not relish the thought of "playing second fiddle to Lenine," and thus served notice that they must be taken into account equally as leaders in the International Socialist revolutionary movement. This notice was probably designed to serve two ends—to let Messrs. Trotsky and Lenine understand they "are not the whole show," and also to befog the public mind in this country as to the unanimity of purpose of Socialism in America and Bolshevism in Russia. As a matter of fact, while the recent convention qualified its stand as to the Third Internationale, it did not repudiate any essential of the program laid down by the Third Internationale, save in matters of phraseology and tactics to be employed under different conditions. It did not repudiate the plan, laid down by the Third Internationale, as the "chief task" of international Communism—of organizing the workers so as to employ industrial action, or the general strike as the weapon for bringing about a revolution; instead it plainly declared for the "One Big Union"—for forming "one organized working class army." It did not repudiate its own answer to the program of the Third Internationale adopted in Chicago last September. That program still stands.

Declaring for the necessity of a Socialist Internationale, the Majority Report says:

"It cannot be truly Socialistic if it is not based upon the program of complete socialization of the industries, and upon the principles of class struggle and uncompromising working class politics. It cannot be truly international unless it accords to its affiliated bodies full freedom in matters of policy and forms of struggle on the basis of such program and principles, so that the Socialists of each country may work out their problems in the light of their own peculiar economic, political and social conditions as well as the historic traditions."

In other words, the convention merely repeats what has already been declared, what has long been part of the international Socialist program, what Mr. Hillquit stated when he said that between the Socialist party and the revolutionary left wings there was no difference on vital questions or principles, but merely minor differences as to tactics.

The Majority Report reaffirms its affiliation with the Third Internationale, but instructs its executive officers "to insist that no formula such as 'the dictatorship of the proletariat in the form of soviets' or any other formula for the attainment of the Socialist commonwealth be imposed or exacted as condition of affiliation with the Third Internationale."

Did this imply any repudiation of the Third Internationale? On the contrary, Hillquit declared: "The Third Internationale represents the best spirit in the movement."

Did this imply any repudiation of Bolshevism or Communism, in force in Russia, as not representing true Socialist doctrine, as being a schism or perversion of Socialism? On the contrary, the Majority Report declared that: *"Socialism is in complete control in the great country of Russia."*

While praising the Bolshevist régime, Mr. Hillquit remarked:

"This does not mean that we must accept everything sent from Russia as a papal decree."

In other words, it was made plain that Mr. Hillquit and the other leaders of Socialism in America do not relish the thought of being merely lieutenants of Lenine and that they demand recognition as major stars in the international Bolshevist firmament. While giving this notice, did Mr. Hillquit at all rebuke Trotzky and Lenine for their crimes, their killings, their reign of immitigable terror? On the contrary, he said: "A dictatorship is an irresponsible rule and the government of Russia is a perfectly responsible government. Lenine and Trotzky are not dictators."

The convention, moreover, decided to admit to membership in the Socialist organization, on equal footing with present members, those who seceded to the revolutionary left wings, on the ostensible consideration that they subscribe to the platform of the organization. The Communist sections are invited to come in—with what result? It was only by the skin of their teeth that the 89 per cent Reds at the convention won out over the 99 per cent Reds. By inviting the seceding 100 per cent Reds to come in, the extremists are invited to obtain a majority. The convention, while mildly criticizing the "bosses" of the Third Internationale and their formulas, nominated as candidate for president Eugene V. Debs—Debs who declared, "From the crown of my head to the soles of my feet I am a Bolshevik, and proud of it;" Debs who, from behind prison bars, in the Atlanta prison, issued the call to all factions of the party to unite, declaring:

"I have no quarrel with the comrade who does not believe in the efficiency of political action, nor have I any quarrel with the comrade who has no interest in industrial action. If both of these comrades recognize it is the mission of the working class to emancipate itself BY EVERY POSSIBLE METHOD, TO UTILIZE EVERY LEGITIMATE METHOD TO ACCOMPLISH HUMAN FREEDOM, and if each works in his chosen path . . . they can work together and help each other.

"You can always depend upon the capitalist class to force the workers to adopt different tactics. For the time being they have the power, and we are on the defensive. THEREFOR WE MUST DO THE THING BEST FITTED TO MEET A GIVEN SITUATION.

"I HAVE BEEN ASKED MANY TIMES IF I BELIEVE IN CHANGING THE PRESENT SYSTEM BY FORCE AND VIOLENCE. THAT IS A SILLY QUESTION, AND NONE WOULD ASK IT WHO HAD THE SLIGHTEST KNOWLEDGE OF HISTORY. . . . ALL ALONG THE TRACK OF THE AGES, WHEREVER A GOVERNMENT HAS BEEN OVERTHROWN BY FORCE AND VIOLENCE, THAT GOVERNMENT HAS BEEN MAINTAINED BY FORCE AND VIOLENCE."

That is the message—published in the *New York Call*, April 15, 1920—sent forth by Debs, choice of the Socialist organization for president, who was hailed riotously by the convention nominating him as "the very embodiment of the militant working-class spirit, the incarnation of the ideals of the Socialist party."

In order not to scare off, by a revelation of its true character, the vast number of converts which the Socialist party hopes to win among the "liberals" and "advanced" sentimentalists, in churches, schools, colleges, et cetera, through the insidious propaganda of such groups as the "Church Socialist League," the "Christian Socialist Fellowship" and the "Intercollegiate Socialist Society;" so as not to neutralize the work already being done by Socialist clergymen holding important pulpits, Socialist college professors and others; the party at its recent convention took occasion to declare that it "does not seek to interfere with the institution of the family" and that "it recognizes the right of voluntary communities of citizens to maintain religious institutions and to worship freely according to the dictates of their conscience." Also, realizing that when, last September, in the heat of a perhaps too ardent enthusiasm, it openly declared for the use of industrial action, it was perhaps indiscreet and undiplomatic so far as the general public is concerned, the party, for obvious purposes of expediency, gave vent to this purring reassurance:

> The Socialist party seeks to attain its end by orderly and constitutional methods, so long as the ballot box, the right of representation, and civil liberties are maintained.

The adoption of this clause was a piece of clever diplomacy on the part of the wily leaders, a triumph of the casuistical asiatic Hillquit intellect. That clause will enable the great number of Socialist clergymen and college professors to point to it triumphantly and so prove, to their congregations and classes, that the Socialist party is opposed to violence, to revolution by force, and is a lily-white political party seeking to bring about changes through "orderly and constitutional methods." Of course, that clause is *prima facie* evidence of the pacific turtle-dove character of the Socialist party! The party leaders are so sincere, so simple minded, so naive as only to speak in order to be believed.

But the hypocrisy of this cunningly construed declaration, the utter baselessness and worthlessness of it, is brought out by the Socialist party Platform.

Averring piously in its Declaration of Principles that the Socialist party "seeks to attain its end by orderly and constitutional methods so long as . . . civil liberties are maintained," the Platform adopted by the party violently, and in a spirit incentive to violence, asserts:

> Our Administration suppressed the cherished and fundamental rights and civil liberties at home. . .
>
> Congress enacted laws in open and direct violation of the constitutional safeguards of freedom of expression.
>
> Hundreds of citizens who raised their voices for the maintenance of political and industrial rights

during the war were indicted under the Espionage law, tried in an atmosphere of prejudice and hysteria, and many of them are now serving inhumanely long jail sentences for daring to uphold the traditions of liberty which were once sacred in this country. . .

And after the war was in fact long over the Administration has not scrupled to continue a policy of repression and terrorism under the shallow and hypocritical guise of wartime measures.

It has practically imposed involuntary servitude and peonage on a large class of American workers. . . . It has dealt a foul blow to the traditional American right of asylum. . .

In the short span of three years our self-styled liberal Administration has succeeded in undermining the very foundation of political liberty and economic rights which this Republic has built up in more than a century of struggle and progress.

In other words, the Socialist party reiterates and emphasizes that "civil liberties" are not maintained. Therefore the double meaning, the deceit and purpose of the declaration that it will seek to attain its end by constitutional means so long as "civil liberties" are maintained, become clear. This is clearly a direct threat and challenge on part of its leaders that the Socialist party does not intend to confine itself to orderly methods because "civil liberties" are not maintained in their opinion, and that therefore the party does feel at liberty, when the hour strikes, to employ as its weapon, industrial action, force and violence, civil war.

If there are any who can still contend that the Socialist organization is a legal political party seeking only through constitutional and parliamentary methods to achieve its ends, who can still maintain that Socialism means an effort toward humanitarian betterment and social reform, that the political movement of which Hillquit is a leader in America and Trotzky a leader in Russia is "applied Christianity;" if, in the face of all the evidence, they are still persuaded that the Socialist organization in America, distinct from Bolshevism in Russia, and the Communist wings in America, is soft-mannered and soft-hearted, cooing-dove and pacific in its proposed methods, lofty in its ideals and noble in its purposes, abhorrent of brutal mob action, vulgar violence and bloodshed, they will find in the speech of a Socialist, one of the ousted New York assemblymen-elect, August Claessens, delivered at a celebration of the Second anniversary of the Russian soviet Republic, November 7, 1919, an answer that is positive, unmistakable and pertinent:

Now, thank goodness, Socialists are not only working along political lines. If we thought for a minute it was merely a dream on our part, a great political controversy until we have a majority of men elected, and then, by merely that majority declare the revolution, if any of you smoke that pipe dream, if that is the quality of opium you are puffing now, give it up.

(*To be Continued*)

The Answer—"Root out Radicalism"

(*Continued from page 4*)

Mr. Charles M. Melden, President, New Orleans College, La., wrote in part as follows:

> Permit me to say that I consider the rights of parents in the education of their children paramount. They have a right to demand that nothing that they consider pernicious ever should be taught them. The phrase "academic freedom" has been abused. Under its guise men have claimed the right to teach all kinds of religious and social heresies. If a man wishes to air his peculiar views which are opposed to what his church or school is supposed to stand for he should resign his position and "hire a hall." . . . The business man who patronizes, by advertising in periodicals such as you describe, becomes *particeps criminis* and is equally guilty with actual revolutionaries.

Rev. T. C. Murphy, S. J., President, University of Santa Clara, Cal., wrote in part as follows:

> No one should contribute money to agencies through whose machinery revolutionary propagandists disseminate their doctrines.
>
> The business man who advertises in periodicals which advocate and propagate a radicalism contrary to our American ideals and institutions certainly has not the welfare of God's greatest country at heart.

Mr. A. W. VanHoose, President, Shorter College, Georgia, wrote:

> A man may have a right to entertain his own opinion upon political questions, but he has no right to remain a professor in an institution whose founders, supporters and patrons do not endorse his views and he should be promptly dismissed from his position by the authorities.
>
> A magazine or newspaper advocating socialism would not receive my support either as a subscriber or advertiser. I would as soon think of contributing to the well-being of a rattlesnake as to the support of such a paper; I would have no right to destroy by violence the plant of such a periodical, but I certainly have the right and would regard it as a duty to withhold my support of such a sheet.

Mr. Melvin A. Brannon, President, Beloit College, Wis., wrote in part as follows:

> I should say that the responsibilities of church-members and citizens in the contribution of moneys is a very definite sort of a trust and they ought to place their investments in those institutions and those movements which are sane and sound and which move forward in an evolutionary rather than a revolutionary way.

Mr. John O. Wilson, President, Lander College, S. C., wrote in part as follows:

> The danger is widespread, and the youth of today ought to be protected. No teacher in school or lecturer in assembly has the right to sow in the minds of our young people any such false doctrines. Freedom of speech does not demand privilege to sow poison in human lives. It is high time to protect our children by clearing out of faculties and lecture courses teachers that will destroy church and state and all just government. We must not stop because the cry of persecution is raised.

Dr. Cyrus Adler, The Dropsie College, Philadelphia, wrote in part as follows:

> All persons are responsible for the results of their own acts. To contribute to an organization which carries on propaganda to which they are opposed makes them responsible for such propaganda.
>
> In protecting his own rights, those of the family and the State the citizen must not assume a reactionary or heresy hunting attitude. Freedom of opinion and speech have been too hardly won to be thrown away. This freedom, however, should not be allowed to degenerate into an attack upon fundamental principles underlying the American state or into a subversion of the moral order.

Mr. James Duncan Phillips, of Houghton, Mifflin Company, Boston, wrote:

> The contribution of money either intentionally or unintentionally to revolutionary propagandists is as much of a crime as starting the propaganda. Persons are not only responsible for contributing this money, but it is their business to investigate fully enough in all cases so that they can be sure that the money they give is for useful and not for evil purposes. Ignorance is no excuse. The philanthropist who through ignorance finds himself supporting an evil cause should be considered fully as responsible as the actual promotor.

Among the letters received were some that expressed the opinion that the revolutionary menace is exaggerated; others that protested against what they called "suppression of free speech" and advocated that radical exponents be freely allowed to ventilate their theories and "isms," and still others openly expressed sympathy with the radical forces. The note of sarcasm in some of these communications indicates the tendency of the writers.

The Rev. F. Ernest Johnson, secretary of the Research Department of the Federal Council of the Churches of Christ in America, referring to the writer of the letter sent out, wrote:

> Personally I think that a considerable part of the excitement over radicalism is due to ignorance and hysteria and a larger part is due to deliberate efforts on the part of certain financial and industrial interests to discredit everyone who is promoting industrial betterment no matter how conservative he may be. . . .
>
> What we need is an era of calm intelligence and courage. Let us examine current doctrines and movements carefully and dispassionately, and when we find anything radical fight it in the open and not from ambush.

C. E. Dunniway, President of Colorado College, Colorado Springs, writes in part as follows:

> Many men of conservative tendencies are shocked and outraged by proposals of reform and progress which they then denounce as revolutionary. Just now the current fashion is to call such proposals bolshevik. My own political philosophy requires me to be sympathetic toward progressive or even radical proposals in theory, but I find myself conservative in attempts to apply theory. I decline to be stampeded into opposition against progressive measures by conservatives who brand them as Socialistic. In short, every proposition for change in the Social and Economic order should be considered with candor in the light of experience and reason.

Rt. Rev. C. P. Anderson, Bishop of the Diocese of Chicago, wrote:

> There seems to me to be undue pressure brought to bear upon churches, colleges, etc., not simply to uphold good government and sound economic principles, but to uphold and defend Capitalism as such. It is conceivable that one might be both anti-bolshevistic and anti-capitalistic. Your particular department is doubtless studying the antecedent causes of revolutionary movements and any attempt to fight off revolutionary movements by perpetuating the cause of them could only meet with temporary success at best. I may be reading between the lines and finding something which is not there, but in some of the communications which have reached me from The National Civic Federation, there seems to be an underlying suggestion of financial pressure upon churches and colleges to uphold the traditional capitalistic theories or take the consequences. Of course any such policy would and ought to defeat itself. To my mind we are facing a double menace—the menace of Bolshevism and the menace of stand-pattism. We can't fight the former on the platform of the latter. I hope and believe that the former won't come to the birth and that the latter won't survive.

Mr. Miner Lee Bates, President Hiram College, Ohio, writes in part as follows:

> To sum it all up: permanent safety can come only from fuller light and freedom to act in that light. Repression, save in the case of occasional individuals, has never served to avoid revolution. On the other hand, intelligent, hearty support of those agencies giving the truth and the whole truth is the true guardian of peace and the social order.

Mr. Samuel Plantz, Lawrence College, Appleton, Wisconsin, said in part:

> My own judgment is there is not much "revolutionary" propaganda in "philanthropic and charitable organizations." Some people call everything revolutionary which does not accord with their own narrow judgments.

The Churchman, a journal of the Protestant Episcopal Church, of which the Rev. William Austin Smith is editor, replied to the letter in an editorial, the spirit of which is self-evident. In part, it said:

> The Church certainly harbors a good deal of unstandardized material—and pretty pesky material it is! For example, how should Mr. Easley proceed to standardize Bishop Lawrence and Bishop Brent and the twenty-two signers of that address to the public, given out to the American press last spring, denouncing the un-American, unjust and dangerous measures against aliens and others whom Mr. Palmer's agents, cheered on by ardent patriotic organizations like The National Civic Federation, were hounding through the sheets and the columns of many American newspapers?
>
> *The Churchman* was not Simon-pure 100 per cent American last spring according to the standards of The National Civic Federation. . . But if our opinion is desired we should say that the people who are in charge of a good deal of the correspondence sent out of late by The National Civic Federation have too lean an equipment in social sympathies and too narrow a perspective of history to fit them to be designated as the censors of American patriotism and the arbiters of destiny of our churches, schools, charities and periodicals.
>
> But we are confident that American public opinion will never tolerate a group of self-appointed busybodies passing judgment on American institutions and giving free advice as to whose Americanism has reached 100 per cent.

Industrial Peace in Building Trades

(*Continued from page 7*)

Board would be suspended from the organization in event of failure to carry out the provisions of an award.

These penalties are most severe and are made so as to prevent any interference whatever to those interested in industrial peace to bring success to the movement.

Similar efforts to eliminate unnecessary strikes have been made in the last few years in various cities. San Francisco, under the leadership of P. H. McCarthy, president of the Building Trades Council of that city, has eliminated jurisdictional strikes by severely penalizing those who engage in it either as unions or individuals.

In 1912 Simon O'Donnell, president of the Building Trades Council of Chicago, began an agitation for peace in the building industry of that city following a most bitter contest. Buildings in course of erection had been tied up for months by strikes based on the issue whether the steamfitters should have an independent organization or become members of the United Association of Plumbers, Gasfitters, Steamfitters and Steamfitters' Helpers. Various trades took sides with one or the other. Sympathetic strikes were called. Although many buildings were contemplated the struggle between the unions made their erection impossible.

Apparently it was a drawn battle, but after O'Donnell's campaign for industrial peace the first result was the affiliation of the steamfitters with the plumbers. The jurisdictional war was probably the greatest industrial contest Chicago had had in many years. It awakened the officials of the various organizations to the danger of permitting such disputes to continually interfere with the building industry.

Up to that time strikes were called indiscriminately and work on buildings, even those owned by union organizations, ceased. During the injurious controversy President Donlin of the Building Trades Department was business agent of the Plasterers' Union of Chicago. His experience in that struggle and for many years previously had made him a firm believer that some nationwide method should be adopted to eliminate these quarrels over jurisdiction. He seconded Secretary Spencer's efforts in every way possible and has been of incalculable aid in encouraging the organization and proper functioning of the National Board.

Any discussion on jurisdictional strikes must not omit the part played in them by employers. The workmen, of course, are sensitive to any invention that will change in any way or entirely eliminate their trade. Naturally the employer has just as deep an interest. It is therefore not surprising that jurisdictional disputes have continued with such disastrous results to the building industry. No one interest is solely responsible. Contractors, architects, as well as unions, must bear equal responsibility.

But the fact that the union officials were the first to advocate the elimination of these disputes by conciliation and arbitration proves conclusively that whatever improvements in industrial conditions the country may enjoy must originate in and be fought for by organized labor. The contractors, architects and engineers are forced to follow.

Among those who would benefit by the elimination of unnecessary strikes are the families of the workers. Just as anxiously do the wives look for the pay envelope on pay day as do the bread winners. It is not generally considered that a wife earns any of the money paid her husband for his activities, but the pay envelope received by the workman not only compensates him for his work but is also pay for the labors of the wife in conducting the household.

Purifying Politics—A Field for the Churches

(*Continued from page 10*)

—should really run our government, would not the millennium really be quite near? No Profiteering, no exploitation, no graft, no political favoritism! Think of it! Yet it is entirely possible if the members of the churches will only take off their coats, so to speak, roll up their sleeves and declare that the thing shall be done.

That there is a crying need for reform in our governmental administration is clearly shown in a speech by the Republican candidate for President. Let me preface it, however, with the statement that an equally sweeping indictment was made against the Republican administration by the Democrats when the Republicans were in power—and both were substantially correct. There is nothing partisan in graft, incompetency and political favoritism:

> "I am referring now to the fact that not only has the government been twisted out of shape, been dictatorial and meddling, and has been extending its activity to experiments beyond its powers, but also to the fact that it has blundered in every direction.
>
> "It has engaged in prodigal waste. The American people pay. It has kept its overstuffed bureaus and departments, many of which are doing overlapping work, in a prime condition of reckless inefficiency. The American people pay. It has a record in the appointment of campaign-contributor diplomats who have been without previous experience in foreign affairs. The American people pay. It has engaged in all kinds of costly bungling experiments of government management and ownership of enterprises which other management could do better. The American people pay. It has allowed worthy Federal employees, particularly those who are skilled, such as chemists and agricultural experts, to go so badly paid by the government that they have left the service. The American people have to bear the cost. It has poured forth our national treasure into the yawning emptiness of unpreparedness for war and unpreparedness for peace. It has spent our money and failed to do business, while the prodigal flow went on. The American people have paid, and are paying. With a return to sanity we now have another task before us in making the administrative part of our government one in which a people proud of their abilities in business can take pride.
>
> "We must not let our administrative government crack under the load of its new burdens or those that our future may place upon it. It has been cracking badly, sometimes neglected during absence, and sometimes exploited at home by those who, now in 'perfect accord,' desire to perpetuate their power. To repair it is the business of every American—not only because of pride, but also because he or she pays for it and is entitled to good government without waste."

As an illustration of the utter helplessness of the Christian people in the matter of government, let me quote the following paragraph from the *Christian Century* of September 12, 1920, a church paper published in Chicago:

> "ALARMING CONDITIONS IN CHICAGO
>
> "The citizens of Chicago have long had cause to lament the prostitution of civic functions to the spoils system entrenched in the City Hall. No mayor of this city ever had a more splendid opportunity to display the qualities of leadership than did William Hale Thompson at the time of his first election. But almost at once the construction of a machine was begun by the controlling forces behind the mayor, and by the time of the second election that organization, by the combination of the most sinister elements in the city with the following of the cowboy executive, was too much for the conservative and order-loving citizens, particularly without competent leadership. The result has been an astonishing display of effrontery in the exploitation of every form of vice which can yield revenue to a city administration. And at the present time, in spite of the showing of mismanagement that has bankrupted the city, and reduced its credit to the vanishing point, these same City Hall henchmen, after looting practically every fund within the reach of the administration, are starting in with a campaign to capture the state government by the election of one who promises to take orders from the Mayor of Chicago if he secures the governorship. The opposition to the plunderbund has selected Lt. Gov. Oglesby as its candidate for the governorship. This is a sample of the stupid or vicious handling of political matters which compels the people who wish to vote the Republican ticket to choose at the primaries between a man like Small, who wears the brand of the crime-condoning and graft-seeking city government, and one like Oglesby, who in his personal character and associations makes no appeal to the self-respecting Christian voters of the state. But hard as the choice is, the Mayor and his gang ought to be served with notice that Illinois wants none of the City Hall brand of politics in the State House."

Well, the Christian people of Illinois did not serve notice that they wanted none of the City Hall brand of politics in the State House. On the contrary, City Hall carried the state. The headlines in the *New York Sun and Herald* the morning after the primaries tell the story:

CRIME CARNIVAL MARKS
ILLINOIS PRIMARY FIGHT!

Killing, Shooting, Kidnapping, Slugging, Riot, Robbery on the List!

THOMPSON FORCES LEAD

Thugs and Gunmen Tour Voting Precincts in Chicago Battle

BALLOT BOX THEFT TRIED

Returns Indicate that Lowden Ticket Is Beaten By 20,000 In State

Is it not worth while for the Christian men and women of our country to wake up to this deplorable situation? Not to do so is to write democracy a failure and to invite in the man on horseback!

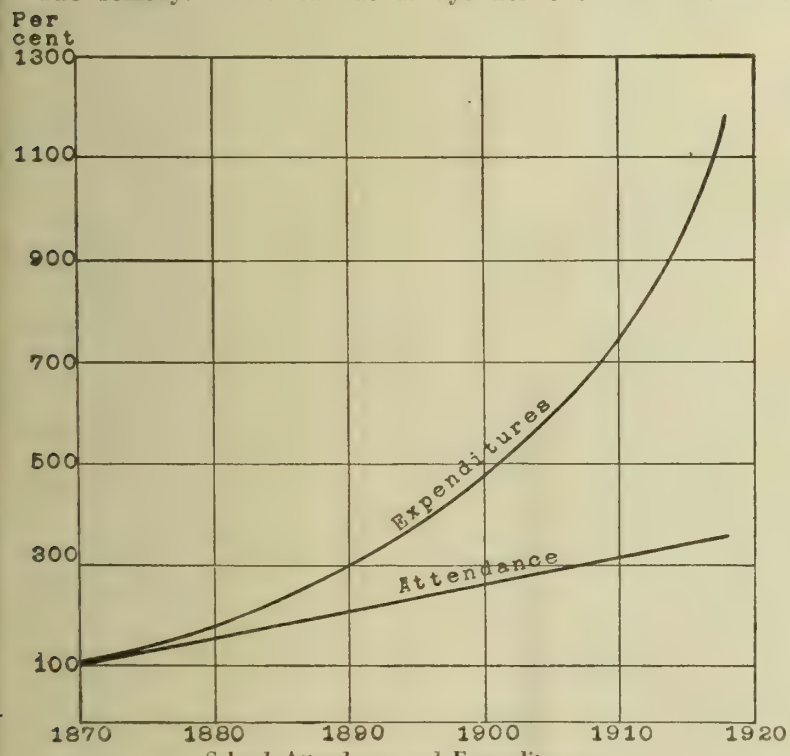
Very truly yours,
RALPH M. EASLEY.

Catholic "Social Reconstruction Program" Analyzed

(*Continued from page 18*)

porary". And so on, in a number of other particulars, all of those measures would do, and the European state insurance laws actually do, what in the excerpt it is declared must not be done. Consequently, it is really misleading to cite this excerpt in support of any of the formulated measures for social insurance that have been proposed in this country. In effect the National Catholic War Council has condemned every plan of compulsory insurance that has ever yet been tried or formulated; and, instead, it has proposed something very different but as yet unformulated—and practically unformulatable.

So much for the visionary social insurance pronouncement of the National Catholic War Council. But, perhaps, before dismissing this subject, the reader may wish to learn the grounds for opposing the movement for the adoption in this country of some concrete plan of compulsory social insurance modeled after European precedents. Unfortunately space does not permit of an adequate presentation of the objections. But they may be roughly outlined as follows:



Where a measure is proposed as a remedy for social ills the burden of proving that it will be a true remedy rests upon the proponents. And the more radical and dangerous the remedy, the higher is the degree of proof required. The adoption of compulsory social insurance in the United States would entail a radical departure from our fundamental principles of government, its successful operation presupposes radical changes in the habits and customs of our people, the cost and increase in bureaucracy would be immense, and chances of serious miscarriage, demoralization and disappointment would be involved. Consequently the proof must be strong both of a high degree of probability of very great social advantages, to offset those certain disadvantages and risks, and of there being no preferable alternative.

Education—Minus Business Brains

(*Continued from page 11*)

ership. It says in substance, in the rough language of the world, Go to College, or Go to Hell! The 38,000,000 American citizens included in the first two enumerations of this bulletin are the "rejects" of our school system. Taken in the mass, however, they contain the best part of our citizenship by whatever measure you apply. Even in terms of genius, Doctor Mann, formerly of Chicago University and now the Consultant of the War Department's Division of Civil Training, tells us that painstaking and scientific analysis of three million persons, and wide personal contact, shows that only 10% of the best brains of the country are college-bred, the other 90% being in the 63,000,000 and more in area "A" of our first chart, who had at best an elementary schooling, that is, who got nothing from the schools better than reading, writing and arithmetic. It is fair to say that this 90% and millions of others were killed in opportunity and in accomplishment by the stupidity of our public school leadership. It will not do to boast that our schools have made our people individually forceful and remarkable. We cannot in the same breath speak of our country schools as the worst we have and wretchedly poor, and admit as we must that our best citizenship comes from the farms, and then add in contradiction, that the excellence of our schools accounts for the virtues of our people.

The remedy. America has always her one cure-all, the one you are emphasizing in this Conference—more money.

School Attendance and Expenditures.

The Chart I now present shows what more money, and then more, has done for public education in fifty years. Spend all we have under the present leadership and we get nowhere.

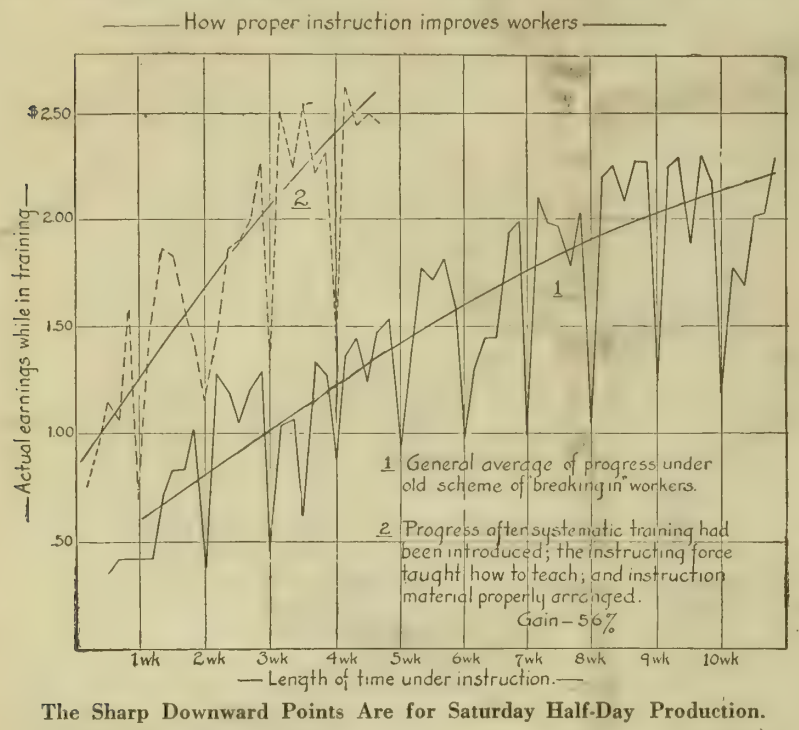
We must understand that the elementary school is only the wet-nurse of infancy. Education comes after children leave the elementary schools, if it ever comes. The relation of the grade schools to the high school has been overemphasized, and its obligation to the 60% who leave the elementary schools for life work, has been ignored. Europe, in her best practice, has shown the way for generations in her "life-schools", the agricultural schools of Denmark and Holland, the continuation and secondary schools for wage-earners of all ages in France, Austria, Germany, Hungary, Belgium and elsewhere. Germany made a ghastly mistake, long foreseen by her best men, in training her wage-earners in vocational efficiency only. We must train also in civic and social understanding. But Germany built in her factories and work places everywhere, schools so effective that 65% of the leaders in both the managerial and technical departments of her topmost industries, those that were conquering the whole world of trade, were her working boys, grown-up, who had left school at 13 or 14 years of age, and by these schools in industry had perfected themselves—had ranked themselves with the world's great engineers of production and discovery. The graduates of her technical institutions were working under these working boys, grown up, and not over them, as in our country, which is called democratic. Only a poor and inbred educational *leadership* has kept us from equalling Germany in this respect, and infinitely surpassing her by also developing the civic understanding of our working people, the educationally abandoned 38,000,000 in the schoolman's bulletin, and their 20,000,000 wives and sisters.

There is absolutely nothing iconoclastic in this. It simply gives to those who labor, a high school and college fitted to their circumstances and of substantially the same educational value, differing only in the place and time of instruction. It equalizes opportunity. It is easy to make these schools of such excellence that the rich, also, will wish to send their sons to them.

This new development requires the cooperation of all our forces, educational and economic. Employers must cooperate willingly and understandingly if may be, but, anyway, cooperate. Our $5,000,000,000 of annual factory payrolls, and the inestimable physical facilities of our factories and commercial institutions, must be used. Employers see this and are already spending millions of dollars in the beginning of this accomplishment, and doing it without the help of public school authorities, because these authorities are, in the main, without the will, the vision or the knowledge, to cooperate.

Leaders of organized labor see all this and are magnificently moved to action. For labor, this movement is the hope of the world. I could quote dozens. I quote one. Mr. Gompers virtually spoke for all, and in fact as truly expressed the judgment of employers as wage-earners, when, after allowing for the merits of our present schools, he criticized them for being only academic, and added:

> But, better than all (not only this official system of education), is the idea of bringing it into the factory, into the shop, anywhere where the toilers are employed, so that they can become more efficient and more highly skilled and better developed in order to make for greater and better production.
>
> My criticism of the schools is that they teach the academic course only. In addition to that there should be teaching of the actual facts of life to fit the public to meet the duties of workers. * * * It is to prepare boys and girls and men and women to do the real service of our country and of the world, to which we should, in my judgment, devote our attention. Anything that can help to make men and women more efficient really, for the individual as well as the collective good, will make for a higher and a better citizenship and help much toward the perpetuation of this wonderful Republic of ours.



I wish time permitted me to tell you how some excellent employers, for instance, the General Electric Company in its Fort Wayne plant, the Illinois Tool Works at Chicago, and the Norton Grinding Company of Worcester, are training, sometimes new men with no previous industrial experience, sometimes old employees, to higher and higher places, and sometimes by a sort of "intermittent apprenticeship", are lifting these men to places of accomplishment and happiness impossible heretofore in this democracy. This Chart, with its zig-zag lines, shows how girls in a corset factory, doing simple operations, used to require, as shown in the lower lines (No. 1) ten weeks to acquire proficiency and $2.30 per day, but by the new methods of intensive training (No. 2) are brought to still better output and $2.60 in three and a half weeks. Also, in these and all other simple operations (at which more than 80% of all our industrial workers labor) those who are not adapted to one task are trained to another. Industry is becoming highly intelligent without the help of public education as respects its wage-earners; and to become highly intelligent is to become considerate, happy and effective. This chart is the simplest. From this we go to the end of apprenticeship in any trade.

In the end, presumably, it will be carefully determined whether and to what extent, in the public interest, a measure of public oversight of these educational processes will be desirable or necessary.

Why industry is now going ahead alone, is indicated sufficiently by the personnel of our 48 State Boards of Vocational Education, with their 311 members—311 members, and only 16 manufacturers or other employers and 12 wage-earners among them. Three of these employers, and three of the wage-earners are on the Wisconsin Board. Leaving out the Wisconsin Board, we have in the other 47 states 301 members, of whom 13, or 4%, are manufacturers and 9, or 3%, are wage-earners. It has been the clear purpose of the schoolmaster politicians to teach the wage-earners and to use the plants in their own way without the effective cooperation of either of these forces. If, as this conference declares, our public school system is not democratic, we see why. The Federal Government showed the right way (the way of experienced Europe, by the way) in making the Federal Board of Vocational Education consist of two representatives each from labor, employment, and agriculture, and the Commissioner of Education as the Board's official connection with the academic schools. But the Federal Government could not compel the States to be either wise or democratic. It could only set an example. Wisconsin excepted, only one State Board has two manufacturers, and 11 others have one each. Think of one manufacturer in Indiana sitting on a State Board for the training of wage-earners in connection with their employment and on the employer's time, with three college presidents, three county superintendents and three city superintendents. He might as well, possibly better, be out entirely. Think of eight lawyers and a surgeon, as the New York Board of Vocational Education, daring to attempt to make the 450,000 wage-earners, now coming into her new continuation schools during working hours and largely on the employer's time, efficient and happy in their occupations. The eight lawyers would presumably be excellent directors of law schools and the surgeon of a hospital. If you and they do not see the silliness and evil of their present position, those who labor in, and those who direct, the industries and the commercial establishments of that State, do see. Think of five schoolmasters as her State Board of Vocational Education developing by themselves the vocational training of the wage-earners of wonderful Detroit and all other places in Michigan. And so of almost every State, except the thirty-three states having politician-superintendents elected through political machinations by popular vote, who run the whole show.

I trust that I have shown enough to demonstrate that at bottom our educational difficulties are not financial. Money, of itself, may only fix upon the country for a considerable period the present defective leadership. This Conference

has emphasized the poor quality of our schools, rural and city, but the country is safer with them where they are than with an exclusive, talkative, and unseeing leadership. Everyone in industry wants and will fight for ample teachers' salaries, but employers buy quality. The best employers will pay any price for quality. Let us have it in our educational leadership. A lame horse is dear at any price; a thoroughbred is cheap at any price. Our rural teachers average up to our leadership. If they didn't they wouldn't be where they are.

The Sharp Downward Points Are for Saturday Half-Day Production.

Each social force both gains and gives in cooperative endeavor with all others. No single social endeavor can gain anything worth while except by such cooperation. Let us, with a new spirit, work together and refuse to work apart.

Possibly no one in this country has happened to have more experience than myself in joint conferences of educators, employers, and men of labor, meeting for the promotion of the education of the body of our people, each of these groups adequately and about equally represented in each conference and competent by its numbers (never very large) and its quality, to decide in substantial measure for all of its group in the United States, and coming into the conference for that purpose. I have helped to call in the last two years more than fifty such conferences, State and National. We make sure of this representative attendance before fixing the date. I do not consider a gathering for a great social purpose that affects, as education does, the will, the personal and property rights of the working people and the employers of America, and the public interest, to be truly a conference and worth-while unless thus composed. Never has one thus composed failed to result in forceful and happy conclusions. Hesitation, mistrust, uncertainty, give way to understanding, friendliness, and decisions that win.

This is not only the line of least resistance. It is the only line that is fundamentally honest. It is the American way. Let's try it in this school crisis. School men may leave business out of their program; but it is no longer possible for business to leave the public schools out of its program. We must all sink or swim together and business won't sink; even less will the working people longer take pot-luck.

Letter to Signers of Declaration Against Recognition of Soviet Russia

The following letter was sent by Condé B. Pallen, Chairman of the Department on Study of Revolutionary Movements of The National Civic Federation, to the signers of the Declaration against the recognition of Soviet Russia, which was submitted to President Wilson last spring. The signers were asked to act at once because of the discernible evidences of sinister influences in the present national campaigns.—EDITOR.

To the Signers of the Declaration Against the Recognition of Soviet Russia:

The Red offensive against Warsaw has been broken, but already Lenine threatens to raise a Bolshevik army of 5,000,000 to renew the Red onslaught. Whether this will be possible or not, the Red offensive against civilization through intrigue, plot and subsidized propaganda has not been checked.

Three months ago more than two thousand men and women of all parties throughout the United States, among whom you were one, signed a declaration against the recognition of Soviet Russia, which was sent in the form of a petition to the President of the United States. In this document the signers voiced their apprehension of the Bolshevist movement throughout the world, declaring:

> We believe that recognition of Soviet Russia would be a repudiation of all that our national life has represented for a hundred and fifty years, and of all the spiritual ideals for which modern civilization has striven for two thousand years.

The American government, following the splendid lead of France, through the Secretary of State in his letter to the Italian Ambassador, has since expressed its unequivocal stand against any recognition of the lawless autocracy in control of Soviet Russia. This stand has evoked spontaneous and unanimous approval from the leaders and press of both the Republican and Democratic parties, showing that the problem is American and not partisan.

Lenine announced publicly in Moscow that Russia must continue to foment revolution in all countries, and that his chief immediate hope was for a revolution in Asia and the East. Documentary proof in possession of the State Department has demonstrated the existence of an organized propaganda whose ramifications enmesh the world. This propaganda of inciting discontent, sedition and revolution is financed, as recent disclosures prove, by tremendous sums, largely raised by the sale of jewels stolen by the Soviet régime from Russian palaces and churches. In England, Europe and America it seeks to gain control of labor and to use the general strike to coerce or paralyze every form of representative government.

The American Labor movement stands firmly against all these Bolshevist policies. The American Federation of Labor at Montreal refused by an almost unanimous vote any recognition of Soviet Russia. Notwithstanding the fact that organized labor stands solidly against Bolshevism and that the debacle in Poland may temporarily check the activities of Bolshevist agitators, the danger in the United States and elsewhere throughout the world cannot be minimized. The Red cause is best served by inculcating a sense of false security and the belief that Russian Bolshevism is collapsing, that America is immune from attack, and that those who fear the Red menace exaggerate the danger. Each day the forces of attack increase. From abroad, as immigration statistics show, within the past months have come thousands of aliens who are to be distributed throughout the land, the unassimilable portion of which promise to be a perpetual yeast of discontent.

The forces of autocratic barbarism are not confined to the Socialists, anarchists and I. W. W.'s, but the cause of Lenine is more actively furthered either frankly or by indirection by radical pseudo-intellectual writers, editors, professors, teachers and clergymen in our newspapers, magazines, colleges, schools and churches, and in some of these the enemies of democratic government are found to hold the very highest positions.

The note of the Secretary of State to the Italian Ambassador points out that inevitably "the diplomatic service of the Bolshevist government would become a channel for intrigues and the propaganda of revolt against the institutions and laws of countries with which it was at peace." This stand logically requires that the Government of the United States make practical application of its policy. The first step toward the eradication of Soviet propaganda in this country must be the deportation of Ludwig C. A. K. Martens.

This issue can neither be evaded nor compromised. Whatever political changes may occur, the stand taken against Bolshevism by our Government must be maintained. The national campaigns are now on, and in both parties, seeking to influence the policies, are Bolshevist sympathizers and agents who openly condone the excesses of the Red régime, who are picturing the Lenine-Trotzky autocracy as representing the will of the majority of the Russian people, and who by specious arguments are urging recognition as the quickest means of helping to bring order and peace in Russia. In order that those who will have power and authority may not be influenced by these Bolshevist sympathizers, and that they may heed the great voice of representative Americans on this grave matter, it is urged that the signers of the previous petition now call for a declaration from their congressmen, senators and from their presidential candidates against any recognition of the Bolshevist régime in Russia and against any temporizing with its agents and propaganda in America, at any time, or under any circumstances. You are urged to write especially to your presidential candidate, emphasizing your conviction that there must be no neutrality either in thought or action on this vital problem.

DEPARTMENT OF PUBLIC WELFARE

PRESIDENT-ELECT HARDING'S NOTABLE PROPOSAL FOR NEW MACHINERY OF FEDERAL GOVERNMENT TO DEAL WITH PROBLEMS OF SOCIAL JUSTICE—AIMS AT CO-ORDINATION AND EFFICIENCY—WILL AVOID PATERNALISM AND BUREAUCRACY

PRESIDENT - ELECT Warren G. Harding, in an address to 5,000 women representing various sections of the country, who assembled at Marion, Ohio, on October 1, made one of the most notable proposals of his campaign. This is for the creation of a Federal Department of Social Welfare to coördinate and direct efforts to obtain social justice. In making the proposal, Senator Harding warned against the dangers of such an undertaking, declaring that bureaucracy must be avoided, and that social justice and not paternalism must be the guiding principle.

Senator Harding in part said:

"There can be no more efficient way of advancing a humanitarian program," he said, "than by adapting the machinery of our Federal Government to the purposes we desire to attain. While others may have their eyes fixed upon some particular piece of legislation or more particular policy of social justice which calls for the sympathetic interest of us all, I say, without hesitation, that our primary consideration must be the machinery of administration, and that when the time comes for us to reorganize our administrative government in Washington we must all stand together for the creation of a Department of Public Welfare.

PRESIDENT-ELECT WARREN G. HARDING

"I pledge myself today to support with all that is in me whatever practical policy of social welfare and social justice can be brought forward by the combined wisdom of all Americans. Nothing can concern America, and nothing can concern me as an American, more deeply than the health, the happiness and the enlightment of every fellow American.

"The social justice that I conceive is not paternalism. It would be easy to make it so, and dangerous indeed to the best spirit that Americans can have—the spirit of expressing by the individual free will one's own merits, capacity and worth. We do not want government to suppress that expression of free will, even by benevolence, but we do mean to preserve in America an equal opportunity and a preparedness for self-expression therein, even though we use the government to do it.

"Social justice, on the other hand, is not a mere sentiment. To my mind a social justice policy in government cannot and should not be confined to a program for the flow of benefits from some uncertain and magic source at the seat of government. I could not even consider a policy of social justice which is conceived, as so many visionaries conceive it, as a right of mankind. I will only consider it as an obligation to mankind.

"I refuse to subscribe to the doctrine which has gone so far to delude the world that even citizenship is based upon rights. I believe, and have repeatedly said, that citizenship is based upon obligation.

"I will not even approach the consideration of a policy of social justice unless it is founded on the stalwart American doctrine of the duties of every one of us to all of us. The first measure of social justice to which America must always devote herself is the duty of citizenship to vote with conscience, to preserve laws and to demand their enforcement. It is the obligation of all true Americans to live clean lives and to engage with head and hand in honest, useful production and toil.

"I believe that there is no step more practical, no step which will mean more to the growth of America's social welfare; no step which will guarantee better America's social justice, than one which I now propose to you.

"It is almost useless for us to go on expending our energies in advancing humanitarian policies which we wish put into effect, and it is useless for us to hope for the effective administration of humanitarian policies already undertaken by the Federal Government, until we have prepared to create an administrative centre for the application of our program.

"At the present time we find social welfare bureaus and social welfare undertakings scat-

tered hopelessly through the departments, sometimes the one overlapping the work of the other, and sometimes, indeed, engaging in bickerings between themselves. The picture is one of inefficiency and of wasted funds.

"Let us not only have social justice and social welfare developed to the fullest extent which a wise citizenship will approve, but let us have also the means with which to make social justice and social welfare real and functioning, rather than visionary and inefficient.

DANGERS TO BE AVOIDED

"I have no doubt that there will be some who will find in this proposal cause for calling me an extremist, but when we have a task to do, which has been dictated by our conscience and approved by our wisdom, let us straightway find the way to do it. I do not say this without a word of caution. I recognize certain dangers which are always presented when Government undertakes large and detailed tasks. I have said already today that we must avoid paternalism, and that we must avoid it because a paternalistic social welfare program would smother some of the liberties, some of the dignity and some of the freedom for self-expression of our individuals.

"In creating Federal departments for the administration of social justice and social welfare we must avoid the fearful results of bureaucracy. I am inclined to think that as between a bureaucracy of a military power which paid little attention to the regulating of domestic affairs, and a bureaucracy of social rules and regulations, the latter would oppress the soul of a country more. We do not want, and we will not have, either in America.

"Undoubtedly the great blessing of our Constitution, appearing, indeed, as if our Constitution had been written by the hand of Providence, are the checks which it places upon the development in a national centre of a great bureaucratic paternalism. We are momentarily irritated at times when we desire to enact measures, which appear to be dedicated wholly to the welfare of mankind, when we find that constitutional limitations prevent their legality. But we have been saved through these many years, and will be saved throughout America's continued progress from the growth of too much centralism, too much paternalism, too much bureaucracy and too much infringement of the individual's right to construct his own life within our American standards of reason and justice.

"I would like to point out to all America that there is grave danger at hand when centralized expression begins to take from local communities all the burdens of social conscience. The best that humanity knows comes up from the individual man and woman through the sacred institutions of the family and the home, and, perhaps, finds its most effective application in the community where life is personal, and where there is not an attempt to cut men and women to pattern and treat mankind as a wholesale commodity."

TASKS OF SOCIAL JUSTICE

Senator Harding pointed out the necessity of going forward upon a sure footing and declared:

"When making the proposal for a department of public welfare to America, I am aware that I have made a step in advance of any platform I have chosen to speak to you on the practical question—the question of how to do the tasks we must do, the things American conscience is calling to have done.

"We all know that we face tasks of social justice, which we must undertake with dispatch and efficiency. Who can suggest one of these tasks which can supersede in our hearts, or in the rank which foresight and wisdom will give, that of the protection of our maternity?

"The protection of the motherhood of America can not be accomplished until the State and the nation have enacted and, by their example, have enforced customs, which protect womanhood itself. I know full well that there are women who insist that women shall be treated upon the same basis that men are treated. They would have a right to take this position in their own behalf, but I insist, that all true Americans must insist, that no woman speaks for herself alone. She is the possessor of our future, and though she becomes engaged in the tasks and services of civilization, we must preserve to her, the right of wholesome maternity."

Senator Harding discussed the need of adequate protection for women in industry and expressed his belief in the wisdom of an eight-hour day for woman workers. He emphasized the need of safeguarding the women on American farms. He proposed putting the Children's Bureau under the suggested Department of Public Welfare, and urged prevention of abuses of child labor. The Senator spoke at length on the problem of conserving national health as a prime factor in national well-being.

Our Supreme Allegiance

INTERNATIONALISM WOULD DESTROY NATIONAL SOUL—AMERICAN UNITY ALONE CAN ENABLE US EFFECTIVELY TO HELP IN MAINTENANCE OF WORLD PEACE AND JUSTICE

By GEORGE SUTHERLAND

WHEN the Armistice was signed, the issues of the war were transferred from the trenches to the peace table. The natural hope and expectation have been that with the final consummation of peace, the world would resume its former tranquility and conditions again be as they were. In a measure and in a sense this hope and expectation in the course of time, will be realized. Vegetation will cover the scars where the battles were fought; the places made empty by the dead will be occupied; time will dry the tears and comfort the hearts of the sorrowful. But, in another sense, the effects of the war will be ineradicable. The processes of human intercourse have been profoundly disturbed, and the slowly built foundations of civilization themselves, menaced with destruction. Old and respectable maxims of government have been put under suspicion; long cherished theories have been challenged and abandoned; in Europe the old order and the firm rock upon which it seemed to rest are both trembling at the edge of a new and dreadful barbarism.

GEORGE SUTHERLAND

The sentiment that once justified a quick appeal to force as a righteous remedy for grave international wrongs, has been largely supplanted by the feeling that war is a thing which, under no circumstances, is capable of justification, and that a substitute must be found and accepted at whatsoever cost or hazard. Any proposal which promises this desired result makes a powerful appeal to the better side of our nature, and objections challenging its practicability or suggesting countervailing perils are received with some degree of impatience as though they were contentions in favor of war for its own sake. And yet the fact that humanity has never been free from recurrent warfare in any age or under any form of government or any degree of civilized culture, should admonish us that we are dealing with a problem of great and stubborn difficulty, the solution of which does not lie at the end of a royal road of easy passage, but to which we shall come, if we come at all, only after long and patient search for the way.

The contention that war in and of itself is ever defensible is a monstrous perversion; but that war as an alternative may be justifiable, and even commendable, is beyond dispute. Right thinking men can never accept the theory that war is a "*biological* necessity," but they cannot ignore the fact that it has again and again been a *moral* necessity. There are, and always will be, some things more sacred than peace, more precious than life, for the necessary preservation of which war with all its sad and brutal accompaniments may be an act of consecration. To hold otherwise is to surround every American battlefield with a wall of shame. When the leader of the Scotch knights flung the golden casket containing the heart of Bruce far out among the victorious Saracens and rallying the torn remnant of his command bade them follow it to the death; when the immortal six hundred charged to certain annihilation at Balaklava; when millions of French and English and American lads threw themselves into the riot of bat-

Vital Problems of Agriculture

WITH INCREASED COSTS OF PRODUCTION AND DECLINE OF PRICES FARMERS CONFRONT SERIOUS DIFFICULTIES—RECOMMENDATIONS TO MEET NEEDS OF GREAT PRODUCING GROUP

(Address delivered at the Annual Convention of the National Farmers' Union, Kansas City, Nov. 16-18, 1920)

By CHARLES S. BARRETT
PRESIDENT, NATIONAL FARMERS' UNION

THE National Farmers' Union during the past year has continued in its work of charting the troubled seas of agriculture. It is the function of a great farmers' organization to discover and make known the rocks and reefs, the currents and cross currents, floating mines and submarines which menace the agricultural interests. New dangers can thus be avoided, additional lighthouses and harbors of safety be provided and farm progress made safer and generally more secure.

The Secretary of the Treasury and the Federal Reserve Board deal a body blow when they persistently and in spite of united farmer protest repeat the slogan of certain financial interests that price declines are inevitable and unavoidable.

As a result of such declarations publicly announced outrageous price declines have set in. The Secretary of Agriculture in an address before the American Bankers' Association, in October, stated that the recent loss in value to farmers amounts to two and a half billions of dollars. Today cotton and wheat are selling far below actual cost of production, bringing hardship and suffering to thousands of producers. It is needless for me to point out that bulk-line costs of producing cotton in 1919 were found by the Department of Agriculture to be thirty-seven cents a pound, while the foremost authorities of the land have carefully figured the costs of production of wheat for last year at about $2.50. It is well known that the costs this year have been heavier than ever before. Deflation has come with a vengeance. It is a deflation due to human causes. There is under rather than over supply of cotton and wheat. The world needs our food. Idle mills in central Europe need our cotton. Certain government officials, however, have made it impossible to finance our crops and while making gloomy predictions, refuse to permit the War Finance Corporation to function. In this great crisis through organization we can meet these body blows to agriculture and the Farmers' Union will continue as in the past to bear its full share of the undertaking.

The city consumers should be made to know the evil effects of agricultural deflation. They should know that the farmer in selling his great staple crops is harvesting the result of an entire year's labor. The farmer has but one turn-over in the year. The price of his feeds, seeds, fertilizer, farm machinery and what he has paid for extra labor are all fixed by forces beyond his control. He has borrowed money from his banker to finance his operations and under the present unfair system his crops are forced on the market regardless of fair prices in order to liquidate these loans. The manufacturer and middleman have many turn-overs of capital annually. What is a loss today may be a gain tomorrow. The very nature of their business is based on insurance and hedges against loss, the fixing of sale and resale prices of their goods and of passing the costs on to the consumer.

Much is being said of price reduction in certain great industries such as sugar, textiles and leather, but these are of the great industries which have piled up billions in the form of dividends, treasury stock and surpluses. To them price declines mean very little in view of the enormous profits which they have made and yet

CHARLES S. BARRETT

make. How different was the treatment given them to that received by the producers of the two great farm staples, where cotton went down and the government wouldn't help to bring it up, and where wheat went up and the government brought it down. Wheat was selling for about and over $3.00 a bushel at the terminal market when the government fixed a minimum price at the terminal of $2.20 a bushel which became in substance the maximum price as well.

During the war the railroads were guaranteed against losses, and now under the Cummins-Esch law have entered on an era of unprecedented high freight and passenger rates and with it such prosperity (to them) as this country has never seen before.

On former occasions I have referred to the rôle of the Farmers' Union in helping to maintain at Washington a national headquarters for the farm organizations. During the past year the National Board of Farm Organizations has made material gains in strength and in service. The National Board of Farm Organizations is the only farm organization in the country which approximates in character the Chamber of Commerce of the United States or the American Federation of Labor.

A distinct contribution has been made this year in placing the demands of the farmers' organizations before the country. The Board first prepared and sent a questionnaire, to the various presidential aspirants. The replies were widely published and elicited much favorable attention. The Board followed this action by sending a delegation to both the Democratic and Republican National Conventions, where its spokesmen presented various planks for the consideration of the platform committees. This action constituted a mile-stone in the history of farm organizations and placed the needs of agriculture as never before squarely in front of the American public.

The great farm organizations belonging to the National Board of Farm Organizations believe in frank and open methods. They are asking for only such consideration as is accorded other great industries. They want no special privileges but do insist that they be placed on an equal footing with all the rest.

SOME RECOMMENDATIONS.

Continuation of cost of production investigations is of the greatest importance. Our membership should insist on sufficient appropriations both State and National to make possible the determining of all factors which enter into the cost of production of the great staple agricultural products. The farmer today is the only manufacturer in this country who is imploring the government to figure out and make public the cost of production of his products. It is because he will come out with a clean bill of health. I wonder what other great lines of business are willing to have the government figure out their costs of production and give the "free, full and uncensored facts" to the entire public.

Consumers should be encouraged in their desire for similar data as to the cost of producing manufactured products as well as the costs of distribution.

Collective buying and selling arrangements should be improved and furthered in every possible way. The Farmers' Union is a pioneer in this most practical field of farm endeavors. Uniformity of methods in organization, bookkeeping, auditing, etc., should be carried out. The buying and selling of agricultural requirements and farm products should be concentrated and to this end our various state directorates and business departments should meet from time to time.

The purpose and spirit of cooperation should be emphasized in all dealings with the general public. No occasion should be neglected to show that agricultural cooperation is the only way to bring stability and prosperity to agriculture and with it prosperous and permanent civilization for this nation.

Data on discrimination against our cooperatives should be systematically gathered together and utilized. Certain great trade associations have been carrying on boycottings and practicing unfair discriminations against cooperative grain elevators, creameries and stores. Through the National Headquarters evidence of such discriminations will be presented before the proper authorities.

Cooperative managers should keep careful records of the number of cars which they secure or desire as against the number of cars furnished their private competitors. Evidence is not lacking that local freight agents have been approached by private shippers in a way to get them more than their fair share of transportation facilities.

The Federal Trade Commission must be preserved in its present functioning. A high type of public servant is now found among its personnel. Attacks have been made against the Federal Trade Commission which farmers should be the first to resent. The knowledge that profiteering has been enormous is due largely to investigations of the Federal Trade Commission. Without its helpful assistance the country would have no proper warning of certain dangers which must be removed.

American Labor Breaks With International Federation

AMERICAN FEDERATION OF LABOR REPUDIATES REVOLUTIONARY PROGRAM OF INTERNATIONAL FEDERATION OF TRADE UNIONS—REJECTS EUROPEAN CALLS TO AID SOVIETS

By SAMUEL GOMPERS and MATTHEW WOLL

AT the present moment continued international cooperation with European labor has become extremely difficult, if not impossible. For two years the American Federation of Labor has given a considerable part of its time, energies and financial resources in the endeavor to build up a new international trade union organization to replace the union destroyed by the war. A portion of the report of the Executive Council to the Montreal Convention of the American Federation of Labor was given over to international relations. The convention endorsed the action of the Executive Council and the Amsterdam delegation, referring to the Executive Council the question of affiliation to the new International Federation of Trade Unions.

The Montreal Convention was by no means satisfied with either the constitution and principles of the new international as laid down at Amsterdam or with the later actions of the executive body. The chief objection to the new constitution was that it completely abrogates the fundamental principle of the former labor union international, namely, complete autonomy for each national federation. It was also objected that a system of dues had been decided upon which would constitute a very heavy drain upon the resources of the American Federation of Labor, compelling it to pay a large part of the expenses of the proposed new international organization.

The main criticism of the new international executive at Amsterdam was that it had issued a statement of purely socialist character, even including the phrase "Down With Reaction. Up With Socialism," and calling for a first of May celebration which amounted to a one-day strike for socialism.

Since the Montreal Convention matters have taken a turn for the worse. The Amsterdam executive has issued throughout the world, and sent to the American Federation of Labor for circulation in this country, a declaration calling for international revolutionary measures by Labor in aid of the Soviets in their war against Poland. The chairman of the British labor party, claiming to speak for the British trade union labor movement, has sent a cablegram along similar lines and apparently calling for similar action. The contents of these messages are thoroughly revolutionary and obviously animated with a desire to use the most extreme measures for strengthening the hold of Soviet power in Russia and enabling it to extend its influence and to dominate neighboring countries.

These actions are all the more amazing as British labor, until recently, was on record as against any such revolutionary methods, and that instead it demanded neutrality to Soviet Russia. At the meeting of the International Federation of Trade Unions Congress held at Amsterdam last year a resolution was introduced by two small Bolshevist delegations calling for the use of identical revolutionary methods and for a nearly identical revolutionary object. Everyone in attendance, other than the two men mentioned, regarded the proposal as absurd and when it was put to a vote, only the proposer and seconder supported it.

The brainstorms which seem to have given the extremists temporary control must be regarded as a result, first, of the critical conditions now prevailing in Europe; and, second, of the enormous propaganda subsidized by the Soviet government with money wrung from its bleeding and starving slaves in Russia.

APPEAL OF THE TRADE UNION INTERNATIONAL FOR REVOLUTIONARY MEASURES IN AID OF THE SOVIETS

On September 8 the Amsterdam bureau of the International Federation of Trade Unions communicated the following manifesto to the American Federation of Labor, with the request that "the manifesto be as widely circulated as possible amongst the workers of your country"! On account of its unique character we reproduce this manifesto in its entirety. The italics are ours:

> In consequence of the extreme gravity of the political situation the International Federation of Trade Unions appeals to the organized workers throughout the world to pledge themselves to inflexible opposition to all war.
>
> The organized workers of the world must from now onwards be prepared to act in accordance with the decisions arrived at by the international conferences at Berne and Amsterdam and to utilize every available resource in the struggle against all wars.
>
> The war must not be continued.
>
> The International Federation of Trade Unions, mindful of the right of the peoples to govern themselves, condemns foreign intervention with the internal affairs of other nations. It also condemns military assistance given to all reactionary enterprises.
>
> Against this intervention and assistance the International Federation of Trade Unions calls upon all workers to demonstrate and to act.
>
> Applying these principles, and in view of the aggressive action of Poland against the Russian revolution, the International Federation of Trade Unions demands that all militarist attacks shall cease immediately, and that guarantees shall be forthcoming against any new aggression.
>
> In view of the declaration of the Russian government which has solemnly expressed the wish to conclude a peace based upon the independence and self-determination of Poland, the International Federation of Trade Unions declares that upon this basis fratricidal warfare must cease.
>
> This universal peace must be immediately established with due regard to revolutionary achievement and the independence of the peoples.
>
> In order to attain this working class and profoundly human aspiration, the International Federation of Trade Unions calls upon all trade unionists to refuse to cooperate with the accomplices of imperialist capitalism, and to definitely refuse to transport troops or to manufacture munitions.
>
> The deliberate action of the workers must break all attempts to re-establish a reactionary Holy Alliance. *Not a train carrying munitions must be worked; not a ship laden with war materials must be allowed to leave harbor; not a single soldier must be transported.*
>
> War must not be further supported.
>
> The International Federation of Trade Unions declares that the proletariat of all countries can and must act in this manner to protect the workers' efforts in the direction of liberty and social progress, and firm in the conviction that war can only cease by the will of the workers, the International Federation of Trade Unions calls upon all National Trade Union Centers to prepare, if necessary, for *mass action by means of a general strike.*
>
> *The production of war materials must cease in all countries,* and in order that disarmament may become an accomplished fact, the International Federation of Trade Unions demands that action be taken in all countries to put an end to the manufacture of arms. This will assist the liberation of the peoples from militarism, and industrial production will proportionally expand.
>
> Comrades! In the year 1914 our organization was much too weak to set itself against war. Today it is a power of *twenty-seven million members.* Above all it is imbued with a pronounced anti-capitalist and anti-militarist spirit. *Today it must of its own accord and within its own ranks, find the power to preserve the world from terror and annihilation.*
>
> War against war! That cry unites all workers! The refusal to work transport for the purpose of war is today an expression of International Working Class Solidarity.
>
> Comrades! The International Federation of Trade Unions places its reliance on you.

Along very similar lines was a cablegram received from Adamson, the chairman of the British Labor party, on August 15, informing America of similar revolutionary measures proposed by the new "Council of Action" of Great Britain. This message, which apparently suggests similar American action, is as follows:

(Copy.)

WESTERN UNION CABLEGRAM

LONDON 196 FIRST 52.

GOMPERS,
American Federation of Labour, Washington.

Greatest most united conference British trade union labour movement. Meeting London today. Hailed with satisfaction Russian government's declaration in favour complete Polish independence and realizing gravity international situation pledged itself resist every military naval intervention against Soviet government. Instructed Council of Action continue until first absolute guarantee armed forces Great Britain should not be used support Poland, Wrangel or any other military naval effort against Soviet government. Secondary withdrawal all British naval forces operating directly or indirectly as blockading influence against Russia. Thirdly, recognition Soviet government, establishment unrestricted trading commercial relationships Great Britain, Russia. Conference refused association any alliance between Britain and France or any other country committing us any support (to) Wrangel, Poland or supply munitions, war material, for any attack upon Russia. Conference authorized council to *call any and every form withdrawal Labour when circumstances may require* given effect policy and called upon every trade union official Executive Committee, Local Council and membership generally. Act swiftly, loyally, *courageously,* sweep away secret diplomacy, assure foreign policy Great Britain accord with desires people for end to war and interminable threats of war.

ADAMSON, *Chairman Labour Party.*
130 A Aug 15.

If the chairman of the British Labor party or Secretary Oudegeest seriously desired to know the position of the American labor movement as to any proposed international revolutionary action directed against all governments—entirely disregarding their democratic character—they could have referred to the proceedings of the Montreal Convention and to the entire record of the American Federation of Labor. It may be doubted if either Oudegeest or Adamson expected any answer, or if a proper answer could be devised that would adequately deal briefly with the immense issues they have raised.

The American Federation of Labor is not a

Railway Brotherhoods Condemn Illegal Strikes

OFFICIALS DECLARE ACTION OF "REBEL MEMBERS" IN VIOLATING WORKING AGREEMENTS DESIGNED TO DESTROY ORGANIZED LABOR AND BUILD "ONE BIG UNION"

THE following letter, signed by the officials of the Railway Brotherhoods, and inspired by the illegal strike of train, engine and yard men at Chicago last April, is of special significance. Condemning the promotion of illegal strikes as efforts to destroy the existing brotherhoods and form "One Big Union," the letter declares that vacancies brought about by the illegal action of rebel strikers may be filled by any and all persons, either temporarily or permanently. The officials also warn the members not to sign petitions for the reinstatement of former employees of various railroads who participated in the illegal strike. This letter, and the position taken, is another example of the intention of organized labor to abide by its agreements and to maintain its laws, rules and regulations against the revolutionary elements.

—EDITOR.

CLEVELAND, OHIO, October 11, 1920.

To General Chairmen, General Grievance Committees, Railroads in the United States, Representing the B. of L. E., B. of L. F. & E., O. R. C., B. R. T., and S. U. of N. A.

SIRS AND BROTHERS:

The following questions are some of the many that came to the undersigned during the illegal strike of train, engine and yard men that started at Chicago last April and spread to numerous terminals in the United States:

> "At the beginning of the outlaw strike here the switchmen quit their jobs and went on vacation, as they called it. The company filled their places as much as possible with new men, some of whom were farmers, office clerks, and from other crafts. Most all of them were unfamiliar with the work and had to be taught.
>
> "The Engineers have the contract for all piloting and it fell to the engineers to pilot the new men around in making deliveries and doing the work in general. We had six engineers piloting, myself being one of the six, and because I instructed them how to throw a few switches and make out wheel reports, take car numbers, etc., many of the engineers, firemen and old switchmen who were out classed me and the rest of those working as scabs. One of the engineers took a job as yard conductor later, after the pilots were pulled off, and is still holding that position.
>
> "What I want to know is, am I classed as a scab? If I am guilty I will take my medicine like a man and get out of the order. If not guilty, I wish to be vindicated in the eyes of the membership here.
>
> "About four days ago our trainmaster and master mechanic came to four of us engineers and asked us if we would take charge of crews until they could get some men.
>
> "I also wish to know if it would have been all right for us engineers to have taken charge of crews, as the officials wished us to do."

Official instructions sent out by the chief executives of the transportation organizations at various times during the illegal strike of train, engine and yard men during the months of April, May and June, 1920, plainly and positively stated that where any number of employes of any class represented by the B. of L. E., B. of L. F. & E., O. of R. C., B. of R. T. or S. U. of N. A. left the service of their employer in violation of the schedule or agreement under which employed, and in violation of the laws of their organization, in sufficient number to interfere seriously with the operation of train, engine or yard work, they not only jeopardized their membership in their organization but their positions with their employer as well, and that such action was illegal and in violation of the laws, rules and regulations of each of the organizations herein mentioned. Therefore, it naturally followed that, where such employes had left the service for the purpose of interfering with traffic, even though such employes claimed they were on strike, on vacation, or had quit the service, the railroad companies affected were clearly within their rights in securing other employes to fill the positions made vacant by those engaging in such illegal action.

We, therefore, take the position that, wherever our organizations maintained a schedule or working agreement covering train, engine or yard service at the time illegal action such as above referred to took place, all positions made vacant by employes of our class engaging in such illegal action were open to any and all persons who desired to accept service of that character, either temporary or permanent. It is therefore the duty of members of each of the organizations named herein to at all times assist one another in protecting working agreements made by the authorized committees of such organizations as against rebel members or others who attempt to repudiate the same, or who endeavor to discredit or destroy any of the standard, recognized labor organizations named herein.

In some instances road conductors, engineers, firemen and brakemen were offered permanent positions in yard service made vacant by those engaging in the illegal strike, and such road employes, or persons not in the employ of the railroad in any capacity, who desired to accept such vacancies were clearly within their rights in doing so, and our organizations appreciate the assistance given by members and others in filling such vacancies and those helping to make good organization agreements violated by rebel members.

When members of any of the transportation organizations, obligated as they are to support, maintain and abide by the constitution and rules of their organizations, assume to violate the working agreements made by the authorized committees of such organization, to the extent of quitting the service collectively, nothing but condemnation of such disloyalty can be expected, and any reputable labor organization that fails or refuses to carry out the terms of a working agreement constitutionally made by it cannot hope to continue long in existence and is not entitled to the respect of the business or labor world.

Many of the former employes of various railroads who participated in the illegal strike mentioned above have not been returned to service by their former employers and in some localities petitions have been circulated requesting loyal members of the different organizations to sign such petitions or ballot in favor of the return of such former employes with their original seniority. Our members are warned against signing any such petition or communication. The loyal membership of these organizations should remember that these organizations live and will continue to prosper, not as the result of the assistance and good wishes of those expelled for engaging in the illegal strike, but over the protest of such individuals. The illegal strike of members and others since April, 1920, on railroads where these organizations maintained schedules or working agreements, was started by disgruntled individuals solely for the purpose of destroying the old established organizations with the hope of building the "One Big Union," and had those individuals succeeded, all the good work of the past quarter of a century would have been destroyed. Our general committees on some of the largest railroads in the country have entered into and signed agreements with the operating officers of such companies that former employes who engaged in the illegal strike mentioned will be returned to service only as new employes and will not be permitted to take seniority rank over loyal members or others employed to fill the vacancies created by such illegal action.

W. S. CARTER,
President, B. of L. F. E.

W. S. STONE,
Grand Chief, B. of L. E.

L. E. SHEPPARD,
President, O. of R. C.

President, B. of R. T.

S. E. HEBERLING,
President, S. U. of N. A.

COOPERATIVE BANK OPENED BY BROTHERHOOD OF LOCOMOTIVE ENGINEERS

THE Brotherhood of Locomotive Engineers Cooperative National Bank of Cleveland opened its doors for business November 1. The capital of the bank is $1,000,000, with a paid in surplus of $100,000 additional. The capital stock is owned exclusively by the brotherhood and its members and was oversubscribed $300,000, despite the fact that the annual dividends on the stock are limited to 10 per cent and cannot exceed this percentage.

The officials of the new bank are: President, Warren S. Stone, grand chief of the Brotherhood of Locomotive Engineers; vice president and cashier, W. B. Prenter, general secretary-treasurer; vice president and manager, W. F. McCaleb, formerly active vice chairman of the Dallas Federal Reserve Bank. A corps of expert bank employes has been chosen, chiefly from Cleveland banks.

President W. S. Stone made the following statement regarding the bank:

"So far as I know this is the first cooperative bank in the United States, although there are many such banks in Europe. It is the first labor bank. We chose a national bank because of its greater security. A national bank is subject to close inspection by Government inspectors. The first consideration with labor is that its enterprises must be absolutely sound.

"We made the bank cooperative by distributing the stock to as many members as possible, so that it would approximate the cooperative ideal of one man one vote. We also limited stock dividends to 10 per cent and plan to distribute excess earnings back to the depositors.

"We pay 4 per cent interest on time deposits. We provide for an additional surplus and if there are additional earnings, we expect to share them with our depositors who cooperate with us in making the bank successful. That is our idea of cooperation.

"The bank will not confine itself to the brotherhood. It will do a commercial, savings and trust company business. It will do banking by mail. We have 85,000 members, not to speak of several million other workers who belong to other labor organizations. The bank is, of course, open to everybody and is not an exclusive labor bank. We expect to handle foreign exchange for immigrants.

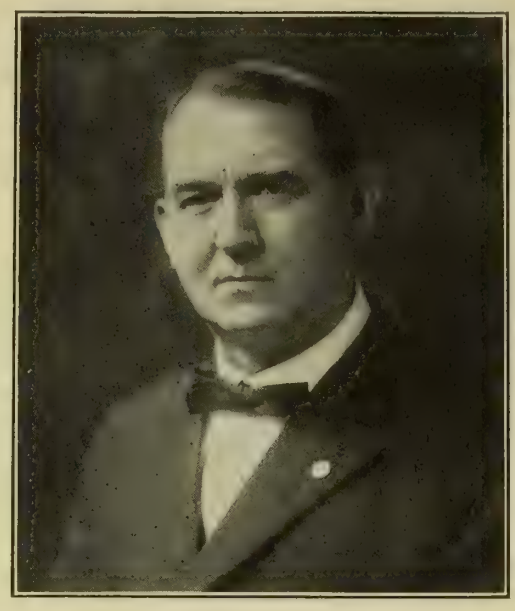
Exposes W. Z. Foster's Charges

PRESIDENT TIGHE, OF THE AMALGAMATED ASSOCIATION, RIDDLES FOSTER'S BOOK ON THE STEEL STRIKE AND DEFENDS HIS ORGANIZATION AGAINST ATTACKS

AT the recent session in Washington of the Executive Council of the American Federation of Labor, the committee to unionize the steel workers was reorganized, with the elimination of John J. Fitzpatrick, Chairman, and William Z. Foster, Secretary, both of whom participated in the direction of the steel strike last Winter. Fitzpatrick was displaced by M. F. Tighe, President of the Amalgamated Association of Iron, Steel and Tin Workers.

In recent issues of the *Amalgamated Journal,* President Tighe vigorously defends his organization against the attacks made by W. Z. Foster in his book "The Great Steel Strike and Its Lessons" and thoroughly exposes this leader of the "red" element and former advocate of the I. W. W. Mr. Foster's views played an important part in the report of the Interchurch World Committee, which investigated the steel strike.



In part, President Tighe writes:

In taking up the defense of the Amalgamated Association from the malevolent and untruthful aspersions cast upon the integrity and honesty of purpose of the entire membership of the Association, it is not intended to involve any of the organizations connected with the movement, other than it may be necessary to show up the duplicity of the author of the book.

The book in itself is nothing more than a compilation of half truths, misrepresentations, evasions and calumnious falsehoods. It is a work written for commercial and personal interests, but so far as being a truthful review of the great steel strike, it has no value whatever. Those who purchase it for the purpose of getting the true account of the inside transactions of that event will not get value received.

The author of this work undertakes to instruct the heads of all National and International Organizations as to what their duties are, and these officials, many of whom were fighting the battles of the workers in the trade union movement before he knew what a trade union was, and after, when he was doing his best to destroy them, are told that unless they follow his advice they are incompetents. * * *

The statements made that the taking of a strike vote did not necessarily mean a strike, showed conclusively to the Amalgamated officials that those who were advocating it had not given human inclinations the study they should have on a matter of such grave importance and responsibility, for in but very few instances, if any, had there ever been a publicly announced referendum vote taken, in which the word strike was involved, that did not carry affirmatively. The meetings of the campaign committee were largely guided by the reports made to it by the secretary of the campaign committee. For several meetings previous to the one in which it was decided to send out the strike vote the majority of those who assembled at these meetings were the paid secretaries and field men working under the orders and control of the author of this malicious edition. Whatever he reported to the committee was a signal for those field men and secretaries to attest to. Under these conditions he was practically master of the situation. This "me too" system did not appeal to the officials of the Amalgamated Association very strongly, and as a result they were not regarded with much favor, and in many instances their position on important questions given but little consideration. * * *

PRES. M. F. TIGHE

It has been shown, First, that the charge of intentional desertion from the campaign committee by the Amalgamated Association was a deliberate falsehood, conceived with malicious intent and as an afterthought to sensationalize the author's work sufficient to make it a saleable article. Second, that because the officials of the Amalgamated would not allow themselves to become mere pawns for him and his secretaries and field men to move as they saw fit, the Amalgamated became the target of venomous and malignant attacks largely centered on Assistant President Davis, who as a member of the campaign committee, at all times acting under the advice of the writer and the International Executive Board, insisted that the campaign be conducted on legitimate trade union lines, and not on lines suggestive of the methods advocated and practiced by Syndicalists and I. W. W. organizations. * * *

While the author tries very adroitly and plausibly to cover his delinquencies as a witness before the Senate Committee every person present who was interested in the success of the strike was disgusted and mortified at the vascillating evasive manner in which he gave his testimony, and the writer without equivocation charges that his actions did more harm to the strikers' cause than any one thing that occurred previous to the calling of the strike or to the end of it. * * *

Where was the great mental acumen which he now tries to impress the readers of his book that he possesses. This instructor of how to win strikes, this disciple of that doctrine called "Direct Action" failed to measure up to the expectations of those who really wanted the strikers to win at least public support. He knew if he knew anything that he was to be taken to task for his former position in regard to government; he knew that much depended on how he impressed those in attendance at the investigation, yet he deliberately threw an insult into the faces of those who would at least have been neutral towards him and the striking workers. When asked the direct question if the views expressed in his "Red Book on Syndicalism" were his views still, instead of answering the question as frankly as it was put and by that spike every gun the enemy had turned not only on him but the movement itself, he hesitated, parried the question and finally asked the committee to exclude the press from the room before answering a plain question on a matter that if he had the welfare of the thousands of workers striving for relief from their former surroundings he should not have required one moment's delay in answering. So aggravating was his actions that the great head of the American Labor Movement had to admonish him by saying in a stern tone "answer the questions; the press cannot say anything more than they have about you," with the attorney for the strikers sitting on his left and the writer sitting on his right, both urging him in undertones to speak out, he still maintained a position of one who was on trial for some great offense and would not speak until compelled to do so. To quote a very prominent advocate of labor's cause, when asked his opinion of the testimony and the actions of this great promulgator of doctrines that had been discarded by every trade unionist as detrimental to the real cause of labor, he answered, "rotten, absolutely rotten." * * *

No deadlier blow could have been dealt the cause of organized labor and the hopes of the thousands then on strike, than was given by the author of this worthless imitation of a history of the steel strike, when in answer to the persistent questions of Senators Borah and McKellar, he asked to have the press excluded from the room before he made answer. Many of the reporters for the press who were present, were members of trade unions for years. They were still carrying cards in their respective organizations. Their sympathies were with the men on strike. They had never been known to be disloyal to the cause. His demand was an insult to them as well as to the others. His request was promptly refused by the chairman of the committee. The question put to him was a simple one, namely, had he changed his opinions from what he had expressed in his former writings on Syndicalism. The head of the great American labor movement had testified that he had changed his opinions, in fact, had given him a clean bill as a trade unionist of the A. F. of L. school. Why was it necessary for him to hesitate to confirm the statement made in his behalf by the chief of the American Labor movement? Was not the reputation of the movement itself as represented by the head of it nothing to him? Was not the interest and hopes of the thousands of men then on strike to be considered before his private opinions? Who now was skulking? Was it the Amalgamated Association officials or was it the secretary of the campaign committee? Publicity was what every friend of the strikers wanted, and the more publicity the better. They wanted it shouted from every hill and vale, housetop and street corner, for their cause was just and righteous. If the Senate Committee was after meat and he knew they were after it, then if he was as wise as he wants his readers to believe he is, he had it in his power to prevent them from getting the hide, not alone the meat. His answer to the question asked had to be literally dragged from him, spoken in a low voice and with a demeanor that left doubt in the minds of all present as to whether he was speaking the truth when he said he had changed his mind somewhat from the opinions expressed in his "red book" and his writings in "Solidarity" some years previous.

Fatigue in Industry

RESPONSIBILITY OF EMPLOYER AND EMPLOYEE RESPECTIVELY—RELATION OF HABITS AND HOME ENVIRONMENTS TO ITS CAUSE—PRESERVATION OF HEALTH CHIEF REMEDY

By DR. ALVAH H. DOTY

NO subject relating to the welfare of employees has received more attention than fatigue. Those who publicly discuss this subject are, unfortunately, apt to take rather a restricted view as to its cause and remedy. On the ground that employers are largely responsible for the fatigue which occurs among workers, the argument has been reduced to an inquiry as to the most effective means of inducing or forcing employers to install special devices, to arrange certain accommodations, to provide for periods of rest during the day and even to serve certain forms of nourishment for employees during working hours.

The demand for better working conditions, particularly in the past, has been amply justified, and the interest and energy of various associations and individuals who have labored hard to bring about reform in this direction cannot be too highly commended. Unsanitary conditions, improper accommodations and long hours of work undoubtedly contribute to fatigue. On the other hand, demands are frequently made upon employers who have provided what are believed to be reasonable and adequate arrangements for the comfort and welfare of their employees and fatigue still exists. Any measure which shortens the day's labor or offers easier means for the performance of work is desirable provided it is fair to the employer. I do not call attention to this aspect of the problem in the interest of employers, nor to belittle the laudable efforts to improve unhealthful or too exacting conditions of employment or to render the duties of the day more comfortable and pleasant for employees in industrial pursuits and other branches of service. It is my object, rather, to point out the fact that there is a more important remedy for the prevention of fatigue which has been given far too little consideration.

Those who have worked in the field or from long personal experience are familiar with the life, habits and home environments as well as the daily work of employees know full well that the chief cause of fatigue, particularly at the present time, is not that employees are improperly treated by employers or that they are subject to unsanitary and uncomfortable conditions and surroundings in the workshop and office, but that they pay little attention to the laws of personal hygiene. Serious errors of diet, improper selection and preparation of food and irregularity in the time for eating are exceedingly common. Very few workers exercise sufficiently in the open air. The period of sleep is reduced to the minimum. Intemperance, in many ways, is quite the rule rather than the exception. All these conditions constantly reduce the resisting power of the body and it should cause no surprise that a person is often unable to perform an ordinary day's work without becoming tired or fatigued and in addition is unable to enjoy fully the periods of release from work which should be devoted largely to rest and pleasure. It would surprise those who have not given this subject extended and careful consideration to learn how little a person, who maintains good health, is affected by fatigue as the result of work. Fatigue decreases as the resisting power of the body increases.

The owner of a car is very careful to supply proper fuel and in the proper amount and he watches every detail of the machine in order to keep it in serviceable condition. Whereas the human machine, the most perfect of all, which is in his keeping, is quite apt to receive but little attention, and under such conditions, it cannot be expected to act in a satisfactory manner.

I have referred to fatigue in connection with employees because it seems to be popular to discuss it along these lines. My observations, however, are applicable to every one. It is proper to add that the education of the public concerning the preservation of health include instruction for the prevention of fatigue.

Notwithstanding the great improvement in working conditions, better light, ventilation and accommodations and more reasonable hours of labor, the fact remains that fatigue as well as so-called neurasthenia or nervous breakdown is increasing, particularly among female employees. We must not close our eyes to the fact that this is due to an improper mode of living.

During a recent and interesting investigation regarding the food supply and general living conditions of over four thousand employees, men and women, it was found that the selection of food and the methods of eating were most unhealthy and improper. A large number of employees ate but once a day, some only twice. The breakfast of many consisted of only coffee, a roll or some fruit. On the other hand, a good percentage of this group, whose work was largely sedentary, ate three hearty meals a day composed largely of meat,—pork being a favorite selection. This is certain to lead to some form of systemic disturbance. Many of these employees drank four or five cups of coffee during the day; others consumed a large amount of tea as well as other forms of stimulants. These errors of diet occurred unquestionably as the result of ignorance concerning the value of various articles of food and how they should be selected and when they should be eaten. It is quite clear that the excessive use of coffee and other stimulants was to obtain energy which should have been provided by good nutritious food. A large number of the employees referred to were neurasthenic and frequently absent from work, although it was clearly shown that in most instances their duties were not too confining or exhausting. They simply were not in good physical condition and were, therefore, unable to meet the ordinary demands of the day. It was found that many of these men and women did not retire until after midnight. These unhealthy conditions are often associated with unpleasant home environments and domestic or financial troubles. It is thus not difficult to understand why many persons approach the day's work tired out and not only unable to render to their employer the service due him but unable to enjoy the period after the day's work is over.

To assume that an employer should be held wholly responsible for the condition of fatigue affecting his employee is unjust to the employer and to disregard the chief underlying cause of fatigue is unfair to employees, for it does not teach them the true means by which fatigue may be prevented.

Those who discuss fatigue refer to the importance of maintaining good health as a means of preventing this condition but it is usually a casual reference only, whereas it should be the factor most strongly emphasized. The apathy in this direction is due largely to the fact that it is far easier to place the responsibility for fatigue upon the employer than to devise and carry out means of educating the public regarding the manner in which good health may be maintained. It may be said, in passing, that employees do not always appreciate provisions made for their comfort particularly if their physical condition is impaired, for although by these means their daily work may be rendered easier, instinctively they know their physical condition is not materially improved nor are they made strong and capable of enjoying life. Expensively furnished rest rooms and lavatories, although pleasant to look upon, are not of educational value to employees. Rather they are quite apt to cause dissatisfaction with home conditions which are not of the same quality. Rest rooms, lavatories and the like should be furnished plainly, attractively and comfortably. Cleanliness should be the main educational feature for this may be carried at the home no matter how humble it may be.

Employees should know the relative value of food products and the great importance of selecting a proper diet in order that the human machine may be furnished with proper fuel, for, if this is not carefully attended to, good health is not forthcoming. Walking, the most valuable form of exercise, costs nothing and there are very few who cannot find an hour during the day for this purpose. This insures a walk of about three miles, a fairly good day's exercise. Contrary to the general belief, exercise during the evening is not unhealthy. It is true that persons engaged in sedentary occupations and those whose work involves constant mental activity are apt to become weary when evening comes. This is mental and not a physical fatigue and the most effective remedy for it is walking. Furthermore, employees do not know the vital importance of proper sleep and often do not retire until after midnight although they are obliged to rise early in the morning. Experience has shown that these violations of the laws of health are sooner or later followed by some form of physical impairment.

There is no doubt that interference with a proper food supply and the unrest and excitement associated with the recent war have gone far to undermine the public health. It is, therefore, all the more necessary that the public should be carefully instructed regarding the preservation of health. For instance, coffee, tea and other forms of stimulants are taken in larger quantities than before and the increased demand for these has thrown upon the market innumerable drinks advertised as stimulating and invigorating. It is the abuse and not the use of these agents which is disturbing and the demand for them would not be as great if careful attention were given to the selection of food, the proper time for eating it, proper exercise, sufficient sleep and other means of preserving health.

I cannot accept the statement ascribed to Galbraith that the slogan for eliminating fatigue is to rest when one needs to do so. Just what would occur, for instance, among a thousand employees who were given a license to suspend work whenever, in their opinion, they were tired or fatigued would, I am quite sure, surprise the above mentioned writer.

The prevention of fatigue depends chiefly upon the proper education of the public concerning the preservation of health and the prevention of disease. It is daily becoming more evident that, in order to secure success in this direction, the measures undertaken must be uni-

Catholic "Social Reconstruction Program" Analyzed

FALLACIES IN PROGRAM OF COMMITTEE ON WAR ACTIVITIES OF THE NATIONAL CATHOLIC WAR COUNCIL SHOWN BY NOTED MEMBER OF ROMAN CATHOLIC CHURCH

By P. TECUMSEH SHERMAN

(*Continued from Previous Issue.*)

BEARING in mind where lies the burden of proof, we can now take up and consider briefly the principal arguments for the affirmative, and note the principal objections.

First. It is argued that compulsory social insurance has been established in many countries of Europe and everywhere has been "successful." In order to prepare a favorable background for this argument it is commonly prefaced by comparisons contrasting conditions in America unfavorably with conditions in the European countries which have compulsory insurance. We will take up this prefatory branch of the argument first.

In the propaganda in this country for state social insurance economic conditions among our workers are continually being painted in the most distressing colors, whereas statements are being made implying that the corresponding conditions in Europe are somewhat heavenly in comparison. For instance we are told, on the one hand, that from 50 to 75 per cent of our laboring population do not obtain a "living wage," whereas we are told, on the other hand, that, since the advent of social insurance (until the outbreak of the war), poverty was being rapidly diminished in Europe and in one country at least had practically disappeared—the country referred to being presumptively Germany, where compulsory insurance had been longest in operation. Thereby a picture is being produced in the minds of our public, like the well-known advertisement showing a thin baby and a fat baby, marked respectively "before taking" and "after taking." But that comparison is not only untrue, it is even the very opposite of the truth. It places the thin baby where the fat baby ought to be, and *vice versa.* It is in Europe, with state insurance, that the condition of the wage-workers is (and, even before the outbreak of the war, was) most distressing and hopeless, whereas labor conditions in America, without state insurance, are (and long have been) immensely the better and more hopeful. In 1914 the average wage in Germany, for instance, was less than half of the average wage in America—and by "wage" here is meant the "real" wage as well as the "nominal" wage. Consequently, if poverty had practically disappeared in Germany, the German workers generally must have been obtaining a "living wage," and a large majority of our workers must have been obtaining more than *double* a "living wage" or, if between 50 and 75 per cent of our workers obtained less than a "living wage," then a very large proportion of the German workers must have been obtaining less than *half* a "living wage," in either alternative the German workers being comparatively deep in poverty.

This miscolored comparison (and the propaganda for compulsory insurance abounds in similar misrepresentations) tends to divert attention from a fact of the greatest import. It is the dreadfully low level of wages prevailing among practically all the wage-workers in Europe that has led to the recent adoption of state insurance by many European governments, not in any general expectation of thereby developing true insurance among the people, but rather as a "ready-made" means for distributing urgently needed poor relief among a hopelessly submerged and impatient proletariat. In final analysis nearly all the European social insurance laws are really "poor laws"—mere palliatives for insufficient wages. Certainly that kind of insurance ought not to be imposed upon our self-sufficient wage-workers. Its merits as a method of poor relief, for application only to the very lowly paid minority, will be considered later.

We can now take up the main argument, namely, that compulsory social insurance has been widely adopted in Europe and has everywhere proved successful. How far this statement is misleading, will be shown in the following brief review of European experience in the different lines of compulsory social insurance:

UNEMPLOYMENT INSURANCE

Compulsory unemployment insurance (although adopted also in Italy within the last few months) has been tested in only one country in Europe, namely, in Great Britain, and there only for a few years, limited to apply only to a few selected industries and providing only a very low rate of pecuniary relief and for a very short period of unemployment. The expense has been enormous and the benefits trifling, and the administration has been extremely unpopular. Upon that short experience to date it is premature to adjudge this social experiment to be a demonstrated failure; but, on the other hand, it cannot reasonably be deemed a demonstrated success. It is yet only a dubious experiment in an early stage of experimentation.

INVALIDITY, OLD AGE AND LIFE INSURANCE

Compulsory insurance of the wage-workers (or some of them) against invalidity, old-age and premature death (or some one or more of these misfortunes) has been adopted in many European countries. But this line of insurance requires long capitalization of funds, with the consequence that results cannot be appraised until the insurance has operated for about a generation; and none of these European insurance systems, except the German, has yet been so long in effect. On the contrary, all the others have been adopted within very recent years, and are either just starting or only about to start; and two with nearly the longest starts—the French and British systems—are already having such serious troubles as to warn against imitation. The only well tested one of those social experiments—the German system—not only has fallen far short of success in many ways, but also is peculiarly inappropriate for imitation in America. Its administrative methods are the quintessence of absolutism and autocracy. Its daring financial plan is almost universally condemned. It has given rise to gross and socially demoralizing abuses. And essentially it is a system of poor relief, fit only for application to a proletariat submerged to a very low level.

Not only is there no well tried system of compulsory invalidity and old age insurance in Europe capable of application in America with the slightest chance of satisfaction and success, but even among the partisans of state paternalism in Europe the opinion seems to be growing that compulsory invalidity and old-age insurance involves too much bureaucracy, too much administrative expense and too many financial complications and dangers to be advisable. In its stead, the new school of social reformers advocate invalidity and old-age pensions, otherwise called "non-contributory insurance"—an alternative method of poor relief, of doubtful expediency, but the objections to which cannot be presented here without leading us too far afield.

SICKNESS INSURANCE

Sickness insurance, in this country often miscalled health insurance, generally—but not always—aims to provide two kinds of benefits, first, a cash benefit during disability from *short* sickness (generally limited to 26 weeks in any successive twelve months), and, second, various medical benefits, including medical treatment and medicines, while sick, and hospital, sanatorium and nursing care, in certain contingencies.

Compulsory sickness insurance has been adopted in many European countries. But, contrary to the claims of its partisans, it has nowhere proven to be much of a success in providing the promised medical benefits. Some of the European systems—e. g., the British—have failed in this respect not far from disastrously. Others—e. g., the German system—have provided a quantitatively adequate though qualitatively doubtful medical service, but only through the degradation and demoralization of the medical profession. To make matters worse, insured medical benefits fail particularly to reach the poorest poor and the very classes of the sick who need public aid the most. And nowhere have there been any real indications that the medical service provided by compulsory sickness insurance has tended to improve the public health, the weight of testimony of the higher medical authorities being to the contrary. In other words, European experience indicates that the medical needs of the poorer people cannot be either well or economically provided for through the medium of or as an incident to insurance of a cash benefit to wage-workers during sickness, and that much waste, harm and bitter disappointment would be avoided and infinitely more satisfactory results obtained, if the state should undertake to provide for the prevention and cure of disease more directly, and, for such purpose, establish and maintain or subsidize such hospitals, clinics, dispensaries, nursing and health centers, etc., as, after due investigation, may be found to be needed to bring specialized medical care, etc., within reach of all the people, instead of seeking to accomplish impossible results through the inappropriate device of insurance. As respects its medical benefits, therefore, the proposition that European compulsory sickness insurance has been proved "successful" may rightly be characterized as a delusion.

In providing the cash benefits European compulsory sickness insurance has been relatively more successful, but subject to one very important qualification. Experience indicates that because of the uncertainty of the criterion of the right to the cash benefit under sickness insurance, this line of insurance can be administered fairly and with net social advantage only through small mutuals, in which the members know each other, watch each other, have a pride in keeping off the benefits and exclude malingerers and persons of bad habits, and that where the state intervenes and interferes with complete liberty of association and self-management, malingering and impositions become the rule, social parasites and impostors are favored and fostered, and the provident and industrious are exploited and preyed upon. The extent to which the European state sickness insurance funds are subject to such abuses is a matter of dispute; but the evidence accessible is most unfavorable. In other words, even as respects the cash bene-

Andrew Carnegie's Autobiography

A STORY OF CONSTRUCTIVE ACHIEVEMENT, OF AMERICAN OPPORTUNITY AND SUCCESS

By T. EVERETT HARRÉ

AT a time when individual enterprise, ambition and achievement, genius, initiative and such honest hard work as leads to signal success are disparaged and held in abhorrence by the advocates of communism, Bolshevism, government ownership and every shade of Socialism, "The Autobiography of Andrew Carnegie," published by Houghton, Mifflin Co., Boston, comes with refreshing wholesomeness. Andrew Carnegie's life is a vindication and exemplification of those principles of Americanism, which have made America great. Scotch by birth, and possessing the fine excellencies of his people, Mr. Carnegie was a typical American, an embodiment of American ideals, an example of American aspirations carried to success. This romance of an unknown boy who, by his own efforts, from poverty became one of the richest men in the world indeed reminds one of the marvellous tales of the Arabian nights and the fairy lore of the brothers Grimm—and like those stories, true in their moral, Mr. Carnegie's story is one in which honesty, devotion to high ideals, self-sacrifice and application are at last rewarded. The good jinn and fairy godmothers of those childhood tales do not wave magical wands for sluggards, the unambitious, incompetent, dishonest and unworthy, and indeed all these tales bear out the truth that happiness and riches come not as miracles but only to them who are deserving.

THE LATE ANDREW CARNEGIE

Mr. Carnegie's achievement is typical of America, whose opportunities, resources and freedom brought to its shores millions like Mr. Carnegie and his family; people of all lands and races who came here, became amalgamated in the melting pot and comprise today one of the greatest nations of the earth. Reading his own story, simply, sincerely and unaffectedly written, one cannot but compare this high-minded, kindly and earnest man with the swash-buckling and rabid poseurs who today strut about the world's stage as leaders of the "new order," the emancipators of the proletariat, the reformers of ancient wrongs—the Lenines, Trotzkys, Smillies, Longuets, Schniedermanns, Debses and Hillquits. Indeed, an answer to the world-agitation of our times might be found in this story of an individual man's accomplishments, by comparing his record in the up-building of a mammoth enterprise to the universal wreck which two mountebanks brought to all industry and agriculture in the great empire of Russia; by comparing what in a tangible and really great way Mr. Carnegie did for a great body of workers in one industry to the chaos, conscript labor and starvation to which the millions of workers of an entire nation have been reduced through the demagoguery of two men. It is proverbially easier to destroy than to create and build—far easier, indeed, for a Trotzky or a Hillquit artificially to foment discontent and sedition than it is for an honest hardworking man like Mr. Carnegie to build up a scientific industry which is of service to all humankind.

At a time when teachers in our public schools, professors in colleges and clergymen in all of our denominations are tincturing their teachings with radicalism, it might well be wished that Mr. Carnegie's story be taken as an object lesson by which our youth should be inspired. For this story of success through honest effort, of a tremendous individual accomplishment, has a noble message. And having won great riches, believing in the gospel that private wealth is a public trust, Mr. Carnegie proceeded to give away that wealth in a way that would do most good. His philanthropy, his endowments of educational institutions, his great libraries are imperishable monuments, and themselves a testimony of what truly great men may do. As one of the great capitalists, who are the object of odious and calumnious attack by the professional "Reds", Mr. Carnegie's humanity, kindliness and benevolence stand in striking contrast to the spirit of those bitter men who, by inciting hatred, class antagonism, all the instincts that are savage and bestial, would carry civilization down to destruction.

Mr. Carnegie began writing his recollections after his retirement from active business during his vacations in Scotland, and was so engaged when news of the outbreak of the Great War reached him. "These memoirs ended at that time," writes Mrs. Carnegie in a preface. "Optimist as he always was and tried to be, even in the face of the failure of his hopes, the world disaster was too much. His heart was broken." And the last entry at the end of the manuscript is of telling pathos: "As I read this to-day (1914), what a change. The world convulsed by war as never before! Men slaying each other like wild beasts. I dare not relinquish all hope."

Born in Dunfermline, Scotland, in the attic of a small one-story house, on November 25, 1835, Mr. Carnegie in his boyhood knew poverty. At the age of thirteen, with his parents and younger brother, he left Dunfermline for America—"To the land of the free," as his father sang, "Where a man is a man even though he must toil, and the poorest may gather the fruits of the soil." Mr. Carnegie tells of the struggles of his boyhood, how he worked in a bobbin factory, then became a telegraph messenger, a railroad clerk, later taking charge of a division of the Pennsylvania and serving the country as an Associate Director of railroad operations during the Civil War. He gives intimate and touching pictures of President Lincoln and other great figures of the time. His story describes his going into bridge building, of his investment in oil wells, and of his entry into the steel business and the development of that enterprise. In his book are rare bits of sage advice, and in telling of his decision to withdraw from all other interests and concentrate in that industry, going contrary to the adage about not putting all one's eggs in one basket, he says:

> "I believe the true road to pre-eminent success in any line is to make yourself master in that line. I have no faith in the policy of scattering one's resources, and in my experience I have rarely if ever met a man who achieved pre-eminence in money-making—certainly never one in manufacturing—who was interested in many concerns. The men who have succeeded are men who have chosen one line and stuck to it."

Mr. Carnegie has been assailed by the professional enemies of individualism and advocates of Socialism as one of the "exploiters of the working classes" and held responsible for the Homestead strike in 1892—the only single clash with labor during his long career. As a matter of fact, as he tells in his biography, he was away in Scotland at that time and was in no way responsible.

He writes:

> "I was travelling in the Highlands of Scotland when the trouble arose, and did not hear of it until two days after. Nothing I have ever had to meet in all my life, before or since, wounded me so deeply. No pangs remain of any wound received in my business career save that of Homestead. It was so unnecessary."

While in Scotland Mr. Carnegie received from the officers of the union of his workmen the fol-

Present Status of the Socialist Party

RECENT ELECTION OF SOCIALISTS IN NEW YORK RAISES QUESTIONS OF ELIGIBILITY—HAVE CHANGES IN CONSTITUTION AND PRINCIPLES MADE SOCIETY LEGAL AND PARLIAMENTARY?

By ARCHIBALD E. STEVENSON

AT the last regular session of the Legislature of the State of New York, the right of the five socialist assemblymen-elect to take their seats was challenged on the ground that their membership in the Socialist Party of America as then constituted disqualified them from taking their seats in the Assembly.

After an exhaustive hearing and investigation by the Judiciary Committee of the Assembly, these socialist assemblymen-elect were expelled by an overwhelming bipartisan vote. This action provoked a storm of criticism from many quarters. The outstanding feature of the discussion on both sides of the question was the lack of clear understanding as to the facts of the case or the principles involved.

At the recent election, three socialist assemblymen have been chosen and one socialist senator. It is therefore probable that the questions raised last year will again confront the people of this state. It is therefore necessary to place before the public certain facts with respect to the Socialist Party of America, so that our citizens may be guided in their consideration of this problem by facts rather than assertions.

Before proceeding to the discussion of the present position of the Socialist Party in the revolutionary movement, it is necessary to have a clear understanding of what the Socialist Party is. The Socialist Party of America is a dues-paying membership organization, a revolutionary society, hereafter it will be referred to in this article as the Society. The Society admits to membership aliens and citizens alike and requires its members to take a pledge in support of its constitution and purposes. Its objective is the establishment in the United States of a socialist commonwealth described as the cooperative commonwealth, in place of the form of government now existing.

In order to effect this object, the Society operates in two distinct fields. In the first place it has created a political party which is known as the Socialist Party. This organization is made up of citizen voters who go to the polls on primary day and enroll under the socialist emblem. The object of the Socialist Party is to elect socialists to public office and to agitate the political demands of the socialist movement. The second field in which the Society operates is economic. The Society is engaged in the organization of revolutionary industrial unions for the purpose of forging a weapon of attack upon our institutions by industrial action which, when defined, means the general strike. These revolutionary industrial unions must be distinguished from the trade unions of the American Federation of Labor type, and are very similar in structure to that of the Industrial Workers of the World—namely, all workers in a given industry, no matter what trade or craft they may follow, are members of the one union. This method of organization gives the control of large masses of workmen into the hands of a limited committee and greatly facilitates the use of the strike weapon for political purposes.

It is the object of the Society to control the political party on the one hand and the revolutionary industrial unions on the other hand, so that when the moment of revolution arrives, they may re-inforce the political demands of the one by the direct action of the other. In other words, the members of the Society recognize that the socialist commonwealth cannot be established in this country or in any other country by parliamentary measures alone, for the reason that the bulk of the workers will adhere to the older parties and will not take part in the political party which it has created. This means that the members of the Society contemplate the use of militant direct action to veto the decisions of the ballot box. It means the assumption of power by a minority through the coercive action of the general strike. It should hardly be necessary to show that the acceptance of such a program as legal and proper would be to destroy the foundations of American liberty and be the beginning of despotism.

We deem this statement necessary because of the confusion in the public mind between the Society which we have referred to and the political party known as the Socialist Party which is its creature. The five assemblymen-elect were expelled from the assembly last year, not because they were members of the political party, but because they were members of the Society which was engaged in the activities just described.

The expulsion of these assemblymen created a profound impression upon the leaders of the Society. The national convention of the Society was held in New York City on May 8 to 14, 1920 (after the expulsion of the assemblymen-elect), at which time certain conspicuous changes in the constitution and statement of principles of the party were advocated and adopted. It must be borne in mind that the Society at this time was engaged in the formulation of a statement of principles upon which its creature, the political party, was to carry on its campaign this fall. The opportunist elements in the Society, led by Morris Hillquit, recognized the necessity of having the political party appear as a purely parliamentary party appealing to the voters of this state in support of a political program. On the other hand, a large faction of the Society, led by certain prominent instructors of the Rand School of Social Science, urged the Society to make a full, fair and frank statement of its purposes and objects as well as the methods and tactics it seeks to employ. The membership of the Society, however, recognized the soundness of Mr. Hillquit's position, and the result was a statement of principles which carries with it little that is objectionable from a legal point of view. At the same time certain changes were made in the constitution of the society in order to meet some of the objections raised by the Assembly last spring. For instance, that provision of the national constitution which provided for the expulsion of members who in public office voted to appropriate any money or supplies to the armed forces of the United States or for military purposes, was repealed.

Whereas minors were previously admitted to membership in the Society, the minimum age was raised to twenty-one years; and whereas previously aliens might hold office in the Society, the new constitution limited such office to citizens.

At an emergency convention held by the Society in September, 1919, the international affiliations of the Society were referred to the membership on referendum. The result of the referendum vote was to affiliate the Society with the Third Internationale of Moscow, a creature of the Soviet Government of Russia, committed to the policy of world revolution and the setting up of the dictatorship of the proletariat in all countries. The opportunist element in the Society recognized the disadvantage to its political party in an appeal to the American workers on such a program, and therefore reported to the May convention that its relations with the Third Internationale should be modified so that its membership in the Internationale would not be made dependent upon the acceptance by it of the formula: "The dictatorship of the proletariat in the form of soviets" or any other special formula for the attainment of the socialist commonwealth.

Similar action was taken by the State convention of the Society held in the early part of July of this year, which also amended the state constitution so as to eliminate the provision requiring members of the Society who were candidates for public office to place in the hands of the Executive Committee their resignations to such office so that after election they could be withdrawn from public service at the will of the Executive Committee of the Society.

The new statement of principles of the Society also contained a clear-cut expression of the party's determination to confine its activities to parliamentary measures. This was to be a campaign document to be used by their creature, the political party in its appeal for the votes of American citizens. It was not a statement of the policy of the Society in carrying out its plan for the establishment of the socialist commonwealth in this country.

This is made clear by the examination of the resolutions adopted at both the national and state conventions of the Society, which show that it has not abandoned the belief that the socialist commonwealth can be established in this country only through the re-inforcement of political demands by industrial action.

At the St. Louis convention of 1917, the position of the Society with respect to revolutionary industrial unions is expressed in a resolution which was adopted, which states:

> "The Socialist Party will ever be ready to cooperate with the labor union in the task of organizing the unorganized workers, and urges all labor organizations, which have not already done so, to throw their doors wide open to the workers of their respective trades and industries, abolishing all onerous conditions of membership and artificial restrictions, with the view *that their organizations may be eventually developed into industrial as well as militant, class-conscious and revolutionary unions with the development of the industries.*"

In furtherance of this plan, the resolution closes with the following admonition:—

> "It is also the duty of the members of the Socialist Party who are eligible in the unions to join and be active in their respective labor organizations."

The fact that the Society recognized at that time that the industrial weapon was essential is clearly stated in the same resolution as follows:—

> "In the face of the tremendous powers of the American capitalists and their close industrial and political union, the workers of this country can win their battles *only* through a strong, class-conscious and closely united organization on the economic field, a powerful and militant party on the political field, and by the joint attack of both on the common enemy."

Socialism Unmasked

THE SOCIALIST PARTY FOR REVOLUTIONARY INTERNATIONALISM AS AGAINST THE UNITED STATES AND PATRIOTISM—LOVE OF COUNTRY HELD IN DERISION

By T. EVERRET HARRÉ

III.

SOCIALISM AND PATRIOTISM

Can a member of the Socialist Party of America be a good citizen? Can the Socialist organization pretend to be a purely political party advocating only parliamentary methods, or the use of the ballot? The answer to these questions is found in the record of the society.

Over the Kremlin in Russia there waves today, not the Russian flag, not the flag which symbolizes the history, the ideals, the mystical character and faith of the Russian people, but the Red Flag with its five-pointed Star of Internationalism. As against the government of the United States, as against the ideals and institutions of America, the Socialist organization in this country no less than the Bolsheviki stands for revolutionary Internationalism. As against the Stars and Stripes, its flag is the same Red Flag which floats over the citadels of Petrograd and Moscow.

Immediately upon the entry of the United States into the war, in 1917, the Socialist party took a stand against the war and against those loyal Socialists who supported their governments in the struggle against Germany. At its first convention after signing of the armistice, in 1919, consistent with its previous record, the Socialist party reaffirmed that stand and denounced those Socialists who had been loyal to their governments. At this national convention, in May, 1920, the party, in line with its policy, denounced the peace treaty as "an infamous pact formulated behind closed doors by predatory elder statesmen" and denounced the American government as having "helped create a reactionary alliance of imperialistic governments, banded together to bully weak nations, crush working-class governments, and perpetuate strife and warfare."

The stand taken and the program followed by the Socialist organization in the United States in regard to the war against Germany is of historic significance. That stand was not an isolated act of disloyalty, but a consistent step in "a continuing program of treason." The disloyal, unpatriotic, treasonable record of the Socialist party of America during the war was but an expression of its fundamental character and basic philosophy.

It is important that the American public fully understand the conduct of the party during the war, especially as now—as was illustrated at its national convention last May—the party seeks to win converts by deceit and camouflage. While that convention sought, for obvious opportunist reasons, to emphasize its political character, it did not repudiate its war platform and program, nor its declaration against and repudiation of all loyal Socialists. Instead, as aforementioned, it continued its stand with a denunciation of the peace treaty and of the Administration which, declares its latest platform, "has not scrupled to continue a policy of repression and terrorism."

The National Convention of the Socialist party convened in St. Louis upon the very advent of the United States in the war, April, 1917, and there adopted its notorious war platform and program. That was confirmed by referendum to the dues-paying membership of the organization, and, therefore, expressed the sentiments of the members of the party. As against the United States and our cause in the war, that document stated clearly:

> The Socialist Party of the United States in the present grave crisis solemnly reaffirms its allegiance to the principle of internationalism and working-class solidarity the world over and proclaims its unalterable opposition to the war just declared by the government of the United States.

Was the anti-war stand of the Socialist organization due to its pacifist character, to its opposition to force and violence? The Socialist party, refusing to support the war against Germany, declared its unpacifist character and its stand for militant actual, armed class warfare:

> The only struggle which would justify the workers in taking up arms is the great struggle of the working class of the world to free itself from economic exploitation and political oppression, and we particularly warn the workers against the snare and delusion of so-called defensive warfare.

The Socialist organization declared its belief in war—in the war of class against class, the taking up arms to bring about a revolution, and at the same time repudiated loyalty to and love of country:

> As against the false doctrine of national patriotism we uphold the ideal of international working-class solidarity.

It was not only upon America's entry into the war that the Socialist party of America committed itself to a policy of disloyalty and treason. The program adopted in April, 1917, was decided upon two years before, at the conference held in Zimmerwald, at which Lenine was prominent.

At a period when the situation between Germany and the United States was exceedingly critical over the use of submarines, April 21, 1916, the Socialist party of America met with the various translator secretaries, representing the various foreign-language federations of the party, and drew up a proclamation for dissemination among the foreign-language membership. This incendiary manifesto concluded:

> We suggest and appeal that the workers as a measure of self defense and as an expression of their power exert every effort to keep America free from the stain of a causeless war even to the final and extreme step of a general strike and the consequent paralization of all industry.

In 1916 the Zimmerwald conference reconvened at Kienthal, Switzerland, and issued a manifesto emphasizing the Zimmerwald proclamation. Again the Socialist organization in America responded and—at a time when the inevitable break with Germany was imminent—the party, seeking to render the country powerless under Hun aggression, adopted a presidential platform in harmony with that of Lenine and his associates:

> Therefor, the Socialist party stands opposed to military preparedness, to any appropriations of men or money for war or militarism, while control of such forces through the political state rests in the hands of the capitalist class. The Socialist party stands committed to the class war, and urges upon the workers in the mines and forests, on the railways and ships, in factories and fields, by refusing to mine the coal, to transport soldiers, to furnish food or other supplies for military purposes, and thus keep out of the hands of the ruling class the control of armed forces and economic power, necessary for aggression abroad and despotism at home.

Had it been possible for the Socialist organization to carry out its program, America would have been utterly helpless under Hun aggression; Germany would have won the war.

After war was declared by America against Germany, the Socialist party called upon the "workers of all countries to refuse support to their governments in their wars." In its program of opposition to the war the party then addressed the workers:

> The acute situation created by war calls for an even more vigorous prosecution of the class struggle, and we recommend to the workers and pledge ourselves to the following course of action:
> 1. Continuous, active and public opposition to the war through demonstration, mass petitions and all other means within our power.
> 2. Unyielding opposition to all proposed legislation for military or industrial conscription.

In addition to the war program, the party adopted a platform, in which it called "upon all workers to unite, to strike as they vote and to vote as they strike," and among its political demands it declared for:

> Resistance to conscription of life and labor.
> Repudiation of war debts.

At the same time that the Socialist party adopted a program of opposition to the war, and recommended that the workers continuously, actively and publicly oppose the war, the party repealed that provision in its national constitution, article 2, section 6, adopted in 1912, which prohibited the practice of sabotage. Concerning this action, Mr. Martin Conboy in presenting the case against the suspended Socialists in the New York Legislative hearing last winter, said:

"In view of the context, consisting of the war program with its pledge to use all means within the power of the members, with the demand for even more vigorous prosecution of the class struggle, with the declaration that the only struggle which would justify the workers in taking up arms was not the national struggle but the class struggle, the removal of the restraint on the use of sabotage becomes significant with sinister meaning. Sabotage is one of the most effective, if not the most effective, method of rendering industrial cooperation not only ineffectual, but impossible. It brings about that condition of national inefficiency and impotency to which the party was pledged to devote itself with unremitting energy, and . . . it cannot be regarded as intended to accomplish any other purpose than to notify the members of the party that even the negative restraint imposed upon them in making effective their program of industrial action had been removed, and they need not further consider themselves hampered thereby. It was a tacit invitation to commit sabotage."

According to a mass of evidence, the war program of the party was carried into effect by an unceasing deluge of propaganda. Because of the attempt to carry into effect its disloyal program, according to the report of the Executive Committee of the party to its National Emergency Convention, held September, 1919, some 2,000 members were arrested, and some of the foremost leaders of the party were convicted and sentenced to terms of imprisonment. Notable among these were Executive Secretary Germer; the editor of the party organ, *The American Socialist*, Engdahl; the secretary of the Young People's Socialist League, Kruse; Berger, Shiplacoff and Clark, of the National Executive Com-

The Editor alone is Responsible for any unsigned article or unquoted statement published in THE NATIONAL CIVIC FEDERATION REVIEW.

BOLSHEVISM AND MENSHEVISM PRACTICALLY THE SAME

The international labor news is most baffling to the average reader of our daily papers. One New York paper joyfully declares: "French Labor Repudiates Bolshevism by a Vote of 1,478 to 602." That sounds good, but when the reader gets by the headlines he discovers that the "majority faction" declares unreservedly that its revolutionary objects are "incompatible with present institutions and with capitalism and its political expressions;" that it proposes "immediate action for supervision of industry and commerce by the workers, to be sought *by direct action;*" that it "wages an intensive campaign for nationalization of essential industries; calls on the International Federation of Labor for united action to accomplish social transformation;" points out that "the revolutionary temper existing throughout the working world is most propitious for the agitation of such action;" and expresses "sympathy and encouragement for the Italian workers and indignation toward the French Government, the most servile instrument of world reaction." The declaration also favors "complete solidarity with Revolutionary Russia" and urges agitation until peace is established and "the republic of the Soviets enjoys full independence." It also proclaims anew "its ideal of economic liberation through the suppression of the wage system."

One naturally asks: If the 1,478 want all that revolutionary stuff, what could the 602 want that is any worse? The answer is, *nothing,* speaking from the standpoint of those who believe in private property and the wage system. The fight in the Orleans Congress was not between radicals and conservatives, between Socialists and anti-Socialists, but between Bolshevists and Menshevists, to speak in Russian terms. To speak in American terms, the fight was between the Socialists and the I. W. W.'s, a fight which is just as intense in this country as the fight at Orleans, the only difference being that the Socialists and the I. W. W.'s, with all their factions and sub-factions combined, are too negligible a factor here to cut any figure.

To translate the whole labor problem into terms that the layman can easily understand, take a concrete case. The General Electric Company at Schenectady has, say, 15,000 employees. If the Socialists should capture this country, whether by ballot or by bullet, they would say to the stockholders of that corporation: "This property has been created by the workers and you have robbed them of it. The State will take it over without compensation and operate it for the benefit of all, just as the Post Office is run for all." The I. W. W. would say to the General Electric people: "To H—— with the State! It should be abolished, as well as private property. We will have the workers take over the plant and run it for the benefit of the workers alone." This was what was attempted in Italy—and thanks to a government with a "Reddish" Premier, they succeeded temporarily but soon found that they could not run the plants after they had seized them. So they offered to "compromise" with the owners by permitting them to "participate" in the management and to participate on a "fifty-fifty" basis in any profits that might remain after the workers had fixed and collected their own wages and also had "managed" the finances, the purchasing of raw material, the selling of the product, etc., etc.

Lenine and Trotzky tried both of these schemes with equally tragic results. First, they adopted the I. W. W. method of having the workers run the business through shop committees, shop stewards and all the rest of the paraphernalia advocated by the parlor Reds of all countries. When those proved a miserable failure, they shifted over to the other plan and now the State is trying to run what is left of industry, the workers being mobilized into an industrial army and placed under machine gun and bayonet discipline. They surely have the discipline, but that is all.

To return to the General Electric Company: So far as the stockholders of the corporation are concerned, it makes not a whit of difference whether the plant is confiscated and run by the State or confiscated and run by the workers; it is confiscated in either case.

So much for the American Socialist and I. W. W., or the Russian, French and Italian Bolshevist and Menshevist industrial program. But there is another program in this country which is the controlling one—and that is the trade union program. The proponents of this school would say to the General Electric Company: "We concede your right to own the business, to make sufficient profit to pay overhead charges, interest, rent, taxes and so forth. But after you have done that, we demand a sufficient wage to enable us not only to live in comfort and educate our children but to save for a rainy day and to have also some of the luxuries of life." The controversy between the General Electric Company and the American Federation of Labor would be not over who owns or runs the plant but over a division of the corporation's profits, in terms of wages. The questions of union and non-union shop, the limitation of production piece work, minimum wage, etc., trying as they are at times, are all predicated upon the wage or competitive system and are only its logical by-products.

But in the case of the Socialist and I. W. W. programs, these exasperating and perplexing problems, leading to strikes and lockouts and, too frequently, to sanguinary outbreaks, do not appear because both private property and the private employer have entirely disappeared. If there is any employer in this country who cannot visualize that situation and who becomes so angry at times over some unreasonable and radical demand of organized labor that he "does not care what happens," let him read the reports from all the labor commissions that have returned from Russia and the incontestable testimony of those who have had their plants taken over "for the good of all." Also, let him note carefully what employers like himself have been doing in Russia since the revolution—sweeping the streets, working in sewers and doing other menial work, provided, of course, they have not been locked up in filthy cells or were not among those thrown into a vat of boiling water just to furnish amusement for some 19-year old girl friend of the Commissar. Even the closed shop, with all its "horrors" would be preferable to a little boiling bee.

However much employers may criticise certain policies and actions of the trade unions, they certainly will appreciate the ringing, patriotic declaration of the American Federation of Labor, repudiating the Bolshevist proposals of the International Trade Union and the British Labor Party. It is not too much to say that the American labor movement is the only important one in the world today that is not trying to paralyze its Government and dictate its international as well as its domestic policies. And the American labor movement would vote just as solidly against the policies of the majority as against those of the minority faction of the French Federation of Labor.

THE EBB AND RISE OF THE RED TIDE

In September, at the heat of the Presidential Campaign, the Department on Study of Revolutionary Movements of The National Civic Federation sent to the people who had previously signed a Declaration against the Recognition of Soviet Russia a communication asking them to write to their Presidential candidate declaring their conviction that, whatever political changes occurred, the stand taken by our Government against Bolshevist Russia must be maintained and that, on this grave matter, there could be neither neutrality of thought nor action.

In this communication it was stated: "The Red offensive against Warsaw has been broken, but already Lenine threatens to raise a Bolshevik army of 5,000,000 to renew the Red onslaught. Whether this will be possible or not, the Red offensive against civilization through intrigue, plot and subsidized propaganda has not been checked."

Not only has the Red offensive through intrigue, plot and propaganda not been checked, but after defeat by the Poles the Red hordes have recently won a tremendous victory over General Wrangle, practically wiping out his armies. Thus, following the tragical defeat of Denikin and Kolchak, the last military offensive against the oppressors of Russia is broken. With the Bolshevik armies again victorious in the field, with recent information that Lenine intends to flood the United States with thousands of propagandist agents, with Ellis Island open to an indiscriminate deluge of alienry, among whom without question are countless social malcontents of the rabid types that brought Russia to her ruin, it becomes all the more urgent that there be no let-down, no compromise, at any time in the future in the stand maintained by the Department of State against any recognition of the lawless autocracy in control of Soviet Russia, and in the position recently expressed that, even should the British Government carry through arrangements for trade relations, the Department will not alter its policy. The firm stand of the Administration is based on the belief, first, that the Bolshevist theory menaces the stability of civilized and democratic government; second, that the Bolshevist régime does not represent the Russian people, nor does it completely control Russian affairs, and third, that Russia has nothing to give in exchange for goods from the rest of the world. The soundness of this position is impregnable, and from it, so long as the régime of Lenine and Trotsky holds, can there be no change.

In both parties, during the compaign, were Bolshevist sympathizers and agents who condoned the excesses of the Red régime and in every way, artfully, cunningly, by suggestion and subterfuge, sought to reach and influence the candidates in favor of recognition of the Soviet regime. In view of the information at hand and his expressed statements, it is not to be credited that the successful candidate has been, or can be, influenced by these sinister voices. But it cannot be overlooked that, after March 4, tremendous pressure will be brought to bear both through the surface and underground forces that are working for recognition and aid for the autocracy of Lenine. Already a formidable pro-Bolshevist propaganda is under way, and is of such a character that it cannot be ignored.

One phase of this propaganda is found in the campaign of the Committee on Russia, of the League of Free Nations Association, which prior to the election addressed an open letter to the Presidential candidates, attacking the rulings of the Department of State and demanding to know what policy, if elected, each candidate would pursue. This is manifestly the beginning

of a propaganda to aid Bolshevist Russia, the purpose being to develop political pressure and bring about a change of policy after the next inauguration. Another phase of the propaganda is to be found in the widely exploited articles of Mr. H. G. Wells, who is to follow this publication by a visit to the United States and an undoubtedly spectacularly advertised lecture tour. Mr. Wells is a distinguished novelist, and on the strength of his deserved literary reputation—incidentally a reputation based on works of imagination and romanticism—what he would have to say about Russia, just as anything he might have to say about a personal Deity or the habitation of Mars, will be listened to in club, lecture, forum, church, and other circles with respectful attention and a certain amount of deferential credence. Mr. Wells is by far the most valuable propagandist Lenine and Trotsky have yet won to their cause, Raymond Robins notwithstanding.

Mr. Wells is undoubtedly sincere; he writes and talks well; he is engaging and plausible. Mr. Wells admits the hideous catastrophe in Russia under the Bolsheviki; his picture of what has happened would be a damning indictment of Bolshevism were it not for the fact that he attributes the tragedy of Russia, not to Bolshevist fallacies, ineffiency and terrorism, but to all that went before it under the Czar. Mr. Wells disavows that he is a communist and that he believes in the Bolshevist theories and program, yet he so hates the Czarist regime that he categorically ascribes the starvation, collapse of industry and very excesses of Bolshevism to the autocracy that preceded the present.

While Mr. Wells' presentation will undoubtedly make a considerable impression, it must not be forgotten that Mr. Wells has for years been a Socialist of the idealist or Fabian variety, impressionable, sentimental, and, giving him credit for sincere intentions, was at times during the war pacfist and an advocate of an early peace through compromise, one of a group which included Romaine Rolland, Henri Barbusse, Anatol France, Bernard Shaw, Bertrand Russel and others. Moreover, during his visit to Russia he was under the aegis of his old friend, Maxim Gorky, one of the chiefs of the Bolshevist propaganda bureau; he was delightfully entertained, taken to the opera, well dined, and treated in such a manner as he could not but possibly feel a certain humanely genial warmth toward his hosts. In fact, Mr. Wells was handled much in the same manner as Raymond Robins was handled, and shall we say Mr. Wells was no less "captured" by the wily Red czarists than his Red Cross predecessor?

It is important that with this renewal of the Bolshevist propaganda offensive, arranged to work to a cumulative climax at the Presidential inauguration, that representative Americans continue to make their voice heard in this grave matter and not permit the noisy liberals and imported lecturers to bring about a surrender to autocratic barbarism of American ideals and a repudiation of all that civilization has won in two thousand years.

COMRADE DEBS AND BISHOP FISHER SEEM TO AGREE

Eugene V. Debs, perpetual Socialist candidate for the presidency, and Bishop Fred B. Fisher, of the Methodist Episcopal church, in certain recent utterances are found to have a striking oneness of mind. Not in regard to the beneficent influence of religion in the world, nor the fundamental principles and ideals of the Christian faith, but as to the reasons for the employment of force and violence by the revolutionists in carrying out their program. It might be expected that while Debs would justify violence, as practiced by the Bolsheviki in Russia, a Christian clergyman would condemn it under any and all circumstances; indeed, that from a bishop would come only reprobation and abhorrence of the unparalleled atrocities of the Russian revolution. But this is not the case with Bishop Fisher, recently in charge of the Industrial Relations Section of the Interchurch World Movement and now Methodist bishop of southern Asia.

In an interview given in prison, Mr. Debs recently expressed the belief that "*we may* have a perfectly peaceful revolution" in America, but that, again, we might not. The revolution would not be peaceful, however, "*in the event that the present owners of the industrial mechanism might fight to retain the privileges of ownership. If they should insist on violence in behalf of their profits, those who had the common good at stake would be forced to use force in return.*"

Mr. Debs justified the use of force in the Bolshevist revolution. Bishop Fisher, in an article in the *Christian Advocate,* of October 28, 1920, pleaded in defense of the "extreme phases" of what he euphoniously terms "the world-wide social awakening," declaring:

"*Give them a chance. Be not too harsh in condemnation of even extreme phases of this awakening. Naturally we decry recourse to force, but force has many causes, not the least of which is often unyielding resistance. Education and tolerance on both sides are a deal more effective and also more Christian than either violence or resistance.*"

According to Debs, if the Socialists attempt to take over the machinery of government, all the mills, mines, railroads, etcetera, by employing the general strike—as they did in Russia, and tried to do in Germany—the present owners, if they did not wish to suffer violence, should sit with folded hands and not resist expropriation. If they did attempt to retain what they believe are their rights, they would then be responsible for violence and bloodshed, massacre and terrorism. Under such circumstances, according to Bishop Fisher, they should let the Socialists go ahead in a spirit of "education and tolerance," which would be more "effective and also more Christian" than *resistance.* Both Debs and Fisher, therefore, agree that a fanatical minority, as was the case in Russia, should not be resisted in carrying out their revolutionary program, but if resisted then the revolutionists would have cause to employ force.

Bishop Fisher asks us to "behold the wonder of this awakening instead of its terror." Therefore, instead of pausing to contemplate the comparatively minor horrors of the Red régime, the wholesale killings, conscription of labor, destruction of industry, and sufferings of the Russian nation, we should instead look for the "wonder" of it! Bishop Fisher further finds a possible explanation for this "economic war" in the "strange and mysterious ways" of God's spirit. To those who know that Socialism, or Bolshevism, is materialistic and atheistic, declaring religion to be "the opium of the people," and that in Russia religion is being scientifically exterminated and that children are educated along anti-Christian Marxian lines, this expression may seem shocking if not blasphemous. Nevertheless, Mr. Fisher says "this wine of the new concept may prove to be the 'wine of the new spirit,'" and he recalls that "our Church history is full of crude, cruel resistance to spiritual reformations misunderstood and persecuted at times which in after years have been revealed as indispensable to human progress." Undoubtedly Messrs. Lenine and Trotzky, Debs and Hillquit, regard Bolshevism as a great "reformation," "misunderstood" and "persecuted" by its opponents, and "indispensable to human progress," and evidently one Methodist bishop at least agrees with them.

It was suspected that the employment of radicals and a certain tone in the work of the industrial section of the Interchurch World Movement under Mr. Fisher's direction, as well as the marked radical atmosphere of the conference held by that section at the Hotel Pennsylvania some time back, was due to Mr. Fisher's proclivities. His recent statement justifies this suspicion and proves, what has long been contended, that there is little difference between the outright "Red" leaders and the "intellectual radicals" in schools, colleges and churches. Bishop Fisher is now "in residence" at Calcutta. Does it not behoove the officials of the Methodist Episcopal church, if not the British authorities, to keep an eye on his activities?

Immigration Enquiry

Within a period of six months the immigration problem, as never before in American history, has become one of acute and crucial importance. To those familiar with conditions it has reached a stage where it constitutes a national menace. The American people generally are ignorant of the fact that day by day thousands of aliens, including aged, mentally defective and diseased, are being deluged upon our shores; that since last June from 80,000 to 100,000 aliens are passed each month through Ellis Island. The Government report on immigration ending with June 30, 1920, showing that the income was hardly more than the outgo, doubtless lulled many people into apathy. Since then conditions have utterly changed. As an indication of the laxity in regard to exclusions, and the policy pursued of letting our doors wide open, showing that either our laws or their enforcement are defective, there were admitted at Ellis Island in one day recently 3,100 people, while only 25 were excluded, and of those admitted the majority were old men and women, orphans and other non-productive people.

Mrs. Marion K. Clark, chief investigator of the Bureau of Industries and Immigration of the New York Industrial Commission, declared recently in an interview in the *New York Evening Post,* that excludable aliens are being admitted in such large numbers that within a few years the penal institutions and asylums for defectives in New York state will be overrun.

"The rules of the immigration authorities provide for an evasion of the immigration law, which expressly prohibits the entrance of certain undesirable persons into the United States," declared Mrs. Clark. "This evasion is accomplished by the making of bonds under the terms of which limited indemnity may be exacted from persons giving bonds should the excludable aliens become public charges after the entrance is accomplished. Such bonds are seldom enforced, are usually worthless, and even if enforced leave the excludable alien a burden on the commonwealth or a social menace which, in the case of the mentally defective classes, cannot be estimated in terms of money."

The popular and humanitarian appeal made by those who would let the bars down is that America should be an asylum and refuge for the poor and persecuted in other countries. Those who have investigated the problem of late are inclined to ask, if this influx is permitted to continue, how long it will be before America is anything but an asylum of defectives, dependents, social malcontents and criminals.

In order to ascertain the public mind as re-

Purifying Politics—A Field For The Churches

DR. WORTH M. TIPPY'S ANSWER TO OPEN LETTER OF RALPH M. EASLEY SUGGESTING POLITICAL WORK FOR RELIGIOUS AND SEMI-RELIGIOUS ORGANIZATIONS, AND THE REPLY

IN the previous issue of THE NATIONAL CIVIC FEDERATION REVIEW was published an open letter by Ralph M. Easley to Dr. Worth M. Tippy, Executive Secretary of the Commission on the Church and Social Service of the Federal Council of the Churches of Christ, which had been inspired by the "Labor Sunday Message." The answer to Mr. Easley's letter by Dr. Tippy, and the response thereto, are herewith published:

MR. RALPH M. EASLEY,
Editor, THE NATIONAL CIVIC FEDERATION REVIEW.

My dear Mr. Easley:

To reply to your letter of September 14th *seriatim* would be difficult because of the number of problems which it raises. The best I can do is to consider the two sections into which it falls —the first dealing with the Labor Sunday Message for 1920 of the Federal Council of the Churches, and the second dealing with your suggestions for the social activity of the churches. I take the second first.

You propose that the churches abandon the industrial field and devote themselves to such movements as social hygiene, the extermination of rats, the control of the immoral theatre, drug addicts, political graft, incompetent public servants, ineffective and unscientific methods of dealing with criminals, defectives and delinquents, conflicting legislation for the protection of women and children. You then outline a possible co-operation between Catholic, Hebrew and Protestant, to improve our political machinery, but working loyally through party organizations. You also show how you consider it possible to control profiteering and to effect conciliation in labor disputes through a purified machinery of government and the use of state Bureaus of Mediation.

My reply to this is to say that the churches are and have long been active in these fields, except possibly in the extermination of rats. They have been closely related since the early days of the war to the campaign for the control of venereal diseases inaugurated by the Public Health Service, the National Social Hygiene Association and the American Red Cross. The office of the Study Committee of the National Conference on Community Organization of which Honorable Franklin K. Lane is Honorary Chairman, is at present in the office of the Commission on the Church and Social Service. The churches are closely involved in every community effort of importance in the United States, and their cooperation is recognized as essential by every social and civic agency. The control of public recreation, the scientific and humane care of the feeble minded, the criminal and the delinquent are a part of the program of every Federation of Churches and Ministerial Association. The Federal Council has its Committee on Social Legislation as a feature of its Research Department and gives most thorough study to federal and state bills considered to be within the sphere of church action, and the churches are constantly before legislative and congressional committees on matters affecting public welfare. They were influential in the campaign which overthrew the so-called Tammany government when the late Mayor Mitchel was elected Mayor of New York.

There is also a growing cooperation in these matters between Catholic, Hebrew and Protestant. Here is one field where dogmatic differences need not divide us. The Protestant churches are quick to cooperate and always reaching out for cooperation. The Catholic churches as yet cooperate guardedly and intermittently. At present the Commission on the Church and Social Service and the Catholic Welfare Council are conducting jointly a study of the street railway conflict in Denver on invitation of the Denver churches, Catholic, Hebrew and Protestant.

But not only are the great religious communions mentioned not as yet effectively united; sixty percent of the people are not in the churches. We do not want the Government run by the churches, even if it were possible, but by the people as a whole in the interest of all the people. The churches, it seems to me, should take an unselfish part in public affairs but should not attempt to dominate them.

But is it not also true that the activity of the church is as little wanted in corrupt politics and in efforts to control the other evils you have mentioned, as in industrial relations? Your associate *Industry* of Washington attacked the Y. W. C. A. because of its efforts in the New York legislature to secure legislation protecting women and girls as vigorously as it has attacked the churches for their attitude on labor. In every social field where there are deep-seated wrongs, the first effort is to try to scare away the church. Those who are old enough to have witnessed the progress of the temperance movement to its climax in the Eighteenth Amendment will remember what the church passed through in its espousal of that great reform.

Turning now to the first part of your letter—the relation of the church to industrial problems, and especially to the Labor Sunday Message for 1920: the church can no more keep out of that field than the others for the reason that it is a field not only of machinery and natural forces but also of human relations. Wherever human relations are involved, there the agencies dealing with spiritual and ethical values are immediately and necessarily called into action. Moreover the basic laws of successful industry are as much human and ethical as economic, as is being shown by the futility of recognizing only the technical and economic factors in industrial management.

The special field of the church in industrial relations is that of an organization having expert knowledge in ethical and spiritual problems and on matters that affect the welfare of men, women and children. We get over into the economic sphere—necessarily so if we are to teach —and often enough we shall make mistakes; but I would remind you good naturedly that even editorial writers do not hesitate to tell the church where to work and how to work, although it may be quite out of their field.

You ask by what authority the Federal Council speaks for the churches on industrial questions. The Federal Council is an official correlating agency of 32 denominations. Their judicatories select representatives to the Council, the number in ratio with their membership. Action by the Federal Council does not bind these constituent bodies except as such action is approved by their judicatories. The Social Creed of the Churches has been approved by practically all these denominations and by the Y. M. C. A. and the Y. W. C. A. Important statements by the Federal Council must be approved by the Administrative Committee of the Council, which is composed of official denominational representatives.

You are mistaken in saying that employers "do not have any representatives on the Committees of the Federal Council having to do with industrial matters." They are on all our committees and commissions, and they are more largely represented than labor. In fact our labor representation is as yet meagre and unfair as compared with that of capital.

Your letter seems to me to use words carelessly. The Labor Sunday Message did not anywhere "talk about abolishing the competitive system and taking on the cooperative commonwealth," but expressly the opposite. It was based upon the conviction that the present system is essentially sound but has grave and sometimes intolerable evils which must be corrected.

The first sentence in the paragraph quoted in the middle of your second column might have been more carefully stated, and should possibly have read as follows: "Our industrial life has been built in part on wrong and unchristian foundations." Few would assert that it is wholly so. What the message contended for was that competition should be controlled by the cooperative principle, and that the motive of profits should be subordinated to the principle of service. The description of the effect of the present working of the competitive law which you quote is exactly what is taking place. When Bertrand Russel came back from Russia, a convert against Communism, one thing that reversed his former sympathy for Communism was that he feared a possible destruction of civilization in the other great western nations. The industrial and political situation is a turmoil of struggle. The temper and addresses at the last annual meeting of The National Civic Federation were as apprehensive as any I have attended since the war. To attack the Federal Council for this passage not by reasoned statements but by the references which the letter makes, seems out of keeping with the standing and spirit of The National Civic Federation.

The statement of the message that "working exclusively or mainly for profits corrupts men as working for a salary corrupts a preacher" is clear, at least to church people. A preacher who does this is discredited in the church. Every minister is supposed to subordinate financial considerations to human welfare; and most ministers, missionaries, Christian Association secretaries, social workers and their wives do this to the point of heroism. The Christian point of view is that the motive of service should be the highest for everybody. "He that would be the greatest among you shall be the servant of all," said Jesus. This is not chimerical. I personally know a great many business men, labor leaders and public officials who work from this motive, and in the increase of such industrial and political leaders, it seems to me, lies the hope of the future. Most of these men with whom I have talked are convinced that when industry is put on a Christian basis, we shall enter upon a period of unprecedented prosperity.

What has Charles W. Wood to do with the Labor Sunday Message or the Federal Council? He was sent to China some years ago by the Methodist Centenary to look at the work of the missionaries through a newspaper man's eyes. I do not find his observations, as reported in the *World*, illuminating; but that is not here nor there in relation to the Message.

In the third column of the third page of your open letter you dwell upon the church's "jumping into the midst of employers and employees." What was said was this: "At whatever risk

of becoming involved in the controversy, it (the church) must go into the midst of the contending forces, if possible between them."

You rightly call attention to the difficulty of this policy and its danger. These were given careful consideration; but the national peril, the economic losses involved and the growth of class hatred and violence are so great that it was considered desirable that the church should exert every ounce of its influence to bring the contending forces together, and to bring to bear the spirit and teaching of Jesus upon the growing strife.

The church has a right to do this, and an obligation, since it is estimated by Babson that 90% of all business men are connected with churches or synagogues, and since vast masses of labor are also in the church. It cannot do anything effective unless it goes "into the midst of the contending forces." What we hope to do is to have our clergymen speak and write on its ethical phases and its human values, and our experienced laymen, employers and leaders of labor, on the more technical phases of the industrial problem.

I do not wish to discuss the differences among church officials on industrial questions, except to say that the church is divided into conservatives, moderates and radicals, as are business politics and labor. We like to keep our more divergent opinions amongst ourselves, and to maintain if possible a broad Christian platform of cooperation and tolerance.

Very sincerely yours,
(Signed) WORTH M. TIPPY.

October 15, 1920.

REV. DR. WORTH M. TIPPY,
Executive Secretary, Commission on the Church and Social Service,
Federal Council of the Churches of Christ in America,
New York City.

MY DEAR DR. TIPPY:

I am sorry you did not "enthuse" over my suggestion that the churches clean up the rotten political conditions which are choking almost to death our governmental institutions. Furthermore, I fear you missed my whole point, for you seem to feel that by "being closely related to the campaign for the control of venereal diseases," initiated by others; furnishing desk room for the Study Committee of the National Conference on Community Organization (whatever that is); having on their program "the control of public recreation, the scientific and humane care of the feeble-minded and the criminal"; going before legislative committees on bills, etc., etc., constitute the fulfillment by the church organizations of their whole political duty. In fact, I am quite pained to find you so well satisfied with such extremely meager efforts to secure the good government for which all men and women of voting age are responsible, and for which all Christian people should feel an especial obligation resting upon them. In my previous letter, I called attention to the fact, in suggesting great moral reforms for the Church to undertake, that it had made little headway during the past two thousand years in grappling with that horrible plague, the social evil. Is "being closely related to the campaign for the control of venereal diseases" the Council's only answer to that charge? What I tried to point out is that, instead of having your committees running around begging aldermen, legislators and Congressmen to listen to your appeals, you should get on the inside and do the work in the city councils, the state legislatures and Congress, and yourselves appoint these boards and committees that are to listen to appeals from the people. You have the votes to do it. You say the churches have only 40 per cent of the people, but the politicians that run the country have not even 1 per cent. Why, Lenin and Trotzky run 150,000,000 people with a handful of communists because they are determined to have what they want. If you wish to awaken the Christian people on this subject, send committees to the municipal councils of all the important cities and let them see just how things are done affecting the matters enumerated in my former letter. If you yourself would head a committee that would attend the meetings of the Board of Aldermen in New York, I believe you would become so indignant that you would turn crusader in the interests of cleaning up the city, and it certainly would be a job worth your while.

As I write this letter, a book comes to me from Raymond B. Fosdick on "The American Police System," which I commend to you and your Commission. It certainly is a sickening revelation for a Christian nation. I quote a few sentences:

> "To an American who has intimately studied the operation of European police systems, nothing can be more discouraging than a similar survey of the police of the United States. . . . In America, on the other hand, the student of police travels from one political squabble to another, too often from one scandal to another. He finds a shifting leadership of mediocre calibre—varied now and then by flashes of real ability which are snuffed out when the political wheel turns. . . . It is a job held, perhaps, by the grace of some mysterious political influences, and conducted in an atmosphere sordid and unhealthy. . . . In the interim between these spasms of publicity the average police force sinks in its rut, while crime and violence flourish. . . . We have indeed, little to be proud of. It cannot be denied that our achievement in respect to policing is sordid and unworthy. Contrasted with other countries in this regard we stand ashamed. . . . We must confess failure in the elemental responsibility laid on all peoples who call themselves civilized, of preserving order in their communities."

You say: "Your letter seems to me to use words carelessly. The Labor Sunday Message did not anywhere 'talk about abolishing the competitive system and taking on the co-operative commonwealth,' but expressly the opposite."

"Expressly the opposite" would mean then that the Labor Sunday Message talked about abolishing the co-operative commonwealth, and taking on the competitive system. That might sound good in Russia, but hardly here. Are you not, therefore, a little guilty yourself of "using words carelessly" and am I guilty of that charge? I was not pretending to quote, but was indulging in a generalization or, more correctly speaking, a deduction based upon the vitriolic Socialist arraignment of the competitive system which I quoted from the Labor Sunday Message. It might well have been taken from the soap-box harangues one could hear any night, during the late election, on the corner of 110th Street and Fifth Avenue. To refresh your memory, I quote again:

> "That law of struggle or competition, as the historic dominant law of industry, has pitted employer against employer, corporation against corporation, nation against nation. It was responsible away back for the great war with its gigantic economic and human losses. It has pitted capitalist and employer against the workers, and the workers against capitalist and employer in a struggle which threatens another cataclysm and at least the temporary shattering of civilization."

Of course, if the competitive system is all that the Labor Sunday Message says, and there are no compensating virtues to its credit—and you mention none—then it should be abolished, and quickly, and when it is abolished the co-operative "commonwealthers" just as surely will stalk in unless the syndicalists "beat them to it." If your premise is sound my conclusion is sound, for certainly you would not want to continue a system so terrible in its operation. Before leaving this topic about the part played in our civilization by the competitive system which all our Socialist and Socialistic preachers and ex-preachers are clamoring to send to the scrap-heap, preliminary to the ushering in of the "new social order," alias our old friend the co-operative commonwealth, may I ask: Has your Commission, or any committee of the Federal Council, ever made an effort to search out and catalogue the wonderful progress made under our present order in the industrial field alone, the one which concerns your Commission? Has it considered carefully the debt that civilization owes to competition? Compare the conditions of work and living of the farmers, the wage-earners and the common people a hundred years ago and now. The result will be truly astounding. I am enclosing one of my articles, entitled "Shall the Old Order be Scrapped?" describing a few of the outstanding changes wrought during that period, which Socialists scrupulously avoid mentioning. For them to admit progress under the present régime would be tantamount to abandoning their whole theory that whatever is is wrong, and would result in postponing the revolution they are working overtime to bring about. This attitude is a consistent one for the Socialist Party to take but it is surprising that a body claiming to represent 17,000,000 Protestant men and women should lend itself, consciously or unconsciously, to the promotion of Socialist propaganda by hurling at the competitive system anathemas couched in the language of Karl Marx and all of his big and little successors. Of course, in all that I have said about competition, I am not referring to the old *laissez faire* unregulated competition of a hundred years ago. Since the first factory act was passed in Great Britain in 1802, legislation in countless fields has, through restrictions, eliminated most of the earlier evils. Workmen's compensation acts, child labor laws, pure food regulations, public utility measures and a hundred other legislative enactments—all give eloquent testimony to the truth of this statement.

You state: "You are mistaken in saying that employers 'do not have any representatives on the committees of the Federal Council having to do with industrial matters.' They are on all our committees and commissions, and they are more largely represented than labor." The quotation is inexact. I said "do not *seem* to have" etc. My statement was based upon the fact that the Federal Council's Commission on The Church and Social Service as shown upon your letter-head, composed of 76 members, has not one important employer, if any, on it, nor more than two men active in the labor movement that I can discover, but is made up almost entirely of preachers, ex-preachers, college professors, ex-college professors and a sprinkling here and there of salaried officials of semi-religious and philanthropic organizations. If that committee was democratically selected—and of course people who talk so much about democracy in others would surely apply it to the conduct of their own affairs—does it not seem strange that out of 17,000,000 members, the 16,000,000 farmers, wage-earners, bankers, manufacturers, merchants and lawyers secured a representation that requires a high-power microscope to discover?

You say: "It is estimated by Babson that 90 per cent of all business men in the country are connected with churches or synagogues." I assume that the Babson to whom you refer is Roger W. Babson, a member of your Commission, who is credited with many remarkable statements and prophecies. Doubtless he is the same Babson who wrote the fifty-one articles in the then pro-German *Evening Mail* for Dr. Rumely, now on trial charged with having disguised the fact that he had bought the *Mail* with money furnished by the German Government. Incidentally, $5,100 of that money, wherever it came from, went to Dr. Babson for his fifty-one anti-English articles, so the story runs.

(*Continued on page* 23)

Our Supreme Allegiance

(*Continued from page 2*)

tle which swept Europe with a scourge of agony and death, they were sustained by the feeling that there was something at stake which transcended all the advantages of peace, and which justified and sanctified the bloody and barbaric work they were called upon to do. Any plan for the suppression of war which does not meet and satisfy this fundamental and powerful incentive to war will inevitably prove defective whenever put to the supreme test. And such an incentive, at once so sad and so exalted, can never be satisfied by a plan which simply says: "peace is preferable to war, so let us enforce peace"; for when conditions arise which morally justify the declaration: "war is preferable to peace, so let us have war," the fallacy of the formula will be exposed and the plan will be thrown aside, unless it afford means for the affirmative vindication of justice through the forces of peace which it has denied to the power of the sword.

And here to my mind we have disclosed one of the critical points in the proposed covenant for the League of Nations where it may sooner or later be found fatally inadequate. We have only to imagine another case like that of Cuba, or to take the actual case of Shantung should Japan finally conclude to retain that portion of the Chinese Republic, and China be driven to wage war for its recovery. In that event, as well as in all similar cases, the League will not only be powerless to afford an affirmative remedy, but its members will be bound, at least morally, by the provisions of Article X, to give aid and comfort to the despoiler.

We are told that Article X is the heart of the League; and so it is, if by that it is meant to assert the over-shadowing importance of its provisions.

In order to understand the nature and effect of this obligation let us read the article. It is as follows:

> "The high contracting parties undertake to respect and preserve as against external aggression the territorial integrity and existing political independence of all states, members of the League. In case of any such aggression, or in case of any threat or danger of such aggression, the executive council shall advise upon the means by which the obligation shall be fulfilled."

There can, of course, be no reasonable objection to a general agreement among nations, including ourselves, to respect the territorial integrity of one another, although it may be said in passing that the principle is one, which, from motives and for reasons deemed good and sufficient by us, we have not ourselves uniformly observed, as Mexico and Spain, for example, might truthfully bear witness. But the obligation, it will be seen, is not merely to *respect*—which requires us to restrain only our own predatory desires and operations—but it is to *preserve* the property of our neighbors, which requires us to restrain the predatory operations of others, a far different and a far more onerous obligation, since the former involves nothing more serious than the exercise of a fair degree of self-restraint, while the latter may call for the exercise of a very high degree of expensive and disagreeable and more or less tragic affirmative action. It will be seen that the undertaking in terms is absolute, unqualified and unlimited, and whether it be regarded as legally binding or only morally binding, as some have happily suggested, may be satisfied by nothing short of accomplishment, or by a reasonable demonstration that accomplishment is impossible. To refuse to execute the undertaking on the score of difficulty or lack of concern or sympathy in any given case, would be utter abandonment of our pledges, and would make of the treaty a scrap of paper. If we sign, we must keep the faith and must, therefore, be prepared if and whenever occasion shall require to put upon the willing, or the unwilling shoulders of the people the task of raising and equipping armies and sending them overseas to preserve the political integrity of Italy or Siam, of Poland or Czecho-Slovakia, of the Kingdom of the Serbs, the Croats and the Slovenes, or of any other member of the League.

I have said the obligation is absolute, and if we have regard for the plain meaning of words, so it is. No exception is made in favor of those cases where external aggression may be the result of internal wrongs, such as Cuba endured, such as any weak people or submerged race may at any time in the future be called upon to endure. The obligation is to preserve the territorial integrity of the tyrant, as well as that of the benign ruler of the well content. If the altogether improbable should happen, and another George III undertake to deal with Canada as his predecessor dealt with us, we should not only be bound to go no further than the indulgence of a flaccid sympathy with our oppressed neighbors, but actually to assist the oppressor should a second Rochambeau or LaFayette come to their aid. It is not sufficient to reply that the suggested circumstances are highly improbable. The fact that they have once happened demonstrates the possibility of their happening again, and such possibility, however remote, should induce us to think well before finally committing ourselves to an undertaking which might prevent us from enlisting our strength on the side of an outraged community except at the cost of breaking our plighted word.

Neither is there substance in the claim that the latter part of the article provides for the advice of the executive council, and as it must be unanimous we shall be able to control the situation. That advice has nothing to do with the obligatory nature of the undertaking, but relates only to the means by which it shall be effectuated. It is not necessary for me to point out in a matter so clear, that one cannot be relieved from a positive promise to do a thing because he will not join with others in determining the way in which it shall be done.

Our acceptance of this obligation would, of course, completely reverse a policy as old as the government itself. That fact, however, while persuasive is not necessarily controlling. It does not conclusively follow that because a given policy of government is old it must be right, or that because it was wise as a practical rule of action for our forefathers it must remain wise as a rule of action for us. Truth is eternal; but not always absolute. It is sometimes conditioned so that a statement which is true at one time, under some circumstances, may not be true, or be only partially true, at another time under different circumstances. And so we are constantly overhauling and modifying, and sometimes rejecting, the teachings of the Fathers which were wise and true in their own time and generation.

The Farewell Address of the first President has been accepted with a degree of faith in its wisdom accorded no other document, I dare say, except the Constitution alone. But even the Constitution is not considered permanently perfect since we provide for its amendment. Nobody insists, therefore, that Washington's advice is to be regarded as the permanent and final measure of our conduct. Nevertheless, counsel which has so long survived, and been so generally approved, has established for itself a presumption in favor of its wisdom of such strength that it may not be challenged except for weighty and convincing reasons. Perhaps nothing in that remarkable address has been more frequently referred to—and more generally misquoted, I may add—than the advice against entangling relations with foreign countries.

No intelligent student of international affairs can doubt that we shall be obliged to participate in the concerns of the old world to a far greater degree than was ever contemplated by Washington. The world has moved and changed since his day, and we have moved and changed with it. No real American will, for a moment, desire that his country shall ever fall short of performing its full part in promoting and maintaining the peace and well being of mankind. If that shall involve expense and hardship and sacrifice, we must cheerfully bear the burden and go on nevertheless. But it is one thing to stand ready and willing to do that in accordance with our own promptings and sense of duty as occasions of need shall, from time to time, present themselves, and quite another thing to bind ourselves to act in that regard in accordance with the will or opinions of some extra-constitutional body responsible to the whole world—ourselves included, to be sure—but in no peculiar sense to us.

I have no desire to be suspected of provincialism; but if that appellation applies to one who prefers that his countrymen shall remain free to manage their own affairs and assist in the management of the affairs of others, as they and not as others, may determine, then I must plead guilty to being hopelessly provincial. I am not averse to an agreement binding us to do those *specific* things which we ought to do in the absence of agreement, as, for example, to assist for a definitely limited number of years in the defense of France against German aggression. I would not, however, make even that an indeterminate agreement, for conditions will inevitably change, and what is right and expedient for us to do now may become altogether wrong and foolish for us to do a quarter of a century hence. I should never be willing to do for the France of a Napoleon what I would gladly undertake for the France of Clemenceau. The transmutations of history are beyond all foresight; and who is bold enough to deny the possibility of finding ourselves irreconcilably opposed to the attitude of some or all of our Allies long before a quarter of a century shall have gone by? Five years ago England and France united in a just war against Prussia, but a hundred years ago England and Prussia joined hands to fight France.

Quite apart, however, from anything which may be said on the subject of American adherence to the guaranty contained in Article X, it is open to serious consideration upon general and fundamental grounds. What is the ultimate thing which it seeks to accomplish? Upon its face it seems to be an attempt to crystalize in perpetuity the present geography of the world as modified by the treaties of peace, a program quite impossible of attainment, and which, if persisted in, must end in failure, if not disaster, for it proceeds in complete disregard of the immutable laws which govern the movements of human society.

In every age, and in every country, there have been men who have longed for and believed in the possibility of some final decree of wisdom that might, once and for all, establish a happy and permanent settlement of all sorts of controversial matters. Again and again, in religion, in government, in science, in all the fields of human thought and endeavor, they have fancied realization just ahead, only to find that it was not the ultimate goal which they beheld but only the horizon from which a new and equally deceptive finality was in sight. But the most visionary of all undertakings is that which seeks not merely to *advise* but to *bind* the future, to follow the opinions and ideals of the present. The political problems of the future will somehow have to be met and solved, but, inasmuch as we do not know what they will be nor how they will be conditioned, we can only be sure that any solution we may prescribe in advance will probably not be as effective as, and certainly will not be wiser than, that which will be found by those who will be able to see with the eyes of fact what we can only imagine.

The Treaty of Peace was formulated by the victors alone, and the vanquished were compelled to accept it. Such a course was naturally to be expected and is not to be condemned upon moral grounds. That it should be a hard peace was also natural and morally right, for the Germans had been guilty of inconceivable outrage and cruelty in the conduct of the war, and that they should be compelled to make restitution to the utmost limit of their capacity was in accordance with the eternal principles of retributive justice. But however clear the justice of the settlement may appear to us it will never receive the approval of the enemy peoples; and when we consider the extent to which they have been stripped of their territory, and the hindrance which this will present to their future expansion and development, we are bound to conclude that they will acquiesce in this capital dismemberment only so long as they are constrained to do so by a sense of their own helplessness to do otherwise. When we consider, moreover, the extent to which new states have been created, submerged and well-nigh forgotten nationalities lifted into power, new adjustments of sovereignty and boundaries among friends and neutrals established, we can but fear, as many thoughtful students of the subject do fear, that the Treaty of Peace has ended one war only to sow broadcast upon the ever fruitful fields of Europe the seeds of hate and controversy which may ripen into many more.

The world is never at a standstill. It is in a continual state of flux. Nations and races come and go, develop from insignificance to dominating strength, run their course of power for a time, and sink back to a condition of inferiority again. A century of this ever recurring process is but a day in the life of humanity. A few days ago it was Imperial Rome who, with her legions, made and unmade governments and dynasties and shifted the boundaries of the earth as she pleased. Then it was Spain. Then France. Yesterday it was England. Today it has been the Big Five at Versailles. Tomorrow? God alone knows! But it will be somebody. Perhaps Japan, old in years but young in power, filled with eager ambitions yet willing to bide her time. Perhaps Russia, that strange admixture of idealism and brutality from whom everybody wins victories, but whom nobody conquers. We cannot know the future, and it is idle to speculate; but of one thing we may be sure, that the restless interplay of diplomacy, the shrewd matching of prime-ministerial wits, and all the devious and sharp devices by which craft and guile and intrigue have played their sinister part in the game of European politics for a thousand years, will not come to an end with the ratification of the Treaty of Peace. But even if they should now and forever end, nevertheless, the rise and fall of nations and societies of men, the perpetual shift of international boundary lines, the extension of sovereignty in this direction and the contraction of it in that direction, will go on in response to the universal law of change which forbids the world to stand still. An agreement, therefore, to make the political subdivisions of the earth perpetually immovable is doomed to failure from the beginning, because it involves the fatal mistake of attempting by convention to render immovable that which by its very nature must be eternally and resistlessly upon the march.

I said that our problems were simple and direct, but I did not mean they were trivial. On the contrary, we are facing questions of the utmost gravity. Their proper solution, however, will demand no nice balancing of alternatives or adroit manipulation of the processes of reason, but only courage and common sense and the application of the usual frank and straight-forward methods of American thought and action. While to a great extent they are new questions, their solution will not necessarily require us to turn our backs upon the past. The truest progress sometimes consists in the sturdy retention of long established methods. Nevertheless, in a world of growth and change we must continually face the problem of determining when to hold fast to the things we have, and when to abandon them for something new—with the certainty, I may add, that whichever we do we shall not please everybody, and perhaps not anybody: the old-fashioned will consider us radical, the impulsive and impatient will stigmatize us as reactionary, and if we seek a path of moderation between them, both will join in denouncing us for "straddling."

Among these problems there is the labor question, always troublesome but recently of acute concern, presenting a difficulty partly real and partly psychological and, therefore, to be settled upon terms which will be not only just in fact but whose justice will be recognized and accepted by those concerned. There is also the not altogether unrelated question of immigration. As unskilled labor has grown scarce we have sought to supply it by opening more widely our gates of ingress to the heterogeneous masses of Europe. We have indulged the optimistic hope that we should be able to assimilate them to our standards, but we are awakening to the danger of being assimilated in greater or less degree to their standards instead. Large portions of New York, Chicago, and other great cities have become virtually foreign territory where the English language is an unfamiliar tongue. We have been forced, in recent months, to deport large numbers of undesirable aliens, a necessary but drastic and unfortunate recourse which admonishes us that we must find some way of closing the gates against such immigrants in advance.

The solution of these and many other social and governmental problems has become doubly imperative as a result of the war. We shall solve them, of course, but they will be followed in never-ending succession by other questions no less serious and important. The great lesson we must continually learn and re-learn is that eternal vigilance is not only the price of liberty, but the price of peace and order and general well-being, and all the other blessings which follow an adherence to the principles of good government. It is, therefore, the duty of the citizen who appreciates their measureless value, to be perpetually alert not only to meet and resist every direct and deliberate attempt to destroy them, but to defend them against the insidiously hostile speculations of the purveyors of theory as well.

To my mind, one of the most dangerous of these speculations is that which challenges and belittles the spirit of nationalism, and which seeks to substitute for the warmth and intimacy of loyalty and love of country, that vague and vacuous communion of the tribes known as "internationalism."

We are in the habit of thinking of the nation as though it were an entity apart—something set going by our forefathers and left to maintain itself ever since by some mysterious power of its own. But the nation is only one of the forms we ourselves assume, and it is we,—and not something apart from us—who constitute it and animate it and maintain it. The nation is something more than so many millions of people occupying a geographical sub-division of the earth's surface, speaking the same language and subject to the same laws. These are its visible and tangible constituents, but what gives it organic life and meaning is the spirit of unity which dwells within and which, if the nation were self-conscious and had a voice, would enable it to say as a person may say: "I am myself and not another."

To lose this organic sense of individuality—at once a manifestation of unity and of separateness—would be to lose the national soul. Co-operation with other peoples for the common good, a feeling of world-wide sympathy and fellowship, are not only of the highest virtue but they give a sweeter quality to patriotism itself. But no man can remain loyal to his own country and be willing to imperil her institutions and organic existence for some real or fancied obligation to serve mankind in general. Any philosophy which teaches us to sacrifice these in order to serve the world is a sham and a fraud. Not only can the world not be served in any such way, but to attempt it will be to sow the seeds of a divided allegiance which will inevitably ripen into national destruction. To admit such a spirit of internationalism as this into the body of the nation would entail consequences similar to those which follow the development of that mysterious thing called "multiple personality" in the body of an individual:—a tangle of utter bewilderment and confusion. I reject with every atom of my intelligence a doctrine so filled with menace. I am as anxious as any one for the well-being of the world, but if I am asked to promote the well-being of the world at the risk of undermining the foundations of the Republic, every sentiment of reverent attachment and fidelity to American ideals and interests bids me stand for the Republic even at the cost of hardship for the world.

The inevitable tendency of the internationalist teaching is to break down the sentiment of patriotism and put in its place a tenuous sense of attachment to a group or a class or a race. You cannot eliminate from the heart of the Anglo-Saxon, the Latin or the Slav the conviction that his race is the foremost, its history the most glorious, its character the most admirable; nor can you prevent combinations of groups or classes for more or less selfish ends. But the thing which saves all this from a condition of predominating danger is the national spirit which, in the last analysis, brings all rival and discordant factions together for the common weal and the common defense. If this be taken away and there be substituted for the unifying force of patriotism the hodge-podge of internationalism the danger will be that if we thereby succeed in reducing war among nations we shall do so only at the cost of increasing it among peoples as a result of race and class and group antagonism. The nation will be in constant jeopardy, for the advancement of a class or the ascendancy of a race will become more important than the preservation of the country. If there be not sufficient warning in the quarrels over Fiume, in the Irish question, in the double allegiance of the hyphenated American before the war, in the labor clauses of the proposed covenant for the League of Nations, which singles out the workmen from all other classes as the subject of special consideration, we may surely find it in the bloody and brutal work of Bolshevik Russia still going on in eastern Europe.

We have no autocracy of birth in this country and we will have none of class or race. The fountain of equal opportunity which the Fathers opened and whose waters we have drunk must never be sealed against our sons. The institutions under which we live are of such transcendent worth that their protection is the imperious and paramount duty of all whose rights are made safe by the marvelous counterpoise of liberty and law which they afford. They are ours and ours alone; an example which others may emulate if they will, but a possession never to be thrown into the grist of some common political universalism. They not only represent the clear foresight and high wisdom of their creators, but they have come to us as the final expression of Anglo-Saxon effort which, through the centuries, slowly, sometimes painfully, but always steadily, has moved toward the culminating glory of their achievement. Those who belittle them, those who would put in the place of their concrete and intimate processes some abstract and far conception of world-wide fraternity, are plotters of

(*Continued on Page 19*)

American Labor Breaks With International Federation

(*Continued from Page 4*)

revolutionary body and has never had any affiliation with any revolutionary body which would require it to give serious consideration to revolutionary proposals of any kind. While recognizing the need of revolution against autocratic governments, organized labor in this country regards the American government as being essentially democratic. On the whole and in the last resort the people rule in this country. While our political system is not perfect from the democratic point of view and while organized labor has devoted itself to bringing about the extension of democracy into the sphere of industry, it has never considered or compromised with any revolutionary movement to upset our institutions by violence.

The appeals of the International Federation of Trade Unions and of the "Council of Action" are appeals to revolutionary violence. The International Federation of Trade Unions declares very clearly that, "it must of its own accord and within its own ranks find the power to preserve the world from terror and anarchy." The world is not threatened with terror and anarchy unless it be from the Soviets for the aid of which these manifestoes are issued. If the world is to be preserved from this or any other danger, it must be by the action of democratic governments chosen by the people.

One year ago the International Federation of Trade Unions endorsed the League of Nations and proposed to reshape it to correspond to the aspirations of Labor. Today it takes a position of anarchistic hostility to all governments without discrimination.

The British labor party also turns its back on the democratic parliamentary system which England has evolved by seven centuries of struggle, and can find no way to ensure that the foreign policy of Great Britain "accords with the desires of the people."

The American Federation of Labor is diametrically opposed both to the methods advocated by the Oudegeest manifesto and to its object. The Montreal Convention reaffirmed the objection of American Labor to all forms of revolutionary violence and to reaction which might be interpreted as assistance to the Soviets.

Oudegeest and Adamson calmly suggest that faith should be placed in the declarations and promises of the "Russian government." The American Federation of Labor does not regard the Soviets as the Russian government and places no reliance whatever upon their statements and promises. The A. F. of L. action taken in Montreal was based in part upon the telegram of our Secretary of State to the President of the American Federation of Labor in which he declared:

> The existing régime in Russia does not represent the will or consent of any considerable proportion of the Russian people. It repudiates every principle of harmonious and trustful relations, whether of nations or of individuals, and is based upon the negation of honor and good faith and every usage and convention underlying the structure of international law.

No despotism in history has ever had such an unbroken record of broken faith. Let us take only two or three most recent examples. It is of the utmost importance to the Soviet oligarchy to reestablish trade relations. The British government has made every concession to achieve the same object. Yet even in the midst of these negotiations and before the eyes of the entire world the Soviets have almost daily broken faith. After the promises to cease propaganda in England came the subsidy of $375,000 offered to the *London Daily Herald*. As the *London Herald* is the only daily labor newspaper in Great Britain and is the leading labor organ, the offer is of the first moment. Lansbury, the near-bolshevist editor, brazenly proposed that the subsidy should be accepted as a symbol of "international solidarity." He wished the public to forget that in giving these subsidies the Soviets claimed, and expected to gain control of, the publications. Every recent announcement of Lenine and of the Communist Internationale has shown that they demand absolute dictatorial powers wherever their authority extends. While claiming to be willing to adjust their tactics according to conditions of each nation, the adjustment is to take place in Moscow.

About the same time as the *London Herald* disclosure, came the Soviet breach of faith in the armistice negotiations with Poland. After having promised to limit their exorbitant demands for the disarmament of Poland confronted by a Soviet Russia armed to the teeth, the bolshevists at the last moment added new clauses demanding workmen's militia for Poland by which they hope to sovietize that country.

The daily comparisons of the statements of bolshevist diplomatists for foreign consumption with the official pronouncements of the bolshevist government in Russia, the speeches and articles of Lenine and the decisions of that branch of the Soviet government which is known as the Third Internationale, demonstrate the utter falsehood of their entire stand.

The American Federation of Labor has always declared for and stood by the demand against large standing armies, for the limitation of munitions of war and for a reduction in naval establishments. These provisions are incorporated in the Versailles Treaty and the League of Nations, but if the production of war materials were to cease entirely all small nations would be utterly helpless and at the mercy of their larger neighbors. America could arm within a year or so even if she had no armament at hand. Smaller countries, like Belgium, would be utterly powerless while Poland and Georgia would fall into the hands of Soviet Russia without any means of resistance. But there can not be the slightest question that the defeat of Poland by the Soviets was the concise and immediate object, both of the British "Council of Action" and the International Federation of Trade Unions.

The International Federation of Trade Unions went even further than that in the copy of the manifesto which reached the Washington office of the American Federation of Labor. In all the telegrams as well as in the copy received by mail as printed in Amsterdam, reference was made to the holding back of food supplies. The very organization which has been crying out against the supposed starvation of Soviet Russia by the entente blockade apparently proposed the blockading of and starving of Poland, as well as its disarmament while Soviet armies were on its soil!

But this contradiction need give no surprise. The International Federation of Trade Unions called for the blockade of Hungary and after executing it inflicted suffering on the entire population. Even worse, the manifesto calling for this blockade contained a protest against the blockade of Soviet Russia.

There can be little doubt that the whole movement was largely devised at Moscow and originated at the conference of the Third or Communist Internationale a few weeks previously. Lenine had called for precisely this line of action on the part of the labor organizations of Western Europe. He boasted that Sovietism would be maintained in Russia and would spread throughout Europe, not because of its own internal strength, but because it could rely on the cooperation of European Labor.

Indeed, with the widespread and practical help that was extended by European Labor to the Soviet armies invading Poland, and with the growing sympathy of European labor for the bolshevists, the demands of Lenine for absolute dictatorship over the European movement has become steadily more insistent. In other words, the aggressive and violent character of the bolshevist régime and international propaganda is now due primarily, not to the certainty of their hold upon the Russian government or upon the victories of the Red Armies, but upon the support of European labor.

There have been indications that the Italian uprising and the radical stand taken by Smillie in England were planned to take place at the same time as the expected fall of Warsaw and to mark the beginning of a general bolshevist or near-bolshevist upheaval throughout all Europe. Even now, letters of Smillie's are published in the Polish press calling for a pro-Soviet attitude on the part of Polish labor—in spite of the fact that Poland has now perhaps the most democratic government of Europe with the leader of the peasant party as its premier and the well-known Socialist Daszinski as its Vice-President.

RECOGNITION OF THE SOVIETS

The British "Council of Action," as quoted in the telegram of Adamson, not only calls for the recognition of Soviet Russia but is empowered to bring about a revolutionary general strike for this purpose. The American Federation of Labor is utterly and wholly opposed, not only to such revolutionary measures but to anything that approaches any form of assistance to Soviets. The Montreal Convention resolved:

> That the American Federation of Labor is not justified in taking any action which could be construed as an assistance to or approval of the Soviet government of Russia, as long as that government is based upon authority which has not been vested in it by a popular representative national assemblage of the Russian people; or so long as it endeavors to create revolutions in the well-established civilized nations of the world; or so long as it advocates and applies the militarization of Labor and prevents the organizing and functioning of trade unions and the maintenance of a free press and free public assemblage.

Every statement made in this declaration was amply borne out by the declarations of members of the official British labor delegation which recently visited Russia. Bertrand Russell declared that the Soviets represented only a very small minority of the Russian people and that the dictatorship was tyranny in the worst sense of the term. Mrs. Philip Snowden stated that the Soviets were not socialist, democratic or christian. Tom Shaw and Ben Turner made similar statements. Yet, in its official report, the delegation has the audacity to state that the Soviets "had rallied to their support practically the whole of the Russian nation," and the "Council of Action" was created to aid in delivering Poland to the tender mercy of the Soviets.

The independent socialist party of Germany also sent a delegation recently to Russia, some of the members of which, though extremely sympathetic with the Soviets, asserted that bureaucracy and militarism were worse than under the Czar. As a result, the leaders of the independent party, including not only the more moderate, like Kautsky and Hilferding, but also Crispien, Dittmann, Louise Zeitz and Ledebour, have all come out strongly against affiliation with the Third Internationale.

Even the Italian bolshevist-socialists who recently visited Soviet Russia, came back with adverse reports. Dugoni reported that Lewis' experiment was a complete failure. His statements were endorsed by Serrati, the editor of *Avanti* and the leader of the party. Darragona, the leading figure in the Italian labor unions, together with Vacisra, reported that the present Russian régime is not based on the desires of the entire people but on the dictatorship of one party, the bolshevist party, which smacks of tyranny. Finally, the French syndicalists who have long resisted the importation of sovietism into France, have strongly attacked the bolshevists. Jouhaux has recently declared that

the Soviets have practically made a declaration of war against organized labor of France, while Meerheim, head of the metal workers, and Bartuel, secretary of the miners, have written that bolshevism is a military and reactionary doctrine which gives even worse results than those of capitalism.

In a letter dated August 25, and received in the Washington headquarters of the A. F. of L. on September 9, Oudegeest asks if American Labor is affiliated with the International Federation of Trade Unions. In a communication sent two weeks earlier he wishes to know if American Labor will be present at the International Trades Union Conference to be held in November. The agenda for this conference covers four points only:

The international control of raw materials; the socialization of international transportation; the control of international exchange; the protection of the trade union movement from oppression.

The agenda specifically states that no internal questions are to be considered. In the second letter of Oudegeest was enclosed the manifesto above quoted.

The President of the American Federation of Labor in answer to the first communication stated it to be his opinion that the A. F. of L. would not be likely to send a delegation if the meeting were closed to a general discussion of all internal and external questions affecting the International Federation of Trade Unions.

We are living in the Republic of the United States of America—a country by no means perfect (on the contrary, it has many defects), in which all too frequently injustice is done. But it is a Republic based upon the principles of freedom, justice, and universal suffrage. Our men and our women are not likely to throw these rights and principles into the scrap-heap for the dictatorship of Moscow's Lenine and Trotsky.

For a number of years the American Federation of Labor was affiliated with the old International Federation of Trade Unions. It has always aimed to help in establishing a bona fide league of the toiling masses of all the countries of the world. It is a source of regret that conditions have been so shaped by those who are now controlling the policies and course of the new International Federation of Trade Unions that the A. F. of L. feels constrained to refrain from joining a movement where the independence and autonomy of each national trade union center is not only denied but wherein it is subjected to absolute domination for purposes wholly foreign to the objects for which the International Federation of Trade Unions should be formed.

The American labor movement is primarily concerned in achieving improved conditions in the standards of life and work, in securing freedom, justice, self-expression, and democracy by evolutionary processes rather than by violent revolution which promises all and accomplishes nothing.

Our Supreme Allegiance

(*Continued on page* 17)

evil or vain dreamers of dreams. The loyal of heart and sound of head will concede no such rival and accept no such substitute. We shall, I hope, never cease to sympathize with and aid the struggle for greater happiness and better conditions in every land, but our first hope and chiefest endeavor must always be for the welfare of the people of this land. Above all else we must suffer no divided allegiance to corrupt our citizenship if we are to remain the masters and moulders of our own destiny.

And so, let us renew the old covenant of American unity and stand together for the perpetuation of the undiminished powers of the Republic, to the end that we may preserve the blessings of liberty and justice for ourselves and thereby strengthen our hands to aid in their maintenance wherever they may be assailed elsewhere among mankind.

Vital Problems of Agriculture

(*Continued from page* 3.)

The Federal Farm Loan system must be preserved and strengthened. The Farm Mortgage Brokers who are seeking to destroy it must be defeated in the sinister purpose to return American farmers to the old order of uncontrolled, unlicensed, and exorbitant interest rates, costs of renewals and bonuses, etc.

The cooperative features of the Federal Farm Loan Act must be preserved from harm. The rights of the cooperative borrowers represented in the 4,000 national farm loan associations will be better protected if they will form a national federation or union through which they can fully and freely function. Friends of the farmers in Congress will welcome such an organization. State and national banks are organized into the American Bankers' Association in whose honor the city of Washington was recently lavishly decorated with bunting and American flags. The National Union of Farm Loan Associations is just as greatly needed by the cooperative borrowers.

Certain farm organizations such as the Farmers' Union, the Equity Societies and the Granges have done pioneer work. They and various cooperative commodity associations have fought the farmers' battles and stood the brunt of the attack when it was unpopular to do so, and it will not be for the good of agriculture to allow new movements suddenly springing up with the backing of great traders and captains of industry, commerce and finance to minimize and push aside the organizations which have blazed and hewn out the road. Let us progress continually but let us hold securely the gains we have already made. To insure this let us trust to the farmer and not to the outsider who may have a peculiar end to attain.

During the year ahead I hope to see the city consumers work out sound purchasing arrangements so that they can meet the farmers part way. The Farmers' Union could supply consumers' stores in the great cities with cooperative vegetables, butter and eggs, but the consumers have no adequate organization for this purpose. Cooperative flour mills, whether owned as in England by the consumers or undertaken by the wheat growers themselves, will in either event prove a check to profiteering and increase the earnings and savings of both producer and consumer.

Certain powerful banking interests are declaring that money should be regarded as a commodity. They say that prices of everything else were unchecked during the war and up to the present time, but that interest rates were maintained at the same level. They believe that money should command an interest rate in accordance with the necessity of the borrower. This is a harmful and vicious conception of money which of course should be regarded only as a medium of exchange. It is not unlikely that the browbeating ideas and tactics of financial despots are making it necessary for the agricultural cooperators to organize their own banks and credit facilities. A special committee to consider this problem should be provided for.

To save the rural citizenship of this country, it is necessary to have a new deal. I care nothing for the hackneyed square deal which leads into the wilderness of promise to no purpose. But a vitalizing squaring off which shall begin with legislation at once (the Capper-Hersman Bill) to permit farmers to conduct their cooperative business free from the menace of imprisonment, and the giving of representation of governmental boards and commissions, and a Secretary of Agriculture who will be representative of the organized farmers of the nation. No other method will now be able to preserve a wholesome balance between the three great groups of Capital, Labor and Agriculture, notwithstanding the altruistic sounding protestations of those who say that this government is adequately representative. We know that it is not adequately representative, and that this is one of the chief causes of a decadent agriculture which it is our solemn duty to remove.

Cooperative Bank Opened

(*Continued from page* 5.)

"The organization of a bank was twice authorized by our conventions, but this was postponed on account of the war. That our members were ready for this venture is proven by the fact that the stock was oversubscribed by $300,000. This confidence is explained by the fact that the brotherhood has never failed in anything it has undertaken. We own an office building worth $2,500,000 that will be turned over at the third triennial convention in May, 1921, free of all indebtedness. We have just purchased a site opposite the brotherhood building on which we are planning to erect a 20-story bank and office building. Both of these buildings are in the heart of the business section of Cleveland and will be closely identified with the group plan of public buildings.

"For fifty years the brotherhood has carried on many kinds of life, accident and pension insurance. We have paid out through the banks of Cleveland many millions of dollars a year. We have paid out in charities alone over $3,000,000 and not a single member of the Brotherhood of Locomotive Engineers is a public charge. Our total insurance on the books of our associations amounts to $184,000,000 and since 1868 we have paid out claims of $45,291,264.

"The Brotherhood of Locomotive Engineers has operated all of these activities for fifty years and has never lost a cent on its investments.

"The fact is, labor needs banks of its own more than any other class, unless it is the farmers. The wages of labor in this country amount to $30,000,000,000 a year, yet the average working man has no place to go to do his banking. In the cities at least his deposits are not wanted in the commercial banks. Often the worker is charged for keeping his account with the bank. There is no place the worker can go to get a loan, save the loan shark where he often pays from 100 to 200 per cent per annum.

"There should be banking facilities for the workers the same as for other classes. There are such banks in every other country. There are 65,000 such banks in Europe and they rarely lose a cent. They do a business running into the billions of dollars every year.

"The motto of the brotherhood bank is 'SERVICE.' It is organized along cooperative lines. We expect to receive the deposits of our 85,000 members and of 892 local divisions. We will invest the insurance and savings funds of our members and their widows. They have no place to go to make safe investments. Millions are lost by them every year through bad investments. We will draw wills and trust agreements for our customers. We also aim to aid our members to build homes.

"Our bank forbids loans or profits of any kind to officers or directors. Our funds will not be tied up in corporate bonds or underwritings. We believe there is need of many more banks owned by workers and farmers conducted on a cooperative basis and we will do everything in our power to assist them with our experience."

Catholic "Social Reconstruction Program" Analyzed

(*Continued from page* 8.)

fits, the success of European compulsory sickness insurance is extremely doubtful.

In this connection it should be borne in mind that the rejection of state sickness, invalidity, old age and unemployment insurance does not mean that our workers will have to go uninsured and in misfortune and old age be dependent upon charity or poor relief. Already there is in effect in this country an immense volume of insurance, covering large numbers of workers, and in amounts running far higher than anything dreamed of in Europe. And, during the last few years particularly, such insurance of American workers has been spreading and improving rapidly. There is much to be hoped from organized efforts to propagate and improve that insurance and to spread it more widely. We ought not to be discouraged because progress is slow. For even the compulsory insurance systems—that is those among them which are at all impressive—were not created in a day or a year by legislative fiat, but have been built up slowly and gradually throughout a generation. And we ought not to be discouraged because voluntary insurance will probably never cover all the workers. So far as it goes it will be better insurance than any the state can provide. And there are some of the workers who are not fit subjects for insurance at all—who are not "insurable risks." What they need is correction or charity; and where it is charity, no good can be done by disguising that charity under the false name of insurance.

It should be further noted in this connection that in America there is relatively far less need than in Europe for insurance of cash benefits during short sicknesses. Relatively few of our wage-workers are unable while in health to accumulate savings equal to the cash benefits of sickness insurance; and cash in pocket or in the savings bank is better protection against the wage loss from short sickness than is a claim against an insurance fund. Generally a savings bank balance is an advantageous substitute for *sickness* insurance. And in estimating the number of our wage-workers who ought to be but are not insured against sickness, those with material savings or property should be excluded from the count.

Second. The second argument for state insurance runs as follows: It is desirable that all persons dependent upon their earnings should be insured. It cannot be hoped that all of them will ever be persuaded voluntarily to insure. And in a voluntary system many of the "bad risks" among them will probably be excluded from insurance. But under a state insurance system all workers can immediately be compelled to insure.

But in order to compel all workers to insure, it is necessary in practice for the state to prescribe, within narrow bounds, *how* they shall insure. And for the state thus to decide and prescribe what provision individuals shall make each for his own private needs, though normal under some European forms of government, would be reactionary in America. Our government is an experiment in individual liberty. And it is an experiment that, up to date, has been highly successful, in comparison with all other forms of government, especially in respect to the material well-being of the working people. Consequently, it would be unreasonable to abandon that successful experiment, even in part only, and to revert to methods of autocracy and paternalism, without very certain assurance of a net social gain therefrom. But experience holds out no such assurance.

In this connection it should be realized whither the proposed departure from our principles of liberty would logically lead. If the state ought to decide how much of his income every worker shall set aside for sickness, invalidity, old age and unemployment, place the amounts so set aside in common funds, and then distribute the funds as the government may determine, there is no reason why the state ought not also to provide in the same way for the food, clothing, lodging and recreation of the people. That would amount to complete communism. And it is simply as a first step towards communism—as a plank in the Socialist party platform—that the movement for compulsory insurance has obtained its principal impetus. Great caution should be exercised before joining with the Socialists in the first step on such a dangerous road.

It is assumed to be a social advantage from compulsion that by its use there can be brought immediately under insurance all the improvident, the subnormal, the "ne'er-do-weels" and the victims of their own vices and bad habits, whom voluntary insurance would slowly or never reach or would largely exclude. But that assumption is more than doubtful. When insurance becomes an obligation it also becomes a right; and by giving such inferior types the right to insurance upon terms and conditions suitable for the "good risks," their faults and vices would be promoted, and not corrected, since they would thereby be relieved, at the expense of others, from the economic penalties for such faults and vices. It is true that the terms and conditions of the state insurance can be—and generally are—framed to fit these inferior classes, so as to restrict the scope of their possible impositions; but that unfits the insurance for the superior classes, who are nevertheless subjected thereto for the sake of uniformity and bureaucratic convenience. That gives rise to the necessity of "sweetening" the funds with liberal contributions from the taxpayers in order to abate the dissatisfaction that would otherwise result among the better elements. It is contended that thus to herd the sheep and the goats into low-grade, publicly subsidized, politically controlled insurance partnerships has a good educational influence, by disseminating an appreciation of the benefits of insurance among the improvident and thriftless. But in actual experience such appreciation seems to have manifested itself principally in the form of efforts to impose upon the funds or of demands for more and more state aid. When compelled to insure, the improvident appear to be even more improvident with the insurance funds than with their own money. On the whole, experience indicates quite positively that state provided insurance, with its many and increasing poor relief features, is slowly sapping the spirit of thrift and self-reliance, which was formerly noticeable among large elements of the workers, and, in its place, is breeding a feeling of dependency on the state. Certainly such insurance does not foster the initiative, self-reliance and ability of the individual, upon which, in a democracy, social welfare and advancement must ultimately depend.

Moreover, it is yet an assumption rather than a demonstrated fact that, practically, insurance can be made universal among the workers by compulsion. While the use of compulsion can bring under a state system of insurance many people whom voluntary insurance would probably never reach, it yet remains to be demonstrated that it can effectively bring in everybody wanted. The older and longer tested European compulsory insurance laws have all been limited to apply only to some classes of workers—generally only to the workers in the organized industries, whom it is most easy to classify and control by bureaucratic methods, being the very same classes who most generally insure voluntarily—whereas the so-called "universal" compulsory insurance laws have all been of very recent enactment and it has not yet been demonstrated that they reach effectively all the people desired. Under the British National Health Insurance Act, which is about the most universal in its terms, some millions of workers—the majority of them not wage-workers but just as much in need of insurance as wage-workers—are not covered; and of those nominally covered tens of thousands are notoriously not getting the insured benefits—those tens of thousands being the very classes which stand most in need of paternalistic protection. There is no reliable information that any compulsory insurance law has yet succeeded in becoming "universal" in fact, particularly in regard to providing the benefits, as promised, to all those intended to be covered.

Third. Another ground, not often avowed, for favoring compulsory insurance is that such insurance can readily be used to discipline the conduct of the working people. The benefits of insurance are payable only upon conditions, and in state insurance the conditions to the right to the benefits are not only the payment of prescribed dues but also conformity with such rules of conduct and of living as the state may directly or indirectly prescribe. This possibility appeals to those who seek to impose their ideas of right living upon others. But their program assumes that the rules and regulations to be imposed through the insurance will always be right and that there is no reason in tolerating individual or minority opinions on such matters. And the success of their program would be a long step toward the "servile state."

Fourth. Another argument for state social insurance of the wage-workers is that under such form of insurance employers can be compelled uniformly to contribute. This is held out as a great advantage to the working people. But the sounder economic opinion seems to be that employers' compulsory contributions are not such an advantage. They are rather a bait dangled before the eyes of the working people to induce them to favor compulsory insurance.

Many of the positive objections to compulsory insurance have been indicated incidentally above. There remain, however, a few that need to be noted specifically.

First. State insurance, including all known forms of compulsory insurance, has all the faults characteristic of government enterprise. The compulsory insurance systems of Europe are all loaded down with political spoils, bureaucracy and "red-tape"; in every one the expense, though in large part concealed, is enormous; and, with just enough exceptions to prove the rule, the administration is grossly inefficient. The exceptions to inefficient administration are the insurance systems in the autocratic countries, of which Germany is the type, wherein there is—or was, while the administration was efficient—a huge, privileged and domineering bureaucracy, on the one hand, and a well drilled, ticketed, labeled and subservient proletariat, used to being "bossed" in the most intimate details of life, on the other hand. In the democratic countries, such as England and France, the extent to which the public administrative machinery fails to function, and the indifference of the higher public officials to the injustices, hardships and disappointments caused by such failure, are simply shocking. Yet that the administration of compulsory insurance in America would probably be even more inefficient than in England and at the same time even more expensive than in Germany is indicated by the numerous instances in which our government departments have combined a maximum of extravagance with a minimum of efficiency.

It must be borne in mind in this connection that the one most certain result of the adoption of compulsory insurance is the establishment of a powerful bureaucracy, prone to work for its own aggrandizement rather than for the public welfare. If such a bureaucracy should once get firmly in the saddle, with the usual propaganda for its perpetuation and enlargement carried

on at the expense of the taxpayers, it would take much more than a simple failure of the insurance to unseat it. Mismanagement and inefficiency that would promptly wipe out a private enterprise would not perceptively jar the hold of a state insurance bureaucracy. For this reason, if no other, state insurance is not lightly to be experimented with.

Many ill-informed persons favor state insurance under the impression that the expense of administration is less in state insurance than in private insurance. But that impression is wrong. It has been created by misleading comparisons, such as comparisons between different kinds of insurance or between the same kind of insurance, with different incidental services—in other words, between the respective costs of administering very different things, or of administering the same thing with different degrees of efficiency and convenience,—or between the most expensively administered systems of private insurance and the most economically administered systems of state insurance—which is like comparing the best apple in one barrel with the rottenest apple in another barrel. And, to complete the deception, in all such comparisons a large and often the major part of the "expense" of state insurance is concealed. In this respect the propaganda for state insurance has been wantonly and unconscionably deceptive. There is, of course, some waste involved in competitive, private insurance, that would be avoided by a state insurance monopoly; but such waste is a low price to pay for escaping the evils specific to monopoly.

Second. A large majority of the European social insurance laws are essentially measures of poor relief, the relief being provided through public subsidies to the insurance funds. Some of these measures are unquestionably to be condemned because they apply to all the wage-workers, or to all the wage-workers in specified industries, thereby subjecting to pauperization many persons who formerly were self-sufficient. On the other hand, many of these measures are more reasonably restricted to apply only to the very lowly paid. But even these latter measures are of doubtful expediency. They result, generally, in a distribution of public aid not in proportion but more in inverse proportion to needs, with the consequence that those who really need help the most generally get the least. And they all exact a contribution from the insured, even though the insured's earnings are insufficient for the immediate needs of himself and his family, thereby tending to aggravate the very ills they are supposed to relieve. Consequently, as methods of poor relief, to be applied only to the very lowly paid, those measures are most imperfect. Probably much more good could be effected with less money by other methods.

Third. The adoption of compulsory social insurance practically entails a choice between two alternatives, each highly undesirable. The first alternative is to apply the insurance to some relatively poor classes of the people only, and the second alternative is to apply the insurance to all of the people who can be reached by taxation.

The first alternative, which is the one generally elected, results in separating the insured into a distinct and dependent class in the community. Palpably that is most dangerous and undesirable; and it is one of the things which, in the above quoted excerpt from the pamphlet of the National Catholic War Council, it is declared must not be done.

The second alternative has the obvious disadvantage of involving interference by the state with the insurance of those who can do better for themselves if the state will leave them alone. This disadvantage might be avoided by requiring state insurance of those only who do not provide for themselves through other agencies. But this compromise has the disadvantage that it is yet without any well tested precedent, that it would not satisfy the partisans of state insurance and that it would entail extraordinary expense, an exceedingly large bureaucracy and the subjection of all the people to much vexatious bureaucratic supervision.

Reviewing the two subjects above discussed—minimum wage laws and social insurance—it is desirable in conclusion to emphasize that it is not the proposal of these subjects *for consideration* that I am criticising. Although my opinions on political questions above expressed or indicated have been arrived at as the result of many years of intensive study and observation, unbiassed by self-interest and unprejudiced save for a natural partiality for American principles of government, they are, nevertheless, only tentative, subject to doubts and open to correction from future observation and experience. I admit the probability of their being wrong in many particulars and the possibility of their being wrong generally, for the simple reason that they relate to matters about which certainty is impossible. Consequently, I do not question the right of the National Catholic War Council and of Dr. Ryan to hold and to advocate radically different opinions. But the pamphlet by the National Catholic War Council, in particular, goes far beyond that. It is dogmatic in matters beyond the field for dogma. In effect it urges Catholic citizens to accept its political proposals *on faith*. That is wrong. No such proposal as either of those hereinabove discussed ought to be accepted by any well-educated person until he be convinced of its merits, after a thorough study of all its ramifications, as well as of its immediate results for the purpose immediately in view. And no such proposal ought to be presented to the uneducated without distinct intimation that its adoption would be an uncertain experiment, involving chances of loss, as well as of gain, for the working people and the community.

Never has thoughtfulness and caution about politico-economic measures been more needed than at present. A wave of emotionalism has swept over the country. Whatever is, is assumed to be wrong. Change, regardless of its results, is assumed to be synonymous with progress. Practically any public measure, nominally designed to change existing conditions and labeled a "welfare bill," can secure wide and unquestioning support, utterly regardless of its merits. The unscrupulous politicians, office-seekers and professional agitators, who are palpably exploiting such measures, are being exalted in the esteem of a deluded public. Those who urge sanity and caution or who dare to protest when wanton injury is threatened to their private rights and interests are being branded as "reactionaries" or vilified as selfish opponents of progress. In propaganda facts, experience, common sense, economic laws, suitability of means to ends, our traditional principles of government, etc., are all being ignored, falsified or treated with contempt. It is regrettable that the National Catholic War Council has been moved to contribute to this political and economical confusion.

Fatigue in Industry

(*Continued from page 7*)

form in character and under the direction of some central body presided over by those who are known to have had long practical experience in matters relating to the public health. Under the present methods this work is largely a failure as there is little cooperation throughout the country in public health instruction, each community carrying out its own policy in public health work. Some time ago an investigation showed that in one place there were seventeen welfare societies engaged in public health instruction with but little or no affiliation between them, each evidently teaching according to its own ideas upon the subject. This want of cooperation is not confined to welfare societies for it will be found that health departments throughout the United States do not work in unison and their methods of education, health protection, and the enforcement of sanitary regulations are often diametrically opposed to each other. The reason for this does not seem clear to the public.

There are certain principles governing these matters which, if carefully studied, would easily bring about a uniformity of action so far as health preservation is concerned not only in the way of public education, but harmony of action on the part of health departments. It is to be hoped that the effort now being made in this direction will prove successful.

Andrew Carnegie's Autobiography

(*Continued from page 9*)

lowing cablegram: "Kind master, tell us what you wish us to do and we shall do it for you." And he says: "This was most touching, but alas, too late." The mischief was done, the works were in the hands of the governor. It was too late. . . .

Of the regard he held for labor and his desire that he be vindicated of blame for a strike in which he had no share, Mr. Carnegie later tells:

> "The general public, of course, did not know that I was in Scotland and knew nothing of the initial trouble at Homestead. Workmen had been killed at the Carnegie Works, of which I was the controlling owner. That was sufficient to make my name a by-word for years. But at last some satisfaction came. Senator Hanna was president of The National Civic Federation, a body composed of capitalists and workmen which exerted a benign influence over both employers and employed, and the Hon. Oscar Straus, who was then vice-president, invited me to dine at his house and meet the officials of the Federation. Before the date appointed Mark Hanna, its president, my life-long friend and former agent at Cleveland, had suddenly passed away. I attended the dinner. At its close Mr. Straus arose and said that the question of a successor to Mr. Hanna had been considered, and he had to report that every labor organization heard from had favored me for the position. There were present several of the labor leaders who, one after another, arose and corroborated Mr. Straus.
>
> "I do not remember so complete a surprise and, I shall confess, one so grateful to me. That I deserved well from labor I felt. I knew myself to be warmly sympathetic with the working-man, and also that I had the regard for our own workmen; but throughout the country it was naturally the reverse owing to the Homestead riot. The Carnegie Works meant to the public Mr. Carnegie's war upon labor's just earnings.
>
> "I arose to explain to the officials at the Straus dinner that I could not possibly accept the great honor, because I had to escape the heat of summer and the head of the Federation must be on hand at all seasons ready to grapple with an outbreak, should one occur. My embarrassment was great, but I managed to let all understand that this was felt to be the most welcome tribute I could have received—a balm to the hurt mind. I closed by saying that if elected to my lamented friend's place upon the Executive Committee I should esteem it an honor to serve. To this position I was elected by unanimous vote. I was thus relieved from the feeling that I was considered responsible by labor generally for the Homestead riot and the killing of workmen.
>
> "I owe this vindication to Mr. Oscar Straus, who had read my articles and speeches of early days upon labor questions, and who had quoted these frequently to workmen. The two labor leaders of the Amalgamated Union, White and Schaeffer from Pittsburg, who were at this dinner, were also able and anxious to enlighten their fellow-workmen members of the Board as to my record with labor, and did not fail to do so.
>
> "A mass-meeting of the workmen and their wives was afterwards held in the Library Hall at Pittsburg to greet me, and I addressed them from both my head and my heart. The one sentence that I remember, and always shall, was to the effect that capital, labor and employer were a three-legged stool, none before or after the others, all equally indispensable. Then came the cordial handshaking and all was well. Having thus rejoined hands and hearts with our employees and their wives, I felt that a great weight had been eventually lifted."

Socialism Unmasked

(*Continued from page* 11)

mittee, Irwin St. John Tucker, one of the party's chief propaganda writers; and the party's recent candidate for president, Eugene V. Debs.

From the National Office of the Socialist party was carried on a vigorous campaign against conscription. A form of exemption blank, to be filled in by Socialist objectors, according to the record, asked for exemption on the ground that the Socialist party "principles forbade its members to participate in war." The person filling in the blank swore to this declaration: "I do further solemnly affirm that my creed and convictions are absolutely in accord with the principles of said Socialist party as herein set forth and that I cannot conscientiously become a party to any war."

In the *American Socialist*, which is published weekly by the National Office of the Socialist party, of June 16, 1917, was an advertisement of anti-war literature sold by the National Office of the Socialist party, as follows:

> Leaflets!
> Eye Openers!
> The Price We Pay!
> By Irwin Tucker.
> Four pages: 20 cents per 100; $1.50 per 1,000.
> 600,000 already Sold!
> Protect Your Rights!
> By Ralph Korngold.
> Two pages: 10 cents per 100; 75 cents per 1,000.
> One Million Already Sold,
> And Still Selling.
> Anti-War proclamation and Program
> (Adopted by St. Louis Convention)
> Four pages: 20 cents per 100; $1.50 per 1,000.
> Send all orders to the
> National Office, Socialist Party
> 803 West Madison Street, Chicago, Ill.

This advertisement followed an article entitled "Cheer Up," by Cary E. Norris, in which the following appeared:

> Cheer Up Boys! Wave your caps and shout for joy; For a kind beneficent government has bought 200,000 coffins for you. . . . Just think of the sad condition of the poor French and German boys; shot to death, torn into shreds, broken and mangled past all recognition, and no coffin. Boys, resist conscription no longer; go joyfully on your way to the trenches!

In a pamphlet, "Why You Should Fight," printed in July, 1917, and issued by the National Office of the Socialist party, the following was stated:

> You must throw bombs and slaughter with machine guns to destroy the Prussian political Kaiser, in order that the American financial Kaiser may remain on his throne at 26 Broadway and around the corner on Wall Street. . . . Above all, and through all, and after all fight for the monarchs who oppress us with an intolerable despotism by the rule of money and iron grip of might. . . . Go forth and destroy the kings of divine right abroad. And when the war is over you will have learned the means and method of destruction of kings.

The disloyal and anti-national character and program of the Socialist organization shockingly manifested during the war, was not confined only to the war against Germany, and is not an isolated instance of treason, but it continues and presumably will continue.

The Socialist organization realizes that it can never carry into effect its program by the constitutional use of the ballot, and it therefore depends—notwithstanding its recent transparent camouflage of emphasizing its political character—upon industrial action, or the general strike, as its revolutionary weapon. Why, therefore, does it in the meantime seek to have members elected to Congress and State legislatures and other public offices? For the same reason that it seeks to enter the organized labor movement, to carry out its program of "boring from within," for purposes of disintegration and propaganda.

Zinoviev, or Apfelbaum, Bolshevist president of the Executive Committee of the Third Communist Internationale, to which the American Socialist organization seeks admission, in a communication on the program of the Third Internationale, declared:

> The Russian Communists, the Bolsheviki, voted in the election for the Constituent Assembly. They met in its hall. But they came there to break up this Constituent within twenty-four hours and fully to realize the Soviet power. The party of the Bolsheviki also had its Deputies in the Czar's Imperial Duma. Did the party at that time "recognize" the Duma as an ideal or at least an endurable form of government? It would be lunacy to assume that. It sent its representatives there so as to proceed against the apparatus of the Czarist power from that side, too, and to contribute to the destruction of that same Duma. . . . Such "parliamentary work" demands peculiar daring and a special revolutionary spirit; the men there are occupying especially dangerous positions; they are laying mines under the enemy while in the enemy's camp; they enter Parliament for the purpose of getting this machine in their hands in order to assist the masses behind the walls of the Parliament in their work of blowing it up.

In a pamphlet, "The Dictatorship of the Proletariat," published by the Jewish Socialist Federation, a clear statement as to the real meaning of political action on the part of the Socialist party, was made:

> Consider the question, that so long as the State is an instrument, a tool in the hands of the bourgeoise in the fight against the proletariat, so long as the State is the dictatorship of the bourgeoise, why do the Socialists seek to send their representatives there? Where do Socialists fit into the State? What can they do there?
>
> Socialists seek to enter into the government for two reasons: First, to be near to the doors of the chambers where dictatorship sits, and second, to hinder the dictatorial work in any way. The first reason is the most important. Sitting in Parliament or Congress, being inside of the government councils, affords Socialists an oportunity to find out the plans, the strategy of the State. And knowing this, they can carry out their propaganda the better.

The intention of the Socialists who were expelled from the New York legislature to use the political office to which they were elected for propaganda, as a rostrum from which to incite the workers, was made clear in a speech by August Claessens, one of the disbarred assemblymen-elect:

> We are going to the Assembly. . . . There are five of us. Charley Solomon is one. There are others, and I will go myself into the bargain, and we will tell them something. But we won't waste much time in the Assembly, comrades, talking to that bunch that sit there with stolen property, sitting in their seats, but we will use our position with the Assembly, and reach the "Henry Dubs" and speak to them, and I can assure you, comrades, we won't sleep one night when we are in Albany, but every night we will be speaking in Troy, Schenectady and Amsterdam. Everywhere around there, arousing the workers wherever we possibly can.

Set upon bringing about ultimate revolution, the Socialist party seeks to elect its members to office solely for ulterior and opportunist reasons. As declared in the Socialist Congressional Campaign Book for 1914:

> Such measures of relief as we may be able to force from capitalism are but A PREPARATION OF THE WORKERS TO SEIZE THE WHOLE POWERS OF GOVERNMENT IN ORDER THAT THEY MAY THEREBY LAY HOLD OF THE WHOLE SYSTEM OF SOCIALIZED INDUSTRY.

By its masquerade of being a political party, the right wing of the Socialist movement, the Socialist party of America has won the sympathy and support of many people to whom force and violence are abhorrent. By its own evidence, the organization is shown to advocate political action for ulterior and sinister reasons, as but a "preparation" for attaining its ultimate objectives. In those ultimate objectives, it is no different from the Communist and Communist labor factions, or left wing, which openly did disdain the purpose of "capturing" "the bourgeois parliamentary state" by political means, but announce their intention "to conquer and destroy it."

That the Socialist organization and the revolutionary left wings are at one in their fundamental principles and ultimate aims, and that their differences are merely minor differences over methods, was clearly stated in an open letter by Morris Hillquit, published in the *New York Call* on September 22, 1919, shortly after the split, and which should not be forgotten. Hillquit said:

> The division was not brought about by differences on vital questions of principles. It arose over disputes on methods and policy, and even within that limited sphere it was largely one of emphasis rather than fundamentals.
>
> The separation of the Socialist party into three organizations need not necessarily mean a weakening of the Socialists. . . . They have not deserted to the enemy. The bulk of their following is still good Socialist material, and when the hour of the real Socialist fight strikes in this country, we may find them again in our ranks." He concluded by saying: "Let us centre our whole fight upon capitalism, and let us hope our Communist brethren will go and do likewise.

In their advocacy of organizing workers for the purpose of taking revolutionary mass action, it was shown in the evidence presented at the Albany trial, that the Moscow Internationale, the Communist wings and the Socialist Party of America are unanimous. In the Socialist Party preamble, dated Chicago, Illinois, October 25, 1919, entered as evidence, after declaring for the organization of the working class "on the political field," it was stated: "It is necessary that the working class be powerfully and solidly organized also on the economic field to struggle for the same revolutionary goal."

"There is little difference between the Socialist party and the Communists," declared August Claessens. "We want to get to the same place, but we are travelling different roads."

Eugene V. Debs, Socialist candidate for the presidency, welcomed both wings and urged them to work toward their ultimate end. The last Socialist convention, obedient to Debs' call for unity and to the Bolshevist Zinoviev's call, passed a resolution, declaring:

> That any individual, branch, local or state, or language federation that left the party last fall because of tactical differences and now desires to re-enter on the Socialist party platform and constitution be welcome to return.

Are the specious attempts at camouflage in the last platform to be taken seriously? The record of the party, its unrepudiated platforms, manifestoes and course of action, speak for themselves. The Socialist organization, with the international Socialist movement, is against every nation, every flag.

The fundamental character of the Socialist party, its integral attitude toward patriotism, national loyalty, love of country has been expressed in a Socialist classic—an article published in the *New York Call*, February 10, 1912, two years before the Great War broke, five years before America entered the war. It was prophetic as an expression of the stand, sentiments and the course of action of the party in regard to America's war against Germany.

Of the uniform of the American soldier, the article said:

> Honor the uniform? No, spit on it! Make it a shame and reproach until a worker who wears it will not dare to show his face among decent working people. Honor the uniform! . . . Honor that which stands for oppression, for the loafer against the worker, for the master against the slave. . . . Honor the Judases, the Benedict Arnolds of the working class . . .

Of the American flag the following was printed in the *New York Call*:

> Honor the flag which stands for freedom, equality and fraternity. What flag? The American flag? The Stars and Stripes? The flag which floats over every hell hole of mine and mill and prison? The flag which floats over station house and barracks whence issue police and soldiers to batter down and murder workers exercising their constitutional rights of free speech and free assemblage. . . . There is and can be but one flag for which an intelligent workingman can have any respect, the flag of humanity, the flag of human brotherhood, the red flag of the working class. . . . Down with the stars and stripes! Run up the Red Flag of humanity!

Purifying Politics—A Field for the Churches

(*Continued from page* 15)

No doubt this is also the same Babson who declared some years ago in a circular to his subscribers:

> "I also wish to warn you that the movement (the I. W. W.) will—in some form—continue to grow, because it is, in my opinion, founded on an economic fact, namely, that the labor problem will never permanently be solved until the workers actually own the mills and other enterprises and the state or nation actually owns the railroads and public service properties, however much we dread both events."

Babson is important in this connection only because he is on your Commission and doubtless, from your quoting him, he is regarded as an authority on things industrial and otherwise. But are 90 per cent of the business men in the country connected with the churches? If so, what a sickening feeling must be prevalent in church circles right now when all these graft and profiteering exposés are filling the columns of the daily press! Of course, if this were true, the churches would expel from membership these grafters and profiteers and help to send them to jail. But it is not true.

You refer to me as an associate of *Industry*, a Washington paper published in the interest of non-union employers. Evidently you have confused me with Dr. F. Ernest Johnson, Secretary of the Research Department of the Federal Council's Commission on the Church and Social Service, who is a contributor to that publication. I am not. A recent number is making much capital out of Dr. Johnson's writings for the magazine in its open shop campaign.

I note that you do not wish to discuss differences among church officials on industrial questions, as "the Church is divided into conservatives, moderates and radicals." The adoption of that policy is, of course, the Church's own business. But may I suggest that in the labor organizations right now they are taking a more courageous position? They are cleaning out their revolutionaries as fast as they can find them. Within the last year in a dozen different national organizations, they have kicked out the I. W. W.'s, while the Canadian Trades and Labor Congress, at its recent annual convention, not only kicked out its I. W. W. members, but 300 delegates marched into the street and made a bonfire of all the revolutionary literature of the Socialists, I. W. W.'s and Bolshevists that had been sent to the hall for distribution.

You have in an important position on your Commission a man who glories in [illegible] friend and defender of [illegible] man, whose books, contain [illegible] philosophy, are widely used in [illegible] associated with you in getting out a [illegible] the Methodist Church which is no credit to the Church and which would not be tolerated in any responsible labor organization. He is now at the head of the American Civil Liberties Union, a body whose object is the defense of revolutionary organizations and individuals in their efforts to undermine and destroy American institutions.

Again, you ask, "What has Charles W. Wood to do with the Labor Sunday Message?" Only this: I called attention, in my previous letter, to the absurd contentions by that group of people called Christian Socialists, who claim that Jesus was a Socialist and who are continually demanding that business should be run today as He would do it, not for profit or interest, but for service. As there were so many glimpses of this idea in the Labor Sunday Message, and as Charles W. Wood had just returned from a trip to China where he had been sent by the Methodist Centenary to report on industrial conditions in that country, I quoted from an interview with him in which he explained how "a factory would be operated on the Jesus principle" and how "a nation would be organized on the Jesus principle." It is a curious fact that the people who are expounding Socialism as the teachings of Christ put into practice—the radical preachers, social workers, industrial commission investigators, etc., are largely of what is called the "modern" or "new theology" group, which attempts to rob Jesus of all of His divine attributes and make of Him an ordinary man. A book just received, "The Crisis in Church and College," by George W. McPherson, quotes as follows, from the "new theology" teachers in theological seminaries on this point, the quotation being taken from "Problems of Religion," by Durant Drake:

> "Jesus shared the ignorance of men, not only in his boyhood, but throughout his life. He knew presumably no science, knew little of the life and history of the world, shared the local contemporary beliefs and hopes of his fellows, was possessed in the last months or years of his life by a passionate conviction which in its literal form can only be called a pathetic delusion."

Without presuming to pass upon the merits or demerits of the "new theology," I should like to inquire if it would be wise to undertake to run our tremendously complex governments of today according to the principles of One who is declared by that "theology" to "know no science and little of the life and history of the world"? Of course, I do not mean to imply that you or I personally hold any such views.

You say:

> "The Social Creed of the Churches has been approved by practically all these (32) denominations and by the Y. M. C. A. and the Y. W. C. A."

That is a very sweeping declaration but I do not presume to question your authority to make it. However, I find in official documents of the Federal Council such declarations as these:

> "We advocate the guarantee of a minimum wage, the control of unemployment through government labor exchanges, public works, land settlement, social insurance and experimentation in profit-sharing and co-operative ownership."
>
> "We affirm that an ordered and constructive democracy in industry is as necessary as political democracy, and that collective bargaining and the sharing of shop control and management are inevitable steps in its attainment."
>
> "We believe that labor must be recognized as being entitled to as much consideration as employers and that their rights must be equally safeguarded by a fair share in control . . . and opportunity for ownership."

I am not undertaking at this time to question the soundness of any of these proposals. I do know, however, that they are highly controversial and that there are many members of the Protestant churches who regard some of them as [illegible]ly unsound. But I am asking how, when [illegible] the 17,000,000 Protestant employers, [illegible]ers, farmers, bankers, lawyers, clergy [illegible]r classes making up that membership [illegible]ically declared for these proposals. [illegible] them, I understand, are amendments to the original sixteen articles in the Social Creed of the Churches, which contain many perfectly harmless declarations; in fact, they are so obvious as to cause one to wonder why the Federal Council took the trouble solemnly to declare them in a creed. I do not think there is a Socialist, I. W. W.'ite or Bolshevist, or an employer of the most reactionary group who would not declare for "Equal rights and justice for all men and in all stations of life"; "The fullest possible development of every child, especially by the provision of education and recreation"; "Conservation of health," etc., etc. But other articles in the creed, seemingly harmless, take on quite a new aspect when one reads their interpretation by Harry F. Ward in his book on "The Social Creed of the Churches." Just what part, if any, Mr. Ward played in the formulation of these proposals, and just what weight should be given to his interpretation of their meaning, I am not informed; but I should regard with very grave concern any connection with these pronouncements on the part of a man who is so proud of the endorsement of his lectures by the I. W. W.'s that he publishes with great glee their laudatory resolutions. Mr. Ward evidently did not call attention to that disloyal, murderous organization's program of confiscation and loot, because they concluded their resolutions as follows:

> "The viewpoint taken by Professor Ward, coupled with his exposition of the cause of labor, we feel will meet with the general approval of the organization (I. W. W.) and its members."

These resolutions were dated Feb. 25, 1915, and signed by Adolph Lessig, Nathan Herman, Guy Curtis and John J. Fraser.

You say:

> "Wherever human relations are involved, there the agencies dealing with spiritual and ethical values are immediately and necessarily called into action. Moreover the basic laws of successful industry are as much human and ethical as economic, as is being shown by the futility of recognizing only the technical and economic factors in industrial management."

As an academic statement, I can fully agree with that paragraph. My criticism is directed not to its essence but to the application of the latter half of the statement. The way in which the Church has dealt with economic questions has been by turning them over to social service committees which, unfortunately, are composed almost entirely of theorists of the radical type. In fact, the social service work of all the churches is said to be in the control of "a small group of self-perpetuating radicals" who draw their inspiration almost wholly from radical church groups in Europe, especially in England. Very much is made of the Anglican Archbishops' "Report on Christianity and Industrial Problems" which, as is well known, was drawn up by a committee dominated by Socialist bishops, rectors and labor men. The notorious George Lansbury, who tried to accept a $375,000 bribe from Lenin, was an active member and, it is charged, wrote an important part of the document.

I am going to quote from a letter recently written to one of your confreres, which I think will throw light upon this phase of our discussion and which I hope he will pardon me for citing:

> "In an article which I wrote last year on Radicalism in the Churches, I called attention to the apparently organized effort of the social service departments of all the churches to exploit the radical and socialistic British Labor Party's program and all other things radical in Europe, with only a word here and there about what the organized labor movement in this country stands for. It is to be noted that the British Labor Party, that wonderful 'uplift' organization which so captivated the social service workers of the various churches in this country, is the one whose members today are threatening to choke the life out of their Government if it does not yield to their demands for control of its foreign and domestic policies. In other words, they demand the abdication of the Constitutional Government of Great Britain. They have also appealed to the workers in this country to join in their treasonable program. But the American labor movement, which is 'too reactionary' to please leading members of your Council, stands as a rock against such revolutionary proposals. Read the ringing pronouncement just put out by Mr. Gompers and Mr. Woll, on behalf of the American Federation of Labor, repudiating the whole anarchistic labor movement of Europe, including the British Labor Party. As shown in my article referred to above, British socialism and radicalism of the most 'advanced' type are finding a voice in this country principally through our church organizations. Let any crackbrained socialist or so-called 'intellectual' in England declare for some program for producing a Utopia overnight, and it is quickly given sympathetic circulation through the churches in the United States. Describing such groups, Arthur Gleason, one of the leading exponents in this country of British radicalism, in an article in *The Survey*, the mouthpiece of much of that same radicalism, said (April 17, 1920, p. 110):

'They have carried on excellent Salvation Army work in popularizing the idea of a British brand of syndicalism. They domesticated that immense dynamic. But for them, the Central Labor College of the Socialist Labor Party, the I. W. W., French ideas, the phrases of Tom Mann and the tracts of Daniel de Leon, would have perhaps been the only deposit of syndicalism and industrial unionism.

'This earnest, tiny group (a few hundred in all the Kingdom) appear in various service uniforms and play many parts. As university graduates, they are at the heart of the University Socialist Federation. As Christians, they are Church Socialists sapping the established church. As guildsmen, they conduct a league, honeycombing the trade unions. As investigators, they are the Labor Research Department, affiliated with important members of the trade union movement. As Fabians, they buffet Sidney Webb. As journalists, they have entry to powerful newspapers and weeklies. As writers, such books as An Introduction to Trade Unionism, Self Government in Industry, The Payment of Wages, Trade Unionism in the Railways, are in some instances irreplaceable because of the careful collection of facts and the understanding of currents of tendency. But their great service has been that of agitators with a smashing generalization. Perhaps no group of young, ardent men with a message ever had a more fortunate fate.'

"Referring only to one of the groups in Mr. Gleason's enumeration, the idea of 'sapping the established church' is borne out by the following extracts from a very remarkable article in *The Edinburgh Review* of January, 1920, by the Rt. Rev. H. H. Hensen, Bishop of Hereford (now Bishop of Durham), entitled 'The Church and Socialism':

'A considerable and increasing number of Christian ministers of all denominations, except perhaps the Roman Catholic, are pouring forth the crudest economic heresies and harshest dogmas of the class war from pulpits and platforms, in newspapers and parish magazines, in tracts and catechisms, even in litanies and hymns. All the methods of religion are being freely employed to create a sense of intolerable oppression and stimulate a passion of class hatred.

'Prayers and devotions for use in Advent and Lent and on numerous special occasions breathe the same spirit. A fantastic exegesis has been worked out, and popularized in tracts, with the object of transforming the New Testament into a Socialist manual.

'The Bishop, referring to these 'muddled thinkers,' says they 'shrink from relentless lucidity, and prefer the pleasant half light of altruistic sentimentalism, in which the worst motives can pass for the best, and even a sordid materialism take the shape of Christian faith.' "

Now, my dear Dr. Tippy, could we not compromise on this matter? Suppose you have all the "Reds" and the "Rads" quietly removed from the Federal Council (I do not insist upon its being done quietly) and their places taken by sane and loyal representatives of the wage-earning and employing groups in your constituent bodies. In other words, reorganize the Federal Council on the basis of "proportional representation", thus eliminating most of its impractical doctrinaires of the ministerial and professorial type and equipping the Council to enter even the industrial sphere. You could then devote your splendid talents to organizing that much greater movement, the purpose of which would be to lead the Christian people of our nation into the field of practical politics, thus helping to correct the most conspicuous failure in American democracy. I think you would find that in so doing, your action would be entirely in accord with the exalted teachings of the Sermon on the Mount.

Very sincerely yours,

RALPH M. EASLEY.

Present Status of Socialist Party

(*Continued from page* 10)

This principle is restated in the manifesto adopted at the national emergency convention of the Society in September, 1919, which closes with the following:

"To ensure the triumph of socialism in the United States, the bulk of the American workers must be strongly organized politically as socialists, in constant, clear-cut and aggressive opposition to all parties of the possessing class. They must be strongly organized in the economic field on broad industrial lines as one powerful and harmonious class organization, cooperating with the Socialist Party and ready in case of emergency to re-inforce the political demands of the working class by industrial action."

The Society sets for itself the task of encouraging and directing the organization of the workers of America along these revolutionary industrial lines. The manifesto continues:

"[illegible] the American workers from their ineffective and demoralizing leadership, to educate them to an enlightened understanding of their own class interests, and to train and assist them to organize politically and *industrially* on class lines, in order to effect their emancipation—that is the supreme task confronting the Socialist Party of America. * * * Long live the international socialist revolution, the only hope of the suffering world!"

This stand of the Society was taken after the expulsion from its membership of the Left Wing or communist elements, whose only difference from the Socialist Party—if we are to accept the statements of Morris Hillquit, was a mistake in their estimate of American conditions. In other words, the communist groups believed that industrial organization and discontent in the United States had reached a stage which gave promise of the successful employment of industrial action. On the other hand, the better informed and more capable members of the Society realized that this was not the case and that precipitate action would injure rather than forward the progress of the revolution.

Despite the changes in their constitution which were made at the last conventions of the Society, both state and national, we find no prohibition placed upon the Society's activities in the industrial field, but instead very definite instructions to its membership with respect to the need of industrial action and industrial organization.

At the annual convention of the state Society this year, the following resolution was adopted, which defines the Society's position with respect to industrial or economic action:

"While the Socialist Party is organized primarily for the purpose of using political methods to aid in the achievement of industrial democracy, we recognize that this result must be brought about by a combination of political and economic action. * * * Working as we do to advance the Socialist Party, we also pledge our support to the workers in all their efforts to improve their condition and to help to achieve emancipation through economic action.

"We consider it vital for the workers to organize along industrial lines as their employers have organized. It is only through a powerful union of all the workers of hand and brain, politically and economically, that the takers of rent, interest and profit can and will be dislodged from their place of [illegible] and the workers come into the control of it."

These are not isolated quotations, but characteristic of the statements of the [illegible] attitude on the steps necessary to effect [illegible] object, which is the overthrow of the [illegible] government and the [illegible]tion of the socialist régime.

Mr. Benjamin [illegible] one of the leading instructors of the Ra[illegible]l of Social Science, which is the approved school of agitators and organizers for [illegible]ciety, writes to the New York Call on July 20 of this year as follows:

"Are we to object to the assumption of power by the workers, who may for the time be in the minority, because the minds of the workers have been warped and corrupted by capitalist teachings? * * * A general election might perhaps show the Socialist Party to be in the minority just as the Bolsheviki were in the minority in the Constituent Assembly of 1917. But who will deny that the opposition to the Bolsheviki was due to ignorance and that the masses have now made them the overwhelming majority?"

Mr. Glassberg here shows why the Society concerns itself so earnestly and urgently with the organization of revolutionary industrial unions, because they anticipate that a general election would show the Socialist Party to be in a minority, but they believe that a minority of workmen organized industrially in essential industries could by the use of the general strike bind the hands of public officials and open the way to the assumption of power by socialist adherents.

These are the facts. Their meaning is clear, but the method of dealing with them is not so plain. The attitude of public officials in dealing with this problem will undoubtedly reflect the attitude of the public upon these questions. In order that the solution be sound and just, it is essential that the public should understand the facts.

Immigration Enquiry

(*Continued from page 13*)

flected by the people's representatives, the Immigration Department of The National Civic Federation, Jeremiah W. Jenks, chairman, has sent to the Governors of all the states the following letter of enquiry:

Sir:

Late experiences at the leading eastern ports of entry into the United States, especially New York, show a very marked increase in immigration. It appears probable that from July, 1920, to July, 1921, not less than a million immigrants will be received.

Latest reports, especially from Ellis Island, indicate also that the percentage of those classes which we have heretofore considered undesirable is greatly increasing owing to the present interpretations given to the Immigration Law. Under the exemptions of the Law, for example in favor of those who claim to be coming to this country on account of religious persecutions in their own country, and those who are members of the families of others qualified for admission, considerable numbers of the mentally afflicted and feeble-minded have been admitted under bond; while the number of illiterates, of women and of children and old people who are likely to become public charges has very decidedly increased.

Many of those most familiar with the situation feel that the whole question should be thoroughly investigated immediately, with reference to prompt action by Congress and the Executive.

The National Civic Federation is desirous to sound as well as it may the sentiment of the different [illegible]tions of the country with reference to doing [illegible] may lie within its power to help [illegible] that seem desirable. In order to have a basis for [illegible]or action, may I [illegible] to the following

[illegible]ylum or land of refuge"
[illegible]migration Law be employed as
[illegible]e admission of those otherwise ex-
[illegible] as illiterates and diseased and feeble-
[illegible]migrants?

[illegible]things considered, do you favor a deci-
[illegible]striction of immigration by further legisla-
[illegible], which of the methods frequently
[illegible]posed do you prefer?

3. Would you favor the amendment of the immigration law in the following particulars?

(a) To provide the immigration authorities with [illegible] information contained in foreign criminal and police records.
(b) Re-phrasing that part of the law which excludes criminals.
(c) To provide a moderate increase in the physical requirements for admission.
(d) To require all aliens to register and report once a year to some governmental authority.
(e) To strengthen the law with respect to the inspection of alien seamen.
(f) To provide for the examination, as to eligibility of aliens seeking admission into the United States, by consular or American immigration officials stationed abroad.

Respectfully yours,

Chairman Department on Immigration.
